March 5, 2014. The conditional use permit was renewed on July 15, 2015 and the Food and Wine Plan was amended on October 21, 2015 to allow desserts to be served at special events. Condition #11 states, "Winery may be open from mid-May to December 31st. Hours of operation shall be 11am to 9pm. Condition #12 states, "Full menu food service (pizza and appetizers) may be provided from mid-May to December 31st, Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm. Limited menu food service (appetizers only) may be provided in the Tasting Room during regular hours of operation." The term "lights out" has been frequently used in permits for similar operations. The term was discussed in detail at the renewal on July 15, 2015. Condition #12 has been interpreted to mean that commercial service must cease by 9pm and that customers are to have vacated the facility by 10pm. This condition has not been interpreted to mean that lighting cannot be utilized past 10pm. The applicants have, on several occasions, notified staff prior to their own personal use of the facility outside of the terms established in the conditional use permit. The applicants' private use of the facility has resulted in concerns about compliance with established conditions being raised by neighboring landowners. Staff is of the position that the issuance of a CUP authorizing commercial use of a property or facility does not impact the owner's ability to utilize or access that property outside of established commercial hours. However, all commercial activity authorized by the CUP must comply with established conditions and hours. There have been no compliance issues with the operations since it opened. The Town of Clifton recommended approval of this request on February 2, 2016 stating, "Recommendation for Belle Vinez Winery to operate with the same conditions presently approved, except expand the days of annual operation to year-round." The existing conditions are listed #1 - #26 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to not be contrary to the above, staff recommends the LMC approve this conditional use permit with the following conditions (staff suggested changes from the current conditions are ~~bolded with strike through~~ which indicate deletion).

1. Activities shall be conducted consistent with the application unless modified by another condition of this approval.
2. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
3. The winery shall produce "wine" as defined by the State of Wisconsin.
4. Applicant shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations.
5. The applicant shall obtain necessary licenses from the Town of Clifton.
6. Applicant shall obtain all other necessary permits from state and municipal agencies.
7. The parking lot shall have at least 71 parking spaces. There shall be no on-street parking.
8. Seating capacity for the pavilion and plaza shall not exceed 120.
9. Applicant shall install signs detailing the need for reservations and no parking on the street.
10. Finalized plans of the structures shall be presented to the LMC for review and approval.
11. ~~Winery may be open from mid-May to December 31st~~; Hours of operation shall be 11am to 9pm.
12. Full menu food service (pizza and appetizers) may be provided ~~from mid-May to December 31st~~; Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm. Limited menu food service (appetizers only) may be provided in the Tasting Room during regular hours of operation.
13. No beer or liquor shall be served in the tasting room.
14. Lighting shall comply with the Land Management Department policy.
15. Sound system shall only be within the structures.
16. No audio bird repellent shall be used onsite.
17. Weddings and special events may not exceed established business hours and must be conducted consistent with the other conditions of this permit.
18. This Conditional Use Permit shall expire in 2 years and a status report shall be presented to the LMC in one year.

19. Applicant understands that any intensification or expansion of this use will require the issuance of a new Conditional Use Permit.
20. Berm shall be established on the east perimeter of the property with adequate vegetative cover.
21. Adequate vegetative cover shall be established to visually screen the parking lot from the road.
22. Applicant shall adhere to the approved Food and Wine Plan and shall ensure that food operations remain incidental/subordinate to winery operations.
23. Sound shall be limited to no more than 80 decibels at the property line.
24. Food service shall remain incidental/subordinate to the primary use as a winery.
25. Promoted access route shall be along County Road M.
26. Arrangements shall be made to establish a visual screen along the southern property boundary.

Roy stated that the only changes being to condition #11 now stating: Hours of operation shall be 11am to 9pm. Other changes to condition #12 to state: Full menu food service (pizza and appetizers) may be provided Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm. Limited menu food service (appetizers only) may be provided in the Tasting Room during regular hours of operation.

Chairperson Fetzer opened the hearing to the public. Pichotta stated you should have two items of correspondence, you were sent a letter from Gary and Marcia Borgstadt which outlined a number of concerns that they have regarding this operation. Rather than read the letter, he will characterize it to get it in the record. One concern was they believe this facility is not in compliance with the Town of Clifton's Comprehensive Plan. They believe that the Zimmerman's are operating outside the requirements of their Class B Liquor License. They feel that the LMC has been allowing the Zimmerman's to operate outside of the CUP. They believe the LMC has been allowing them to hold private parties also outside of the parameters of the CUP. They raise issues relating to property values. They ask that you deny the request and they advise the Zimmerman's to stop violating the State Liquor laws. You also received some additional correspondence, that is in your folders, from Carol Schoenthaler, another neighbor; to characterize that one; she wants to see the winery within the neighborhood and not taking over the neighborhood. She feels that it is a commercial establishment that is changing the neighborhood. We also did get a third item of correspondence from Greg and Kristin Johnson who are also neighbors, they are in support of the winery and it's expansion. Pichotta stated that he would like to touch on a couple items. He could do it in the public comment part or we could close the public hearing if that is appropriate. Chairperson Fetzer stated we will get through the public comment, close that and then go from there. Any further public comment? **Chairperson Fetzer closed the public hearing.** Pichotta, it has been suggested that the applicants are operating outside of their Class B Liquor license for a winery. The Borgstadt's reference in their letter a discussion that they had with Tyler Quam and/or Mario Altuzar with the Department of Revenue. Pichotta indicated that he had talked to Tyler Quam and it is fairly clear that some of the rules and regulations relating to Class B Liquor Licenses specifically for wineries aren't exactly clear. Mr. Quam had noted that he is seeking a legal opinion regarding some of these issues from the State AG Office. Mr. Quam is a special agent in charge for the Department of Revenue. He alluded to the fact that there are five or six wineries where issues have been raised and they are seeking clarification. It would seem appropriate that decisions relating to compliance with a Class B Liquor license need to be made by the Department of Revenue versus an interpretation by the LMC. Pichotta suggested that this is almost akin to if we issue a CUP for someone to sell used cars. The State has to give them a permit or a license if they are going to sell more than five cars in a year. The license that is given by the State is of course, different than the CUP. In order for them to operate under that CUP they have to have the license. He would see this as similar to that and, depending on what type of liquor license that the Zimmerman's had, if they had a Class B beer license they could actually be open until 2:00am and concerns about when the doors are actually closed wouldn't be an issue. If there are issues with the Class B Liquor License, he would suggest that it's not within our purview to pursue them because what we are mainly concerned with is compliance with our own conditions. Sanden asked Andy if our conditions were in conflict with the liquor license, of course the liquor license would supersede our CUP. Pichotta stated it may be that the parameters associated with the CUP are broader than they can actually use, depending on the type of liquor license that they have. That would fall upon the applicant to ensure that he doesn't lose his liquor license. Sanden asked with respect to one of the arguments brought up by Mr. Borgstadt, this did come up in another

winery issue. If they are having a private party, how does this committee know or how does Brad know whether or not they are charging and therefore it's not a private party. How do we know what's commercial and what's private unless we are actually there to see if any money is changing hands. Pichotta stated that when we have been notified on the handful of times that it has occurred, his understanding is that one of them was, rather than watch the Super Bowl in his living room the applicant opted to watch it at the winery. To a certain degree we have to take him at his word at that. He doesn't think that we want to be out there policing it in that sense. Holst stated he believes every applicant is different and he believes this applicant calls in advance and warns us when he is going to do things. He thinks every one of these has to be judged on its own merit. Pichotta stated he also had a discussion regarding the personal use of a facility like this with Mr. Quam and the long and short of it is, in each of these instances it would have to be judged on its own merits. Pichotta noted that Mr. Quam had said such a situation would be alright if it were employees or, for example, the applicants wife and child. Pichotta noted that he had asked what if those in attendance were more children and potentially some in-laws, is that ok? Quam stated probably but that each situation would need to be judged on its own merits. Holst stated what we need to take into consideration is there have been no compliance issues with the operations. He believes these people that have issues need to follow the correct procedure and that isn't to write us a letter as individuals but to notify the department when they believe there are compliance issues. Sanden stated so they can be documented. Ross stated at that time. Holst stated that is right. Pichotta stated a lot of their concerns stem from a different interpretation than this committee has about condition #12 about what lights out means. Sanden asked according to the letter, the Clifton Town Plan Commission denied it but the Clifton Town Board approved it. Pichotta stated the Planning Commission makes a recommendation to the full board that the full board utilizes to help make their determinations. Holst stated that the planning commission makes a non-binding recommendation to the Town Board. Pichotta stated that is correct. **Holst moved to approve the conditional use permit for expansion/intensification for Belle Vinez Winery with conditions #1 - #26 as stated, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Passed.**

Discuss take action on review and update of the Goals, Objectives and Policies of the Management Chapter, relating to Planning and Regulatory Techniques of the Pierce County Comprehensive Plan.

Staff Report – Ryan Bechel: This is part two of what we started at the last meeting. This section is lengthy so I would encourage you to interrupt whenever you have comments or concerns. So starting off with Planning:

Goal:

- Establish comprehensive, county-wide policy planning that supports municipal, town and other agency planning efforts and supports effective decision-making.

Objectives:

- Encourage local municipalities and towns to adopt comprehensive plans and development policies that reflect local characteristics and standards and mesh with the adopted county comprehensive plan.
- County planning should anticipate change and provide decision-makers with insight into alternatives and consequences.
- The county should make its comprehensive plan well known, up-to-date and useful so it becomes part of the fabric of decision-making.
- Consistency with the county comprehensive plan should be made a prerequisite of development within the county's jurisdiction.
- Encourage energy efficiency in site planning and building design.

Policies:

- The county acknowledges that the responsibility for accomplishing planning goals and objectives set forth in plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The county further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. In cases where a town

has not adopted a comprehensive plan, the county will continue to solicit a non-binding town recommendation regarding the proposed use.

Pichotta stated this is one of those ones that if you recall, in previous chapters, where we struck the words “non-binding”. Once again we will be striking them in this paragraph as well as the next.

- The county will approve rezoning or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not completed a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan. In cases where a town has not adopted a comprehensive plan, the county will solicit a non-binding town recommendation regarding the proposed rezone.
- The county will consider goal, objective and policy statements that “discourage” a given condition or use – as not prohibiting the specific action – but as a statement that the condition or use is not the preferred outcome, except when relating to rezones (map amendments). In cases of rezones, language discouraging the establishment of a use (or type of use) at a given location shall be interpreted as not supporting the establishment of that district at that location – if the town in which the rezone is proposed does not have a comprehensive plan. In cases where a town does have a comprehensive plan, the appropriateness of a proposed rezone shall be determined based on its consistency with that town’s plan.
- The county acknowledges that the primary responsibility for achieving plan objectives within urbanized communities remains with the municipalities. The county further acknowledges that it shares responsibility with the municipalities for achieving the plan objectives within the one and one-half to three mile area of shared jurisdiction.
- The county will encourage municipalities to adopt land use regulation that allow for the widest possible mixture of housing types, with particular attention paid to providing housing opportunities that meet the needs of the elderly, the low and moderate income households and the handicapped.
- The county will encourage each municipality to adopt land use controls that support the central business district of each community, if present.
- The county will encourage municipalities to consider land use regulations that include standards for landscaping, impervious surface areas and maximum lot coverage with the intent of protecting human and wildlife habitat from any detrimental effects of development.
- The county will encourage the use of clustered development of dwellings in an arrangement that encourages the permanent protection of open space and/or agricultural lands.
- The county will work with towns and property owners to establish, when appropriate, land use controls that preserve and enhance the agricultural industry.
- The county will encourage the establishment of town land use regulations and land use transitions designed to reduce potential conflicts arising from the proximity of agriculture to urban areas and other incompatible land uses.
- The county will work with the Wisconsin Department of Transportation to carefully examine proposals for primary highways and major arterials with respect to the impacts on conversion of agriculture land to non-agriculture use.
- The county will work with municipalities and towns, when appropriate, to prepare and adopt specific area plans and land use controls for the high-accessibility corridor areas that enhance the opportunity for economic development.
- The county will encourage municipalities and towns to prepare and adopt specific area plans and land use controls for sites conducive to economic development located along major water corridors, including the Mississippi River, for the purpose of resolving conflicts between the competitive interests of industrial uses and recreation and historic/cultural uses.
- The county will encourage municipalities and towns to adopt land use controls and promote the development of structures economic development parks that protect employment areas from incompatibility and land use conflicts, both internally to the park and externally to surrounding land uses.

- The county will encourage the Pierce County Economic Development Corporation to focus potential employers to areas in proximity to concentration of population within the county and within reasonable distance to transportation routes, so that Pierce County residents have the opportunity to minimize long, energy-absorbing commuting.

Pichotta asked if there are any thoughts or comments on this particular lengthy section. Sanden stated many of these are repeated. Pichotta stated there is some redundancy. Probably you have seen half of them before.

Regulatory Techniques

Goal:

- Encourage the development of regulations and enforcement techniques necessary to protect public health, safety, public and private property, the natural environment, water resources and the aesthetics and character of the county, through the establishment of regulations such as zoning, subdivision, floodplain, building and other ordinances or development standards.

Objectives:

- The potential for improving Pierce County's living, working and natural environments should be the standard used to determine the need and effectiveness of regulations.
- All regulations should be consistent with the plan and work to implement county goals and objectives.
- Only those regulations that are enforceable under realistic expectations should be considered.
- Environmental design criteria should be considered in development controls to protect natural, scenic, historic and environmental areas and minimize adverse impacts.
- All new developments should be encouraged to preserve significant natural features such as vegetation, waterways, floodplains, wetlands woodlands and scenic vistas.
- The county will strive to make its land use regulations, development and performance standards, approval process and expectations regarding plan compliance as clear and streamlined as possible.
- Efforts will be made to attain community goals while respecting private property rights.

Policies:

- The county acknowledges that the responsibility for accomplishing planning goals and objectives set forth in plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The county further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. In cases where a town has not adopted a comprehensive plan, the county will continue to solicit a non-binding town recommendation regarding the proposed use.

Pichotta stated this is one where we strike "non-binding".

- Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the public interest for conditional use permitting decision relating to that governmental unit or municipality.

Pichotta stated this is another one that we are proposing to amend a little bit. We propose to change it to: Pierce County will consider adherence to the goals and objectives; strike out "and policies", of an adopted or amended comprehensive plan to be consistent with the public interest. The reason for that being that a policy is, in a lot of cases, only one of many ways that one might accomplish a goal or objective that they cite. If the policy that the Town is proposing is over the top and onerous, it may be that we don't want to tie ourselves to that because there is a better way to accomplish it that doesn't get sideways with case law or other considerations. Ross asked we will go to goals and objectives and drop policies. Pichotta stated yes.

- The county will approve rezoning or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not completed a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan. In cases where a town has not adopted a comprehensive plan, the county will solicit a non-binding town recommendation regarding the proposed rezone.

Pichotta stated again striking "non-binding". The reason we tie a rezone to a Towns comprehensive plan, there is a need to be consistent with the Town's plan is because Town's that have a comprehensive plan have veto

authority over rezones so it makes no sense for us to move through the process and approve something that's not consistent with a towns plan. It just makes sense to make sure it's consistent with that on the front end. Chairperson Fetzer asked if all towns have a comp plan. Pichotta stated everybody but the Town of Union.

- The county will consider goal, objective and policy statements that “discourage” a given condition or use – as not prohibiting the specific action – but as a statement that the condition or use is not the preferred outcome, except when relating to rezones (map amendments). In cases of rezones, language discouraging the establishment of a use (or type of use) at a given location shall be interpreted as not supporting the establishment of that district at that location – if the town in which the rezone is proposed does not have a comprehensive plan. In cases where a town does have a comprehensive plan, the appropriateness of a proposed rezone shall be determined based on its consistency with that town's plan.
- The county will, when appropriate, strive to create processes and a fee structure that provides incentives to produce the activities or outcomes that the county wants to “encourage” and disincentive for activities or outcomes that the county wants to “discourage”.

Pichotta asked if the committee recalled a couple years ago they had a discussion about the fee structure and how to approach it and whether to use kind of market strategies to encourage those sorts of behaviors that we want to see and to discourage those that we don't? Rather than scrap that whole concept, what he is proposing to do is walk it back a little bit. Instead of how it was stated originally, the County will strive to create processes in a fee structure that provides incentives to produce... The County will, when appropriate, seek to create processes. When appropriate may mean that if we encounter the types of pressures that we saw in '04, '05 and '06, maybe at that point in time there will be a need to put some of these things in place, maybe not. Although it may be that we won't see that sort of pressure again in the next few decades. The reason for changing strive to seek is the word strive suggests a little bit more of a concerted action to make it happen, and seek generally means that we will explore the option.

- The county will continue to utilize land use controls, including site plan review procedures that regulate site development in a way that encourages compatibility between uses and an efficient development process.
- The county will continue to permit the use of density transfers, which allow for the development of dwelling at the same overall gross density, to encourage the retention of the greatest area of open space.
- The county will consider the adoption of transferable development rights (TDR's) procedures, which allow developers to purchase development rights from willing property owners. The use of TDR's must be limited only to those developments that implement state public policies. In order to encourage the preservation of the best agricultural lands, TDR's may limit the transfer of density to only those properties with lower productivity at the sending site.
- The county will encourage town land use regulation and land use transitions designed to reduce potential conflicts arising from the proximity of agriculture to urban areas and other incompatible land uses.
- The county will require adherence to standards that prevent erosion, sedimentation and adverse visual impact resulting from the modification of shorelines of rivers, lakes and streams.
- The county will utilize land use regulations such as zoning, subdivision, flood plain, storm water and wetland ordinances, to carefully regulate development in all areas, with particular reference to safeguarding environmentally sensitive areas and limiting development in these areas.
- The county will pay particular attention to the protection of environmentally sensitive areas and groundwater resources in its review of development proposals.
- The county will participate in groundwater protection planning efforts of local communities, as appropriate.

Sanden asked about the TDR one; In order to encourage the preservation of the best agricultural lands, should that be a comma, TDR's may limit the transfer of density to only those properties with lower productivity at the sending site. Staff agreed that it should. Pichotta asked if the committee has any thoughts or comments. Sanden asked if it would be prudent to mention any case where some issue is not addressed in a Town's Comprehensive Plan that we at the county would use our best judgment? Is that a necessary or prudent thing to put in this

document? Pichotta stated he almost thinks that's a given. Sanden explained that we have been talking about encourage and discourage and you reference the Town's Comp Plan a lot and talk about how they would have then solicit the opinions of them. He was thinking the one thing missing is what if that issue is not addressed in the Town's Comp Plan. Pichotta stated what has been interesting is often times issues are addressed in their comp plans and they don't actually reference it. We see that regularly. Either way that's fine. The elected officials use the comprehensive plan as a tool. Basically it helps validate their decisions and if they chose not to refer to certain sections for whatever reason, that is their prerogative. Holst stated some township plans are becoming more like zoning ordinances opposed to comp plans. We've got to have the latitude to interpret which it is. If they are trying to zone the comp plan doesn't carry water with him but if it truly is a plan and gives direction, then it carries a lot of weight. Sanden said "well stated". Pichotta asked if there is consensus to go forward with changes as proposed. Chairperson Fetzer asked if we need a motion. Pichotta stated consensus would be fine. Committee agreed to changes as proposed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Hopefully, you received in the mail a copy of the Health Impact Assessment. Sue Galoff, Public Health Director, sent an email stating; The Board of Health discussed the Health Impact Assessment of Industrial Sand Mining at their February meeting and are interested in having Audrey Boerner, HIA Specialist and author of the report to come do a presentation and thought perhaps we could have her speak at a joint meeting with the Land Management Committee if there is interest. She believes the grant runs through the end of March so we would need to get something scheduled before that. If there is interest please let her know so she can see when Audrey is available. Pichotta stated that he did hear from Sue and Audrey is available on the evening of our next Land Management Committee meeting. He did have a discussion with Mr. Aubart who is not present and he questioned the timing and wasn't sure this would have a ton of value given that we have a copy of assessment and also if we did hold it, he thought it would make more sense to hold it after the County Board changes have taken place. So it would be April or later but he thinks this is an opportunity that ends in March. He is looking for some direction, if the committee wants to have a joint meeting with the Board of Health to discuss the assessment we would do so at our next meeting. We've got one other agenda item that is renewal of County Materials – Spring Lake and we would do the next piece of the comp plan if we don't do this joint meeting. If we do the joint meeting, we probably will push off the comp plan until another date. Ross asked if it's OK with everyone. Sanden stated on the one hand it's important because we do have a lot of sand mining going on and on the other hand he saw no surprises in that report, kind of what we always thought. He can go either way. Holst stated he always relates back to the outdoor wood burner. They wanted to regulate outdoor wood burners and they had a whole list of stuff they wanted to invoke and they wanted somebody else to enforce it. He fears here is that they will want to start having input in land use decisions and a broader scope than just sand mines so what happens next. Do we look at where 90% of the airborne stuff comes from; farmer's fields, etc. This is a slippery slope, if we allow their foot in the door, how far in are they going to get. He is opposed. He thinks the committee can read this, come to the conclusion that it's not as big a problem as some people had it perceived to be and still seek their input when we feel it's needed. Sanden stated he is not adverse to that. Holst stated he thinks the committee has done a relatively good job of protecting the public's health. Sanden stated if there was something unexpected in that report then he would want to hear them. But it seems to him it's what they have been operating under the assumption of. Chairperson Fetzer stated it's what we've already known, nothing earth shattering. Sanden stated the only benefit would be to show due diligence and confidence that we delved into it as deeply as we could. He certainly appreciates Mr. Holst's comments as well. Holst stated he could go either way. Chairperson Fetzer agrees with Mr. Aubart to bring them in before the committee changes. Holst stated once the grant money runs out they have a little money left and they want to burn the grant. Pichotta asked what is the LMC's wishes? Ross stated no joint meeting. Committee consensus. Pichotta stated at the next meeting we have renewal for County Materials – Spring Lake and the next chapter of the comp plan.

Motion to adjourn at 6:45pm by Ross/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 2, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 16 th , April 6 th & 20 th , all in 2016.	Chair
3	Approve minutes of the February 17, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion/Intensification of Belle Vinez Winery, a conditionally permitted use, in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-76A, for Shannon and Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on review and update of the Goals, Objectives and Policies of the Management Chapter, relating to Planning and Regulatory Techniques of the Pierce County Comprehensive Plan.	Bechel
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(2/19/16)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, February 17, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Kevin Etherton, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: March 2nd & 16th, April 6th & 20th, all in 2016.

Approve Minutes: **Ross moved to approve the January 20, 2016 Land Management Committee**

minutes/Aubart seconded. All in favor with Fetzer abstaining because of absence at the last meeting.

Passed.

Chairperson Fetzer stated that item #4 has been stricken from the agenda for tonight at the request of the applicant.

Discuss take action to approve updated Land Records Modernization Plan and authorize/accept Strategic Initiative Grant.

Staff Report – Andy Pichotta: Each County participating in Wisconsin’s Land Information Program is able to retain a portion of the fees associated with the recording of documents in the Register of Deeds Office. These fees are placed into a Land Records Modernization Fund and are utilized to implement the priorities identified in a County’s Land Records Modernization Plan. A Land Records Modernization Plan establishes each County’s goals and priorities in making land records and information more accessible to the public and establishes eligible expenditures from the Land Records Modernization Fund and for State administered grant funds. Act 20, the biennial state budget for state fiscal years 2014-2015 resulted in numerous changes to the Wisconsin Land Information Program (WLIP). Changes are as follows:

- Initiative to create a statewide digital parcel map
- Increase in Land Information Funds at State level
- Increase County Base Budgets to \$100,000 per year and Training & Education Grant to a minimum of \$1,000
- Establish a Strategic Initiative Grant
- Increase frequency of update to Land Records Modernization Plan to every 3 years
- Establish mandatory benchmarks, deadlines and penalties

The establishment of mandatory benchmarks and timeframes resulted in the need to update the plan to reflect the new parameters. The draft plan was submitted to Peter Herreid, Wisconsin Land Information Program (WLIP) Grant Administrator, for a preliminary review. Several changes were made in response to Mr. Herreid’s review. A final plan must be submitted to the WLIP in March. Pierce County’s Land Information Council met in late October to review and approve the Land Record Modernization Plan and also meet with Mr. Herreid. Mr. Herreid discussed changes to the program and encouraged staff to submit an application for a \$50,000 Strategic Initiative Grant to assist the County in meeting the newly established benchmarks.

Pichotta stated that Keven Etherton, our GIS Specialist, was in attendance and asked him to briefly go through our current and future projects. Etherton stated the current projects: Aerial Photography or Ortho Photography as they call it. Ross asked where that name derives from. Sanden stated its Orthographic projection. Etherton stated we flew LiDAR in April and the same with Ortho Photography. Both of those projects are almost 100% complete. We are still waiting for some contours from one of the companies that are creating the contours for us. Pichotta asked what the timeframe for that is. Etherton stated hopefully in the next week or two. Pichotta stated what we will have on our website will be two-foot contours for the whole County. Etherton stated we maintain and update Land Management and Zoning information. Maintain the web mapping site and map services. We maintain the Sheriff's Department, Dispatch Center and mobile data. Remonumentation is Louie's part of the gig. COGO parcels is what ProWest is helping with right now. We provide GIS Data to the public, State, local and private organizations and agencies. We do permits in Permit Tracking. Nugget Lake flood warning system, the migration to the newer ArcGIS from previous mapping software. The future projects we have in mind are ArcGIS on-line, we have started some of that and it is currently on our website, GIS Mobile Data and ArcGIS Mobile Data for Emergency Management as well, Sheriff's Department looking at doing crime analysis mapping, GIS Data and map Maintenance/Creation and looking at free GIS Data available on our website for downloads and would like to do scanning of large format survey documents which we hope to do in the next year or so to put on our website as well. Pichotta stated one of the things Kevin mentioned is the potential for free GIS Data available on the website and that is basically the direction that other counties and municipalities have gone. We still have a fee schedule that is about a decade old now where we were charging for data by the megabyte, which is now not very much data. So we will in all likelihood, in the not too distant future be bringing through the Land Information Council a recommendation regarding fees that we should charge for data, or lack of fees perhaps. To do so will result in the need for us to take a look at the resolution which establishes fees for the department. We probably won't bite off all of the fees but perhaps just do a resolution to amend the portion relating to data. Etherton stated that a lot of counties, right on their mapping website, you can just pick a layer and download it. Since we are already giving the parcels away to the State, anybody can get that data for free right now, granted it could be up to a year old if you go through the State. If you came through us, it would be up to date as of a week or so. Pichotta stated he doesn't know if it's publically available yet, but there is a statewide map where in the State of Wisconsin you can zero in on any particular part and look at parcel data, parcel maps and see who owns the land. Any questions about the plan? We could have Kevin go through page by page but he doesn't feel it's necessary unless there are questions. Sanden asked if you were to charge fees, how would that work on the website. They would be billed by how much they download? Pichotta stated his hunch is that they will follow the lead of other counties and municipalities, the recommendation will probably ultimately be not charge. Sanden stated he doesn't know of any instances where they do charge and you would think that is taking a financial hit but it is also freeing up a lot of work hours where the County Clerk doesn't have to dig up all the information by hand. It will actually result in a savings even though accessing the data doesn't pay directly. Etherton agreed and stated he is exactly right and when people call him, they want it a specific way and we charge them for it but it saves time for him not to do that. Sanden said what he was looking for, he saw. He is glad that we are going into oblique imagery. That is really good for assessors to see the fronts of buildings rather than just the roof line. That is really helpful for emergency services. They can see what they are getting into. The one thing for a future goal perhaps, have you thought about linking into the national grid? Etherton stated that was mentioned at some of the conferences that he has gone to. Goodhue County or Dakota County is doing that. He talked to the gentleman there who is in charge of GIS, Randy Knippel, and he also brought it up to Gary Brown and he was unaware of it. He did create an on-line GIS with the grid on it just in case there is an emergency, all the power goes out, we would have that available. Granted who knows how to use it, we don't know. Sanden stated the national grid is what the military uses. The beauty of it is, if you have a tornado come through and everything is wiped out, emergency services can still find where they are going just the way the military does. He doesn't think it's something we need to jump into immediately but maybe in the future. Ross asked if we have to provide our information to the federal data base. Sanden stated no, think about how we have coordinates systems like latitude and longitude. The national grid is just like another coordinate system, so we would just overlay it onto our data. Etherton said

what he needs to do is create maps if there ever was an emergency, that they are available or an on-line off the server here where someone can go and look at that grid. We just need to educate them on how to use it, is the issue. It's real easy for him to do. We just need to educate people in the field. Holst stated he thinks it's worthwhile. We have all the information. Let's use it however we can.

Staff Recommendation: Staff recommends the LMC approve the updated Land Records Modernization Plan and authorize/accept available Strategic Initiative Grant Funds.

Pichotta stated we also became aware late in the year last year that a strategic initiative grant was available. It's an extra \$50,000 for us to meet the benchmarks that we have to meet by 2017. So that will enable us to get all of our COGOing done. Holst asked how far off are we? Pichotta stated we will make it. Etherton stated surveying wise we are ahead of schedule, Louie got Oak Grove done early and he is working on Clifton. He was out there today and he did two corners. ProWest, the company that does our parcels, they are working on Oak Grove right now.

Sanden moved to approve the Land Records Modernization Plan and authorize/accept Strategic Initiative Grant/Ross seconded. All in favor. Passed.

Discuss take action on review and update of the Goals, Objectives and Policies of the Management Chapter, relating to Finance & Budget, Land Acquisition, Public Works, Public/Private Relations, Education and Information, of the Pierce County Comprehensive Plan.

Staff Report – Ryan Bechel: The Wisconsin State statutes mandating county comprehensive plans place a significant degree of emphasis on implementation. For a comprehensive plan to be successful and the community's vision of the future to come to fruition, action needs to be taken towards implementing the policies set forth in the various elements of the plan. Recognizing the significant impact the implementation element has on the successful execution of a comprehensive plan, Pierce County developed a series of "management" goals, objectives and policies that serve to support and guide the implementation strategies developed by the plan. The Urban Land Institute has described the management of growth and change as "the utilization by government of a variety of traditional and evolving techniques, tools, plans and activities to purposefully guide local patterns of land use, including the manner, location, rate and nature of development." Growth can be characterized as the fluctuating "dimensional" aspects of a community such as population, economic productivity and development. Alternatively, change relates more to the intangible attributes of a community, often described as its "character." Growth can influence change and change can occur whether growth is absent, positive or negative. Implementing a plan almost always requires that a proactive position be taken on the management of "growth" and "change." Implementation strategies have to be adaptable to future growth and change the county may experience over the duration of the plan. Whereas the forthcoming "Implementation" element of the comprehensive plan consists of the specific "line-item" implementation goals, the purpose of this element is to develop management provisions that guide and support implementation of the plan and position the county to proactively manage future growth and change. In reviewing the existing management goals, objectives and policies the county should assess whether additions or modifications are warranted to position Pierce County to successfully implement the comprehensive plan in the coming years.

Finance & Budgeting

Goal:

- Continue financial monitoring, fiscal analysis, revenue projections and mid-range budgeting to ensure financial health of the county and the equitable distribution of public costs between current and future residents and businesses.

Objectives:

- The county should minimize the cost of infrastructure and public facility expansion through integrated planning and capital improvement programming.
- The county should encourage intergovernmental approaches to address the cross-jurisdictional impacts of major new developments.

Policy:

- The county will review and adopt only those management activities or programs that are adequately staffed and funded.

Pichotta stated something to keep in mind especially with these chunks that we are dealing with tonight, there is a consistency requirement for the comprehensive plan and some of the decisions that are made by the county, Finance & Budgeting, Land Acquisition, Public Works are not one of them. So the consistency perspective, really relates to the application of zoning and land use type regulations. While these are things, that ideally, the county would do as they consider various things, we are not actually held to them in a strict sense. Pichotta noted that we have one suggested policy that may be appropriate to add to this particular section and that is at the end of the staff report: The County will seek to identify and evaluate cross-jurisdictional and multipurpose use opportunities when planning community facility and infrastructure improvement projects. Basically, when we are going to spend some money to do something, at least consider if there is the potential for multi-agency, multi-county, multi-whatever use of that facility or infrastructure, any thoughts or comments on this? Sanden asked if this is the implementation. Pichotta stated no, basically, all of these policies, a lot of them suggest an action of some sort. What we are going to do when we are at the end of this is we are going to conduct a series of open houses to present this. We are also going to do a survey of sorts through our website to try to help prioritize or understand the areas that residents or elected officials from the town level, feel ought to be a priority. That input will be given to the committee to help us identify an implementation plan for the next five years. Sanden asked if we ever see the CIP, Capital Improvement Program, is that something this committee handles? Pichotta stated typically not. Sanden stated to your point, he thinks the cross-jurisdiction fits right in with the first objective. Bechel continued reading the staff report.

Land Acquisition

Goal:

- Consider prudent acquisition or public control of property needed for rights-of-way, facility sites, parks and open space.

Objectives:

- The county should consider acquiring property, rights-of-way or easements in advance of identifiable needs in order to reduce costs and reduce the need to exercise eminent domain.
- County acquisition plans should maximize joint development potential (e.g. school/park sites; fire/police/community centers) to accommodate count and regional needs.
- The county or other responsible agencies should consider acquiring environmentally critical lands wherever the natural environment cannot be protected through regulation.

Policy:

- Land acquisitions will be made when in the best long-term interest of the county and a specific need is identified.

Pichotta asked if there are any thoughts, comments, or concerns on this section? Ross asked if there are any major changes. Bechel stated everything that he is reading is the existing plan as it is currently. Holst suggested to go to the one sentence you are changing and let's move on. Pichotta stated that the one suggested addition was already covered. **Holst moved to approve the proposed update of the Goals, Objective and Policies of the Management Chapter, relating to Finance & Budget, Land Acquisition, Public Works, Public/Private Relations, Education and Information, of the Pierce County Comprehensive Plan. Ross seconded. All in favor. Passed.** Pichotta suggested that if committee members had any further thoughts or suggestions on this section that they should feel free to call him.

Discuss take action to authorize staff to replace the 2002 Ford F150 and to declare said vehicle surplus.

Staff Report – Andy Pichotta: As part of the Department's 2016 budget, \$30, 000 was authorized for the purchase of a vehicle to replace the 2002 Ford F150 currently utilized by the Department. Proposed specifications for the new vehicle are:

Half Ton Pickup Truck

4 wheel drive

Extended or Crew Cab

Staff is seeking authorization to solicit bids from local truck dealers for the new vehicle. Staff is also requesting that the LMC declare the 2002 Ford F150 to be surplus, which will enable the vehicle to either be traded-in or sold outright. Approval by the Finance and Personnel Committee will also be sought.

Staff Recommendation: Staff recommends the Land Management Committee authorize staff to solicit bids for a new pickup truck for the Land Management Department, consistent with the Department's approved budget and also declare the 2002 Ford F150 to be surplus equipment.

Ross moved to approve the authorization of staff to replace the 2002 Ford F150 and to declare said vehicle surplus/Aubart seconded. Aubart asked if when they solicit bids, are you going to do the state bid? Pichotta stated that we surely can. Aubart suggested checking with Ewald. Ewald Motors has the state bid. Holst stated we saved a bunch of money for Solid Waste when we went there and you can transfer the warranty to the local dealer. It's a win-win situation. Aubart stated it saves a couple thousand bucks. Holst stated the way the other one was set up it was \$2,000 or \$3,000. Chairperson Fetzer asked if Andy has checked prices yet. Pichotta stated that he has not done much research but that he is confident we will be able to get what we are looking for, we don't need anything fancy, just need a pickup truck. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Request for a CUP for the Expansion/Intensification of Belle Vinez Winery.
Another chapter of the comp plan.

Motion to adjourn at 6:28pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, February 17, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 2 nd & 16 th , April 6 th & 20 th , all in 2016.	Chair
3	Approve minutes of the January 20, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-40A, for David and Karen Bunch, owners on property located in the NE ¼ of the NW ¼ of Section 12, T26N, R17W, Town of Ellsworth, Pierce County, WI.	Lund
5	Discuss take action to approve updated Land Records Modernization Plan and authorize/accept Strategic Initiative Grant.	Etherton/Pichotta
6	Discuss take action on review and update of the Goals, Objectives and Policies of the Management Chapter, relating to Finance & Budget, Land Acquisition, Public Works, Public/Private Relations, Education and Information, of the Pierce County Comprehensive Plan.	Bechel
7	Discuss take action to authorize staff to replace the 2002 Ford F150 and to declare said vehicle surplus.	Pichotta
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(2/5/16)

- **Revised February 11, 2016 @ 2:17pm**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, January 20, 2016

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta, Ryan Bechel and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: February 3rd & 17th, March 2nd & 16th, all in 2016.

Approve Minutes: **Ross moved to approve the January 6, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request by the Town of Union for an extension to the timeframe that a town has to generate a recommendation for a conditional use permit application, per Land Management Committee policy (6.5.13).

Staff Report – Andy Pichotta: At the LMC October 21st meeting, the LMC granted the Town of Union a 60 day extension to the timeframe within which a town has to generate a recommendation for Muskie Proppant’s proposed nonmetallic mine. This initial extension was requested to allow for additional information to be solicited from Muskie Proppant and for input to be sought from the Village of Plum City and extended the Town’s response time frame to January 25, 2016. The Town had, prior to the extension being granted, requested additional information from Muskie Proppant regarding their proposed mining operation. Muskie Proppant, on November 12, 2015, responded to the questions asked by the Town. On December 5, 2015, the Town of Union requested additional information and clarification of Muskie’s submittal (Town’s request to Muskie is attached). As of January 13, 2016, a response to the Town’s second request by Muskie Proppant had yet to be received. The Town of Union is now requesting an additional extension to the timeframe within which they must make a recommendation. The Town is of the position that it cannot make a meaningful recommendation until they have a better understanding of the mining activity that is proposed. The Town Recommendation Policy adopted by the LMC on June 15, 2013 is listed in the staff report.

Staff Recommendation: Staff recommends the LMC consider and act upon the Town of Union’s request for an extension to their timeframe to generate a Town Recommendation. Given that it is unknown when Muskie Proppant will respond to the Town’s request for information or the adequacy of that information, it is recommended that a 60 or 90 day extension be granted.

Pichotta stated representatives of the Town are here as are folks with Muskie. Chairperson Holst invited John Krings forward: John Krings, Supervisor, stated their Chairman is coming but not here yet. They are asking for an extension because they haven’t gotten a letter back from December 7th. Chairperson Holst invited Kenny King to respond: Mr. King stated they received the letter. He had to put the engineers on hold because of the Town Licensing Ordinance that was put in place. Obviously, they put an ordinance in place that will not allow them to mine there. He convinced management to allow them to move forward with the project so they will have answers to the questions real soon, he can get the engineers on it. Chairperson Holst asked if they are opposed to the Town getting an extension. Mr. King stated they are. Chairperson Holst asked if they have answered the Town’s questions. Mr. King stated they answered the first round of questions and he feels that the questions that they are asking pertaining to volumes and such have been provided in the initial information that

they gave to them. Ross asked about the first round of questions, not the ones dated on December 5th. Is that the ones you are referring to? Mr. King stated no, that is the second round. Ross stated on the first round, was there feedback on that or just a second round of questions. Mr. King stated just a second round of questions. Ross asked if there is no communication otherwise. Ross asked Mr. Krings on the first round of questions, it just was not satisfactory then? Mr. Krings, yes, they had more questions. That is why they want the extension until they answer the questions. Ross asked Kenny, you are opposed to the extension just because it's time delays? Mr. King stated it's time delays, basically many of the questions are answered in that booklet that they provided. If they would call or email him with a question here or there or set up meetings with him, he is open, he will sit down every day if he needs to. Ross asked if any of the second round of questions duplicates the first round. Mr. King stated basically they were, the majority of the questions are pretty much asking the same thing. He can send them to the engineer's office but there is so much of that they wouldn't understand. Mrs. Krings stated that communication only goes through the clerk and she hasn't received any response. Pichotta noted that staff had received a courtesy copy of the application. Our assessment was, if it was presented to us as an application, we too had additional questions that we felt needed to be answered. So if we had been submitted this application we would have requested additional information including some of that which the town requested. Mr. King stated that he would prefer that they express their concerns with him instead of sending him another round of questions. He told Andy earlier, he could draw them a picture of how he plans on doing it. They just keep asking him the question, he gives them an answer - fifteen acres. Chairperson Holst stated his suggestion is that we extend it 60 days and tell you to get going and talk to them Kenny. You will work it out and when you get it worked out they might be back in 30 days. The quicker you two can sit down and talk the better things are. Mr. Krings pointed out that it was stated in the first letter that correspondence would be only through the clerk. Chairperson Holst stated he thinks that is where you should send correspondence - to your Town Clerk and then the clerk needs to get that out to the other board members. Mr. Krings stated that if you don't have things written down then it's he said, she said - and that doesn't work. Sanden asked Andy as a point of order, if they were to sit down and have an informal discussion between the two parties, is that legal or is that considered a meeting that would have to be posted. Pichotta stated if there was a quorum of the Town Board present then it would have to be noticed. The approach they are taking where they are trying to steer communication through an official channel makes a lot of sense. Then you don't end up with he said, she said, which it appears we are ending up with anyway. Sanden stated a lot of time written communication aren't as efficient as sitting down and hashing out face to face. Ross stated often times when you answer questions in a format like this, what it does is prompt additional questions. So you are spending a lot of time; Kenny's answer might trigger yet another thought pattern or concern that could be remedied as say just a sit down conversation. In a situation like this, having a formal meeting, however you wish to do it is your choice, and airing out these concerns and ensure it is documented by the minutes and so on. He thinks Kenny's concerns are also legitimate. As you are building business and business models, time becomes of the essence. Where time may not be as critical on the Town's side, because you are not having to produce revenues and so forth. In able to be respectful of both, Kenny and the Town, taking the opportunity and the time to sit down and get this done, would save everybody a lot of headache and also move things in the right direction. He feels that is important. **Aubart moved to grant a 60 day extension to the Town of Union to generate a Town Recommendation/Sanden seconded.** Chairperson Holst stated he is of the belief that if you can sit down and talk and go through your questions, and as more questions are generated, and you can answer them, Kenny, perhaps they can get this deal wrapped up quicker than 60 day period and come forward. Closer to what you would like to see, so compromise and communication is what he would like to see out of this. Bring forward something that we can accept without making you wait when you get here too. **All in favor. Passed.**

Discuss take action on review and update of the Goals, Objectives and Policies of the Intergovernmental Cooperation Chapter of the Pierce County Comprehensive Plan.

Staff Report – Ryan Bechel: Intergovernmental Cooperation: 26 local governments operate within Perce County's borders, including 17 towns, 6 villages, 2 cities and the county itself. Pierce County also shares borders with 6 other counties (3 MN, 3 WI) and the numerous towns of those bordering counties. As the

principal governmental entity in the county, Pierce County plays a critical role in helping to foster cooperation among local governments as well as assisting in resolving conflicts that may arise. Planning issues such as housing, natural resource protection, economic development and land use rarely confine themselves to arbitrary jurisdictional boundaries; therefore, the decisions, plan and policies of one community can impact neighboring jurisdictions. The most successful and cost effective governmental entities work cooperatively with other units of government and the private sector in order to efficiently meet the needs and demands of the citizens they serve. Intergovernmental cooperation can be as simple as sharing ideas, expertise and information or involve more complex formal agreements and sharing of resources such as equipment, buildings, staff and funding. Benefits of these cooperative ventures include reduction of costs, expanded services, more efficient government and reduced conflicts among government entities. The challenges inhibiting governmental cooperation include reaching and maintaining agreements, balancing power and addressing local self-preservation and control issues. To accomplish its comprehensive planning goals, Pierce County will need to cooperate and coordinate effectively with its neighbors, counterparts and partners. The Intergovernmental Cooperation element of the comprehensive plan review will focus on reflecting on the existing Goals, Objectives and Policies to consider opportunities to support existing relationships and evaluating potential new avenues to enhance intergovernmental cooperation amongst Pierce County's governmental entities. The existing Intergovernmental Cooperation Vision: By the year 2035, intergovernmental cooperation efforts have enabled Pierce County to establish partnerships with municipalities, towns, state agencies and school districts to provide coordinated cost-effective services. Through cooperation with municipalities and towns, the county has preserved its rural lifestyle while providing a unique blend of industrial, commercial and residential development. Not a lot of data to look at for Intergovernmental Cooperation, more of an open discussion format and just kind of look at the goals, then have a discussion and then the objectives and policies.

Existing Goals, Objectives and Policies

Goal:

- Encourage a team approach to comprehensive planning involving state, regional and county agencies and municipalities and towns for the most effective, representative, decision-making process.
- Work with other units of government to seek efficiencies and economies of scale in providing services, while recognizing the autonomy of each.

Pichotta stated given there are a good number of Objectives & Policies is there any thoughts to the two existing goals. Sanden stated he doesn't see the second goal translated into an objective or a policy. The first one is very well covered. He doesn't know how much room there is for sharing of services. Finding efficiencies, just the lack of it being followed through on the objectives and policies, he did note that. Pichotta asked do you still feel that is a worthwhile goal? Sanden stated the County is a little different beast for him, he can certainly see where two Townships could cooperate and share equipment or maybe share personnel. At the County level, do we have those same kinds of abilities? Pichotta stated at the County level we may not have the same kind of abilities exactly, however, it may be we could attempt to foster those sorts of relationships. He thinks it's still a worthwhile goal. Chairperson Holst stated quite often if Dunn County has a hole patcher, Pierce County rents it. We will do trucking for St. Croix County. So we have some intergovernmental cooperation with Highway Department. We've got joint jurisdiction with law enforcement, mutual aid. Pichotta stated you have to think about this from not only a land use perspective, because, from a land use perspective, opportunities are likely limited. Chairperson Holst stated the Health Department does things, Human Services does things with other counties. Intergovernmentally at the County level, we are doing a fair amount. Through the townships quite often, Highway will do work; build roads and maintain for three townships. Those townships have no equipment, no crew. There is mutual aid with the different police departments. Sanden stated it sounds like it is happening quite a bit. Chairperson Holst stated a fair amount but there is probably room for more. Sanden asked are you limited as far as sharing on State programs as an agent of the State, are you limited in anyway? Does the State say that you in Pierce County have to provide these services for your residents; St. Croix County has to provide it for their residents and the two shall not. Pichotta stated in cases of private onsite wastewater treatment staff, it says that each county shall have this staff on board. He doesn't necessarily preclude the

county from sharing those as long as the County had them in some fashion. Typically it does say that the county shall provide certain functions. But he doesn't think that would preclude them from sharing that service with adjacent county. Sanden stated maybe something in the objectives to document, he is pretty impressed with what you came up with just spur of the moment, document where we are cooperating and explore additional. Pichotta stated when Pepin County didn't have a POWTS Inspector; we did provide that service for them. We did get paid but we were in a contract with them just because that only made sense. Sanden stated in a time of tight budgets it might be nice to document it just so if an interested party does ask, how are you being more efficient with our tax dollars, you can show them.

Objectives:

- The County should encourage land-use, boundary and administrative agreements between municipalities and between the county, towns and municipalities, in an effort to eliminate defensive municipal annexation or private developers taking advantage of municipal or county approval processes.
- County agencies and town and municipal authorities should open direct channels of communication that promote the two-way exchange of ideas and meaningful dialogue on issues of importance to either the county or the towns and municipalities.
- The County should encourage a variety of approaches to coordinate local planning and development practices and to help resolve conflicts between communities, including encouraging the use of intergovernmental agreements, improved notification procedures and cross-adoption or acceptance of plans and by sponsoring intergovernmental task forces on specific planning and land use issues.
- Encourage each agency within the county that reviews or approves development proposals to strengthen the public hearing process by requiring, prior to the decision-making process, conspicuous notices that provide the relevant information, such as maps about proposed developments, potential impacts and the ability to participate to residents and surrounding government agencies.
- The County should play a prominent role in managing the land-uses around airports, including the investigation of an Airport Zone.
- The County should support the efforts of the Pierce County EDC in working with local municipalities, chambers of commerce, regional industrial associations and state agencies to encourage the retention and expansion of existing businesses and industries in Pierce County.

Pichotta asked if the committee had any thoughts or suggestions on Objectives. Chairperson Holst stated the last one: Pierce County should support the efforts of the Pierce County EDC in working with local municipalities, etc, when it is relevant. Ross asked if there are any examples of that so far. Chairperson Holst stated we fund them annually. Ross stated no, he is asking any other involvement that Andy is aware of. Pichotta stated he has met with Ellsworth Industrial Council on occasion. Ross asked how would you define relevancy? Chairperson Holst stated when it's for the good of the county as opposed to the good of a few people in the county. That's his opinion. Pichotta stated the second to the last one; dealing with the investigation of an Airport Zone; we have played a role in that. We still haven't heard from the commissioner of the Minnesota Department of Transportation regarding the adequacy of that proposed zoning ordinance that would have been adopted and that that the City of Red Wing wanted us to administer. That is still out there. Sanden stated given that it is still an issue we should probably leave it in the comp plan just so we have that covered in the comp plan.

Policies:

- The County acknowledges that the primary responsibility for achieving plan objectives within urbanized communities remains with the municipalities. The County further acknowledges that it shares responsibility with the municipalities for achieving the plan objectives within the one and one-half to three mile area of shared jurisdiction.

- The County will, when appropriate, act to assist in municipal planning and development practices and assist in resolving conflicts between communities toward the benefit of the county as a whole and toward its adopted planning and management goals and objectives.
- The County will encourage the development, revitalization and redevelopment of urbanized communities.
- The County will encourage municipalities and towns to adopt land use regulation that allow for the widest possible mixture of housing types, with particular attention paid to providing housing opportunities that meet the needs of the elderly, the low and moderate income households, and handicapped.
- The County will encourage each municipality to adopt land use controls that support the central business district of each community, if present.
- The County acknowledges that the responsibility for accomplishing planning objectives set forth in plans developed by towns subject to County zoning lies jointly with the Town and Pierce County. The County further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. In cases where a town has not adopted a comprehensive plan, the County will continue to solicit a non-binding town recommendation regarding the proposed use.
- The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not completed a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan. In cases where a town has not adopted a comprehensive plan, the County will solicit a non-binding town recommendation regarding the proposed rezone.
- The County will encourage consistent procedures for municipal management of growth and change.
- The County will encourage municipalities to adopt land use regulations that include standards for landscaping, impervious surface areas and maximum lot coverage with the intent of protecting wildlife habitat from detrimental effects of development.
- The County will work with municipalities and towns, when appropriate, to establish boundary agreements and other mutual planning actions that discourage the premature or inappropriate annexation of lands.
- The County will discourage the annexation of land not governed by adopted municipal comprehensive plans.
- The County will work with municipalities and towns to prepare and adopt specific area plans and land use controls for the high-accessibility corridor areas that enhance the opportunity for economic development.
- Ensure that towns subject to county zoning understand the role of town plans and ordinances in county land use processes, including implications of statutory authority and land use case law (e.g. responsibility for decisions regarding conditional use permits, lack of town plan authority over permitted uses, etc.).

Pichotta stated that there are a large number of policies, and there are a couple things to point out. Middle of the page; The County acknowledges that the responsibility for accomplishing planning objectives set forth in plans developed by towns subject to County zoning lies jointly with the Town and Pierce County. The County further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. In cases where a town has not adopted a comprehensive plan, the County will continue to solicit a non-binding town recommendation regarding the proposed use. He would suggest striking the word non-binding in there, simply because it's a little bit confusing. For example the next one too, he would suggest it be struck there. The reason, especially for rezones, why we ask for a Town Recommendation regarding a proposed rezone is because Towns that have adopted comprehensive plans have veto authority over rezones within their borders. It only makes sense for the County to find out their support

based on their comprehensive plan prior to taking action on it simply because it makes no sense for the County to run it through the process only to find it's not consistent with the Town's Comprehensive Plan. In that particular case, if a Town doesn't have a comprehensive plan and they make a recommendation, they're probably going to make that recommendation not only on what they want to see but he would hope they would review our comprehensive plan and attempt to apply it to it. But our comprehensive plan has some statements regarding the appropriateness of the expansion of zones and also appropriate locations for possible commercial, industrial spots say along State Highways and intersections with County Roads. So he would encourage those to be struck in those cases. He thinks the one good thing about the process we have now, where we request Town Recommendations and we attempt to further the goals and objectives of the Town's Comprehensive Plan. The fact that we have Town's referring to their comprehensive plan when they consider land use decisions that are occurring within their borders is a very good thing. Especially considering it wasn't that long ago when County Planning was not very well accepted at all. In fact that is a tremendous step forward that we actually have them participating in the process. As far as the last policy; Ensure that towns subject to county zoning understand the role of town plans and ordinances in county land use processes, including implications of statutory authority and land use case law (e.g. responsibility for decisions regarding conditional use permits, lack of town plan authority over permitted uses, etc.). That was something that Sarah Palodichuk, Chair of Oak Grove, brought up at the last meeting. Asking for more educational opportunities where we can make sure the town boards are aware of the roll that they can play, the roll that their plans play and the need to update their plans occasionally to reflect things as they change. That is probably something we will be proposing an implementation step when we get done working our way through these sections. He would note that the next section that we will be delving into after this one, this one starts to touch on the County/Town relationships. The next one is Management Policies for the County, which delves into it in a greater degree, so we will be further defining and refining some of the statements that relate to the weight placed on town recommendations, etc. Ross stated if the policies were numbered it would be item #4, he was at a meeting about a year ago and they were talking about a handicapped ramp and there was a gentlemen there whose daughter was handicapped and he said the more common term today versus handicapped is physically challenged. Whether or not the committee wants to change it or not he just wanted to bring it up for discussion. There were some negative overtones to some folks. Pichotta stated he has no issue with that change if that is how it is more appropriately referred to, does the committee agree? Committee agreed with word change. Pichotta asked if the committee had any other thoughts, comments or concerns. Sanden stated he thought it was very thorough. Pichotta stated there are some folks from a variety of towns present, maybe they have some concerns. Sanden stated that he is assuming, not having the entire plan in front of him, these policies that you have mentioned here are also reflected in other elements like the land use element and the economic element. Pichotta stated that is correct. Diana Smith, River Falls Chairperson, stated she came mostly to see how the committee was going to address the concerns that Sarah Palodichuk addressed at the last meeting. It really is helpful for the Towns if there is some point where they can understand what is going on. Even though they are not covered by County Zoning, they are still very much affected by it and she would love if there would be some time when the Towns and the County could sit down and we could hear what's going on and what the changes are, what the plans are, what the hot topics are. There are so many things because we function in your own little world and many of us are doing other jobs besides working in the Town capacity, to understand it. One of the things, the process in land use, so that we aren't duplicating efforts so someone that comes and wants to do something doesn't have to meet the Town objectives and then have to meet the County objectives. So we are aware of them when someone comes to us with an issue. How can we make this work for the good of everybody? Some of the things that are working really, really well, when their Town truck broke down, she could call the County and ask if they have a truck and a driver that they could pay for and use in order to get their roads plowed. Certainly on working on their zoning plan, Andy and his office has been so incredibly helpful that we couldn't move forward without their knowledge. There are many, many pieces out there that are working really well but she bets not a lot of people know that. Pichotta stated as part of this process there will be a series of meetings held at the end to present what we have discussed and what the committee has recommended prior to adoption. He thinks she is suggesting something more than that, that there almost be an information sharing mechanism somehow. What one Town is dealing

with, other Towns are dealing with the same thing and perhaps there is something to be learned and shared. Mike Miller, Trenton Township, stated he feels that sometimes not a lot of weight is placed on their conditional use permit recommendation. Some of the townships feel, you struck on that earlier, Jeff, what is best for the County versus a few, what do you classify as a few, where do you cross that line? For a whole township, is that considered a few out of the County? Where do you set a guideline for that? That has always been a gray area that hasn't been defined. Chairperson Holst stated that is a complicated definition, the case he was referring to earlier, it was a few, less than 3, 4, 5 people. Ross stated it wasn't a Town issue that he was referring to. It was a core group of people, nongovernmental that had some specific concerns. Chairperson Holst stated every Town, if you come forward with a plan and you have the goals, objectives and policies to back up what you are coming forward with, you pretty well have your own self-determination. Pichotta stated he is struggling to think of where the Town of Trenton has made a recommendation that we didn't follow. Mr. Miller stated that isn't what he said, he is wondering where between the County and the Townships, where you cross that magic line at when you consider what is good for the whole County versus a few. Ross stated he thinks, in the time that he has spent here, we do take very seriously recommendations that do come forward and often have found ourselves in situations where we follow those recommendations. He thinks in definition of a few would be a difficult thing to address, because he cannot cite an example either, during his time here. In all the decisions that they have made, often hot button issues that come forward, they are very well vetted and we get community turnout. He can think of one, in a winery, where the opposition to it was very vocal but not very specific. That made a very challenging time but from the Town's perspective it was different in terms of recommendations. Chairperson Holst stated his reference involved the Pierce County EDC working with local municipalities, chamber of commerce's at a meeting he went to, he was waylaid by a group of people asking specific questions about a specific part of the County and they wanted the County's blessing to go over and above what would have been for the good of the County for the good of two or three people so they could sell their house so they could do this, they could do that. That's what he was making reference too. Otherwise, if Towns have a plan, if they can back up their decision with their plan, and they do it in a timely manner, he doesn't know of anytime they have ever overridden anything. Pichotta stated he can't think of a circumstance where that has occurred. He noted that he is not sure he understands Mr. Miller's point. Mr. Miller stated we will leave it at that. Chairperson Holst stated he feels you did alright on this section. Committee consensus to approve as presented.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Brad Roy to attend a seminar in Eau Claire on February 2nd, continuing education on his POWTS/Soil Tester Certification. The fee will be \$25.00 and he will utilize a County vehicle. **Aubart moved to approve the travel/training request for Brad Roy for February 2, 2016 for POWTS/Soil Tester Certification continuing education/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

We only have two items, one is to authorize replacement of the truck and the other is the comp plan section. If you want to meet for that we could or we could push both of those items off two more weeks. Committee consensus to meet on February 17th.

Motion to adjourn at 6:50pm by Ross/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 20, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 3 rd & 17 th , March 2 nd & 16 th , all in 2016.	Chair
3	Approve minutes of the January 6, 2016 Land Management Committee meeting.	Chair
4	Discuss take action on a request by the Town of Union for an extension to the timeframe that a town has to generate a recommendation for a conditional use permit application, per Land Management Committee policy (6.5.13).	Pichotta
5	Discuss take action on review and update of the Goals, Objectives and Policies of the Intergovernmental Cooperation Chapter of the Pierce County Comprehensive Plan.	Bechel
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(1/08/15)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, January 6, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Ryan Bechel, Louie Filkins and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: January 20th, February 3rd & 17th, March 2nd & 16th, all in 2016.

Amend approved minutes of the October 21, 2015 meeting. **Sanden moved to approve the amended October 21, 2015 Land Management Committee minutes/Ross seconded. All in favor. Passed with Fetzer and Holst abstaining because of absence at the last meeting.**

Approve Minutes: **Ross moved to approve the November 4, 2015 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Fetzer and Holst abstaining because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Heavy Industrial Use (Nonmetallic Mining Wash Plant and Processing Facility), pursuant to Pierce County Code Chapter 240-37E by Monarch Paving Company, agent for Michael A. Johnson, owner on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Monarch Paving Company forward: Tony Tomashek, Vice President of Mathy Construction, Milestone Materials speaking on behalf of Monarch Paving, stated along with him, here tonight are Candy Anderson, Geologist and Permit Specialist with Monarch Paving and Milestone, which are divisions of Mathy, Brian Gosse, from Monarch Paving, he is the area guy at the Hager City plant and Bob Servais, Geologist and Hydrogeologist with Mathy. He is here to answer any groundwater or well questions that you might have. Mr. Tomashek explained the purpose of the request is to expand the stockpile area at the asphalt plant on Hwy 35 and 830th Ave in the Town of Trenton. It is currently owned by Mike Johnson and his wife. They have a purchase agreement in place with Mike if all of their permitting and zoning goes through Mathy will buy that property. They are expanding approximately 16 acres. Approximately 49 acres that Mike owns, they are going to buy the entire property but their expansion is only going to be 16 acres. Currently 38 acres is zoned Industrial and the balance is a residential zoning to the east of their current plant. Today they stockpile on County property and some of Bill Holst's property and they also wash some of their aggregates on Bill Holst's property. They would like to consolidate all of their operations onto their own property. The main reason for the request is to expand their current footprint and be able to do all their work on their own property. The main two things they will do is stockpiling aggregates that will come off the Morrison Quarry or sand that they will bring in from sand pits or some of the recycled asphalt that they also bring back from jobs. Also want to wash the portion of the aggregates they have to wash. They will not be doing any mining on the property even though there is some sand on Mike's property. They will just be doing the industrial use of the stockpiling and the washing. They submitted a substantial packet to the Township and the County. He will talk about the highlights and if the committee has any further questions, they will be happy to answer them. They are requesting the same hours of operation as the asphalt plant, 6am to 8pm, Monday through Saturday. They do have a reclamation plan on file for the existing asphalt plant. Even though they are not doing any mining, if they ever get done using the site, they will reclaim it similar to the asphalt plant. The only haul route will be 830th Ave out

to Hwy 35. If they have a job or a town road to pave back the other way, they may go out the other way but all the trucks today come in and out 830th Ave to Hwy 35. That will not change. We will handle any erosion control issues. That was a permit condition in the last conditional use permit. Stockpiles have to be below 35 feet. They are requesting a two year request similar to the other ones. The expansion will require a high capacity well which is a DNR permit they have to get. They will file for that after all the local zoning is done. They are proposing a three to five hundred gallon a minute well. They will only run that well to fill the ponds in the spring. They will only add water as they have to. They plan to recirculate the water in those wash ponds. They won't use a great deal of water once the ponds are full. They are going to line the bottom of the wash ponds because it is sand down there. They will bring clay material off from the quarry to line the bottoms of those wash ponds so they will hold water and any sediment will stay in the ponds. They will dig the sediment from the ponds out and either use it for mix or for ag lime for the farmers in the area. They will have two storm water retention ponds on site that will handle the storm water on site. Those ponds will be sand bottom ponds so the water can filtrate down to the ground water. The bulk of the site will be gravel covered or the edges of the site will have grass on it to control erosion. It will be basically rainfall or clear water going into those two ponds. The operation will be seasonal, similar to the asphalt plant, starting in April or May and usually done by deer hunting season. Nothing there will change; they are proposing to put the same type of operation there. They are proposing to put berms around the property and some tree planting. That is one request from the Town, they asked for the berms to be 15 feet high and also plant trees on the berm not just out in front of the berm. The dust control will be handled by either paving, water trucks or the actual wash plant will be a wet process so any of the stockpiles will be wet or damp. So dust control should not be a problem. They will seed and do erosion control around the berms and the exterior of the property. They will get all the other required permits before they begin construction which includes a DNR Storm water permit and an on-site Storm water permit along with the high cap well permit. Sanden asked if the western berm is being done at the request of the Township. Mr. Tomashek stated they actually proposed all the berms as you see it. The Town just requested that they make them all 15 feet high. Sanden asked if he could characterize the view shed that you would get from Hwy 35 as you are driving past. Let's say you have a 35 foot mound of inventory, would that be visible from the road? Mr. Tomashek stated yes, it would be similar to what is there now. Although some of those piles will probably move to the back as time goes on. The recycled blacktop will stay in the same general location. Most of the aggregates will be virgin aggregates or washed out. Mr. Tomashek indicated the location of the wash ponds and the two storm water ponds on the map presented. Holst stated he is wondering if they are going to move the blacktop pile because it gives tourist an excellent chance to view buzzards, spring, summer and fall, as they spread their wings. He believes it would be good for tourism. Mr. Tomashek stated they did notify about 15 neighbors and some of those folks came to the Township meeting. Their only concerns were about the berm and the tree planting. No other concerns about the plant. There was a question if they were going to move the asphalt plant onto this expansion but they are not. The asphalt plant is going to stay exactly where it is. Ross asked about the trees, did the Town suggest a size at all? Mr. Tomashek stated no, they plan on doing just what they did at the plant there now. Plant some pine trees on the berm. There are pines on those berms now and they will do a similar type of thing and maybe do some mixed trees around the outside borders. They are going to try to leave as many trees, there are a fair amount of trees around the perimeter. The only trees they will probably have to move is for the storm water pond. Ross asked about the clay lining and how deep is the clay. Mr. Tomashek stated about a foot to 18 inches in those ponds. They will have to get in there with machines and shape them. Holst asked if the ponds are going to be fabric lined. Mr. Tomashek stated probably not because they have to clean them out occasionally. It's easier to replace the clay. Once they start washing and seal them up with the silt and lime that comes out of the limestone, it will help seal them up. Chairperson Fetzer asked if he is correct there is a certain density in the clay that you have to look for, correct. Mr. Tomashek, it's not like a landfill liner, but they try to look for the cleanest clay they can find at the quarry. Obviously, they are not using topsoil. They will use the overburden clay.

Staff Report – Ryan Bechel: This proposed plant is an expansion of the company's Trenton area operations as they currently own and operate a "hot-mix" asphalt plant (referred to as "Plant 46") on the property adjacent to the proposed site which has been in operation since 2001. The site proposed for the "Plant 46 Expansion"

comprises 38.5 acres and is currently agricultural land owned by Mike Johnson. If approved, the plant would require LMC site plan review as required by PCC § 240-75. The property is located in the Town of Trenton. The property is zoned Industrial. PCC § 240 *Attachment* “Table of Uses” lists Heavy Industrial uses as a conditionally permitted use in the Industrial district. Heavy Industrial Uses is defined as: Uses such as manufacturing, assembling, fabrication, processing, bulk handling, storage, and trucking which are likely to generate significant levels of traffic, noise, pollution, vibration, dust, fumes, odors, pesticides, herbicides, or other hazardous materials, fire or explosion hazards, or other undesirable conditions which are unsuitable for any other district. Surrounding land uses include agriculture to the south, industrial to the north and west, and residential to the east (Hager City within .25 miles). The town of Trenton’s future land use map designates this area as “Mixed use.” Access to the site is through the existing private driveway off of 830th ST that services the hot-mix asphalt plant (Plant 46) to the north of the subject property. Truck traffic for the Plant 46 Expansion is proposed to follow the route currently established for Plant 46. The proposed haul route to be used by loaded trucks will be north through the Plant 46 site to the existing driveway on 830th ST. Truck traffic entering and exiting the Plant 46 site are required to use HWY 35 to travel to HWY 63 under the existing CUP to minimize impacts to Town roads. No buildings are proposed to be constructed at the site. The crushing and washing plants are portable and easily moved on and off of the site as needed. Four 12 to 13 foot deep settling ponds will be excavated to provide water storage for the washing process. Excess water from the washing operation is stored in the ponds to allow fine sediments to settle out prior to reuse. Typical equipment involved in the processing operation includes 2 crushing/screening plants, 1 wash plant, backhoes (1-2), portable generators (1-3), and front end loaders (1-4). No mineral extraction activities will take place at this site. In accordance with PCC § 240-29, no portable equipment or aggregate stockpiles will exceed 35’ in height. The duration and frequency of plant operations are dependent upon product demand, which vary by season and by the amount of road construction in the area. The plant is anticipated to operate for a period of 4 to 6 weeks, one to two times per year. During times of high demand, it is possible that processing operations would be conducted for longer periods of time. The applicant is proposing hours of operation to be Monday through Saturday from 6am to 8pm, similar to the Plant 46 site. The applicant anticipates the need for one high-capacity well to initially feed the wash ponds with water. Water usage after the ponds are initially filled is limited. No potable water supply well is proposed due to the relatively short periods of time that crews are anticipated to be on site. Portable sanitary facilities are proposed to be brought on site when aggregate processing operations are being conducted and removed when processing equipment are removed from the site. No processing operations will be conducted at or below the water table at the site. The approximated groundwater elevation is 680’. The elevation of the site is at an average of 701’ to 719’. Solid waste disposal will be provided via portable dumpsters that would be brought on site when processing operations are active. The applicant has submitted a grading plan for the site. With the exception of a portion of the access road, all storm water runoff and spring melt-water runoff from the site will be contained via 2 storm water retention ponds. The WI DNR will regulate the establishment of the site through a Construction Storm Water Permit. The WI DNR Bureau of Air Management regulates crushing and screening operations at the site under an Aggregate Processing General Permit. The general permit provides flexibility in meeting ambient air quality standards and also outlines production requirements as well as reporting, training, prevention, and abatement standards to be followed in order to maintain compliance. Fugitive dust emissions from plant equipment will be controlled using wet suppression to supplement insitu moisture from the plant equipment. Dust from roads in the operation and site area will be controlled by use of a water truck that will spray water on the roads as necessary. Calcium chloride may also be use on areas where trucks travel to suppress dust. The operation does not anticipate producing any nuisance odors. Aside from security lighting, no exterior lighting is being proposed for the site. No night-time operations other than occasional equipment maintenance are proposed with this operation. No advertising signs have been proposed at this time. No known historic or archeological sites are located on the subject property. The Town of Trenton recommended approval of the CUP request on December 8, 2015 with the following recommendations.

- 15 foot or higher berms.
- Trees put in for buffer beyond berm.

- Combination of trees on berm and south of berm.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to public health, public safety or character of the surrounding area. If found to not be contrary to the above, staff recommends the LMC approve the proposed heavy industrial use with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies as required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. Berms and vegetative screening shall be established and maintained according to submitted plans within 12 months of operation.
4. The hours of operation shall be Monday through Saturday, 6am to 8pm.
5. Applicant shall obtain all necessary permits and approvals prior to beginning processing operations at the site.
6. Stockpiles shall be limited to 35 feet in height above grade.
7. The dust control plan shall be adhered to.
8. The existing Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures Plan shall be updated to include the expansion area.
9. The haul routes for trucks traveling to Minnesota projects via Red Wing shall be routed from 830th Ave to Hwy 35 to Hwy 63.
10. Any unforeseen dust, noise and /or erosion issues that arise shall be addressed to the satisfaction of the County.
11. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
12. This CUP is valid for two years and may be renewed administratively unless compliance issues exist.

The owner/operator is responsible for requesting renewal.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Sanden asked about the reference in the staff report to conditions #3 screening, #7 dust control & #8 Storm water pollution plan. He assumes the berm and vegetation screening plan is part of the grading plan. Looks like #7, the dust control plan has been submitted. #8, has the storm water pollution prevention plan been updated. Bechel stated we haven't received the updated plan but that is required before they would be able to start, should this be approved, they would basically have to expand that plan to include the Plant 46 expansion. Mr. Tomashek stated they are in the process with the DNR right now. It's on hold, pending the zoning approval.

Holst moved to approve the conditional use permit for a Heavy Industrial Use (Nonmetallic Mining Wash Plant & Processing Facility) for Monarch Paving Company, due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to the public health, public safety or character of the surrounding area, with conditions #1 - #12/Ross seconded. All in favor. Passed.

Discuss take action on site plan review for a Heavy Industrial Use (Nonmetallic Mining Wash Plant and Processing Facility), pursuant to Pierce County Code Chapter 240-37E by Monarch Paving Company, agent for Michael A. Johnson, owner on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Mr. Tomashek stated they did develop a grading plan for this site. Mike's property drains south to north toward the railroad tracks. They will strip off the black dirt or black sand and use that for the berm construction and then they will base coarse material or grade some of the sand on site to get the site to drain. The south part of the property will be the high point. They will drain it to the two storm water ponds. They will keep the wash plant area the high spot. So the water drains away from the wash plant and flows to these two storm water ponds. There is an existing emergency overflow pond on the asphalt site. They will keep that separate from their two ground water ponds. They will leave a part of the berm in there. That is actually an impervious paved pond that is for the potential oil spill or diesel fuel spill on the plant. They

do occasionally pump the ground water or rain water that gets into that pond. They do have the ability to pump that out. They are permitted by the DNR to do that. They are proposing to locate the high cap well on the north end of where the wash plant would sit. They will bring in a whisper quiet generator to run that as they need too. They plan to seed and mulch the berm as soon as practical as soon as they have it constructed and then plant the trees shortly thereafter. They would start as soon as possible in the spring and start with the grading work and excavation after that.

Staff Report – Ryan Bechel: During the previous agenda item the Land Management Committee discussed the Conditional Use Permit required for establishment of this facility and conditions for its operation. *PCC § 240-75* requires site plan approval for new construction or additions to existing structures and buildings for industrial uses. The purpose of site plan review is assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to street and transportation, protect property values and contribute to efficient land use in Pierce County. Access to the site is through the existing private driveway off of 830th ST. The proposed haul route as we discussed before would be from 830th ST to HWY 35 to get to HWY 63. With the exception of a proposed berm, a minimum 100 foot setback will be maintained between operations and all property lines. There are no minimum setbacks in an Industrial Zone. Ample parking space is available on the site to satisfy Pierce County code requirements. 2 to 4 employees are anticipated to be on site while aggregate processing operations are being conducted. Outside storage will include temporary stockpiles of raw aggregates, washed aggregates, processed aggregate stockpiles and equipment intended for use at the proposed plant.

Stockpiles are proposed to remain under 35 feet in height. The applicant has submitted a grading plan for the site which he just discussed. Monarch Paving Company has an existing storm water plan and associated WI DNR permit for the Plant 46 site that they intend to update to include the Plant 46 Expansion site. The plan employs Best Management Practices (BMP's) for pollution prevention and addresses petroleum product handling, erosion control, and onsite runoff containment for control of suspended solids. The processing areas are proposed to be screened using a combination of existing vegetation, earthen berms and installation of additional vegetation. A 75 foot vegetative buffer is proposed along 830th ST where no vegetative buffer currently exists. Stands of existing mature trees on the east and south side of the property will be left intact. A 15 foot high berm constructed of soil and overburden materials created during site preparation is proposed along the east, south and west perimeter of the processing area. The berm would be mulched and seeded and trees would be planted on top of the berm following the submitted "Plant 46 Expansion Site Plan." The proposed berm and additional vegetation also serve to mitigate noise generated on the site by plant equipment and machinery. Fugitive dust emissions from plant equipment will be controlled using wet suppression to supplement insitu moisture. The operation does not anticipate producing any odors. No advertising signs have been proposed at this time. The Town of Trenton recommended approval of the CUP request on December 8, 2015 with the following recommendations which are also relevant to Site Plan Review:

- 15 foot or higher berms.
- Trees put in for buffer beyond berm.
- Combination of trees on berm and south of berm.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the proposed plan are necessary. The LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Staff recommends the Land Management Committee consider the following condition as part of this site plan approval:

1. Berms and vegetative screening shall be established and maintained in accordance with the Town of Trenton's recommendations.

Aubart asked about the height of the trees. We've gone down this road how many times. Holst stated with this Township, the height of the trees, the spacing, the location, etc. Aubart asked Andy what the language has been in the past. Pichotta stated the last time you approved trees on a berm, the trees were a minimum of 6 foot tall, 20 feet apart and there was two rows, staggered ten feet apart. Holst stated on top of the berm.

Aubart moved to approve the site plan for a Heavy Industrial Use (Nonmetallic Mining Wash Plant and Processing Facility) for Monarch Paving Company as presented with condition #1 and adding #2 Two rows of trees, a minimum of six feet tall, planted 20 feet apart with the second row staggered ten feet away/Ross seconded. All in favor. Passed. Mr. Tomashek thanked the committee and staff for their time and effort in this, they appreciate it. Holst stated the citizens of Pierce County would like to thank Monarch Paving for being good neighbors to the community and for the services you provide.

Discuss take action on Departmental Policy regarding placement of Center of Section Survey Monuments

Staff Report – Louie Filkins: Louie Filkins, County Surveyor, introduced himself. Most of his duties are outlined in the State Statutes but it is silent on centers of sections. In the past 40 – 50 years or so, the County Surveyor has placed many of the center of section monuments. He presented a drawing of the section and stated a mile square in the original government surveys there was four corners placed and midway quarter, quarters. They call them quarter, quarters because when you run a straight line between them, it divides a section into four quarters. About 10 – 15% of the centers of sections are monumented. Most of them were monumented over a hundred years ago. He thought it was appropriate to have a county policy in place to monument all the centers of section in order to have consistency. When a surveyor approaches a section now, he might use the intersection method or he might use the historical method but there is a chance for some ambiguity there and some uncertainty. If all of those are monumented with a modern day monument, there is much greater chance the surveyor will use the modern day monument. Throughout history in Pierce County, the practice has been if it has been monumented in the past, and some of these are old monuments, that is what the County Surveyor has used. What can happen is you can have an old survey versus a newer survey and two different methods are used and you will get two different locations. That is what we want to avoid. He doesn't think it's fair to have one County Surveyor or any surveyor set a location and the land owners rely on that for a long time, fences are constructed and then a new surveyor comes by and says we think it should be over here. In his pros and cons, in the staff report, some surveyors believe the intersection method, the federal method should be used regardless of where it falls. To him, what that results in is every time we improve our technology, we are going to move the corner. It used to be tape, then it was electronic distance measurements, now GPS, what's next, who knows but he doesn't believe the corners should move with our technology. He feels we should be monumenting all of the corners so there is no doubt, he can do it along with his normal maintenance of the townships and the current budget. Hopefully, it will bring consistency. Sanden asked if he is proposing doing all the corners over again. Filkins stated no, what he is proposing is setting the centers of sections, county monuments at the centers of sections. It's been done at other areas of the State. Sanden asked what would happen if that new center makes the corners out of date. Would you have to go back and change the corners? Filkins stated those wouldn't change. Those are permanent. Sanden stated they are accurate to your knowledge, with the new technology, they have all been updated using GPS. Filkins stated he is working in Clifton now. That is the last township for remonumentation. Filkins stated except for a handful along the St. Croix River and Clifton, all the monuments in Pierce County are in. Holst stated if he has a full section of land, you are going to plop a survey marker in the middle and he gets to farm around it. Filkins stated they will set it below the ground if it's an ag field. Holst asked, then you will find it again. Filkins stated it used to be that the monument was a very important part of the corner because all the land, legal descriptions are based on these monuments. Now the most important part is the coordinates. Once you have the coordinates, you don't need any of the accessories; signs, ties any of that. If it all gets wiped out, in theory, as long as the satellites keep flying around, you can go back with GPS and replace it very accurately now. Holst asked how much more accurate are you now, using the Russian satellites than you were using the American ones. He has noticed in his field equipment, he got a lot more accurate with

the Russian satellites. Filkins stated a little more accurate but the biggest thing is that you can work in the woods now. Three years ago, two years ago the County purchased a new GPS system, big investment but it can work faster and in the woods with the leaves off. It's really a huge improvement in GPS technology.

Staff Recommendation: Staff recommends the Land Management Committee consider adopting the following policy relating to the County Surveyors placement of center of section monuments:

The LMC authorizes the County Surveyor to set survey monuments at all of the centers of section to further the goal of continuity. The location of monuments is to be based on the best available corner evidence or by using the intersection method, at the discretion of the County Surveyor.

Chairperson Fetzer has one question, because he is sure that not all land owners are going to care for you being out on their land putting a monument out there; is there anything we can do beforehand for a heads up? Holst stated whenever Louie has dealt with them, he has always called well in advance saying he is going to be there, is this convenient for you, do you have standing crops, he will work around that. Basically, we can't tell him no, he has that right to go there. Filkins stated he always tries to get ahold of the land owner, it doesn't always work out. In that case he leaves a card and he gets very few calls back. He keeps telling Andy that it's just a matter of time before someone comes in and is irate but so far so good.

Holst moved to approve the proposed Department Policy to complete the setting of county survey monuments at all centers of sections in Pierce County as written/Ross seconded. All in favor. Passed.

Discuss take action on review and update of the Goals, Objectives and Policies of the Land Use Chapter of the Pierce County Comprehensive Plan. Staff Report – Ryan Bechel: Land Use is among the most important planning considerations. Moreover, it is also often one of the more controversial elements in a comprehensive plan. The Land Use element is really a compilation of all the other elements of this plan. Designating land uses and promulgating standards for development requires the consideration of Pierce County's utilities, roads and other support services as well as implications for housing, economics, agriculture and natural resources. Therefore, the goals, objectives and policies of the land use element should be supported by and complimentary to all other elements of the plan. Land Use in Pierce County is regulated by several ordinances, including the county's zoning ordinance. The county's ordinances are the primary mechanism through which the Land Management Department seeks to attain the goals and visions set forth by the Comprehensive Plan. The plan offers guidance regarding changes to zoning and other regulating ordinances and provides context to consider local growth decisions in conjunction with neighboring communities. The purpose of this section is to review and analyze land use trends in Pierce County. Land use trends are indicative of what changes are occurring regarding type, location and intensity of uses over time. It is these changes that should be carefully considered through the comprehensive plan review process to determine whether modifications to the county's existing Land Use goals, objectives and policies are warranted to further the Land Use vision. Land Use Vision: In the year 2035, Pierce County has successfully maintained its land base and continues to offer rural residential living options in relative close proximity to the Twin Cities. The natural beauty of the area has been maintained through the protection of environmentally sensitive corridors, parks, agricultural lands and preserved open spaces throughout the county. There is a list of the existing land uses in the county, in the staff report. No surprises there. Looking at the data for land use, the first one we have is Land Use Intensity, getting that data from the Pierce County Property Valuation statistics, for a couple years there: 2002, 2005, 2010 and 2014 comparing land and percent of land area as well as the change in the last five years, for residential, commercial, manufacturing and agricultural uses. On the fifth page there is a breakdown of what we've seen across the county. Overall minimal changes throughout the County. Agricultural lands increased 0.5% and forest lands decreased 0.3%. Undeveloped land uses experienced a slight gain, increasing 0.2%. Not a lot of changes countywide. In terms of the individual townships themselves, most towns experienced gains of about 1% in Ag Lands over the last five years. Towns of Oak Grove and Rock Elm were the only two to have more with Oak Grove a 2% gain and Rock Elm having 3% gain in Ag Land. That is as reported through taxes. The only one to lose Ag Land was the Town of Ellsworth, losing 1% and residential and commercial was relatively static for all towns except for Oak Grove that posted a loss of 1%. Holst stated your figures balance out so we didn't gain any more land anywhere. Bechel stated there is rounding in there. On page 7, is a Land Cover map,

just another way of looking at land uses in the county. This one is based off of satellite data versus taxing data. You can see on page 8 what breaks down what we're seeing in the Land Cover Data from the National Land Cover Dataset, pretty much the same story as what is being reported through the property valuation statistics. Cultivated crops and forest are the biggest land uses in the county which is no surprise. We have the Real Estate Equalized Values that is also from the Pierce County Property Valuation statistics. We saw about a quadrupling of equalized values since 1980. Sanden are those adjusted for inflation? Bechel stated those are not they are strictly from the property valuation statistics. But the story of the last five years from 2010 to 2014 has actually been of decrease of about 3.5% reduction across the county. Isabelle and Union are the only towns that have posted gains in equalized values over the last five years. The biggest loss was seen in Rock Elm which was about 25% from 2010 to 2014. Looking at Population Density and Change, the map in the staff report is showing percent change in Block Group Population Density so what the map really shows is the dichotomy that we know is in Pierce County with the east side of the county having a lower population per square mile versus the western portions of the county. Over the last ten years from 2000 to 2012, that kind of has gone up a little more as you see the eastern half posting more reductions in density per square mile than the western half. Those are skewed though because they are based off of census block groups. The census quit doing it off of townships. You get a little bit of skewing because they include municipalities in some of the areas that are more rural. Next in the staff report is the Land Use Permit Application data from our department for the last six years. Page 13 has a breakdown of what we have seen in land use permit applications over the last six years. Total land use permit applications has been fairly steady; average about 231 permits a year, maybe a slight upward trend, pretty close to that again this year. Looking at the individual categories, new dwellings may have had a slight uptick over the year and new accessory buildings have continued to be the number one permit that we issue.

Existing Goals, Objectives and Policies

Goal:

- Provide for a well-balanced mix of land uses within the county to take into consideration the other goals and objectives of the comprehensive plan.

Objectives:

- Encourage land use patterns in conjunction with transportation options that reduce single occupant auto dependency.
- Encourage the protection of prime industrial and mineral extraction areas from encroachment by incompatible uses.
- Encourage the protection of other land uses from negative impacts of mineral extraction and heavy industry through appropriate siting and adequate screening and buffering.
- Preserve the county's natural, cultural, historic and rural areas, including productive agricultural lands, by encouraging new residential growth to locate close or adjacent to existing areas of development.
- Encourage development that promotes open space through site design, has minimal impact on the environment, and fits within the character of the county as well as the specific location in which the development is proposed.
- Ensure all landowners have an equal opportunity for proposing land use change.
- Discourage the establishment of land uses that are incompatible with existing land uses.

Policies:

- Encourage the planned growth of urban communities, including the expansion of municipal boundaries through annexation of lands only as shown on adopted municipal plans and in cooperation with Town comprehensive plans.
- Encourage the use of non-automotive modes of transportation.
- Encourage commercial development within existing municipalities. Major commercial activity will be discouraged outside existing municipalities and unincorporated areas unless approved by the affected municipalities and/or Towns and included within their adopted plans.

- Encourage the preservation of open space and protection of natural resources before, during and after development of land uses.
- Encourage preservation of woodlands, conservation areas and open spaces close to developed areas to protect the natural environment and so that the effects of urbanization and the loss of the character of the area can be minimized.
- Encourage the location of public schools, parks and libraries in locations that are central to existing, recently developed and planned areas so that automobile driving and the need for school bus facilities can be minimized.
- Encourage the concentration of non-agricultural employment, including the commercial and light industrial uses, within high accessibility corridors, at or near intersections of County and State Highways and within close proximity to necessary support services.
- Land adjoining waterways actively used for transportation that is within high access corridors may be developed for industrial uses.
- Encourage industrial development in appropriate location within Heavy Transportation Corridors (e.g. railways, waterways, highways).
- Encourage the establishment or expansion of residential districts in close proximity to or adjacent to existing areas of residential development.

Land Use – Urban Areas

Goal:

- Create a pattern of compact, contiguous urban development that enhances the quality of personal and community life.

Objectives:

- Establish a pattern of development that supports the sense of community.
- Promote a vital central business district as the central focus of each community.
- Coordinate land use type and density with the level of accessibility provided by the supporting transportation and infrastructure systems
- Encourage development consistent with good design principles in the process of development.

Policies:

- Encourage a compact development pattern that clusters neighborhoods, rather than a pattern that sprawls subdivisions.
- Build on the patterns of established urban communities, rather than creating new urbanized places isolated from existing development.
- Encourage the use of non-automotive modes of transportation.
- Encourage commercial development within existing municipalities. Major commercial activity will be discouraged outside existing municipalities and unincorporated areas unless approved by the affected municipalities and/or towns and included within their adopted plans.
- Encourage the preservation of open space and protection of natural resources before, during and after development of land uses within the contiguous growth area.
- Encourage preservation of woodlands, conservation areas and open spaces close to developed areas to protect the natural environment and so that the effects of urbanization can be minimized.
- Encourage the establishment of growth areas served by central utility systems, with varying suburban, countryside and urban densities.
- Encourage the development of housing surrounding existing municipalities at suburban or countryside densities in a sequence that follows an orderly pattern of annexation, zoning, subdivision and the extension of public facilities. In cases where properties are contiguous

to existing urban densities, similar urban densities may be extended into the contiguous growth areas.

Land Use – Rural Areas

Goal:

- Maintain a rural environment that provides for continuation and evolution of agricultural activities and a rural character and lifestyle.

Objectives:

- Encourage the preservation of cultural, social, economic, environmental and aesthetic amenities provided by agricultural land use for the benefit of Pierce County.
- Encourage the maintenance of the most productive agricultural lands for agricultural purposes.
- Discourage urbanization from penetrating prematurely into productive zones of agriculture and support services.
- Encourage the use of agriculture techniques that produce long-term advances in agriculture production and soil and water conservation.
- Encourage development within established areas that can provide the infrastructure required by such development.
- Encourage the establishment of a pattern of rural land use that is sensitive to the natural environmental context and that encourages compatibility between land uses.
- Support land use practices that reduce potential conflicts between agriculture and other land uses.

Policies:

- Incorporate land uses as shown in plans adopted by municipalities or towns.
- Encourage towns to define the physical and practical limit of rural settlements based on the capacity of facilities and the historic function of the community.

Recommendation

The LMC should consider whether changes or additions to the Comprehensive Plan's Goals, Objectives and Policies are warranted to further the County's Land Use vision.

Pichotta stated there are a lot of goals, objective and policies in this section, as staff we went through these and once again, didn't find a lot of things that we thought needed tweaking. There will be some things that will need to be tweaked in other sections. The next one that we will be tackling will be Intergovernmental Cooperation where we start to define relationships between different units of government including the County's relationship with Towns. We have had five years now where we have utilized the Comprehensive Plan and the mechanism identified through that. There will certainly be some changes that we will make to future sections more so than we do to this land use one. The question is does any of these - whether its goals, objectives or policies - jump out as something that needs to be tweaked, is there something that we've missed or something that could be better stated? Sanden stated he thought you had a very insightful development a couple years ago. We were focusing on conservation design and that wasn't really catching on, he doesn't think it will for quite some time in this area. He thought it was very insightful that you decided to steer the ship to density transfers, to maintain productive ag lands, which he thinks is probably a better approach. So he was wondering if that might be articulated in this, the use of density transfers. He can see the approach that we have taken here, at the county level, to be a more of a general umbrella approach and not to be as specific as talking about density transfers versus this or that. If we were to get down to that level of detail it would be nice to see it in there. Pichotta stated as we are going through these different sections, keep in mind, when we are done working our way through all of the different sections, we are going to need to put together an implementation plan which basically is going to identify what we are going to do or what the committee wants to see staff do, as far as implementation steps/tasks related to the comprehensive plan, over the course of the next five years. Keep in mind the density transfer issue because he thinks that is a policy or goal, somewhere, to ensure folks are aware of that. Bechel said he thought it is in the management goals. Holst stated this was a real big deal in the 80's

when we did our first comprehensive plan. The second one that came along, it was a real good idea that never grabbed ahold because very few people wanted to live in cluster housing. Sanden say it wouldn't go as far as to say that, but we are not in a situation where that is going to be attractive. Holst stated people in our area didn't want to live in cluster housing. People moved to the country to have a three acre lot or a five acre lot. Generally, that is one of the biggest waste of land is the five acre lot. Sanden stated he would agree. Pichotta stated that density transfers are useful, not only in a cluster sense, but say you have land that's zoned Primary Agriculture with two density units per forty. You could transfer all your density points on a less desirable forty and put your five acre lots, three acre or two acre, what have you. We try to inform folks of it, there are a lot of folks out there that are simply not aware it's out there. If fact, he thinks there are some towns that aren't aware. Ross asked on page 15, under policies, item 4, wouldn't we just say bicycles instead of non-automotive. Holst stated we have to be sensitive to the Amish that are moving into the eastern part of the county. Pichotta stated he thinks that phrasing was what Mr. Rudd came up with. Ross stated if we want to specify those kinds of things either now or at some point, that would make sense to him, but the non-automotive doesn't make sense to him. What are we talking about? Pichotta stated it is also a nod toward buses and transit - it's not just walking or biking. Holst stated the person that wrote that, it was his intent to cover multiple modes of transportation. It was to cover skateboards, cross-country skis, It was never the intent to travel from Oak Grove to Rock Elm. Ross noted that this it is in the Urban section. Pichotta stated the thing to remember about the Urban section is we've got no formal jurisdiction there. State Statutes mandates that we have goals, objectives and policies relating to that in case they didn't adopt that, then ours would apply. But they all did. The reality is that we will likely not apply these. Sarah Palodichuk asked if Urban specifically means not towns. Pichotta stated correct. Ms Palodichuk stated it's not like a certain density, its city versus town. Holst stated you are safe down there but you could be incorporated area and part of their township could be annexed. Ms Palodichuk stated she wanted to bring up a couple things specifically. The policy about town recommendations, how much weight does it hold? She would also like an explanation of what it means to incorporate land uses as shown in plans adopted by municipalities or towns. Andy mentioned the turnover on town boards. She feels a lot of the town leaders would benefit from some education or knowledge of what that means and how we can help use it so we can communicate better to you. The second thing, they have run into trouble, they have a lot of General Rural Flexible 8, the way Andy explained it is that we have a lot of agricultural land zoned residential so we have Rural Residential 12 being row cropped and we have a lot of residential land that is zoned General Rural Flexible 8 which is an agricultural zoning. That leads into a zoning question that probably isn't appropriate here, can we find a way to remedy those things? As you look into implementation of it or the description of it, she has had questions about Rural Residential 12 whether you can hunt on it and Rural Residential 8 and they had the issue where someone didn't buy a house because they couldn't have chickens and maybe assorted other animals. This is a problem for them. She is sitting on over ten acres in Rural Residential 12 and she can't have chickens on her land. She didn't know that. Her whole planning commission laughed and said go buy chickens if you want chickens. She thinks it's something that they need to address. She reads in the goals, objectives and policies that we want a rural life style. There are plenty of people that come out, buy their three acres and if we really want to have that rural attitude, if that is our theory, then we need to be able to tell people coming, you are getting the aesthetics of the rural community, maybe that's the sounds and smells. Another part that she doesn't appreciate is the way that dogs are handled in the rural community. Holst noted that dogs are a township problem. Ms Palodichuk stated she knows they are. They are a very large township problem. That falls into how do we look at rural communities. She would love to see more discussion about that. She wants to tell people "keep your dogs in your yard." Then again she grew up on a farm where the dog ran a half mile to the Aunt & Uncles house all the time and nobody said anything because there was no neighbors in between. But now you have people's dogs following them to Big River Church. The other thing that does play into this, maybe a little more specific, the zoning issues, she knows there were changes made about large animals on land and how many acres are required. That was before her time or she wasn't cognoscente enough about it to know there had been a change made but she has heard from different townships that's problematic for them. She doesn't really understand the nuances of it but she does know the general feeling is that we had something a certain way and we liked it a certain way. We all know it's the county's responsibility and they can do something about it but

she does hear rumblings about how many horses you can have on five acres or how many acres are necessary for one horse. If you can talk a little about what the policy means as far as town weight and about rural nature. Pichotta stated the relationship with towns and the weight placed on town recommendation, that is actually one of the things he was eluding to earlier and we're going to need to discuss that in the intergovernmental cooperation section as well as the management goals. That is not really addressed in this section but there will be discussions on that. Ms Palodichuk asked what this means then, incorporate land uses as shown in plans adopted by municipalities or towns. Pichotta stated it means that the county can't approve rezones that aren't consistent with a town's comprehensive plan. Holst stated this is specific to rezones. Pichotta said this is all, to a large degree, specific to zoning. Your question about the Rural Residential versus the General Rural Flexible, we can't fix that for you. The county would approve or adopt the changes that you propose but the towns would - through your comprehensive plan - that's the mechanism that you would use to correct those deficiencies where you got ag land that's zoned residential. Ms Palodichuk asked so that starts with the comprehensive plan. Pichotta, yes that's where it would start. Holst stated you base your rezones off your comprehensive plan. He knows of one development specifically in your town where people wanted horses, and it was zoned Rural Residential 12. You guys addressed that and changed the zoning and you based that off your plan, because you've got these bigger lots, you would like to see chickens or a person can have a horse or two. You change that zoning that fits into one of our districts that allows that. That's why we look at these things every five years to address those deficiencies that the county and towns didn't realize weren't aware of. Now we open the lines of communication and you have been on the board long enough now that you have a little experience with horses and dogs. You tie it to your comp plan, you justify the zoning change, you change the zoning in those districts to satisfy the wants and needs of your township in those areas. Then the correct process is to bring it through your town board, through your plan and petition the county for a zoning change and then go through the public hearing process. That's the way you move from Rural Residential districts to General Rural districts or vice versa. Pichotta stated that we would view this as a comprehensive revision to your zoning map and noted that the Town of Gilman did that a few years ago. Ms Palodichuk stated what if we wanted to create a zoning district that was altogether different? Pichotta stated something like Ag Light. Ms Palodichuk stated that was what we called it in our conversation. It addresses the problem that she brought up. Holst asked if it would allow chickens but not horses. Ms Palodichuk stated chickens, horses and would not allow sand mining. There are a couple communities that want Rural Residential 12 and want their neighbors to have nothing and they want it to be a big suburb. For the most part, there is a tolerance for a little more than that but they don't want to have General Rural Flexible 8. Holst stated he doesn't believe that the county would be opposed to another zoning district that would allow those types of uses if you could define them and come forward and work with us. He can see River Falls not doing it because they have their own zoning issues. Ms Palodichuk stated it's really surprising to look at the numbers and how similar Clifton and Oak Grove really are compared to the eastern part. This is why I'm dealing with this more. In the future, if there is something they should be doing as far as preparing for the fact that Prescott really would like to annex more of their land. That would be great to have that conversation. They had a conversation with Prescott about a year ago and they nicely said we could wait a little while to talk about it and they said thank you. But if they need to be proactive in that, it would be great to get some direction. The second policy here, encourage towns to define the physical and practical limit of rural settlements based on the capacity of facilities. Pichotta stated it's a reference to what they used to call rural centers. Where you've got Lawton and Beldenville, Diamond Bluff, in reference to those types of situations, typically they are zoned Rural Residential 20. Ms Palodichuk asked is there anything that the LMC gives us as far as advice for infrastructure as far as broadband goes or phone, like when we are creating development. When talking to CenturyLink, they have a lot of plans to do work in Oak Grove in the near future. Do you guys keep track of that when we bring CSM's or development plans. Pichotta stated not specifically. Mainly we deal with two things, the regulation of uses and the running of utilities may require permits because there are structures involved but it's not really the establishment of a use from a land use perspective. Then we deal with lot creation. Some of this stuff is outside of our ability and purview. As far as the horse issue, what we did years ago was change it from five acre minimum lot size to a three acre minimum lot size. The requirement that there be one open acre per horse did not change. The reality is that if the County poses a change to a zoning

district or the uses, any change to the zoning code, it can't be adopted if one more than half of the towns that would be impacted by it don't want to see that happen. We do send out notices as well as staff reports. He has not heard any feedback from anybody ever that they are having an issue with it. It may be that they do but they aren't telling us about it. Ms Palodichuk stated she is here tonight because you nicely send these packets and she thinks it's better to at least come and listen than have inaction and then care about it a couple years later. Diana Smith, River Falls Town Chairperson, stated she wants to reiterate what Sarah said, that it is so helpful to get the information in the mail, so that the towns have a chance to look at it and have a comment. Her only comment is that River Falls isn't listed in the information listed and she thinks she understands that only the land use applications that came to the County were listed in here but then they are listed on page 12 as having no new construction, no values. Either they need to be on or off. If the committee wants them on, it's no problem for Jerome to get you that information. Holst stated it's no problem for us to leave you off either. Pichotta stated if you want to provide that information to us that would be wonderful because then we could see where you are at with the rest of the County. Ms Smith, if this is to be a true picture of the County, then they need to be on. Pichotta stated we don't need a motion but consensus that we leave as is and we'll tackle the Intergovernmental Cooperation. Chairperson Fetzer stated it sounds good. Ms Smith stated the other thing that she really likes about this is as they have to look at their comprehensive plan, this gives a lot of guidance to the Towns to see what the County is doing to help us move forward with the changes and things as we make changes and update our plans. Holst stated it's not too late for you to get back in County zoning, you know that. Ms Smith stated it will have to be with a different board than what she has right now. So this is really helpful in that respect. Committee consensus to accept as presented.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Kevin Etherton to attend the WLIA Annual Conference in Elk Hart Lake on February 10th through the 12th, \$305.00, two nights in a hotel. We do get a \$1,000 grant from the State for his attendance at this sort of a thing. **Aubart moved to approve the travel/training request for Kevin Etherton for February 10 - 12, 2016/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

While River Falls is still here, have you received certification from DTCAP on your zoning ordinance yet? Ms Smith stated the last they heard, it was imminent but they have not gotten a positive piece from them. Pichotta stated we won't put that on until we get that because it's possible it could change.

Discuss take action on a request by the Town of Union for extension of the timeframe that they have to generate a recommendation regarding a conditional use permit application. As you may recall, we issued them an extension some time ago. The Town has requested additional information from Muskie. Muskie responded with information that was vague and lacking in detail. They have requested additional clarification. They are coming back to request an additional extension.

Discuss take action on the Goals, Objectives and Policies of Intergovernmental Cooperation Chapter.

Motion to adjourn at 7:28pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 6, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates: January 20 th , February 3 rd & 17 th , March 2 nd & 16 th , all in 2016.	Chair
3	Amend approved minutes of the October 21, 2015 meeting.	Chair
4	Approve minutes of the November 4, 2015 Land Management Committee meeting.	Chair
5	Public hearing to consider and take action on a request for a conditional use permit for a Heavy Industrial Use (Nonmetallic Mining Wash Plant and Processing Facility), pursuant to Pierce County Code Chapter 240-37E by Monarch Paving Company, agent for Michael A. Johnson, owner on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.	Bechel
6	Discuss take action on Site Plan Review for a Heavy Industrial Use (Nonmetallic Mining Wash Plant and Processing Facility), pursuant to Pierce County Code Chapter 240-37E by Monarch Paving Company, agent for Michael A. Johnson, owner on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.	Bechel
7	Discuss take action on Departmental Policy regarding placement of Center of Section Survey Monuments.	Filkins
8	Discuss take action on review and update of the Goals, Objectives and Policies of the Land Use Chapter of the Pierce County Comprehensive Plan.	Bechel

MINUTES - Pierce County Land Management Committee Meeting, December 6, 2017

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 20th, if necessary, 2017.

Set next meeting dates: Pichotta stated that he proposes to continue with the first and third Wednesday at 6:00 pm. Chairperson Fetzer asked the committee if it has been working out for everybody and stated it is good for him. Committee consensus to continue with first and third Wednesday at 6 pm.

Approve Minutes: **Aubart moved to approve the November 15, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Motion Passed.**

Discuss take action on a request for a rule exception to the requirement that an erosion control plan be submitted for a 1-Lot Major Certified Survey Map (CSM) for Rebecca and Reed Sponsler, owners on property located in part of the NW ¼ of the NW ¼ of Section 8, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: Rebecca and Reed Sponsler created Lots 2 & 3, CSM Volume 14 Page 129 on 8-9-2017. They are proposing to create their 3rd parcel within a five-year period, which is considered a Major CSM. The lot number will be ‘Lot 4’ as there are existing parcels labeled “Lot 1-3” nearby. Pierce County Code (PCC) requires erosion control plans for the creation of Major CSM sites per PCC §237-11 and per PCC §237-17A(3)(a) states that accompanying information shall include erosion control plans.

Rule exceptions per PCC Subdivision of Land §237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The property is located in Section 8, Town of Clifton. Surrounding land use is mostly agricultural and some residential. The zoning district on the property is General Rural Flexible 8. The following conditions must be present for a proposed land division to qualify for this type of rule exception (LMC policy):

1. No roads are being constructed as part of the land division.
2. No erosion problems are present on the property.
3. There are no problems with stormwater or surface water flow on the subject property or that originate on the subject property.

No roads are being constructed as part of this proposed land division. Staff visited the site on 11/27/2017 and noticed the site is very stable. The previous cover crop was soybeans and the drainage ditches were covered in thick grass. To the south, 840th Avenue adjoins the proposed lot.

Staff Recommendations: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Chairperson Fetzer asked if the site is pretty flat. Lund stated it rolls toward the road, to the south, but is very stable. She drove around it, there is a field road and it's very beautiful. Chairperson Fetzer asked Mr. Sponsler if he had anything to add. Mr. Sponsler stated no.

Sanden moved to approve the rule exception to the requirement that an erosion control plan be completed for a 1-Lot Major Certified Survey Map (CSM) for Rebecca and Reed Sponsler/Snow seconded. Pichotta noted that granting a rule exception requires that a justification be included in the motion. Sanden stated seeing that there are no roads being constructed, no erosion problems present on the property and no problems with stormwater and surface water flow, move to approve the rule exception for an erosion control plan for Reed and Rebecca Sponsler. Chairperson Fetzer asked Mr. Snow if he was OK with the amendment. Mr. Snow stated yes. All in favor. Passed.

Discuss take action on a request for approval of a 1-Lot Major Certified Survey Map (CSM) for Rebecca and Reed Sponsler, owners on property located in part of the NW ¼ of the NW ¼ of Section 8, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: This is the same property discussed in the last staff report, in Section 8, Town of Clifton. The surrounding land is mostly agriculture and some residential. The zoning district is General Rural Flexible 8. The density calculations, once you work through the code, allows four lots to be created on their 27.16 acres. The proposed lot is 8.00 acres. Road frontage requirement for this CSM is met with 410 feet adjoining 840th Avenue. The CSM meets slope requirements, staff reviewed if the land was subject to any hazards to life, health or property; no such hazards were found. A soil test was completed on 9-20-2017 and a mound septic system is recommended. Property is not in the Farmland Preservation Program per Land Conservation Department. Pierce County Surveyor, Louie Filkins, reviewed and approved the CSM on 11-9-2017. Survey review fees were paid on 11-8-2017. Clifton Town Board reviewed and approved the CSM on 11-7-2017. Town issued a driveway permit off of 840th Avenue on 9-22-2017. Town of Clifton's minimum lot size of 3-acres is met.

Staff Recommendation: Since the committee approved the rule exception that was granted for the erosion control plan requirement, staff recommends the Land Management Committee approve this major CSM.

Aubart moved to approve the 1-Lot Major Certified Survey Map (CSM) for Rebecca and Reed Sponsler/Sanden seconded. All in favor. Passed.

Chairperson Fetzer states the next agenda item has been stricken.

Discuss take action on Travel/Training Requests. Pichotta stated he has several travel/training requests for committee consideration: one for Emily Lund to attend the WCZA District meeting at the Eau Claire County Courthouse on December 13th. Another for Emily to attend the WCZA POWTS Inspector training at Stoney Creek Inn at Rothchild on January 9th. The cost is \$35.00. That is part of the continuing education credits that she needs to get. Adam Adank to attend the WCZA Soils training which is the following day at the Stoney Creek Inn in Rothchild. The cost is also \$35.00. Then Emily and Adam to attend the WDNR Technical Workshop on Shoreland and Floodplain Issues on January 18, 2018 at the Eau Claire County Courthouse. County vehicles will be used whenever possible. **Snow moved to approve the Travel/Training requests for Emily Lund and Adam Adank/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated that we have no public hearings for December 20th, so rather than putting any housekeeping items on there, we'll just not have a meeting.

The first meeting will be in January and he is not sure what will be on the agenda.

Motion to adjourn at 6:12pm by Aubart/Snow seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 15, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund, Adam Adank and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 6th and December 20th, if necessary, all in 2017.

Approve Minutes: **Sanden moved to approve the November 1, 2017 Land Management Committee minutes/Snow seconded. All in favor. Motion Passed.**

Public hearing to discuss and take action on a request for a Map Amendment (Rezone) from General Rural to Agriculture Residential for Timothy and Becky Brunner, owners of a 12.78 acre parcel located in the NE ¼ of the NW ¼ of Section 15, T26N, R18W, Town of Trimbelle, Pierce County, WI.

Chairperson Holst invited Mr. & Mrs. Brunner forward: Mr. Brunner explained they are requesting a rezone from General Rural to Agriculture Residential. They are asking that the 12.78 acre parcel be subdivided to create one to two additional lots, possibly three acres each. The current zoning doesn't, the parcel does not have enough density to allow the parcel to be split and they can't purchase any other property.

Staff Report – Emily Lund: The applicants went over the background. The property is located in Section 15, Town of Trimbelle. Current land use is forest land, residential with a dwelling and detached garage and undeveloped. Adjacent land uses are forest land, residential and undeveloped. The current zoning of this parcel is General Rural. The adjacent zoning is General Rural, Primary Ag and Agriculture Residential. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts are listed in the staff report for General Rural and Agriculture Residential. Pierce County's adopted Comprehensive Plan states: "The County will approve rezonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. The value of land for agricultural use according to the USDA Web Soil Survey is listed in the staff report. The Town of Trimbelle recommended approval of this request on 10/10/2017 and identified two goals from the Town of Trimbelle Comprehensive Plan in the following places:

- "Chapter 3: Housing. Goal: Facilitate opportunities for an adequate housing supply that will meet the needs of current and future residents and promote a full range of housing choices for all income levels, age groups and special housing needs while maintaining the current housing stock.
- Chapter 9: Land Use. Objectives: Ensure development accrues in an orderly process and includes sufficient infrastructure for fire protection, roads, parks and other infrastructure."

Staff Recommendation: Given that the Trimbelle Town Board determined that this proposed map amendment (rezone) of 12.78 acres from General Rural to Agriculture Residential is consistent with their Comprehensive Plan, staff recommends that the LMC approve this map amendment (rezone) and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the hearing to the public. No public comment. **Chairperson Holst closed the public hearing.** Sanden stated it looks pretty straight forward. **Sanden moved to approve the Map Amendment (Rezone) from General Rural to Agriculture Residential for Timothy and Becky Brunner and forward a recommendation to the County Board of Supervisors/Snow seconded. All in favor. Passed.**

Discuss take action on a request for a Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-41C, for Verizon Wireless, agent for Lyle & Shirley Stockwell, owners on property located in the SW ¼ of the SW ¼ of Section 6, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Holst invited Brian Kabat forward: Mr. Kabat, Buell Consulting, agent for Verizon Wireless and working with Mr. & Mrs. Stockwell on the project. There is still a need for new towers and improved service in the county. He would appreciate the consideration in granting the height exemption.

Staff Report – Adam Adank: Verizon Wireless is seeking a height exemption pursuant to Pierce County Code §240-29D to construct a new Wireless Communication Service Facility (WCSF) exceeding 35' in height in the Town of Hartland. The complete project proposal includes erecting a self-support wireless communication tower with a total height of 259 feet, constructing an equipment platform and installing supporting equipment to improve broadband and wireless services in the county. Newly adopted code amendments removed Conditional Use Permit requirements for Wireless Communication Service Facilities, which are now permitted administratively via a Land Use Permit. PCC §240-29 requires towers to comply with the height requirements of other commercial structures. The proposed Wireless Communication Service Facility is located in Section 6, Town of Hartland. The property is zoned General Rural Flexible. PCC §240-23 requires 10 foot side and rear yard setbacks in this zoning district. Adjacent properties are zoned General Rural Flexible and Light Industrial. Adjacent land uses are residential, agricultural and light industrial. Access to the site is off of 730th St. The site is currently agricultural land owned by Lyle & Shirley Stockwell. The proposed structure is a self-support tower (monopole) with a height of 250 feet. A nine (9) foot antenna is to be placed on top of the tower which makes the overall height of the structure 259 feet. PCC §240-41C(3)(d) states, "Wireless Communication Service Facilities Support Structures shall comply with the height requirements of §240-29D." PCC §240-29D states, Industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setbacks and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. PCC §240-27C addresses town road setbacks and states, "Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater." The 259 foot structure has a required right-of-way setback of 266 feet from 730th St; required side and rear yard setbacks are 234 feet. In the proposed location, the tower is 268ft from the 730th St right-of-way and 269ft 6in from the nearest side or rear property line. PCC §240-41C(3)(d)[1]states, "If engineering certification reveals that the WCSF support structure, or an existing structure, is designed to collapse within a smaller area than the requirements of §240-29D, the certified fall zone shall be applied to the setback requirements of §240-29D." Certified fall zone engineering certifications state "*in the unlikely event of total separation, this would result in a collapse within a radius of 250 feet.*" The fall zone engineering certification does not account for the nine (9) foot antenna on top of the tower. Therefore, the fall zone engineering certification does not provide any setback relief for the proposed structure. Staff visited the tower site and observed no structures located within the 259 foot fall zone of the proposed tower location. Staff will verify appropriate setbacks prior to issuing a Land Use Permit for the structures. PCC §240-88 The following applicable terms are defined in the staff report: Fall Zone, Support Structure, Yard, Yard, Rear and Yard, Side.

Staff Recommendation: Staff recommends the LMC review the proposed WCSF height exemption and determine if any changes or modifications are necessary. If none, staff recommends the LMC grant approval of the height exemption.

Aubart moved to approve the Height Exemption for a proposed Wireless Communication Service Facility (WCSF) for Verizon Wireless on property owned by Lyle & Shirley Stockwell, as presented/Snow seconded. All in favor. Passed. Mr. Kabat stated there was one item on the report; it did indicate that the tower was a monopole. It's not a monopole. It's a self-support, lattice-style tower instead.

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests: one for Brad Roy to attend the Flood/Substantial Damage Estimation Process Seminar/Workshop being put on by

FEMA in LaCrosse on November 16, 2017 and the second for Shari Hartung to attend a Skillpath Seminar on for assertiveness skills, positive self-esteem, conflict management and communication techniques on December 14, 2017 in Eau Claire. Neither requires a hotel stay. **Snow moved to approve the two Travel/Training requests for Brad Roy and Shari Hartung/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Request for a rule exception to the requirement that an erosion control plan be submitted for a 1-Lot Major Certified Survey Map (CSM) for Reed Sponsler. He is the gentleman who lives next door to the paintball park. This is the third lot that he will have created in a very short time.

Discuss take action on approval of a 1-Lot Major Certified Survey Map (CSM) for Reed Sponsler.

Discuss take action on request for screening of a Private Outdoor Recreational Use for Paintball Park.

Motion to adjourn at 6:17pm by Aubart/Snow seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 1, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 15th, December 6th and December 20th, if necessary, all in 2017.

Approve Minutes: **Sanden moved to approve the October 18, 2017 Land Management Committee minutes/Snow seconded. All in favor. Motion Passed.**

Public hearing to discuss and take action on a request for a conditional use permit for an Accessory Residence in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-40A, for Pamela & Jason Belisle, owners on property located in part of the NE ¼ of the SW ¼, Section 20, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Holst invited Ms. Belisle forward: Ms. Belisle explained they are asking for approval for a conditional use permit for an accessory residence for her father-in-law. He is living with them. All of their bedrooms are on the upper level of their home and he is half blind and has problems with his foot for getting around. Instead of adding onto the main level of their home, they needed some extra storage space. They were just going to create a small space for him in the back of that storage shed.

Staff Report – Adam Adank: On July 27, 2017, the applicants visited the Land Management Department to obtain a Land Use Permit to build an accessory structure on their property located at N7478 690th Street. At that time, the applicants stated that the proposed accessory structure would be used for personal storage and have a bathroom. Subsequently, a LUP was issued for a 30ft x 56ft accessory structure with the condition that they obtain a sanitary permit for the bathroom prior to any septic system installation. While the applicants were working with their plumber and discussing design plans, the plumber informed the applicants that a separate permit may be required for accessory structures with living quarters. The applicants then contacted the Land Management Department and learned they would need to apply for a CUP for an accessory residence if they wanted to have living quarters in the structure. The applicants propose to use the eastern 30ft x 20ft portion of the structure as a one bedroom accessory residence for Jason Belisle's father (total Sq Ft 600). The remaining 30ft x 60ft portion of the accessory structure will be used for personal storage. The applicants own a 40 acre parcel located in Section 20, Town of Martell. The property is in the Primary Agriculture zoning district. Pierce County Code (PCC) §240-40A allows accessory residences which are accessory to single-family residences in the Primary Agriculture District with the issuance of a CUP. The definitions for Accessory Residence and Accessory Building are defined in the staff report. The existing primary residence has a total floor area of approximately 2500 square ft. Other existing structures on the property consist of a 36ft x 60ft pole barn and a 30ft x 10ft shed. The septic system for the principal residence was permitted and installed in 1996 for a three bedroom mound system. The applicants were issued a State Sanitary Permit for the proposed accessory residence on 10-18-17 for a 2000 gallon holding tank which was installed on 10/23/17 (Sanitary Permit #471992017). The applicants have a shared driveway easement over two separate 20 acre parcels. PCC Chapter 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Martell Town Board recommended approval

of this request on 9-12-17 without any concerns or recommended conditions. The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a separate uniform address number for the accessory residence.

Chairperson Holst opened the hearing to the public. John Worsing, adjoining property owner, stated they are totally happy with the presentation and with what's going on. **Chairperson Holst closed the public hearing.** Aubart asked what are the future plans for the structure. Ms Belisle stated they would never rent it out. It would just be an extra space if they have guests, then they can stay there. It's never going to be rented out, it's just for their own personal use. Chairperson Holst stated he doesn't mean to tell them what to do but it's going to obstruct access to your other building. Ms Belisle stated she didn't make the choice of where it's going. They wanted it up close to the house as well, limited options up on top of that hill. **Sanden moved to approve the conditional use permit for an Accessory Residence for Pamela and Jason Belisle with conditions #1 - #2, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Passed.**

Discuss take action on a proposed policy regarding administrative completion of Site Plan Review.

Staff Report – Brad Roy: As you probably remember, we have had a few site plan reviews recently that there were no real impacts to what they were doing. Instead of bringing it to the committee, we've worked to develop some guidelines for allowing staff to just review them and save the applicant some time as well as the committee. Staff has proposed the following criteria to qualify for administrative site plan review. Proposed development which does meet the following would be eligible for administrative site plan review:

- Additions or buildings that are located on sites with existing structures for commercial, industrial, institutional or multifamily uses.
- Proposed construction or addition will not change existing traffic patterns.
- Proposed construction or addition will not negatively impact surface water drainage patterns.
- The parcel is not located adjacent to residential district or has existing vegetative buffer clearly adequate to screen the use.
- Any increase in parking requirements can be accommodated.
- Lighting does not impact neighboring property.
- Proposed construction or addition does not change the character of site.

Part of the policy would also be that any applicant could request that it come before the committee if they wish, rather than have staff review it. Aubart stated that would mean that if you said we're not going to approve it, they have an appeal essentially. Is that what that means. Roy stated yes, and our attitude would be anything iffy, we would just send it to the committee. If we felt we couldn't approve it, our advice would be let's just put it on the committee's agenda. Aubart stated when you say deny it, let's bring it to the committee or something like that, unless it was just bizarre. Roy stated the one thing he thinks would be the vegetative standard, where we say the vegetation is clearly adequate to screen it. If we get out to the site and it's one of those that we're not sure, we can put it on the committee and see what they think if they want to require more screening. Pichotta stated our goal is really just to be able to address the no-brainers at the staff level. Sanden asked if it's standard practice to have counsel look at these. Pichotta stated we can have them review them but it's not really standard. This is pretty straight forward. Sanden stated he is just wondering, worst case scenario if you did approve something administratively and it turned out that someone would question that and say you should have run this

through, based on our interpretation, would staff be on the hook? Pichotta stated the code says, that the committee or its agent or it's designee. Sanden stated to that end, I'm sure that if you anticipated some kind of backlash like that you would run it past the committee just to cover all the bases. Chairperson Holst stated that he would just as soon not spend any more time on these when they are obvious that they should be approved. Committee agreed. **Snow moved to approve the administrative completion of site plan review policy as presented/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a proposed rezone from General Rural to Agriculture Residential for Timothy & Becky Brunner in the Town of Trimbelle, Section 15.

Request for a height exemption for a proposed wireless communication service facility by Verizon in Section 6, Town of Hartland.

Motion to adjourn at 6:14pm by Snow/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, October 18, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 1st & 15th, December 6th and December 20th, if necessary, all in 2017.

Approve Minutes: **Aubart moved to approve the October 4, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Motion Passed.**

Public hearing to discuss and take action on a request for a conditional use permit for a Farm and Home Based Business for Automobile Repair and Restoration in the Agriculture Residential District, pursuant to Chapter 240-36D, for William Janousek, owner on property located in part of the NW ¼ of the SW ¼, Section 14, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Holst invited Mr.

Janousek forward: Mr. Janousek explained he is just trying to get things up to par. It's a new building that he is putting up with a new paint booth and he just wants to make sure everything jives.

Staff Report – Adam Adank: The applicant, Mr. Janousek, is requesting a conditional use permit to operate an automobile repair and restoration shop at his residence in the Town of Rock Elm. The business is called Janousek Paint, Body and Restoration. Mr. Janousek has been operating an automobile repair and restoration shop for the past few years without benefit of a permit. The Land Management Department became aware of the business when Mr. Janousek called the department inquiring about the potential of rezoning his property from Ag Residential to Commercial. At that time Mr. Janousek was made aware that a Conditional Use Permit for a Farm and Home Based Business was a viable option. Mr. Janousek owns a 15.01 acre parcel located at the end of 90th Street which is a dead end road. He is currently running his business out of a 32' x 62' garage with an attached 10' x 32' office space off the west side (total sq ft 2304). Mr. Janousek also has several other buildings that are under construction. He plans to move his work area into the new buildings upon their completion and use the existing garage for personal storage. The buildings Mr. Janousek plans to use for his business include:

- 10' x 20' office building.
- 24' x 28' paint booth building.
- 28' x 42' 3 stall garage building with a 12' x 12' service bay door.
- 24' x 20' personal garage which may have some storage for business.
- A proposed 28' x 42' addition which will have 3 service bay doors that are each 10' x 10'.
- Total sq ft 3648.

The property is located in Section 14, Town of Rock Elm and is zoned Agriculture Residential. The purpose of the Agriculture Residential District is established to provide for the continuation of agricultural practices in areas of the county which have historically been devoted to farm operations while providing locations for rural housing opportunities without public sewer and certain recreational and other nonresidential uses. Adjacent properties are all zoned Agriculture Residential. Adjacent land uses are agriculture and low density residential.

Section 240-36(E) allows farm and home based businesses as accessory to single family residential uses subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
 2. If located in the dwelling unit, the farm and home business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
 3. Minimum lot size shall be 5 acres.
 4. Such other conditions as specified by the Land Management Committee pursuant to Sec 240-76 shall apply.
- Mr. Janousek is self-employed and has no employees. Currently all of the business received has been through word-of-mouth. He anticipates having a few employees in the future when he starts to advertise and business becomes too much for one person. 90th Street is a dead end road that connects to County Road PP. There is one other driveway on 90th Street that serves the residence of David and Jackie Pille. The Pille driveway is approximately 200 feet north of William Janousek's driveway. The Pille residence is over 1500 feet from Mr. Janousek's buildings and is the nearest residence to the proposed business. Equipment operated for this business: 2 above ground hoists, frame rack, auto rotisserie, air compressors and other miscellaneous tools. Mr. Janousek is looking into regulations for hazardous waste generators in order to properly dispose of all paint thinner, cleaning solvents, paint, etc. Off-street parking per Pierce County Zoning Code Chapter 240-54A requires 3 spaces per service bay for auto repair. Mr. Janousek anticipates UPS, Fed Ex or semi deliveries a minimum of 5 times per week and a maximum of 20 times. Hours of operation are 8am to 6pm, Monday through Friday or by appointment. Bathroom facilities are located in the front office building. A 2000 gallon holding tank was installed in 2007. Mr. Janousek plans to expand his driveway/parking area significantly by placing gravel between his existing garage to the east and the new garage/workshop to the west. Mr. Janousek plans to place one advertising sign for his business at the entrance of his driveway. The Rock Elm Town Board recommended approval of this request on 9-12-2017. The Town did not suggest any conditions or state any concerns.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not approval of this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends that Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. This use shall be established within 1 year of the CUP approval. The CUP shall be renewed again in 2 years. Permit may be renewed administratively if no compliance issues arise.
3. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
4. The advertising sign shall not exceed 24 square feet, comply with the zoning code standards and be located outside of road right-of-way. Necessary permits shall be secured for any future advertising signs.
5. Applicant shall comply with all applicable NR 662 hazardous waste generator standards.
6. There shall be a minimum of 12 parking spaces established when the proposed 28' x 40' addition has been completed.
7. Applicants shall work with Todd Dolan, Rock Elm Building Inspector, to determine whether or not commercial plan review and approval is required from Department of Safety & Professional Services and receive all necessary permits.
8. The entire business area shall not exceed 5,000 square feet.
9. No more than 8 persons not residing on-site shall be employed at the site at any given time.
10. The business shall be conducted by the owner of the dwelling unit.
11. A land use permit shall be obtained for all future structures prior to construction.

Chairperson Holst opened the hearing to the public. No public comment. **Chairperson Holst closed the public hearing.** Sanden stated the staff report was very well done and very complete. **Sanden moved to**

approve the conditional use permit for a Farm and Home Based Business for Auto Repair and Restoration for William Janousek with condition #1 - #11, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Passed.

Discuss take action on a proposed Management Plan for a Duplex in the Primary Ag District for Paul & Judith Nielsen, owners on property located in the SW ¼ of the SE ¼ of Section 17, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Holst asked if there are concerns of the Township.

Staff Report – Brad Roy: In 2009, Mr. and Mrs. Nielsen obtained a Conditional Use Permit for a Duplex on their 8.8 acre parcel located in Section 19 of the Town of El Paso. Since then Mr. Nielsen and a family member have occupied both dwelling units of the duplex. Condition #4 of the permit states, “If a party other than a family member wishes to reside in the duplex, a management plan must be approved by the Land Management Committee.” The applicant anticipates renting one dwelling unit in the near future to a nonfamily member and has submitted a management plan for consideration. The property owners will furnish heat, electricity, snow removal, garbage service and maintain grounds and the septic system. Staff has not received any complaints about the duplex. Staff did hear from the Town Chairperson. He expressed concern about why this was put on an agenda without the Town taking action first. Roy explained that the conditions state that it is a LMC approval item and not a Town approval. It doesn’t expand the conditional use permit. The conditions aren’t changing. He also had concerns about if the owner could leave and both units be rented out. Roy explained that in the conditions it states that it can’t and that he is still held to that. There are some Town members here as well that can probably expand on that. The existing conditions are listed in the staff report #1 - #7:

1. Landowner must occupy one of the residences on the property.
2. Any deviation from the approved conditions requires the applicant apply for a new CUP.
3. This CUP shall expire in 5 years or if compliance issues arise. The permit may be renewed administratively if no compliance issues arise.
4. If a party other than a family member wishes to reside in the duplex, a management plan must be approved by the Land Management Committee.
5. A second uniform address number is needed for this building per PCC 15-3C.
6. The secondary driveway connection from this parcel to Hwy 72 shall be removed within 8 months of approval.
7. This CUP shall not run with the land and shall be automatically invalidated by the sale or other transfer of title to this parcel of land.

A copy of the proposed lease agreement/management plan is attached for your review and consideration. The lease agreement contains the typical provisions of a residential lease and appears to be based on a template. It should be noted that the Land Management Department does not typically get involved with lease agreements between parties when considering the establishment of uses. Staff is of the position that the lease agreement/management plan appears to be adequate.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed management plan is adequate to protect the public interest, public health and safety and the character of the area.

If no changes are necessary, staff recommends the proposed plan be approved as written. If changes are warranted, appropriate modifications should be identified and the amended plan approved.

Chairperson Holst asked what the concern is from the Township. Scott Schoepp asked to speak. Chairperson Holst asked if he represented the Town and Mr. Schoepp stated no, he is representing himself. Mr. Schoepp stated this property has had a lot of changes throughout the years; it started out as a Farm and Home Based Business and has now transpired into a Duplex. Mr. Schoepp passed out copies of the Land Management Committee minutes from October 21, 2009. He stated on the second page, the staff provided recommendations and the committee addressed those recommendation and responds accordingly. This is highlighted on page three of the minutes. Mr. Schoepp read condition number one that stated Paul or his daughter have to live in it. That was one of the conditions when this was first granted. The second one, comment from the committee was

“any deviation from this and it will not be looked on favorably.” About four years ago, his daughter moved out and his son has moved in. Mr. Schoepp stated he doesn’t believe that Paul contacted the County or anyone and this was done on his own. Mr. Holst stated at that time that the conditional use permit would be reviewed in two years and there was a friendly amendment to come back in one. The point was that Paul was doing this at the time to help his daughter through some rough times, Mr. Schoepp stated that he understands that. But the statement was made that once the tough times were over, then we move on. Number five and number six are really not pertinent at this time but number seven was, this was a short-term family based problem, if the daughter moves on, this goes away. The way he interprets this was that it looked like it was granted as a short-term solution to a problem and he reiterates that because the committee and the staff recommendation, number seven was that CUP shall not run with the land and shall automatically be invalidated by the sale or the transfer of this title to this parcel. The committee responded to that in this manner, this is a short-term family based problem that will go away when the daughter goes away. He does have a concern about the definition of a duplex. He has reviewed the code and the definitions are used to make decisions within the code and the definitions are provided there. From the code he read the definitions of duplex, dwelling unit, building and enclosed structure. He stated the only thing left to interpretation is a breezeway. When the code does not define a breezeway, one goes to Webster Merriam Dictionary to obtain that definition. He doesn’t understand the verbiage or the definitions that were used to define a duplex when this was originally approved. He asks that the committee deny the permit based on the simplest fact that it is not a duplex. Pichotta reminded the committee that we are not taking action on the permit; we are taking action on a management plan as specified in the conditions of the permit. While Mr. Schoepp has gone through the code and cherry-picked a number of definitions and presents them, the reality is a duplex is two attached dwelling units on a single lot regardless of form of ownership. He didn’t bring his code so he’s not going to debate the specifics of it but there is no language associated with a duplex that talks about an “enclosed structure”. He is comfortable that when this was originally dealt with, it was dealt with appropriately. As far as the references out of the minutes, he would agree, it was stated by a committee member that if the daughter moves on this goes away. However, that particular condition was ultimately not modified to include that. It simply said there would be a management plan that would be required should it be rented to anyone other than a family member. It was lawfully permitted and Mr. Nielsen has submitted a management plan as was required by the conditions and he is following what was established. Pichotta would also note that we have a number of other duplexes in the County, none of them required CUP renewal. It’s considered to be an establishment CUP. None of them required, except another one located in the Town of El Paso, required a management plan that had to be reviewed by the Land Management Committee. The management plan concept was something that the prior Zoning Administrator had come up with and to be perfectly frank, he isn’t sure what that would include except a copy of the lease and an understanding of what sorts of services that the landowner would provide. Moving forward, anytime a duplex comes forth, we are certainly not going to be recommending that a management plan of any sort be put in place because historically, it has not been the role of this committee or this department, to micro manage uses once they are established. Especially a relatively benign use as a duplex. If there are issues with behavior, certainly that is a law enforcement issue. The primary goal of the zoning code, when establishing a duplex, is to ensure that it has been done according to code, parking is adequate, there is signage to ensure public health and safety can find them, should they need to do so. We don’t typically delve into the minutia of the lease. However, in this particular case, we are. While he understands Mr. Schoepp’s concerns, again we are not being asked to act on the permit itself. You are being asked to act on a management plan which the contents of which are not specified in the CUP. That is the issue before you today. Chairperson Holst asked if the CUP has been renewed administratively. Roy stated yes. Chairperson Holst asked if there have been any complaints. Roy stated no. The last renewal was October 20, 2015. Ron Foley, Supervisor of El Paso Township, he would just like to ask number two states any deviation from the approved conditions requires the applicant to apply for a new CUP. Is this not a deviation? Pichotta stated he doesn’t see how it is, if a party other than a family member wishes to reside in the duplex, a management plan must be approved by the Land Management Committee. That’s why we are here. Mr. Foley asked if number two comes before that and it states any deviation. Pichotta stated it comes before it numerically but that doesn’t give it greater importance. Melanie Schoepp, Town of El Paso Plan

Commission, on the Town Board and a neighbor, she asked if the committee has seen what this looks like, are you aware of the breezeway connecting the two structures? She stated this was turned into a residence without a building permit or a CUP in place. Chairperson Holst stated it has one now so it's in compliance now. Ms Schoepp asked if they were interested in the comprehensive plan for the Town of El Paso and their duplex/dwelling definition. Chairperson Holst asked when the plan was adopted? Ms Schoepp stated this one was revision 2015. Chairperson Holst stated this duplex was pre-existing prior to the new comp plan. Ms Schoepp stated the buildings were pre-existing to the new com plan. Chairperson Holst stated the duplex was pre-existing to the new comp plan, correct? Ms Schoepp stated she believes the comprehensive plan was in draft at that time. Chairperson Holst stated draft is not a legal document. Ms Schoepp stated she knows and she wasn't saying it was. Wondering if you would be interested in hearing what we have for a definition? Chairperson Holst agreed. She just wanted to add that she agrees with Scott that this does not meet the definition of a duplex, because of the enclosed structure and she thinks that was the point in your code that was not read. She just wants to say this, they did have a lawyer look at this and they did agree with us but we decided not to pursue that. In the future, we have no problem with duplexes. They are allowed in our land use section according to the definition. We were told that is good to put those things in the comprehensive plan, so we did. Chairperson Holst asked if she wanted them read into the record. Ms Schoepp agreed. Chairperson Holst read the Town of El Paso duplex/dwelling definition: A duplex refers to a structure for residential purposes consisting of two living units and must 1. Have a common wall of the same height for all of its height and depth. 2. Must have a common roof. 3. Must have two separate entrances. 4. Must have separate utilities, phone, cable, satellite and water. 5. Both must comply with all zoning setbacks and driveway restrictions. 6. Both must be built on the same basement or slab. 7. Both must be built at the same time. 8. Both must share the same waste system. 9. Tri-plex, Quad-plex or X-plex are not allowed. 10. The duplex must follow all fire, zoning, safety and building codes. The duplex unit shall be considered one principle building occupying one lot in yard requirements. Chairperson Holst stated the matter before us is to take action on a proposed management plan for a duplex in the Primary Ag District for Paul and Judith Nielsen. Aubart asked Pichotta if there is any direction what the requirements are for the management plan itself. Pichotta stated the management plan, he thinks, was intended to placate to a certain degree the concerns that were raised by the Town. Aubart asked what those concerns were. Pichotta stated he isn't exactly sure what the concern was. Normally a CUP is based on public health and safety and clearly the concerns was something beyond that. Chairperson Holst asked when the original verbiage changed into the new. Explain again how the management plan came into effect. Pichotta stated the prior Zoning Administrator recommended its inclusion. Chairperson Holst stated approximately when? Pichotta asked when this was issued. Roy stated 2009. **Aubart moved to approve the proposed management plan for a duplex for Paul and Judith Nielsen, as presented/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a CUP for an accessory residence in the Town of Martell for Belisle's.

Discuss take action on proposed policy regarding administrative completion of Site Plan Review.

Motion to adjourn at 6:36pm by Aubart/Snow seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 18, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 1 st & 15 th , December 6 th and December 20 th , if necessary, all in 2017.	Chair
3	Approve minutes of the October 4, 2017 Land Management Committee meeting.	Chair
4	Public hearing to discuss and take action on a request for a conditional use permit for a Farm and Home Based Business for Automobile Repair and Restoration in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-36D, for William Janousek, owner on property located in the NW ¼ of the SW ¼ of Section 14, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Adank
5	Discuss take action on a proposed Management Plan for a Duplex in the Primary Ag District for Paul & Judith Nielsen, owners on property located in the SW ¼ of the SE ¼ of Section 17, T26N, R16W, Town of El Paso, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, October 4, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 18th, November 1st & 15th, all in 2017.

Approve Minutes: **Aubart moved to approve the September 20, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Motion Passed.**

Discuss take action on Site Plan Review for a Garage in the Commercial District pursuant to Chapter 240-75, for JeffreyEbensperger and Lynn Spindler, owners, on property located in part of the NW ¼ of the NE ¼, Section 28, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Holst invited Mr. Ebensperber forward: Mr. Ebensperger stated he just needs more storage.

Staff Report – Brad Roy: Hank’s Refrigeration and Electric provides offsite electrical and refrigeration services. The site is used for storage. There is no store or showroom for customers. The applicant is proposing to place a 26’ x 23’ garage on the site. Site plan review is required by Pierce County Code §240-75. The Commercial Zoning District is described in the staff report. The property is bordered by residential and commercial uses. Adjacent zoning districts include Agriculture-Residential to the north, south and west; Commercial to the east. The Village of Plum City is nearby to the east. The proposed structure meets all applicable setbacks and will be placed in line with the existing buildings. The configuration will not impede parking or deliveries. Driveway access to the property is located off of County Rd S. There is an existing yard light located near the driveway. No additional exterior lighting is proposed at this time. A screening plan is not proposed. Typical hours of operation are 6:00am to 6:00pm. There are currently no other employees for the business. Occasionally a subcontractor is hired. Pierce County Code §240-54 establishes parking requirements. This particular use requires two parking spaces. The plan submitted demonstrates sufficient parking area to fulfil this requirement. One delivery per day is average. Deliveries are by truck or semi. Upon completion of the site plan review the applicant shall obtain a Land Use Permit as outlined in Pierce County Code §240-73(1)B. The size of the structure does not require commercial plan approval from DSPS.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Staff recommends the LMC place any condition(s) that it deems necessary, as well as the following:

1. The applicant shall obtain a Land Use Permit from the Land Management Department.

Sanden asked if it is a one-story building. Mr. Ebensperger answered yes.

Snow moved to approve the Site Plan for Jeffrey Ebensperger and Lynn Spindler for a Garage in the Commercial District with condition #1/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a Farm & Home Based Business for an Automobile Repair and Restoration Business in the Town of Rock Elm.

Proposed Management Plan for a Duplex for Paul & Judith Nielsen in the Town of El Paso.

Pichotta also noted that a proposed policy regarding site plan review that enables staff to administratively approve site plans that clearly have limited impact would be forthcoming.

Motion to adjourn at 6:06pm by Sanden/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, September 20, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 4th & 18th, November 1st & 15th, all in 2017.

Approve Minutes: **Aubart moved to approve the August 16, 2017 Land Management Committee minutes/Holst seconded. All in favor with Sanden and Snow not voting because of absence at the last meeting. Motion Passed.**

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for B.S. Construction Inc and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.

Staff Report – Brad Roy: B.S. Construction/Steve Schoeder Properties owns a mine which was expanded in 2006. County Materials was the previous operator of the site, but did not renew its lease. In 2006, County Materials and the Sylla's, neighboring property owners, agreed to allow mining within 50 feet of the property line as long as the mining did not encroach within 400 feet from the house and peak particle velocity would not exceed .35 inches per second. On September 5, 2012, the LMC modified the condition regarding peak particle velocity for the blasts. The peak particle velocity was raised from .35 to .50. It was stated that the low peak particle velocity makes it more difficult to blast the rock as it gets closer to the Sylla's structure. The higher peak particle velocity will allow the blasters to obtain a higher frequency in the blast and utilize electronic detonators with proper timing to get better results for both the operators and the Syllas. A signature hole blast was completed on August 5, 2013. An analysis was done of the wave form to determine the optimum blast timing utilizing electronic detonators. Since then, there have been two production blasts. Each blast was designed to remove the top half of the mine wall. The previous operator was instructed to report back to the LMC after the next full-face production blast with the peak particle velocity limit of .50 to determine if any modifications to the permit are necessary. To date there has not been a full-face production blast with a peak particle velocity limit of .50. The Sylla's continue to want the peak particle velocity limit to be set at .35. They are concerned about the effects of the blasts to them as well as their structures. As the blasting gets closer to their residence they believe that higher peak particle velocity will make the blasting less tolerable to them. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road S. Mining activity has been significantly less since County Materials lease expired. Previously most of the processing of materials was done at the County Materials Spring Lake Quarry. With new operator(s) more processing may have to be conducted onsite. B.S. Construction intends to mine one additional acre, towards Cty Rd S and then close and reclaim the mine. The future production needs of any potential operator(s) cannot be known at this time. The LMC directed County Materials to conduct a full-face blast with a peak particle velocity of .50 and to then appear before that LMC to review impacts; this may not be acceptable for the next operator. Therefore, modifications to Conditions #6 and #13 may be warranted. Staff suggests that it may be appropriate to enable the operator to eliminate the need for a signature blast/full face blast and the subsequent LMC review by limiting peak particle velocity to .35 inches per second. A condition that would enable this has been proposed

for LMC consideration (#14). In addition to concerns about blasting near the residence, the Sylla's have concerns about well testing and dust control. The well was last checked in 2014 and dust issues come up during certain conditions (strong north winds). Staff contacted the Town of Rock Elm regarding this renewal. Since the report, Brad has spoken to the Town. They are watching this. They don't have any concerns of what is going on but they are concerned about the peak particle velocity and what a full-face blast would do. Like everyone, without seeing the impacts of it, they don't really have a position at this time. They are in favor of the renewal with existing conditions. The existing conditions #1 through #13 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no additions or modifications are necessary staff recommends the LMC renew this permit with the following conditions.

1. Hours of operation shall remain consistent with daylight hours or Monday through Friday, 6:00am – 9:00pm during the construction season with an occasional Saturday, 6:00am – 6:00pm, property owners within 300 ft and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibrations.
7. Well test for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. 50 foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Operator shall ensure that fly-rock does not negatively impact adjacent properties.
13. The operator shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions.
14. The need to conduct a full face blast/signature hole and to appear before the LMC to review conditions may be eliminated by limiting peak particle velocity to .35 inches per second.

Roy stated we also received a letter regarding this. Pichotta read the letter dated September 17, 2017. To the Chair and Members of the Board, My brother and I have recently purchased N5290 Cty Rd S from our parents. We are now renting the property to my parents. As new owners, we strongly state our desires that all stipulations in current CUP for the abutting quarry remain unchanged. As providers of residential accommodation, we believe any further expansion or loosening of any condition would be detrimental to our ability to rent our property as a residence. In particular, we request there be no increase to the peak particle velocity and no change to any setback. Also, our parents, (long-term owners and residents of our property) have voiced their concerns to us. They desire the operator of the quarry be held to all of the current conditions in the current permit. Per the CUP, a test of our well water is to be completed every two years and is now due. Also, because the exit from the quarry is right next to the house, the CUP requires dust mitigation when hauling occurs. Recently, this has not occurred. Thank you for your time and dedication to Pierce County. Tom and Bill Sylla, Partners of N5290 LLC.

Jeff Schoeder stated as far as watering, nothing has really went on in the pit since County Materials left.

Chairperson Fetzer asked if that is roughly two years ago now? Mr. Schoeder stated probably three or four. We

have been in and out of there for a load or two of screenings. Not much has gone on. Dust, he wouldn't want anything implemented so they have to go up there and water when nobody is even in the pit. Chairperson Fetzer stated there can't be a lot of dust if no one is rolling in and out of there. Mr. Schoeder stated he wouldn't think so. Without being up there to visually see it on a gusty, windy day, he doesn't know. William Sylla stated he would say they haven't seen a lot of it this year because they have had a lot of rain, therefore it's not a bother. But your remark that you are in there occasionally, I go to get my mail once a day and frequently I see, I'm guessing it's your brother-in-law coming out of the pit with a truck and he's waving at me. Rosalyn hears noise out of the pit. It's not just occasional. Rosalyn Sylla stated this is a little bit off the subject but she is questioning the legal description on what this renewal is on. Holst stated some of that on the far east of the quarry sits on the other 40. The part that has already been mined sits on the other 40 it looks like to him. Therefore, the description would have to be on both 40's. Pichotta stated the description in the staff report actually does not quite cover the entire parcel. The listing on the agenda is in fact correct and the agenda is what matters. Mr. Sylla stated your map shows the whole 80 of Bechel's being included. Roy stated the mine expanded onto other parcels. So those parcels are now included. When they got their conditional use permit to expand in 2006, it included all of those parcels. As a way of permitting the use but they aren't free to just go mine the whole thing. They have other stipulations in place. I don't believe their lease goes any farther. The reclamation plan is limited to the area they can mine. This is just for the quarry area that we are all familiar with. Mr. Schoeder stated condition #14, When he hears a blaster tell you that they think they can do a better job for fill with a peak particle velocity of .50, I don't see any reason to try to limit that to .35. Pichotta stated what we wanted to do is make it easy so that if someone were to use the site and didn't want to have to do a full face blast and then come back to the committee they could eliminate that by defaulting back to the original. We're not saying you have to do that, we're saying either or. Mr. Schoeder stated OK. Him, personally not knowing when somebody is going to be in there to blast, he would eliminate the well testing to relevant to somebody blasting. The last test was done in 2014 and nobody has blasted. Why go in there every two years and have to bother Bill to do a well test. Mr. Sylla stated the reason that we wonder about it because their last well test went up significantly, just curious where it's at today. He could spend the money and find it out but if it's caused by the mine then why should he spend the money. Chairperson Fetzer asked how often this comes in front of the committee. Pichotta stated every two years. Mr. Sylla stated as far as County Materials, they faithfully checked that well every two years. Chairperson Fetzer stated his opinion is the well, this time and then we have a baseline. If no one has been blasting and it's up for renewal now, staying on that now and seeing how things are going. Maybe in two years revisit it again. Roy stated one more well test would give us a lot of information about what impact the mining has on the well. The fact that no one has been in there for a few years we would be able to see a lot from that result. Holst stated it may be beneficial to you. Perhaps he has nitrates and it has nothing to do with the blasting. You can say, we haven't blasted for four years but your nitrates are higher. Mr. Schoeder stated he sees benefits both ways. But after that test could we modify it that no other tests have to be taken until.....Pichotta stated you wouldn't have to do another test until after the next renewal which would be in two years and we could revisit it at that point. If appropriate, eliminate it or predicate it on blasting. Mr. Schoeder stated if there is no blasting then it wouldn't need to be done and it could be stated in there. Chairperson Fetzer stated he thinks they just revisit it. He would like to see the results of this next test and then if some things are happening he wouldn't want to just say no on that, just trying to protect everybody here. **Holst moved to renew the conditional use permit for a Nonmetallic Mining for B.S. Construction Inc and Steve Schoeder Properties with conditions #1 through #14/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests. One is for Tracie Albrightson, one of our Office Specialists, to attend a seminar in Eau Claire on October 6, 2017 that is called Communicating with Professionalism. The second is for Kevin Etherton, our GIS Specialist, to attend the MN GIS/LIS Consortium in Bemidji. Typically in the past, when Rand was around, we participated in this. It is 260 miles and the limit is 200. It is a little out of the range so it requires that I not only get your approval but it has to go to F & P. Pichotta stated we do get a grant to attend these things. **Aubart moved to approve the**

two travel/training requests for Tracie Albrightson and Kevin Etherton/Sanden seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Pichotta stated we have one agenda item for site plan review for a garage in the commercial district in the Town of Union for Jeffrey Ebensperger.

Motion to adjourn at 6:21pm by Snow/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 20, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 4 th & 18 th , November 1 st & 15 th , all in 2017.	Chair
3	Approve minutes of the August 16, 2017 Land Management Committee meeting.	Chair
4	Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(9/8/17)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, August 16, 2017

Present: Jon Aubart, Joe Fetzer and Jeff Holst

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Eric Sanden and Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 6th & 20th, October 4th & 18th, all in 2017.

Approve Minutes: **Aubart moved to approve the August 2, 2017 Land Management Committee minutes/Holst seconded. All in favor. Motion Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Duplex in the Primary Agriculture District pursuant to Pierce County Code 240-17 for Mackenzie Zajec, owner, on property located in Lot 1, Certified Survey Map (CSM) V6, P138, in the NW ¼ of the NW ¼, of Section 12, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Mr. Zajec forward: Mr. Zajec stated the duplex is already there. He purchased the property in December at a sheriff's sale; one side is 1960 and the other side is 2005 built. He really isn't doing anything different to it. He just received a letter in the mail saying that it is a duplex and he had to respond because it's not sanctioned right or something.

Staff Report – Emily Lund: The applicant purchased the property on 3-24-2017 at a sheriff's sale as a foreclosed property. The residence has two separate entrances and is currently setup as a duplex. As Mackenzie mentioned, one side was built in 1960, has 2 bedrooms and a walkout basement. The other side, permitted as an "addition", was built in 2005, also has 2 bedrooms and a walkout basement. Each side has separate bathrooms, kitchens and all utilities are separate. The applicant would like the use converted to a duplex so they can live in one side and rent out the other side. The parcel is located in Section 12, Town of Martell. The applicant owns 8.74 acres, recently purchased an additional 40 acres, that is in the Primary Agriculture zoning district. PCC §240-88 defines Duplex as, "Two attached building units on a single lot regardless of the form of ownership of the units." PCC §240-24D describes Lot Requirements as, "Only one single-family residence or one duplex shall be permitted on a lot, except as provided elsewhere in this chapter." Pierce County Code (PCC) Table of Uses allows Duplexes in the Primary Agriculture zoning district with the issuance of a CUP and does not reference any code provisions. The applicant owns a 36' x 72' dwelling, 25' x 39' detached garage, well and septic system. A previous owner obtained a Land Use Permit on 8-5-2005 for a 26' x 32' dwelling addition. The dwelling has an existing well and a mound septic system that is sized for 4 bedrooms and was installed on 11-9-2005. PCC Ch 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Martell Town Board recommended approval of this request on 7-11-17 without any concerns or recommended conditions. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a duplex with the following conditions:

1. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a separate Uniform Address Number for the rented unit of the duplex.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Holst stated it's pretty straight forward. It's nice to see he is coming forward to get the correct permits and taking his role as a property owner seriously.

Holst moved to approve the conditional use permit for a Duplex for Mackenzie Zajec, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - 2/Aubart seconded. All in favor. Motion passed.

Public hearing to consider and take action on a request for a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for Steven & Joan Tyvoll, owners on property located in the NW ¼ of the SE ¼, Section 10, T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Tyvoll forward: Mrs. Tyvoll stated because people weren't quite sure where to put their designation, Retreat Center sounds a lot more grandiose maybe than what they really need. They understand that it has to be put somewhere.

Staff Report – Emily Lund: The Department received a complaint in June 2016 regarding an unpermitted garage/shed being used for religious gatherings on the applicant's property. Staff contacted the applicants about the use of the structure and the need for permits. Staff further explained that hosting worship services and similar organized gatherings required the issuance of a Conditional Use Permit. The applicants informed staff that the use of the structure was a multi-use shed for personal storage and office space. The applicants obtained a Land Use Permit on 7-26-2016 for a 24' x 36' pole shed, 6' x 8' pergola and 10' x 12' greenhouse that were permitted for residential use. In April 2017, the Department received additional complaints along with documentation confirming the use of the shed for religious worship and gatherings. Staff obtained additional information indicating the applicants are operating "River Apostolic Center, a non-profit, tax-exempt, Christian Retreat Ministry" at the site. The website (<http://riversapostolic.center>) indicates these activities have been taking place on the property since August 2015. The applicants are seeking an after-the-fact CUP to convert the use of the pole shed to a Retreat Center. The property is located in Section 10, Town of Spring Lake. The property is in the General Rural zoning district. PCC §240-88 defines Retreat Center as "A facility or facilities used for professional, educational, organizational or religious meetings, conferences or seminars and which may provide meals, housing and recreation for participants and may include multiple related uses managed as one operation. Pierce County Code (PCC) Table of Uses allows retreat centers in the General Rural zoning district with the issuance of a CUP and provisions in §240-36M are listed in staff report #1 - #7. The applicants propose to utilize the house and pole shed for 1-2 hour long worship gatherings on Sundays and occasional weeknights. Their home and pole shed are handicap and wheelchair accessible. In the future, they propose to provide a home school co-op. Children (2-5 families) would meet twice a month for fellowship and group learning. The applicant (Joan Tyvoll) is currently a part-time employee of Rivers Apostolic Center. There is no meal program, but an occasional potluck meal is offered. Current attendance is between 8-14 members. Staff has not been provided any information whether the applicants intend to add new members in the future. Applicants have a mound septic system sized for 3 bedrooms that was newly installed and inspected in 2001. They propose that the public use the restrooms in their home. Staff has concerns about whether the septic system is sized appropriately for the additional use. Due to staff's inability to monitor membership, it is recommended that any septic system be designed based on the maximum occupancy limits of the structure. Staff has contacted the Building Inspector for the Town of Spring Lake to discuss whether the structure will need to comply with Uniform Commercial Code (UCC) requirements. The structure will not need Commercial Plan Approval from the State, but will need to comply with the UCC. The Building Inspector will work with the applicant to determine what structural modifications are necessary. Pierce County Code §240-54 establishes parking requirements and suggests 1 parking space for 4 seats. A minimum of 1 parking spot per employee present on-

site at a given time shall be provided. A minimum of 1 parking space shall be ADA compliant. There are more than 20 off-street parking spaces available, with 1 space ADA compliant. No advertising signs and no retail activities are planned at this time. Applicants will need to obtain a Land Use Permit prior to sign placement if they choose to have advertising signs in the future. The Spring Lake Town Board recommended approval of this request on 7-11-2017. The Town Recommendation Form is attached.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a retreat center with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. The applicant shall work with the Town of Spring Lake Building Inspector, Todd Dolan, to determine whether a permit from the Town or State is needed and to ensure compliance with the Uniform Commercial Code (UCC) requirements. If the Building Inspector determines that a safety issue currently exists, use of the facility shall cease until it is code compliant.
3. There shall be at least 20 off-street parking spaces available, with a minimum of 1 parking space ADA compliant. There shall be no on-street parking.
4. Adequate portable outhouses (1 per 50 people) shall be provided and maintained until the maximum occupancy of the retreat center is determined and the septic system is upgraded (if necessary) to accommodate maximum occupancy.
5. Applicants shall obtain a Land Use Permit prior to construction if they choose to have advertising signs in the future.
6. Applicant understands that expansion or intensification of this use will require modification to this CUP.
7. The CUP expires in 1 year. Renewals shall be completed before the LMC.

Chairperson Fetzer opened the hearing to the public. Tom Miller, he was just wondering if it is just for church with no other buildings in the future. Mrs. Tyvoll stated what they have is a house church and that may help you understand it a little bit better. A house church is just families getting together to pray together and worship together and do life together. They are using the building to do that. Mr. Miller stated when he first read it, he didn't understand what Retreat meant; another building, coming in with other people. Mrs. Tyvoll stated like strangers coming into your neighborhood. Mr. Miller stated yes, that is what he did think of. He thought maybe you were bringing kids in to Mr. Tyvoll stated like the Penial Home by Wilson, they were troubled kids from Chicago. Mrs. Tyvoll stated no. They have no plans to build any other buildings. The home school co-op, some other people have had a question about that. What a home school co-op is, is like a fellowship between home school families maybe once a week or twice a month for a few hours to have kids play together. Mr. Tyvoll stated we're not talking a huge thing, just four families, five families. This isn't happening anyway right now it's just like a potential that might happen. Mrs. Tyvoll stated but the house church idea is a little bit different than the church idea that normally comes to mind. It's not intended to be big and it will not be big. Mr. Miller stated he knew they had kids out, maybe bible study, they were playing a lot and running around and caught them in some of their fields and tramping down stuff. Mrs. Tyvoll stated that goes back a ways when she was pastoring the church in Spring Valley and they would have youth group kids. She apologized for that night they were in your alfalfa. Mr. Miller stated it was a grain field but they had lost their toys out there or whatever they had done. Mrs. Tyvoll stated that was some years ago and she isn't pastoring that church anymore. Jim Moe, asked how do we know that you aren't going to get bigger someday, like ten years down the road. It could turn out to be something huge. Mrs. Tyvoll explained the characteristic house church, apostolic center is that the way it is constructed is that they intend not to allow it to get bigger. Apostolic center is like the hub of a wheel. What we have are people that are connected to them in other towns. They serve as a resource center, training center, a place for them to come and get the help that they need to grow; that they would have their own house church. They have people in New Richmond, in the cities and so they are like the spokes of the wheel. But an apostolic center is never meant to be growing like your normal idea of a church. That is not the way an apostolic center is organized. She hopes that helps you get a different picture

of the kind of church that they are building and developing a culture of home-based connections with families. Mr. Tyvoll stated on the practical side if you have ever driven by on a Sunday morning, you will maybe see six cars, very seldom more than that. It was reported eight to fourteen, last Sunday they had nine. Fourteen is a good week. What Joan is saying, we really have no intention of getting bigger than that or the gatherings at our place. We're not thinking of ending up with a hundred people coming. That is not what is at all in their mind or plans. Mr. Miller asked if he plans to expand on the farm, he doesn't have to worry about any complaints from your side? Mrs. Tyvoll stated she hopes he does. She has been praying for him, praying for his family, for one of his kids to want to take over the farm. She prays for him every day, for his crops, his business just like she prays for the whole neighborhood. Mr. Moe stated he doesn't know what Tom's plans are but there are a lot of people that don't pray for these big farms. Some of the big farms nobody wants. Chairperson Fetzer stated don't throw me under the bus. Yes, we do get complaints and he totally sees his point. Mr. Tyvoll stated he isn't sure what he means. Like we wouldn't want you to build something, is that what you mean? Chairperson Fetzer stated it's just a matter of a business or whatever that is next door, if he expands, if you have close next door neighbors it can turn into issues and stuff, especially if you are down wind. Holst stated or down water. Chairperson Fetzer stated Durand is having some major issues right now with large dairies. It's just a lot of stuff happening over there. He appreciates them bringing it up. Mrs. Tyvoll stated her answer has to be from her perspective which is what they have talked to the town board about. Their purpose, just their calling is to pray to bless their neighbors and their neighborhood. Mr. Tyvoll stated we get to wake up every morning and look at your amazing crops. The quarry isn't so amazing to us. Mrs. Tyvoll stated she prays for the quarry too. Mike Jacobson, Town of Spring Lake Supervisor, he looks at how could this have been better handled. He would have said to go to each one of your neighbors, Tom, Ninnemans, Jim and Klandermans, everyone and just let them know what you are up too instead of having to ask questions in a form like this. It could have been as short as other CUP's have been. This one is a little unusual because it was kind of like an after-the-fact building permit followed by an after-the-fact CUP. There were some things that weren't done properly. Anyone that knows Richard, sitting next to me, he is, by default, our constable for Spring Lake. Holst stated don't say that too loud or you will be exposing yourself to some liability. Mr. Jacobson stated we're just trying to do it by the book, the six square miles we're given in that corner of Pierce County that is still part of this entity. We did support the approval on it based on Land Management weighing in on it. Because we didn't know what we were up against on this one. **Chairperson Fetzer closed the public hearing.** Holst stated he is a little troubled by the fact that they were advertising this August 2015, drew building permits in July 2016 and it's brought to our attention a year later, after-the-fact. He's not opposed to the home church philosophy, he's been involved with some of them himself. Generally if you do get a bigger following the idea changes from home churching to a conventional church and it's probably not going to happen at this site. It doesn't look to him like you have the ability to build much more where you are at just the lay of the land isn't favorable. It does bother him that you had to come along after-the-fact. He can understand you not understanding this retreat philosophy thing, but it's in our code and if you would have been straight forward when you applied for your permit and said what you were going to do we wouldn't be here after-the-fact. Mrs. Tyvoll stated that some of the difficulty when they were building is that they had a contractor, a young guy who is beginning in business and we asked him to look into all the permits we needed.....Holst stated ultimately you are the responsible property owner, ultimately you get the results when they are good and you get the results when they are poor but they lie with the owner of the property, not his or her agent. You can sue him if you want that's your business. Our business is to do this the correct way. If you have an expansion, and if your membership grows dramatically past one outhouse, we want to know about it. We don't want to drag you in here and tell you, you have to get another one without you beingWe'd rather you come to us and say blah, blah, blah and I understand right now you are hopeful that your own septic system will carry the load but a lot of times out in that country it's pretty questionable. Mr. Tyvoll stated he can respond to that, he is apologizing and can claim ignorance but it wasn't intentional and when they were first contacted, he talked to Todd, he was very clear saying they weren't trying to hide anything and they got on top of it right away when he finally figured out what needed to happen. Holst stated to do this after-the-fact might very well cost you way more money than it would prior if you have to upgrade your buildings and stuff to satisfy their code requirements as opposed to the residential code. It

probably would have been beneficial if you would have done it the right way to begin with. Chairperson Fetzer stated he would concur with Jeff.

Aubart moved to approve the conditional use permit for a Retreat Center for Steven & Joan Tyvoll, due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7/Holst seconded. All in favor. Motion passed.

Discuss take action on updated Land Records Modernization Plan. Staff Report – Andy Pichotta: Pierce County's Land Information Council recently met to discuss proposed updates to the Land Record Modernization Plan and to review proposed expenditures from the Land Records Modernization Fund and the WLIP grant program. Minor changes were proposed to be made to the plan to reflect progress made since the last update and to enable future projects. Proposed changes to the plan were approved as written by the Land Information Council which Mr. Holst sits on. Pichotta stated the plan is attached. He didn't go into a lot of detail on what the changes were. He certainly can. What we did was updated the current projects to include Floodplain map amendment now that we have LiDar we can do a much better job of Floodplain in the County. We want that to be added to the current projects. An item relating to the scan display on-line of large format survey documents, we are going to need some software to enable those to be put on the County website. We want to further develop ArcGIS on-line including some mobile data so you can use our mapping function on your phone. Create a septic system GPS application for Land Management and working with Highway to get them to use the ArcGIS on-line collector app for signs, culverts, bridges, guard rails and centerline markings. We are doing some maps relating to center of section, monumentation, which you will recall we talked about that a bit back, some discussion about data & COGOing parcels. We did discuss, there is some language in there relating to free GIS data available on the website. The State is pushing us toward, as you recall we get between a grant program and retained fees from the Register of Deeds Office, we get \$100,000 a year. In exchange for that, the State wants us to provide the data that we develop to, basically, anyone for free. Which is a little bit of a departure of how we have typically dealt with it, we usually will give other units of government our data, whatever we've got in raw format, however they want it, but if somebody wants something value added, if they want us to do a custom map, that sort of a thing, we do charge for that. Some of the language in the plan relating to data availability, we say the County proposes to openly share most data with the public for free, data can be accessed on-line through our GIS on-line or can be emailed. Pierce County reserves the right to charge for time on any custom data requests. Then another statement: Pierce County proposes no restriction on data distribution or downloads other than for LiDar data and ortho photography which requires a storage device. A fee schedule will be made available for this data. So this will necessitate that we bring forth at some point, a resolution relating to data sales. We have done similar things in relation to Nonmetallic Mining fees. We probably need to take a look, in the Comp Plan one of the action steps is to take a look at our fee structure again. We had a discussion about that awhile back but the reality is we haven't touched that since 2004. We also included some language on future projects, parcel fabric, local government information model it's an ESRI product that seems to be kind of an industry standard, something else that everybody else is doing and we can do relatively cheaply is building footprints. If you were to look at just a political map versus one with ortho photography, technically exactly where the structures are there would be a little shaded box, demonstrating if you ever go on Google Earth or Google Maps and you look at not an aerial photo but if you look in a city or village, where there are structures, there will be a gray box there. We can do that for a couple of grand and something also that the State is encouraging us to do. That is another thing we are pursuing. These are the changes. Basically, we updated new projects, identified a few future projects and changed the status of a couple things we accomplished in the last couple years since the committee last saw the plan.

Staff Recommendation: Staff recommends that the LMC approve the updated Land Records Modernization Plan as proposed.

Holst moved to approve the updated Land Records Modernization Plan as presented/Aubart seconded. All in favor. Motion Passed.

Discuss take action on proposed 2018 Land Management Department Budget. There is a memo there which looks at the 2017 Budget versus the 2018 Budget, you will see there is about a 4.3% change which is higher than one would anticipate but it has largely to do with increases in personnel costs specifically going from single insurance to family insurance in one case. Planning Budget: This was increased by roughly 7500.00 due to personnel increases. The sign parts and supplies line item was increased by \$1000 and printing and duplication by \$50. If you recall we changed the style of the signs and that is necessitating that we get more supplies in stock. It is his anticipation that we may be able to bump that back down in a year or so once we get our supplies. Printing and duplication is just the cost associated with copies and that tends to go up like everything does.

Zoning Budget: This budget increased by approximately \$22,000 when compared to 2016. This was due to personnel and the insurance fund.

GIS Budget: This budget has increased by approximately \$2,500. This is due to an increase in personnel costs. Step increase and everything associated with that.

Surveyor Budget: This budget has increased by approximately \$1,400. This is due primarily to an increase in personnel. He also did propose to increase the training and conferences line item by \$250. Louie attends annually a training in WI Dells that is necessary for him to maintain his licensure. It turned out it wasn't quite enough what we had budgeted for that. Unlike the GIS training we don't get money from the State for that.

Land Records Modernization Fund and Grant is fees retained by the Register of Deeds Office. Whatever we retain, the difference between that and \$100,000 the State gives us in a grant. It looks like our typical retention is about \$54,000. So we get about a \$46,000 grant so all of these expenditures are proposed to come out of the grant. What we do is spend the grant first, because the grant needs to be accounted for and the fund is non-lapsing. So if we don't do some of these things just by virtue of the timing, or things that are available, we don't lose those funds we can simply move that item into the next year.

We are proposing:

\$8,000	COGO Parcel Updates
\$5,000	GIS Maintenance
\$3,485	ProWest LINK web map maintenance – Annual
\$4,995	ESRI Arc Licenses – Annual
\$1,000	ArcGIS online credits (Data hosting)
\$9,400	Parcel Conversion to ESRI Parcel Fabric
\$6,800	GIS Data Conversion to Government Model
\$1,800	Database upgrade – Install Workgroup SDE
\$4,000	Laminator (Survey/GIS Office) – Have developed some new County maps, would like to laminate them and sell them. The Sheriff's Department would like some they can write on.
\$3,890	R1 GPS Unit and Handheld Collector (Parks)
\$ 800	New Printer (replace 850-10+ years old) for GIS/Surveyor Office.
\$7,500	Application Extender License upgrade (For surveys on website)
\$1,800	Application Extender Annual Maintenance (For surveys on website)
\$4,800	Survey search website creation – ProWest
\$6,000	Fix CIS Geofile from updated MSAG (Sheriff)
\$2,213	50 Pictometry Internal Website Licenses and 1 Public facing License – Annual
\$21,000	Upgrading Fidler (Avid/IDOC) – Software/Hardware (ROD)
\$3,000	Building Footprint Creation (GIS Data)

\$95,483.00 Total Potential Expenditure (Grant and Land Records Fund)

As far as Revenues, he is expecting revenues to remain consistent with 2017. He has historically in the past been a little too optimistic on revenues so he is being slightly pessimistic assuming they are going to stay what they are. The reality is that we will probably have a little more revenue this year than what he had budgeted for. But given the ramifications of being wrong, he would rather be a little low than a little high. You have budget worksheets for the various chunks of the department, first is County Planner: as you can see the percentage

changes, the 40%, the one that jumps out is the signs and equipment that we talked about and 9% is printing and duplication. Holst stated that you have to take into consideration that 40% is \$1,000. Then Zoning on page 2, the ones that jump out are Health Insurance 39%, Medicare Deduction, actually we went from 22 to 26 on Life Insurance so that's an 18% increase that looks substantial but it's also not. Nothing too earth shattering on that page. Next moving to GIS, all personnel costs associated with the cost of living and step increases that Kevin would get. Moving into the Surveyor, similar kind of deal, personnel costs except for the 25% increase for training and conferences which equates to \$250. Revenues are the next page, not expecting to see too much difference. Next page is revenues from the surveyor, again not too much difference, in 2016 we saw \$7350 and we had budgeted \$6000, leaving it at \$6000 rather than chasing that around. Then the next budget is GIS State Aid Grant, he is anticipating \$46,000 grant given he expects we will retain in the neighborhood of \$54,000. That is the ROD's revenue budget where that would come in. Next is an expense account that would account for half of the Land Information Grant, we have \$49,000 budgeted for 2017, the reality is that it is going to be closer to \$46,000. So in 2018 he is proposing \$46,000. The next page shows the expense account of \$49,000 out of the Land Records fund itself. Between the two of them it comes very close to the \$95,483. The Zoning Aids, this is the Wisconsin Fund, last year we didn't have any qualifying systems, usually we would see \$15,000. That has been average over the case of the last decade. Perhaps we won't have any qualifying systems again but statistically he suspects we might, as long as they continue to keep that program. That is the revenue budget for the same grant fund. The last page is a program worksheet which he is providing to you just because he feels departments aren't always necessarily upfront about what is mandated and what's not mandated. This kind of definitely shows what is in fact mandated within the department. Basically it gets into the number of full-time equivalents associated with each of the functions, income associated with each, tax levies and the priority and the priority is pretty tough because they are all so interconnected. No real action is required on the last sheet just giving you that in the interest of full disclosure. Chairperson Fetzer stated overall your budget has been holding tight for a number of years. A bit of an increase, everything else keeps going up. I think you do a nice job. Pichotta noted that we have the \$100,000 for Land Records Modernization Grant and the retention program. There is the potential for a Strategic Initiative Grant for about another \$50,000. He doesn't know about that yet, rather than seek authorization from the committee tonight should that become available he will put it on as an agenda item for the future. Aubart stated the numbers are going to come down and we're going to be a little closer. Holst stated we can only work with what we were told. Aubart stated but Andy's increase is all in insurance. Holst stated except for \$1,000 in signs. **Aubart moved to approve the proposed 2018 Budget as presented/Holst seconded. All in favor. Motion Passed.** Pichotta asked Chairperson Fetzer if he would appoint Mr. Holst to accompany him to Administration. Chairperson Fetzer asked where they are going. Pichotta stated a representative of the committee, typically it's been Mr. Holst, needs to meet with Administration and present the budget and they usually accept it.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Pichotta stated we actually don't have anything for the next meeting. We have a couple CUP applications that are out there that could slide in at the last minute but he doesn't anticipate anything.

Motion to adjourn at 6:50pm by Aubart/Holst seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 16, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 6 th & 20 th , October 4 th & 18 th , all in 2017.	Chair
3	Approve minutes of the August 2, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Duplex in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-17, for Mackenzie Zajec, owner on property located in Lot 1, Certified Survey Map (CSM) V6, P138, in the NW ¼ of the NW ¼ of Section 12, T27N, R17W, Town of Martell, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for Steven & Joan Tyvoll, owners on property located in the NW ¼ of the SE ¼ of Section 10, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
6	Discuss take action on updated Land Records Modernization Plan.	Pichotta
7	Discuss take action on proposed 2018 Land Management Department Budget.	Pichotta
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/4/17)

PIERCE COUNTY WISCONSIN

MINUTES - Pierce County Land Management Committee Meeting, August 2, 2017

Present: Jon Aubart, Joe Fetzer and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jeff Holst and Eric Sanden

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 16th, September 6th & 20th, all in 2017.

Approve Minutes: **Snow moved to approve the July 19, 2017 Land Management Committee minutes/Aubart seconded. All in favor. Motion Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for Wisconsin Frac Sand Inc, John & Marjorie Kralewski Family Partnership, Dean & Mary Holden, Edmund & Dawn Daleiden, William & JoAnn Steele, Jeffrey & Kelly Von Holtum and Schaul's Gas Inc, owners, on property located in the S ½ of the SE ¼ of Section 3 and the N ½ of the NE ¼, the SW ¼ of the NE ¼, the E ½ of the SE ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 10, the W ½ and parts of the SE ¼ of Section 11, the W ½ of the NW ¼, the E ½ of the NE ¼, the N ½ of the SW ¼, the W ¼ of the SW ¼, the SW ¼ of the SW ¼, the SW ¼ of the NE ¼ and parts of the E ½ of the NW ¼, parts of the E ½ of the SE ¼, parts of the NW ¼ of the NE ¼, all in Section 14 and the W ½ of the SW ¼, the NE ¼ of the SW ¼, the W ½ of the SE ¼ of the SW ¼, part of the S ½ of the NW ¼, part of the NE ¼ of the NW ¼, of Section 13, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Rich Budinger and staff forward:

Staff Report – Brad Roy: The WISC mining operation encompasses approximately 2,077 acres total with approximately 1,587 acres located in the Town of Maiden Rock. Of the 1,587 permitted acres in the Town, approximately 370 acres have been mined to date. Due to market conditions the mine shut down in April 2016 and started back up in January 2017, with production starting at end of February. The mine operates 24 hours a day, 5 days a week and employs 46 people at this time. Nothing has changed with any of the operation. WISC creates tunnels by blasting and uses a room and pillar mining method. Mining activities take place underground, including blasting and washing. Surface activity is limited to the processing plant in the Village of Maiden Rock. The land currently is agricultural, residential and undeveloped areas. There are 4 wells on-site. Three of which are high capacity. Blasting typically takes place three or four days a week; the blasts usually occur around 5:30pm. The WDNR (and other agencies) regulates many of the activities of a mining operator with storm water runoff, impacts to navigable waterways and high capacity wells and other activities. WISC submitted a Groundwater Response Plan for the facility. The plan addresses the source and use of groundwater within the facility as well as measures to protect the quality of water. WISC developed a Damage Response Plan as requested by the LMC. Staff has not received any complaints about this use but in the past citizens have raised concerns about this operation which include:

- Health effects of silica in the air.
- Depletion of the aquifer.

- Contamination of the aquifer and surface water.
- Blasting effects on wells and structures.
- Potential decrease in property values.

Staff contacted the Town of Maiden Rock Chairman regarding this renewal request; the Town did not have any concerns at this time. The existing conditions #1 - #17 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends the Land Management Committee renew this CUP with the following conditions:

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5 am up to four times per week, including Saturday).
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100ft from any well.
4. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
5. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
6. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
7. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
8. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
9. This permit shall expire in two years.
10. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
11. The Damage Claim Response Plan, as approved by the Town of Maiden Rock, shall be adhered to.
12. The Town of Maiden Rock's recommendations/comments, from the January 19, 2011 public hearing, shall be adhered to.
 - a. Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
 - b. The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
 - c. The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.
13. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat from such emissions.
14. A fugitive dust plan shall be developed for the processing facility and submitted to the Zoning Office.
15. The operator shall provide notice to the County of any orders to cease and desist from MSHA.

16. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.

17. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LMC.

Chairperson Fetzer asked Rich Budinger if he has anything to add. Mr. Budinger introduced staff with him tonight: Aaron Scott, Director of Operations, Lauren Evans, Sustainability Coordinator, Brandon Simmons, Superintendent on site at Maiden Rock, Ally Simmons, Superintendent at Maiden Rock. Aaron, Lauren and Brandon have a few things to bring you up to date on. Aaron Scott, Director of Mining Operations in Wisconsin and in Minnesota, explained one of the things that they have seen in the last year with market conditions and going into this year is an uptick. We did a great job with the plant, keeping it in top shape, knowing that this uptick would eventually come back. They're real excited to bring back employees and hire more employees. Brandon Simmons stated they are currently at 50 employees and still have 20 more to go. So getting there, working 24/5. We'll get to 24/6 and once we get all 20 it will be 24/7. Mr. Scott stated they are continuing to hire which is a great thing and one other important thing is even though in 2016 we didn't see a lot of activity there, employees were still engaged in the region. We had a lot of community efforts, we still held onto all of our permits, the things that we were going to do in the mine that we said we were going to do. We were still able to get volunteer hours and do some of those things even though it was slow. With the 70, that is not including the staff you see here and the additional salaried staff, support staff, engineers, regional quality coordinators, environmental health and safety coordinator. Lauren Evans stated a quick update since the last CUP renewal, 2015 we were very active with production and employee numbers so we volunteered a total of 5,422 hours here in the northern region and a little over 2,000 of those hours came from employees at the Maiden Rock facility. Even in 2016 with the facility being idle for part of the year, we still completed 1,402 hours from the Maiden Rock facility. So taking advantage of those opportunities and making sure that we are doing those things within the community. That is important to us. Charitable contributions: we gave around \$62,000.00 last year within the region and about \$35,000 of that from our Maiden Rock facility to local non-profits. Then in 2015 we were able to give a little more; a total of \$201,000.00 in the region with \$92,000 of that coming from Maiden Rock. Some of the opportunities that they are looking forward to this year, now that they have more staff and continuing to staff up, we have already completed some projects at Camp Pepin, just down the road, south of Hwy 35 from our facility. We hosted the Rush River cleanup again this year. We had a total of 70 volunteers, not all our employees but community members and other groups as well. We cleaned up about 25 miles of the Rush River and collected about 540 pounds of waste, 150 pounds of recyclables and 15 tires, continuing to pull material out of there year after year. A new development at Pine Creek which is a project that many of you know we have been working on for some time with the DNR and Trout Unlimited. We signed an agreement with the DNR as part of their adopt a fish and wildlife program. It just solidified what they are already doing there and put it on paper so they can continue to maintain that area for them. We have more things planned for this year and volunteer opportunities. Mr. Scott stated as we continue on with that history there, we look forward and excited to continue to be members and good stewards of the community. A couple weeks ago, we did contact the Town of Maiden Rock and went to their meeting and gave a very brief, similar update on what is going on. They thanked them for their involvement and continuing on with what we said we were going to do and looking forward to hiring more people. Chairperson Fetzer stated when he first got on this committee, some of the meetings that obviously Rich was there, he doesn't remember some of the others, we would have a full room here and one meeting we had in a different room just because of the number of people. He would say it's a feather in your cap for doing a good job down there because now it's just your people showing up, obviously things are going well and you are doing what you say you are going to do. We appreciate that from our standpoint because it makes our job a lot easier too. Just want to commend them for the job they must be doing down there and it's nice to hear we don't have any complaints on stuff. Snow stated we have been mining sand in Pierce County for about a hundred years now, so it's part of our culture, part of who we are, thank you guys for keeping the tradition up.

Snow moved to approve the renewal of a conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand Company with conditions #1 - #17/Aubart seconded. All in favor. Motion passed.

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for BS Construction Inc and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.

Staff Report – Brad Roy: This permit will expire on August 5, 2017. Multiple attempts were made to contact the owner/operator to determine availability for this meeting. Rather than allowing the permit to expire, staff is recommending a 60 day renewal to schedule a meeting when the owner/operator will be available. The existing conditions #1 - #13 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no additions or modifications are necessary, staff recommends the LMC renew this permit with the following conditions:

1. Hours of operation shall remain consistent with daylight hours or Monday through Friday, 6:00am – 9:00pm during the construction season with an occasional Saturday, 6:00am to 6:00pm, property owners within 300ft and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibrations.
7. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
- 9. This CUP shall expire in 60 days.**
10. 50 foot setback shall be maintained from all property liens and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Operator shall ensure that fly-rock does not negatively impact adjacent properties.
13. The operator shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions.

Chairperson Fetzer asked if staff has had any complaints on anything. Roy stated no.

Aubart moved to approve the renewal of the conditional use permit for a Nonmetallic Mining Operation for BS Construction and Steve Schoeder Properties with conditions #1 - #13/Snow seconded. All in favor. Motion passed.

Discuss take action on a status report for a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: In 2012, WISC obtained a permit for a Mineral Processing and Rail Load-Out Facility in the Town of Trenton. The permit was valid for two years and could be administratively renewed. In 2014, WISC presented staff with information which demonstrated that they had taken action to establish the use without actually constructing the facility. Staff renewed the permit administratively for another two years. WISC has changed plans and no longer has any intention of constructing a processing and rail load-out facility on the site. Last year the property owner, William F. Holst III, assumed operation of the permit and is now working to establish a new mineral processing and rail load-out facility on the site. Mr. Holst has been working

with Total Excavating to construct a facility to process sand from the Wieser mine in the Town of Salem. Adjacent land uses are nonmetallic mining to the east and west, residential to the north across Hwy 35 and agriculture to the south. Higher density residential is located near the proposed site approximately one-half mile to the south. No structures have been built. Efforts to fill and grade the site began in 2013 and have been ongoing and continue today. The proposed facility will receive, wash, dry, screen silica sand for shipment and operate 24 hours a day, seven days a week. Raw sand will be transported to the site by truck from Hwy 35 and entering the site from 830th St. A new Traffic Impact Analysis (TIA) would be needed to determine if any road improvements are required. The proposal states that outbound rail shipments will average 200 cars per week. Loading trucks for shipment will consist of a conveyor and a hopper. Truck shipments are secondary and will be predominantly local. The plan calls for the construction of six rail sidings to the BNSF Railroad. The sidings will be used for storage and in the loading process. A Fugitive Dust Plan will need to be developed for the facility. The Town of Trenton Chairperson was contacted regarding this use and no concerns were identified at this time. The existing conditions #1 - #14 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any additional information is necessary. No formal action on this time is necessary.

Chairperson Fetzer invited William F. Holst III forward: Mr. Holst stated we have most of the sand along the tracks now in place. We have put three quarters of a million ton of material in there. It needs some grading but the big bulk of the material is there. Chairperson Fetzer asked how it is going setting up with the railroad. Mr. Holst stated oil has to get a little higher before there is going to be any serious interest in doing that. Chairperson Fetzer stated no formal action is needed. Pichotta stated this is just a status report as required in the conditions to come in once a year to let you know how things are going.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Request for a CUP for a Duplex in the Town of Martell.

Request for a CUP for a Retreat Center which is a church facility for the Tyvoll's in the Town of Spring Lake.

Update to the Land Records Modernization Plan.

Proposed 2018 Land Management Department Budget

Motion to adjourn at 6:21pm by Snow/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 2, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

MINUTES - Pierce County Land Management Committee Meeting, July 19, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 2nd & 16th, September 6th & 20th, all in 2017.

Approve Minutes: **Snow moved to approve the July 5, 2017 Land Management Committee minutes/Holst seconded. All in favor. Motion Passed with Sanden not voting due to his absence from the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Nursery in the Agriculture Residential District, pursuant to Pierce County Code 240-35B(4), for Timothy & Shawn Doose, owners on property located in part of the NW ¼ of the NW ¼ of Section 20, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Doose forward: Mr. Doose stated he is building a 42ft x 96ft steel framed greenhouse for his aquaponics to expand.

Staff Report – Emily Lund: The applicants obtained a land use permit on 3-30-2016 for a plastic 18ft x 40ft greenhouse and on 1-23-2017 they obtained a land use permit for a Home Business for the sale of produce and various crafts within a 15ft x 15ft room of the house and a 4ft x 5ft advertising sign. Today the applicants are proposing to construct a 42ft x 96ft metal greenhouse that grows their Home Business beyond the 1,500 sq ft that their permit allows. The applicants are requesting approval of a CUP to operate a Nursery to accommodate the business expansion. The area within the house is no longer being used and was transferred to a 16ft x 8ft area of an adjacent shed for an office/sales room. The property is located in Section 20, Town of Trimbelle and is zoned Agriculture Residential. A nursery is conditionally permitted per Pierce County Code (PCC) §240-35B(4). PCC §240-88 defines ‘nursery’ as “a facility or facilities used primarily to raise trees, shrubs, flowers, produce and other plants for sale, of which at least 50% are grown on site. Landscaping and horticultural services may be offered along with the sale of garden products such as rakes, shovels and pots. The sales of garden products shall not occupy more than 25% of the sales area. Applicants own 5.001 acres, where 3 acres are the home, lawn, buildings and nursery and 2 acres are for crop production. They sell aquaponics vegetables, farm raised eggs, honey and homemade crafts; all of which are grown or produced onsite. Aquaponics uses the waste produced by farmed fish or other aquatic animals to supply nutrients for plants grown hydroponically. They have a 128 sq ft office, a 720 sq ft greenhouse and a proposed 4,032 sq ft greenhouse that totals 4,880 sq ft. Applicants do not have any additional employees at this time. Hours of operation are daily from 8am to 8pm, self-service. PCC §240-54 off-street parking requirements state 1 parking space per 200 feet of primary floor area for retail stores and personal service establishments and outside retail sales require 1 space per 500 square feet of display area. The applicants have 50 parking spaces available. Portable outhouses are not planned at this time. No special equipment is needed for aquaponics, except fish, water, heat and the greenhouse. A 4ft x 5ft advertising sign is located at the driveway entrance along US Hwy 10. The facility is licensed with DATCP and is registered as a Type 1 Fish Farm. The Town of Trimbelle recommended approval of this conditional use permit on 6-13-2017. The Town did not recommend any conditions or identify any specific concerns.

Staff Recommendation: Staff recommends the Land Management Committee (LMC) determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be

detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the Land Management Committee approve this request with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Applicants shall work with the Town of Trimble Building Inspector to determine whether commercial plan review and approval is required for the building from Department of Safety & Professional Services.
3. Adequate portable outhouses (1 per 50 people), or other acceptable restroom facilities, shall be provided and maintained.
4. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on or off property.
5. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no compliance issues arise.
6. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit. An increase in the number of, or size of, greenhouses or an increase in number of employees shall not be considered an intensification of the use.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Snow asked what kind of fish are you raising? Mr. Doose stated hybrid blue gill and tilapia. Holst asked when they would be available for sale. Mr. Doose said in a few months. Sanden asked Emily for clarification on condition #3, portable outhouses 1 per 50 people, is that 50 employees, clients...? Lund stated anybody. Sanden stated that it says that portable outhouses are not planned at this time. Sanden asked the applicant if they could explain how he plans to meet condition #3. Mr. Doose stated there are never more than 3 or 4 people there at one time. They come. They stop and get their stuff and leave. He isn't sure, if he needs to get an outhouse he will get one. Chairperson Fetzer asked if it's just a roadside stop or a shop. Mr. Doose stated yes, it's self-serve. He built a room for them to go in and everything is in there for them to get what they want and pay and walk out. Holst stated he believes at this time, these guys are just starting their business and perhaps at this time it would be a hardship to force them to have a bathroom facility. Maybe as the business increases, and he believes it will, at that time we should review condition #3. Sanden asked if we would be setting any precedent by striking condition #3 or causing any problems with like applicants. Pichotta asked the applicant if he would characterize this as a roadside stand or is as something more than that? His sense had been that it's something more than a roadside stand. Mr. Doose stated it's pretty much a roadside stand but it's inside a building. Pichotta asked if someone showed up and had to use the bathroom, what would you do? Mr. Doose stated he wouldn't be there. He would be at work unless it's at night. Pichotta stated given the nature of it, basically, as a self-service roadside stand, he would be comfortable with striking condition #3, given that it's characterized as a roadside stand. But if one has a facility where folks are there for a while; he has read several articles in the paper and it sounded like folks would regularly come in for tours which made it seem to be more than just a roadside stand. In those cases we want the public to have the ability to use a restroom facility. As long as it remains a roadside stand, he thinks that would make sense to not require bathroom facilities. Mr. Doose, asked if he had an open house for a day, then he would need restroom facilities? That would be no problem. Sanden stated his only other question is there have been no complaints up to this point? Lund stated no. Holst asked how do you want to address condition #3? Sanden stated strike it.

Holst moved to approve the conditional use permit for a Nursery for Timothy & Shawn Doose, due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6, striking condition #3/Sanden seconded. All in favor. Motion passed. Holst commented that this is a very good thing for Pierce County, not only for agriculture but for the ag tourism and the rural area in general. These are the types of things that we should promote and frequent. Chairperson Fetzer agreed with that and stated that with him being in the ag business, he looks forward to stopping in and checking out the business. Mr. Doose stated he is home on the weekends. Mrs. Doose stated they could use their bathroom in the house if needed.

Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) in an Industrial District pursuant to Pierce County Code Chapter 240-37E, Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Rob Williams and Tom Olson forward:

Staff Report – Brad Roy: This facility was permitted in 2011 and began full operation in 2012. Muskie was originally processing sand from a mine located in Pepin County and then later secured material from a mine located in Dunn County. Muskie, through their discussions claimed that the sand was coming from the Gilles Quarry however, staff has been there and it doesn't appear that the Gilles Quarry is very active at this point. That will be something that they can expand on. Due to market conditions Muskie shut down operations at the plant in June 2015. The plant restarted operation in January, 2017. Sand is trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The facility also has byproduct storage stockpiles, storm water ponds, a high capacity well, process water treatment facilities and elevators for the storage silos. The final product is trucked primarily to St. Paul. The hours of operation are currently 24 hours a day, five days a week, weather and labor permitting with periodic weekend work. Industrial uses within the Industrial District typically have not had hour restrictions due to the purpose and intent of the district. A Fugitive Dust Plan has been submitted. The plan details potential sources, control measures and daily record keeping. Staff had received multiple complaints regarding dust on the driveway and Hwy 10. Staff did not observe any dust on Hwy 10 on inspection, but did notice dust on the driveway. The fugitive dust plan details measures to remove dust from the driveway and internal roadways. There have been no complaints about engine braking since Condition 6 was added. Staff has contacted the Town of Union Chairman regarding this renewal request; the Town did not have any concerns at this time. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no changes or additions are necessary, staff recommends that the LMC renew the CUP with the following conditions.

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.
5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. The Fugitive Dust Plan shall be adhered to.
8. Byproduct shall be utilized in the reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code.
9. Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.
10. The facility shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.
11. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
12. Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.
13. The conditional use permit shall expire in 2 years.

The only recommended change being to condition number 13 changing to a 2 year permit renewal.

Sanden asked if the complaints received regarding dust received after the Fugitive Dust Plan was submitted and implemented or before? Roy stated after, the Fugitive Dust Plan was submitted in 2013 and he has spoken to Muskie about it. They feel it probably came up with the new hiring of staff and just getting everything on

schedule. They can elaborate on that. Chairperson Fetzer stated that he lives right there and goes by multiple times and previous to this re-opening he would see the sweep out there and cleaning up stuff. He saw it out there a lot. He has seen the sand coming down the driveway but it's obviously being taken care of. You are coming out and sweeping. Originally, we had some issues with new employees where the sand would drop in and you would see clouds of dust. They actually came on line and cleaned things up and did a really nice job. Maybe it's just a matter of getting you guys up to snuff on things. He doesn't want it to be just because you are coming here before the committee. He would like to see it done continually. Before it was all permitted, when it first came in front of us, it's a huge concern and we have to deal with it. Keeping things cleaned up makes a big difference for the neighbors. Rob Williams, HSE Manager for Muskie Proppant, to your comments, initially on the re-opening it really did have a lot to do with the staff that they had. Everybody was brand new, they were short-staffed and struggling with a lot of different issues. They have worked really hard with staff to get them to understand the requirements and the importance of Fugitive Dust Plan. They have several facilities and health & safety are at the very top of their list. Everything else comes second. They are working very hard to get that taken care of and cleaned up. He thinks they have done a pretty good job of it so far and they continue to try to do so. They are implementing some further changes in their silos to control dust during the loading and monitoring process and even to reduce exposure for their own employees working in those areas. So it's something they are being very proactive about. Chairperson Fetzer stated he sees it is getting better and we want to make sure that they are going to stay on that. Mr. Williams stated it most certainly wasn't because of this meeting. It's something they take very seriously and monitor daily. There are control methods they have in place regarding the Fugitive Dust Plan. It is required that the Fugitive Dust Control measures that are used and enacted are recorded every single day. Even if there isn't a requirement for it that day; pouring down rain, this still has to be filled out. They are monitoring it very carefully. Holst stated the Zoning Administrator was a little concerned about where their product was coming from. He supposed this is due to haul routes, if it's coming out of the Gilles Quarry. Mr. Williams and Tom Olson stated it's actually the Wieser Quarry. That was a misunderstanding. Holst stated then nothing has changed. Mr. Williams stated nothing has changed. Chairperson Fetzer stated it's just not coming out of Pepin County anymore.

Holst moved to approve the renewal of the conditional use permit for Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC with conditions #1 - #13 amending #13 to read "The conditional use permit shall expire in 2 years." and remind them that if they don't adhere to their Fugitive Dust Plan, we won't be so friendly to deal with/Snow seconded. All in favor. Motion passed.

Holst stated it's nice to see you guys up and going again. Mr. Olson, District Manager, stated if you know of anyone that wants a job, send them our way. Chairperson Fetzer asked how many people are you looking for? Mr. Olson stated they would like to get to 24/7.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Request for renewal of a CUP for WISC's facility in Maiden Rock.

Request for renewal of a CUP for Nonmetallic Mining for BS Construction in Rock Elm.

Status report for a CUP for Heavy Industrial Uses (Sand Processing Facility) for William F. Holst III in the Town of Trenton. This is the one that used to be with WISC.

Motion to adjourn at 6:25pm by Holst/Snow seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(7/07/17)

PUBLIC NOTICE
Nonmetallic Mining Reclamation Plan

Notice is hereby given that Total Excavating has filed an application for a Nonmetallic Mining Reclamation Permit with the Pierce County Land Management Department under the Pierce County Nonmetallic Mining Reclamation Ordinance. The application is for the mining operation located wholly or in part of the E ½ of the SW ¼, Section 14, all in T27N, R19W, Town of River Falls, Pierce County, WI on property owned by Peterson Family Real Estate, LLC.

The applicant proposes to extract, crush and screen sand material. Washing may occur at the site. The applicant proposes the post-mining land use to be agriculture, including a potential barn expansion. The site will be contemporaneously reclaimed. A highwall with a peak height of approximately 100 feet will remain after mining has been completed.

Any person residing within, owning property within, or whose principal place of business is within 300 feet of the boundary of the parcel or parcels of land in which the nonmetallic mining site is located or proposed may request a public informational hearing. Pierce County shall hold a public hearing if requested by any of these persons within 30 days of the actual date of public notice. The hearing shall be conducted as an informational hearing for the purpose of explaining and receiving comment from affected persons on the nature, feasibility and effects of the proposed reclamation.

The reclamation plan for the above referenced project can be viewed at the Pierce County Land Management Department, 414 W. Main Street, Ellsworth WI during regular business hours. Please contact the Zoning Office at (715) 273-6746 with any questions.

MINUTES - Pierce County Land Management Committee Meeting, July 19, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:04 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 19th, August 2nd and 16th, all in 2017.

Approve Minutes: **Snow moved to approve the June 21, 2017 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Conditional Use Permit for a Utility Facility >1,000 sq. ft. (bulk LP storage) in the Commercial District, pursuant to Pierce County Code Chapter 240-41F, for River Country Cooperative, agent for David L'Allier owner, on property located in part of the NE¼ of the NW¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI. Also, Discuss take action on a request for Site Plan Review for a Utility Facility >1,000 sq. ft. (bulk LP storage) in the Commercial District, pursuant to Pierce County Code Chapter 240-41F, for River Country Cooperative, agent for David L'Allier, owner on property located in part of the NE¼ of the NW¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI.

Staff Report – Emily Lund: The applicant owns the Steel Horse Saloon tavern and softball field located along US Hwy 10. He intends to sell the property to River Country Co-op pending approval of this CUP. River Country Co-op acquired Pierce Pepin Propane Services in 2015 and is proposing to convert the existing tavern into a garage/office and to develop a bulk LP storage facility to support the area's propane needs. Site Plan Review is required by Pierce County Code (PCC) § 240-75 for new construction or additions to existing structures for commercial uses. Given that the subjects reviewed when considering issuance of a CUP are the same as those considered for site plan review; both actions are being presented in a single staff report. The property is located in Section 21, Town of Trimbelle. The property is zoned Commercial. The property is bordered by agricultural, residential, and commercial uses. Adjacent zoning districts include Commercial and Primary Agricultural. PCC Ch. 240-41(F) states Utility Facilities are subject to the following:

1. No land use permit shall be required for any installation that is at or below grade elevation nor for electrical distribution poles, towers and wires.
2. Those structures which are four feet or less above grade elevation need not meet setback requirements nor need they be placed on conforming lots.
3. Electrical substations shall be enclosed by a chain link fence at least 10 feet high. Such structures shall additionally be located at least 75 feet from a dwelling unit and 50 feet from any residential lot line.
4. Utility facilities where the land area bounded by the location of such structure or equipment is less than 1,000 square feet shall be exempt from the permit requirements of this chapter and shall not require a land use permit.
5. Utility facilities in the Exclusive Agriculture District shall be consistent with agriculture use per 91.01(10) Wis Stats.

The agent/buyer submitted plans to remove the structure and trees within the ball field area and add class 5 gravel over the lot. They propose a secure area that is ~230' by ~300' with a 10' tall security fence around the entire secured area. Within the secured area, they propose to have up to (3) - 30,000 gallon bulk LP storage tanks, residential/customer storage tanks, and 3-4 bobtail delivery trucks. The security fence is to be located

within the property lines and out of the US Hwy 10 right-of-way. Two security lights are proposed within the secured storage area. They propose to have 2-4 service pickup trucks and have 3-6 employees. Hours of operation are to be Monday – Friday, 7 a.m. to 5 p.m. Over 20 parking spaces will be available for employee parking. The existing well is located northwest of the tavern. Applicants intend to utilize the existing bathrooms. The existing septic system is northeast of the tavern. River County Co-op proposes to have a road monument and other signage on their storage tanks, but have not provided any dimensional information relating to signage. The Town of Trimbelle recommended approval of this request on 6-13-2017 without any comments or recommended conditions. PCC § 240-75 requires site plan approval for new construction or additions to existing structures and buildings for commercial uses. The purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to street and transportation, protect property values and contribute to efficient land use in Pierce County. The topography is level throughout the south half of the property. The north half of the property slopes to the north 15 to 60% slopes. There is a row of large pine trees between the tavern and residential property to the west. The agent/buyer proposes minimal modification to current landscaping. Neighboring property to the east is zoned Commercial with a pole shed. Access is off US Hwy 10. In reviewing the site plan, the LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed use at the proposed location would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, and no modifications to the site layout are necessary to achieve efficient traffic flow and circulation, or to mitigate off site impacts, staff recommends that the LMC approve this conditional use permit, including the proposed site plan, with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The security fence be installed to a height of 10 feet above the grade elevation.
3. The applicants shall not encroach on US Hwy 10 right-of-way.
4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. Best management practices shall be implemented to prevent off site impacts from ground disturbance activities.
- 6 All signage shall comply with Pierce County Code and applicant shall obtain necessary permits.
7. The proposed project shall be completed within 12 months of CUP approval.
8. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary

Chairperson Fetzer opened the hearing to the public. Myrna Melby stated they feel the applicant/agent needs to resurvey the east lot line. On a survey map it shows the ball field, but if you look at the second page of the survey map, it states, “subject to easement over lot 4 for the continued operation and maintenance of a ball field as described in a previous document and to a 10 foot wide easement surrounding the ball field located on lot 3 and 4”. This is a survey that was made up at that time and it shows the fenced in ball field. But when Sheffers surveyed it, he surveyed right around the ball field. But on the second page, it states that there was an easement. In October 1997 a survey was made and it included the ball field, but it doesn’t show the easement. They had a fire in 1998 and then K2 issued a deed to release the easement along the westerly boundary of lot 4 of the CSM. Later they sold the property to Arneson’s. Arneson’s wanted a used car lot, not a ball field. So that easement was released. Andy Pichotta stated that staff did some research into this as well with the help of the interim real property lister, Phyllis Beaström. From our research it appears that some documents were recorded in 1999 which actually created lot 3 and 4 as is shown in the staff report and in the materials that the applicant presented. This may be an issue that may need to be resolved between the two parties; however this doesn’t preclude the committee from considering this request before you today. Myrna Melby stated it would consider it as far as where those tanks would be put. Chairperson Fetzer confirmed with Pichotta that the tanks need to be

at least 10 feet from (east) property lines. So this is an issue that will have to be resolved. David L'Allier stated he is in the dark on this. When he obtained the property from Arneson's he was given a map of the property, now this has changed and that's not our property? Myrna Melby stated when it was sold to Arneson's the easement was released. Chairperson Fetzer asked the current owner if he still wanted to pursue this. David stated of course. Chairperson Fetzer stated the lot line issue is a totally different matter that you are going to have to figure out. It's a civil matter. All they have to worry about is that the tanks are ten feet off the (east) property line. Pichotta suggested a condition to address this issue. The condition would read, "Applicant shall verify lot line locations and shall ensure compliance with applicable setbacks." Chairperson Fetzer stated once everything is figured out, then everybody should be covered. Emily Lund stated she tried calling both the applicant and the agent and she wasn't able to get through to the applicant, but she did explain everything to the agent. Dennis Langer asked if that takes a slice of land away from the lot, is there still adequate space for the tanks? Holst stated yes, there is a considerable amount of space left. Sue Langer asked what the right-of-way is from Hwy 10. Emily Lund stated their lot line goes up to the right-of-way. It is 50 feet from (here) to the center of Hwy 10. Sue Langer stated living on Hwy 10 and hearing the ambulances and helicopters overhead; there are so many accidents and coming up the hill from the west, you are basically blindsided if someone is sitting there. All of a sudden there is a little bit of a dip. With the larger tankers, 10,000 gallons has to be a lot, sitting on the highway. Then having these larger tanks to the front, by looking at the placement, is there a higher risk if there is an accident. Lance stated they are basically taking what is at Pierce Pepin and moving it down the road. For the transportation piece of it, there is going to be the same transportation load they currently have at Pierce Pepin. She is not questioning that or up on that, but her concern is that there is so much chance for a large explosion very close to the highway. If you look where it is at Pierce Pepin right now, you go down and into the lot and away, it is setback more. Lance stated there is NFPA-58 that deals with all propane regulations throughout the US. The county has a greater setback than what the agency requires. So the county setback is what they will follow. Langer's are looking at a lot of the propane facilities around and it seems that all of the smaller tanks are usually to the front rather than the large. Lance stated the smaller tanks are empty. Sue stated so wouldn't that be easier to have to the front of the highway. Lance stated it could be but it depends, you could go back and forth. But as far as the larger storage tanks, NFPA-58, it's 50 feet from the highway. Propane is a very safe product. If you're going to override NFPA-58, you'll have to start looking at a lot of different operations along Hwy 10, if that is the mindset you have. But as far as traffic goes, it is going to be the same as today. Sue stated it is just you're stopping at a spot where cars can't get around you. Lance stated on average, that is one transport a day. Sue stated it is hard when you are living close by; is it something that you necessarily want right next to your property, no. But right now the main thing is, they are very concerned on the security, and the safety. She wishes they would have been given a little more time to look at this. They first got a letter on Wednesday late, did come to the County and the gal was very good about getting a copy of the records so they could read it ahead and look at some things. Sue asked if Land Management had any concerns about the safety, have you spoke to the Department of Transportation. Pichotta stated no we have not spoken to the Department of Transportation. We are aware that there are universal standards in place. Sue stated just for even turning on and off the highway, like when they built, you couldn't just put the driveway where you wanted to. So if it is going to have larger vehicles with propane going in and out, will the DOT hold to the same entrance? Chairperson Fetzer stated there are certain standards if there is enough traffic in and out of there, and then they will have to build an additional lane. Holst stated that traffic flow isn't going to come anywhere close to meeting those standards. We always see the worst case scenario and we can't possibly build everything and protect everybody every minute of the day. Because if we did, we would live in a vacuum and nothing would get done. Sue asked if something happened, is there something that you set up, and maybe you have right now with Pierce Pepin, with the Fire Department, a blast and evacuation area. Lance stated not only do they work with the County, but also with local fire marshals and the EPA. They put plans together for this. This is all driven by not only River Country Co-op, but also different agencies. Sue asked what is the blast and evacuate area. Most facilities have a half mile radius. Lance stated once the property goes through, then River Country Co-op will work with their safety company and they will come in and do a site evaluation for them and a site plan. He would be happy to share that with the Langer's once it is complete. Sue asked if they have one right now. Lance stated no. Each one of their locations has emergency plans. Sue asked if the big tanks are to the

front on their other locations. Lance stated it depends. Sue asked they only have one other location, right? Lance stated there is one in Martell, but they have other locations in Minnesota as well that have propane. Sue asked if they have the large tanks up front. Lance stated yes. As far as the traffic is concerned, there is probably going to be a lot less traffic on a daily bases, and it's going to be traffic that is Monday through Friday, 7 to 5, primarily. Sue asked if there are any odors that you have to worry about from the tanks being vented. Lance stated they do have propane odorized with mercaptan, it smells like a rotten egg. The propane is odorized at the pipeline, at the source where it is pulled from. Sue asked if that was monitored regularly. Lance stated yes. Sue stated there is going to be growth at some point in the area. What happens if there is a need to have more than what is there? Is there any chance for expanding more? Chairperson Fetzer stated if there is intensification or modification of what is happening today, a new CUP would have to be applied for and come through this again. Sue asked if it would be just a notice in the paper. Chairperson Fetzer stated it would be in the paper, yes. Sue stated most of them don't read all those. Dennis Langer stated the verbiage is greater than, there is no less than. Pichotta stated smaller utility facilities are often times exempt. The code allows for certain utility installations that are below grade or slightly above grade, that are small, not to require a conditional use permit, they are a permitted use. If there is intensification or an expansion on what is proposed today, we redo this entire process. Chairperson Fetzer stated it is setup for the three tanks right now. So if they are going to expand, it will have to go through the same thing again. Holst assumes when you look at the property that the three tanks are about all they can fit there. A three tank facility in this part of the country is a pretty big facility. Myrna asked if the electrical feeder line that runs in the back part of that property comes into play. Holst stated if there are any easements on that property for the other utilities, these people have to abide by those setbacks. This property was zoned commercial when the Melbys had it and the zoning is correct for this piece of property and that is probably why it was attractive to the agent and the applicant. They are a highly regulated industry and they are a big player in Minnesota and they are coming over to Wisconsin. They are going to provide a service, and hopefully they will be competitively priced. **Chairperson Fetzer closed the public hearing.**

Snow moved to approve this request seeing it is not contrary to public interest or detrimental or injurious to public health, safety or character of the area along with conditions #1-8 and adding #9-Applicant shall verify lot line locations and shall ensure compliance with applicable setbacks/Holst seconded. All in favor. Motion passed.

Discuss take action on a Resolution approving the updated Comprehensive Plan and recommending adoption by the Pierce County Board of Supervisors.

Staff Report- Andy Pichotta: The LMC, at their June 21, 2017 meeting, held a public hearing to consider adoption of the updated Comprehensive Plan. At that meeting the draft document was approved and a recommendation that the County Board of Supervisors adopt the plan was made. Wisconsin Statute 66.1001 states that a resolution must be adopted by the body that developed the comprehensive plan or update in order for approval to be effective. This requires that the LMC, by a majority vote of all members, adopt a resolution approving the plan and recommending its adoption. The resolution would not be forwarded to Finance and Personnel nor would it go before the County Board for approval. The stand-alone resolution would simply be included in the adopted plan as an addendum as required by statute.

Staff Recommendation: Staff recommends that the LMC approve the proposed resolution as written.

Snow made a motion to adopt the Resolution/Aubart seconded. All in favor. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel training requests.

Departmental Update and Future Agenda Items

Public hearing to consider a request for a CUP for a Nursery for Timothy Doose in the Town of Trimbelle,
Public hearing to consider a request for a CUP renewal for Muskie Proppants and a public Hearing to consider a Request for a CUP renewal of Wisconsin Industrial Sand's Maiden Rock facility.

Motion to adjourn at 6:36 pm by Aubart/Holst seconded. All in favor. Motion carried. Respectfully submitted by T. Albrightson

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, July 5, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 19 th , August 2 nd & 16 th , all in 2017.	Chair
3	Approve minutes of the June 21, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Utility Facility >1,000 sq ft (bulk LP storage) in the Commercial District, pursuant to Pierce County Code Chapter 240-41F, for River Country Cooperative, agent for David L'Allier, owner on property located in part of the NE ¼ of the NW ¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
5	Discuss take action on a request for Site Plan Review for a Utility Facility >1,000 sq ft (bulk LP storage) in the Commercial District, pursuant to Pierce County Code Chapter 240-41F, for River Country Cooperative, agent for David L'Allier, owner on property located in part of the NE ¼ of the NW ¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
6	Discuss take action on a Resolution approving the updated Comprehensive Plan and recommending adoption by the Pierce County Board of Supervisors	Pichotta
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(6/23/17)

MINUTES - Pierce County Land Management Committee Meeting, June 21, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 5th & 19th, August 2nd & 16th, all in 2017.

Approve Minutes: **Aubart moved to approve the June 7, 2017 Land Management Committee minutes/Snow seconded. All in favor. Passed.**

Public hearing to consider adoption of the updated Pierce County Comprehensive Plan.

Staff Report – Andy Pichotta: Pichotta stated that he did not prepare a formal presentation given that he knows the committee is familiar with the process that was utilized and also in that he anticipated low turnout from the public for this hearing. Basically, we took into consideration updated demographic and economic information and went through chapter by chapter. Staff reports and drafts were sent to Town Chairs and posted on the County’s website prior to discussion by the LMC. What he had anticipated was that he would respond to any comments or questions from folks as part of the public hearing.

Chairperson Holst opened the hearing to the public.

Barry Barringer, Trenton Township, asked if there was any survey work done in this effort. Pichotta stated yes, we did an informal survey, we sent out letters to all the Town Boards encouraging them to participate and to encourage others to participate. There was a link on the County’s website and we also put a notice in the Pierce County Herald for a couple of weeks encouraging folks to participate. We didn’t get a huge response but the results are contained in the appendices of the plan. Mr. Barringer asked if there was anything unusual in the survey. Pichotta stated no, nothing really stood out. In fact we held, in this room about a month or so ago, two informational meetings regarding the plan and notified both clerks and chairs of each Town. We had three folks total show up for the two meetings. It is his sense that folks must be comfortable with the plan and the guidance that it provides as well as the frame work that it provides for implementation of the Town’s Comprehensive Plans. Mr. Barringer stated that satisfies his curiosity at this time. **Chairperson Holst closed the public hearing.**

Staff Recommendation: Staff recommends the Land Management Committee consider any public comments relating to the proposed Comp Plan and its update and whether any modifications or additions are necessary. If no substantive changes are necessary, he would recommend that the LMC approve the plan and forward it to Finance and Personnel for review and approval. The plan must be adopted by ordinance, thus requiring two readings by the County Board, with adoption considered at the second reading.

Aubart moved to approve the adoption of the updated Comprehensive Plan and forward to Finance and Personnel Committee for review and approval/Sanden seconded. All in favor. Motion passed.

Discuss take action on a request for screening of a Private Outdoor Recreational Use (Commercial Paintball Playing Field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W,

Town of Clifton, Pierce County, WI. Chairperson Holst invited Timothy Jennings and Aaron Tholey

forward: Mr. Jennings stated he has packets which include correspondence to hand out. Pichotta suggested to Chairperson Holst that it might be helpful for staff to present the staff report for a little background and to capture how we got to where we are at.

Staff Report – Brad Roy: The applicants obtained a conditional use permit (CUP) for a Private Outdoor Recreational Use (Paintball Playing Field) from the LMC on August 4, 2010 and began operations in the fall of 2010. The operation began with approximately 2 acres utilized for paintball with plans to grow to the current size. The Sponsler’s, the nearest neighbor to the paintball park, bought their property on December 17, 2010. Their property was bank owned at the time the CUP authorizing the use was issued. As the business has grown the visual impact to the Sponsler’s has increased. They are primarily concerned with the appearance of the paintball structures, noise, potential future expansion and impacts to their property’s value. Staff first received a complaint from the Sponsler’s in the fall of 2016, just prior to the LMC meeting on November 2, 2016 where the applicant requested a modification to the CUP relating to storage. Mr. Sponsler attended the meeting and briefly discussed his concerns about the operation. The LMC suggested that the applicant and Mr. Sponsler try to come to an agreement regarding screening the paintball fields from the Sponsler property. The two neighbors have had discussions about planting trees and buying land, but no agreement could be reached. Mr. Jennings has concerns about having to screen the business seven years after the permit was issued and whether screening could come up again if another land owner has complaints in the future. Both parties now wish to bring this to the LMC to determine whether screening is needed and if so, to what extent. The paintball business is currently occupying all of the area designated for the business depicted in the original 2010 CUP application. Any expansion to other areas would require a new CUP. The land owner previously indicated that the paintball playing field is located on land that is not best suited for agriculture and that he has no intention of expanding to other areas. The paintball course utilizes inflatable bunkers, recycled electrical spools and collapsible/movable buildings as obstacles. Safety netting is put up for games and later taken down. Equipment is put away before winter in storage containers. The owner indicated that no permanent structures will be built on the playing field. The structures are sunk into the ground to prevent them from blowing over, but there is no permanent foundation and they can be moved around the property. The CUP has been renewed administratively by staff in 2012, 2014 and 2016. Prior to each renewal staff contacted the Town of Clifton Chairperson to inquire about complaints or issues with the operation. Each time, the Chairperson stated that there were not any complaints or concerns about renewing the permit. Pierce County Code §240-31 Landscape buffers is listed in its entirety in the staff report. B. Applicability. Landscape buffer requirements shall only apply to proposed uses in cases where a commercial or industrial use abuts a residential or agricultural district. The paintball field is permitted as a Private Outdoor Recreational Use. As such, it is not technically classified as a “Commercial Use” by Pierce County Code, but it clearly has commercial characteristics, similar to those of a driving range or golf course (other outdoor recreational uses). Although Pierce County Code §240-31 does not specifically require that a landscape buffer be installed for Outdoor Recreational Uses, the LMC can require such mitigation measures as part of a Conditional Use Permit. The Sponsler residence is located on a hill near the south property line and overlooks the Jennings farm field. The Sponsler residence is at an elevation of approximately 922’. The paintball fields have elevations ranging from approximately 910’ – 940’. The agricultural field located between the Sponsler residence and paintball fields is approximately 910’ in elevation. The elevation of the Sponsler residence provides a largely unobstructed view of the playing fields. The paintball field is located approximately 995 feet from the Sponsler property line. The existing vegetation on the south property line does not screen the view from the Sponsler residence. Photos from that property line are included with this report. The existing conditions are listed in the staff report #1 - #9.

1. A Uniform Address Number shall be assigned and located at the driveway entrance off of 1160th Street.
2. Applicant shall be limited to five (5) – 8 ft x 8 ft x 40 ft shipping containers on the site. Containers shall be shielded from public view to the extent practical. Shielding shall be accomplished through placement and/or vegetative screening.
3. Adequate portable satellite waste stations (1 to 50 people) shall be provided.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.

5. Hours of operation shall be daily 9AM to 9PM, or as otherwise established by LMC.
6. The applicant shall be limited to 10 employees.
7. A copy of any changes or additional liability insurance shall be submitted to the Land Management Department.
8. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise.
9. Applicant understands that expansion or intensification of this use may require modification to this CUP, or potentially, the issuance of a new conditional use permit.

Staff Recommendation: Staff recommends the Land Management Committee consider whether screening should be required for this operation and if so to what extent. The LMC should take into consideration the nature of the permitted Outdoor Recreational Use, the distance from the neighboring residence and the practicality of various screening options.

Tim Jennings, along with Aaron Tholey the business operator, were present. Mr. Jennings presented information to the committee which shows the written correspondence that he has had with Mr. Sponsler. He discussed the hydrology report; by having that in a grassland, that comes from the soil conservation office, they have significantly reduced the runoff from that parcel. So that is just one thing where it is an advantage not only to him but it prevents pressure on his driveway. Initially, when this came up they were looking at putting in a garage type structure. We since have figured out that is not an economical endeavor for Mr. Tholey or himself because Mr. Tholey doesn't own the property. He would be investing in capital structures. So the modification of the CUP last fall was to just add storage structures. From Mr. Sponsler's home and up on the hill, you cannot see where those containers went in. They are not visible as of this point. Then there was the letter from Mr. Sponsler to us requesting that we either screen, buy his house for \$500,000.00 or he could purchase some of Mr. Jennings's land for \$5,000.00/acre but not less than 250 feet. Well they reviewed those options and it goes into the letter he wrote after that and it shows Mr. Sponsler's appraisal. One of the concerns was the value of Mr. Sponsler's property. If he had an appraisal at \$500,000.00 for his property and he offered up to us for sale at that money, then he must have been satisfied with the appraisal. The appraisal was done in the summer of 2016. The structures and the entire paintball course were up in its entirety with the exception of the two new storage containers which are not visible. Apparently the appraiser didn't see any devaluation in the property. His offer to buy my land, he can't in good conscience sell farm land. It's part of his business. It doesn't make any sense to him, long term, when he is hoping to turn that over to his kids. If you go over a two generation time period, the lost revenue on up to ten acres would more than offset the \$50,000ish that he was offering to pay for that. We discussed some trees verbally. He has learned since when dealing with neighbors, it's best to have it written down which is why he started sending the letters back and forth. In his letter, he notes that he had paintball there many, many years as a recreational use. They didn't do anything formal with it. It was just a group of guys that went out there and goofed around. St. Croix Paintball came in a little while after that in the mid 90's. Ran a half a business there but they started bringing in old vehicles and junk to play around and that didn't sit well with him, having stuff in his fields like that. So they left and it just so happened that Mr. Tholey was looking for a place. He came in and we discussed it. He laid out his plan and we decided that we would go ahead with that. At that time, he didn't know anything about conditional use permits. Mr. Tholey insisted that we make sure everything was done by the book, hence the application for the initial CUP and the business plan that he had laid out with the initial CUP. How he was going to start out small and expand as any business does, into its existing state. The south boundary of the paintball course, because of the way his fields lay, should not move at all anymore because the field is more productive than the paintball course would let it be. We had verbally agreed on some trees. You can see the quote in the back of the packet that he handed out, \$6,000 and something with Boulder Hills Landscaping. He had tentatively agreed to put up some trees with Mr. Sponsler's help, to his credit. Then he was reading back on the minutes from the Clifton Town Board meeting and Mr. Sponsler went in and told the Town Board that he should be taxed commercially. You can see the new tax assessments where it is going to increase his taxes around \$1400.00. That prohibited him being able to afford trees so that brings us before you. Whatever you decide, that is what we will have to abide by, because we feel we have followed all

the rules thus far, is he correct, Aaron? Mr. Tholey stated yes, everything is on the up and up. Everything has been approved. He can't help but feel a little bit like he is being extorted here. No problems thus far. A guy buys his house to flip it, now he can't sell it, now he wants me to improve his property. We have really gone out of our way to be a positive impact in the local community, whether it be with the high school, with other colleges, with national guard guys. It's been an overwhelming response as far as positivity goes. He feels this kind of out of left field here. A couple notable things on that south side, when we put those bunkers in place, we did make them green to blend into the background there. You can see that on the photo. The other thing is, this guy is three and a half football fields away. He's really far away, not like he is on our boundary line or looking right into our facility. He is three and a half to four football fields away. That is another thing to keep in mind and he purchased his home when the paintball was already there. Now that he wants to sell his home, he wants to improve it and not see my place. Those are just some notable things that he had written down. Mr. Jennings stated they have had contact throughout the seven years that Mr. Sponsler has owned his home. He rents the shed from him and stores his farm machinery in there. So it's not like he hasn't had any contact. So in seven years, six years to the date of the thing, he hadn't heard a thing about it. He stated he had one complaint when his kids were out practicing trap shooting, he was trying to put his baby to sleep and he called me and I forgot he had a baby, the kids were having fun, we lost track of time and we stopped. It's not that he is trying to be out of line and he was willing to work with the trees until he got slapped with extra taxes. He just doesn't see how, when they have followed everything in the books by the conditional use permit when it was inspected, when they initially started they came out and did a walk around, he can't remember who from the office did that, but it was inspected and nothing was indicated at that time. He is sorry they have to be here before the committee but he can't sell part of his farm. I can't afford to pay \$500,000.00 for his house and he would prefer not to put in screening trees. If he puts trees on the south border on the fence row between him and Mr. Sponsler, those trees eventually grow up and that side of the field becomes shaded. The trees suck water out of the ground and that portion of that field becomes less productive. It happens all the time. He has fence rows all over that are his and next to the woods. If he puts trees next to Mr. Tholey's boundary on his south edge of the paintball park, if he ever decides to go or if he ever decides to not have it there anymore, then those trees by convenience would have to come out so that he could farm that field in a convenient manner again rather than splitting it in two. There is just not a good option from his side that isn't going to economically impact him in a very significant way, long term. That is his plea. The only thing they have is that they have followed all the rules to this point and whatever you guys decide we will figure out but we are hoping that we are far enough away and that we have tried to do their due diligence that there won't be anything significant required. Thank you for your time. Catherine Munkittrick, an attorney in River Falls, representing the Sponsler's on this matter. Mr. Sponsler and his wife are not here to try and shut down the paintball operation. What they are asking for is just some reasonable screening of the operation. They live out in the beautiful countryside and this operation is quite different from anything else around it, does not blend into the countryside and they have a clear unobstructed view of just that paintball operation. The paintball operation has expanded significantly since they purchased their property. It is much more visually intrusive. The structures there are up all year round. Whether they are permanent or not they are there all year round. So that's what he looks at. He has tried to reach an agreement. He came to Mr. Pichotta with his concerns and Mr. Pichotta suggested they try to reach an agreement. They have tried for several months now. They offered to purchase a portion of his land at \$5,000.00 an acre. That was rejected. He offered to have trees put up closer to his property and pay half the cost of the trees and that was rejected. There needs to be some resolution to this. He has tried; they have made offers. She misspoke, it wasn't rejected. It was accepted but then it was Mr. Jennings retracted that acceptance after his taxes changed. She will say it's up to the assessor to decide how to appropriately classify tax property. That's not a decision anybody else makes but the assessor and the Town Board approves it. The paintball operation is visible not only from the Sponsler's residence but from the street, 1160th and 840th. During the time of year when there is no foliage, it's also visible from County Rd F. Again this is a rural, agricultural, very beautiful area and it's obviously very different, the paintball operation that you see. She handed out a photo from the Sponsler's driveway of the structures. She was out there and their house is on a hill and it's a two-story house and once you get up to the second story it's very visible and because it's higher up, you can really see the structures and what's going on

over there. Ms Munkittrick stated Mr. Jennings was given a CUP, the paintball operation was a lot smaller at that point. It has expanded over the years. The CUP ordinance does allow for putting conditions on CUP's to mitigate adverse circumstances and adverse impacts on neighboring properties. That is what they are asking the committee to do here. It's obviously a very different type of operation than the surrounding area. It does adversely affect property value, particularly Mr. Sponsler's. She is going through the conditional use factors now. Again, this operation and the scope of it is different from when the CUP was originally issued. He was given permission for that area, but the area and the structures in that area have expanded significantly. The area hasn't expanded but the structures have. Another factor to consider under your ordinance is whether the buildings contribute to visual harmony. They just absolutely don't. It's something totally different within the rolling, rural countryside. Does it adversely affect the natural beauty of the area, yes. So those are the factors under your ordinance which you can decide are conditions appropriate to mitigate. Screening is a very common and easy thing to do to mitigate those adverse impacts. What we are asking for is screening along the southern boundary of the paintball park; two rows of conifer trees that would screen the area not only from Mr. Sponsler's property but also from the roads that she mentioned. Holst asked if they want screening on three sides now. Ms Munkittrick stated no, just screening on that southern boundary of the paintball park would do it. Again they are not trying to shut down the operation. They just want some reasonable accommodation for the visual impact. It just is a stark change from the rest of the countryside in that area. It will preserve property values. It will preserve just the scenic and aesthetically beautiful area. That is something that is reasonable under your ordinance. It is consistent with your comprehensive plan of maintaining rural character, encouraging preservation of aesthetically beautiful areas, minimizing incompatibility with neighboring land uses, all those things are in your comprehensive plan and that is exactly what Mr. Sponsler is asking for. It is unfortunate that we have to be here but the parties have tried for months to come to an agreement. Mr. Sponsler has made several offers and they have not been able to reach a resolution. What we ask the committee to do is to require screening using conifer trees along the southern boundary of the paintball park. They should be trees of at least seven feet tall that would help with that screening. Snow asked how many trees would that be? Mr. Sponsler stated he doesn't know the exact length of that south border, maybe 800 feet. Ms Munkittrick stated the rows would be offset, she thinks that was suggested. The two rows of conifer trees was suggested in conversations that Mr. Sponsler had with Mr. Pichotta. Snow stated he isn't a farmer Mr. Chair but would two rows of trees through that prime ag, is there any way you could put a dollar amount on what that would cost Mr. Jennings in loss of productivity? Chairperson Holst stated he knows what he does with a tree on farmland, he takes the bulldozer to it. He also knows this is a recreational use in an ag district and we have promoted that type of thing. Ms Munkittrick stated she understands that and also you have promoted aesthetics and preserving scenic views and scenic areas. This is a situation where you can do both. This operation can continue but the scenic area can be preserved by requiring some type of screening of the operation. It's not an all or nothing situation here. She thinks you have an opportunity to both preserve those property values and the area not just for Mr. Sponsler but other property owners and people who may choose to develop there and continue the operation of the paintball park. Chairperson Holst stated he is more concerned about the continuation of an agricultural field because the agricultural field is the neighbor to Mr. Sponsler. The paintball park is a distant neighbor to Mr. Sponsler, in his opinion. We will talk about it as a committee. Sanden asked in the original offer, Reed, you mentioned purchasing a strip of land not more narrow than 250ft. Why the 250ft, it seems like all you would need would be a strip wide enough to put in a row of trees. Mr. Sponsler stated he wanted, up at the top of the hill the berm kind of rises as it goes away from his place and he wanted to put them out there. Sanden asked if the land he wanted to purchase was adjacent to his property. Mr. Sponsler stated yes, just north, a strip the length of the 40, that way he could block it from when he enters his driveway so he doesn't have to look at it. Sanden stated maybe he is misreading it. So you wanted the 250ft strip long, not deep. Mr. Sponsler stated no, 250ft deep the length of the 40. Sanden stated he can see the reticence of giving up that much farmland but if it was one small strip to put in a row of trees, that might be something he would be a bit more easy to accommodate. It seems to me that at this point, it's your property that is really being affected; it would just make a lot more sense to put a very small strip of trees on your northern border than to put a much longer strip along the entire southern border of his property. He knows you have been in negotiations between the two of you and it just seems whether or

not you pay for all of it, pay for half of it or the other party pays for all of it, it just seems like it would be a lot more efficient, a lot more cheaper and would accomplish the same goal. He understands without being privy to all of your negotiations back and forth and he doesn't know where the negotiations broke down, but it would just seem in everyone's best interest to just put a strip of trees along your northern border. Part of it looks like there already is some partial screening with some trees up there. Mr. Sponsler stated yeah, in his backyard there is. Sanden stated another 100ft maximum. Mr. Sponsler stated the agreement that they had reached that fell apart, the last agreement was the row of 250ft in length, one row planted on the field on the dividing line between me and Mr. Jennings and one row planted in his field and he was going to pay for half of the trees, at that time. The Town caught wind that it is a commercial paintball park so they taxed him commercial and then he told me there would no longer be any trees planted. At that point, he offered to pay for half of them now he is not offering to pay for half of them now but that would be acceptable. Ms Munkittrick stated the location. Mr. Sponsler stated the location of the trees by his house. The concern is that if they planted along the southern border of the park, then you can't see it from the road and who knows what will happen in the future with other properties around there. Snow stated he has a question for Mr. Pichotta, he lives in Spring Valley and we have commercial businesses right in the middle of agricultural property and residential property. He understands that we can issue CUP's on a case by case basis. Does this not lead us down a slippery slope of someone across the road from that convenience store stated, you know what, I want that screened. Pichotta stated what is important to remember is that screening isn't intended to or expected to render something invisible. It's to provide a broken up view. Snow stated that business is not there on a CUP, he understands that, but do we go down that slope. Pichotta stated a conditional use permit is a discretionary decision by the committee and it's based on a proposed use at a proposed location and so technically it ought not be precedential but certainly one could argue that if you required something in one case then something similar comes before you and somebody reads the minutes, they surely could come in and say you did it for them, I would like that same treatment. Sanden stated a few years back down on Hwy 10, near County Rd J, that was somewhat similar to this. That was a commercial use that abutted next to residential and it was after the CUP that we did go back and have them put in those trees because it was seen as a visual blight. Does that have any relevance to this particular issue. Pichotta stated there are some similarities to the situations given that that particular residence was up on a hill and it did look down. Chairperson Holst stated the distance was considerably less. Pichotta agreed. The district that the implement dealer was located in, he believes is zoned commercial. So there are some similarities but there are also some differences. Snow asked Mr. Jennings, I would assume you plant corn in this field? Mr. Jennings stated it's a rotation, corn, soybeans. We have started shifting a little bit into some no till because of the erosion factors. He is obviously concerned about that with the hydrology report. We've got over a mile of waterways on the east side of 1160th Street where they have put in 36ft wide over the last couple of years, that the soil conservation office told him he didn't need. Then when they had the seven year rain storm and they came out and said "Oh my God, we've got to do something". He stated they needed to do something four years ago when he asked them to do it the first time. The primary use for him, right now, is that it is helping him to preserve his topsoil. If you want to stretch it out, the Kinnikinnic, the St. Croix and the Mississippi Delta, every ton of topsoil that comes off his farm eventually makes it down to Louisiana. He happened to be lucky enough to find a secondary use for his property where he can still make some income because the farm economy is horrible anyway. Mr. Tholey and he talked about it, his attendance is down for his traffic and hence the extra taxes and whatever, he couldn't do the trees anymore, at that scope anyway. But they will respect whatever your decision is because they have abided by the rules thus far. They have no reason to not do it anymore. Trees on the south side will shade that field and he will lose a certain amount of production. He could go take pictures of the existing trees on the fence row and show you the soybeans this year. Show you the soybeans out in the middle of the field are this tall and the ones next to the tree row are barely squeaking by. He doesn't want to be a bad neighbor. He is just a business guy trying to feed his family. Ms Munkittrick stated this is a use that is significantly different from all the surrounding area. You have the ordinance that gives you the tools to minimize the impact. This is a commercial, money-making operation. She would also remind the committee of Belle Vinez. It is similar, it's in this same area and she thinks in that situation it was a different operation from the surrounding uses, primarily residential that the committee did require berms and vegetative screening. We aren't asking for berms but

vegetative screening would help minimize the impact his operation has on the surrounding property. Mr. Sponsler has said he would be willing to consider screening just on his property with a row on one side of the fence and a row on the other side on the northern. Mr. Sponsler stated one row on the fence line and one row in the field. Ms Munkittrick stated to basically screen where his home is. She thinks the committee should really consider that, it's quite an accommodation and it would help preserve property values and just enjoyment of living in that area. Thank you. Mr. Jennings stated Belle Vinez was granted their conditional use, Belle Vinez serves alcohol, we don't Belle Vinez has an exhaust fan for their kitchen and whatever, they have lights, Chairperson Holst stated he doesn't think it's fair to compare the two and yours is the application in front of us. Mr. Jennings stated she compared them. Ms Munkittrick stated she compared them in response to the question of whether it's been done before and it has in the same area. Sanden asked Andy if he could be kept in line if he proposes something that really shouldn't be done. He does this at his discretion, given the different options in front of us, would it be agreeable to both parties to delay this decision until the next meeting and you two can get back together, it's either going to be putting in a lot of trees on your southern boundary or a couple trees on his property. If you guys can get together and I would hope that paying 50% of a few trees on Mr. Sponsler's property might be a cheaper solution. Is that something that we can do? Pichotta stated it's certainly within your discretion to request that. Sanden stated that he hates to put a financial burden on them to put in two rows of trees 800ft long, where it might just be a dozen trees or less on Mr. Sponsler's property. Would you see that as being a reason to go back to the negotiation table and work out something like that? Mr. Jennings stated that as you can see from the bid he obviously had pursued that when Mr. Sponsler and he had verbally agreed. He had told me that he had expected me to keep all the trees alive and that on the south boundary but he doesn't have access to any water up there. He wants seven foot trees now by what they are asking for. You try and put seven foot trees in there with the prevailing winds that come through there, they are going to tip right over. Seven foot trees won't work. He isn't saying that because he's trying to get out of it. He is telling them seven foot trees won't work. Mr. Tholey has safety netting on his north edge to prevent any stray paintballs from getting into the parking area or his observation area. The winds shred that net. Shorter trees would be fine. They would grow up over time but they wouldn't be an immediate fix. Over time on that south border, the taller they get, the more they shade my field. Chairperson Holst stated if you took that picture with the rocks and stuff there, you ain't going to give up a lot of yield along that south border. Mr. Jennings stated it's actually better than you think it is. Chairperson Holst stated he would go to continuous corn and tell him to stick it but he's not my neighbor and I'm here in a different capacity. Mr. Jennings stated he doesn't want to go that way. Chairperson Holst stated that he would suggest the two come to a conclusion that is fair and amicable to everybody. He does think that if we give you a month to come up with something, he seems willing to do something, you seem willing to do something. He can understand you being pissed off about getting your agricultural to commercial taxation wise but that's got nothing to do with us. That is something out of the picture. He even doubts if it has anything to do with Mr. Sponsler. Sometimes things seem different than they are. He hates to go down this road because pretty quick someone will come in and say "you know that farm yard over there, he has three more cows than he used to have" and it's in an ag district, you know where I'm going with this. I don't want to go there. Snow stated as he looks at this photo and if there were 50 calf huts out there and 125 beehives and a building used to cook maple syrup, he doesn't know what the difference would be in how it looks but that's just his opinion. Sanden the argument to be made is that those are agricultural buildings and that is what you would expect to see in a rural area. He agrees that they look the same from the outside but you look at that like something to be expected. He just wishes you guys would come to an agreement, a few more trees on the north border of Mr. Sponsler's property. He just thinks that would solve everything. Ms Munkittrick asked if you are saying you would just postpone your decision and if the parties can't come to an agreement you will put it on the agenda for the next meeting? Sanden stated he knows that is the reason that you are here right now because you have tried to do that once and it failed so now we're here. That is what he is proposing. Mr. Sponsler would be amenable to that but also it may, if they can't reach their solution she would urge the committee to come out to the property and actually see it because photographs and actually seeing it are two different things. That might help you just see it from the Sponsler property so you can see what it's exactly like. With that a little more time to try to resolve it and if it can't be resolved if you would come out for a site visit and then put it on the agenda.

We would accept that. Mr. Jennings stated if you are going to come out for a site visit, come out on a weekend when they are playing so you can see Mom reading her book and while the kids are playing paintball. Mr. Tholey stated or come play yourself. Ms Munkittrick stated they are not asking for the operation to be closed down, all that will continue if screening were put up. Chairperson Holst stated that he believes ag land in Clifton Township is probably under valued at \$5,000.00 an acre. That offer he doesn't think was quite enough but he also understands that things are different here. He truly hopes they come to an agreement. You have \$641 on this one sheet you gave us, is that the difference in tax value. Mr. Jennings stated that is the increase in tax value, in tax base. \$1442 is the total, \$801.00 and \$641.00 are the two differences. Chairperson Holst asked what's the difference in the actual taxation? Mr. Jennings stated that is the actual. They went to the County Clerk with the difference in assessment and she gave them those numbers on the two parcels. Ms Munkittrick stated that's a function of using it for a commercial purpose. Chairperson Holst stated it's also a function that they could go to the Board of Review and get it reversed too. That is their option and they could and should take that option if they feel they are being taxed or classified in the wrong district. Pichotta suggested a motion: **Motion to defer action until a future date to give the applicant and neighbor an opportunity to attempt to resolve this on their own with the expectation that if they are unable to do so, it will be placed on a future agenda for the committee's consideration/Sanden moved/Snow seconded. All in favor. Motion passed.** Mr. Jennings asked if we have a date as to when we will revisit this. Pichotta stated not specifically, probably a month or so, does that seem reasonable? The committee meets the first and third Wednesday of each month. He doesn't expect the committee to make a field trip out there together because our county attorney actually frowns upon such things - so what we would do is encourage them to go individually so there wouldn't be quorum issues. So if you are unable to reach any kind of an agreement, he will inform the committee members of that in a letter which he will copy to you folks and encourage them to view the site and to call each of you prior to visiting the site. Ms Munkittrick stated the Sponsler's really want and encourage that. Pichotta cautioned against ex parte communication. Ms Munkittrick stated correct. Chairperson Holst stated that it would be beneficial to all parties if you can come to an agreement.

Chairperson Holst stated agenda item #6 has been pulled by the applicant.

Agenda #7 Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the government body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director. Aubart moved to convene into closed session at 6:55pm /Snow seconded. Roll call vote: Sanden – yes, Holst – yes, Aubart – yes, Snow – yes. All in favor. Motion passed.

Snow moved to reconvene into open session at 7:22pm and take action on closed session item/Aubart seconded. Roll call vote: Sanden – yes, Holst – yes, Aubart – yes, Snow – yes. Snow moved to grant a favorable performance evaluation for Land Management Director, Andy Pichotta and to grant a step increase if eligible/Aubart seconded. All in favor. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for a Utility Facility >1,000sq ft for bulk LP storage in the Town of Trimble and Site Plan Review.

There may be a status report on the Holst/Total Excavating mine in Diamond Bluff.

Motion to adjourn at 7:24pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, June 21, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 5 th & 19 th , August 2 nd & 16 th , all in 2017.	Chair
3	Approve minutes of the June 7, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider adoption of the updated Pierce County Comprehensive Plan.	Pichotta
5	Discuss take action on a request for screening of a Private Outdoor Recreational Use (Commercial Paintball Playing Field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, by John Rohl, agent for John C. Rohl, Jr and John C. & Alva-Jeanne Rohl Life Estate, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director.	Chair
8	Committee to reconvene into open session and take action on closed session item, if required.	Chair
9	Discuss take action on Travel/Training Requests.	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(6/9/17)

- **Revised June 13, 2017 @ 2:39pm. Changed the order of the agenda items.**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS

MINUTES - Pierce County Land Management Committee Meeting, June 7, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 21st, July 5th & 19th, August 2nd & 16th, all in 2017.

Approve Minutes: **Snow moved to approve the May 17, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the General Rural Flexible 8 District pursuant to Pierce County Code 240-40A, for James & Mary Ashbach, owners on property located in the SW ¼ of the SW ¼ of Section 15, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Mr. Ashbach forward:

Staff Report – Andy Pichotta: The applicants' have an 8 acre parcel located in Section 15, Town of Clifton and is zoned General Rural Flexible 8. Pierce County Code (PCC) 240-40A allows accessory residences which are accessory to single-family residences in the General Rural Flexible 8 District with the issuance of a CUP. PCC 240-88 defines Accessory Residence as:

A. A dwelling unit that is accessory to a nonresidential use on the same lot, is the only dwelling unit on the lot and provides living quarters for the owner, proprietor, commercial tenant, employee or caretaker of the nonresidential use.

B. A dwelling unit located in an accessory building located on a residential parcel.

PCC 240-88 defines Accessory Building as, "building, not attached to a principal building by means of a common wall, common roof or an aboveground roofed passageway, which is:

A. Subordinate to and serves a principal structure or a principal use.

B. Located on the same lot as the principal structure or use served.

C. Customarily incidental to the principal structure or use.

The applicants own 8 acres with 1 home, 1 shed, 1 well and 1 septic system currently located on the site. The principal residence is 3,654 sq ft (basement plus 1st story) and excludes the attached garage (24'x31'). The conventional septic system was permitted in 1968. The applicants propose to build a 40' x 70' shed with a 1 bedroom accessory residence (40'x21') and attached porch (8'x21'). The accessory residence will be used by the applicant's father. The applicants propose to hire a plumber to install a holding tank for the accessory residence. PCC Ch 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Clifton Town Board recommended approval of this request on 2-7-17 without any concerns or recommended conditions. The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land

Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall hire a Wisconsin Licensed Master Plumber to obtain a sanitary permit and the plumber shall install a septic system for the accessory residence.
2. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The applicant shall obtain a separate uniform address number for the accessory residence.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Sanden asked Andy if they need to have a kitchen facility in order for it to be a dwelling unit or is access to the main kitchen facility in the main house is enough. Pichotta stated that would be enough, you could simply put in; it could be a bedroom and a bathroom. Sanden stated he sees the bathroom, he doesn't know if he saw the kitchen. Holst stated he has a microwave so he doesn't know how much more you need to cook with. Sanden stated he was just wondering what is the legal definition of building units. Usually require kitchen access and bathrooms and he is assuming the main house kitchen is available. Holst stated it has a microwave and a refrigerator. Sanden stated his eyes are really bad. Now he sees it. Holst stated on the second drawing. Nick Ashbach stated his culinary skills aren't very good so it won't be very much, somebody mentioned microwave and can opener. Chairperson Fetzer stated welcome to the club.

Sanden moved to approve the conditional use permit for an Accessory Residence for James & Mary Ashbach with conditions #1 - #3 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. All in favor. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Public hearing to consider adoption of the updated Comp Plan.

Rohl pit which was renewed for 60 days a few meetings back will be back for consideration.

Discuss take action on a request for screening for a private outdoor recreational use, commercial paintball playing field in the Town of Clifton. That issue came up a little bit when we did the renewal and we had hoped the neighbors could come up with some sort of a solution, they could not so we're bringing it back for your consideration.

Performance Evaluation of Land Management Director.

Motion to adjourn at 6:10pm by Holst/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 17, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 7th & 21st, July 5th & 19th, all in 2017.

Approve Minutes: **Aubart moved to approve the May 3, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Snow not voting because of his absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Rural Residential 20 District pursuant to Pierce County Code 240-40A, for Leanne Abbas, owner on property located in the SE ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Ms. Abbas forward: Ms. Abbas stated she is applying for a conditional use permit for a secondary residence to make it legal and right. She bought into it and it wasn't set up right. So she is trying to make it right.

Staff Report – Ryan Bechel: The applicant purchased the property in November, 2016 The previous owner converted an existing accessory building into a second dwelling without obtaining proper permits. When the applicant acquired the property, it was being processed by Land Management staff for violation of PCC §240-40A, which requires issuance of a CUP to establish more than one dwelling on a single lot. The applicants are now requesting a conditional use permit to enable the existing accessory building to be legally used as an accessory residence. The primary residence is occupied by the applicant's son, and the accessory residence is to be occupied by the applicant. The 0.48 acre property is located in the Town of Trenton and is zoned Rural Residential 20. Pierce County Code §240-40A allows accessory residences which are accessory to single-family residences in the Rural Residential 20 District with the issuance of a CUP. Pierce County Code 240-88 defines Accessory Residences and Accessory Buildings. The property consists of a mobile home with a 30ft x 28ft detached garage and an accessory building. The 3 bedroom mobile home was placed on the site prior to permits being required. The structure measures approximately 10ft x 70ft and includes 10ft x 18ft and 16ft x 30ft permitted additions (1360ft² total). The single story accessory structure was also apparently established prior to permits being required and measures 40ft x 28ft (1120ft²), and is proposed to have one bedroom. The principal residence (mobile home) and accessory residence share an existing conventional septic system and well. No records exist on file for the existing septic system. The accessory structure is an existing non-conforming structure due to it not adhering to established setback requirements to CTH K (100 feet from centerline) and CTH VV (110 feet from centerline). PCC §240-66(D) allows for the establishment of new uses in existing non-conforming structures provided that the proposed use is permitted in the zoning district in which it is located. Access to the lot is provided off of CTH K. The existing address is W8112 CTH K. PCC Ch 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Trenton Town Board recommended approval of this request on 4/18/2017 listing the following concerns/suggested conditions:

“That Pierce County have the sewer inspected and that it meets all requirements for the second dwelling on the property. The \$50.00 CUP fee is paid. There will be a 60 day notification to Trenton Town Board before two year renewal.”

Conditional Use Permits for accessory residences do not typically require renewal provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall work with the Town Building Inspector (Galen Seipel) to determine whether permits from the town are needed to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a separate uniform address number for the accessory residence.
3. The applicant shall have the POWTS system evaluated by a licensed professional to ensure compliance with state sanitation regulations and shall obtain any necessary permits.

Chairperson Fetzer opened the hearing to the public. Jim Coughlin stated he is in favor of it. The applicant noted that is her father. Harlen Grant, Town of Trenton, stated he knows who used to own it and they said that when it was sold as is, one had to be removed or replaced. It was in the writing in the papers. He doesn't know how Jay sold it because he knows him too. Ms. Abbas (the applicant) stated it said just that the new owner has to obtain a CUP. Chairperson Fetzer asked Mr. Grant if he is a neighbor. Mr. Grant stated yes. Chairperson Fetzer asked how many years has the secondary residence been there? Mr. Grant stated the trailer wasn't worth fixing when they did it was at the most five years ago, they converted that one and were going to get rid of the trailer. I guess it didn't go that far. They did say, even at that time, that you could either have one or the other. You could not rent it out. You had to live in either the apartment or the trailer. If you lived in the trailer, which would have to be a double-wide or obviously what you are doing right now. Holst asked who “they” are. Mr. Grant stated this is from Alan & Jeanette Nelson who used to own it. They did all the work to it, someone that was licensed, he doesn't know who did the work but it was a licensed contractor that did the work on the apartment. They said that the trailer wasn't worth fixing. They would have more money into the trailer than it was worth to convert it. It was either one or the other. Ms Abbas stated she was told you could have the two residences as long as you get the permit. The trailer is definitely worth fixing. Do you just not want the house there? Do you want it torn down? Mr. Grant stated he isn't saying that. He is just stating what he was told. He even looked at buying it. Ms Abbas stated you have to go through the hoops, which she is doing. It seemed like a shame to tear down affordable housing in Pierce County. We've got a dog food plant and a strip bar close by. She is asking to keep a house. Holst noted that it's where the viaduct used to be.

Chairperson Fetzer closed the public hearing. Holst stated as long as she is going about this the right way and making this thing legal, the past is the past, if it meets the criteria. Chairperson Fetzer stated he would have to agree. Ms Abbas stated Mary Jo Huppert is coming next week to do the soil test. Then we will comply with whatever she finds.

Holst moved to approve the conditional use permit for an Accessory Residence for Leanne Abbas with conditions #1 - #3 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Motion passed.

Discuss take action on Site Plan Review in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-75, by Town of Martell (Town Shop), owner on property located in the NE ¼ of the NW ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited David Daleiden (Cleary Building Corp) forward: Mr. Daleiden explained that Martell Township plans to store their plow trucks, town equipment to do maintenance around the roads. That is what they are using it for. It will have a restroom in it. They have five employees listed. Maximum five employees, they only have one working there currently. They just need a place to store their grader. A new shop, because the one they have is

currently beat down and needs work. It's going to be a basic box building on a four foot frost wall, pretty simple building.

Staff Report – Andy Pichotta: This is a request by the Town of Martell. They are seeking site plan approval for the construction of a new Town Shop. They have one employee. No oil changes or truck maintenance will be performed in this proposed building. Pierce County Code §240-75 requires site plan review for new construction for institutional uses. The purpose is to assure site designs that promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The 1.7 acre parcel is in Section 14 in the Town of Martell and is zoned Primary Agriculture. The property is bordered by agriculture, residential and institutional (Town Hall & Cemetery) uses. All adjacent properties are in Primary Agriculture zoning districts. The applicant proposes to construct a 48ft x 72ft storage shed that is 26ft in height. The shop will have running water, a concrete floor, a floor drain for snow melt and a holding tank septic system. Setbacks are laid out and met. Information is in the staff report regarding the Vision Clearance Triangle. The proposed structure is located outside of the Vision Clearance Triangle. The proposed driveway access is 122 feet wide and located north of Unnamed Town Rd/Church Lane. The first time he reviewed this, this did not jump out at him but Pierce County Code 240-57 Access to Public or Private Roads stipulates that maximum driveway width can be only 35 feet. They could have two 35 foot driveways but they can't have one that is 122 foot. Holst asked if they could have two that touched one another. Chairperson Fetzer stated if it had a centerline in between. Pichotta stated that is a interesting question that he is not prepared to answer off the top of his head. Mr. Daleiden stated he talked to the excavator and he said they will do anything. Two 35 footers work. He doesn't know what the parameters are for how wide they have to be apart from each other. They will probably make a loop in and make it easier. Pichotta stated there are no existing structures on the property. The applicants are proposing to install exterior security lighting. They propose a wall sign displaying the Town name sometime in the future. The proposed construction is exempt from Landscape Buffer requirements per Pierce County Code §240-31B. A total of 4 parking spaces are proposed, with one being ADA compliant. PCC §240-54A does not list a specific parking requirement for this use. Staff believes the plans submitted have sufficient parking based on similar uses.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

If no changes or modifications are determined to be necessary, staff recommends that the LMC approve the Site Plan as proposed with the following conditions:

1. The applicant shall obtain a State Sanitary Permit for the holding tank prior to other permits.
2. Uniform street numbering sign numbered 800th Avenue shall be required at the intersections with US Hwy 63 and County Rd Y and shall be installed by the applicant.
3. The applicant shall obtain a new uniform address sign for the new Town Shop.
4. Applicants shall follow all conditions and receive all necessary permits from WI DNR, DSPS and other agencies as required.
5. Prior to installation of a wall sign, the applicant shall submit information regarding the proposed sign so the Department can verify code compliance.
6. Applicants shall obtain a Land Use Permit for this and any future structures.
7. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

8. Driveway widths shall not exceed 35 feet.

Holst stated we added number 8 because he figured out you couldn't have 122 feet but you could have numerous 35 foot ones. **Holst moved to approve the Site Plan Review for Town of Martell (Town Shop) with conditions #1 - #8/Sanden seconded.** Holst asked do you expect to get this done in relatively decent time frame? Mr. Daleiden stated the plan is they will start the excavation the end of June. That will be done by Leonard's Excavating. Plummer Concrete comes to start the project probably the second week in July. Build time they expect probably right around a month timeframe. Holst asked about stabilizing the site, are they going to put up silt fences because he doesn't want that stuff running down into the Rush. Mr. Daleiden said they have silt fences so don't worry about that. Plan around a month build time between subs and subcontract work with Walter's Electric. Mr. Daleiden stated they are good guys and they have to have it done for sure because of a late penalty clause and have to be complete by October. Holst stated then we don't need any surety on this. **All in favor. Motion passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Public hearing for a CUP for an accessory residence in the Town of Clifton.

Motion to adjourn at 6:22pm by Snow/Holst seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 17, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 7 th & 21 st , July 5 th & 19 th , all in 2017.	Chair
3	Approve minutes of the May 3, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Rural Residential 20 District pursuant to Pierce County Code Chapter 240-40A, for Leanne Abbas, owner on property located in the SE ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.	Bechel
5	Discuss take action on Site Plan Review in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-75, by Town of Martell (Town Shop), owner on property located in the NE ¼ of the NW ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI.	Lund
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(5/5/17)

MINUTES - Pierce County Land Management Committee Meeting, May 3, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Absent: Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 17th, June 7th & 21st, July 5th & 19th, all in 2017.

Approve Minutes: **Sanden moved to approve the April 5, 2017 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Holst not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Commercial District pursuant to Pierce County Code 240-67A(2), and Site Plan Review per Pierce County Code Chapter 240-75, for Skogen Enterprises LLC, John Skogen, owner on property located in the SW ¼ of the NE ¼ of Section 35, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Mr. Skogen forward: Mr. Skogen stated he would like to build a deck on the end of the existing structure.

Staff Report – Emily Lund: The applicant owns a tavern on a 1-acre corner lot at the intersection of Cty Rd S and Cty Rd X. He also owns a 2-acre baseball field located west of the tavern and across Cty Rd S. The applicant is requesting to expand the existing nonconforming structure. The existing structure is located in the vision clearance triangle, is 48 ft from the center line of Cty Rd S and is 58 ft from the centerline of Cty Rd X. The proposed expansion is an 8 ft x 29 ft open-sided deck with an overhang roof attached to the north end of the existing tavern. The deck would align with the east and west walls of the current structure. The expansion would be partially in the vision clearance triangle and also be 48 ft from the centerline of Cty Rd S. The expansion would satisfy all other setback requirements. A variance and land use permit were issued in 1994 for a 20 ft x 24 ft north addition. An old garage was removed as per a variance condition. The tavern has an existing living quarters upstairs and an existing open-sided porch with roof overhang along the entire west side of the building. Site Plan review is required for the construction or expansion of commercial structures and given that the issues reviewed when considering issuance of a CUP are the same as those considered for site plan review, both actions are being presented as a single agenda item. The parcel is located in Section 35 in the Town of Rock Elm. The property is in the Commercial Zoning District. PCC §240-67A(2) states, “Additions to or extensions of nonconforming structures are permitted, provided such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76.” Setbacks distances are described in the staff report regarding the setbacks from County Highways and Vision Clearance Triangle. The tavern is located entirely within the Vision Clearance Triangle area of Cty Rd S and Cty Rd X. As noted above, the placement of structures within the Vision Clearance Triangle area is typically prohibited. However, this structure was constructed prior to the enactment of current restrictions. Access to the facility is off both Cty Rd S and Cty Rd X. Approximately 20 parking spaces are available. Two existing septic systems are located to the north of the property, with one for the upstairs apartment and the other for the tavern. It’s pretty level property. Land uses surrounding the property is agricultural. The nearest dwelling located 400 ft to the south of

the tavern. The proposed expansion area is currently used as open space and the proposed expansion should not negatively impact the functionality of the site. The Department of Public Health is working with tavern licensing and inspection. The Town of Rock Elm recommended approval of this request on 4-10-2017. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. PCC §240-75 requires site plan approval for new construction or additions to existing structures and buildings for commercial uses. The purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to street and transportation, protect property values and contribute to efficient land use in Pierce County. In reviewing the site plan, the LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operation. The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, and no modifications to the site layout are necessary to achieve efficient traffic flow and circulation, or to mitigate off site impacts, staff recommends the LMC approve this conditional use permit and the proposed site plan with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The applicants shall maintain the 48 ft setback from the centerline of County Road S.
3. The proposed expansion shall not be located within the County Road X right-of-way.
4. The applicants shall follow Pierce County Solid Waste Code Ch 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. The proposed expansion shall be completed within 12 months of CUP approval.
6. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.**

Sanden moved to approve the conditional use permit for Expansion of a Nonconforming Structure and Site Plan Review for Skogen Enterprises LLC, John Skogen with conditions #1 - #6 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. All in favor. Motion passed.

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, by John Rohl, agent for John C. Rohl, Jr and John C. & Alva-Jeanne Rohl Life Estate, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer asked if the applicants are here. Roy stated no one is here. They are asking for a 60 day renewal.

Staff Report – Brad Roy: This permit was originally issued on May 6, 2015. Nonmetallic mining had previously been permitted on this parcel, with Milestone Material as the operator. However, the conditional use permit expired and the use ceased for more than 12 months. In 2015 staff became aware that mining had again begun on the site and notified the applicant that a new Conditional Use Permit was required. The property is subject to a conservation easement with the Kinnickinnic River Land Trust (KRLT). The easement required the mine to be reclaimed in 2010. The property owners and the KRLT came to an agreement to allow mining for a limited term and then have the site reclaimed. However, the mine operator could not accomplish sufficient mining within the agreed timeframe and chose not to submit financial assurance to allow for continued mining of the site. Limited extraction was completed since the issuance of the CUP. Rumpca Excavating operates the

mine on the neighboring property and is interested in mining the site. They are aware of the easement with the KRLT and are submitting plans to extract material and reclaim the site. Their initial plans are for the two mines to be combined. This will allow for the material to be mined on the Rohl site but stored on the Rumpca site for a timely reclamation of the Rohl site. A policy exception to the 100' mining setbacks will be needed for this to occur. The Land Trust and Rohl's are working on a new agreement and timeframe. Both asked for the 60 day renewal in order to get a plan from Rumpca. The existing conditions are listed in the staff report. Sanden asked if this is renewal of the existing conditional use permit or the expired conditional use permit. Roy stated this is a renewal from the 2015 conditional use permit. He doesn't know off hand when the permit issued to Milestone expired.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if the current conditions sufficiently protect the public health, public safety or the surrounding area, renew this Cup with the following conditions, as well as any additional conditions deemed appropriate:

1. A 100-ft setback shall be maintained from all property lines for all mining activities, unless granted an exemption by the LMC.
2. Applicant shall comply with all requirements of Pierce County Code Chapter 241, Nonmetallic Mining Reclamation.
3. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSA and other agencies if required.
4. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies.
5. A fugitive Dust Plan shall be developed and implemented for the mining site and haul roads.
6. Hours of operation shall be 7am to 7pm, Monday through Friday and 7am to 4:30pm on Saturday.
7. Any plans to deviate from the Reclamation Plan shall be submitted to the Zoning Office.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. This CUP renewal shall expire in two years.
10. Any expansion or intensification shall require a new conditional use permit and potentially a rezone depending on the intensity of the use.
11. New Financial Assurance consistent with the Reclamation Plan shall be submitted by the new operator prior to any mining activities taking place and kept current.

Roy stated that the applicants and the land trust are asking for a 60 day renewal to enable an agreement to be reached.

Aubart moved to approve the renewal of the conditional use permit for Nonmetallic Mining for John Rohl, agent for John C. Rohl, Jr and John C. & Alva-Jeanne Rohl Life Estate with conditions #1 - #11, modifying condition #9 to read "This CUP renewal shall expire in 60 days." /Sanden seconded. All in favor. Motion passed.

Discuss take action on a status report for Belle Vinez Winery, a conditionally permitted use in the General Rural Flexible 8 District pursuant to Pierce County Code Chapter 240-76A for Shannon & Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Mr. Zimmerman forward. Mr. Zimmerman gave an update. They are very active in the community. They were nominated for the Small Business for the Chamber in River Falls. They continue to support an array of different charities and fundraisers both on premises and in the community. They are trying to do their part there as well. That is the whole purpose of this business is that it is integrated into the local fabric and the area. He also wants to take a minute because over the past year he has had an opportunity to do a few new things in his life as well and heed access to different periods of information. When the committee first approved them, it came with a little bit of challenge. There were some concerns of course and he hopes that they have demonstrated themselves in a way that has met and filled those expectations. But he thinks it's important to know a few things about what's happening in the winery industry. In 2015, from an ag tourism standpoint, we crested \$150,000,000 in revenue to the state, all wineries in. What that means, based on the velocity, this is a category of ag tourism that is getting substantial

attraction and he doesn't think we will be the last ones you see coming through the doors. Just FYI on that. Where 1300 jobs are now sustained on a full-time basis across the State and the total number of wineries as of end-of-year 2015 is 200 and we know this year it is substantially higher. He raises those points so you are aware of what's happening in the industry but also because he thinks Pierce County did the right thing. He is personally biased when he makes that statement. You took a chance on us and hopefully we are doing right by you but this is also a good growing industry for the State of Wisconsin. For their small part, some of the totals are as expected, they did see a rise in their customer volume in 2016 versus 2015 by over 40%. Over 10,000 people that entered their doors during the 2016 period. He hopes that trend continues. He doesn't want to stop there. They want to keep going. They haven't had any issues. Maybe on two occasions, of their 26 conditions, one of them requires no parking on the roadway, 875th. He thinks there was only two occasions where the parking lot filled up and what they did was begin to direct guests to their back lot. The other condition they are required to report on has to do with the wine sales being the dominant percentage of their revenue. There was only a slight modification from the last time they were here, wine sales now account for 69% of all revenue in the business. Non wine sales that includes food, they also sell some types of retail stuff, winery sort of stuff as well. That 69%, and he thinks it was Dr. Sanden last time that asked that question, but just to clarify, that does not account for wine sold in Hudson at the liquor store or in River Falls. That is the wine sold on the premises. Just to make sure that you know that in terms of the revenue coming in there. Looking ahead this coming year, Angel is telling him that they are forecasting an up year because their reservations and events planned look to be on the rise. So they won't change anything. They are still operating with the conditions and that's called free market. They like that and want to see businesses grow and flourish. That is going to happen. They are contemplating going back to the township, asking for an additional malt beverage license which would allow them to also serve beer. You have cleared that in the CUP the last time we were here. We did not ask the township at the time. Partly, they didn't ask because of the heightened sensitivity around what the heck this place was going to be, going to have the sheriff there all the time and kids are going to get hurt. None of that has proven true. So recently also the Wisconsin Department of Justice had a ruling in the favor of wineries now expanding into beer as well. Just to be clear on this, it is not in any way, shape or form, we're not going to come back here and say it's a tavern. It would be for some of the guys that are at the winery, they are there with a group and they don't drink wine. They may do that, they have not completely decided. They will have to decide in the month of May. He does have one neighbor who issued some complaints with the Wisconsin Department of Revenue, Alcohol & Tobacco Enforcement group. Agents arrived on July 12, 2016, they conducted a full inspection and everything was clear. So there were no issues. That's it. Roy stated that was pretty thorough, does the LMC want me to read the staff report? Roy noted that no formal action is needed. Chairperson Fetzer asked about any other complaints. Roy stated no, there hasn't been any other complaints, just the ones about the personal use of the facility by the applicant which we have discussed before and don't deem that as any violation. Chairperson Fetzer stated he doesn't feel you need to read the staff report. Zimmerman's report was as thorough as anything you would have presented. Sanden asked about the reservation log, how many of these people are from outside the immediate area? He would suspect someone coming from a further distance might have a greater positive impact on the local economy buy either staying overnight in River Falls or shopping in River Falls. What percentage come from outside the region? Mr. Zimmerman stated you could not have asked him a better question because this is something he is advocating strongly for, state wide now at this point and time. We want Minnesota revenue coming into this state and offsetting our tax obligation. They use Square, their point and tracking system. It does track your zip codes if you use a credit card so that shouldn't shock anybody. It's pretty common. They do have greater than 50% of their customer base is most often Minnesota. They are surprised Minneapolis is a big driver out of there. They believe they haven't quantified this but working with the River Falls Chamber that they certainly are creating a broader ripple impact on hotel stays. People will go shop the downtown area, whatever the case may be. He would like to see that number increase. He is still surprised that there are a lot of people in River Falls and Hudson that still don't know we're there. We'll keep working on that and working on bringing people over to spend their money here in Wisconsin. The addition of Cracked Barrel Winery, just up Highway 35 between River Falls and Hudson, they are becoming much more promoted as well. So you have four wineries in a tight concentration between Hudson and River

Falls. Two in Hudson, one outside; 65 Vines, Cracked Barrel, Belle Vinez and Madison Spirits downtown. He would like to see more people spend the entire day in our community. Holst, it is nice when an applicant comes in and says what he is going to do and then does it. We appreciate your business and all the work you have put in to make your winery a first class establishment. Thank you. Mr. Zimmerman stated he appreciates the committee dealing with all the stuff you did, photographs of homes and a packed room to deal with this and he is grateful and that is why he wanted to share the broader impact to the state because he thinks Pierce County, he has talked to some people in other counties and there are people fighting right now just to open a business. You said yes, we did, we honored what we said we would do and he is grateful to the committee. Sanden asked about conditions #20 & 21 of 2016 with the berm, vegetative cover and visual screen, has that all been covered to your satisfaction. Roy stated yes. No action necessary.

Discuss take action on a status report for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F. Holst III, William F. Holst IV, Big Acres Inc, Nancy Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and Sections 25, 33, 34, 35 and 36, All in T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited WISC forward: Mr. Budinger introduced the team with him: Aaron Scott, Director of Mining Operations in Wisconsin, Minnesota and Missouri, Texas as well, he has quite a few mining operations under his management, Mike Melton, Corporate Director of Environmental for Fairmont, Michelle Maxson, Regional Environmental Coordinator. Mr. Budinger thanked the committee and stated this is an annual report for Diamond Bluff and Oak Grove mining operation and the next agenda item is the wet plant CUP. Their report covers both so however the committee wants to cover both through the transition, he'll leave that up to the committee but he will speak to both of those at the same time, identifying what has been going on in the last year. He stated they came before the committee this time in 2016. He won't take Brad's thunder away because he did a great job in identifying all the details here. This is a one year update and they are looking forward to interacting with the committee, answering any questions, talking about what they have been doing the last year and what their plans are within the next year. Regionally there was an industry downturn within industrial sand mining across the state. It not only affected WISC and Fairmont as a whole in Wisconsin but also several other mining operations. He thinks there were only a few operations out of the several dozen that continued to operate through that downturn. They feel as an industrial that they are seeing an uptick. The price of oil reflects that. The downturn started back in 2014, continued through 2016 and then early in 2017 they started seeing the uptick. Oil right now in the upper 40's, it's been as high as 54/55 in the last few months which has really stimulated a lot of reissuance of employees, rehiring of employees and also starting up of several mines that had been idle for a period of time. Maiden Rock, Hager City, Bay City, as well as the Menomonie operation are the three active Wisconsin sand mines. Maiden Rock they did start back up late in January, early February. They have 35 employees on site right now and they are actively hiring another 30 to come and work a 24-7 schedule similar to what they were doing back in 2015 and early 2016. They ended up idling that facility and still remaining active in a certain level of readiness as they have continued to do at Hager City and Bay City. They are actively producing sand products and shipping sand products out of Maiden Rocky right now. Menomonie also started in late 2016 and continues to run at its full capacity which is 24-6 day capacity that they are shipping not only to Cardinal Glass in Menomonie but also frac sand products into the oil and gas industry. They are very optimistic about the next several months. Although he does not have plans for Diamond Bluff mining at this point, he will discuss the activity that they have been doing and they will be doing that will hopefully lead to the mining activity in the near future. Bay City continues to be active but not actively producing sand products out of the mine there as well.

Staff Report – Brad Roy: In 2012, WISC obtained a Conditional Use Permit for a new underground mining operation in the Town of Diamond Bluff. On May 21, 2014 a Conditional Use Permit was obtained to expand the mine into the Town of Oak Grove. The mining process will be consistent with that utilized at the Maiden

Rock and Bay City mines. The mined materials will be screened, trucked and conveyed in the tunnels. The sand will either be washed at a new proposed plant at the mine entrance in Diamond Bluff or at the proposed plant expansion at the existing Hager City processing plant. The washed sand will be dried and further processed in Hager City. The mining permit encompasses 59 parcels totaling 1,867 acres in Diamond Bluff and 27 parcels totaling approximately 985 acres in Oak Grove. Activities on the site will include blasting and screening underground as well as stockpiling and loading on the surface. The LMC, at the required 1 year status report on August 7, 2013 by WISC, found that “action” had commenced at the Diamond Bluff site within 12 months and that the “use” had been established. The permit was renewed on April 6, 2016. Access to the mine entrance site is off of 1005th St, WisDOT recommends that the intersection be upgraded to the B1 class. 1005th St will also need significant upgrades. A road agreement has been reached with the Town of Diamond Bluff, but a copy has not been submitted to staff. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. A CUP for Filling and Grading in the Shoreland area was granted on May 21, 2014. This permit has expired and a new permit will need to be obtained. The entire mining process will take place underground using room and pillar mining. The sandstone will be mined in parallel tunnels approximately 30-feet wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The applicant is proposing to operate the facility 24 hours a day, seven days a week with up to 22 employees. The mining operation is required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. Waste materials will be placed back in the mine tunnels. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. There has been limited activity on the site since the expansion permit was received. Activities since the 2016 renewal are they have obtained a high capacity well permit, retained GZA for storm water design to avoid wetlands and to work on the permitting. Started the process for permits with the DNR, wetland evaluation, Rich will speak to these and then there is also planned activities for the upcoming year. Staff has not received any concerns or complaints regarding this operation since the 2016 renewal. The existing conditions are listed #1 - #33. One condition of note is #27, “Prior to beginning any mining activity within the Town of Oak Grove the applicant shall request to be placed on the agenda of the Oak Grove Town Board to review uses occurring in proximity to parcels authorized for mining. Concerns raised by the Town shall be presented to the LMC for review and potential CUP modification. Mr. Budinger stated where they are at right now with the wetland evaluation, that has been completed. What their intention is right now, the primary activities, their intent is to construct a storm water pond on site. Essentially it is one of two ponds that would cover us if he wanted to go in and make a major disturbance for any kind of storm water erosion control. The pond location itself is adjacent to the wetland perimeter, the line that has been established by the DNR for the Wind River. So they had a consultant do a wetland evaluation. That evaluation was completed so their next step is to finalize the design which will happen soon if not already and their intent is to submit a new application for Filling and Grading and will be going through the Town of Diamond Bluff and eventually with their recommendation, ending up here for that CUP prior to the excavation or any activity on site for that storm water pond. Also within that activity, condition #11, formal Road Agreement for 1005th, Town of Diamond Bluff, shall be established provided to the Zoning Office prior to any site disturbance. Their intention is to finalize that document. They will be requesting probably both of those topics within the next available agenda for the Town of Diamond Bluff. They have an agreement. It’s at a point where they just need to finalize the signatures. He thinks there has been some administrative challenges with getting that document. They know it was signed but they don’t have a copy. Part of the idling of the facility and losing several employees, Jeff Himes, and management staff that was leading that initiative created a problem where they just can’t find the signed copy for the road agreement. They will work with the Town of Diamond Bluff and hit the redo on that process and make sure they have that established before they have a disturbance of the excavation of a storm water pond. Those are the two main projects that are underway right now. Several other things need to happen before they can break ground. They have a request for quotes out for three excavating companies that have submitted quotes for the activity. The dollar amount is in the budget this year. They are acting in good faith to get the pond in before the end of the season so they could actually have some grass growing and soil stabilization on the edge of the pond. That is their intent. The next

time we meet, this time next year for the renewal of the conditional use permit, we will be able to give an additional update on that activity. That is the highlights, the bullet points. Looking at the rest of the activity and what's been going on, a lot of it has to do with the storm water project and also continuing to improve the property. Like he said, due to the economic downturn and also the industry and overall markets, they are seeing an upturn so they are expecting this mine will be developed in the near future. He just can't tell exactly when they will be breaking ground for portal construction. They are actively spending a significant amount of time and resources. The pond itself is going to be right around \$50,000 is what they are anticipating. The cost of the project, bringing some dollars into the local economy even though they are not actually producing sand there, they are still creating a positive impact to the economy in the area. That's where they are right now. There has been a lot of other activity going on to continue to improve the property. He wishes he could tell the committee when they would be cutting a box into the side of the hill and developing the portals, he just can't do that at this point and time. Chairperson Fetzer asked staff if the committee needs to act on this. Pichotta stated that formal action is not required.

Discuss take action on a status report for a Heavy Industrial Use (Wash Plant) in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.

Staff Report – Brad Roy: In 2014, the applicant modified their mining plan and obtained a CUP to construct a wash plant to wash sand from the mine. The washed sand will be trucked to the WISC dry plant in Hager City. The proposal includes the construction of a wash plant building, conveyors and a new load out tank building. The application also stated that a temporary wash plant may be constructed for use during the construction of the permanent wash plant or the material may be trucked offsite and brought back for processing after the plant is operational. The mining application detailed the conversion of the existing residence into an office and construction of a maintenance building. The proposed hours of operation of the plant are 24 hours per day, seven days per week. Front end loaders, trucks, mining equipment and conveyors will be routinely operated outside of the mine. The site plan for the plant was approved by the LMC on June 18, 2014. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. A CUP for Filling and Grading was granted on May 21, 2014. As previously noted the permit expired and a new permit will be needed. On January 7, 2015, the LMC approved an expansion of the existing WISC processing facility in Hager City, which, it was stated at that time, would remove the need for the proposed wash plant in Diamond Bluff. The LMC may want to request further explanation regarding WISC's future plans as there are currently multiple permits issued to fulfill what would appear to be the same processing need. Ideally, conditional use permits that will not be utilized within a reasonable timeframe would be rescinded and reconsidered should the need again arise. The wash plant will remove clays and fine material from the sand. Flocculants will be used to remove the clays and fines and will remain in the material which will be placed in the tunnels. The wash sand is conveyed to storage bins. Trucks will be loaded inside a new load out tank building. The process, when fully implemented, has been designed so that the sand will not be exposed to the open-air. Two high capacity wells will be needed for the wash plant. The WDNR permits high capacity wells. The proposed system will reuse 90-95% of the water. A Fugitive Dust Plan has been developed for the operation. There may be some temporary storage of mined sand as the adits to the mine are being constructed. Once mining operations are in full production outside storage will not be needed. Access to the mine and processing facility site entrance is off of 1005th St. As previously discussed, a road agreement is needed. The list of activities within the last year and upcoming are listed, which Rich has discussed. He can offer further details on that. Staff has not received any concerns or complaints since the 2016 renewal. The existing conditions are listed #1 - #11 in the staff report. Chairperson Fetzer asked Mr. Budinger about this where it said they wouldn't be needing it. Mr. Budinger explained there are two wet plants and they think they will only use one. Both wet plants, both business methods of operation are viable. The one concern that they have right now is the Hager wet plant, the Diamond Bluff wet plant, you have cost, quality and some other issues that they haven't discovered yet. One of the main concerns is quality. Quality when he means Bay City, the Hager expansion; the method of operation is that half

the volume comes from Bay City and half the volume comes from Diamond Bluff to be put into the wet plant at Hager City, which is one of the wet plants that is permitted and then it goes into the dry plant. One of the concerns is that there are different varying qualities between the two and therefore we may need to keep the processes separate. That's when the wet plant at Diamond Bluff and the wet plant at Hager City work well together. Not sure if that is going to be the case, also cost, being able to develop a business model where they are hauling waste sand from Diamond Bluff to Hager and the raw sand from clays and rocks oversize, non-sand products and then hauling them back. The business model of having a wet plant at Diamond Bluff is attractive when it comes to the cost minimizing waste handling. Keep your waste at Diamond Bluff. They do that right now at Bay City, they have an underground wet plant. They aren't able to take advantage of efficiencies and technologies. They are looking forward to a new wet plant at Bay City. This would be the one at Hager City, raw sand from Bay City into Hager. There are pluses and minuses. Making sure that they have flexibility in their business model. Investment of all the consulting and permitting they went through to get to the point where they had a conditional use permit is valuable to them as an asset. Overall, it's a definition of flexibility is the way they see it. When they do get into development, he doesn't see two wet plants running unless they run into a major quality issue. He would think one or the other would prove itself making sure that they are running efficiently is a concern; an efficient operation minimizing their waste handling and that sort of thing. They haven't truly determined which one is best yet, they do feel that both those options are viable. The activity for the wet plant specifically, there is overlap with the two with the mine. They did obtain the high capacity well permit which would feed fresh water into a wet plant at Diamond Bluff. So that is the one thing that is significant to the CUP. Sanden thanked Budinger and his team. These are controversial issues, as you well know, without your due diligence, he thinks it would not have gone nearly as smoothly, thanks for dotting the I's and crossing the T's. Pichotta stated we do have a couple folks from Oak Grove and they may have a question or two. Debra McClure, Oak Grove Supervisor, asked for clarification on the permit that was issued in 2016. Was that for two or three years? Pichotta stated two years as required by our code. Ms McClure stated because it does say in here that it expires in two years, if it was issued in 2016 it would expire in one year? Because in both of these reports it says it will expire in two years. Roy stated those are the conditions from when it was issued. Ms McClure asked from 2012 or 2014. Roy stated 2016, when it was renewed. Ms McClure stated these will be updated? Roy stated that these are the conditions of that permit and that permit date is 2016. Ms McClure stated so 2018 is when it will expire. Roy stated we are just listing the conditions as they are on the permit. Holst stated this is just a one year status report on a two year permit. Holst informed WISC that they are on the Diamond Bluff agenda for the road agreement for this month. Chairperson Fetzer thanked WISC for being very forth coming and open with their information, it makes things flow a little bit better. No formal action taken.

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Emily Lund to attend a FEMA Floodplain Map Correction discussion being hosted by the Regional Planning Commission at Rice Lake on May 11, 2017. **Aubart moved to approve the Travel/Training request for Emily Lund/Holst seconded. All in favor. Motion passed.**

Departmental Update and Future Agenda Items

Public hearing for a CUP for an accessory residence in the Rural Residential 20 District for Leanne Abbas in the Town of Trenton.

Site Plan Review for Town of Martell for a new Town Shop.

Roy noted that the Rohl Pit could come whenever they get an agreement reached.

Motion to adjourn at 7:00pm by Holst/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 3, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 17 th , June 7 th & 21 st , July 5 th & 19 th , all in 2017.	Chair
3	Approve minutes of the April 5, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Commercial District pursuant to Pierce County Code Chapter 240-67A(2), and Site Plan Review per Pierce County Code Chapter 240-75, for Skogen Enterprises LLC, John Skogen, owner on property located in the SW ¼ of the NE ¼ of Section 35, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Lund
5	Discuss take action on renewal of a conditional use permit for Nonmetallic Mining in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, by John Rohl, agent for John C. Rohl, Jr and John C. & Alva-Jeanne Rohl Life Estate, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
6	Discuss take action on a status report for Belle Vinez Winery, a conditionally permitted use in the General Rural Flexible 8 District pursuant to Pierce County Code Chapter 240-76A for Shannon & Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Discuss take action on a status report for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Piece County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F Holst III, William F. Holst IV, Big Acres Inc, Nancy Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and Sections 25, 33, 34, 35 and 36, All in T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
8	Discuss take action on a status report for a Heavy Industrial Use (Wash Plant) in the Industrial District Pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff,	Roy

	Pierce County, WI.	
9	Discuss take action on Travel/Training Requests.	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/21/17)

MINUTES - Pierce County Land Management Committee Meeting, April 5, 2017

Present: Jon Aubart, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund, Ryan Bechel and Shari Hartung

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Aubart called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin. He stated the first order of business is agenda item #8 will be struck from the agenda tonight.

Next meeting dates: April 19th, May 3rd & 17th, all in 2017.

Approve Minutes: **Sanden moved to approve the March 15, 2017 Land Management Committee minutes/Snow seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for a Gunsmith and Gun Sales Business in the Agriculture Residential District pursuant to Pierce County Code 240-36D by John Carlson, owner on property located in the NE ¼ of the NE ¼ of Section 22, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Aubart invited Mr. & Mrs. Carlson forward:

Staff Report – Ryan Bechel: The applicant is requesting a Conditional Use Permit to operate a gunsmith shop at his residence in the Town of Union. The shop will provide parts and repair services for firearms (shotguns, rifles, pistols and muzzleloaders) as well as retail sale of new and used firearms, ammunition and firearm accessories (scopes, magazines, holders, etc). Additionally, the applicant is proposing to sell fishing poles and equipment, live and manufactured baits and hunting/camping gear. The applicant has applied for a type 1 Federal Firearms License (FFL) to enable him to engage in the commercial sale and transfer of firearms. Per Federal Gun Control Act regulations, persons who are engaged in the business of dealing in firearms must receive an FFL license from the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF). Retail activities involving the sale of consumer goods produced off-site and not accessory to any on-site produced goods require a CUP for a Farm & Home Based Business in Pierce County's agricultural zoning districts. The 39 acre property is located in the Town of Union and zoned Agriculture Residential. Pierce County Code 240-36D permits farm and home based businesses accessory to permitted single-family residences upon issuance of a conditional use permit. In ag districts, subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
2. If located in the dwelling unit, the farm and home business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be 5 acres.
4. Such other conditions as specified by the Land Management Committee pursuant to Sec 240-76 shall apply.

The property is the applicant's primary residence. The business will be located inside a 30ft x 24ft (720 sq ft) existing garage. No new structures are proposed with this request. The applicant anticipates approximately 288 sq ft (12ft x 24ft) will be designated retail floor area. The business will be operated by the applicant and his

wife. No additional employees are anticipated. Adjacent zoning districts are Agriculture Residential to the north, east and south; Light Industrial to the west. Adjacent land uses are agriculture and low density residential. Lot access is located off of 280th Ave on the north side of the property. Typical equipment utilized for this business includes a gun safe(s), hand tools, personal computer, filing cabinets and general office supplies. Primary on-site activities include the retail sale of firearms and related sporting goods items and repair/cleaning of firearms. The applicant utilizes a gun safe for storage of retail firearms. Exterior security lighting, security cameras and dead-bolted doors will provide additional security for the business. Hours of operation are proposed to be year-round from 10:00AM to 6:00PM, Tuesday through Saturday, additional hours by appointment only. Pierce County Code §240-54 specifies minimum parking provisions shall be one parking space for every 200 square feet of primary floor area for retail stores and personal services establishments. A minimum of 3 off-street parking spaces is required for this facility. The plans submitted show ample parking area to fulfill this requirement. The applicant is proposing to provide a satellite toilet on site for customer use. Solid waste disposal bins and removal services will be locally provided. Any potential hazardous materials/wastes produced on site will be disposed of through Pierce County Solid Waste & Recycling. PCC §240-61C addresses freestanding and projecting signage and states signs shall not exceed 24 square feet in sign face area in Agriculture Residential zoning districts without the issuance of a CUP. Such signs shall be limited to two per parcel. The applicant is proposing to erect one 2ft x 4ft free standing exterior sign. The applicant has existing exterior lighting installed to provide security lighting for the garage and parking areas. No additional lighting is proposed. The Union Town Board recommended approval of this request on 3/4/2016. The Town did not specify any concerns or suggested conditions in their recommendation. PCC §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit." We did receive concerns from the neighbor to the north of the property. He didn't want to see a gun range on the premises. He had some security concerns and also some questions concerning the liability of the business.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed Farm & Home Based Business with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. The business shall be conducted by the owner of the dwelling unit.
3. There shall be at least 3 off-street customer parking spaces. A minimum of one parking stall shall be ADA compliant.
4. Applicant shall provide adequate sanitary facilities for customer use.
5. The applicant shall secure and maintain all necessary federal and state firearm dealers' licenses.
6. Hours of operation shall be year-round from 10:00AM – 6:00PM, Tuesday through Saturday; additional hours by appointment only.
7. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
8. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
9. Applicant shall secure a Land Use Permit for any future signage, if required.

Mr. Carlson asked if after two years there is an additional fee for renewal? Pichotta stated that there is no renewal fee the only fee required has already been paid. Mr. Carlson asked about one of the neighbors asking about a firing range. Bechel stated yes, they would not like to see a firing range on the site. Chairperson Aubart stated we could do that during the public hearing. Mr. Carlson stated he really doesn't need a firing range. He will be doing everything with the scopes for laser inside and have a shooting box inside. **Chairperson Aubart opened the hearing to the public.** No public comment. **Chairperson Aubart closed the public hearing.** Sanden asked if discharge of the firearms outdoors is going to be a regular part of your business? Mr. Carlson

stated no. Sanden asked how delivery and shipping is handled. Is it done by your own vehicle, UPS? Mr. Carlson stated UPS and for firearms, he doesn't know if UPS or Postal service does that. Sanden stated we aren't talking tractor/trailer deliveries. Mr. Carlson stated not heavy traffic, no. It's just a small home based business and he is doing this word-of-mouth basically. He has his hands full already before he got his license. **Sanden moved to approve the conditional use permit for a Farm and Home Based Business for a Gunsmith and Gun Sales Business for John Carlson with conditions #1 - #9 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Motion passed.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-40A, for Cosme and Lacey Perez Traynor, owners on property located in the NW ¼ of the SW ¼ of Section 6, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Aubart invited Ms Perez Traynor forward:

Staff Report – Emily Lund: In 2007, the previous owners of the applicants' property obtained a land use permit to build a new dwelling and the existing older home was to be converted to storage and not inhabited. The new house was built and staff verified that the older home was no longer habitable. In 2016, the applicants purchased the property and made improvements to the older home making it habitable again. That structure (older home) is currently being occupied by relatives of the applicant. Staff received an inquiry regarding the status of the older home from an appraiser and investigated the situation. Staff determined that a CUP would be needed to enable its use as an accessory residence. The applicants are now requesting a conditional use permit to enable the older home to be legally used as an accessory residence. The property is located in Section 6, Town of Hartland and is zoned General Rural Flexible. Pierce County Code (PCC) §240-40A allows accessory residences which are accessory to single-family residences in the General Rural Flexible District with the issuance of a CUP. Accessory Residence is defined in PCC §240-88. PCC §240-88 defines Accessory Building as, "building, not attached to a principal building by means of a common wall, common roof, or an aboveground roofed passageway, which is:

- A. Subordinate to and serves a principal structure or a principal use.
- B. Located on the same lot as the principal structure or use served.
- C. Customarily incidental to the principal structure or use.

The applicants own 15.153 acres with 2 homes, 1 barn, 2 wells and 2 septic systems. The original residence was constructed prior to permits being required. Staff has estimated that it is a 34ft x 32ft, 1.5 story structure. The new residence is 65ft x 42ft, two-story structure. The principal residence (new home) has an existing conventional septic system, sized for 4 bedrooms. The accessory residence has its own existing septic system and well. PCC Ch. 115 Numbering of Buildings and Roads: states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The applicants indicated they are renting the accessory residence to a relative and requested a separate address. The Hartland Town Board recommended approval of this request on 3-14-17 without any concerns or recommended conditions (attached). The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends that Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall work with the Town building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a separate uniform address number for the accessory residence.

Ms Perez Traynor stated she did contact Todd Dolan's office yesterday and spoke with Vicki. She stated she didn't think they needed any additional permits and she would contact Ms Perez Traynor if there was.

Chairperson Aubart opened the hearing to the public. Maria Gallardo Johnson, owns two parcels that abut their property. She is wondering that since people are living there has it been inspected to meet all codes now? Pichotta stated that is what the condition referring to Todd Dolan, the Uniform Dwelling Code Inspector, would address. Ms Gallardo Johnson stated it sounded like at the end you called up and maybe you don't need any other additional things. Ms Perez Traynor stated they didn't have to build anything it was just the cabinets so there was nothing structurally that they had to alter. Ms Gallardo Johnson stated when they have asked before, they have been told that because they have two different 15 acre parcels that only one home can be on each parcel. She is not understanding why somebody can have two homes on the same parcel. Chairperson Aubart stated that is why we are here tonight to meet those conditions for the conditional use permit and also the inspector will take care of making sure, if this is successful, that the house is up to code. Ms Gallardo Johnson asked if it would set a precedence of other lands of that size around us could also then start multiple homes. Pichotta stated they already can do that, you could do that. Ms Gallardo Johnson stated they were told they could not. Pichotta asked by whom? Ms Gallardo Johnson stated they went down to get building permits and were told not on that size property. So she is curious, they don't want around them to become more dense. Pichotta stated he isn't sure who you talked to because the reality is anyone in an agricultural district could apply for an accessory residence as long as it was customarily subordinate and incidental to the principal residence. So he isn't sure who you talked to but that wasn't quite right. Ms Gallardo Johnson stated OK. We got permits for everything that they built and then when they had asked to have like an in-law area, they were told no. Chairperson Aubart suggested that is a separate matter than what we are dealing with right now, he suggests you contact Mr. Pichotta's office he can help walk you through that process. But for tonight we're going to deal with Ms Traynor. Ms Gallardo Johnson stated she understands that but is still concerned with how dense areas can be that are so close together. How many houses can be on a property? Lund stated she would be willing to meet with her since she helps people with land divisions and maybe we can help you with the land division and these different uses. Pichotta stated you can only have one accessory residence per parcel so there is not the potential for her to build five houses. Ms Gallardo Johnson stated that was her question and concern, she is worried about density happening within there. Ms Perez Traynor stated it's for my sister. Chairperson Aubart asked for any other public comment. **Chairperson Aubart closed the public hearing.** Sanden asked so the sequencing of the buildings when one was built versus the other, that is irrelevant to whether one is an accessory to the other one. Pichotta stated in this case yes. **Sanden moved to approve the conditional use permit for an accessory residence for Cosme & Lacey Perez Traynor with conditions #1 - #2, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Motion passed.**

Discuss take action on a deferred request for a Map Amendment (Rezone) from General Rural to General Rural Flexible, for Jerrod & Danette Faber, owners on property located in the NW ¼ of the NW ¼ of Section 10, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Aubart invited Mr. Faber forward. Staff report - Emily Lund: The LMC held a public hearing for this request on 3-1-17 and after discussion, referred it back to the Town of Gilman to reconsider the justification used to recommend approval. The applicants are requesting to rezone an 11.01 acre parcel in order to split the lot into two parcels. With the current zoning district and acreage, the parcel does not have enough density to allow the split and the property owners don't want to purchase more land from adjoining property owners. The property is located in Lot 1, CSM V8, P166 in Section 10, in the Town of Gilman. Current land use is residential with a dwelling, multiple accessory structures and undeveloped. The proposed use on the proposed lot is residential with a new dwelling. Adjacent land uses are agricultural, residential and undeveloped. This parcel and adjacent zoning is General Rural. The value of land for agricultural use according to the USDA Web Soil Survey is listed in the staff report. Pierce County Zoning Code §240-15 Discusses General Rural and General Rural Flexible Purpose and Intent of Zoning Districts. Pierce County's adopted Comprehensive Plan states: "The County will approve

re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone.” The Town of Gilman again recommended approval of this request on 3/15/17 stating: “Our primary justification for supporting this rezone is found in the [Gilman] Comprehensive Plan in the following places: Page 10.C. Goals, Objectives & Recommendations. Goal 1: Encourage and support a variety of affordable housing choices in the Town of Gilman. Objectives: 1. Support affordable housing options to attract future residents and first time home buyers. Because of the nature of this property and location on 850th and County Road BB, we believe this rezone is appropriate and consistent with the objectives of the Comprehensive Plan.”

Staff Recommendation: Given that the Gilman Town Board determined that this proposed map amendment (rezone) of 11.01 acres from General Rural to General Rural Flexible is consistent with their Comprehensive Plan, staff recommends that the LMC approve this map amendment (rezone) and forward a recommendation to the County Board of Supervisors.

Sanden thanked the applicant for his patience and stated it helps us to not set an undue precedence.

Snow moved to approve the Map Amendment (Rezone) from General Rural to General Rural Flexible for Jerrod & Danette Faber, and forward a recommendation to the Pierce County Board of Supervisors/Sanden seconded. All in favor. Motion passed

Discuss take action on a deferred request for a Map Amendment (Rezone) from Rural Residential 12 to General Rural Flexible 8 by Bailey Webster, owner on property located in part of the NE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Aubart invited Ms Webster forward:

Staff Report – Ryan Bechel: The applicant is requesting to rezone a total of 1.00 acres in the Town of Oak Grove. The applicant is requesting the rezone in order to obtain appropriate permits to sustain operation of a Direct Market Agriculture business on the premises. The business consists of the production and sale of fresh produce and nursery items. Pierce County Code does not permit Direct Market Agriculture operations in districts zoned residential. The applicant appeared before the Land Management Committee on November 16th, 2016 for this rezone request. After holding a public hearing, the request was referred back to the town of Oak Grove for further consideration and clarification of the recommended condition. Pierce County’s adopted Comprehensive Plan states: “The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs discouraged). The Town of Oak Grove recommended approval of this request on July 18th, 2016. The Town referenced the following supporting objective under “Economic Development Goal #1” of their adopted town comprehensive plan:

Objective 1: ‘Promote ag-based businesses.’

The town removed the following concerns/suggested condition from their original recommendation after further consideration:

1. “Combine 1 acre lot with adjacent 5 acre GRF8 lot.”

Staff Recommendation: Given the Oak Grove Town Board of Supervisors has determined that this proposed rezone of 1.00 acre from Rural Residential 12 to General Rural Flexible 8 is consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Sanden asked Ms Webster if she could clarify what the business involves since he is not familiar with the Direct Market Agriculture. Ms Webster stated it’s a farm stand, just a vegetable stand, a 3ft x 6ft shed structure.

Snow moved to approve the Map Amendment (Rezone) from Rural Residential 12 to General Rural Flexible 8 for Bailey Webster and forward a recommendation to the Pierce County Board of Supervisors/Sanden seconded. All in favor. Motion passed.

Discuss take action on a request for renewal of a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffrey Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Aubart invited Mr. Willgrubs forward:

Staff Report – Ryan Bechel: In 2015, the applicant received a Conditional Use Permit to establish a campground along the Mississippi River. The campground is intended to provide seasonal camping space for individuals with campers, travel trailers and recreational vehicles. The initial CUP approved the establishment of 16 camping sites with the option to add four additional sites upon campsite layout approval by Land Management staff. The CUP was anticipated to be the first of several phases of campground development on the site. The planned full scope of the project is to establish approximately 120 campsites, most of which would be located in the floodplain and shoreland areas of the property. The expansion or intensification of this use will require issuance of a new CUP. The property is located in the Town of Trenton and is zoned General Rural Flexible. In 2013 this parcel and an additional adjacent parcel, were rezoned from Rural Residential 20 to General Rural Flexible. The campground is not commercially operating at this time. The applicant anticipates the campground will be operational beginning in May of this year. 7 of 16 originally delineated camping sites have been installed. The applicant anticipates the 9 remaining delineated camping sites will be completed within the next year. A holding tank dump station for the collection of waste from recreational vehicles camping on-site has been partially installed. The applicant stated that his plumber (Darrell Hubbell) will be completing the installation this spring. Staff contacted the Town of Trenton regarding this CUP renewal. No issues or concerns were reported. A status report was required (condition 9) within one year of the initial CUP issuance. The applicant inadvertently failed to contact the Land Management Department to be placed on an agenda. The existing conditions are listed #1 through #9 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether existing conditions remain adequate to protect public health, public safety and the character of the surrounding area. If no additions or changes to the established conditions are determined to be necessary, staff recommends that Land Management Committee renew this conditional use permit for a campground with the following conditions:

1. Total number of campsites present shall not exceed 20 individual sites. If additional campsites beyond the 16 currently delineated are to be established, the layout shall be presented to Land Management staff to verify side yard setbacks, minimum campsite dimension requirements and the location of campsites in relation to the floodplain, prior to use.
2. Internal roads, camping pads and sanitary improvements shall be completed prior to the operation of the campground. Staff shall be contacted to verify improvements prior to commercial use.
3. Any campground advertising signage shall comply with Pierce County zoning standards.
4. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Pierce County Subdivision Code, Department of Safety & Professional Services (DSPA), Department of Health-DHS standards etc.).
5. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
6. The campground shall comply with all items listed under Section 240-39 of the Pierce County Code.
7. Any additional filling and grading shall be verified by staff to determine if a conditional use permit is needed.
8. Owner and manager contact information shall be prominently posted on site.
9. This conditional use permit shall expire in two years. A status review shall be presented to the LMC within 1 year.

Snow asked if all the sites will be seasonal. Mr. Willgrubs stated for the most part. Sanden asked what is the anticipated timeframe. Mr. Willgrubs stated we are going on nine years now. The plumber is supposed to be

down in two weeks to finish up the septic. Then Emily can come out and do an inspection on that. He was down there yesterday wiring the site. He would say we would probably get the 16 sites in by the first of May depending on the plumber. Sanden asked staff if the conditions are identical to the original. Bechel stated yes. **Sanden moved to approve the renewal of the conditional use permit for a Campground for Chris Willgrubs, agent for Jeffery Kessler, with conditions #1 - #9/Snow seconded.** Barry Barringer asked the chairman if we are in a public hearing now. Chairperson Aubart stated no. Mr. Barringer stated he is a member of the Trenton Planning Commission and this is all new to them as far as he is concerned. He is just wondering, you are renewing a conditional use permit and it states that at one point in time the applicant inadvertently failed to contact Land Management Department to get placed on the agenda. Where does that put this? Pichotta stated we typically do status reports, it's not good that he forgot that but in this particular case, it's probably not a big deal since he hasn't fully established the use. He has been working toward it. As far as your suggestion that this is new to you, this is not new to you, this has been before your planning commission and your town board and your town board chair was contacted regarding this particular renewal and he said that there was no issues that he was aware of. Chairperson Aubart stated that sounds like an internal communication issue within the town. Motion is on the floor. Any other discussion? **All in favor. Motion passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated we only have one agenda item and that is Shannon Zimmerman Status Report for Belle Vinez Winery. We were thinking of not holding a meeting just for that and to get him on the next available meeting that meets his availability.

Committee consensus to cancel the April 19th meeting. Sanden asked if there have been any complaints. Pichotta stated not to his knowledge.

Motion to adjourn at 6:38pm by Sanden/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA**

**Wednesday, April 5, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 19 th , May 3 rd & 17 th , all in 2017.	Chair
3	Approve minutes of the March 15, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for a Gunsmith and Gun Sales Business by John Carlson, owner on property located in the NE ¼ of the NE ¼ of Section 22, T25N, R15W, Town of Union, Pierce County, WI.	Bechel
5	Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-40A, for Cosme and Lacey Perez Traynor, owners on property located in the NW ¼ of the SW ¼ of Section 6, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
6	Discuss take action on a deferred request for a Map Amendment (Rezone) from General Rural to General Rural Flexible, for Jerrod & Danette Faber, owners on property located in the NW ¼ of the NW ¼ of Section 10, T27N, R16W, Town of Gilman, Pierce County, WI.	Lund
7	Discuss take action on a deferred request for a Map Amendment (Rezone) from Rural Residential 12 to General Rural Flexible 8 by Bailey Webster, owner on property located in part of the NE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Bechel
8	Discuss take action on a request for renewal of a conditional use permit for a Utility Facility >1000 Square Feet (Load Out Facility) in the General Rural Flexible and Industrial District for William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34, and part of the SE ¼ of Section 28, All in T25N, R18W, Town of Trenton, Pierce County, WI.	Bechel
9	Discuss take action on a request for renewal of a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.	Bechel
10	Discuss take action on Travel/Training Requests.	Pichotta
11	Future agenda items.	Pichotta
12	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, March 15, 2017

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 5th & 19th, May 3rd & 17th, all in 2017.

Approve Minutes: **Snow moved to approve the March 1, 2017 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Rural Residential 20 to General Rural Flexible, for Town of Trenton, owner on 5.5 acres located in the SW ¼ of the SE ¼ and the SE ¼ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.

Chairperson Holst invited Brian Berg forward: Mr. Berg, Town of Trenton Chair, stated the reason for the request is they are looking into doing managed camping in that area. At this time, they have no agreements with anybody. They are just getting started in the process. They figured it would offer more recreational activities for the community. Snow stated at one time there were some problems down there with some people camping and littering. Are you still experiencing some issues? Mr. Berg stated no, not right now but they have an ordinance in place. That has done a good job of taking care of that. What they are going to do is modify their ordinance so that it will only apply to managed camping. So it's the only thing allowed. There is no other overnight camping allowed on any of the island properties. That has kept the problem at bay.

Staff Report – Andy Pichotta: The Town of Trenton is requesting to rezone 5.5 acres, consisting of a 2 acre parcel and an adjacent 3.5 acre parcel located in Section 33 of the Town of Trenton. This rezone request is intended to enable the applicant to obtain a conditional use permit for managed camping and outdoor recreation. Pierce County Code does not permit the establishment of campgrounds in a Rural Residential zoning districts. It's located in Section 33, Town of Trenton. It does have a street address and is accessed off of 860th Street. Current land use is undeveloped. The adjacent land uses are commercial, residential and undeveloped. There parcels and the adjacent parcels are currently zoned Rural Residential 20. The soils information is provided in the staff report. The purpose and intent of the various zoning districts is listed. Basically, the reason for the rezone request is campgrounds are allowable in an agricultural district and not allowable in a rural residential district. Much of Trenton Island and the Shoreland there is Rural Residential 20 which is intended for residential development which is not allowable in a floodplain. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. The Town of Trenton recommended approval of this request on February 14, 2017. They cited portions of their comprehensive plan relating to Utilities and Community Facilities – The goal that they cited was Goal #1. Provide adequate, good quality and varied park and recreation facilities to meet the needs of all community residents;" and Objective #2: To provide passive and active park and recreational facilities to meet the needs of all age groups."

Staff Recommendation: Given the Trenton Town Board determined that this proposed rezone of 5.5 acres from Rural Residential 20 to General Rural Flexible is consistent with their comprehensive plan, staff

recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the hearing to the public. Tim Huppert, lives within a block or two blocks of this and their concern is it was already floodplain and moved the campground, Evert's Resort, out of there at one time. Why all of a sudden now does it have to be reopened as another campground? Pichotta stated that this doesn't actually create a campground. What this does is create an opportunity for the Town of Trenton to seek a conditional use permit to establish that sort of a use. He is not familiar with what was on the site prior, given that predated his time of being here. Mr. Huppert stated at one time there were two Evert brother's that owned it, Rollie and Irv. Irv had the one that is now this and he chose to sell it out for the floodplain deal and Rollie kept his which is his campground. We had to pay for it once and now we are going to have to pay for it again, basically or give it back to them? It just doesn't make any sense. Pichotta reiterated that this doesn't actually create a campground. There is a whole separate process that will be required in order to establish a campground. In order to establish a campground, it will need to go through the Town Planning Commission. The Town Board, back here, another public hearing would be held and also FEMA and State Hazard Mitigation have to sign off on it as well. There are a lot of steps left. Mr. Huppert stated in their neighborhood, since they have closed it down they have also closed down a stretch of road on 174th Avenue which is shutdown so a local person could put two houses in there. Now on 174th Avenue, they have a lot of traffic. He has lost several mailboxes. So you are asking now to double that amount of traffic going down there. It's just going to be more confusion and more traffic than what they have now. **Chairperson Holst closed the public hearing.**

Chairperson Holst stated we are talking about a rezone here today. The future use is another time. His opinion is you have some land there that is zoned Rural Residential 20 in the floodplain that shouldn't be zoned Rural Residential 20. It's probably a better rezone choice of what you are doing here and maybe you want to look at a more comprehensive rezone for other areas of your township. That being said, there are a lot of steps to go through yet, at some of which you will have a great deal of input. They will also need to get permission from the State and Federal Government to use it for their projected use, which might be a hard thing to get accomplished. Chairperson asked if Mr. Huppert knows some history, is there a pond on that property and it used to be a fish holding facility or what? Mr. Huppert stated yes there is.

Aubart moved to approve the rezone from Rural Residential 20 to General Rural Flexible for the Town of Trenton given that it is consistent with the Towns comprehensive plan and forward a recommendation to the County Board of Supervisors/Sanden seconded. All in favor. Motion passed.

Discuss take action on a request for renewal of a conditional use permit for a Utility Facility >1000 Square Feet (Load Out Facility) in the General Rural Flexible and Industrial District for William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34, and part of the SE ¼ of Section 28, All in T25N, R18W, Town of Trenton, Pierce County, WI. Pichotta stated that this is a request for renewal of a CUP. It's a two year renewal and there is a one year status report. The deadline for renewal is coming up and the applicant is not able to attend tonight's meeting so what we are requesting is that you approve it with the same conditions - but modifying #2 to state that the CUP shall expire in 60 days - which will give the applicant time to come and present the status and discuss the progress he has made toward the establishment of that use. **Chairperson Holst recused himself from voting and discussion due to possible conflict of interest. Aubart takes over as Acting Chairperson. Snow moved to approve the renewal of the conditional use permit for 60 days for William F. Holst III with existing conditions #1 - #4, modifying condition #2/Sanden seconded. All in favor. Passed with Holst not voting.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for your consideration. It's a half day workshop for ArcGIS Mobile Apps in St. Paul on March 22nd for Kevin Etherton, our GIS Mapping Specialist. **Snow moved to approve the travel/training request for Kevin Etherton/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing to consider a request for a CUP for Home Based Business for Gunsmith and Gun Sales by a guy in the Town of Union.

Request for renewal of a CUP for a campground in the General Rural Flexible District in the Town of Trenton for Chris Willgrubs.

We expect to see Mr. Faber from the Town of Gilman back for that rezone.

We will likely see Mr. Holst back for this request for renewal of a conditional use permit for a Utility Facility >1000 Square Feet in the Town of Trenton.

Motion to adjourn at 6:15 pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 1, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 15th, April 5th & 19th, all in 2017.

Approve Minutes: **Snow moved to approve the February 15, 2017 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from General Rural to General Rural Flexible, for Jerrod & Danette Faber, owners on property located in the NW ¼ of the NW ¼ of Section 10, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Mr. Faber forward: Mr. Faber stated he had nothing to add at this time.

Staff Report – Emily Lund: The applicants are requesting to rezone an 11.01 acre parcel in order to split the lot into two parcels. With the current zoning district and acreage, the parcel does not have enough density to allow the split and the property owners don't want to purchase more land from adjoining property owners. The property is in Section 10, Town of Gilman. Current land use is residential with a dwelling, multiple accessory structures and undeveloped. The proposed use on the proposed lot is residential with a new dwelling. Adjacent land uses are agricultural, residential and undeveloped. This parcel and adjacent zoning is General Rural. Pierce County Zoning Code states:

General Rural is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and/or are compatible with surrounding rural land.

General Rural Flexible is established to achieve the same objectives as the General Rural (GR) District but to allow a greater density of residential development with the approval of the town board.

Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Town of Gilman recommended approval of this request on February 8, 2017. They justified the approval "from [the] Gilman Comprehensive Plan, pg 10, Goal #2, Objective #3; pg 11 [Policies and Recommendations] #1, 2, 3, 5a, 5b and 6; pg 47 D; pg 48 Goal #2 and Objectives (attached)." The Town Board stated, "Overall the proposal meets our plan by avoiding prime farmland and maintaining reasonable housing density. The Town grants this Rezone approval as a unique exception applying to this parcel, at this location at this time, as it meets our Comprehensive Plan. Any new Rezone requests will be judged on their own particular merits. Soils information is listed in the staff report. The New USDA Web Soil Survey states that 23% of the area is Prime Farmland, if drained, 51% of the area is Prime Farmland and the remaining 26% is Farmland of Statewide Importance. The important farmlands are prime, unique, farmland of statewide or local importance. The Old USDA Pierce County Soil Survey that was

published in 1968 states that 77.5% of the area is Prime Farmland. Soil capability units in the old book, ranked the farmland's value based on that capability unit and there was a policy, kind of an unwritten policy, that states that capability units mentioned above unit I & II were Prime Farmland. The Town of Gilman's recommended approval of this rezone relies primarily on Comprehensive Plan language that relates to the preservation and maintenance of agricultural lands. It is not clear to staff how a rezone intended to increase residential density would result in the preservation of agricultural land. Staff also suggests that such a determination establishes a precedence that would make future rezone requests to increase residential density difficult for the Town to deny. Given this, requesting additional information and/or clarification from the Town of Gilman may be warranted. A town representative plans to be in attendance at the meeting to provide additional information.

Staff Recommendations: Staff recommends the Land Management Committee consider whether additional information or clarification regarding the Town's rationale is necessary. If determined to be necessary this issue should be referred back to the Town of Gilman for additional consideration. When additional information is submitted the item would be placed on the LMC's agenda as a "discuss take action" item.

If the LMC determines that additional information is not necessary, and given that the Town of Gilman has determined that the proposed rezone is consistent with their adopted comprehensive plan, staff recommends the LMC approve the rezone of 11.01 acres from General Rural to General Rural Flexible and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Tom Manley, Chair of the Town Planning Commission and with him is Phil Verges, the new Board Chair and he is also on the Planning Commission. They are here for a couple reasons; they don't want to do anything to unnecessarily get in somebodies way and also to look for some clarification on how this process works. If he is going to be fulfilling this role going forward, he wants to understand how the Town and County's relationship works and to explain why they came to these conclusions. The way they worded their approval, they really do think this is a unique situation. If you are familiar with the Township and this particular spot in the Township, he thinks you would understand why they think it's consistent with their comprehensive plan. That corner is right on County Road BB and 850th. 850th is probably the most traveled road in the township. It goes straight from the Village heading east and west, it crosses County Road BB and then ultimately goes to Hwy 63 and runs straight into Hwy 29. It is a road that is heavily traveled. He doesn't think that any of them are looking for increased densities in their township but if you read their comprehensive plan they talk about how we are looking for residential development along major trunk roads. He thinks this is an intersection of two major trunk roads, County Road BB and 850th. It is a corridor that people are using to get to Hwy 63 and commute out of the area. The other argument about it being less than Prime Farmland, he absolutely thinks that that holds and Phil can attest to that because his family farmed the land for a very long time. So he knows what is there and what is possible on that parcel. He thought it would be helpful to explain their rationale and he would like some clarification why it is you feel this sets a precedent and why the Town Planning Commission would not have the discretion, going forward, to deny similar requests that don't fit the comprehensive plan like we believe this one does. Phil Verges, Town of Gilman Supervisor, to address the Prime Farmland part, they did not have any soil maps in front of them when they sat at the plan commission to approve this. His father and him, personally farmed this from 1977 to 2000 or 2001 when that farm was broken down to multiple lots. That's the last that that particular land that Mr. Faber has, has been farmed. To call it Prime Farmland, first of all he didn't know there was Prime Farmland in Gilman period, this was the lower portion of some very wet farmland. He was kind of shocked as he looked at the soil classifications. He doesn't know if the classification doesn't count the 8 feet of red clay that's underneath the silt loam. The 8 inches of silt loam or what but he finds it very hard to qualify or categorize that as Prime Farmland. Even if it was Prime Farmland, it hasn't been farmed for 15 years or more and it's growing up into Box Elders and Prickly Ash. To have this portion developed, he thinks would be a plus for the township, the community as well. He is disputing the soil maps a little bit and again it hasn't been farmed in 15 years or more. They would have to clear that land again from the shrubs, brush and trees that are growing up. For someone to farm an acre and a half or two acres or so of land there is unrealistic. Holst asked Dr. Sanden if he would want to explain by the soil how they came to the conclusion that it's Prime Farmland. Sanden stated it's all based on soil type. Holst, yeah but the depth of the soil, see that was a question he asked that didn't take into

consideration the 8 ft of clay underneath it. Sanden stated that's true if the soil cap has been degraded or eroded, what was once prime soil may become nonprime. Holst asked but the depth of the prime soil, what numbers do they use? Sanden stated he doesn't have that information and it's on a soil type by soil type basis. Holst stated he believes they don't take into consideration the soil under the topsoil, they go to a certain depth and that's it. He does agree with Mr. Verges on the question of any Prime Farmland in Gilman. **Chairperson Fetzer Closed the public hearing.** Chairperson Fetzer said he thinks the concern we have with setting a precedence is if this gets approved here, anyone coming in and saying we want to switch things over from the General Rural to General Rural Flexible and increasing the densities. With this happening in one place is the next person coming and saying they want to do that too. Pichotta stated there are two things; one is in our comp plan we state that the appropriateness of a given rezone is based on consistency with a town's comprehensive plan. From staff's perspective, he still doesn't see how this preserves ag land exactly. He thinks there are other goals, objectives and policies in your town plan that could have been cited that wouldn't have this question. The soil data is the soil data. What he doesn't really want to do is show up in front of the County Board and try and explain how what looks to be a good piece of ground on paper, how a rezone that increases the density on it would somehow preserve ag land. The second concern from a precedential standpoint, your discussion about judging a rezone requests on its individual merits, that's how we judge conditional use permits based on the proposed use at the proposed location. There is some variability depending on the surroundings, etc. But for a rezone in order to not be considered a spot zone, any similarly situated property would need to be able to expect the same treatment. Given this property on paper looks like it's great ag land, whether it is or isn't, the fact that you are doubling the density, would make it very difficult for you guys in the future if someone came in and you didn't want to support it. This would probably give them grounds to appeal your decision. You have to treat everybody who is similarly situated the same way. He has absolutely no issue with the town supporting rezones, he just wants to make sure the rationale is sound and easily defensible and is something that when he presents it to the County Board, makes sense. Sanden asked if the fact that they mentioned the location, intersections of two major roads, does that give them any cover in the future if someone says they want to be treated the same way. They could say you are not equally situated. Is that enough, do you think? Pichotta stated Goal #1 which is encourage and support a variety of affordable housing choices in the Town of Gilman, that goal actually supports this better. He chatted with the folks from the town and they didn't want to amend anything without bringing it back to the committee, which he totally understands. Sanden asked could they use the rationale that by rezoning this piece that is along the major highways is an increase in density there along a heavily used thoroughfare - is that protecting prime ag land elsewhere that may be more contiguous and currently in use by absorbing some of that growth pressure in these locations? Pichotta stated that he asked that same question and was told that is not what they were saying. Holst stated from an outsider looking in, when you see the housing density along that road, he would strongly suggest to you that you come back with a rezone proposal for all of that. You have seven residences on that 40 already. Mr. Faber stated there are two on that 40. Holst stated you must have a section that you have seven on then. Mr. Faber stated right now with the way it is zoned currently there isn't anybody on that 40 acres that owns enough to build another house. Holst stated that is why he would rezone it. When you look at the ag production capacity of the land in Gilman Township, he believes you are zoning either for General Rural or Primary Agriculture is a stretch. How that was developed, now you've come to realize we are close to the interstate and our township is going to grow. Maybe it's time to take a little different look. When you developed your plan, it was intended to be modified every few years. Maybe now is the time to take a more global look at your plan and change the way you are doing business. He would suggest that it goes back and you guys come up with a plan. We aren't opposed to helping you achieve your goal, we actually would like to help you achieve your goal but we want to do it when we come to town we've got 17 people here and a lot of them live in the city and they don't look at anything other than the soil map. We do get grouched quite heavily from time to time. You haven't been before us, that he can remember, and this is a new learning experience. We have to help you learn in order for this to work. We have other townships that have come here quite often and actually some were quite belligerent to start with but once we explain and get it started, your plan can be very, very helpful to you. Pichotta stated years ago, you were entirely Primary Agriculture. There was a rezone process, a comprehensive rezone where you guys brought in the General Rural District. You could do

something similar if you wanted to bring in the General Rural Flexible. You could put it in along intersections or along those state roads or trunk highways. Or you could consider doing all the General Rural to General Rural Flexible. The reality is there is kind of a line in the county where there is General Rural; Spring Lake, you guys have General Rural, Salem does and that's the line. Everybody to the west of that has General Rural Flexible or General Rural Flexible 8. It wouldn't be surprising if the General Rural Flexible crept further east. If that is what you want to do, that's just fine but we have to kind of set the stage for that to happen and as far as this gentleman, if the committee is comfortable with your rationale I guess we would move it forward. If they are not comfortable with your rationale, what we would do is bump it back to the town and what he would suggest is using a goal like Goal #1. As soon as you react to it, we can get it back on an agenda here. It all depends on what the committee wants to do. Aubart asked what kind of timeframe would that be if the township were to do that? Pichotta stated he doesn't know if it would go to the full board or the planning commission and the board, as soon as they get it out of the town level, we would get it on our next agenda. We meet the 1st and 3rd Wednesday of each month. This gentleman would have to wait a little longer to get his rezone done but he would be much more comfortable presenting a different rationale to the County Board. This looks on paper perhaps a lot different than it does on the ground. Sanden stated he hates to complicate this, just so he is clear, when you are saying go back and take another look at it, are you proposing they go back and initiate a new rezone for the entire township or could they through their comprehensive plan and update that and identify growth corridors where along here we could justify rezoning it when the time comes. Pichotta stated that there are actually a couple different issues, this gentleman needs to be dealt with sooner than later, so he would encourage you to act on his request now - even if you are going to look at doing something comprehensive. You could simply amend your comprehensive plan to say we will support higher density rezones in this specific area. Then when requests come, you have the language to support them. Or you could amend your plan and initiate a comprehensive revision and rezone a bunch of land. It would be all depending on how the town wants to do it. If you need help with this, he would certainly be happy to do so. He was very involved the last time your town did a comprehensive revision and he would be happy to do so again. Mr. Verges stated one of their justifications is page 11, #6 which is kind of that housing corridor that you were talking about. Maybe it's not worded quite as strongly as you were mentioning. Number 6 on page 11, encourage housing developments to be located along Hwy 29 and on trunk roads near Hwy 63. There again, do you need more specific language? Mr. Manly stated he wants to be clear also, you would recommend either spelling it out clearly in our comprehensive plan where we wish for higher density development to occur and then identify those roads and places in the township, or to just simply go ahead and rezone those places preemptively. Pichotta stated you would need to base any request for a rezone on your comp plan. He suggested that, from his perspective, some of this language, including the policy you cited is kind of a strange to have under Support subdivision practices that maintain the town's agricultural and natural resources. It seems like it would be a more appropriate policy under Goal #1. It doesn't necessarily correlate directly to the preservation of ag. But it does lend itself to the providing of choices. Mr. Manley stated that we want to encourage smart development but we don't want densities that are not consistent with what our township is. Mr. Verges asked another question of Andy, you mentioned Goal #1 on page 10, if we had cited that as a part of our justification that would perhaps be enough in this case. He is trying to think of how they can do this in a timely enough manner to help Mr. Faber, because to amend the comprehensive plan they have a 30 day public hearing. Pichotta stated he doesn't think they need to amend their plan to support Mr. Faber's rezone. Lund suggested that it may be good to remove the statement regarding avoiding Prime Farmland in their rationale, just to remove that. Pichotta and Chairperson Fetzer both stated right. Pichotta stated he thinks the rationale that Dr. Sanden suggested, you could make the argument you are preserving ag land by allowing density in an appropriate spot so it doesn't pop up or want to pop up in active ag. That's legitimate but when we talked about it you said that wasn't what you were saying. Mr. Verges stated probably not in this unique circumstance it was because it was not active farmland anyway. Aubart stated this is very frustrating to him because Mr. Faber is caught in a spot he doesn't need to be caught in. He thinks that we can move this forward. They have stated here publicly, on the record, that the Town is in support, I know it's not in the written justification but it is still part of the record. We could support Mr. Faber and the rezone and Town of Gilman can move forward to fix the problem which would take care of the

precedent. That would be a commitment that the Town of Gilman would have to make to fix the problem that wouldn't put us in this situation again.

Aubart moved to approve the rezone from General Rural to General Rural Flexible for Jerrod and Danette Faber and forward a recommendation to the County Board of Supervisors/Snow seconded. Holst asked if the motion intends that the town drop some of their reasoning and just go with what they talked about here today, Goal #1. Aubart stated yes. Chairperson Fetzer asked Andy if that is passable with him. Lund asked if we could request something in writing from the town. Pichotta stated I think we are depending on the oral record here versus what they submitted. Basically they augmented their recommendation. Holst stated but we have gotten caught with our pants down where one member of the town board says something and the town board comes back and says something different. We have a policy in place where it has to be in writing from the clerk. Mr. Faber asked if there is something if we take a little more time, it's my time that we are taking up, if we take a little more time and we get something back from them in writing is that better to approve and go forward with. Pichotta stated from his perspective, yes. Mr. Snow asked if he had the time. Mr. Faber stated he would rather take the time now and make sure that we move forward in the proper manner. Aubart stated he appreciates that. Chairperson Fetzer stated he very much appreciates Mr. Faber's input on that. We have a motion on the table. Aubart stated he is fine with that. Mr. Faber stated he very much appreciates that. Mr. Verges said for the plan commission there wouldn't be time to get things lined up for the March meeting so we would be looking at board approval the second Wednesday of April. Lund asked if it has to go back to the planning commission? Pichotta stated it would be up to the town board, it wouldn't have to. It all depends on how the town board wants to run their town. Mr. Verges stated they could possibly get it done in the March meeting. It might be pushing things a little bit. The way he is understanding it, if they just switch their justification to Goal #1 on page 10 and take off protecting prime farmland part, we are probably good to go for this case. We could probably squeeze that in and get that approved in the March meeting. He would be back here in early April, he is assuming. Pichotta stated if you get it done in March we could get you on the April 5th meeting. Holst stated April and May it would be voted on in the May meeting at the County Board. He noted that his statement was not a reflection upon the Town of Gilman at all, but about getting the recommendation in writing. We adopted that policy because we got burned and he would hate to deviate from that then other townships will come in and say you did it for Gilman why didn't you do it for us. He thinks we need some consistency at this level. Mr. Verges stated we have been burned in Gilman on situations too and it changes our policies so he understands exactly what you are saying. **Aubart withdrew his motion. Holst moved to send the rezone for Mr. Faber back to the Town of Gilman for clarification/Aubart seconded.** Chairperson Fetzer thanked everyone for their willingness to work with us. **All in favor. Motion passed.** Chairperson Fetzer stated we will see you back here soon and at that time it will not be a public hearing, it will be a quick Discuss/take action.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Candy Anderson forward:

Staff Report – Brad Roy: The operation was originally permitted for nonmetallic mining in 2001 and is currently the storage site for dredge materials taken from Corps Island on the Mississippi River near Diamond Bluff. There is no longer active deposition of dredged materials taking place at the site. The dredge material was originally used for "interim reclamation" and is now being utilized by the operator for other projects as needed. This site is internally drained. The floor of the pit is at 690 feet above mean sea level. Surface water is directed to the northwest, near the pit entrance. Permitted hours of operation are 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season. The haul route for commercial trucks travels from the pit entrance on County Road K to Hwy 35 towards the Monarch Paving Asphalt Plant. The haul road was paved to address airborne dust concerns. A groundwater response plan was prepared and presented to the LMC on May 19, 2010 and approved. Groundwater and surface water monitoring was completed at the site and at nearby residential wells in 2012. The county has received no complaints about this operation since the

last renewal. The Chairman of the Town of Trenton was reached for comment regarding this operation; he saw no issues with the renewal of this conditional use permit. The existing conditions are listed #1 - #12 in the staff report.

Staff Recommendations: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no other additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. Hours of operation are from 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season.
3. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35.
4. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
5. A 50ft setback shall be maintained from all property lines for all mining activities.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
8. Reclamation shall be according to submitted plans.
9. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
10. The approved Groundwater Response Plan shall be adhered to.
11. This CUP shall be reviewed for renewal in two years.
12. Any future use of this site for hydraulic dredge material placement shall not be allowed until such time as information is presented that demonstrates, to the satisfaction of the LM C, that the impacts of said placement will not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area.

Holst moved to approve the renewal of the conditional use permit for Monarch Paving with conditions #1 - #12/Snow seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a Map Amendment (Rezone) in the Town of Trenton, 5.5 acres for the Town of Trenton, former Barb's Dam Property they are seeking to rezone it from Rural Residential 20 to General Rural to enable them to create a campground.

Request for renewal of a conditional use permit for a Utility Facility (Loadout Facility) for Bill Holst in the Town of Trenton.

Motion to adjourn at 6:45 pm by Aubart/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 1, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 15 th , April 5 th & 19 th , all in 2017.	Chair
3	Approve minutes of the February 15, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a Map Amendment (Rezone) from General Rural to General Rural Flexible, for Jerrod & Danette Faber, owners on property located in the NW ¼ of the NW ¼ of Section 10, T27N, R16W, Town of Gilman, Pierce County, WI.	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(2/17/17)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, February 15, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 1st & 15th, April 5th & 19th, all in 2017.

Approve Minutes: **Sanden moved to approve the January 18, 2017 Land Management Committee minutes/Snow seconded. All in favor. Passed.**

Chairperson Fetzer asked everyone to shut off or silence their cellphones. As we get into this public hearing, we have a lot of people who want to talk tonight, he would like people to limit their comments and if you have a common view of someone that has already talked, just say you echo that comment. We will go with a three minute time limit so be succinct with your comments.

Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for a Trap Shooting Range in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-39E, by Prescott Sportsmans Club Inc, owner on property located in the SE ¼ of the NW ¼ of Section 6, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Eric Penk and Chris Patraw forward: Mr. Patraw explained he is one of the members and the head coach of the Prescott High School and Middle School Trap Shooting Team. The range is being developed primarily for the High School and Middle School Trap Team. Last year they had 20 kids, this year they have 65 shooting. The range is going to include three trap houses, three stations on the northern part of the land. The time they will be shooting for the High School/Middle School is from March to June on Mondays, Tuesdays and Thursdays from 3:30pm to sunset. The sportsman's club shoots March to June on weekends from 10:00am – 4:00pm and July through September they shoot weekends, same time plus Tuesdays and Thursdays, 3:30pm to sunset. The range would be closed October, November, December, January & February. The range is strictly a trap shooting range, there is no other shooting allowed on the range. There will be a driveway coming in that will be locked. When there is no shooting going on. There will be fences blocking off the shooting areas. The trap houses will also be locked and only opened by a Range Safety Officer. There will be a Range Safety Officer on site for all shooting that occurs at the range or there can be no shooting occurring at the range. All the recommendations that were brought up in the letter, the sportsman's club agree with. We have no issue with any of the recommendations that were brought up. He passed out a map to the committee for the fall area for the lead. Basically what it shows is the swale of the land. They will make it a flat area where the lead goes and berm it up on the other side where the wash way comes down through to hold the water in place so none of the lead would move off the site. Another issue that was brought up from the Town is the entrance to the range would come off of 1170th St, not off of 620th Ave because that was a blind entrance and unsafe to enter from. That would be the entrance off of Hwy 29 and Hwy 10. A couple things that were brought up in the letter that they want to review: there are other ranges in Pierce County and St. Croix County. All the ranges, outside of Prescott, have houses especially the Hudson range has houses that adjoin the property. They are right next to the shooting range. In a quarter mile, all the other ranges Ellsworth, Elmwood and River Falls have newer houses

that were built after the range was there. One other point brought up was lead; their range will be built through the EPA Standards. They are required. He introduced Jeff Nass, for reviewing some of the lead issues brought up by the County. Mr. Nass explained the EPA came up with this because there were issues in the past where they were shooting directly into swamps and into water. In Wisconsin there were trap ranges that had trap houses directly on the river banks. There is one in Peshtigo that they discontinued that they actually did all their shooting, all the birds and all the lead landed in the river. The EPA designed this to help ranges upgrade. This is a very unique situation because it's totally new, it's farmland and can be excavated exactly what will work the best not only for the club but for the environment. It will be easily recyclable. All the materials there, it will be landscaped in such a way to facilitate that recycling along with not allowing any runoff much less not shooting into water bodies to start with. The reason he is involved is to give advice on doing things the proper way and following the EPA guidelines on doing that. Again the book helps a lot of clubs. There is a lot of existing clubs that slowly are upgrading to these standards. This range will start out following all them right from the very beginning. It's a very unique property in that case because it will be set the right way from the get-go. Mr. Patraw stated they wanted to make sure they presented the facts about the range and what they are doing. Prescott started a trap team last year. All the neighboring towns in Pierce County and St Croix County have trap teams. The trap teams have boys and girls shoot together on the teams. There is no girls teams, boys teams, it's a lettering sport recognized in Prescott. In the spring they had girls letter last year in the sport. They opened it up to the middle school in Prescott just like Hudson, River Falls, New Richmond. Their middle schools also shoot. It's one of those sports where kids can letter in high school and don't have to be athletic, big, strong, fast. Everyone can shoot. Girls shoot the same. All the schools shoot equally. There are no divisions in trap shooting. We shoot against Hudson and outside of our conference if we are playing any other sport. It's a lot of responsibility to give to the kids, having to use a gun. It's the fastest growing sport in the country. Trap shooting is a high school sport. It's the safest sport in high school. The big thing is right now we shoot at the Hudson Range which is 24 miles from the high school. It would definitely be nicer to shoot two miles from the school.

Staff Report – Brad Roy: The applicant is proposing to establish a trap shooting range. The range will include three trap houses with shooting stations and storage shed. The main users of the site will be the Prescott High School and Middle School Trap Teams. The Prescott Sportsmans Club will also have open trap shooting and leagues that will be open to the public at the site. The property is located in Section 6 in Oak Grove. It is zoned General Rural Flexible 8. Access to the site is off of 620th Ave.

Chapter 240-15, Purpose and Intent of Zoning Districts are included in the staff report.

The definition of "Private Outdoor Recreation" is: Land uses which offer recreation activities primarily outdoors, including such uses as private parks, sportsmen's clubs, golf courses and ski hills and which are operated for members or on a commercial basis for members of the public and may include multiple related uses managed as one operation.

The site is currently characterized by agriculture and woodlands. The surrounding land uses are agriculture, low-density residential and undeveloped land. The City of Prescott compost site is located on the neighboring property to the west. A nonmetallic mine is located to the north. The applicants are proposing to construct three trap houses on the east side of the property, 180' from the east property line. There will be 100 feet between the trap houses. Shots will be directed west over the range area. The range area extends 300 yards west of the trap houses and 320 feet north and south. The two end trap houses will be 30 feet from the north and south edges of the range area. A driveway will be constructed, using an existing farm access. The driveway will be approximately 220 feet from the east property line and extend approximately 380 feet north to a parking area. The driveway will have a locked gate. The parking area will be approximately 210 feet from the east property line. Dimensions and capacity of the parking area was not provided, but the site allows for abundant options. A fence with signs stating "Shooting Area" will be installed along the north and west property lines. Portable toilets will be placed onsite and serviced weekly. Ammunition used will be shotgun rounds of 7.5, 8 and 9 shot. This will be monitored by every member, Range Safety Officer and user. Trap field shot fall zone is generally 375 feet to 450 feet with the maximum range of approximately 670 feet from the proposed firing line. The west property line will be approximately 1100 feet from the proposed firing line. The range will be built following EPA guidelines. The shot fall area will be kept to a minimum area allowing for easier maintenance. The fall

zone will be contoured and seeded with yard grass to slow runoff. The trap houses will be locked when the site is closed. The Prescott High School and Middle School trap teams seasons run from March to June. Shooting takes place on Mondays, Tuesdays and Thursdays after school from 3:30pm to sunset. The Prescott Sportsmans Club will have open trap shooting and leagues that will be open to the public and will operate separately from the school shoots. The hours are proposed as Tuesdays and Thursdays from 3:30pm until sunset, July to October 1, as well as on weekends from 10:00am to 4:00pm from February 15 until October 1. The range will be closed to all trap shooting from October 1 until February 15. EPA guidelines suggest that lead be recycled after 250,000 to 1,000,000 targets shot. Due to the economic value, the applicant expects to recycle at a lower range, if not before, minimum targets are shot. The applicant will work with a private company to collect and recycle the shot lead. Members will have keys to the gate at the driveway. The Range Safety Officer will have keys to open the trap houses. One Range Safety Officer will be present at all times when the range is open. The site has moderate slopes. The total elevation change from the south of the property to the north is approximately 90 feet. The highest point is near the road access and the lowest by the west half of the north property line. There are no mapped wetlands or wetland soil indicators on the site. Two waterways run through the range area. There is no navigable water on the site, but an intermittent stream runs through the northern portion of the property. The intermittent stream carries enough water that the floodplain also extends onto the property. The east half of the range area has slopes that span 3%-5% towards the intermittent stream. Pierce County Land Conservation Department provided drainage calculations for the site. The waterways on the site have a drainage area of approximately 27.5 acres. The watershed slope is 7%. Based on the model in the USDA-NRCS Engineering field manual, a 10 year rain event would create a peak discharge of 59.1 cubic feet per second from the site. Lead is generally stable in the environment, but can become soluble in water under certain conditions. Once soluble, lead becomes mobile and can be transported vertically through the soil column. Soil type, soil pH and rainfall rates affect the potential for lead migration at a given site. Lead becomes soluble when soil pH is <6.5 and >8.5. Highly permeable soil (sands, sandy loams) provide quick avenues for soluble lead to migrate down the soil column towards groundwater. Permeable soils with high or low pH would have an increased potential for lead migration. Lead has a strong tendency to bind to clay particles and organic matter in soil. Therefore, heavy soils (clays and clay loams) with neutral pH tend to decrease the potential for vertical lead migration by preventing lead from becoming soluble and hindering mobility. The site is composed of two main soil series – Kasson Silt Loam and Vlasaty Silt Loam. These soils generally have a clay content of 20% to 28% and a sand content of 25% to 45%. Both are categorized as “moderately well drained.” pH data is not available, but the applicants have indicated that they have tested the site and the results showed pH7. The more rainfall, the greater the likelihood the soil will become saturated, increasing the potential for lead corrosion. Acidic rain can accelerate the corrosion process. The risk of lead migration to groundwater becomes greater when the corrosion rate is high and depth to groundwater is shallow. The applicants are proposing to construct two berms extending east-west, actually the new drawing we received tonight is different from the original submittal. In general any berm placed would have the potential to hold water on site which could create additional concerns. We, as staff, would still request additional information regarding the placement and design of any berms, whether there is a liner or not a liner. The groundwater is mapped at approximately 780 feet on the site, approximately 100 feet below the surface. EPA recommends four steps for an environmentally protective outdoor range and Best Management Practices (BMPs):

1. Control and contain lead bullets and bullet fragments. Applicable BMP for the proposed site is to reduce the shot fall zone. Concentrating the lead shot in a smaller area by modifying the shooting direction facilities lead management by providing a smaller and more dense area of lead to both manage in-place and reclaim.
2. Prevent migration of lead to the subsurface and surrounding surface water bodies. BMPs include:
 - » Monitoring and adjusting soil pH. It is recommended to monitor soil pH annually. Lime spreading can be done to adjust pH, if needed.
 - » Immobilizing lead. Phosphate spreading can be done to bind the lead particles to limit vertical transport to groundwater.

- » Controlling runoff. Planting vegetative ground cover will minimize the amount of lead that will runoff during heavy rainfall. It will also absorb rainwater which reduces the amount of water that is in contact with the lead. Also, the ground cover will divert and slow down surface water runoff. Mulches and composts can also be used but may impact the pH of the soil. Ground contouring can also be used to reduce the velocity of the runoff. Engineered controls of filter beds, containment traps, dams and dikes can also be installed.
- 3. Remove the lead from the range and recycle. Periodic lead removal activities should be planned for and conducted. Frequency of removal is dependent on number of rounds fired, soil pH, precipitation, soil type and depth to groundwater.
- 4. Documenting activities and keeping records. Owners/operator should document all activities done at the range with respect to BMPs and recycling of lead. Records should be kept on when services were provided and who provided them.

The EPA states that the most important site selection criteria to consider when selecting a new range include: topography, surface water flow patterns and depth to groundwater. If possible, ranges should be developed on flat terrain, as it facilitates reclamation and reduces the chance of off-site migration due to surface water runoff as compared with highly sloped terrain. Staff has significant concerns about the ability to contain lead on this site due to the terrain and volume of stormwater runoff. The presence of an intermittent stream on the site provides an opportunity for any uncontained lead to travel offsite and create serious environmental issues for properties in the area. Staff has received numerous concerns from area residents regarding this proposal. The concerns include the following topics:

- » Traffic. The applicants' website, <http://www.prescottsportsmansclub.com/>, states that the club has 35 members. The application states that there are 65 total students on the teams. No information was provided about expected daily member usage or student transportation. The applicants should provide additional information regarding traffic.
- » Noise. No information was provided about expected daily member usage or student usage in regard to the number of shots expected to be fired.
- » Lead. Lead was discussed previously.
- » Potential expansion. The applicants' website states that the club is looking to acquire land for a learning and activities center. This application is only for the trap shooting range, three trap houses, parking lot and shed.
- » Limits on the ability to regulate. Wisconsin statutes provide limits on the ability to regulate a shooting range.
- » Property values. Many of the nearby property owners are concerned about impacts to their property values if the proposal is approved. Multiple articles are available on line about a potential decrease in property values when in proximity to certain uses. However, as we have found with many other proposed uses, definitive determinations regarding impacts to property values are difficult to make.

Wisconsin Statutes impose certain limitations and restrictions on the regulation of "Sport Shooting Range Activities" (§895.527) and "Local Regulation of Weapons" (§66.1409).

Restrictions imposed include:

- "A person who owns or operates a sport shooting range is not subject to an action for nuisance or to state or local zoning conditions related to noise."
- "A city, village, town or county may regulate the hours between 11:00pm and 6:00am that an outdoor sport shooting range may operate, except that such a regulation may not apply to a law enforcement office...."
- "An owner or operator of a sport shooting range... and any user of a sport shooting range is immune from civil liability in any action commenced by the state or its political subdivisions, or by a special purpose district, related to the use, release, placement, deposition or accumulation of any projectiles on or under the sport shooting range or other contiguous real property over which the owner or operator of a sport shooting range has an easement, leasehold or other legal right to use."

Statutory restrictions appear to impact the LMC's ability to place certain conditions on this conditionally permitted use. The Town of Oak Grove recommended denial of this request on November 21, 2016. The Town Recommendation is attached. The recommendation is primarily based on the Oak Grove Comprehensive Plan, Chapter 9 – All Conditional Uses:

Goal 1, "To carry out the Town vision and planning goals stated in this Comprehensive Plan when considering all conditional use permit applications."

Objective 1, "Ensure decision making is consistent with the Town's Comprehensive Plan."

Policy 1, "Consider recommending approval of conditional use permits only when the proposed conditional uses will not conflict with or negatively impact the use and enjoyment of nearby or surrounding properties and land uses; will not negatively impact property values; will not harm the public health and safety; and will be consistent with the Town vision, planning goals and goals, objectives, policies programs and actions in this Plan."

The Town, in their recommendation, states that the proposed use "would result in a noise nuisance of a level that would negatively impact the use and enjoyment of nearby properties to an extent that is not acceptable. The sound of repetitive gun shots would take away the way of life for nearby property owners and because of the nature of gunshots, it would affect those beyond those with adjacent lots."

It is also noted that "While trap shooting would naturally be recognized as a rural activity, in this particular location it is not compatible with surrounding rural uses (such as large herds of cattle that could be affected by the sounds and residents who are accustomed to being able to enjoy their property peacefully)."

Additionally, the Town identifies policy language regarding the need to protect the Town's surface and subsurface water quality and notes that these are of concern due to the quantity of lead generated by a trap shooting range. Also noted is language regarding the need to protect property values.

Pierce County has, through its adopted comprehensive plan, acknowledged that the responsibility for accomplishing planning objectives set forth in comprehensive plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The County further establishes "that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses." The County's plan states that "***the county will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the public interest for decisions relating to that governmental unit or municipality.***" (Pierce County Comprehensive Plan page 13)

Staff has reviewed the Town of Oak Grove's amended Comprehensive Plan and is of the position that the language contained in their plan supports their recommendation and that the LMC should view consistency with the cited policy to be akin to the public interest.

Staff Recommendations: Staff recommends the LMC determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area.

Staff suggests that particular attention should be paid to public health risks and issues with consistency to the Public Interest as it relates to the Town of Oak Grove.

If found to be not contrary to the above and additional information is not necessary to make a determination, staff recommends the following conditions be placed on any approval of this request:

1. Activities and structures shall be limited to those presented in the application, unless altered by another condition of this permit.
2. A Range Safety Officer shall be present at all times when shooting is to occur.
3. Additional information regarding the vegetative planting of the range area, size and layout of any potential berms, potential ponding onsite, potential pond liners and lead containment measures shall be submitted to the Land Management Department for review and approval prior to any use.
4. Allowable hours of operation shall be 6:00am to 11:00pm as established by State Statutes.
5. pH Testing shall be completed twice each year with the results and any remedial actions intended to adjust the pH provided to the Land Management Department.
6. Records shall be kept detailing all activities done at the range with respect to BMPs and recycling of lead. Records should be kept on when services were provided and who provided them.

7. Applicants shall obtain a driveway permit and Uniform Address Number.
8. Plans for a parking area shall be submitted to Land Management Department staff for review and approval.

Chairperson Fetzer stated before he opens this up to public comment, he would like a three minute limit on time for talking into the microphone. Please no repetitive statements, state your name and whether you are for or against the issue and if your position was already stated as far as you feel. Please use the podium, state your name and where you are from for the record.

Chairperson Fetzer opened the hearing to the public. Bruce King, Oak Grove Township, two miles from school for some of you but in my neighborhood for me, it might be beneficial to some of you but it's not to those who live in that area. We live there, pay taxes and wish to maintain our quality of life and the resale value of our homes. He doesn't care if it's kids or Prescott Nursing Home, the issue isn't who is going to do it but what will be done. What will be done is noise pollution and we would just as soon not have it in our neighborhood. Fifty rounds, twenty-five students, that is 1,250 rounds. That might be more than that depending on how many kids are out there at times, weekends included. And the club is growing. You need a different place. I hope you can find one but not in Oak Grove. Tom Nelson, lives in Oak Grove Township and he is opposed to it. He read a statement: The Township of Oak Grove has unanimously spoken declaring this shooting range inappropriate for the people of the town and in effect declaring it as a nuisance that will decrease the enjoyment of our property rights and reduce property values. There are no overriding County concerns that would justify approval. This is essentially the request of hobbyists whether students or clubs to impose the ill effects of their hobbies on nearby land owners regardless of how it may destroy property values, impair livelihoods and blast away the quiet enjoyment of rural life. You are asking all of us to take the risks that what they claim about noise or about property values is true. If it isn't true, and you grant this approval, we will suffer, not them. It is not appropriate to place that burden of proof on us. It is not our risk that what we believe to be the case will happen which is that property values will plummet and good people here will not be able to enjoy their property. As a result, should the County vote to approve the proposed shooting range, two consequences necessarily follow: first by excluding preexisting gun ranges from nuisance suits, our legislature has created a presumption that they are nuisances. The township concurs and nearby property owners now before you vehemently agree. Approval of this nuisance would constitute a taking of adjacent property rights without just compensation which is prohibited by the Fifth Amendment of the Constitution. If this proposal is approved, the County must institute proceedings to ensure affected owners are properly compensated. Second because the approval of this proposed nuisance will result in the immediate reduction of nearby property values, it is incumbent on the County to immediately conduct a study to determine how much to reduce property valuation and to have the tax assessor immediately act upon the study to reduce the taxes on affected properties. In either case, if the County does not reduce taxes or compensate owners whose property is being unlawfully taken. The courts may be called in to ensure our rights are protected with all the expense and administrative hassle that entails. Tricia Huber, lives in Oak Grove Township, right on Hwy 10, about a mile as the crow flies, where this is going to take place. We have worked really hard in the last 30 years to build their home and enjoy the country. There is wildlife coming into their backyard. They love to sit outside and enjoy it. If this is what they are going to have to listen to on weekends and at night, it's just not fair to those that own their property and chose to live out in the country because of this. I hope you will take that into consideration for all the people that live in that area. Darold Oswald, lives in Newport, MN, they have a gun range across the river from me, been there forever, South St Paul, everybody's heard of it. Everybody's used it. It's been there a long time. He began pounding on the desk to demonstrate what he hears in his home from the range. He cannot sit out on his deck and enjoy his family, anybody. His neighbors, he yells at them, that is what he hears. Every single day of the week by 3:00pm. All the people that live in this area are going to hear this, all day long and it's going to be ten times as bad because there is going to be 15 or 20 people at a time. This is voted down by the locals already, what it is doing here is beyond him. Krista Claude, Oak Grove Township, she was given a statement by Amy Jo Most, she would like to read it, she is out of town and couldn't be here. She lives just across Hwy 29 so she is in Trimble. My name is Amy Jo Most and I'm a Pierce County resident. I'm writing to provide information to the Land Management Committee regarding the impact the proposed shooting range would have on my current

Home Based Business, Pampered Pets. My home and business is located at W11980 State Rd 29, which is approximately one-quarter mile northwest from the proposed shooting range location. I have lived here for twenty years and have also owned and solely operated a Home Based Business called Pampered Pets. This was initially a part-time business that offered dog grooming both at my home and at my customer's homes. In July 2016, I decided to dedicate myself to the business full-time and Pampered Pets is now my household's sole source of income. To make Pampered Pets work as a full-time business with sustainable profit margins, I invested \$8,000.00 into my business in 2006 and also switched to offering only onsite grooming at her home for new customers as that is more profitable. The percent of customers that bring their pets to my home for grooming is currently at 40% and continues to rise. I work five days a week for eight to ten hours a day grooming twenty-five to thirty dogs a week. With this close proximity, the gunfire from the proposed shooting range would be clearly audible at her home and business. Most dogs are extremely sensitive to the noise of gunfire and the anxiety this causes would make it impossible to maintain grooming services in my home. This would cause my full-time business to fail as my business model requires that I increase these higher profit margin onsite services. I strongly encourage the Land Management Committee to deny the proposed conditional use permit. Not only would the proposed shooting range negatively impact the quality of life of local residents, it would also have significant and dire consequences for home based businesses. Dean Rogge, lives in Oak Grove, NRA life member, trap shooter but he prefers not to have a trap range in his backyard. He understands the situation with the kids and he contacted the president of the 3M Trap League who said there is a possibility that they could be fit in there. There is no guarantee on that but he thinks it's something they should check on. Tracy Claude, lives a quarter mile straight west of the proposed shooting range. He agrees that it is difficult to quantify how much this is going to depreciate our property values. To that affect, he set out to see if he could do that and could come up with some examples. What the Hudson Gun Range has done to some properties and he even found one in River Falls that just sold in January. He spoke to a realtor in Hudson that has been a realtor for twenty years. He's a resident for forty years and has sold multiple homes around the gun range. One thing he said is your homes will not appreciate in value anymore. When you put that in you will not increase the value of your homes. He found a home on 745 Summit Lane, which is a quarter mile from the Hudson Gun Range, it was built in 1991 for \$900,000.00, a big home, and it's been on and off the market now for five years, they are currently trying to get \$599,000.00. That's a 33% loss. It depreciated 33%. Hudson's not a great comparison to what we would have because it's urban, there are houses there, traffic all the time, there's noise that we don't have in the country. River Falls is a better example of what it would do to our properties. There is a property in River Falls that just closed. It is on 1126th Rifle Range Rd, right next to the rifle range. It was appraised for \$252,000.00 and the bank just sold it for \$172,000.00. It was on the market for sixty days. The purchaser was the River Falls Gun Club. Basically I think they realized no one else would want it. That was a 32% decrease in value from the appraisal. He had his home appraised and he said it would sell for \$575,000.00. If he gives us 32% of that he loses \$185,000.00. We have 60 acres and he was hoping to build five or six homes on that. Its floodplain, it's rolling hills, it's really quite nice for that. If he can't put in the ten lots that he could build in there, or even six or seven, I stand to lose close to half a million dollars just because kids want to shoot trap closer to home. We aren't stopping them. We just don't want them right there. It's hard to quantify, you go on the internet and its apples to oranges and every place is different. But he thinks those are two good examples of how it's affected property values. Trent Huber, Oak Grove Township, he and his family live very close to the proposed site. His wife and he have five children and well aware of the commitments that are undertaken when your child signs up for a sport or extracurricular activity. For us, driving 20, 30, 40 minutes for soccer, gymnastics, lacrosse was a very common weekly occurrence. You have school districts in the area that share sport teams; Elmwood/Plum City, Spring Valley/Elmwood share a wrestling team, Pepin/Alma. They are driving weekly to practices to other communities. It's just something that is understood as being a part of the responsibility of being out for that team or that sport. Since this process began, he has spoken to pretty much all of his neighbors, everyone in the area and almost everyone is opposed to this range. Almost everyone is included in the 250 approximately signatures that they have on the petition opposed to this range. There is concerns based on what will happen long term if this range is to go in. If they would look to expand it or if there were new legislation passed to further the protections for shooting ranges. There was a real concern for a lot of

his neighbors that the first they were hearing about the range was coming from that initial conversation that we had not from anyone doing proper due diligence before they actually purchased the land. Eric Penk, Prescott Sportsmans Club, resident of Prescott. He is hearing about everybody's rights, the board also has to realize our rights too. Property valuation, it was brought up about River Falls along the gun range. The reason that property didn't sell, it was full of mold, no one wanted to buy it. That's why the gun range bought it. The one in Hudson, he can't tell you much about that one, maybe no one can afford that big a house, \$900,000.00 house is a big house. He just wants to put out that they have the rights too with their property. Mary Bolin, resident of Oak Grove Township, she thinks it's good that they can have a trap team. It's been here and established without being in Oak Grove. The residents of Oak Grove who are here have opposed this and our township and planning commission have approved that they do not want this here. All the people that are here, there are a lot of people supporting the trap shoot thing but they are not residents of our township. They aren't going to be directly impacted. The people that are going to be directly impacted are here and they have asked you not to approve it and I would hope that you would not approve it. She does sell real estate and she has seen articles that do show that things like this do negatively affect the value. She doesn't have any exact numbers but she has seen a few. It will affect their property values. Gordy Dalman, Prescott/Clifton Township, a member of the sportsmans club. So he has attended a couple of the previous meetings on this issue and everything he heard at those meetings, all the opposition and including everything we've heard tonight is all noise related. He wants to point out that there are other things that create noise in our County. It doesn't seem like every time somebody builds something that makes noise that the citizens should have a right of objecting to that or getting in the way of that. As an example he had a corn dryer built a couple hundred yards from his house a few years ago. He would not have expected to have the right to say no to that or to have a vote in that and he didn't. Seems like we would be setting a precedent here tonight where noise related issues could become an issue that citizens could object to and get in the way of progress. Jon Anfinson, lives in Oak Grove, he is for the trap range. He doesn't recall you ever asking him or anyone else that lives in Oak Grove if they enjoy it. There are a number of people in the club that do live in Oak Grove and they are sitting here patiently listening. He appreciates everything everybody has to say but he would appreciate it if they didn't speak on his behalf. Michelle Huber and her front door is approximately one third of a mile from the proposed site. It doesn't take a rocket scientist to see and anyone who tries to fight the idea of this, try to say that this is a normal amount of noise, something that people could accept. They are not being honest. She hopes you see that. Her husband and her, as well as some of her neighbors, have gone door to door and she doesn't know where you live but she thought they had covered every property within one mile. They kept a map, went on the Pierce County website and kept a list and went door to door to what she thought was almost every property. There were a few that they weren't able to get to but they were able to collect 246 signatures. Some of those being family members, like her son who visits them from Austin, TX. You were given the names and see all the people who live in Oak Grove and signed the petition. She apologized that they didn't make it to their house. They would have welcomed any comments. She just wanted to say that for the record. She believes that they have a very large group out in the hallway to demonstrate that she thinks there are the majority in Oak Grove that are opposed to this. She would like to ask that the committee deny this conditional use permit. Her husband and her work very hard for the place that they live, and his family for several generations, she doesn't think she could live with this but she would fight this. We aren't going anywhere and they aren't giving up their home. They love where they live. They will continue to fight this. Aaron Marshall, Oak Grove resident and he supports the trap houses. No, he was never approached either by anybody nor asked any questions. Like Gordy said, he lives just 100 feet right off the highway and this property sits right between Hwy 29 and Hwy 10 and there is jake brakes, motorcycles, all day every day and all night long too. When he first moved in, he thought he would never be able to live there but within a month that noise is gone and it's just part of what your life is. So he supports the trap team. Dave Serres, he would like to speak for Hilton Fiedler who lives in Oak Grove Township. His property butts up against the gun range. Hilton Fiedler is the hardworking farmer. He's old school. He's tough as pig iron and he is getting to the point where he is getting ready to retire. With a gun range right up against his yard/his field, there will not be any peaceful nights sitting out into enjoy what he has worked his entire life for. He is one of the best people that he has had the honor to know. He will help anybody. But he is definitely against this and the affect it will have on his

quality of life and his livestock and his neighbors. On his behalf, he beseeches that this get denied. Mike Lubich, he is for the gun club, he thinks it's a great thing that someone is doing for the youth in this area. He grew up hunting. He still lives in Prescott. He was able, at that time to walk right out his back door and hunt. Now it's all developed and hunting has moved. All this property they are talking about, he grew up hunting in this area. They trap shot, his parents sponsored two trap teams, they did a lot of shooting growing up. But they got out of it because of the inconvenience of having to go to different areas. They started at 63; they originally shot at the Gaslight and they ended up moving to River Falls. So these people putting in the time and effort to make it localized for the community is a good thing. A lot of these complaints about noise, he understands. He's not sure he would want it in his backyard but being a hunter all his life and a trap shooter, he guessed he would OK it. He hunts in that area and noise is noise. He stated that he doesn't even hunt in certain areas out there anymore because of the traffic. There are buses, motorcycles, there is stuff going by but people get used to it. He often times talks to people in town with the trains going by, asking "how can you stand that?" They say they don't even hear it anymore. So you do get used to that stuff. As far as the other places and complaining about the noise; it depends on what they are shooting. He does a lot of shooting himself. He went out to a housing development this fall to sight in a rifle at his nephew's. Houses all around, they are shooting rifles, shotguns, pistols right in the middle of the development. He asked don't people ever complain? His nephew stated, no that's what we moved out into the country for so we had the right to shoot. We don't have to go to club or a range. He has also been to several stag parties where people go out in the backyard of the farm where you've got 10 – 15 guys shoot all day long. He asked doesn't anybody complain, don't you run the cattle off. The nephew stated, no, never heard a word. It's not every day but it happens. Back in the day you couldn't go to any gravel pit or anything without being littered with shotgun shells. Kids went to shoot wherever they could so it would be really nice to get things localized and controlled to eliminate a lot of that. As far as he knows, you can go out in your backyard and shoot whatever you want and it's not an issue. You drive around the country and there are targets set up all over. People are sighting in their rifles. Yes, this is an inconvenience to some sense but it's also not as bad as people are blowing it out to be. Crystal Zeverino, lives right across the street from the Huber's, not that far from the proposed shooting range. This first got a unanimous vote against it by the Planning Commission, then the Town Board, that's eleven people right now that were totally against it on top of not all the residents. We know the few that we did not go to because we knew that they were not in our favor so we chose not to go to certain neighbors. It's going to be a big noise thing and she doesn't want to hear anyone that says oh, you will get used to it because she lived in Newport her entire life up until three years ago. She married her husband a year ago and they wanted to make this farm, on top of, Dad's farm, Grandpa's farm, it's ours now. We wanted to be out in the country. She laughed at him when he said you are going to be from a city girl to a country girl. She thought no way, she's never going to get used to it, but she fell in love with it. Do you think she really wants to go back to a city life now? That's what's going to end up happening if this goes in. They are not going to have the quietness, the freedom, the eagles that fly over their place. Half of them are going to be dead because they feed off the birds. Anything that eats the lead is going to end up killing our eagles and don't say that little bit ain't going to hurt them because it only takes a little pencil tip to kill an eagle. On top of the noise, the negative impact on our property, there are traffic concerns for our children that sit out at a bus stop every day and get dropped off. We're on a bad corner and there is going to be no way of telling these high school kids or middle school kids you can't go down 620th. You have to go down to 1170th. There is no way kids are going to listen. We were all there at one time too. Nobody listens to their parents or higher authority. She grew up listening to this every day, even the trains, it got old, sickening, annoying every day. They eliminated all that in New Port. You can't blow your train horns, nothing down in New Port. The residents complained enough, they stopped that from happening. There is nothing they can do about the shooting range because it was there before most of those homes were there. We were here first. We should have a right to say that we do not want this. Debbie McClure, Town of Oak Grove, having sat on all of the meetings where we have had these conversations, and read through a large amount of material and talked to a lot of residents of Oak Grove, she can say for herself that the one main thing that she had to take into consideration when we talk about noise, first of all this is new noise, not a highway that people chose to buy their house next to. Also had to look at what the maximum amount of noise is, knowing the regulations and restrictions put on by the State of

Wisconsin, there was the need for us to look at the maximum number of students and the requirements that those students are shooting fifty rounds a piece each time they are out there. She thinks Crystal and her father mentioned it too, when we talk about 1,000+ rounds, we are not talking about in a day or on a Saturday, we're talking potentially per hour during the hours that they are open. Again that will be dependent on the number of students or public people that are out there shooting but conceivably 1,000+ rounds per hour during the times that this is open. Seeing that this is a new use, that does need to be held in a different light than if I were to purchase a house on a highway or near the railroad tracks that has been in existence for a very long time. Troy Cleasby, Oak Grove, a bunch of people are saying this isn't a suitable place, he just wants to point out there is formerly a dump on the west side of the property that is now a compost site. There is a gravel pit/mine on the north side, city land on the east side, City of Prescott has no qualms with this. And there is vacant land/farming land across the road. There were comparisons to the St Paul Gun Range and how you were going to be hearing this pounding noise all day long, every day, starting at 7:00am. We're pretty clear what our hours will be and it's nothing comparable to that. We're talking about three trap houses. I question whether you know how many trap houses South St Paul has and the volume of shooting that they have. It would be considerably more than what we are proposing. Someone mentioned the 3M Range, we did check with the 3M Range and they did not have room for us. As far as noise levels, we did take decibel level measurements of noise and at the various people that live in the region/vicinity that have been complaining about it. He believes the highest reading was at Jerry Kosin's who hasn't spoken yet tonight. His was in the 80 range and 45 at Jerry's. The highest they took was 65. He is talking at about a level of 60 is normal conversation. Highway traffic noise was also at a normal conversation level. The petition, 246 signatures, he encourages the committee to really look at that. He knows for a fact there are duplicates on there, people from California, Minnesota, all other states that have no bearing on this. 1,000 rounds per hour, that's not accurate, that would maybe per night, 1,000 to 1200, maybe 1500 across the whole night of shooting not per hour. Those are the main points that he wanted to make. Sherri Ptacek, Prescott, She is here today to voice her opinion because it means a lot to her and her daughter. Her daughter was introduced to guns by Ms Ptacek's husband who is now her hunting buddy. She doesn't participate in sports at school. She has tried but just doesn't have the athletic ability to feel comfortable with the other kids. Her daughter does, however, enjoy hunting. Right now they have the trap shooting team that is available but they need to travel 35 – 45 minutes away. That's a lot to ask parents who are working to try and get off in time to get their kids there for something that is important to them. What she is asking today is that you take into consideration how important trap shooting is, helping to teach these kids that would be receiving this and any other sport, or activity that they can do. Please let them have the ability to have these skills by allowing the trap shooting range that is about two miles from their school, the possibility of having a bus bring them to participate, to and from. Athena Stifter, Michelle & Trent Huber's oldest daughter, she was in high school once too, just a few years ago. She wasn't great at sports but she honestly thinks that just the pure convenience for a few people versus the quality of life and the livelihood for the farmers whose livestock are going to be affected, other folks, if you have dog grooming, it's just not acceptable. The Town has spoken and it's pretty clear that this isn't right. Dave Serres again this time speaking on his own behalf, we live right down the water run just a mile from Hilten's and the sound travels down it very efficiently. The type of life they have is that they have five acres, they have horses. Their daughter grew up riding the horses. They traveled well over a half hour to get her to the stuff they had to. And he considered it an honor and a privilege. Some of the things he has been hearing is there are other noises. There are other things, highway noises, airplane noises, motorcycles, rumble strips, we can't do anything about that. He believes there is something they can do about this. A 1,000 shots over the course of an evening; he doesn't see that as an improvement, he sees it as a huge annoyance and a huge negative effect on his and his family's life. The highest sound was 80 decibels. At 85 OSHA requires you to wear hearing protection. He knows that because he worked at a refinery for over 30 years. So you are dangerously close at Jerry Kosin's to get that level of hearing protection. He thinks that is a huge statement. Doreen Rogge, just wanted to say that this morning somebody was shooting somewhere and you went outside and that was all you could hear was pop, pop, pop pop pop, pop pop, etc and they stood there and said can you imagine listening to this all the time. She would hope that the committee would reject this proposal and not force them to have to listen to this all the time. Tim Rundquist, Prescott, he is in favor of the

gun range and he grew up on a big dairy farm. He was a hunter his whole life. Most of the time they were doing their target practice close to their pastures and their cattle, no matter what, would come over and stand and watch it. Never once did he see any animal run away from us when they were shooting their guns. So anyone that feels the noise is going to bother the animals, it will not. David Zeverino, lives about a quarter mile from the proposed site, it's not only about the noise, it's about the pollution. Lead is a huge contaminate. They don't make lead, you can't use it to hunt waterfowl. They don't make wheel weights anymore because it's dangerous and they are putting thousands of pounds of lead on their land, in a water run. Every time it rains, it's going to wash down. He doesn't care what kind of berm they build. They live just downstream and that water runs through our property. It washes out hills. It washed an old car, when he was a kid, about a 100 yards down the water run. It's moving with that much force, it will wash anything that's in its way. It doesn't care. So he guarantees that lead will get washed out of that berm and end up in their drinking water. It's going down the hill and will be that much closer to the water table. He is opposed to it and the town board was unanimously against it as well. Sharon Phillipps, Oak Grove, live probably a mile and a half or better to the east. She is a fifth generation, trying to pass it on to a sixth generation. She doesn't want her sixth generation to have to tolerate this kind of activity. She is a hunter. She came from a hunting family. This doesn't just impact a few individuals. This is impacting a whole neighborhood. This neighborhood is all united and she feels that, she is not against the trap shooting range, but it doesn't belong there. There must be someplace else that won't impact the neighbors as much as this site will impact it. She hopes you will listen to the neighbor's concerns and go by what the town board has recommended. Sarah Palodichuk, Town of Oak Grove, she thinks the committee has heard what she has to say as far as the town recommendation goes. But she does want to let people know that this is the hardest thing that she has had to do in the past four years. This is the most division that she has seen in their town in the past four years. She was probably the person on the board who was most eager to find a solution to make it work. Because she thinks having a trap shooting range would be a good thing, especially for the kids. But as we went through the process, there are too many question marks and when you fill in the blanks and you look at all the hours. If you fill all those hours with gunshots, that's beyond a level of what's acceptable. She heard some people say oh, you have to be able to have some noise move in next to you. She completely agrees, you have to have some noise move in. If it were trap shooting season for Prescott High School, she thinks she could make that work and she said that publicly. She knows some people aren't happy to hear that. She thinks that would be feasible but it's when you fill every hour on the calendar. Part of it's hard because the structure of the financing requires that many hours. But as long as they are there, they can be filled and that's too much burden for the neighbors. For her it's, not who was here first, because there is a lady that moved in after the proposal and she has every much right to enjoy her land as the people who have lived here for generations. It's just too much noise for anybody potentially. Also with 620th, people are talking about traffic, that's an impact fee road. That's one of their big roads. It's not about the use of the road. It's about the possibility of every hour being used as a trap shooting range. Curt Bretoi, he is from Prescott, he is for the range, he understands everyone's concern on the noise. He moved to Prescott in 2003, built a house behind Jeff Most's farm and a few years ago that big warehouse went up across the highway. His nights used to be dark, now they have all their street lights. He sits out on his back deck and look at their building and the new Ptacek's building. He is not a fan of it. He has grown accustomed to it now. He drives truck for a living and at all hours there are trucks in and out of that place. When they are not delivering there, they are lined up in the parking lot. He can smell their fumes. He hates that but you get used to it. You really do. **Chairperson Fetzer Closed the public hearing.** Sanden asked staff it was noted in the staff report about lack of some information about daily member usage and the number of shots and honestly the drawings don't tell them a lot. They show berms but they don't know the height, don't know the design of them. Did the applicants give you any details, he is looking at the EPA recommendations and the BMP's of what the shot fall zone would be and if they have taken measures to reduce it. Roy stated yes, it was in the report; 375 to 450. Jeff Nass stated shot fall zone is generally 125 to 150 yards is where the majority of the shot falls. That's when the recyclers/reclaimers come in and that's the majority where the shot is. The extreme distance is about 220 yards, if everything is exactly perfect. That's why you always design the range for 300 so you have that buffer zone there. The berm height would be based to stop any potential runoff of other property coming onto the rain surface. The rain surface will be fairly level

with just a slight grade so you can recover the lead. Sanden asked if the configuration has been such to minimize that. Mr. Nass stated yes, you do that to minimize where they have to pick up the lead. You can only turn them so far because safety is number one and if you overlap too much you have a safety issue. With three trap houses, you can tweak the two outside ones in a little bit. Also they don't want birds crossing other fields. That is all taken into consideration. Sanden asked as far as lime, any plans for phosphate spreading? Mr. Nass stated as a general rule in Wisconsin, they haven't had a huge issue with that. The EPA guidelines cover the whole United States. The main issue is that they want to make sure the soil is within that 6.5 to 8.5 range. They recommend that for all ranges whether its trap or rifle, crystal ranges to monitor it annually. There is a suggestion to do it twice a year, they generally recommend doing it once a year unless they have an issue. If the property, as an example you went in right now, and it was low and every year they had to add, then naturally they would probably test two or three times a year to make sure they maintain that level. Twice a year is not a huge issue. The biggest thing is to make sure they have the pH level there. Once lead is encapsulated it doesn't leach anymore. If you have ever seen lead that has been exposed to the environment, once it has that white coating on it, that encapsulates the lead and it stays there from that point on. That's where the acid in the soil or the soil that is not in that medium there can eat away that coating and then you can have an issue. There are a few parts of the State that do have an issue because of their heavy sand more acidic soil and they have to maintain it at a much higher level. I believe the average was 7, you said at the soil testing they did. It's a fairly easy process to test. Sanden asked about controlling runoff and planting vegetation. Are there any planting plans for this site? Mr. Nass said basically it's a lawn. When they recycle that lead, it naturally chews it up. You put in fresh vegetation or seeded to get grass to grow quickly. But as this range is going to be designed specifically for this, they can contour the entire impact area so that it is fairly level, meaning it only runs off at the end. At the end there is a swell at the end and construction deals with this all the time. So that if anything would get picked up, it has a chance to drop to the bottom. Obviously, lead is heavy and drops to the bottom when there is not a heavy water flow. So the range will be designed so there isn't a heavy water flow. That's where the berms come in along the sides of it to ensure that flow from other areas are redirected away from the range area. Sanden asked about the depth to groundwater on this site. Mr. Nass stated 100 feet is not shallow. State of Wisconsin has 300 to 900 ranges. There is no set number. The DNR and Conservation Congress are guessing between 300 and 900 ranges. At least half of these ranges are trap ranges. Again years ago they shot right into wetlands, swamps, rivers and lakes. They discontinued that due to the water fowl feeding on the bottom of those lakes and wetland areas. But he cannot find a case where a range contaminated water in a community in Wisconsin. He Googled it, DuckDuckGo'ed it and two other search engines, but there may be a case out there. With all those ranges for the last untold years in the State of Wisconsin and not having an issue and also point out we are the lead mining state. There are two counties in the State of Wisconsin that have the highest lead content naturally in the soil than any other place in the country. Sanden asked how far they are from here. Mr. Nass stated they are down by Madison, Yellowstone area down there. Sanden asked if any of these design features done for noise mitigation? Mr. Nass stated no. The noise mitigation, the location of the range is the biggest thing for noise mitigation. Naturally, sound decreases over distance. Sanden asked staff, the restrictions imposed by the sports shooting range activities statute, no action can be taken for nuisance issues as well as no civil liability for any action. What he is having a little problem with is the lack of details of some of the things. So would that mean that if we were to miss something, we wouldn't have much in the way of recourse? Pichotta stated in certain respects, we do have a limited ability to control for example hours. State Statutes said they can be open from 6:00am – 11:00pm. Regardless of what they are proposing, we can't enforce something different than that. There are some other restrictions as far as liability. It does appear that that says State or other political subdivision, he would have to discuss neighbors ability, their recourse with our attorney. We didn't get into that great of depth with this. But it was clear that there were certain restrictions that impact our ability to place conditions. Mr. Nass stated State Statute doesn't state that because this range was not in existence prior to the original date with the noise was 1998. The range had to be in existence prior to that date. This range, obviously, was not in existence. So the range protection that is in State Statute 895 whatever the statute number does not pertain to this range. That's why they are here for a conditional use permit. If they were already an operating range, they wouldn't have to come and ask you this. If you look into that, you will see at the very beginning of

the statute states that the 1998 date, and we passed a couple bills in there that those dates were upgraded to 2013. That's all right in the State Statutes. Because this is a range that is new, it was not in existence, it is not covered and you do have recourse. Also even if statutes would change, you are under a conditional use permit as a legal contract. You would have to talk to your County lawyer but you would have a legal binding contract with them and yourselves that this is what's going to happen. If they violate that you would have grounds to deny the permit or stop the operation. Sanden stated that is kind of his point, they would have to put those conditions in and without knowing a lot of the details he doesn't know what conditions to put in to anticipate any possible nuisance or health issue. Holst stated he would like to point out to all of those in attendance that this is not a popularity contest. We have one group that has 250 signatures; we've got another group that comes from the Sportsmans Club. We're here to protect public health and safety and the interest of the people of Pierce County. He is a benefactor member of the NRA, his names on the wall in Washington. He has pushed a lot of money their way. He believes that these kids have the right to trap shoot but at the same time he had a daughter in dance and he hauled her all over the State of Wisconsin on his own dime. And it wasn't cheap and it took a lot of time. He believes we just built a nice new school in Prescott. He believes the Sportsmans Club should have talked to the school and put your shooting range in the City of Prescott if it doesn't affect anybody. He believes that there are serious concerns with lead migration. As far as the noise goes, he believes that it probably would be tolerable. He lives 100 feet from the railroad but the railroad was there a long time before he came there. As far as UNFI building in Prescott and the lights, that piece of property was zoned Industrial as far back as he can remember. It was always going to be something there of an Industrial use. He cannot support this at this time. This is about as poor presentation on a berm that he has ever seen. There is no scale drawings. You have a black line on a piece of paper. You don't say where it starts, what the elevation is, where it ends. You give us a linear distance but that's about it. Town of Oak Grove came forward with things that match their comp plan. They give us reasons to deny it and I have to stand with the Town of Oak Grove on this and I don't always do that. Aubart asked if they looked at alternative sites before they purchased this property? Mr. Cleasby stated they didn't originally purchase this property with the intent of building this trap range. This came up after they had begun looking for land to build a clubhouse and do other activities. It wasn't until after they secured the land and the high school trap team came into existence that they thought that they could accomplish this and facilitate building this range. Regardless of what other people say, that's the facts. Aubart asked when they started, is this a high school sponsored school district trap team? What was their plan to start with, where they were going to shoot. Mr. Patraw stated they started this up and presented it to the school board and they approved of having a trap team. Last year they shot as a club, like a fishing club or other clubs and they shot up in Hudson. This year the school officially made them a sport like dance is. They talked about shooting at Hudson and they talked about the Sportsmans Club trying to get a range built closer to the school. The trap team is different than all the other sports because none of the coaches get paid. They OK this as a sport but they don't put money into the sport. They don't pay coaches, we sponsor ourselves. Sponsorship and money like that. It's sanctioned by the district but not paid by the district. Like Ellsworth and Elmwood trap teams, they are by sponsors. We are lucky that the school does support us to let the kids letter in the sport. Eric Penk stated when they brought this up, we started out with 25 kids; we've grown. We're up to 65 kids this year. We're growing and will they facilitate us in the future. He sees the need for this in our community because if we ultimately outgrow Hudson, where are we going to go? It's agriculture out there, not many homes, that's why we chose it. There's pictures of Hudson, River Falls, Ellsworth range is right here and you can see the housing around it and they have no noise issues over there. People come there and move there after it was built. Aubart stated he has been a member of the River Falls Club for many years, a couple decades and they have had issues. He can guarantee that. The travel issue - really to him, like Mr. Holst, his boys were in hockey and he grew up on hockey and his high school team they traveled 70 miles one way every day for practice. That was the choice and it was worthwhile and they continued to do that. He was president of their hockey association. They rented ice for many years, so did Woodbury, Cottage Grove, they traveled to here to Hunt Arena. Traveling for our kids is nothing new. He encourages the trap team. He thinks it's a great deal. He just doesn't know that this is the place that it needs to be. Hopefully the kids will enjoy it and continue to participate in it but there is a cost to it too. The other issue, the noise issue, it could be an issue with the livestock. There isn't a lot of information, really on

what the effects of that would be. He is concerned about the water issue. He doesn't think that has been vetted good enough in this presentation. Mr. Nass asked if he could speak to the drawings, one of the things that when clubs are looking to do things along these lines; every one of these guys that's with the club is a volunteer. The club, I'm sure has a shoestring budget, I'm sure they are not flush in cash and are actually working to support the juniors which are never charged the same rate as the adults. We're just moving earth here. There was a note that plans would need to be submitted and those could easily be done once they are approved before they could start excavation. Those plans would be turned in. They would hire a draftsman/engineer to actually shoot all the elevations. The berms were put in there just to divert any flow onto the range, exact heights they would have to shoot and all that. Again, these guys aren't flush with cash where they can do that and have it denied. That can be done, should be done but doesn't need to be done prior to that. If it's approved and they say it has to be approved by your zoning staff, there is not an issue with that because it has to be done anyway. We have to make sure it's level and diverted away from there. Again for these guys to hire a professional to come in, puts an onus on them as volunteers. He doesn't know how many of their kids shoot even. They are just looking for the future. Its dirt so they are not building a building where we need structural issues involved. Holst stated that's what they said at the Oroville Dam too, it's just dirt. Mr. Patraw stated this isn't the best plan but he isn't going to invest \$10,000 into a site plan because that is the minimum it would be. When they get ready to build this, for sure it will be. He can't send an excavator out there. He wouldn't know what to do, he would laugh at him, throw it back at him and say this is horrible. Holst asked if he would present this to a future client? Say here is my plan, I don't think Kraus-Anderson would. You are asking us to OK something based on this piece of paper. Chairperson Fetzer noted that we have had homeowners come in that hand drawings that are very detailed, I wouldn't say to an engineer is always needed but more detail is. **Aubart moved to deny the Private Outdoor Recreation for a Trap Shooting Range for Prescott Sportsmans Club Inc finding that the proposed use and the proposed location is contrary to the public interest and likely be detrimental and injurious to public health & safety/Holst seconded stating: regarding the public interest – Pierce County has through its adopted comprehensive plan – stated that when considering conditionally permitted uses – adherence to a Town's comprehensive plan will be considered to be consistent with the public interest for that town. The Town of Oak Grove has adopted a policy language regarding the need for conditionally permitted uses to not conflict with or negatively impact the use and enjoyment of nearby properties – this policy is appropriately applied to this proposed conditional use – which would likely have negative impacts on the use and enjoyment of neighboring properties that cannot be mitigated. Regarding public health and safety – The proposed location is not a good site for a trap shooting range. The lay of the land, existing drainage patterns and volumes and proximity to an intermittent stream would make it difficult to ensure that lead does not migrate off site – creating the potential for public health and safety risks. All in favor of denying the CUP. Motion passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for your consideration. It's to attend a West Central Zoning Association meeting at the Chippewa County Courthouse on March 9th. It's entirely likely that Emily, Brad & Ryan will all attend. **Aubart moved to approve the travel/training request for Emily Lund, Brad Roy & Ryan Bechel/Snow seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for a Rezone request from General Rural to General Rural Flexible in the Town of Gilman.
Renewal of conditional use permit for a Nonmetallic Mining for Monarch Paving in the Town of Trenton.

Motion to adjourn at 7:43 pm by Snow/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, February 15, 2017 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 1 st & 15 th , April 5 th & 19 th , all in 2017.	Chair
3	Approve minutes of the January 18, 2017 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for a Trap Shooting Range in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-39E, by Prescott Sportsmans Club Inc, owner on property located in the SE ¼ of the NW ¼ of Section 6, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
5	Discuss take action on Travel/Training Requests.	Pichotta
6	Future agenda items.	Pichotta
7	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, January 18, 2017

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 1st & 15th, March 1st & 15th, all in 2017.

Approve Minutes: **Snow moved to approve the January 4, 2017 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Holst not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for construction of a new structure (Warehouse and Storage) in the Industrial District, pursuant to Pierce County Code Chapter 240-37(1)B, by Chad Whitcomb, agent for Hager Telecom Inc, owner on property located in Lot 2, Certified Survey Map (CSM) V3, P72, being part of the NE ¼ of the SW ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Chad Whitcomb forward:

Staff Report – Ryan Bechel: Bechel noted that there was a correction made in the staff report regarding the height of the structure. You should have a new staff report with that highlighted. The applicant is seeking a Conditional Use Permit to enable the construction of a storage building to be utilized for commercial use. The Hager City Telephone Company currently operates with 5 employees and provides telephone, internet, computer and television sales, service and installation to both residential and commercial clients. The Hager City Telephone Company is a provider of Bevcomm sales and services. The proposed building will be utilized for storage of telecommunications installation equipment including cable spools, plows, broadband equipment and cable excavation equipment to prevent theft which has become an issue at some of their facilities. If approved, the storage facility will require LMC site plan review as required by PCC §240-75. An agenda item for site plan review directly follows this item. The two acre parcel is located in Town of Trenton and is zoned Industrial. Pierce County Code 240 Attachment 2, Table of Uses list warehouse and storage uses as a conditionally permitted use in the Industrial Districts. Warehouse and storage is defined as the holding of packaged or wholly or partially finished products within enclosed buildings which will not create significant impacts to surrounding uses. The property is bordered by an Industrial District by each side. Surrounding land uses include a mixture of Commercial and Industrial uses. Planted forest lands border the property to the east. Access to the site is off of 760th St which is a private road. The applicant is proposing to construct a 30' x 56' storage shed that is 22' in height. The shop will have a gravel floor and will not be served with water or sewer. The property is subject to maximum elevation restrictions due to its proximity to the Red Wing Airport. The maximum elevation restriction for the property is 818' above mean sea level. Pierce County contour elevation data estimates the elevation of the ground at the structure's proposed location to be 768' above mean sea level. At the height proposed, the structure would be at approximately 791' above mean sea level. The applicants do not intend for customers or the general public to visit or utilize the facility. Hours of operation are proposed to be 24 hours per day, 7 days per week to allow access to materials and equipment in the event of service repair emergencies. On site solid waste disposal provisions are not proposed. Solid wastes produced on site will be removed and properly disposed of. The applicant is proposing to install exterior security lighting on the front

(west side) of the building and on the south side of the building to provide lighting for the fenced in storage area. No advertising signs have been proposed at this time. The Town of Trenton recommended approval of the CUP request on December 12, 2016 stating no specific justification/comprehensive plan reference but offering the following recommendation:

“Prior to renewal, Bevcomm notifies Trenton Township Planning Commission in a timely manner to allow the planning commission and /or town board to review the CUP prior to county renewal.”

Prior to approving the CUP renewals, staff typically contacts town officials to gather comments and/or concerns regarding a CUP. Historically, an applicant has not been conditionally requires to seek formal town review prior to renewal. Given the low impact nature of the proposed use and the fact that all adjacent properties are zoned Industrial, staff is of the position that renewal of this CUP is not required. Staff views this request as an establishment CUP, similar to a CUP authorizing an accessory residence, a use which does not require renewal. If issues relating to this use arise in the future, the permit can be brought back to the LMC for further discussion of conditions or termination at any time. Staff has not received any concerns/comments regarding the proposed use.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to not be contrary to the above, staff recommends the LMC approve the proposed warehouse and storage facility with the following conditions:

1. Applicant shall obtain a Uniform Address Number from the Land Management Department prior to commencing building construction.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. Applicant understands that expansion or intensification of this use will require modification to this permit or potentially, issuance of a new conditional use permit.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the construction of a new structure (Warehouse and Storage) for Hager Telecom Inc due to the fact this is not found to be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area, with conditions #1 - #3/Sanden seconded. All in favor. Passed.

Discuss take action on a request for Site Plan Review for a structure (Warehouse and Storage) in the Industrial District, pursuant to Pierce County Code Chapter 240-75, by Chad Whitcomb, agent for Hager Telecom Inc, owner on property located in Lot 2, Certified Survey Map (CSM) V3, P72, being a part of the NE ¼ of the SW ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Ryan Bechel: A Conditional Use Permit to authorize this use was approved by the LMC on the previous agenda item. Site plan review and approval is now required. Pierce County Code §240-75 requires site plan review for commercial structures, the purpose of which is to assure site designs that promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The property is zoned Industrial. The property is bordered by commercial/industrial uses to the north (mini-storage), south (Crestwood Cabinets), and west (Warehousing of Hager City LTD). Planted forest land borders the property to the east. All adjacent properties are in Industrial zoning districts. The structure will be 30’ x 56’ with a 22’4” height. PCC §240-23 establishes Minimum Requirements and states that the development shall meet the minimum requirements for the applicable district shown in the Table of Dimensional Requirements. The Table of Dimensional Requirements does not dictate side yard and rear yard setback for Industrial zones. PCC §240-23(E) regulates structure setbacks from private roads and states; “The required setback for all structures fronting on private roads or private road easements shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater.” In its proposed location, the structure would be 75 feet or greater from the nearest side or rear yard line and 120 feet from the centerline of 760th ST (private road). The driveway access for the property is located off of 760th St (private road) on the west side of the property. There

are no existing structures on the property. The proposed building will be constructed adjacent to an existing fenced in storage pad. The applicant is proposing to install exterior security lighting on the west and south side of the building. The applicant is not proposing any signage. The proposed construction is exempt from Landscape Buffer requirements. Pierce County Code §240-54 specifies minimum parking provisions shall be one parking space for every 1,000 square feet of primary floor area for warehouse/commercial storage uses. A minimum of 2 parking spaces are required for this facility. The plan submitted show ample parking area to fulfill this requirement.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

If no changes or modifications are determined to be necessary, staff recommends the LMC approve the Site Plan as proposed.

Chairperson Fetzer asked as far as the building, do you know when you are going to get started. Mr. Whitcomb stated in the spring time before the end of the year. Chairperson Fetzer stated he doesn't see any point in throwing in a bunch of stuff on that. Pichotta stated site plan review sometimes seems redundant especially in cases like this where you have a CUP. In cases where you have a commercial use in a commercial district which is a permitted use and site plan review is required, in those instances you would look at putting in place similar conditions that you would put in place as a CUP and the site plan review is the committees kick at that particular can. This is one of those cases where it's a pretty benign use. It may seem redundant to have two agenda items that do basically the same thing.

Sanden moved to approve the Site Plan Review for Hager Telecom Inc as presented/Snow seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests for your consideration. Ryan Bechel would like to attend a series of training sessions held in New Richmond at WITC for POWTS, Soil Testers, Soil Test Training, POWTS Design and Sanitary Code Education, on February 6th, 20th & 27th and March 6th. Cost is \$100.00 and there won't be any hotel required. Louie Filkins would like to attend the Annual Surveyors Institute. This is continuing education for the surveyor, required for him. This will be on January 25th & 26th at the Kalahari. This will be a one night stay and the funds are budgeted for attendance at each. **Snow moved to approve both travel/training requests/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

At this point, we have no agenda items for February 1st. February 15th will be the Trapshooting Range public hearing.

Motion to adjourn at 6:19 pm by Holst/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, January 4, 2017

Present: Jon Aubart, Joe Fetzer and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jeff Holst and Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 18th, February 1st & 15th, March 1st & 15th, all in 2017.

Approve Minutes: **Sanden moved to approve the December 7, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial, General Rural and Primary Agriculture Districts, pursuant to Pierce County Code Chapter 240-37A, for Wieser Concrete Products Inc, et al, owner on property located in Sections 4, 9 & 10, T25N, R16W, Town of Salem, Pierce County, WI.

Staff Report – Brad Roy: This request is for the renewal of a conditional use permit for 3 nonmetallic mines located on Wieser property located in the Town of Salem. Pierce County issued the original Conditional Use Permit in 1992 for four (4) mines. Reclamation plans and fees have been submitted to Pierce County for Mines #1 and #2 since 2001, as required by NR 135. It was previously understood by Pierce County that Mines #3 and #4 had been issued DNR Chapter 30 permits, which covers reclamation and exempts mines from the provisions of NR 135. It was recently determined that no such permits were on file with the DNR. The permitting process was started but no permits were ultimately issued. It was agreed by the applicant, DNR and Pierce County that reclamation plans for the two mines would now be filed with the County. A reclamation plan was submitted and approved by Pierce County on September 18, 2015 for Mine #4. Mining activities at Mine #3 had ceased before 2001 and the applicant is not intending to mine in that area in the future. Due to this, a reclamation plan is not required for that mine. Pierce County Code (PCC) and NR 135 only require reclamation plans for mines active after 2001. In the past, the mined product was primarily used in the production of concrete products. Volumes of material were dependent on the market needs. In 2014 the material in Mine #4 was identified as being industrial frac sand and the use of the mine increased. At the previous renewal conditions were added to reflect the increased volumes. Due to current market conditions the volume of frac sand removed from Mine #4 has decreased from the prior volume. The applicant has been in discussions with the Town of Salem regarding the use of Town roads and a new agreement, he believes has been finalized. There are plans being developed to construct a private access road to Hwy 10 which would include the installation of a bridge over the Rush River. Mine #1 on the hilltop is located in Sections 9 & 10 and is the limestone source. The operation plan identifies normal workdays are Monday through Friday, 7am to 6pm and in rare cases material may be needed at other times due to project requirements or emergencies and may operate 24 hours per day. Blasting operations are from 8am to 5pm several days per year. After blasting, the limestone is crushed and transported to the bottom quarry via conveyor for washing and stockpiling. There are 12 open acres. Mine #2 is behind the pre-cast plant and is mined for sand and gravel. Material is removed through the use of a front end loader or backhoe and dump trucks. The operation plan identifies normal workdays are Monday through Friday, 6am to 8pm and in rare cases material may be needed at other times due to project requirements or emergencies and may operate

24 hours per day. There are 7 open acres. Mine #4 operations consist of mining as well as washing and load out of the sand and gravel from all the mines. Equipment used includes front end loaders, screener, excavator and dump trucks. Materials from this site are sand, rock and frac sand. Currently there are stockpiles of sand and rock and materials removed average 10-30 loads per week. There are 30 open acres. Total Excavating has a contract with Muskie Proppants to deliver 200,000 tons of frac sand from this mine to their plant in 2017. Muskie has told Total Excavating that when the market improves they will start the plant again. Total Excavating is waiting for further information from Muskie regarding demand for frac sand. Typical hours of operation range from 6am to 6pm. When the frac sand mining first began the operation was active 24 hours a day to build stockpiles. The applicant wishes to continue to have the flexibility for 24 hour operation. Wash water for the sand and gravel is supplied from the existing pond on site adjacent to Mine #4. No supplemental water is necessary for washing operations. Crushing at the site is conducted as necessary and has been performed 24 hours a day. Review fee calculation is \$200 plus \$20/acre, which totals $\$200 + (\$20/\text{ac} \times 49\text{-ac}) = \$1,180$. Staff was able to contact the Town of Salem Chairperson today and we were told that a road agreement has been reached and the Town has no concerns. Staff has not received any complaints about this mining operation. A Fugitive Dust Plan and Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures have been submitted to the Zoning Office. The existing conditions are listed #1 through #18 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Renewal fee in the amount of \$1,006 shall be submitted to the Land Management Department.
2. All required permits shall be kept current with the DNR.
3. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
4. A 100-ft setback shall be maintained from all property lines for all mining activities.
5. The applicant shall notify the Zoning Office if groundwater is encountered.
6. Blasting shall be conducted by a state licensed blaster.
7. Blasting shall take place between the hours of 8am and 5pm.
8. Reclamation shall be completed consistent with the submitted plans.
9. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1,000 feet of any mine where blasting takes place. All results shall be provided to the Zoning Office.
10. Any unforeseen erosion issues shall be addressed to the satisfaction of the County.
11. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
12. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
13. The conditional use permit shall expire in 2 years.
14. Road agreements shall be secured from appropriate municipalities for hauling industrial sand.
15. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
16. A Fugitive Dust Plan shall be developed and implemented.
17. Operations may not begin prior to 6am from December to April.
18. A Traffic Impact Analysis be completed for any potential access points onto Hwy 10.

Chairperson Fetzer asked applicant Andy Weiser if he had anything to add. Mr. Weiser stated the only thing is clarification on the road agreement. They have an agreement in word right now and they are working out the final details with the lawyers, of course, a formal road agreement. We have a conceptual agreement. We actually are supposed to meet next week. We have a CD in place and we have agreed to pay for any damage to that section of the road that is caused by traffic. Basically the Town has no cost involved. The road has been upgraded. They re-blacktopped the bottom part. We paid for that. It's like seven tenths of a mile up to their

quarry and that's all been redone. It's like new now so it will be pretty easy to tell if there is any damage. Aubart asked Brad about the renewal fee amount as it is listed. Roy stated that the renewal fee should be \$1,180.00. Sanden asked about the Traffic Impact Analysis, has that been done, is it still needed? Roy stated that would only be needed if the new access is going in. Up until the new access is going in, we don't need it. Mr. Weiser stated it was meant for if they do build the bridge. The bridge really depends on the amount of frac sand. They also have to get a permit first. We are quite a ways along on that. In order to justify a bridge they need to have frac sand for a lengthy enough time because it's going to be a very expensive project. If that would go through, they have a driveway onto Hwy 10, an existing driveway they used years ago for their mining operations when they were on the other side of Hwy 10, this side of the Rush River. So there is an existing driveway entrance that has been there for years but he thinks the concern was if they need a turn lane or something. There is a turn lane now on to Hwy 10 off of 390th Ave. Chairperson Fetzer asked if they have a lot of their plans already going for your permits for the bridge or did you suspend all of that? Mr. Weiser stated they started that quite a while ago and it's sitting in the DNR's hands. However, even if they do grant it, they still have to justify it from a cost standpoint. If they were guaranteed they were going to haul sand for five or six years, they could justify it. The way the sand market is now, it's pretty hard to justify. The agreement with the Town is to inspect the road yearly and that any damage that they cause to the road, they would pay 100%. **Aubart moved to approve the renewal of a conditional use permit for Wieser Concrete Products Inc. with conditions #1 - #18, amending the fee amount on condition #1 to read \$1,180.00/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural, General Rural Flexible and Primary Agriculture Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for Kathleen & John Thayer, My Course LLC, Cynthia Hanson and MOAP LLC/TROLL KING LLC, owners on property located in part of Sections 33, 34 and 35, All in T25N, R17W, Town of Hartland, Pierce County, WI and for Wisconsin Specialty Sands Inc, owner and agent for Nellie Anderson, My Course, Charles & Lynn Brown, Lynn Brown, Dennis Potts, Florness Farms LLC, Gregory & Debra Anderson and Margaret Chesley, on property located in part of Sections 2, 3, 4 and 10, All in T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: This underground mining operation began in 2006; in 2008 the hours of operation were expanded to 24 hours a day. In 2013, the LMC approved an expansion of the mining area into the Town of Hartland. Activities on the site include blasting, screening, washing and sizing underground in the mining tunnels. Washing is done in clay-lined ponds within the tunnels. The washed sand is then trucked to the processing facility in the Town of Trenton. Trucks enter and exit the site directly on to STH 35. In 2015, the LMC approved an expansion of the Trenton processing facility to include a new wash plant. When the wash plant becomes operational the wash ponds located within the mine will be removed. The LMC approved the location of a ventilation shaft in March of 2015 in Section 3 in the Town of Isabelle. The permitted mining area encompasses approximately 1300 acres. The primary use of the land is either agriculture or forested and undeveloped. Other nearby uses include low-density residential. The entire mining process takes place underground using room and pillar mining. The sandstone is mined in parallel tunnels approximately 30-foot wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The tunnels allow for the internal washing, sizing and storage of the sand. The blasted sand is screened and taken to an underground classifying area where the sand is sized and dewatered. Approximately 90% of the water is recycled. Water is supplied by two 1000 GPM fresh water wells, although typically only one is used. High capacity wells are permitted by the Wisconsin Department of Natural Resources (WI DNR). Groundwater elevation is mapped at approximately 720 to 740 feet mean sea level. The lower level of the mined sand is approximately 60-80 feet above the groundwater table. The use of flocculants in the dewatering process has caused concerns from the general public relating to the possible contamination of groundwater. The use of flocculants is permitted by the WI DNR which monitors the type and limits the amount used. WI DNR regulates and monitors storm water and process water through the Wisconsin Pollutant Discharge Elimination System

Permit (WPDES). The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The facility has a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of stormwater pollution and spills of oil-related materials and other chemicals and establishes controls intended to minimize any potential impacts to surface waters. A Fugitive Dust Plan has been developed for the operations. The plan details the measures to be taken to reduce dust from roadways during periods of dry or windy conditions. There has been a market downturn for frac sand. The applicants had to reduce the workforce in April 2016. There are four fulltime employees to maintain operations at the area facilities. Their primary duties are to conduct monthly maintenance functions which includes startup of all machinery, safety and environmental checks as required for WDNR and MSHA compliance, security checks, snow plowing and maintaining overall readiness for full operations when the market returns. MSHA completed its last safety and health inspection of the Bay City mine on November 28 and 29, 2016. Staff has not received any complaints regarding the operation since the expansion in 2013. Staff contacted the Towns of Isabelle and Harland regarding this renewal request. Neither Town Chair expressed any concerns regarding renewal of the permit. The existing conditions are listed #1 - #27 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to the public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends this CUP be renewed with the following conditions:

1. Applicants shall follow all recommendations and receive all necessary permits from WI DNR, Department of Commerce, Mine Safety and Health Administration and other agencies if required.
2. Applicants shall submit written verification from all real property owners granting access to the abandoned tunnels of which WSS will be accessing pursuant to this CUP.
3. Applicant shall submit verification of lease agreements before mining is conducted and before mining is conducted within the 100 foot setback to parcels of which WSS does not hold the mineral rights, subject to condition number 5.
4. Applicant shall comply with the conditions recommended by the Town of Isabelle. The Town of Isabelle recommended approval of this request on March 22, 2006, subject to the following conditions:
 1. A map of the facility and underground tunnels shall be posted conspicuously at the site.
 - a. This same map shall be provided to the Town Clerk of the Town of Isabelle and emergency officials.
 - b. This map shall be updated semi-annually.
 2. A site stability study shall be completed by a professional engineer qualified for such work.
 - a. The stability of the site shall be monitored by a qualified professional engineer annually.
 - b. A copy of the engineer's report shall be made available to the Town of Isabelle.
 3. The groundwater shall be monitored by professionals qualified to perform such work.
 - a. Check all wells within 1,000 feet of company wells. This is the same as county requirements.
 - b. The groundwater shall be monitored annually as well as any time the Town of Isabelle deems appropriate.
 - c. A copy of this report shall be made available to the Town of Isabelle.
4. A reclamation plan shall be prepared.
 - a. In compliance with the requirements of the County of Pierce.
 - b. Including a performance bond to insure that reclamation work can be completed after operations cease or the operating entity ceases to exist.
5. Hours during which blasting operations can be performed will be unrestricted unless official complaints are registered with the Town of Isabelle-
 - a. Upon receipt of an official complaint to the Town of Isabelle, the Town of Isabelle will advise the operators of the facility of the hours of blasting restrictions.

- b. Within 24 hours of notification, the operators of the facility shall not perform blasting between the hours of 9:00pm to 5:00am.
6. Town of Isabelle does not control driveway permits onto a State of Wisconsin highway and therefore cannot approve or deny any such driveway. However, the Town of Isabelle is very concerned about trees on either side of the driveway blocking the view of the drivers on the driveway and the State Highway. The Town of Isabelle strongly recommends that sufficient trees be removed to promote safe vehicular traffic.
5. A 100-ft setback shall be maintained from all property lines for which Wisconsin Specialty Sand does not hold the mineral rights, except for any areas which were granted an exception to this requirement. An exception was granted on the west property boundary of the parcel subject to this CUP. Mining is permitted 57 feet from this boundary.
6. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
7. Real property owners located within 1000 feet of the parcel subject to this CUP shall be notified of the blasting schedule and be given the option of having notices sent to them by phone, text or email before any blasting. Blasting shall be restricted to six days a week.
8. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells located within 1000 feet of the parcels subject to this CUP.
9. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
10. After the asphalt and road gravel is removed, following mine closure, the road bed shall be graded so storm water will run laterally off the old road bed shall be graded so storm water will run laterally off the old road bed and not longitudinally down the old profile grade of the road bed.
11. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences and kept current.
12. Applicant agrees that any unforeseen erosion issues that arise during or after construction shall be addressed to the satisfaction of the county.
13. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention , Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
14. This CUP shall be renewed every two years.
15. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
16. The applicant shall submit written verification from the Department of Natural Resources that a binding agreement between the DNR and WSS is in place to preserve the conservation values of the existing DNR State Natural Area and associated tunnels. Such agreement shall also address access.
17. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
18. Outdoor storage of any equipment and/or mining materials shall only occur on the parcel with the mine entrance.
19. Mining shall not encroach within 200 feet of any existing residence unless owner authorization has been obtained.
20. All loaded trucks shall be tarped.
21. A Fugitive Dust Plan that utilizes industry standards and best management practices shall be developed and adhered to.
22. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
23. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
24. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.

25. A Groundwater Response Plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
26. A map of the facility and underground tunnels shall be submitted to the Town of Harland semi-annually.
27. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.

Chairperson Fetzer asked Rich Budinger if he had anything to add. Mr. Budinger stated they are hanging in there and expecting volumes to start returning this year. 2016 was a pretty rough year for the industry as a whole, not to mention Wisconsin. It seems like the northern white sands are the higher quality sands and therefore in a downturn, lower in demand. So a lot of the Tier 2, Tier 3 sands that are closer to the wells are being utilized as far as high volumes. You can see that in the overall health of the Wisconsin Industry. Some good news recently, we have seen some upturn and have heard that some of our competitors are starting to bring back employees and increasing operating hours across the state. They recently, a couple months ago, brought back a one-shift operation, to the Menomonie operation, the service operation. So they are optimistic that they will have increasing activity throughout 2017. Sanden asked about condition #15, annual audit, has that been done, he would assume. Mr. Budinger stated that they typically submit their annual report in January. It's in process right now. They have looked at a file and saw a lot of January 15th information. He introduced Mike Melton, he is the Corporate Environmental Director, he is in charge of that now. Mr. Melton stated he has been working on that and expecting to get it in a timely manner. Sanden noted that in condition #17 there is a typo. **Sanden moved to approve the renewal of a conditional use permit for Wisconsin Industrial Sand Co. w/conditions #1 - #27/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for your consideration at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for the construction of a Warehouse in the Industrial District for Hager Telecom Inc in the Town of Trenton and then Site Plan Review for that same structure. Just so you have it on your radar, we do have a public hearing coming up for a proposed trapshooting range in the Town of Oak Grove.

Motion to adjourn at 6:28 pm by Sanden/Aubart seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, December 19, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy and Tracie Albrightson

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: Committee consensus to keep meeting dates on the first and third Wednesday of every month at 6:00 pm. January 2nd & 16th, February 6th & 20th, all in 2019.

Approve Minutes: **Sanden moved to approve the November 7, 2018 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for Height Exemption for a Wireless Service Communication Facility in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter §240-29 Height Requirements for Northfield Wifi, agent for Town of Clifton (Town Hall), owner on property located in the NE ¼ of the SE ¼ of Section 18, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: Northfield Wifi wants to construct a wireless communication facility tower of 100 feet. All the antennas will be below the top of the tower so the total height of the structure will be 100 feet. Pierce County Code states industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setback and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. This property is bordered by two county roads. Setbacks from county roads shall be 100 feet from the centerline of the road or 67 feet from the edge of the right-of-way, whichever is greater. In this case using the right-of-way will be the applicable setback. To comply with all the requirements of §240-29(D), the 100 foot structure would require a right-of-way setback of 132 feet from County Roads FF and QQ and a side and rear yard setback of 75 feet. The proposed location of the tower is 147 feet from County Road QQ and 127 feet from the nearest side and rear property line. Applicable definitions are as followed:
Support Structure – an existing or new structure that supports or can support a mobile service facility, including a mobile service support structure, utility pole, water tower, building or other structure.

Yard – A required area on a lot, unoccupied by buildings and open to the sky, extending along a lot line to a specified depth or width.

Yard, Rear – A yard extending along an entire rear lot line from the rear lot line to the depth or width as specified in the yard requirements for the applicable district.

Yard, Side – A yard extending along an entire side lot line from the side lot line to the depth or width specified in the yard requirements for the applicable district.

Staff Recommendations: Staff recommends the Land Management Committee review the proposed WCSF height exemption. Given that the proposed tower location complies with the criteria identified in PCC §240-29D, staff recommends that the LMC grant approval of the height exemption.

Holst moved to approve the height exemption/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests

Pichotta requested approval for County Surveyor, Louie Filkins, to attend the Wisconsin Society of Land Surveyors annual conference at the Kalahari Resort in Lake Delton, WI on January 23 - 24, 2019.

Holst moved to approve the request for the travel training request for the County Surveyor /Gulbranson seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Concept plan for Cory Huppert in the Town of Clifton.

Renewal of CUP for Nonmetallic Mining for Wisconsin Industrial Sand in the towns of Hartland and Isabelle.

Motion to adjourn at 6:06pm by Aubart/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by T. Albrightson

MINUTES - Pierce County Land Management Committee Meeting, November 7, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 21st, December 5th and December 19th, if necessary, all in 2018.

Approve Minutes: **Holst moved to approve the October 17, 2018 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Fetzer and Gulbranson abstaining due to their absence from the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Duplex in the General Rural District for Geiger Family Trust (Eugene Geiger), owner by Adam Adank, agent, on property located in Lot 4, Certified Survey Map (CSM) V15, P12, in the SW ¼ of the NW ¼ of Section 6, T27N, R15W, Town of Spring Lake, Pierce County, WI. Staff Report – Andy Pichotta: This is a request for a conditional use permit for a Duplex. The owner and the agent have a purchase agreement on 9.74 acres that is contingent on a 2 Lot Certified Survey Map (CSM) and approval to build a duplex on the south lot (Lot 4). The 2 Lot CSM was approved and recorded on 10-16-2018. The agent proposes to build a 1-story, ±40' x ±140' duplex with two separate entrances and slab-on-grade construction. Each side will have separate 2-car garages, 3-bedrooms, bathrooms, kitchens, and utilities. The agent plans to live on one side of the duplex, while renting out the other half. The parcel is located in Section 6, Town of Spring Lake. Lot 4 is 4.796 acres and is zoned General Rural. PCC §240-88 defines Duplex as, "Two attached building units on a single lot regardless of the form of ownership of the units." PCC §240-24D describes Lot Requirements as "Only one single-family residence or one duplex shall be permitted on a lot, except as provided elsewhere in this chapter." Table of Uses allows Duplexes with the issuance of a conditional use permit and does not reference any code provisions. Existing land use is undeveloped and is currently leased out for crop farming. Adjacent land uses are residential, commercial, and agricultural. PCC Chapter 115 relating to Uniform Address Numbers systems, Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Spring Lake Town Board recommended approval of this request on 10-9-2018 without any specific concerns or recommended conditions. This CUP shall expire 12 months from the date of issuance if no action has commenced to establish the use.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a duplex with the following conditions:

1. The applicant shall work with the Town Building Inspector, All Croix Inspections Corporation, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a Uniform Address Number (UAN) for both units of the duplex.

Chairperson Fetzer opened the hearing to the public. Mike Jacobson, Town of Spring Lake Supervisor, they are excited about Adam wanting to build in the Town of Spring Lake. It is definitely consistent with their comprehensive plan. Where he is putting it, they feel is a great spot, so they have no concerns what-so-ever.

Chairperson Fetzer closed the public hearing. Holst asked Adam which side he proposed to live on. Mr. Adank stated he is going to live on the north and the left if you are looking at it this way. Sanden asked about converting ag land the soils are listed, he didn't see that in the report. Are these prime ag land soils or soils of state wide importance? Pichotta stated it does border some soils of state wide importance, that was a consideration at the town level, but its location is very close to the village. There is specific language in their comp plan that supports such development in locations close to Spring Valley. Sanden asked about that commercial district which can change use, right now what is the commercial ventures going on right across the way? Mr. Jacobson stated Adam Mattison has highway construction products for sale across the road. That's where he operates out of.

Sanden moved to approve the conditional use permit for a Duplex for Geiger Family Trust (Eugene Geiger) by Adam Adank, agent, due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #2/Holst seconded. All in favor. Passed.

Discuss take action on a request for Site Plan Review for Mini Storage in the Commercial District pursuant to Pierce County Code Chapter 240-36K for WD LLC, Jay McGrath, owner on property located in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: The applicant is proposing to construct three structures to be used for mini-storage in the Commercial District. Pierce County Code §240-75 requires site plan review for commercial structures; the purpose of which is to assure site designs that promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Mini-storage is defined as “Indoor storage of customer’s items within partitioned buildings with individual access to each partitioned area.” There are code requirements listed PCC 240-36K, #1 – #5. The property is bordered by a Commercial Zoning District to the north, west and south, and a Rural Residential 20 District to the south. An Industrial District is located to the east. That land is currently used for agriculture. Access to the site is off of 170th Avenue. The applicant has proposed to construct three structures. The structure closest to Hwy 63 will be 380’ by 50’. This structure will have approximately 57 units sized 20’ x 20’, 20’ x 30’, and 10’ x 20’. This will be the first structure constructed. The middle structure will be 420’ x 40’. It will have 82 units sized 10’ x 20’. The final structure will be 480’ x 50’. Unit number and size will depend on demand. All structures will have a peak height of 26 feet and will have a metal exterior with a neutral color. The west structure is proposed to be 47’ from the Hwy 63 right-of-way. PCC 240-27 requires a 77’ setback from state highways. The neighboring structure to the south is located 17’ from the right-of-way. Setback averaging was used to allow the structure to be 47’ from the right-of-way. All structures will be greater than 75’ from 170th Avenue. The proposal will comply with the 50’ lot line requirement of 240-36K. An access easement and gravel driveway to the property to the north extends along the east edge of the property. The proposed construction will not encroach into the easement. An engineered stormwater pond has been designed along the west and southern portion of the property. The proposed development will increase the total impervious surface for the site by approximately 2.75 acres. With the designed ponds, the total stormwater runoff for the site will decrease. The stormwater will exit the pond through a culvert into the ditch along 170th Avenue. A gravel driveway of at least 26’ will extend around and in between the structures. No vegetation is proposed. PCC 240-31 requires a landscape buffer in cases where a commercial use abuts a residential district. The buffer is to be located in a manner to ensure that principal buildings and outdoor storage areas associated with the proposed use are screened as viewed from the vantage point of the principal structures on affected adjoining lots. The Rural Residential 20 District borders the eastern portion of the south lot line. The stormwater pond and access easement are located in the area of the lot which adjoins the RR20 District. The adjoining lot in the RR20 District is currently in agricultural use and no principal structures are located near the applicant’s property. Due to this, staff does not believe that vegetative screening is warranted. All lighting will be placed on the structures. LED lighting which is directed straight down will be placed on the ends of each

structure as well as the highway side to keep the light onsite. The applicant has not indicated if this lighting will be placed on the east side of the final building. More typical lighting will be placed between the structures. This light will shine out. The Department Lighting Policy states: Power and orientation of light fixture: No exterior light fixture may be placed or orientated so that the lighting element or associated convex lens is visible from an adjacent lot line, ordinary high water mark line or public road right-of-way easement line. The applicant is proposing a free standing sign along Hwy63. Any sign along the highway will require DOT approval as well as permits from the Zoning Office.

Staff Recommendations: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

If no changes or modifications are determined to be necessary, staff recommends that the LMC approve the Site Plan with the following conditions:

1. All signage shall be permitted by the Zoning Office and WisDOT when applicable.
2. All lighting shall comply with the Department Lighting Policy.

Chairperson Fetzer asked Jay McGrath if he wanted to add anything. Mr. McGrath stated no, Brad pretty much covered everything. Chair Fetzer asked if he is doing all three of them right away. Mr. McGrath stated no, just starting with one. Chair Fetzer asked if next summer he would have it done. Mr. McGrath stated next spring they will do the first building and go from there. Fetzer asked what you are looking at for a timeframe? Will he need to come back here? Roy stated as long as he stays consistent with approved plans he wouldn't need to come back. Permit fee wise, it would be in his best interest to do them all at once because we would just issue one permit for all the structures. If he does one at a time, he would have to get a new permit for each structure. As long as his plans don't drastically change from what he has presented, he can take his time. Holst asked if there are any restrictions on this site due to the Hwy 35 Scenic Corridor. Roy stated not on this site. Gulbranson asked if in the future, if you ever wanted to put a fence around there because of thefts or anything, is that going to interfere with lot lines or anything. Roy stated we would be OK with that, he doesn't think that would warrant coming back in for site plan review. We don't issue a permit for fences so that would be his choice.

Holst moved to approve the Site Plan for Mini-Storage for WD LLC, Jay McGrath, as presented, with conditions #1 - #2/Gulbranson seconded. Russ Duden asked if this is where the public can speak. Chairperson Fetzer stated this isn't a public hearing but they are welcome to speak. Dawn Duden stated they are concerned with the unique stormwater pond. Consideration for a fence would make the most sense for safety, considering the south side. Mr. McGrath asked if they looked at the pond now. That pond is only going to be three feet deep. It will have a three-foot slope going into it. Right now it's probably about eight feet deep. They have to haul a lot of fill in yet. Mr. Duden stated back in April 17, 2014, they currently own the Hager Heights Drive-in, which they are the adjoining property on the south side. In 2014 they were flooded out from the water runoff coming from the fields where this is going. Back then, when Bruce built he put a dike on the back side where some fence lines had been removed and it did slow the water trouble down. On 170th Avenue when you come down the backside, right in back of their dumpsters, that entire ditch way has been eroded, washed out because the water cannot fit through the culverts off of 170th Avenue. He knows the pond is going to hold the water but currently the culvert that you have installed coming off the dike, the dam pond, and going to make a 90 degree turn into that culvert which is under the access of our restaurant is going to cause some issues in his eyes. Water isn't going to come out, make a 90 degree turn and go down. If it's going to back flood it, their driveway and 170th Avenue will become flooded before that water gets fed under that culvert down 170th Avenue. Mr. McGrath stated he talked to the engineers about that and they said the first pond on the highway side, that was to dump over the bank, down the blacktop and along Highway 63, we asked that same question. Mr. Duden stated he is referencing the back water coming out of the pond which is all running parallel to their property

there where they adjoin the blacktop driveway. The other concern they would have is with the general public coming through and going to the gas station and stuff like this, so many times you hear of people drowning in these ponds and just for the general safety is what he is concerned for. He understands it's only three feet deep but we got a pretty good neighborhood back there with a lot of young kids that do go to the gas station, go to the other places and he would just hate to see something like that happen. He has no issue with the storage units, he runs a good operation from the ones he has seen. These are just a few issues that he sees and thinks should be looked at. Chairperson Fetzer asked if he had anything else and thanked him for his input. Chairperson Fetzer asked if Jay had everything engineered. Mr. McGrath stated yes, for our permits, yes. Chairperson Fetzer asked what they typically engineer for, a 50 year rain event? Mr. McGrath stated he isn't sure. They have programs that they put it into and then send it off to the DNR to be approved. Chairperson Fetzer stated so you won't have all of the water running over to the drains, some will be coming over towards Highway 63. Mr. McGrath stated along Highway 63 there is actually a pond there and then it goes up just a little bit and down into the bigger pond. From there it would dump out into 170th where they are talking about. So there is actually two holding ponds to let it settle and soak in. Holst stated these ponds are designed to retain water and hold water, that's the question he asked staff. He is very familiar with your situation because he goes down there to chow down on chicken from time to time. He understands your wants and desires for a fence. He appreciates that. At some point in time, Jay, it would be beneficial to you to fence your property. The other storage units in Hager have fences around them. Mr. Duden stated he isn't saying to fence the entire premises. But that adjoining, we have young drivers, we have seniors, we have every kind of driver out there and as tight as what the pond is going to adjoin the property line, if you get an elderly driver and a young driver, the elderly is going to crowd that way, that young driver is coming through. Just the water issues and they have outside seating down there. Is this going to be blacktopped in the future at all or is it going to continue. He looks for the dust problems and also out of this pond generation now they are going to be dealing with the mosquito infestation becoming stronger. There is a summer operation and that's where it affects them. Like you did with the DNR, is there any possibility that it could be moved to the east line and put the pond upstream. Mr. McGrath stated that is the way they thought they would design it and dump down that spillway into the Highway 63 right-of-way but that is how they designed it. We talked about that. Mr. Duden stated he is concerned with the undermining of their culvert coming in, who is going to deal and address that issue when it comes from the water issues down the road. Chairperson Fetzer stated it's hard to predict everything. If there are issues, it comes back in front of us and we deal with it as we go. Pichotta stated we have two different issues here; whether or not the engineers did a good job in their design. We have to trust that it will work, given that they put their professional stamp on it, also he understands this gentleman's concerns. He also understands the potential need for a fence and that is exactly the reason that we conduct this sort of review, for those sorts of things. If the LMC wanted to add a condition relating to requiring the applicant to work with staff to identify an appropriate fence and appropriate configuration you can certainly do that. If we can't come to a reasonable agreement we can come back and see the committee again. Holst stated he feels this committee is about public health and public safety. That is the only thing we are here for. This is, however remote, a public safety concern. In his mind it could be an added condition. Sanden stated he would be a little concerned if they require a fence around every detention pond in the county. Holst stated this one is a relatively unique situation due to the fact that you have a commercial entity right there and many times you see young kids out there playing and everybody in that area uses that street/private road as if it were a public road. Whether they have it blocked off or not. He can understand the concerns of the neighbors. Mr. McGrath stated his facility up here (Ellsworth), they had to dig that pond out about eight feet deep and that was a big concern of his because of the residential area right across the street. There is always kids riding bike out there and skateboarding. Those banks were steep. If a kid goes in there they are sliding in and they didn't require anything. Gulbranson stated he agrees with Doctor Sanden, are we setting a precedence? Pichotta stated no. Holst stated its site specific. Gulbranson stated those ponds are all over the place in residential areas now. He worries about it this time of year when they get an inch of ice on there and the kids go out and play. They are all over. Holst maybe then those municipalities should ask that there be fences. Chairperson Fetzer stated it's usually a little housing development where that stuff shows up. Sanden stated a lot of times they use them as an open space and put trails around them. They intentionally attract people to

them. Chairperson Fetzer asked Holst if he would like to amend his motion. **Holst stated he would amend his motion to require working with staff to identify appropriate fencing to be installed around the retention pond. Gulbranson seconded.** Roy asked if the committee wants it all the way around the pond or just on the property line. Holst stated he would like to see it on the property line. Work with staff. Mr. McGrath asked if just around the deeper part by 170th? Holst stated no, and suggested running it along the whole southern property line and then that solves the issue. Mr. Duden stated we haven't been in contact with Jay to discuss any of this. We get two inches off the blacktop and we're into an eight foot slough. He understands that all of this has been good neighbor property, share the driveway, share the access. He understands all this. But that is their biggest concern. They park on the edge of the blacktop and they are down to an eight foot slough right now. That's why he barricaded the driveways like he did, nothing personal you parking there. The general public uses that all the time. We have always allowed it. As far as what kind of a fence, a little bit of a leaway on that edging. If you want to talk about it, we can go from there. He doesn't know how this works if the committee sets the guidelines, you tell him it's got to go 12 feet high, the whole property. Mr. McGrath stated he would like to fence kind of just along his property for his customers, just for maintaining purposes and stuff. Then nobody would come from his property here. Otherwise they have to come through the ditch on the highway or the ag land on the east. Holst stated we directed staff to work it out with you. Chairperson Fetzer stated they will come out and work it out with you, sound good? Mr. Duden stated yes. Chairperson Fetzer asked if we amended the motion and Gulbranson stated yes. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests.

Departmental Update and Future Agenda Items

Pichotta stated we don't have any public hearing requests nor any renewals and suggested that the next meeting would likely be in December.

Motion to adjourn at 6:34pm by Holst/Sanden seconded. All in favor. Motion passed.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, November 7, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 21 st , December 5 th & December 19 th , if necessary, all in 2018.	Chair
3	Approve minutes of the October 17, 2018 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a Conditional Use Permit for a Duplex in the General Rural District for Geiger Family Trust (Eugene Geiger), owner, by Adam Adank, agent, on property located in Lot 4, Certified Survey Map (CSM) V15, P12, in the SW ¼ of the NW ¼ of Section 6, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
5	Discuss take action on a request for Site Plan Review for Mini-Storage in the Commercial District, pursuant to Pierce County Code Chapter 240-36K for WD LLC, Jay McGrath, owner on property located in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, October 17, 2018

Present: Jon Aubart, Jeff Holst and Eric Sanden

Others: Brad Roy, Adam Adank and Shari Hartung

Absent: Joe Fetzer, Neil Gulbranson & Andy Pichotta

Acting Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 7th & 21st, December 5th and December 19th, if necessary, all in 2018.

Approve Minutes: **Sanden moved to approve the September 19, 2018 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural Flexible 8 District for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼, all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI. Staff Report – Brad Roy: Rumpca Excavating owns and operates a nonmetallic mine of 80 acres which was expanded in 2002 requiring the issuance of a conditional use permit. The materials mined are gravel and limestone. The operation plan states that 60 of the 80 acres will be mined and extraction will extend to the elevation of approximately 900 feet. A policy exception, to the 100 foot setback requirement, was granted by the LMC in April, 2018 to allow for the Rumpca mine to be joined with the neighboring Rohl mine. Much of the extraction this year was done in the Rohl mine. Attempts are being made to complete extraction from the Rohl mine as soon as possible and to complete final reclamation in accordance with the agreement between Rohl, Rumpca and the Kinnickinnic River Land Trust. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road MM. Portable crushing equipment is brought in to make C/5 Gravel, Recycled C/5 and Screened Hard Rock and trucks are used to haul the product. Blasting is conducted by a bonded professional explosive company. Blasting frequently takes place on this site. No explosives are stored onsite. Hours of operation are 7:00am to 6:00pm, Monday through Friday and 7:00am to 4:30pm on Saturday. Blasting is between the hours of 8:00am to 4:00pm Monday through Friday. Crushing is between the hours of 7:00am to 4:30pm, Monday through Friday. A 100 foot setback has been maintained for all extraction in all areas of the property except for the portion which borders the Rohl mine. The 100 foot setback is still in effect for all of the property that does not border the Rohl mine. A scale and scale house are located on the site. Staff received concerns from a nearby landowner, property to the north atop of a hill, regarding the increased visibility of the operation and the possibility of screening (vegetative or berms). Staff inspected the site and believes that the increased visibility is due to the temporary road which combines the Rumpca and Rohl mines. Staff does not believe that screening is warranted or viable due to the elevation of concerned property and the impending final reclamation of the Rohl mine. Staff has contacted the Town of Clifton Chairperson regarding this renewal and no complaints or concerns were reported. The existing conditions #1 - #14 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if determined to be not contrary to the public interest, health, safety or character of the area renew this conditional use permit with the following conditions amending condition #2:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.

2. **A 100-ft setback shall be maintained from all property lines for all mining activities, except in areas for which a policy exception has been granted by the Land Management Committee.**
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of the proposed mining operation.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Dust control measures shall be implemented along haul roads.
8. Hours of operation are 7:00am to 6:00pm, Monday through Friday and 7:00am to 4:30pm on Saturday.
9. Recycling of concrete, asphalt and bricks into Class five materials is allowed.
10. Reclamation shall be according to submitted plans.
11. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
12. This CUP renewal shall expire in two years.
13. A new reclamation plan shall be completed if extraction differs from the approved plan on file.
14. Any expansion or intensification shall require a new conditional use permit and potentially a rezone depending on the intensity of the use.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Rumpca Excavating due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #14/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District for Rickey & Sara Diesing, owners on property located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Adam Adank: In September of 2006, Rick Diesing obtained a new Conditional Use Permit for Nonmetallic Mining. Bechel Sand and Gravel took over the property in 2013 and continued operating the mine until 2017. In 2017 Rick Diesing obtained the property back. Sand is mined from the site and waste industrial sand has been deposited in the mine. Portable processing equipment is utilized when necessary. All new mining activity has been consistent with current rules and regulations. The property is located in the Town of Isabelle and is zoned General Rural. The mining site has approximately 3.5 unreclaimed acres; the total extent of the mine will be approximately 6.5 acres. Access to the mine is off of 150th Avenue. Sand screening and sizing equipment is placed on the site when necessary. There is no blasting on this site; sand is extracted with excavating equipment and trucks. There are numerous residences located within close proximity to the site; staff has not received any complaints about this operation. A 100 foot setback will be maintained from property lines for all new extractions. Staff has contacted the Town of Isabelle Chairperson regarding this renewal. The Town of Isabelle expressed concern that if mine productivity increases that heavy hauling operations in the future may result in increased road maintenance expenses on 150th Ave. The current conditions are listed #1 - #7 in the staff report.

Staff Recommendations: Staff recommends the Land Management Committee consider the above and if it is found that no changes or modifications are necessary to protect the public interest, public health, safety or character of the area, renew this conditional use permit with the following conditions.

1. Hours of operation remain consistent with daylight hours Monday through Friday, Saturday hours will be 8:00am – 4:00pm.
2. Applicant shall receive all necessary permits from other agencies.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. A 100-ft setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement.
5. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.

6. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.

7. This CUP shall expire in two years.

Sanden asked Adam if the Isabelle Chairperson made the comments as an FYI for possible future issues or was it urgent. Adank stated no, it's for the future if productivity picks up. He asked him if he wanted it addressed and he said he didn't think it was necessary at this time. Chairperson Holst stated it may be advantages for the mine owner to have the road surveyed at this time so you can say it's in whatever condition it's in. He doesn't think it's in perfect condition anyway. Mr. Diesing stated no, when he was down there, it's not. Chairperson Holst stated he thinks that if you would get the Highway Dept to come through and put a grade on it for you, then you would have a baseline to work from anyway. We have done that in our township and it's worked well. Mr. Diesing stated he doesn't plan on using it right now, he has it up for sale again.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Rickey & Sara Diesing, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Roy stated there is one travel/training request for Tracie Albrightson to attend a Business Grammar and Proofreading Seminar on October 30th in Bloomington. **Aubart moved to approve the Travel/Training request for Tracie Albrightson/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Brad Roy stated we have two future agenda items; a public hearing for Adam Adank for a Duplex in the Town of Spring Lake and Jay McGrath is looking to construct Storage Units in the Town of Trenton so we will have Site Plan Review.

Motion to adjourn at 6:12pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, September 19, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 3rd & 17th, November 7th & 21st, all in 2018.

Approve Minutes: **Gulbranson moved to approve the September 5, 2018 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Commercial District, pursuant to Pierce County Code Chapter 240-67A(2), for Gregory & Susan Andrews, owners, by Mikael Andrews, agent on property located in Lot 5, Certified Survey Map (CSM) V10, P111, in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Adam Adank: The applicants own a business called M.A.R. Power Sports that is located in a shed on the south side of the property. This business is a small engine repair shop and lawn equipment dealership. The applicants received site plan approval in 2015 and a land use permit in 2016 for a 12ft x 56ft lean-to addition to the north side of the structure. They are requesting to expand the existing 26ft x 56ft nonconforming structure by adding 40ft x 50ft to the west side of the shed. From the centerline of town road 180th Avenue, the south side of the existing shed is 51.5ft and the north side is 77ft. The setback for structures on a town road is 75 feet from the centerline of the road. The proposed expansion will not encroach more than the 51.5ft to the centerline of 180th Ave and will remain out of the town road right-of-way. The parcel is 1.01 acres and is located in the Town of Trenton. The property is zoned Commercial. Pierce County Code (PCC) §240-67A(2) states, “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76.” PCC §240-76A states “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use.” PCC 240-27C states, “Town highways. Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 42 feet from the edge of the right-of-way, whichever is greater.” The existing topography is a gradual slope toward the southwest of the property. The existing septic system is located on the north side of the shed and appears to meet the required setbacks from the proposed addition. The existing well is located northwest of the shed and also meets setbacks. Adjacent land uses and zoning districts surrounding the property are commercial. The nearest driveway is west of the existing shed on this property. The proposed expansion will extend into a portion of the driveway. Knudsen Trucking uses this driveway as access to their business and both owners, Dennis Knudsen and Terry Skorude, signed a document stating that they have no issues with the proposed addition. The driveway will still remain about 29.8ft to 32.3ft wide. The proposed expansion is west and away from the road setback so will not affect travelers along 180th Avenue. No permit renewal is needed for this request. The Town of Trenton recommended approval of this request on 4-10-2018. The Town suggested the following condition: “The addition shall not be any closer to the street than the existing building.”

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC approve this conditional use permit with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The applicants shall stay out of the road right-of-way and maintain the 51.5 ft setback from the centerline of 180th Avenue.
3. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.
5. Applicant shall contact the Town Building Inspector, Galen Seipel, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing. Chairperson Fetzer invited Mr. Andrews to add any information.** Mikael Andrews stated he didn't have anything to add. Holst asked if he was going to put some barricades around the back of that building to keep Knudsen's truckers from running into it. Mr. Andrews stated yes, there will be some bollards put in next to the shed.

Holst moved to approve the expansion of the nonconforming structure for Gregory & Susan Andrews, owners, by Mikael Andrews, agent, due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #5/Sanden seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining (Gilles Quarry) by American Materials, agent for Muskie Proppant LLC, owner on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.

Staff Report – Brad Roy: The nonmetallic mining operation was originally permitted in 1978. American Materials received an updated permit in 1998. All permits have been kept current since that time. The operation involves mining dolomite/limestone and subsequent crushing and sizing. Muskie Proppant purchased this property prior to previous renewal. This change in ownership has not impacted the American Materials operation. The mining site has approximately 9 unreclaimed acres. Access to the mine is off of US Highway 10. The surrounding land uses are farmland and woodland. Overburden is stripped and stored onsite. Extraction is completed with drilling and blasting. All blasting is done by a certified blaster. Portable equipment is brought to the site for processing. The highwalls are approximately 40 feet in height. There has been no blasting on the site since 2007. Hours of operation are 6:00am to 9:00pm, Monday through Friday and 6:00am to 12:00pm on Saturday. Renewal fees for this mine are \$200 + \$20 per acre of expansion. We have not received any complaints. All appropriate information has been submitted. The Town of Union Chairperson was contacted regarding this renewal. We did not hear back so he assumes there have been no issues. The existing conditions are listed in the staff report #1 - #10.

Staff Recommendations: Staff recommends the Land Management Committee consider whether established conditions remain adequate to protect the public interest, public health and safety and character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Activities shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-ft setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.

5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells within 1000 feet of the mining operation before blasting commences and annually thereafter. Applicant shall not be required to test wells on properties where owners have not granted access.
6. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday.
7. Reclamation shall be according to submitted plans.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. Applicant shall pay renewal fees.
10. This CUP shall expire in two years.

Roy stated there are no changes proposed to the conditions. Chairperson Fetzer invited Candy Anderson and Kaitlynn Filkins forward and asked if they would like to add anything. Ms Filkins stated no, everything was covered in the report but they would answer any questions that anyone has.

Aubart moved to approve the renewal of this conditional use permit for Nonmetallic Mining (Gilles Quarry) for American Materials, agent for Muskie Proppant LLC, owner, with conditions #1 - #10/Gulbranson seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining by the Pierce County Highway Department, agent for Gregory Bisel, on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI.

Staff Report – Brad Roy: This is the Bisel Pit along Highway 10. The Highway Department is the operator. The mining site is approximately 17 acres. The active mining area is approximately 6.5 acres. Not a lot to report on since the last renewal. We have had no complaints. The groundwater response plan has been submitted and satisfies condition #3. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Hours of operation shall be 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm.
2. A 100 feet setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur.
3. Reclamation of the mine shall adhere to the original plan which states that slopes shall be restored to 3:1. Due to the location of the northern highwall and the potential for land development on the northern adjacent parcel highwalls or steep slopes would create unsafe conditions.
4. The owner shall notify the Zoning Office when the operator of the mine is no longer a public entity. Modifications to the permit may be required at that time.
5. Applicant shall comply with NR 135 Annual Reclamation Permits.
6. All blasting shall be done by a certified state licensed blaster.
7. Residential property owners located within 1000 feet of mining operations shall be given a two day notice of any planned blasting.
8. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation annually.
9. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
10. Applicant shall receive all necessary permits from other agencies.
11. This CUP is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
12. A renewal fee of \$200.00 plus \$20 per acre of expansion shall be paid.

Roy stated staff removed the condition regarding groundwater since that has been completed. Sanden asked if there is any blasting planned. Chad Johnson stated they will likely blast this winter there. They have been doing

three or four shots a calendar year. Sanden asked if we had any well testing requirements. Roy stated they have been submitted. There's not many wells in that area.

Holst moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent for Gregory Bisel with conditions #1 - #12/Sanden seconded. Holst stated they are doing a nice job out there. **All in favor. Passed.**

Discuss take action on a request for modification of a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Adam Adank: In 2015, the applicant received a Conditional Use Permit to establish a campground along the Mississippi River. The campground is intended to provide seasonal camping space for individuals with campers, travel trailers and recreational vehicles. The initial CUP approved the establishment of 16 camping sites outside of the floodplain with the option to add four additional sites upon campsite layout approval by Land Management staff. The applicant has established 7 of the 16 approved campsites. However, the applicant now believes that he will only have room for 11 campsites outside of the floodplain and is proposing to establish the remaining 9 authorized campsites in the floodplain for a total of 20 campsites. Campsites designated as 12 through 19 on the map will be in the floodplain. Campsite 20 will be a rustic site with no electricity or water supply. The exact location of campsite 20 has not yet been determined but would be located south of the other 19 sites and closer to the Mississippi River. The original CUP was anticipated to be the first of several phases of campground development on the site. The planned full scope of the project is to establish approximately 120 campsites, most of which would be located in the floodplain and shoreland areas of the property. Expansion beyond 20 sites or intensification of this use will require issuance of a new CUP. The property is located on 11.6 acres in the Town of Trenton. In 2013 this parcel and an adjacent parcel were rezoned from Rural Residential 20 to General Rural Flexible (GRF). A campground is defined in Pierce County Code §240-88. Campgrounds are subject to conditions set forth in Pierce County Code §240-39(A). The existing conditions are listed in the staff report #1 - #16. Pierce County Code §238-20 states "Public or private campgrounds shall be allowed only if they evidence a low flood damage potential. Said requirements shall be determined upon application of the following criteria:"

1. The campground is approved by the Department of Health Services.
2. A land use permit for a campground is issued by the Zoning Administrator.
3. The character of the river system and the elevation of the campground is such that a seventy-two hour warning of an impending flood can be given to all campground occupants.
4. There is an adequate flood warning procedure for the campground that offers the minimum notice required under this section to all persons in the campground. This procedure shall include a written agreement between the campground owner, the municipal emergency government coordinator and the chief law enforcement official which specifies the flood elevation at which evacuation shall occur, personnel responsible for monitoring flood elevations, types of warning systems to be used and the procedures for notifying at-risk parties and the methods and personnel responsible for conducting the evacuation.
5. The agreement required under Subsection D shall be valid for no more than one calendar year, prior to the end of which period it shall be reviewed by and between the operator and the officials identified in Subsection D and, if necessary, modified in order to remain in full compliance with all applicable regulations, including but not limited to those of the State Department of Health Services.
6. Only tents and mobile recreational vehicles shall be allowed by the operator to be placed in and used in each such campground.
7. Tents may not occupy any site in the campground for more than 180 consecutive days, at which time the camping unit must be removed from the floodplain for a minimum of 24 hours.
8. All tents that remain on site for more than 30 days shall be issued a limited authorization by the campground operator, a written copy of which is kept on file at the campground. Such authorization

shall allow placement of a camping unit for a period not to exceed 180 days and shall ensure compliance with all the provisions of this section.

9. The municipality shall monitor campground usage to assure compliance with the terms of this section.
10. All structures that do not meet the definition of tents or mobile recreational vehicle, or that remain in place for more than 180 consecutive days, must meet the applicable requirements in either Article III or Article IV for the floodplain district in which the structure is located.
11. The campground shall have signs clearly posted at all entrances warning of the flood hazard and the procedures for evacuation when a flood warning is issued.
12. All service facilities, including but not limited to refuse collection, electrical service, natural gas lines, propane tanks, sewage systems and wells shall be properly anchored and placed at or floodproofed to the flood protection elevation.
13. Camping in a camping unit in a floodplain outside of approved campgrounds under this section is allowed without a permit if the camping unit consists of nothing more than an easily removable tent or if the following criteria are met:
 - (a) The camping unit is a mobile recreational vehicle;
 - (b) The camping unit is on a parcel of land that has less than four camping sites and the parcel is not advertised, represented or used as a campground;
 - (c) The camping unit may not occupy the site for a period of more than 180 consecutive days;
 - (d) Support services are consistent with items 10 and 12 listed above.

The campground is not operating commercially at this time. There are 3 incidental campers currently located on the site. The applicant anticipates opening the campground in April 2019. A holding tank dump station for the collection of waste from recreational vehicles camping on-site was installed on June 4th, 2018. Each site will be a minimum of 1,000 square feet and will have two off street parking spaces. Each site will be marked and surfaced with gravel. Gravel campsite pads may vary in size based on site layout. However, each site will have an approximate 8' x 30' gravel pad. The applicant will need to determine if any filling and grading is necessary for the sites in the floodplain. Pierce County Code §238 Floodplain Zoning authorizes campgrounds in the floodplain with a Land Use Permit. The applicant will need to satisfy all the requirements of §238 prior to issuance of the Land Use Permit. Staff will review final plans to determine compliance with Pierce County Code §242 Shoreland Zoning. In order to comply with floodplain regulations, the placement of gravel or other material cannot increase the existing surface elevation. Prior to the placement of any material on the ground surface, existing elevations will need to be established by a registered surveyor, as well as final grade determinations. No more than one mobile recreation vehicle shall be allowed on each campsite. Wheels and tires will be required to be in an in-transit position. Camping units in the floodplain will be required to be moved every 180 days consistent with floodplain zoning regulations. Each campsite except for the rustic campsite will be provided electricity and water. A well has been installed between campsites 1 and 7 out of the floodplain. Each access pedestal will be at elevation 685' or higher and supplied with a backflow preventer. The electric transformer will be located outside of the floodplain between the main driveway entrance and the holding tank dump station. Campsites in the floodplain will have electrical services located at an elevation of 685' or higher. The campground site is located in an area where there is more than a 72 hour warning of likely flood events. There will be a flood warning procedure for the campground that offers notice to all persons in the campground. This procedure will need to include a written agreement between the campground owner, the municipal emergency government coordinator and the chief law enforcement official which specifies the flood elevation at which evacuation shall occur, personnel responsibilities for monitoring flood elevations, types of warning systems to be used and the procedures for notifying at-risk parties and the methods and personnel responsible for conducting the evacuation. This agreement is valid for one year. Signage will need to be prominently placed near the entrance that informs that a "Flood Hazard Area" is being entered. The sign should provide contact information and illustrate the evacuation route. The Department has not received any complaints regarding the campground. Staff spoke with Town of Trenton Chairperson, Brian Berg, regarding the modification of this conditional use permit. Mr. Berg stated that the Town has no additional comments or concerns. The existing conditions are listed in the staff report #1 - #9.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed modification at the proposed location would be contrary to public interest, detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed modification with the following conditions (**proposed modifications in bold**):

1. **Operations shall be consistent with the application unless modified by another condition of this permit.**
2. Total number of campsites present shall not exceed 20 individual sites. The expansion or intensification of this use beyond the 20 campsites delineated will require issuance of a new CUP.
3. Internal roads, camping pads and sanitary improvements shall be completed prior to the operation of the campground. Staff shall be contacted to verify improvements prior to commercial use.
4. Any campground advertising signage shall comply with Pierce County zoning standards.
5. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Pierce County Subdivision Code, Department of Safety and Professional Services (DSPS), Department of Health-DHS standards etc).
6. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
7. **The campground shall comply with all items listed under §238-20 and §240-39 of Pierce County Code. If conflict between regulations occurs, the most restrictive shall apply.**
8. **The campground shall comply with all applicable regulations in Chapter 242 of the Pierce County Code.**
9. **Prior to the placement of any material on the surface in the floodplain, existing elevations shall be established by a registered surveyor, as well as final grade determinations.**
10. Any additional filling and grading shall be verified by staff to determine if a conditional use permit is needed.
11. **Written flood warning procedures for the upcoming year shall be submitted to the Zoning Office annually prior to December 31st of the preceding year.**
12. Owner and manager contact information shall be prominently posted on site.
13. This conditional use permit shall expire in two years. A status review shall be presented to the Land Management Committee within one year.

Chairperson Fetzer invited Chris Willgrubs forward: Mr. Willgrubs explained he got his approval for the sixteen sites and basically he is making some adjustments to those sites. He needs to correct Adam, he has eight of them completed, not seven. He is moving a couple around just because it fits the landscape better and then he is creating some down in the floodplain now just to fit. He has already had the surveyor, Tom Healy, out there. He has already done the grade elevations for the new sites. That is completed. The septic is already in. Water is already in. Power is already there except for the three sites that are on the west side, then the new ones in the floodplain. Basically, he is just looking to adjust some of the ones he already has approved and add the four more he is allowed to have, only moving them down in the floodplain. Chairperson Fetzer asked if he is going to do the full twenty. Mr. Willgrubs stated yes. One will be a rustic site with no water or electricity. Sanden asked where that one is, he sees nineteen. Mr. Willgrubs stated it's going to be south, further down on the river. So rather than have a map that needs to be massive to show you where it is, he hasn't actually decided where he is going to put it yet. He has already talked to Michelle Williams. She has been down to the site. She is starting to take the water samples for him that he has to do monthly from this point on. He doesn't have his approval through her yet for everything but he has a list of three little things that needed to be done for her. He just wanted to wait to get this completed so he can turn everything into her all at the same time. Basically, what she told him was whichever ones he has completed by sometime in March, she can go ahead and give him the final inspection on the ones that he has done. So if he doesn't have them all done, they will just go with what he's got so that he can at least open. He has eight that are completely finished right now. Holst asked staff about the

bullet: Wheels and tires will be required to be in an in-transit position. Is that according to our code? Adank stated yes, it's in the floodplain code. Holst stated for future discussion, a lot of these ice shacks are getting to be very fancy, very expensive and very nice and they are used year-round as recreational vehicles. Perhaps we need to look into that at some point. Pichotta agreed. Sanden stated if they don't have wheels, at this point it wouldn't be out of compliance but maybe refer to skids or something. Holst stated no, they've got either a cable or hydraulic system to raise and lower the axel. They will drop it right down on the ground or on a block. You don't have to step up. **Holst moved to approve the modification of the conditional use permit for a Campground for Chris Willgrubs, agent for Jeffery Kessler, owner, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #13/** Mr. Willgrubs asked where does this leave his CUP. Because his CUP is coming due in April and he is supposed to be coming back for another meeting in December to tell staff where he is at. Holst stated maybe you want to get this seconded first. **Sanden seconded.** Roy stated his first thought is that a modification doesn't change the date. We'll look at the past and see. Mr. Willgrubs stated it will be a year to come back and tell you where I'm at and my CUP renewal will be by April. Just so he is clear and doesn't miss a meeting. Chairperson Fetzer stated a year from now, you've got the summer to get through, you will have a good feel and we'll have a good report because this time of year camping is winding down. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Adam to attend the WCZA District Meeting on September 20, 2018 at the Barron County Government Center. It starts at 9:30am and ends at 3:00pm. Holst asked if he will have to stay overnight. Pichotta stated he will not and he will use a County car. **Aubart moved to approve the Travel/Training request for Adam Adank/Gulbranson seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated we have no public hearings, no CUP renewals. There are a couple housekeeping items he is working on but there is really no reason to bring them to you at the next meeting so we will not meet in two weeks, we will meet in a month.

Motion to adjourn at 6:36pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 19, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 3 rd & 17 th , November 7 th & 21 st , all in 2018.	Chair
3	Approve minutes of the September 5, 2018 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Commercial District, pursuant to Pierce County Code Chapter 240-67A(2), for Gregory & Susan Andrews, owners, by Mikael Andrews, agent on property located in Lot 5, Certified Survey Map (CSM) V10, P111, in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining (Gilles Quarry) by American Materials, agent for Muskie Proppant LLC, owner on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining by the Pierce County Highway Department, agent for Gregory Bisel, on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
7	Discuss take action on a request for modification of a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. MINUTES - Pierce County Land Management Committee Meeting, September 5, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 19th, October 3rd & 17th, all in 2018.

Approve Minutes: **Aubart moved to approve the August 15, 2018 Land Management Committee minutes/Gulbranson seconded. All in favor with Eric Sanden abstaining because of absence at the last meeting. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the General Rural District, pursuant to Pierce County Code Chapter 240-67A(2), for Wayne Siverling, owner on property located in the NW ¼ of the NE ¼ of Section 16, T27N, R16W, Town of Gilman, Pierce County, WI. Staff Report – Emily Lund: The applicant owns a house on State Rd 29 and is requesting to expand the existing nonconforming structure. The front of existing house is 66.3' from the centerline of State Rd 29. The setback for structures on a state highway is 110 feet from the centerline of the road. From State Rd 29 centerline to the back of the house is 102.8' and to the back bump-out/entry way is 108.8'. The proposed expansion is an L-shaped deck that is 20.5' by 25.75' attached to the south side of the existing house. The proposed expansion will not encroach more than the current 102.8' to the centerline of State Rd 29 and will remain out of the State Rd right-of-way. The property is located in Section 16, Town of Gilman. The property is zoned General Rural. PCC 240-67A(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76." PCC § 240-76A states "Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use." Pierce County Code (PCC) § 240-27A states, "the required setback for all structures fronting on state and federal highways shall be 110 feet from the center line of the road or 77 feet from the edge of the right-of-way, whichever is greater." The existing topography is a gradual slope toward the southwest of the property. The existing septic system is located on the west side of the house and meets the required setbacks from the proposed addition. The existing well is located southeast of the house and also meets setbacks. Adjacent land uses surrounding the property are agricultural and residential. The nearest driveway is approximately 1,500 ft west of the applicant's driveway. The proposed expansion area is currently used as open yard space and should not negatively impact the functionality of the site. The proposed expansion is south and away from the road setback so will not affect travelers along State Road 29. No permit renewal is needed for this request. The Town of Gilman recommended approval of this request on 8-8-2018. The Town referenced their Comprehensive Plan by citing page 49, "Considering approval of conditional use permits only when the proposed conditional uses will not conflict with or negatively impact the use and enjoyment of nearby or surrounding properties and land uses."

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious

to public health, safety or character of the area. If found to be not contrary to the above, and no modifications to the site layout are necessary to achieve efficient traffic flow and circulation, or to mitigate off site impacts, staff recommends that the LMC approve this conditional use permit and the proposed site plan with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The applicants shall stay out of the road right-of-way and maintain the 102.8 ft setback from the centerline of State Rd 29.
3. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.
5. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing. Chairperson Fetzer invited Mr. Siverling to add any information.** Mr. Siverling stated he didn't have anything to add. He's here seeing how the process works. Emily has been very helpful through the process. **Holst moved to approve the expansion of the nonconforming structure for Wayne Siverling, due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #5/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for nonmetallic mining to expand an existing mining operation on September 3, 2014. A screening plan was presented and approved by the LMC in March, 2015. The screening plan and operation were again discussed in May 2015 and a modification made to the screening plan relating to tree height. The expanded area is approximately 22 acres and the area to be mined is approximately 20 acres. The applicant anticipates that new area will take many years, to extract all of the material. The adjoining pre-existing nonconforming mine has 110 open acres. The property is zoned Industrial and General Rural Flexible. Access to the site is off of 830th St. Surrounding uses include mining, agriculture, industrial uses and higher-density residential. The applicant owns a farm site on the property. The structures will be demolished when the rental agreement expires. There will be no blasting or chemicals used, extraction will be done with frontend-loaders. The mined materials will be hauled north to the pre-existing nonconforming mine for processing. Processing will include crushing, screening, sorting, grading and blending with use of conveyors, screeners, stackers and other equipment. All washing of the sand will take place in the pre-existing nonconforming mine. The washing will be needed to remove fines and will use an existing high capacity well. Servicing and fueling of equipment will take place in the pre-existing nonconforming mine. Extractions will go approximately 40 feet below the existing grade. This will result in the floor of the pit elevation of 712' and only few feet above the water table. Ground water has been encountered in the adjoining mine. When most of the mineral deposit above the water table has been removed, the applicant will explore the possibility of mining below the water table. This decision will need to be made at a future time. The applicant cannot determine if mining will below the water table will be economically feasible many years into the future. The entire site is internally drained. The applicant intends to operate 24 hours per day, seven days per week. The application states that mining will not occur within 100 feet of the property lines, which is consistent with the policy. The policy also requires that no mining may occur within 200 feet of existing residences. The reclamation plan states that the proposed post-mining use will be industrial uses. A portion of the site is cataloged as an archeological site. The applicant is working with the State Archeologist on this issue. The applicant should be asked to provide an update on this issue. The required Groundwater Response Plan has

been received. It details measures taken to protect the groundwater beneath and adjacent to the extraction operation. A Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan are not required for this site by the DNR. Well tests for 2018 have been submitted. Some of the properties exceed EPA levels for nitrates. The levels are consistent with those received in 2015. The area is known for having high nitrates. Well tests for 2016 and 2017 were not received by staff. The applicant should be asked to address this discrepancy. The Town of Trenton chairperson was contacted regarding this this renewal. At this time we still haven't heard back so he takes that to mean there isn't anything too alarming going on there. Earlier this summer the railroad performed maintenance on the crossing at 830th St north of the site. The Town did not allow the applicant to use 830th St. south to connect to County Rd K. The applicant has been using an existing driveway on the south of the property near the residence to access County Rd K when the rail crossing is closed. Neighbors have contacted staff with concerns about this due to the residential aspect along County Rd K as well as the safety of large trucks accessing on a sharp turn. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendations: Staff recommends the Land Management Committee consider whether the current conditions remain adequate to protect the public health, safety and character of the surrounding area. If determined to be appropriate, staff recommends the LMC renew this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate: (Condition 3 has been removed due to completion of requirement. Additions are in bold.)

1. Activities shall be conducted consistent with the application unless modified by another condition of approval.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA, **State Archeologist** and other agencies if required.
3. Prior to extraction of any material from below the water table the applicant shall present proposed plans to the LMC for review and approval.
4. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
5. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to any material extraction from the site. We can strike #5, Roy just realized that has been completed.
6. A 100-foot buffer shall be maintained from the active mining to the property boundaries. A 200-foot buffer shall be maintained around existing offsite residences.
7. Hours of operation within areas zoned General Rural Flexible (GRF) shall be limited to 6a.m. to 7p.m. Monday through Friday.
8. Testing of the wells on properties within 1000ft of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, annually. Base line data shall be obtained prior to mineral extraction. Test results and the base line data tests shall be provided to the Department of Land Management.
9. Applicant shall obtain all necessary permits for structures, signs or activities not discussed in this plan from the Zoning Office.
10. Any lighting shall comply with the Land Management Department Policy.
11. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
12. This permit shall expire in two years.

Chairperson Fetzer invited Nancy Beeler forward. Chairperson Fetzer asked if they have been working with an archeologist. Ms Beeler stated yes, Bill has been working with someone. She didn't recall the name. Holst asked if they dug up any Indian bones. Ms Beeler stated not that she is aware of. Chairperson Fetzer asked Brad if we need a report on that. Roy stated we need an update. He was out there a couple years ago with Bill and someone from the State and there were questions about remains or something near the farm house. Bill was told not to mine that area until they found out more. Chairperson Fetzer asked Ms Beeler if she could have Bill check back in, report and update on that, please. Ms Beeler stated she could do that. Chairperson Fetzer stated as far as the well tests, was there nothing done in 2016 and 2017? Ms Beeler stated they weren't aware that they

were supposed to be doing them every year. They are doing them now and he did the majority of them. She just talked to him today and they had a fire a couple weeks ago where he lost his shop and all of his equipment so he is busy with that right now. Johnson Pump, they are the ones doing the tests. He said he was going to try and get out tomorrow and the following day to get the balance of them in. Ms Beeler asked if the committee wants them to do them every year? Chairperson Fetzer stated yes, the biggest thing with that is that it protects you as much as us and it gives us a good baseline to go by. Chairperson Fetzer asked Brad, it said earlier in the report that they intend on running 24 hours a day, seven days a week. Roy stated that is the intention. Chairperson Fetzer asked if we need to address that in condition #7. Roy stated on the property zoned Industrial, they can operate 24 hours a day so condition #7 is to address the areas zoned General Rural. Pichotta stated if you look at the map you will see a buffer district of General Rural Flexible between the RR20 where the houses are and the Industrial. The limitation on that was something that the Town wanted to limit the timing of activities there. Sanden asked if the access runs through the General Rural Flexible? Roy stated yes. Sanden asked if the operation included the trucking portion of it. Pichotta stated the access road that they use that goes out to Cty Rd K is not their primary access. That is the access that they used when they had limited ability to use the other access because of the railroad, that road does in fact cross the General Rural Flexible. Holst stated the County is looking into swapping some road with the Township and making the Town Road a County Road. Holst stated he is speaking as a citizen now, not as a committee member. If that happens then this access will change, the Town seems to think it can pick and choose who can use its roads. He doesn't believe that they can get by with that. The main access is a mile away from that. Holst stated he recuses himself from speaking or voting on this issue but retains his right as a citizen. Sanden asked the recommendation of staff, do you think it is worthwhile to put in a separate condition about providing an update of the State Archeologist. Pichotta stated that they are not going to get to mining there for quite some time. He suggested that if we don't hear from Bill and get a report on that, we can establish a time frame at the two year renewal. Sanden stated actually they do find something then mining wouldn't be allowed. Pichotta stated right, it would limit their ability to mine in that particular area. Holst stated it would limit their ability to mine within a few feet of that spot. With his experience with State Archeologists, they are not always the most timely people and if we start holding up things for them, in that area of the County, we are not going to get a lot of stuff done in a timely fashion. Sanden stated if there is an issue, that will be taken care of. Gulbranson stated he has a question, is this committee involved in the road issue with Trenton? Holst stated no.

Gulbranson moved to approve the renewal of this conditional use permit for Nonmetallic Mining for William F. Holst III, with conditions #1 - #12, striking #5/Sanden seconded. All in favor. Passed.

Discuss take action on a request for Site Plan Review for Mini Storage in the Light Industrial District, pursuant to Pierce County Code Chapter 240-75, for Dog House Garage & Warehouse Condominiums LLC, owner, by Tom Cogan, agent, on property located in Lot 4, Certified Survey Map (CSM) V12, P107 in the SW ¼ of the SW ¼ of Section 36, T27N, R20W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: Applicants are seeking site plan approval for the construction of 7 mini-storage buildings. Pierce County Code (PCC) §240-75 states new construction or additions to existing structures and buildings for commercial, industrial, institutional or multifamily uses shall require site plan approval as set forth in this section. A Land Use Permit will be required prior to construction of the buildings. The purpose of site plan review is to assure site designs, promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The property is located in Section 36, Town of Clifton and is zoned Light Industrial. PCC §240-15 Purpose and Intent of Zoning Districts: Light Industrial (LI). This district is established primarily for production, processing and assembly plants that are operated so that noise, odor, dust and glare from such operations are completely confined within an enclosed building. Traffic generated by these industries should not produce the volume of traffic generated by heavy industrial uses. The district is also designed to accommodate warehouse and limited commercial uses. The applicant proposes to construct 7 mini-storage buildings and the sizes are listed in the staff report. PCC § 240-36K lists mini-storage as a commercial use and states the following:

1. Except in industrial districts, all buildings shall be located a minimum of 50 feet from all lot lines.
2. Commercial storage facilities shall not be used as workshops or retail shops.
3. Outside storage shall be prohibited.
4. Screening with vegetation and/or fencing as approved by the Land Management Committee shall be provided along property lines bordering residential districts.
5. Lighting shall be shielded to prevent direct illumination of adjacent properties not in industrial and commercial districts or public rights-of-way.

Proposed mini-storage buildings #1 - #4 were approved by DSPS on 8-16-2018. The applicants will need to obtain a Land Use Permit from the Department prior to construction. The applicants will also need to work with the Town or State Inspector to ensure compliance with the Uniform Commercial Code (UCC). Proposed mini-storage buildings #5, #6 and #7 are being finalized and need to be submitted to DSPS for plan approval. Once the applicants obtain plan approval, the applicants will need to obtain a Land Use Permit from the Department prior to construction. The applicants will also need to work with the Town or State Inspector to ensure compliance with the Uniform Commercial Code (UCC). The seven proposed mini-storage buildings are designed to be not habitable, but with a sink, bathroom, and lofted area in each unit. A soil evaluation report was submitted to the Department. A commercial sized conventional septic system design was approved by Dept. of Safety & Professional Services (DSPS) on 8-13-2018. Applicants will need to hire a Wisconsin Licensed Master Plumber to obtain a state sanitary permit prior to any other permits. An affidavit for multiple buildings on a septic system needs to be recorded with the Register of Deed's Office. Adjacent zoning district are Light Industrial and General Rural Flexible 8. Surrounding land uses are mini-storage, landscaping business with office and storage, cold storage, and agriculture. Access to the site is north of State Rd 29 onto 1250th Street and east on 655th Avenue. The buildings are proposed to have a 20 ft side yard setback. The buildings are proposed to be setback 70 ft from the edge of 655th Ave. All buildings must be setback 75 ft from the center of 655th Ave or 42 ft from the 655th Ave. right-of-way whichever is greater. Building #5, previous to tonight, appears to be located within the setback. The applicant received a driveway permit on 6-25-2018 from the Town of Clifton and will need to obtain a Uniform Address Number and sign from the Department. Lighting is proposed but no specific plans were submitted at this time. Applicant will need to submit lighting plans to DSPS for approval and will need to comply with Pierce County Code requirements. The applicant received WI DNR WPDES General Permit for Construction Site Storm water runoff on 7-13-2018. An existing stormwater catch-basin and easement is located on the south portion of the lot that is 108'x299.87'. No construction can take place within the storm water catch basin and easement. The applicant proposes to begin construction immediately after the plans are approved and permitted. They anticipate construction of mini-storage buildings 1-4 to be completed in 2018. They anticipate buildings 5-7 to be finished by the summer of 2019 along with the septic system installation, fencing and pavement. An advertising sign was permitted on 7-6-2015 for a 32 sq. ft. sign that the applicant plans to change and update the name and information on the sign and continue to use. Applicant will need to maintain the existing 32 sq. ft. advertising size, stay out of the drainage easement, and 10 ft from lot lines. A Land Use Permit will need to be secured from the Land Management Department prior to construction of the buildings. The following conditions will be need to be met as part of the Land Use Permit(s):

1. An affidavit for multiple buildings on a septic system shall be recorded with the Register of Deed's Office.
2. Applicants shall obtain a Uniform Address Number and sign.
3. The applicants shall work with the Town or State Inspector to obtain permits and have the site inspected to ensure compliance with the Uniform Commercial Code (UCC).
4. Applicants shall follow all conditions and receive all necessary permits from WI DNR, Department of Safety and Professional Services, and other agencies as required.
5. Applicant shall maintain the existing 32 sq. ft. advertising size, stay out of the drainage easement, and 10 ft. from lot lines.

6. The structures shall only be used for storage and the personal use of renters. In-unit commercial and/or residential uses are a violation of the Pierce County Zoning Code.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Staff recommends the LMC consider the above and if no changes or additions are determined to be necessary, approve the proposed site plan for mini-storage in the Light Industrial zoning district with the following conditions:

1. Applicant shall hire a Wisconsin Licensed Master Plumber to obtain a state sanitary permit prior to any other permits.
2. Applicant shall submit lighting plan to DSPS for approval, if required, and shall comply with Pierce County Code provisions.
3. No grading or construction shall take place within the storm water catch basin and easement.
4. Applicant shall submit documents demonstrating compliance with all setbacks for each building.

Chairperson Fetzer invited Tom Cogan forward. Mr. Cogan stated this is something he has been business planning for six or seven years and finally the conditions were correct. This is something in his travels with his real job that he has seen in other states and areas and they are pretty amazing little communities within themselves. He and a couple business partners have established the concept of what they call Dog House Properties, it has some connotation there that they think this kind of development actually saves marriages cause people have a place to go to have their own little garage. These become little communities within themselves as far as who utilizes them. Many of these are taken over by car clubs; one building will be the Corvette Club and one building will be the Camaro Club and one will be the Mustang Club. They have a lot of versatility, businesses will buy them for storing extra stuff, no businesses run out of these because these are gated, secure type of communities so only people that are supposed to be there are actually in there. They are very well built; they are very cosmetically attractive; they are very appealing to the surrounding areas. It's a vision that he has seen in other parts of the country where they have just exploded. This is the first of several projects that they intend on doing. They chose this site basically because its five minutes from where they all live and it's something in the Prescott, River Falls, Ellsworth community that would be really cool for people to have based on the needs that are in this particular area. Chairperson Fetzer stated he has never seen one with a bathroom and loft. Mr. Cogan stated it's based on all the research of garages and what people use them for and storage areas that people want to come out there, they want to do some things. They all need bathrooms and everyone hates a communal bathroom. One of the attractive things about this is they have their own bathroom, maybe they only use it once a week but when you've got to go. They didn't want people going around outside of the building and have to have people going around doing cleanup. They are not actually putting the bathroom in. They are stubbing the area so people can make the choice to put the bathroom in if they so desire. The septic system was designed so that if everyone wanted a bathroom, it's all set up. Chairperson Fetzer asked how they set this up on the septic system, typically if you have a four-bedroom house your septic has to be this big depending on the size of the house. How do they do that? Mr. Cogan stated Mary Jo Huppert did the septic design that she submitted to the State. She had a number of conversations with State people in regards to this. They have had a little experience with this on the east side of Wisconsin but nothing in this particular area on how to size these based on how often people will be out there, etc. They came up with a calculation he believes is 3 gallons per day per unit, based on experience of what other developments like this had incurred. That is how they sized the septic system. They do add 50% greater than what they think the maximum capacity would be so that if they are off a little bit in their calculations they are still good. There is some type of backup system in case things aren't calculated correctly. Gulbranson asked, so the people that rent this are going to finish the

inside. Mr. Cogan stated actually these are in a condominium format. They are having their attorneys do the appropriate work so that these are condos that they can buy and each will have their own PID number. Gulbranson asked how will that be regulated as far as somebody comes in and puts a bedroom in there and a kitchen and thinks they are going to have big parties or stay overnight. Mr. Cogan stated that is a very good question. They have purchased from two other associations like this, one was in Colorado and one was in Wisconsin, the big manuals of owner association laws and regulations of what you can and cannot do. There will be very specific guidelines as far as what you can do and what you cannot do and then the enforcement actions if someone violates those particular policies. If someone stays overnight, they are not supposed to, can he absolutely guarantee that will never happen, he can't do that but they will have regulations that say they are not supposed to and it will be up to the owners that are all participants of the association like in a normal condo complex they can call up and say, hey this person stayed overnight, they are not supposed to. We need to enforce this and take the appropriate action to make sure that does not occur. Sanden asked about the lighting. Mr. Cogan stated they are going to have outside exterior lighting on each of the buildings and each unit will have its own light that they can turn on and off over each of their overhead doors. But the exterior lighting will be the security lighting that will be on the outside of each of the buildings and they will purchase whatever type of lights are necessary that meet the proper code that shines the light where it needs to go but doesn't reflect where it's obtuse to any of the surrounding areas. They own the Churchill Mini Storage next to it too so they aren't as concerned there. They actually would like a little bit of light on that side to shine in there because they are actually thinking they will apply for fencing around the mini storage right next to it. They have had a couple issues of break-ins so they are trying to make this area much more secure. This in itself will be a specific, individual, gated community with ten foot high, chain-link, black-coated fencing with automatic entry system so that also prevents anyone from trying to run a retail operation or something out of there because only the people that are supposed to be in there can get in there. Sanden stated he realizes it's an industrial site and the only reason he asks about the lighting is because Hwy 29 does go right near it. Holst stated the lighting would have to be shielded away from the highway. Mr. Cogan stated they will submit the plan that will comply with that, that one slipped his mind. They got delayed quite a bit in this process, they should have been here three months ago but when they purchased all the Churchill properties which included the Churchill Store in Prescott, the mini storage and this adjacent lot where we want to build these mini condominiums, they thought they were good to go because they had the retention ponds. They contacted the DNR and they had lost all their records related to when this site was developed eight or nine years ago. It took him about a month but he did actually find the paper records of where they had signed off on all the retention ponds. They submitted that back to the DNR and they said that was eight years ago and regulations have changed so we had to go through a full recertification through their engineers and soil infiltration testing, which they did but it took two months and a few thousand dollars in engineering bills and it came back and it was good. That delayed them a couple months and then his ignorance of the entire process of all the different government agencies where they had to get permits and approvals. They are way behind schedule but getting close. Sanden asked what is your estimated time from breaking ground until finishing. Mr. Cogan stated they anticipate, weather dependent also, they will get a minimum of two buildings done this fall so they can get the concrete slabs to go down with them. Their goal is to get the first four buildings, which are already approved. They should have buildings five through seven approved on September 13th or 14th with state stamps. Those are being done by Midwest Engineering, which is a division of Menards that does 75% of these types of buildings. They should have everything state stamped approved from the building perspective within a couple more weeks. LBH Engineering which is out of Minneapolis. They used to have a division here in River Falls or Hudson, they did all the site plan engineering. They're the ones that Emily caught a mistake on, the smaller building was in the setback area because there was a provision of 42ft from the cul de sac line and they were going by the setbacks of 75ft from the centerline of the road of the county and the town has a 100ft setback from the centerline of the road. They met those two but not the 42ft so they did an adjustment on the one building and cut 10 feet off the width of it. The best case scenario we will have the four, worst case scenario we will have two. Everything else they will do in the spring. Mr. Cogan showed color conceptual photos to the committee. Chairperson Fetzer asked, the permits are usually good for a year? Pichotta stated that a permit can be renewed if necessary as long as there is substantial

progress. **Holst moved to approve the site plan as presented for Dog House Garage & Warehouse Condominiums LLC, Tom Cogan, agent, with conditions #1 - #4/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests, one for Shari Hartung to attend a two-day seminar on Advanced MicroSoft Excel Techniques for a cost of \$319.00, there will not be any hotel required and the dates on that are November 5th & 6th. The other request is for Emily Lund to attend the Wisconsin County Code Administrators annual shindig on Barker's Island on October 10th - 12th. There is a variety of workshops associated; Floodplain, Shoreland, Wetland updates. The cost is \$150.00. We do have money set aside for these in our Travel/Training fund. **Gulbranson moved to approve the Travel/Training requests for Shari Hartung and Emily Lund/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for a CUP request for expansion of a nonconforming structure in the Commercial District, down in Hager for Greg & Susan Andrews located in Lot 5 right by the Bluff's.

Discuss take action on renewal of a CUP for a nonmetallic mining operation for Gilles Quarry by American Materials.

Discuss take action on renewal of a CUP for a nonmetallic mining operation for the Gregory Bisel pit located in the Town of Salem.

Discuss take action on a request to modify a CUP for a campground in the General Rural Flexible District for Chris Willgrubs downstream from Mr. Sippy's.

Motion to adjourn at 6:52pm by Aubart/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 5, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 19 th , October 3 rd & 17 th , all in 2018.	Chair
3	Approve minutes of the August 15, 2018 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the General Rural District, pursuant to Pierce County Code Chapter 240-67A(2), for Wayne Siverling, owner on property located in the NW ¼ of the NE ¼ of Section 16, T27N, R16W, Town of Gilman, Pierce County, WI.	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on a request for Site Plan Review for Mini Storage in the Light Industrial District, pursuant to Pierce County Code Chapter 240-75, for Dog House Garage & Warehouse Condominiums LLC, owner, by Tom Cogan, agent, on property located in Lot 4, Certified Survey Map (CSM) V12, P107 in the SW ¼ of the SW ¼ of Section 36, T27N, R20W, Town of Clifton, Pierce County, WI.	Lund
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/24/18)

MINUTES - Pierce County Land Management Committee Meeting, August 15, 2018

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Neil Gulbranson

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Eric Sanden

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 5th & 19th, October 3rd & 17th, all in 2018.

Approve Minutes: **Aubart moved to approve the August 1, 2018 Land Management Committee minutes/Gulbranson seconded. All in favor with Jeff Holst abstaining because of absence at the last meeting. Passed.**

Holst moved to amend the agenda and move item #5 to the end because of absence of the applicants/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M for Steven & Joan Tyvoll, owners on property located in the NW ¼ of the SE ¼ of Section 10, T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Tyvoll forward.

Staff Report – Emily Lund: The Department received a complaint in June 2016 regarding an unpermitted garage/shed being used for religious gatherings on the applicant's property. Staff contacted the applicants about the use of the structure and the need for County land use permits. Staff explained a CUP was required for hosting worship services and similar gatherings. The applicants explained the use was a multi-use shed for personal storage and office space. The applicants obtained a Land Use Permit on 7-26-2016 for a 24ft x 36ft pole shed, 6ft x 8ft pergola and 10ft x 12ft greenhouse that were permitted as accessory to a residential use. In April 2017, the Department received an additional complaint with documentation confirming the use of the shed was for religious worship and gatherings. Staff obtained information indicating the applicants operated "River Apostolic Center, a non-profit, tax-exempt, Christian Retreat Ministry." The website (<http://riversapostolic.center>) described the use began in August 2015. The applicants received an after-the-fact CUP on August 16, 2017 to convert the use of the shed to a Retreat Center. The 30 acre parcel is located in Section 10, Town of Spring Lake. PCC 240-88 defines Retreat Center in the staff report. The applicants utilize the house and pole shed for 1-2 hour long worship gatherings on Sundays and occasional weeknights. Their home and pole shed are handicap and wheelchair accessible. In the future, they propose to provide a home school co-op. Children (2-5 families) would meet twice a month for fellowship and group learning. The existing conditions are listed #1 - #7 in the staff report. Condition #2: The applicant and Building Inspector met on-site and determined necessary structural modifications. On July 18, 2018, the applicant received an after-the-fact permit from the Building Inspector to convert the personal shed to this commercial use. Their permit authorizes necessary improvements to be made by July 30, 2020. Condition #4: Staff contacted the DSPS Wastewater Specialist to discuss options for the septic system sizing. It was determined that recording of an affidavit restricting the wastewater flow for the dwelling and retreat center is an option. This essentially restricts the use of dwelling to two (2) bedrooms and allows up to 50 members/guests to use the bathrooms in the residence.

Another option is having portable outhouses (1 per 50 people) on-site. The applicants chose to record an affidavit for “Per Capita Flow” sizing based on occupants, flows and loads with the Register of Deed’s Office on 8-9-2018. There is no meal program, but an occasional potluck meal is offered. Current attendance is between 8-14 members. There are more than 20 off-street parking spaces available, with 1 space ADA compliant. No advertising signs and no retail activities are planned at this time. The Spring Lake Town Board recommended approval of this request on 7-11-2017. The Town Chair and Supervisor indicated no issues or complaints were reported within the last year. Their only concern was that the applicants comply with the uniform commercial code requirements the building inspector conditioned with the Town permit.

Staff Recommendations: Staff recommends the Land Management Committee consider whether the current conditions remain adequate to protect the public health, safety and character of the surrounding area. If determined to be appropriate, staff recommends the LMC renew this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate: (changes in **bold**)

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. The applicant shall work with the Town of Spring Lake Building Inspector, Todd Dolan, to ensure compliance with the Uniform Commercial Code (UCC) requirements as permitted. If the Building Inspector determines that a safety issue currently exists, use of the facility shall cease until it is code compliant.
3. There shall be at least 20 off-street parking spaces available, with a minimum of 1 parking space ADA compliant. There shall be no on-street parking.
4. **Based on the “Per Capita Flow” affidavit, the maximum retreat center members/guests shall not exceed 50 people. If a gathering exceeds 50 people, the applicants shall have adequate portable outhouses (1 per 50 people) provided.**
5. Applicants shall obtain a Land Use Permit prior to construction if they choose to have advertising signs in the future.
6. Applicant understands that expansion or intensification of this use will require modification to this CUP.
7. The CUP expires in 1 year. Renewals shall be completed before the LMC.

Chairperson Fetzer invited Steven & Joan forward: Mr. Tyvoll asked if staff had received a copy of the report from the building inspector. Lund stated no. Chairperson Fetzer asked if they had a meeting with the building inspector. Mr. Tyvoll stated they have to acquire an affidavit from the builder, cement person & electrician. After the inspection they didn’t have an exit sign so they have scheduled an electrician to come out and do that. Chairperson Fetzer asked about the septic stating that it appears that as long as they stay under 50 people there is no issue. Lund stated that is correct and noted that a per capita flow affidavit had been recorded.

Aubart moved to approve the renewal of the conditional use permit for a Retreat Center for Steven & Joan Tyvoll with conditions #1 - #7/Holst seconded. Holst stated time limits are interesting, when we ask for things to be done we would prefer they be done in a timely manner not just a week or two before renewal. Gulbranson noted that the issues identified in 2016 and 2017 have evidently all been addressed. Chairperson Fetzer stated there is a motion on the table, if no more discussion, we’ll vote. **All in favor. Passed.**

Discuss take action on proposed 2019 Parks Department Expenditures out of Park Development Fund.

Staff Report – Andy Pichotta: The Parks Department is proposing two expenditures out of the Park Development Fund as part of their 2019 budget. For a lot of years when you created a lot, money was put into a parks fund. Resolution 04-09 establishes parameters for allowable expenditures of the Park Development Fund as well as establishes procedures for approval of budgeted and non-budgeted expenditures. The Land Management Committee is required to provide a recommendation regarding both budgeted and non-budgeted expenditures. Resolution 04-09 is attached for your information as is the “Pierce County Goals and Activities” section of the most recently adopted Outdoor Recreation Plan. The current balance of the Park Development Fund is \$288,293. Proposed expenditures include a canoe/kayak landing dock at Nugget Lake County Park – for an estimated cost of \$17,000 and a “low profile” hiking trail/boardwalk at the Lee-Kay Forest – for an estimated cost of \$7,000. Pichotta noted that the only remaining mechanism for acquiring new funds was the revenue generated by timber sales and that once the money was gone there would likely be no more. Holst stated that it

made sense to ensure that enough money was left to develop another recreational opportunity if one should arise.

Staff Recommendation: Staff recommends the Land Management Committee formulate a recommendation to the Finance and Personnel Committee regarding the proposed expenditures.

Gulbranson moved to approve the proposed Parks Department Expenditures out of Park Development Fund as presented and forward a recommendation to the Finance and Personnel Committee/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a Private Outdoor Recreation/Dual Sport Event, pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, by Scott Freier, agent on properties located in the Towns of El Paso, Hartland, Isabelle, Salem, Trenton and Trimbelle, all in Pierce County, WI. Pichotta noted that the applicant still isn't present and suggested that the LMC might consider a one month renewal to ensure that the CUP doesn't expire before the applicant is able to attend a meeting. Holst suggested that given that we haven't had any complaints about this event in a couple years, we consider renewal tonight despite the applicant's absence.

Staff Report – Emily Lund: The Valley Springs Motorcycle Club Inc. received a CU P on June 15, 2016 to sponsor and hold an annual event called a dual-sport ride. A status report was given to the LM C on 8-17-2016 per condition #9. The ride is not a competition; it is an event that allows a limited number of riders to utilize a mixture of public roads, paved and unpaved roads, as well as off-road trails located on private property. Participants are required to have licensed street-legal light weight dirt bikes. They will follow an organized and mapped on-and off-road trial ride. There are many connecting points to stop for gas, snack and restrooms. In 2016-2018, the events were 1 day, but may be a 2 day event in the future. Commercial or club use of trails on private property triggers the need for a CUP. All property owners with off-road trails proposed for use in this event have signed waivers authorizing Scott Freier and Valley Springs Motorcycle Club to act as their agent through this CUP process and to allow event participants to drive off-road through their property. Valley Spring Motorcycle Club Inc. hosts an annual hill climb event in the Town of Hartland. They are sanctioned and insured by the American Motorcyclist Association (AMA). The club's mission is to positively impact Pierce County by having participants utilize local hotels, camp grounds, gas stations, restaurants and more. If they reach full participation, registration will be donated to local non-profits.

Staff Recommendations: Staff recommends the Land Management Committee consider whether the current conditions remain adequate to protect the public health, safety and character of the surrounding area. If determined to be appropriate, staff recommends the LMC renew this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate: (changes in **bold**):

1. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
2. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Dept of SPS, Dept of Public Health).
3. The dual-sport event may be held annually. The event shall not exceed two (2)-days in duration. Staff shall be contacted regarding any modifications to approved plans or any change in properties to be utilized for off road activities, to determine if a new CUP is necessary.
4. Hours of operation shall be 8am to 6pm, or as otherwise established by the LM C.
5. Emergency services (Sheriff's Dept and EMS) shall be given adequate notice of event and route.
6. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
7. A copy of the insurance and any changes to the insurance shall be submitted to the Land Management Department.
8. Camping shall be limited to the Gas-Lite property, contingent on owner approval.
9. **The CUP shall expire in 2 years.**
10. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

11. Applicant shall notify towns and the Land Management Department of future events. Chairperson Fetzer stated it looks good and there have been no complaints. Lund stated we have the insurance and they get things to us way ahead of time. They are setting their dates for the fall.

Holst moved to approve the conditional use permit renewal for a Private Outdoor Recreation/Dual Sport Event for Valley Springs Motorcycle Club Inc for Scott Freier, agent with conditions #1 - #11/Gulbranson seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Kevin Etherton to attend the annual LIS/GIS Consortium in Duluth in a month. **Holst moved to approve the request for Kevin Etherton to attend the LIS/GIS Consortium in Duluth, MN/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

CUP request for a nonconforming structure for Wayne Siverling in the Town of Gilman.

Renewal of CUP for a nonmetallic mining operation for William Holst in the Town of Trenton

Motion to adjourn at 6:29pm by Gulbranson/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, August 15, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 5 th & 19 th , October 3 rd & 17 th , all in 2018.	Chair
3	Approve minutes of the August 1, 2018 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on a request for renewal of a conditional use permit for a Private Outdoor Recreation/Dual Sport Event, pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, by Scott Freier, agent on properties located in the Towns of El Paso, Hartland, Isabelle, Salem, Trenton, and Trimble, all in Pierce County, WI.	Lund
6	Discuss take action on a request for renewal of a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for Steven & Joan Tyvoll, owners on property located in the NW ¼ of the SE ¼ of Section 10, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
7	Discuss take action on proposed 2019 Expenditure out of Park Development Fund.	Pichotta
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/3/18)

- **Revised 8-7-18 @ 11:58am**
- **Revised 8-13-18 @ 12:57pm**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647

MINUTES - Pierce County Land Management Committee Meeting, August 1, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson and Eric Sanden

Others: Andy Pichotta, Kevin Etherton, Adam Adank and Shari Hartung

Absent: Jeff Holst

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 15th, September 5th & 19th, all in 2018.

Approve Minutes: **Aubart moved to approve the July 18, 2018 Land Management Committee minutes/Sanden seconded. All in favor with Joe Fetzer abstaining because of absence at the last meeting. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District pursuant to Pierce County Code Chapter 240-67A(2) for Michael Dorricott, owner on property located in Lot 2, Marissa's Addition, in the NW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Michael Dorricott forward.

Staff Report – Adam Adank: The applicant's property is located at W9636 295th Ave. In 1995 a former property owner obtained a Land Use Permit (LUP) for a 14' x 70' mobile home and a 26' x 30' garage. When the garage was constructed it encroached on the 10' rear yard property line setback. The applicant was able to estimate a property line boundary by running line from 2 apparent property markers. Based on these markers the existing garage is approximately 5'6" from the rear yard property line. Lot lines have not been verified by a surveyor. The applicant has proposed to construct a 2-3 bedroom dwelling addition off the west side of the existing garage. The proposed plans consist of a 26' x 30' addition with a 14' x 30' room located in the roof truss design. A smaller 16' x 16' one story addition is also proposed to be added to the west side of the 26' x 30' addition. The applicant has proposed that new construction be setback 4 feet from the rear yard property line. The location of the existing mobile home in relation to the rear yard property line and existing garage restrict the applicant's area to build. The applicant intends to live in the mobile home during construction of the proposed dwelling. The property is located in the Town of Diamond Bluff. The property is zoned Rural Residential 20. Adjacent property is zoned Rural Residential 20 and Agriculture Residential. Adjacent land uses surrounding the property are residential and wooded. Pierce County Code (PCC) §240-67A(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76." PCC 240-76A states "Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure or expansion or intensification of a nonconforming use." PCC §240-23 states, "Minimum requirements. Developments shall meet the minimum requirements for the applicable district shown in the Table of Dimensional Requirements." PCC §240-42E states, "Temporary residence during construction of principal dwelling. An existing dwelling or manufactured home may be used as a temporary residence during construction of a new dwelling on the same parcel, subject to the following.

(1) A land use permit shall be obtained for the temporary residence.

- (2) A temporary residence, if a manufactured home moved onto a lot, shall comply with all setback requirements of this chapter.
- (3) Such temporary residence shall be connected to an approved wastewater disposal system.
- (4) A permit for a temporary residence shall lapse at such time as the principal dwelling is completed and has been connected to utilities or 12 months from the date of issuance, whichever is earlier.
- (5) The temporary residence shall be removed or destroyed at the time the permit for such temporary residence lapses or converted to a nonresidential use.

A sanitary permit was obtained in 1995 for a 3 Bedroom Private On-site Wastewater Treatment System (POWTS). The existing well is located under the front part of the existing trailer over 14' from the proposed addition and the septic system is located south of the existing trailer. Both meet the required setbacks from the proposed addition. The proposed expansion area is currently used as open yard space and should not negatively impact the functionality of the site. The nearest dwelling is located approximately 125 feet to the west of the proposed expansion. The Town of Diamond Bluff recommended approval of this request on 7-12-2018. The Town did not reference its Comprehensive Plan.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC approve this conditional use permit with the following conditions:

1. Activities shall be conducted as proposed in the application and as presented to the LMC unless modified by another condition of this permit.
2. The applicant shall maintain a rear yard property line setback of 4 feet or as established by the Land Management Committee of ____ feet. Lot line shall be verified by a registered land surveyor or as agreed upon by the adjacent property owner.
3. A Sanitary Reconnect Permit shall be obtained prior to any construction.
4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. The applicant shall follow PCC §240-42E. Temporary dwelling during construction of principal dwelling and secure all necessary permits.
6. The proposed expansion shall be completed within 12 months of CUP approval.
7. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the public hearing. No public comment. **Chairperson Fetzer closed the public hearing.** Sanden asked Michael if the mobile home is going to be removed after he has completed the construction. Mr. Dorricott stated yes, it needs to go. Gulbranson asked if the four feet to the lot line, does that include the overhang or is the overhang going to encroach on that a little farther. Mr. Dorricott stated he is making the overhang in the back about 16" to keep it to a minimum. Gulbranson asked if it will be four feet minus 16". Mr. Dorricott stated yes. Staff was great, they came out. They were very helpful. There is a tree that is holding the line out from where there is a stamped certified survey marker. So they tried to estimate where that was at. He is trying to be as accurate as they can in their description. That line actually might be over a little farther. He is going to try to not even get to four foot. He is going to try to bump that thing out toward the trailer. He was trying to line up the front of the garage. He thinks maybe he needs to make a two foot bump this way. He isn't going to like what it does with the roof line. It's going to put the valley close over to where this little hip is but it is doable. He is just going to try to keep Randy happy, in the back. He will do his best to keep it this way and if that means he has to have a lesser overhang in the back, nobody is going to see that. He is worried about some curb appeal in the front. It's a really nice garage and why everything was crammed way in the back of the property he doesn't know. It's basically the only place he could build anything to improve the quality of living there. Gulbranson asked if there is anyone that lives right behind. Mr. Dorricott stated no, Randy has a lot back there. He lives down a bit. He is kind of working with Mr. Dorricott on this. He wanted to mention that he is only going out 30ft which doesn't give you a lot of room for a living room, kitchen area. That is why he had the idea of putting that lower level. We are going to step in away from that property line. It was

mentioned in the staff report a 16ft x 16ft could he push that to 20ft. It will not be approaching the property line at all. That exterior wall does not need to go all the way through. That could be trussed and that would give him another four foot of living space in that downstairs area. Chairperson Fetzer asked if it is a 20ft x 20ft. Mr. Dorricott stated 20ft x 16ft. Mr. Dorricott showed the committee what he was describing. He doesn't know what Todd Dolan will say about monolithic slab on monolithic slab. Chairperson Fetzer asked about the need for a certified surveyor. Pichotta stated he can see a strong argument for having a survey done. Chairperson Fetzer asked if there is a fence line there. He described a situation he had been in regarding property lines on a parcel that had been in a gentleman's family for years. The new owner started putting up a new fence which created some issues. He is just looking to protect Mr. Dorricott. Mr. Dorricott stated he has talked to surveyors and they don't even want to go to Diamond Bluff, it's apparently all messed up. Pichotta stated the Marissa Addition is new versus the old plat in the village. Mr. Dorricott noted that the marker they were going off is stamped with the official surveyor sign. He is assuming that is right. Chairperson Fetzer suggested he stay on the good side of your neighbor. Mr. Dorricott stated he thinks his neighbor is all for it because it's definitely an improvement to the neighborhood. Chairperson Fetzer asked if there is anything that we need from the neighbor. Pichotta stated in condition #2, as agreed upon by the adjacent property owner. Also condition #1 states: as proposed in the application and as presented to the LMC, so he doesn't see that we necessarily have to change anything to address the four foot larger issue. **Sanden moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Michael Dorricott, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7, modifying condition #2 to read "The applicant shall maintain a rear yard property line setback of 4 feet. Lot line shall be verified by a registered land surveyor or as agreed upon by the adjacent property owner./Gulbranson seconded. All in favor. Passed.**

Discuss take action on updated Land Records Modernization Plan.

Staff Report – Andy Pichotta: As you probably recall, we actually acted on an update to the plan last year. Pierce County's Land Information Council recently met, last week, to review the proposed changes to the Plan as well as the proposed expenditures from the Land Records Modernization Fund and the WLIP grant program. Minor changes were proposed to be made to the plan to reflect progress made since the last update and to enable future projects. Proposed changes to the plan were approved by the Land Information Council. Andy introduced Kevin Etherton, our GIS Mapping Specialist, he can give you a brief synopsis of some of the changes that are in the plan and also when we get to that part of the budget we are proposing a substantial chunk of dollars toward land information activities and he is here to answer any questions you may have in regard to that. Etherton stated the first change they are kind of excited about. We are going to do the parcels in house, eventually. Probably 2019, 2020, the Real Property Lister is going to be doing the parcels in house so part of the change is training. He will be a backup for her as well. That is project number 1. Right now we have Pro-West as our contractor. They have probably been ten years plus. Pichotta stated more like 18 plus. Etherton stated they redid all our parcels for us and right now we are in the maintenance phase so any new parcels that come in we thought we could have Angela do it instead of pushing it to Pro-West and she is a little excited about it as well. Project #2, Register of Deeds has a data entry project that Julie Hines is in need of. It's about indexing documents, about a thousand hours and she is proposing hiring somebody. Pichotta stated temporary staff. Etherton stated Project #3 is a bigger project from Julie, scanning all the old documents because we really don't have a backup system right now. They can be put in the computer and accessed later on. That project is quite expensive but we think it's a necessary project indeed and we have the money for it right now. Number 4, every five years we do an aerial ortho flight and 2020 is coming up already. We are going to redo that flight as well as possibly doing Oblique's. They are like the birds eye, side angle view and the Sheriff's Department really likes that if they ever have to go into a situation they can research the house ahead of time. It's pretty neat. We currently have those Oblique's as well on our website. Number 5 replacing old map books that the Treasurer has in her office. They are going to buy some new books and rethread them. Number 6, this will help Louie, our surveyor, out. Right now he has a base station he uses for surveying. It's eighteen years old and he is concerned that it is at the end of its use. We are not going to get a new one until it dies but we need to have some money handy just in case

that happens. As well as we are going to get a radio for Louie when he is in the field. He is out of cell range and needs something for an emergency situation. He was in the woods last year in a ravine and couldn't get cell service. So we are going to dedicate some money so he can contact the sheriff's office. Pichotta stated if you recall, the surveyor department used to have a surveyor tech position that we did away with five or six years ago. The reason being that technology has advanced to the point that really a single guy can basically do everything but that brings up some safety concerns especially if you are in the rougher parts of the county which is where he typically ends up being. Another part of the plan that we have talked about previously, because the State is throwing all this money toward land information and land records, they basically want us to give data away. When somebody calls and requests information, really the only way we can charge for it is if we do some kind of a value added component. If we do custom maps or something that we use staff time for. If it's simply raw data, the State really wants us to just give it to folks. There is something in there that relates to that. That is one of the changes. As you may recall, we are going to take a peek at our fee structure; that is one of my goals for next year. As part of that, we will also be addressing the cost for GIS Data and a substantial chunk of that will have to be free. We still do a decent amount of custom maps for folks. Sanden stated that actually is a smart move, trying to support the GIS Office off of custom map fees is kind of an old model. The newer better way to do it is to give away the data and he is glad to see the State is supporting that. He is thinking Dakota County, Washington County, for years they tried selling maps as a way to generate their revenue and it just was not a good way to do it. Pichotta stated you just can't sell enough. If you sell a couple grand worth of maps you are doing pretty good. Sanden stated right, plus everything is so open now, it just doesn't make any sense. Etherton stated St. Croix has it available on their website too now. Sanden stated he is glad to hear the Oblique's are coming in too, assessors use it, insurance companies use it, fire departments use it. What's nice about Pictometry Obliques is Pictometry software itself, on the border areas of Counties, they will let you get that information as well. So Prescott has 2018's from Dakota County as well. Same as St. Croix, they flew in 2017 so in River Falls we have 2017 flight overlap. Gulbranson asked how much is a total station if you are going to buy one. Pichotta stated about \$25,000.00. Gulbranson asked if that would go up quite a bit every year. Pichotta stated no, he thinks it's pretty close to what we paid 18 years ago. That's one of those things we will put in the budget every year. He has proposed \$241,000.00 expenditures out of Land Records Fees and Grants but the reality is that we will probably spend a third of that in the next year. But we are setting it up if Julie does get a RFP done and gets a contractor identified; she could start on that sooner than later. The reality is having a whole bunch of records that aren't backed up is not ideal. If something were to happen that would be very unfortunate.

Sanden moved to approve the Land Records Modernization Plan as proposed/Aubart seconded. All in favor. Passed.

Discuss take action on proposed 2019 Land Management Department Budget. Staff Report – Andy Pichotta: Pichotta stated as is typical about 95 ½ % of department costs are associated with personnel. About 4 ½ % are associated with operating costs. There is really no change in any of the budgets other than our copier maintenance went up \$13. That is the one increase in operating otherwise its all personnel. On the first page there is 1, 2 & 3% increases and that is all consistent with the costs of personnel. The second page is the Land Records Modernization Fund and Grants. We expect we will get a Base Budget Grant probably of about \$46,000, we will retain about \$54,000 which will give us about \$100,000 to put toward Land Records activities. It is anticipated that a Strategic Initiative Grant will once again be available for 2019 but sounds as though the amount available will be slightly less than typical. We have for the last couple of years received \$50,000 but it looks like it will probably be \$35,000 or \$40,000 this year. The balance of retained fees that we have right now is about \$200,000. That is fees that we have retained in previous years and just haven't spent. Pichotta stated he is kind of cautious with it but the activities that are proposed in the report and Kevin touched on a number of them. The \$150,000 scanning the old documents in the Register of Deeds Office is an estimated cost. We had a ballpark figure of about \$80,000 for a portion of that she then realized she has twice as many documents as she thought she had that needed to be scanned. We adjusted that out, recognizing that \$150,000 will get us in the right direction but what will happen is whoever the consultant/contractor is, will show up, have to set up shop somewhere in the building, because the files can't leave the courthouse and they will have some very specific

equipment that they will need to bring. They will basically have to live out of a hotel and crank out the scanning of those documents until it is done. It's going to be a spendy proposition but is something that needs to be done. The County Planner budget only increase that isn't related to personnel is the Sundry Repair & Maintenance Services were it went up \$15. There isn't much for change. The Zoning budget, 3% increase in a number of things: salaries, social security, retirement and medicare, which is consistent if one goes up they all would be similar percentages. No changes in the operating side of things. Surveyor budget is basically the same deal but because Louie is at the top of the grid the adjustments are 1% versus 3%. Most of the folks in the Zoning category have the 2 ½% step and the 1.25% cost of living in January. GIS budget is similar, 4% increase in all the other categories associated with the cost of living adjustment as well as step increase for Kevin. Overall it brings up a 3% increase in that budget. Next is the Land Information Grant, 2017 actual was \$82,000, we had estimated \$46,000 for this year and we may see a bit more this year because there is a Strategic Initiative Grant which you authorized. He has increased the expected \$46,000 with another \$40,000 which is anticipated for that Strategic Initiative Grant so that is why there is that increase in Land Information for the Professional Services budget. He doesn't know about the 2020 or 2021 as far as the Strategic Initiative Grant so that is why we are back down to \$46,000 for those projections. Sanden asked if that is an expense for the grant. Pichotta stated yes, that is an expense account. It's what we anticipate getting and spending on professional services. The next budget is actually the Land Records Modernization Fund, it's the retained fees in the ROD Office. It's an expense budget that we have to approve because as the Land Information Officer it's under his jurisdiction, however, it is one of Julie's budgets. Under salaries temporary is \$11984.00 and that is for the hours to do scanning and indexing within the office and then the \$142,958.00 is the difference between the \$241,000.00 of proposed activities which are down the road minus the \$86,000.00 in grants. Moving along to revenue, again \$46,000.00 for the Base Budget Grant, \$40,000.00 with the Strategic Initiative Grant and GIS revenue in \$1500.00 so we are anticipated total revenues basically associated with Land Records around \$87,750.00. That is on top of the \$200,000.00 we have sitting in the Land Records Fund right now. Next is Revenue, we are anticipating pretty close to the same. Sanitary fees and revenues were a little higher last year but he feels that was a bit of an anomaly and he anticipates about \$20,000.00 for the next few years in that regard. Land Records fees, we saw about \$4500.00. That is fees associated with surveys. He bumped that up a little bit. He is anticipating \$3000.00 versus \$2000.00 budgeted for last year. Monumentation fees and surveyor fees, basically the same moving forward. State Aid Zoning Funds, this is the Wisconsin Fund which is going to sunset. We will only see this for a couple more years and that's why in 2020 he is forecasting \$20,000.00. Some years we get nothing, some years we get \$30,000.00. Over the last 15 years, it has averaged \$15,000.00 that is why he used that number. It is basically pass through dollars. It's money to help folks who had to replace their septic systems that meet certain income requirements. 2021 he is forecasting no money at all because that fund will go away. The last page, page 11, is the expense account associated with that same fund. If the committee is comfortable with the budget, he would ask that you approve it as proposed. **Sanden moved to approve the proposed 2019 Land Management Committee Budget as presented/Gulbranson seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Renewal of a CUP for a nonmetallic mine in the Town of Trenton for Bill Holst.

Renewal of CUP for a Private Outdoor Recreation for a Dual Sport Event.

Renewal of a CUP for a Retreat Center in the General Rural District for Steve & Joan Tyvoll.

Motion to adjourn at 6:45pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, June 20, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 18th, August 1st & 15th, all in 2018.

Approve Minutes: **Gulbranson moved to approve the May 16, 2018 Land Management Committee minutes/Holst seconded. All in favor. Passed with Aubart abstaining because of absence at the last meeting.**

Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing and Rail Load-Out Facility) located in the Industrial District for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited William Holst forward. Jeff Holst recused himself from discussion and voting because of possible conflict of interest.

Staff Report – Brad Roy: In 2012, WISC obtained a permit for a Mineral Processing and Rail Load-Out Facility in the Town of Trenton. In 2014, WISC presented staff with information which demonstrated that they had acted to establish the use without constructing the facility. Prior to the 2016 renewal, WISC indicated that it no longer has any intention of constructing a processing and rail load-out facility on the site. The property owner, William F. Holst III, assumed operation of the proposed facility and has continued to work to establish a new mineral processing and rail load-out facility on the site. Adjacent land uses are nonmetallic mining to the east and west, residential to the north across Hwy 35 and agriculture to the south. Higher density residential is located near the proposed site approximately one-half mile to the south. The proposed facility would receive, wash, dry, screen silica sand for shipment and is proposed to operate 24 hours a day, seven days a week. The applicant has been working with the BNSF railroad and has indicated that plans for rail siding will be approved. The first phase of the plan is to construct four rail sidings, one to connect to the main line and three others for the loading of rail cars, as well as a structure for loading dry sand onto the rail cars. The dry sand structure is proposed to be 60' x 100' with a height of 40'. Trucks would enter the site and dump into one of three hoppers. The sand would be conveyed from the hopper to a corresponding rail line. The conveyors will be covered and have a dust collection system to reduce/eliminate dust leaving the site. This design will allow for the facility to ship sand for up to 3 different sand operations. Final plans for the conveyors have not been presented to staff. Future phases call for the construction of a wash plant and dry plant. The applicant will be able to provide additional information regarding rail plans, structures and timelines at the meeting. A new Traffic Impact Analysis (TIA) will be needed to determine if any road improvements are required. The applicant previously indicated that outbound rail shipments will average 200 cars per week. Numbers will probably be different due to the phasing of the project. Unsaleable product will be used for mine reclamation. The applicant intends to install two high capacity wells in the future for the wash plant but as we know final plans haven't yet been submitted. WDNR regulates and monitors storm water and process water through the WPDES Permits. The applicant will work with the DNR to determine the need for that. Operation of the plant will need to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures

Plan. These plans will identify potential sources of storm water pollution and spills of oil-related materials and other chemical and establish controls to minimize any potential impacts to surface waters. A Fugitive Dust Plan will need to be developed for the facility. WISC submitted one. The applicant has indicated they will submit a new one but work to have the same methods of dust suppression as the plan that was approved. Staff received concerns from nearby residents about the original proposed facility. The Town of Trenton recommended approval of the original proposal on May 9, 2012 without reference to their Comprehensive Plan and with the following recommendations:

- Extend berm on Hwy 35 and include trees on top.
- Lights shall be adjusted away from residences.
- Noise controls shall be implemented.
- Berm shall be constructed along County Road K to block view of the railroad.
- All rail cars shall be behind the berm of Hwy 35.
- Trucks shall have a drive-through unload to avoid back-up alarms.

Staff has contacted the Town of Trenton Chairperson and there were no concerns about this renewal. The existing conditions #1 - #14 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no changes or additions are necessary, staff recommends that the LMC renew the CUP with the following conditions:

1. Activities shall be conducted consistent with the submitted plan.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office.
4. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
5. Applicant shall be subject to control methods deemed adequate by the Land Management Committee for silica emissions if current or future studies suggest a significant public health threat exists.
6. Any polyacrylamide flocculants must be used consistent with WI DNR permits.
7. The Fugitive Dust Plan shall include dust suppression methods for any stockpiled materials, at sand transfer points and during instances of exceptional events such as high winds.
8. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
9. This permit shall expire in two years. A status report shall be made to the LMC in one year.
10. The Town of Trenton's recommendations/comments shall be adhered to.
11. Site plan approval and any potential height exemptions shall be obtained prior to any construction.
12. Applicant shall present proposed plans to the Town of Trenton. Concerns raised by the Town can be addressed through site plan approval or as a modification to this permit.
13. The applicant shall submit a Traffic Impact Analysis or similar document, to the WisDOT and make any suggested road improvements.
14. Any unforeseen impacts shall be addressed to the satisfaction of the County.

Chairperson Fetzer asked what the Town of Trenton recommendations were. Roy indicated that they were listed in the staff report, about the berm on Hwy 35 and the lights. Roy stated he believes the berms have already been put in. They have completed what they can at this time.

Mr. William Holst explained it's been a long process and that it takes forever to get anything approved by Burlington Northern Santa Fe. He has received tentative approval from the big shots there. They plan to go ahead. What they have to do now is wait for the railroad to come up with a cost of the two switches. Because you have to prepay the full amount which is about \$4 million dollars for the two switches and then they will put it on their construction schedule. He thinks now the earliest they could be installed would be next spring.

Sanden moved to approve the renewal of the conditional use permit for a Heavy Industrial Use (Sand Processing and Rail Load-Out Facility) for William F. Holst III with conditions #1 - #14/Aubart seconded. All in favor. Passed.

Discuss take action on a request for modification of a conditional use permit to expand the amount of unreclaimed acres for CMC-Spring Valley LLC (County Materials) owner on property located in SE ¼ of the SE ¼ of Section 9 and the NE ¼ of the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Ted Peterson forward: Mr. Peterson stated **Staff Report – Adam Adank:** County Materials obtained a conditional use permit for Nonmetallic Mining in April, 2007. Mining operations began in 2008. The conditional use permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. Currently, the primary crusher is located in the lowest level of the quarry with the secondary crusher and lime plant in the mid-level of the quarry. The wash plant and other operational structures are located above the quarry. The original application allowed no more than 30 unreclaimed acres at any given time. In April 2012, the number of allowable unreclaimed acres was increased to 40. The applicant is now requesting to increase the number of allowable unreclaimed acres to 50. The property is in the Town of Spring Lake and is zoned General Rural. The original operation plan states that excavation would create a floor elevation of 1050ft, where all activity would be conducted. The average current floor elevation is 1100ft and the processing area has an approximate elevation of 1160ft. The average floor elevation of the quarry is 1100ft. County Materials has begun to lower the floor to 1060ft. The floor of the expansion area will be no lower than 1040ft. Staff asked the applicant how many open acres are needed before the entire operation can be moved to the quarry floor and if this proposed increase would enable the move. The applicant responded that “It is not feasible to move the entire operation into the lower elevations of the floor under current market conditions. It would be detrimental on sales/profitability to move the wash plant and stockpiles into the lower level of the quarry due to multiple operational concerns. Please consider the vast majority of the dust and noises generated are from our crushing activities. Both the primary crusher and secondary crusher are located in the lower and mid-levels of the quarry. We do plan to move the lime plant along with the secondary crusher into the lowest floor level within the next five years, if the current market conditions continue to exist. In the next ten years we could evaluate the entire process to see if it would be feasible to move more of the operation into the lower levels of the quarry.” Reclamation has begun in the North/West part of the quarry and will continue in an easterly direction until it is full to the haul road which is expected by late 2018/2019. The reclamation activities will then be moved to the quarry floor against the east wall. The operation received numerous complaints when it began operation about noise, dust and appearance. Staff has not received any complaints since the last renewal. Staff spoke with Town of Spring Lake Chairperson, Richard Johnson, regarding the modification of this conditional use permit. Mr. Johnson stated that the town board voted to approve the expansion and the town has no additional comments or concerns. The existing conditions are listed in the staff report #1 - #28.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed modification at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed modification with the following conditions (**proposed modifications in bold**):

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm with nonproduction hours 6pm to 8pm, Monday through Friday and 8am to noon on Saturday. Operation shall be closed on holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.

4. Storm water measures shall be implemented and maintained consistent with Land Conservation Department recommendations.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be consistent with submitted plans.
8. **Applicant shall determine if the reclamation plan needs updating and shall submit an updated financial assurance bond based on increased acreage.**
9. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
10. Zoning Office shall be notified if groundwater is encountered.
11. All structures and signage shall be permitted by the Zoning Office.
12. An elevation benchmark shall be established.
13. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
14. Applicant shall comply with NR 135 Annual Reclamation Permits.
15. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
16. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline and for all other properties agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
17. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
18. The recycling of concrete products shall be allowed.
19. This CUP shall be reviewed for renewal in two years unless compliance issues arise.
20. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
21. All loaded trucks shall be covered (tarped) prior to leaving the site.
22. **The quarry shall have no more than 50 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.**
23. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 feet from the property line and at 1 ½ miles from property boundary and shall submit results to the Land Management Department. Such readings shall be taken three times annually and at locations agreeable to Land Management Department Staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
24. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
25. A lockbox with access key shall be made accessible to emergency personnel.
26. Applicant shall provide a status report to the LMC at the request of the Town of Spring Lake.
27. Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.
28. The fugitive Dust Plan shall be implemented as approved.
29. Applicant is allowed to water anytime necessary to mitigate off-site dust impact.

Jim Small stated we discussed it at the April meeting the reason for needing more room. It's mainly due to our experience in that pit. There are some valleys in there that have extra overburden and because of the extra processing they have to do to meet MNDOT's specs for all of their products at Roberts. They are generating some waste and they have a lot of ag lime if anybody is interested. The piles have gotten bigger, the overburden piles have gotten bigger. These will leave them some room to move around. It's getting pretty tight in the quarry floor. Ted Peterson is their Western Region Aggregate Manager, so he is there on a very regular basis,

several days a week at a minimum to watch things. He hopes that everybody agrees that that has been a vast improvement. It's made his life easier. That is why we need the 50 acres. They are planning on that overburden pile on that map that he handed out; the majority has been seeded and should be able to get some extra acres closed from Land Management. They are finished on that edge. Hopefully with 50 acres they can have room to move around and keep it at that for at least the foreseeable future and get it opened up. Ted Peterson stated the ag lime has been tough on it for sure. Sales are down, he talked to his dad and he said corn is down another \$.60 this week. They aren't getting the farmers coming in. They just had MSHA there today and yesterday and they had a perfect visit with zero citations which is rare. We've cleaned it up quite a bit and it's operating really well as far as being safe and keeping it clean, keeping the noise and dust down. They believe they are operating very professionally. Chairperson Fetzer stated it shows on not receiving complaints and he has commented to numerous people of issues that we had and how things have turned around. It's nice and it makes our job easier. Holst stated some of it can be attributed to the fine Town Board also. Richard Johnson stated they have been good neighbors. They have complied to what they said they would. We haven't had any complaints. The one thing about all loaded trucks shall be covered. Their trucks are and it's hard to regulate others but we don't get any complaints on that anymore. Mike Jacobson stated Ted has been a pleasure to deal with. He can get ahold of him almost anytime, cellphone, email, responsive and that is what they are looking for. If there are issues, they resolve them before they come to a head. It's been a remarkable turnaround for the neighbors up there and in the Town. Thank you to Land Management for staying on it, it helps. Mr. Johnson stated he thinks it was a little culture shock to some of the neighbors when this started. That had never been around a quarry, they are noisy. We were up there one night and there was more noise coming from the chopper on the other side of the road than it did from the quarry. **Holst moved to approve the modification of the conditional use permit to expand the amount of unreclaimed acres for CMC – Spring Valley LLC (County Materials) with conditions #1 - #29/Gulbranson seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated the next meeting will be on the 18th, given that the 4th falls on Wednesday.

Public hearing to consider a request for a CUP for expansion of a nonconforming structure in the town of Trimble for Greg Knoll.

Public hearing to consider and take action for expansion of a multi-family dwelling in the Rural Residential 20 District which would be the Prairie View School. They want to increase the number of units in there by one which technically is an intensification which requires a new CUP.

Potentially have a request for a conditional use permit for a campground by the Town of Trenton on the former Barb's Dam property, it was a Trenton buyout piece down near Everett's Resort.

Closed session to do Andy's performance evaluation.

Chairperson Fetzer asked if the Wieser request from Salem is coming in. Andy stated we haven't seen an application yet but it is possible.

Motion to adjourn at 6:28pm by Holst/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 16, 2018

Present: Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Emily Lund, Adam Adank and Shari Hartung

Absent: Jon Aubart and Joe Fetzer

Acting Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 6th & 20th, July 18th, August 1st & 15th, all in 2018.

Approve Minutes: **Sanden moved to approve the April 18, 2018 Land Management Committee minutes/Gulbranson seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the General Rural District, pursuant to Pierce County Code Chapter 240-40A, for Scott & Angela Mathison, owners on property located in Lot 4, Certified Survey Map (CSM) in the SW ¼ of the NW ¼ of Section 9, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Holst invited Scott Mathison forward. Mr. Mathison explained that they did some remodeling in an out building for his Mom & Dad to use as a part-time home/residence basically during the week then they go up north to their cabin on the weekends. When he built the shed in 2015, back then it wasn't used for that. This just happened this spring. When they drew the permit for the sanitary, he was made aware that he needed to get this done that's why he is here to get this done right.

Staff Report – Adam Adank: On May 21, 2015 the applicant visited the Land Management Department to obtain a Land Use Permit to build a 2016 sq ft detached garage (only) to serve as an accessory structure to their existing 3906 sq ft 3 bedroom dwelling located at N8354 410th Street. On March 5, 2018 the applicant submitted a sanitary permit for a holding tank to be connected to the existing garage built in 2015. The sanitary permit application also indicated that the garage would have one bedroom. Subsequently, the applicant was contacted regarding the need for a CUP for an accessory residence if the garage was going to have a bedroom. Through discussions with the applicant, staff became aware that half of the garage (1008sq ft) had already been converted to living quarters with a bedroom, kitchen, bathroom, laundry room and living/dining area. At this time the applicant was informed that a CUP for an accessory residence would be required to bring the property into compliance with Pierce County Code. The applicant owns a 22.202 acre parcel located in Section 9, Town of Gilman. The property is in the General Rural zoning district. Pierce County Code (PCC) §240-40A allows accessory residences which are accessory to single-family residences in the General Rural District with the issuance of a CUP. PCC §240-88 defines Accessory Residences and Accessory Buildings. The existing primary residence has a total floor area of approximately 3906 sq ft. The portion of the garage that has been converted to living quarters is approximately 1008 sq ft. The septic system for the principal residence was permitted and installed in 2002 for a 3 bedroom mound system. The applicants were issued a State Sanitary Permit for the proposed accessory residence on 3/5/18. A 2000 gallon holding tank was installed on 3/14/18 (Sanitary Permit #471082018). PCC Ch. 115 Numbering of Building and Roads: states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The Gilman Town Board recommended approval of this request on 4/11/18 without any concerns or recommended conditions. The Town

did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a separate uniform address number and sign for the accessory residence.

Chairperson Holst opened the hearing to the public. No public comment. **Chairperson Holst closed the public hearing. Sanden moved to approve the conditional use permit for an Accessory Residence for Scott & Angela Mathison, due to the fact it is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #2/Gulbranson seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for two Accessory Residences in the General Rural District, pursuant to Pierce County Code Chapter 240-40A, for Robert Hunczak & Denise Hackel, owners on property located in the SE ¼ of the SW ¼ of Section 31, T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Holst invited Denise Hackel forward: Ms. Hackel stated they have an apartment over their garage that is used by a person that helps with the farm. They have a daughter that is disabled and has always lived on-site. When her mother passed away she left an estate and they wanted to get her a more permanent place to live for the rest of her life. She is 31. We would like to have a single-wide manufactured home put on the property right adjacent to theirs.

Staff Report – Emily Lund: The applicants would like to permit a manufactured home for their daughter to live on-site and help on the farm. Currently there is an apartment above the garage, where a hired farm worker lives. The garage was permitted in 2004 along with the principal dwelling. This CUP would bring the existing apartment into compliance with Pierce County Code and authorize the placement and use of the manufactured home. The property is located in Section 31, Town of Spring Lake and is zoned General Rural. Pierce County Code (PCC) §240-40A(2) allows accessory residences which are accessory to single-family residences in the General Rural zoning district with the issuance of a CUP. PCC §240-88 defines Accessory Residence and Accessory Buildings. The applicants own 31 acres with a well, house, garage, several sheds and pastures. There is also a mound septic system connected to the house and garage. The principal residence was permitted in 2004 with 1,450 sq ft with a main floor, loft and no basement. The applicants propose to have a 14ft x 56ft (784sq ft) manufactured home brought to the site with a cement slab foundation. The accessory residence is proposed to be used by the owner's daughter. The garage apartment is 24ft x 30ft (720sq ft) upstairs in the garage. The main floor of the garage is used for storage. The residences will use the existing access off of County Road G. The mound septic system was permitted in 2004, is sized for 3 bedrooms or 6 people total and is connected to the house and a bathroom in the garage. The applicant's plumber obtained a Pierce County Sanitary permit on 4-9-2018 to connect the proposed manufactured home to the existing septic system. An Affidavit restricting the "Per Capita Flow" for each structure to the septic system shall be recorded with the Register of Deed's Office. PCC Ch 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The applicant will need to obtain a separate uniform address number for both accessory residences. The Spring Lake Town Board recommended approval of this request on 4-23-2018 with suggested conditions that "No more than 6 people total living in any of the residences at one time. [The] building inspector to inspect activity center as well as the new single-wide mobile home." The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided this use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed uses at the proposed location are contrary to the public interest and whether they would be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above staff recommends the Land Management Committee approve this conditional use permit for two accessory residences with the following conditions:

1. An Affidavit restricting the “Per Capita Flow” for each structure to the septic system shall be recorded with the Register of Deeds Office.
2. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The applicant shall obtain a separate uniform address number and sign for both accessory residences.

Chairperson Holst opened the hearing to the public. No public comment. **Chairperson Holst closed the public hearing.** Sanden asked staff, we are doing two of these at once, is there a limit to the number of accessory residences in a General Rural zone and if the combined square footage is more than the principal structure is that something that we need to consider. Lund stated, it just states that they have to be subordinate too, it doesn't say the combining of them in the code. We can look at it a different way too, density, each zoning district has a density so we could count up the density allowed on 31 acres and it still allows these three homes. They could do a land division and make the daughter's home on a different lot or just keep it on this one. It could be allowed. **Gulbranson moved to approve the conditional use permit for two Accessory Residences for Robert Hunczak & Denise Hackel, due to the fact it is not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Agritourism for Dome Ranch in the General Rural District, pursuant to Pierce County Code Chapter 240-35B, for Robert Hunczak & Denise Hackel, owners on property located in the SE ¼ of the SW ¼ of Section 31, T27N, R15W, Town of Spring Lake, Pierce County, WI. Ms Hackel explained that they operate a very small business called the Dome Ranch. It's got a couple different facets; one is actually declining every year, that would be the fieldtrip aspect. They started that for her daughter so she could have meaningful employment. However, they are very non-profitable. They probably have 15 this whole summer, maybe two or three a month. Generally about 20 to 40 kids come on a bus and they introduce them to country life and talk about gardening, animals, woods and teach them something they are doing to save the bees this year. The other part of the business is actually the business that is doing really well and they work mostly with Pierce County Human Services with people that are clients of Pierce County Human Services and they come to the Dome Ranch for therapeutic time spending time just petting the animals, doing some painting, doing some crafts, walking in the woods or working on daily living skills toward their recovery. They are one on one, one staff with one client so there is never large volumes of people there and it's only daytime and there are no overnights or weekends.

Staff Report – Emily Lund: In April 2018, the Department received a complaint that the applicants were operating a business from their residence called “Dome Ranch”. Staff obtained additional information from the applicants and their website (<http://www.domeranch.com/>) indicating the business was started in 2015. Groups or individuals are invited to the farm for educational activities associated with daily farm operations. The applicants are seeking a CUP to allow the use of their property for “Agritourism”. The property is located in Section 31, Town of Spring Lake and is the General Rural Zoning District. Pierce County Code (PCC) §240-35B(1) and Ch 240 Attachment 1 Table of Uses allows Agritourism in the General Rural zoning district with the issuance of a CUP. PCC §240-88 defines “Agritourism” as, “Activities conducted at a working agriculture operation and offered to the public or to invited groups for the purpose of recreation, education or involvement in the operation”. The applicants own 31 acres and have a hobby farm. They utilize the activity center, pole barn and front shed of the farm grounds, Denise described what they offer. Applicants do not allow overnight guests. Hours of operation are Monday – Friday, 9AM to 7PM, with occasional weekend hours as necessary. Hours are not regular. Visitors are invited and scheduled by appointment only. They are not open to the general public.

They have three part-time employees. There is no meal program, but they have a large deck on which visitors may eat their bagged lunch and enjoy the countryside view. The applicants currently have two portable outhouses for the visitors on field trips to use. Pierce County Code §240-54 establishes parking requirements. Agritourism is not a listed use, but one parking space per four patrons is required for Commercial Recreation. Groups attending range in size from 2 – 40 individuals requiring approximately 10 available parking spaces. There is adequate parking areas onsite to satisfy this requirement. The applicants currently have one unpermitted on-site advertising sign. It is 4ft x 6ft and states “Dome Ranch” with a telephone number. The sign’s size is consistent with zoning code requirements and it will be brought into compliance through issuance of this CUP. The Spring Lake Town Board recommended approval of this request on 4-23-2018 without any conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. PCC §240-76G discusses expiration of Conditional Use Permits and states, “All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit”.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for Agritourism with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. The applicants shall contact the Town of Spring Lake Building Inspector to discuss whether any structures need to comply with the Uniform Commercial Code (UCC) requirements. If the Building Inspector determines that a safety issue currently exists, use of the facility shall cease until it is code compliant.
3. Applicant shall secure a Land Use Permit for all future structures or signs prior to construction or installation. Applicant shall also comply with relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health and Family Services, etc.).
4. Adequate portable outhouses (1 per 50 people), or other acceptable restroom facilities, shall be provided.
5. Hours of operation shall be Monday-Friday, 9AM to 7PM, occasional weekends and by appointment only.
6. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
7. One parking space per four customers and areas for ADA compliant parking shall be provided. There shall be no on-street parking.
8. This CUP shall be renewed every two years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Holst opened the hearing to the public. No public comment. **Chairperson Holst closed the public hearing.** Sanden asked Denise how the clients arrive at the location, is it by van or school bus or do they drive independently? Ms Hackel stated there are a very few that drive themselves but most of them come in a minivan that is part of the medical transport. They just get dropped off and picked up. Sanden asked Emily how do we determine ADA compliance? Is that something your office can evaluate on site? Lund stated there is one parking space required for ADA compliance on every commercial site. They need to have one parking space. Holst stated it needs to be wider. Ms Hackel asked if they need that if they don’t have anyone that is wheelchair and it’s not open to the public. Lund stated yes. Ms Hackel stated they could do that. They don’t really have parking lines, they are just out in the country. Lund asked if they have a paved or concrete spot. Ms Hackel stated it’s not a problem. **Sanden moved to approve the conditional use permit for Agritourism for Dome Ranch, Robert Hunczak & Denise Hackel, due to the fact it is not found to be contrary to the public**

interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #8/Gulbranson seconded. All in favor. Passed.

Discuss take action on a status report for a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Government Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.

Chairperson Holst invited Chris Willgrubs forward: Mr. Willgrubs stated he is just coming in to go over what they haven't done down there. He had Brad come down last Monday and he has been dealing with Adam and spoke to Andy for just a little bit last week too. They haven't done anything at this point. The septic tank is in, the well is in. He has eight sites that are all watered up and powered up. They poured the concrete yesterday for the washout for the dump station. The wash tower is supposed to be here either tomorrow or Friday so then he will be giving Emily a call for final inspection on the septic. Then they just need their state approval and they are off to the races.

Staff Report – Adam Adank: In 2015, the applicant received a Conditional Use Permit to establish a campground along the Mississippi River. The campground is intended to provide seasonal camping space for individuals with campers, travel trailers and recreational vehicles. The initial CUP approved the establishment of 16 camping sites with the option to add four additional sites upon campsite layout approval by Land Management staff. The CUP was anticipated to be the first of several phases of campground development on the site. The planned full scope of the project is to establish approximately 120 campsites, most of which would be located in the floodplain and shoreland areas of the property. The expansion or intensification of this use will require issuance of a new CUP. The property is located on 11.6 acres in Section 3, Town of Trenton. In 2013 this parcel and an adjacent parcel were rezoned from Rural Residential 20 to General Rural Flexible (GRF). The campground is not commercially operating at this time. There are three incidental campers on the site. Eight of the 16 originally delineated camping sites have been installed. The applicant is interested in reconfiguring some of the campsites. The applicant has expressed an interest in utilizing some of the land within the floodplain for campsites. The applicant will need to determine if any filling and grading is necessary for the sites in the floodplain. Pierce County Code §238 Floodplain Zoning authorizes campgrounds in the floodplain with a Land Use Permit. The applicant will need to satisfy all requirements of Chapter 238 prior to issuance of a Land Use Permit. Staff will review final plans to determine compliance with all Pierce County Code §242 Shoreland Zoning. A holding tank dump station for the collection of waste from recreational vehicles camping on-site has been partially installed. The applicant stated that he will be working with his plumber (Darrell Hubbell) to possibly finish the cement slab and wash tower prior to May 16th LMC meeting. The Department has not received any complaints regarding the campground. This status report is required per condition #9. Staff contacted the Town of Trenton regarding this CUP Status Report. No issues or concerns were reported. The LMC approved a CUP renewal for this Campground on April 5, 2017 with the following conditions:

1. Total number of campsites present shall not exceed 20 individual sites. If additional campsites beyond the 16 currently delineated are to be established, the layout shall be presented to Land Management staff to verify side yard setbacks, minimum campsite dimension requirements and the location of campsites in relation to the floodplain, prior to use.
2. Internal roads, camping pads and sanitary improvements shall be completed prior to the operation of the campground. Staff shall be contacted to verify improvements prior to commercial use.
3. Any campground advertising signage shall comply with Pierce County zoning standards.
4. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Pierce County Subdivision Code, Department of Safety and Professional Services (DSPS), Department of Health-DHS standards etc.).
5. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

6. The campground shall comply with all items listed under Section 240-39 of the Pierce County Code.
7. Any additional filling and grading shall be verified by staff to determine if a conditional use permit is needed.
8. Owner and manager contact information shall be prominently posted on site.
9. This conditional use permit shall expire in two years. A status review shall be presented to the Land Management Committee within one year.

Chairperson Holst asked if everything checked out down there, sounds like it did. Adank stated yes, see my pictures. Pichotta stated there is no formal action necessary on this item given that it is a status report. Chairperson Holst stated you have to come back in a year and renew again and give us an update then. Mr. Willgrubs stated we might actually have something done then.

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests, both for Emily Lund. One is to attend the WCCA meeting in Chippewa Falls on June 14, 2018. The other is to attend a POWTS training down in Holmen on June 6, 2018. No overnight and she would take the county car.

Gulbranson moved to approve the two travel/training requests for Emily Lund/Sanden seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Pichotta stated there are no items or public hearings scheduled for the next meeting or renewals and noted that the next meeting would be June 20th.

Motion to adjourn at 6:35pm by Gulbranson/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 16, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 6 th & 20 th , July 18 th , August 1 st & 15 th , all in 2018.	Chair
3	Approve minutes of the April 18, 2018 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the General Rural District, pursuant to Pierce County Code Chapter 240-40A for Scott & Angela Mathison, owners on property located in Lot 4, Certified Survey Map (CSM) in the SW ¼ of the NW ¼ of Section 9, T27N, R16W, Town of Gilman, Pierce County, WI.	Adank
5	Public hearing to consider and take action on a request for a conditional use permit for two Accessory Residences in the General Rural District, pursuant to Pierce County Code Chapter 240-40A, for Robert Hunczak & Denise Hackel, owners on property located in the SE ¼ of the SW ¼ of Section 31, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
6	Public hearing to consider and take action on a request for a conditional use permit for Agritourism for Dome Ranch in the General Rural District, pursuant to Pierce County Code Chapter 240-35B, for Robert Hunczak & Denise Hackel, owners on property located in the SE ¼ of the SW ¼ of Section 31, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
7	Discuss take action on a status report for a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.	Adank
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(5/4/18)

MINUTES - Pierce County Land Management Committee Meeting, April 18, 2018

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 2nd & 16th, June 6th & 20th, all in 2018.

Chairperson Fetzer stated the next item is to elect a Temporary Chairperson: Holst nominated Jon Aubart for Temporary Chairperson/Sanden seconded, Chairperson Fetzer asked for any other nominations. Holst moved to close nominations and cast a unanimous ballot/Gulbranson seconded. All in favor. Motion carried.

Temporary Chairperson Aubart stated the next agenda item is to elect a Committee Chairperson and opened the floor for nominations. Holst nominated Joe Fetzer/Gulbranson seconded. Chairperson Aubart asked for any other nominations. Gulbranson moved to close nominations and cast a unanimous ballot/Holst seconded. All in favor. Passed.

Chairperson Fetzer opened the floor for nominations to elect a Committee Vice Chairperson. Aubart nominated Jeff Holst for Vice Chairperson/Sanden seconded. Chairperson Fetzer asked for any other nominations. Fetzer moved to close nominations and cast a unanimous ballot/Aubart seconded. All in favor. Passed.

Approve Minutes: **Aubart moved to approve the April 4, 2018 Land Management Committee minutes/Holst seconded. All in favor with Gulbranson abstaining from voting due to his not being present at that meeting. Motion Passed.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Rural Residential 12 District, pursuant to Pierce County Code Chapter 240-40A, for J & D Trading Co, David Chadima, owner on property located in the NW ¼ of the NW ¼ of Section 20, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Emily Lund: The applicant is proposing to remove an obsolete structure on the property and construct a residence for family or caregiver (if necessary). The property is located in Section 20, Town of Oak Grove. The property is zoned Rural Residential 12. Pierce County Code (PCC) §240-40A allows accessory residences which are accessory to single-family residences in the Rural Residential 12 with the issuance of a CUP. PCC §240-88 defines Accessory Residence as: B. A dwelling unit located in an accessory building located on a residential parcel. PCC §240-88 defines Accessory Building as a “building” not attached to a principal building by means of a common wall, common roof or an aboveground roofed passageway, which is, A. Subordinate to... B. Located on the same lot as ... and C. Customarily incidental to the principal structure or use. The applicant owns 200+ acres of land with a home, well, several farm buildings and silos. There is also a septic system for the existing house and another septic system that is not being used. The principal residence is ±4,000 sq ft (1.5 story dwelling + basement) and attached garage (24’x24’). The conventional septic system was permitted in 1978. The applicants propose to build a 38’x48’ accessory residence includes an upstairs loft, 1-car garage. There is a proposed 38’x48’ basement and attached screened in porch (12’x12’). We do have drawings submitted that might be altered slightly. But it’s somewhere around 1200 to 1800 square feet. The

accessory residence is proposed to be used by relatives or caregivers. The proposed residence will use the existing access off of 1160th St. The applicants propose to hire a plumber to inspect and assess if the existing unused septic system can be used and reconnected to the accessory residence. If the existing system needs to be improved or a new system needs to be installed, the applicant will need to obtain a sanitary permit. PCC Ch. 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The applicant will need to obtain a separate uniform address number for the accessory residence. The Oak Grove Town Board recommended approval of this request on 3-19-18 without any concerns or recommended conditions. The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall hire a Wisconsin Licensed Master Plumber to assess the existing unused septic system. If the existing system needs to be improved or a new system needs to be installed, the applicant shall work with the Master Plumber to obtain a sanitary permit.
2. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The applicant shall obtain a separate uniform address number and sign for the accessory residence.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.**

Holst moved to approve the conditional use permit for an Accessory Residence for J & D Trading, David Chadima, due to the fact it is not contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Aubart seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for a Nonmetallic Mining Operation in the Primary Ag District, pursuant to Pierce County Code Chapter 240-37A, for Rumpca Excavating Inc, agent for John C. Rohl, Jr, John C. & Alva-Jeanne Rohl and Mackenze Rohl, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: Nonmetallic mining had previously been permitted on this parcel. However, the conditional use permit expired and the use ceased for more than 12 months in 2008. In 2015, staff became aware that mining had again begun on the site and notified the applicant that a new Conditional Use Permit was required. At that point mining activity was halted and the applicant began the process of applying for a new conditional use permit. The property is subject to a conservation easement with the Kinnickinnic River Land Trust (KRLT). The easement required the mine to be reclaimed in 2010. The property owners and the KRLT came to an agreement to allow mining for a limited term and then have the site reclaimed. A CUP was issued in 2015. However, the previous mine operator could not accomplish sufficient mining within the agreed timeframe and chose not to submit financial assurance to enable continued mining of the site. That permit expired, while the property owners and the KRLT continued to work on an amended agreement. The applicant and the KRLT have come to an agreement to allow mining for a limited term and then have the site reclaimed. Rumpca Excavating operates a mine on the neighboring property. They are aware of the easement with KRLT and are submitting plans to extract materials and reclaim the site. Their initial plan is for the two mines to essentially be combined. A policy exception to the 100' mining setbacks would be needed for this to occur. Mining and reclaiming on the Rohl property will be a priority. The site has a residence and an active agricultural operation. Surrounding land uses are residential, agriculture and nonmetallic mining. The mining site has approximately 4

unreclaimed acres. Access to the mine is off of County Road MM. The extraction area will be expanded to allow for better reclaimed slopes. The site is relatively flat with the relief of approximately 25 feet. No major streams are present on the site. The active mining area is and will continue to be internally drained. Sand and gravel is present under the topsoil and is approximately 20 feet thick. The operation is for the extraction of the sand and gravel. Typical equipment on the site is bulldozer, backhoe, screener and trucks for hauling. Portable crushing equipment is brought in when needed. Mining had previously occurred within the 100 foot setback and over the property line. The plan is to connect the two operations. Proposed extraction is limited within the setback area; the plan is to match elevation from the previous mining in the area and to construct a road between the two sites. A policy exemption will be required. There will be no blasting or use of chemicals on the site. Washing and processing of the material will occur on the adjacent Rumpca property. The average ground water elevation, determined by area wells, is 830 feet above sea level. The pit floor is approximately 1000 feet above sea level. The operation will be most active in the summer months. Typical summer hours of operation will be 7am to 7pm Monday through Friday and 7am to 4:30pm on Saturday. The Reclamation Plan states that the post mining land use will be pasture land. The plan calls for sequential reclamation and covers approximately 8 acres. Final slopes will be no greater than 3:1. The applicants have been working with the Land Conservation Department to improve the runoff through the reclaimed mining area and farm. Rumpca Excavating has submitted financial assurance for the mine which is currently being reviewed by Pierce County's Corporation Counsel. This request was presented to the Town of Clifton on August 8, 2017. The Town recommended approval of the request with no reference to its Comprehensive Plan or concerns listed.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and or would be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above staff recommends the LMC grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate:

1. A 100-ft setback shall be maintained from all property lines for all mining activities, unless granted an exemption by the LMC.
2. Applicant shall comply with all requirements of Pierce County Code Chapter 241, Nonmetallic Mining Reclamation.
3. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
4. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies.
5. A Fugitive Dust Plan shall be developed and implemented for the mining site and haul roads.
6. Hours of operation shall be 7am to 7pm Monday through Friday and 7:00am to 4:30pm on Saturday.
7. Final reclaimed contours for the Reclamation Plan shall be submitted to the Zoning Office.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. This CUP renewal shall expire in two years.
10. Any expansion or intensification shall require a new conditional use permit.

Sanden asked Brad, the financial assurance being currently reviewed by counsel, does that need to be included as a condition or is that implied. Roy stated that would be part of the requirement of part of compliance with Chapter 241. Sanden stated condition #2 and do we need to make any consideration for the Kinni River Land Trust and their agreements. David Drewiske, Executive Director of the Land Trust, he first met Joe and John at the site about a year ago. They had extensive discussions and have agreed upon a plan for reclamation and they have an operating agreement that has been reviewed and approved. They are comfortable and think it makes sense. They want the site reclaimed and think this is a good plan. That aggregate material is always handy to have. It's a good deposit. They are comfortable with it.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing. Sanden moved to approve the conditional use permit for Nonmetallic Mining for Rumpca Excavating Inc, agent for John C. Rohl Jr, John C. Rohl & Alva-Jeanne Rohl and Mackenze Rohl, owners due to the fact it is not found to be contrary to public interest nor detrimental or injurious to**

public health or public safety or the character of the surrounding area, with conditions #1 - #10/Holst seconded. All in favor. Passed.

Discuss take action on Exemption to Nonmetallic Mining Policy to allow mining within 100 feet of property lines. Staff Report – Brad Roy: On October 3, 2007, the LMC adopted a policy which requires a 100ft setback to property boundaries. To do what the plan is on this site we need an exemption from that policy. **Staff Recommendation:** Staff recommends the Land Management Committee consider if this proposal warrants an exception to the departmental policy. Rumpca will only be allowed to mine within the setback area adjacent to the Rohl mining area so it's not granting the exemption for the whole piece. Sanden asked if we are talking about the piece we just granted a conditional use permit. Roy Stated yes. **Sanden moved to approve the Exemption to Nonmetallic Mining Policy to allow mining within 100 feet of property lines/Holst seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training request at this time.

Departmental Update and Future Agenda Items

Pichotta stated there are no items or public hearings scheduled for the next meeting and noted that the next meeting would be May 16.

Motion to adjourn at 6:21pm by Aubart/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, April 18, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 2 nd & 16 th , June 6 th & 20 th , all in 2018.	Chair
3	Elect Temporary Chairperson	Acting Chair
4	Elect Committee Chairperson	Acting Chair
5	Elect Committee Vice-Chairperson	Chair
6	Approve minutes of the April 4, 2018 Land Management Committee meeting.	Chair
7	Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Rural Residential 12 District, pursuant to Pierce County Code Chapter 240-40A, for J & D Trading Co., David Chadima, owner on property located in the NW ¼ of the NW ¼ of Section 20, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
8	Public hearing to consider and take action on a request for a conditional use permit for a Nonmetallic Mining Operation in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, for Rumpca Excavating Inc, agent for John C. Rohl Jr, John C. & Alva-Jeanne Rohl and Mackenze Rohl, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
9	Discuss take action on Exemption to Nonmetallic Mining Policy to allow mining within 100 feet of property lines.	Roy
10	Discuss take action on Travel/Training Requests.	Pichotta
11	Future agenda items.	Pichotta
12	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/6/18)

- **Revised April 9, 2018 @ 8:54am.**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, April 4, 2018

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Absent: Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 18th, May 2nd & 16th, June 6th & 20th, all in 2018.

Chairperson Fetzer stated before we get started he would ask that everyone silence or shut off their phones. Anybody that did not sign in at the podium, please sign in. During the public hearing, please use the microphone at the podium unless you are sitting at a table and have a microphone in front of you. State your name and address, please. Please no talking when somebody else is making a statement just so we can get all the correct information on our recording. Thank you for the cooperation.

Approve Minutes: Sanden moved to approve the March 21, 2018 Land Management Committee minutes/Aubart seconded. All in favor with Jeff Holst abstaining from voting because of absence at the last meeting. Motion Passed.

Committee will convene into closed session pursuant to §19.85(1)(g) Wis. Stats. For the purpose of conferring with legal counsel for the governmental body who is rendering oral or written advice concerning strategy to be adopted by the body with respect to litigation in which it is or is likely to become involved: advice of counsel re: CUP for Prescott Sportsman's Club.

6:04pm, Aubart moved to convene into closed session/Holst seconded. Roll call vote: Holst – yes, Aubart – yes, Sanden – yes, Fetzer – yes. Motion passed. Chairperson Fetzer asked everybody to step outside.

6:39pm, Aubart moved to reconvene in open session/Holst seconded. Roll call vote: Holst – yes, Aubart – yes, Fetzer – yes, Sanden – yes. Motion passed.

Chairperson Fetzer reiterated to have everyone silence their phones and when you are speaking to come to the microphone at the podium. State your name and address and please sign in if you haven't already.

Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-39E, for Bill Hovel, agent for Prescott Sportsman's Club Inc, owners on property located in the SE ¼ of the NW ¼ of Section 6, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Brad Roy: The Prescott Sportsman's Club owns a 40 acre parcel in the Town of Oak Grove. They are applying to use the property for a variety of outdoor activities for club members and the public. The application proposes, "Activities related to the enjoyment and recreation of the outdoors and continuing education experiences that will enhance the public's appreciation of the outdoors." In February, 2017 the club

presented an application for a Trap Shooting Range which was denied by the Land Management Committee due to a high likelihood of lead migration off the site as well as inconsistency with the public interest as it relates to the Town of Oak Grove and their Comprehensive Plan. The applicant has indicated that they will likely continue efforts to pursue the establishment of a firearms shooting range at this site in the future. The property is located in the SE ¼ of the NW ¼ of Section 6, Town of Oak Grove. The property is zoned General Rural Flexible 8. Access to the site is off of 620th Ave.

- 240-15 Purpose and intent of Zoning Districts.
- General Rural (GR). This district is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and/or are compatible with surrounding rural land.

General Rural-Flexible (GRF/8). This district is established to achieve the same objectives as the General Rural (GR) District but to allow a greater density of residential development with the approval of the town board.

- “Private Outdoor Recreation” is defined as: “Land uses which offer recreation activities primarily outdoors, including such uses as private parks, sportsmen’s clubs, golf courses and ski hills, and which are operated for members or on a commercial basis for members of the public and may include multiple related uses managed as one operation.”
- The site is currently being used for agriculture and woodlands. The surrounding land uses are agriculture, low-density residential, and undeveloped land. The City of Prescott’s compost site/former landfill is on the neighboring property to west.
- Member only activities proposed are:
 - Picnics
 - Up to 4 picnics a year (May through October) to be held on a weekend for members and their families. Picnics will be held between the hours of 10am and 7pm.
 - Meetings
 - Regular meeting once per month, generally between 7pm and 10 pm.
 - Board and committee meetings, with less than 15 members, up to 4 times per year.
 - General outdoor activities: hiking, gardening, apple harvesting, camp fires, snowshoeing, cross country skiing
 - Small farming of food plots or other grains
 - Raising of various livestock and poultry (such as pheasants and quail).
 - Tree cutting for firewood.
 - Hunting and trapping as it relates to the available Wisconsin DNR licenses
 - No more than 4 individual hunters with a gun at any one time.
 - No more than 4 days per week, based on DNR regulation hours.
 - Days would be filled by member lottery pick if more member interest is high enough.
 - Firearm use will be appropriate for the targeted game.
- Member and Public (the public is only allowed when a member is present) activities proposed are:
 - Educational and practice clinics (fishing, trapping, forestry, wood projects, air guns)
 - Limited to 3 per year.
 - Clinics would be scheduled between the hours of 8am and 3pm.
 - Clinics will include instruction and practice.
 - Clinics will only include air guns.
 - Youth and disabled hunts related to the available Wisconsin DNR licenses
 - No more than 2 armed individual hunters at any one time.
 - No more than 4 days per week, based on DNR regulation hours

- Includes bow or gun (12 or 20 gauge shotgun).
- Learn-to-hunt turkey program for first time turkey hunters
 - 10-25 participants
 - Program is 1 day between the hours of 8am and 3pm.
 - Program includes group instruction and training, lunch, and learning stations related to blind setup and turkey decoy placement.
 - Approximately 1.5 hours to have participants shoot their shotgun at target to understand shot pattern.
 - Will work with the DNR to organize the event.
- Fundraising Events
 - Two events held annually on weekends between the hours of 8am and 4pm.
 - Carnival type events with various stations to view and participate.
 - Bow competition with no more than 5 shooting at any one time and with 2 members supervising at all times.
 - Air gun competition with no more than 5 shooting at any one time with 2 members supervising at all times.
- Bow range and course for practice, leagues and events
 - No more than 2 days during the week and one weekend day.
 - Weekday hours are 4pm to dusk. Weekend hours 8am to 4pm.
 - No more than 5 shooters at any one time with 2 members supervising at all times.
- Air gun range and course for practice and future adult and youth leagues
 - Guns would consist of BB, CO2 or pneumatic.
 - Ammunition would be lead free BBs or pellets, or bio-degradable BBs.
 - No more than 3 days during the week (4pm – dusk) and one weekend day (8am – 4pm).
 - Air gun range has no more than 5 shooting at any one time with 2 members supervising at all times.
 - Shooting no farther than 25 yards.

Long term plan is to construct a clubhouse for the members for meetings, picnics, seminars and events as well as up to 5 pavilions and/or out buildings for the various activities. The Club is also proposing to place a storage container on the property. Equipment to be used includes motorized vehicles such as tractors, cars/trucks, lawnmowers and UTVs/ATVs. Vehicles will be used from dawn to dusk. Hours of operation for certain activities were listed. The hours of operation for the remaining activities are 7am-10pm., with exceptions for club member only events may extend to 12am on weekends only. No more than 6 exceptions annually. The following items will be stored outside: bow targets, lawn equipment and tractor/implements, lumber for projects, and portable hunting stands. Portable toilets will be used for all fundraising events as necessary. State code requires one portable toilet per 50 people. The Club is proposing to construct two parking lots on the south end of the property. The southeast parking lot will use an existing farm access. A new driveway will need to be constructed for access to the southwest parking lot. Pavilions will be constructed near each parking lot. The clubhouse is proposed to be constructed near the southeast parking lot. Dimensions of the structure have not been provided. Commercial plan approval may be needed. The site has moderate slopes. The total elevation change from the south of the property to the north is approximately 90 feet. The highest point is near the road access and the lowest by the west half of the north property line. There are no mapped wetlands or wetland soil indicators on the site. Multiple grass waterways run through the property. There is no navigable water on the site, but an intermittent stream runs through the northern portion of the property. The intermittent stream carries enough water that the floodplain also extends onto the property. The club is proposing to construct a pond at the intersection of two of the waterways. No dimensions or depths were provided. The proposed pond is not located in the floodplain. Two pavilions are proposed near the pond. The Town of Oak Grove recommended “partial approval and partial denial” of this request on March 6, 2018. The Town Recommendation is attached. The Town has no issues with parts of the application, but has issues with others.

- Supported Activities:
 - Regular picnics

- Regular meetings and campfires
- Hiking, gardens, apple harvesting
- Small farming of food plots or other grains throughout the property
- Raising of various live stock or poultry
- Cutting trees for firewood
- Winter activities such as snowshoeing or cross-country skiing
- Educational and practice clinics (such as fishing, trapping, forestry, building) which total no more than 3 calendar days per year and occur between the hours of 8am and 3pm as proposed, provided the clinics do not involve activity that would constitute a “sport shooting range” as defined by Wis. Statute 895.527 or create a nuisance that would unreasonably impact neighboring properties.
- Two fund raising events annually, which shall be no more than two calendar days
- Archery range, only if an archery range is not considered a “sport shooting range” as defined by Wisconsin Statutes Section 895.527
- An air gun range is only supported by the Town if it is conducted within a building and is not considered to be a public “sport shooting range” as defined by Wis. Statute 895.527. No high-power air guns would be allowed to be used on the property and all air guns must be used indoors.

Supported Structures, The Town of Oak Grove supports the construction/placement of the clubhouse, pavilions or outbuildings (up to 5) and storage container subject to proper permitting. Hours of operation. The Town recommends that “Club only” events go no later than 10pm. The Town does not object to the other proposed hours so long as the noise/sound generated by the activities remain at a level that does not unreasonably impact the neighboring property owners’ enjoyment of their property, especially in the evening and on weekends. Town Concerns: The Town is of the position that a firearm shooting range at this location is not appropriate given the proximity of neighbors, the proximity of animals and livestock which can be sensitive to loud noise or shooting, and the potential for decreased safety and issues with lead migration. In response to Chapter 9 of the Oak Grove Comprehensive Plan which calls for all conditional uses:

- Consider recommending approval of conditional use permits only when the proposed conditional uses will not conflict with or negatively impact the use and enjoyment of nearby or surrounding properties and land uses
- Ensure that the proposed conditional use will be compatible with surrounding land uses that exist when the proposed use commences

“Given that the use of and/or approval of this site to target practice could potentially vest the Club with the “right” to an expanded sport shooting range, the Town does not support any activities that may ultimately result in the establishment of firearms shooting range of any kind. The Town strongly objects to any activity that would be considered a “sport shooting range” as defined by Wisconsin Statutes Section 895.527, and recommends denial of the conditional use application as it relates to firearms and “sport shooting ranges.” The Town is concerned with protecting farmland, limiting noise and traffic and a reduction in the quality of life on surrounding properties.”

The Town has concerns regarding the potential impacts of the following activities:

- Air gun range and course for future adult and youth leagues
- Bow range and course for target practice and competitive events or leagues
- Hunting and trapping
- Learn to hunt programs such as annual spring turkey hunt (including learning to pattern a shotgun)
- Youth or disabled hunts related to available Wisconsin DNR licenses

The Town does not support hunting activities on the property and is concerned with noise that can result as well as potential safety issues from multiple hunters using long-range rifles. If hunting is approved, the Town suggests a mechanism to limit numbers of hunters present at one time to a safe and reasonable level.

The Town requests that a deed restriction be placed upon the property which would prohibit the property from ever being used for a public “sport shooting range.” The Town is concerned with the use of any guns on the property. The only gun use that would be supported by the Town is the use of air guns within a building as previously described. The Town is concerned that “air guns” is a broad category inclusive of weapons posing significant safety hazards, and that an outdoor air-gun range would create a nuisance for surrounding properties inconsistent with the Town’s Comprehensive Plan.

Town also has the following concerns:

- Protecting farmland and preserving the quality of rural life on surrounding properties.
- Property boundaries and wants the applicant to have all the property boundaries surveyed and marked.
- Dogs running at large on the property.
- Consumption of alcohol on the property.

Staff requested a legal opinion from Pierce County’s Corporation Counsel regarding the potential implications of the use of firearms, air guns, and archery equipment on the site, including the implications associated with the establishment of a “range” for their use. Staff has been advised that the Town’s concerns regarding the potential vesting of rights if a “sport shooting range” were authorized on the site, appear to be valid. Given the definitions of “sport shooting range” contained in Wisconsin Statutes, even the establishment of an archery range or air gun range would constitute a “sport shooting range” with all the expansion rights and protections that accompany that designation. Staff has also been advised that the “patterning of shotguns” on the site (proposed as part of “learning to hunt” seminars) would constitute a “sport shooting range” as defined. Staff was also advised that occasional incidental hunting on the site, similar to that occurring on private land in much of the County, would not constitute a “sport shooting range”, and that such use could be allowable as long as all state and local regulations and restrictions are adhered to.

Staff Recommendation: Staff recommends the LMC determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area.

If found to be not contrary to the public interest, nor detrimental or injurious to public health, safety, or the character of the surrounding area, staff recommends approval of this request with the following conditions:

1. All activities shall be conducted consistent with the application unless modified by a condition of this permit.
2. No weapons (including firearms, air guns, and archery equipment) shall be used on the site except when used for lawful hunting purposes.
3. All hunting activities shall be conducted as presented in the application and shall follow all DNR and local regulations.
4. Plans for parking areas shall be submitted to Land Management Department staff for review and approval.
5. Portable toilets (1 per 50 people) shall be provided onsite for all activities except for incidental hunting.
6. Club only events shall end by no later than 10pm.
7. Information and plans regarding structures to be built shall be provided to Land Management Department staff for review and construction shall commence with one year of the date of issuance of this permit for structures presented in the application. For structures not built within one year, a Land Use Permit shall be required.
8. A Land Use Permit shall be obtained for any structures and signs not described in this application.
9. All structures shall comply with Uniform Commercial Code requirements, if applicable.
10. Access approval shall be acquired from the Town of Oak Grove, a Uniform Address Number (UAN) shall be assigned, and an address sign acquired and placed.
11. Final designs of the pond shall be submitted to Land Management Department staff prior to construction to determine permitting requirements.

Chairperson Fetzer stated before we start with the public hearing he would appreciate that if you want to get your name on the record and state you are for or against it, be succinct with your words and get to the point. We have a lot of people that want to talk tonight.

Chairperson Fetzer invited Bill Hovel forward: Mr. Hovel stated the club decided to take a different approach for their property. One correction on the staff report on page 3, bullet point 2, Equipment to be used. The second sentence that states, "Vehicles will be used from dawn to dusk." That was just related to the UTV/ATV's. Everything else they would be able to drive there past dark. The other questions he has is more around the no weapons in the recommendation. With the application we took our best stab at trying to give you guys a general view of where they are headed and what they want to do so he added a lot of things in here. Things that may not come true in the next two/three years but it is something he wanted you guys to have a good understanding on what they are planning on doing if they could afford to down the road. That's why you are seeing a lot of these things where Brad says you didn't give a comprehensive plan for your pond or you didn't do this or you didn't do that. He is trying to give an overall perspective, that's why. Not a lot of guidance in the zoning. It just says Outdoor Private Recreation. They would like to use their property like any other private land owner as best they can. But also taking some consideration into their neighbors and how they use theirs. We have laid it all out, based on your recommendation, if you want to talk about the no weapons recommendation. Where you say "No weapons (including firearms, air guns and archery equipment, that's pretty hard to take, especially for archery and air guns, he thinks they are pretty quiet and don't do a lot of damage. They would like to give their club owners an opportunity to actually shoot at targets, close by, at least from Prescott. It's a good range for someone to come out and actually shoot their bow if they want to. It's one of those things where he knows we're all hooked up on "Sports shooting range" and there is very vague definition in all the statutes in Wisconsin. He thinks he hit every one of them. He too, always thought a sport shooting range was created around firearms and all of a sudden it grew into weapons and now he doesn't know what a weapon is; a bow, a gun, a rifle, a knife, a sling-shot. He is hoping the board tonight can take that into consideration for us, to at least give us a little feeling that you are listening. We are trying to be the best we can to get something out of our property. The other one would be to have events up until midnight for six times a year. He didn't think that was too out of the realm. He sees that we have it recommended no later than ten. He would like to understand where you are coming from to say coming from 10:00pm to midnight is a big deal, and what is the deal. Just so he can understand the evidence behind that. Those were the only two points he had on the entire application and recommendation. Roy stated on the recommendation to 10:00pm, going off your application from last year, there was 35 members. The likelihood of a large group of people assembling at the site could create nuisances if it goes until midnight that isn't typical of a residence. But these are recommendations that we make, they are certainly not binding. Chairperson Fetzer stated we will get into the public comment and the rest we will address after that. **Chairperson Fetzer opened the hearing to the public.** Tom Huber, W9278 460th Ave, Hager City, WI, a few of the items the Sportsman have asked for in the application are an air rifle range, a bow range and a patterning range. As stated in the staff report, Pierce County's Counsel has indicated that if these ranges are approved they will probably benefit from all the expansion rights and protections associated with a shooting range in Wisconsin. At that point the citizens of Oak Grove and Pierce County will have lost any and all influence or control they might have involving these ranges. This isn't an issue where someone can just say "approve this and trust us". From the very beginning of this permitting process there hasn't been a lot of trust generated by the club. The first shooting range was hidden in a proposal for the high school trap team. The second one here, the shooting permit is hidden behind the air gun, bow and patterning ranges. If we end up doing this, we'll end up with a shooting range eventually. He feels this is an insult to the citizens of Oak Grove and Pierce County and he urges you to not approve the air gun, bow and patterning ranges on this application. Dave Serres, W11102 620th Ave, he echoes the sentiments of Tom. There are a lot of things that sound all nice and flowery. Early on in the meetings he said he wouldn't have a problem agreeing to any of this if you put it down in writing that you never, ever would have guns, shotguns, pistols, anything that would disrupt the life style. He was told that they thought that was unfair so that tells him with the vagueness of the gun clubs or the statutes of what a gun range is. They have told us straight out that their plan is to someday have a gun range. There are people who live right next door. Their people said

the people next door had a recording of 80 decibels. OSHA mandates that you wear hearing protection at 85 decibels. The difference between 80 and 85 is pretty much indistinguishable. We are talking about potentially harmful. It may not be for a large group of people but for people who are tax payers in Oak Grove. The ground water contamination issue, they think they can handle it. You only know when it's too late if it isn't handled right. Right now we have people living so close. There is one lady that has a grooming facility and if a gun range came in, her income would go away. Because 90% of the dogs are very jittery around guns, she can't afford stuff like that. Every tax payer, nobody has changed their stance. This is something we are strongly against. This is something we deem as harmful to our neighborhood and nobody in the Sportsman's Club will be affected by the adverse changes. They are all coming in from miles away, having their fun and everyone around that is going to suffer. He doesn't see how that's even an item you can consider. He is strongly, strongly against it and thinks for the people that live in the area, Oak Grove Township, this would be a harmful addition. Sarah Palodichuk, she doesn't have a strong feeling about a sportsman club, one way or the other. She thinks it's probably a good thing to have one because of the nature of our community but she does think there are protections that need to be in place. She would ask that you don't approve anything tonight that could be construed as a sport shooting range. She doesn't think that statute 895.527, just reading it on its face, she doesn't think it allows for towns to have appropriate control over a sports shooting range once it's established. She also doesn't know what constitutes establishing a sports shooting range. If you are worried about it, she wouldn't put that into place. The reason that she doesn't think you should do that though, is because local control is really important. So then to the Town of Oak Grove Board, please do something about it. That statute allows the Town of Oak Grove to put nuisance regulations in affect before something is established like that. So if you are worried about it being established, respond. There are three things you can respond to: sound, hours and civil liability. So if we want to protect local control then we have be proactive about it. She knows it came before us last year and that probably would have been the right response a year ago is to start working on that. The sportsman club is a good thing it's just that the slippery slope is intimidating to everybody. So instead of being intimidated by the slippery slope, you just got to cut off the slope and decide where that is. She said it's a good thing but it's only good if you don't live in the area. She can't speak for the people that live close enough to hear it and be affected by it. She just wants to echo Tom and Dave and that they are strongly, strongly against this in every possible way. Mary Bolin, N5801 1200th St, Prescott, she would agree with what Dave, Tom and David have also said that she is opposed to this. She thinks the idea that there being a sportsman club is not a bad idea, she just doesn't think there is any place in Oak Grove Township that it is appropriate. She sold real estate for many years and she believes putting one in Oak Grove Township is going to hurt the other tax payers. It's going to negatively impact the values. It's going to negatively affect those people who pay the taxes that are surrounding there to their enjoyment and peaceful living and their properties. She thinks if the sportsman's club wants to have special events, instead of giving them a conditional use permit, they should apply to the township for a special event, individually. They will be given direct guidelines of what they can do. Crystal Zeverino, W12246 620th Ave, she doesn't want to go into depth, everybody has already said enough. We're all showing with most of the residents being here that we don't want this. For numerous concerns, everybody has spoken enough between this one and the last meeting that we had. Everybody remembers her obnoxious father that was here before. He lives next to a shooting range. She has been dealing with this her whole life and she moved to the country so she didn't have to deal with this anymore. She is totally against having any sort of outdoor shooting range. They want peace and quiet that is why they move out to the country. They pay high enough taxes for all that. We deserve to have peace and quiet. Dean Rogge, N6042 Cty Rd QQ, Mr. Rogge stated he will go on record as saying being for what Tom has said and against the sports club. Trent Huber, Oak Grove Township, his family and he live real close to the Sportsman's Club property off of 620th Ave. Two things he wants to point out that haven't been mentioned yet is the intersection of 620th and Highway 10, in his opinion is a very dangerous intersection. It doesn't need any additional traffic added to it, at least a high volume amount of traffic. The second thing, the high intensity usage or hunting on the 40 acre parcel is over and beyond what an individual land owner would place on a similar property if they were just hunting on it with their family. He is opposed to anything that would establish a shooting range at that location. David Zeverino, wanted to add that he is highly against the hunting part as well. He just wanted to go on record for that. Pichotta note that in the

LMC member packets there were a number of emails that he received in opposition primarily to the sports shooting side of things: Thomas Nelson, Deborah Nelson, Jody & Dee McDaniels, Amy Jo Most, Athena Stifter, Patty Perrier, Mary Bolin and Michelle Huber. Sharon Phillipps, Oak Grove lives about a mile and a half to the east, she is a fifth generation and plans on passing it down to a sixth generation and she would like them to go out there and enjoy that property and not have to listen to guns shooting. It's just too much. They have tried to upgrade it from what it was. She is deathly against this whole operation and hopefully you will take the town's recommendations. Thank you very much. Michelle Huber, lives on 650th Ave very near the proposed site. She has been trying to understand the shooting range protection act and what the definition by Wisconsin State Statutes, what falls into that definition of a shooting range. It seems you get mixed information depending on who you speak with, even attorneys that work in land law. She is a new member of the Oak Grove Planning Commission and she has been attending some workshops and having conversations with attorneys that deal with this sort of thing. Her husband and her have also met with attorneys since last year when this first came up, trying to educate themselves on what they are dealing with and what the implications might be. She thinks it's important to point out that one attorney that they talked to stated occasional, incidental hunting which is referenced in the staff report by a private land owner, similar to that occurring on private land in much of the county, cannot be compared to a facility such as a sportsman's club holding organized hunting events. This type of activity, this person states, would fall in the category of a shooting range according to Wisconsin Statute 895. If you research shooting ranges, some of the things that come up, facilities that are for hunting. Her concern about the hunting activities is that it might end up falling within that shooting range protection act area. She has printouts of some local, what's called a shooting range where they charge money to go hunt on the land. She is opposed to this. Eric Penk, 475 Monroe St, Prescott, WI, he is hearing everything about this controversy with the gun range. They are not asking for a gun range. You guys have full control of it with the CUP permit. You guys are governing the CUP permit. That is the set standard. It doesn't go in this deal with previous gun ranges or the law that's out there. You guys are in control of it. Not us. Pierce County has control of the CUP permit, they can pull it if we go beyond our CUP permit privileges. Dave Serres, what he said is we have control, his experience is the best way to eliminate a problem is never, ever let it happen in the first place. If we have control, now is the time to use it by not letting this happen. **Chairperson Fetzer closed the public hearing.** Bill Hovel stated he is going to echo what Eric said. This is a CUP. It is a contract between us and the County. That is why we have these CUP's. We state what we want to do and if we are out of bounds of what we put on there then we get slapped. If we continue to do that, it gets pulled. That's his understanding of why they continue to go through our processes. If we want a sport shooting range, we would come back and have to start all over again and have to start and tell you exactly what we want for that. The one piece on it is, the only place in there that we are shooting an actual firearm, is for one day for one and one-half hours. That is to be able to have our first time turkey hunters see how a pattern is on an actual piece of target. We do that today where we are a half mile from the property. We have been putting on the first time turkey hunt for ten years approximately and it's been about a half mile from that property today. Not sure how that is different than what I'm asking for. Mr. Hovel stated all they are asking for is one day, for one and a half hours shooting at a target. The rest of it is a bow which is quiet and an air gun which is quiet. Holst stated in his opinion, state statute sends us conflicting messages. He agrees that sportsman's clubs are a viable and needed thing in our community today. It teaches young people how to enjoy the outdoors and to live with them and live in peace and do things in a safe manor. It gives them something that probably gets them away from the video games and the arcades and computers, all the crap that leads you down the path that's maybe not the best for you. With that being said, with conflicting definitions in state statutes, he is afraid that a nice quiet bow shooting range, even an indoor bow shooting range, under today's definition in state statute would be constituted as a shooting range and provide you with all the necessary legal mumbo jumbo to kick the door down and build an outdoor trap-shooting range or a clay target or whatever you wanted to shoot. The same is said of your air soft guns, your pellet guns, all that stuff, they are a weapon according to Wisconsin law. He can't support that part of the application. The rest of it, he thinks you are entitled to use your property. If we deny you to use an outhouse on your property, we are doing you a disservice. He thinks we are doing them a disservice if they deny them the use of four people going to shoot the one pheasant that might live in Oak Grove Township and on your land.

Sometimes just being in a field, even if you don't kill anything, that's usually one of the better hunting trips cause you ain't got to clean anything when you get done. He sees no problem with allowing hunting to be regulated the way they propose to do it on their land. It would be no different than you or I allowing people to hunt on our land. Sanden stated he thinks Jeff really hit the crux of it, the ambiguity and the statute makes it so that anything that is considered a weapon could open the door and that is the issue. He doesn't think the issue is whether an air rifle or a bow is loud, it's the legal implications. He also agrees that the other uses they are certainly entitled to as far as a sports club that doesn't open the door to be construed as a sports shooting range. He believes the 11 conditions as recommended by staff define that in a way that we could allow them to use it as a sportsman's club but not fall under the definition of sports shooting range. Aubart stated that is really the problem with the statute and how we end up going down a road we don't want to go down. Until that can be resolved he doesn't see an ability to approve shooting. Then we do lose any control and it's problematic. Chairperson Fetzer stated he agrees and would like to add, we are trying to work with people to make it good for them and we want to work with you guys too, to do the best we can. After consultation with legal counsel, there is a lot of areas that are very gray, you can look at it the way you want to look at it. It makes it tough for us on the board to say "Good for this but not for this". It just makes it very difficult that way and to open up a box, it really makes it hard. Bill Hovel asked if we put in the CUP that the Sportsman's Club and the County agree that this is not considered a sports shooting range and would need to come back for a whole separate CUP for that. What if you put that into the language knowing that both parties agree to that and understand it? Then both parties totally agree. We weren't coming here to say this was a sports shooting range in the first place. Everybody took it that way. He is trying to get around that concept by saying would the County be willing to put in their legal opinion to say this does not constitute a sports shooting range based off of these statutes within Wisconsin at this point and time? Holst stated he doesn't think that we can do that, he thinks we would like to but he doesn't think that we can. State statute takes precedence over us. Mr. Hovel stated that's the hard part, how would we ever get a bow range in? If we gave up everything and just had a bow? His advice would be to talk to the people that represent you at the state level and get a definition that's uniform and understandable. Mr. Hovel stated how does a private land owner get to do it? Chairperson Fetzer state we all do it on our land, it's a fact. Pichotta stated doing it on a commercial basis or for club members triggers the need for that CUP. Mr. Hovel stated we can go to a private property and do it. **Sanden moved to approve the conditional use permit for Prescott Sportsman's Club for Private Outdoor Recreation, finding that the use of this property for many of the proposed club activities, is not contrary to the public interest, nor is it detrimental or injurious to public health or safety and will not unacceptably alter the character of the area. Noting, based on evidence received from legal counsel, that some of the proposed activities could result in expanded activities that could result in substantially increased impacts to public health and safety and would create an issue with the public interest as it relates to the Town of Oak Grove and their comprehensive plan. Given this I would move to approve this conditional use permit with conditions #1 through #11/Aubart seconded. Sanden stated that condition #2 addresses weapons and that is included in the motion. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Resort in the General Rural Flexible and Commercial Districts, pursuant to Pierce County Code Chapter 240-39G, for John Grabrick, Big Dog Daddy's Roadhouse LLC, owner on property located in part of Government Lot 3, in Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: The applicant is requesting to operate a year-round resort on the property. The resort will include 42 campsites, 24 cabins, a support structure with bathrooms and showers, and infrastructure (new roads, septic, electrical and water services). A Bar and Grill and mobile home are currently on the property. A previous owner operated a campground on the site, but that use has discontinued. The applicant received a conditional use permit (CUP) for a campground on the 5 acre parcel on June 4, 2014. The LMC terminated the permit on October 1, 2014 for failing to comply with the established conditions. The parcel is five acres and has two zoning districts. The northwest portion (volleyball courts) is zoned Commercial and the remaining property is zoned General Rural. Resorts are Conditionally Permitted in the General Rural zoning district. The applicants

submittal does not include any area zoned Commercial. Resort is defined as: A facility for transient guests where the primary attraction is generally on-site recreational features or activities and may include multiple related uses managed as one operation. Surrounding land uses are the Red Wing Airport to the north, railroad right-of-way to the south, vacant DNR property to the east and residential to the west. The applicant has stated that he is in the process of purchasing the neighboring property to the west and intends to make that his primary residence. The proposed design is for camping cabins lining the exterior west, south and east borders of the property. The 42 campsites will be in the interior area. Interior roads will have a minimum width of 26'. Each campsite will have 1500 square feet, 2 parking spaces, 1 space for a camping unit and the remaining area will be left open. Each proposed campsite is set back at least 50' from the property lines. The applicant is proposing two styles of cabin. One style of cabin will have full bathroom and kitchenette. The other style will be a sleeping cabin. The applicant anticipates each cabin to be approximately 25' x 15' however final dimensions have not been determined; the applicant will bring additional information to the meeting. All of the cabins will have heat. The cabins are to be setback 10 feet from property lines. The cabins will need to meet the uniform commercial code. Resorts do not have any predetermined requirements such as setbacks and density. However, Pierce County Code 240-39A regulates campgrounds. The following requirements are applicable to the request:

1. Each campsite shall be plainly marked and surfaced with gravel, asphalt or other surface to free the site of mud.
2. The maximum number of campsites shall be 15 per acre.
3. Minimum lot size shall be 5 acres.
4. Each campsite shall be a minimum of 1,000 square feet.
5. There shall be two off-street parking spaces for each campsite.
6. All sites shall meet the required setbacks from roads and from the ordinary high-water mark and shall be located at least 50 feet from all exterior lot lines.
7. No more than one mobile recreational vehicle shall be allowed on any individual campsite.
8. No porches, lean-to's or additions shall be constructed outdoor immediately adjacent to a camping unit. Canvas screen rooms or awnings shall be allowed.
9. A wooden deck may be provided adjacent to a camping unit subject to the following:
 - a. The deck shall not exceed 256 square feet in area.
 - b. The deck may be enclosed by open railings but shall not have built-in benches or tables.
 - c. The deck shall not have a permanent foundation in the ground.

The proposed campsites satisfy all of the dimensional requirements of PCC 240-39A. The applicant received a Land Use Permit to construct a shed in 2016. The structure was permitted to only be used for storage. The applicant intends to use this structure for the resort bathrooms and showers. The structure will need to have Commercial Plan approval from DSPS, prior to resort use. The plan is to also include retail space within the structure. A rezone of that area (including the Bar and Grill) to commercial will be pursued in the future. The Land Use Permit for the shed had the following condition, "Not to be used for Camping/commercial use/activity. Need red stamped Commercial Plan approval before camping/commercial activity can be done. Must be at least 10 feet from the lot line."

- Pierce County Code 184 regulates campground under the Public Health Department. Permits are issued on an annual basis. Public Health campground regulations reference WI Administrative Code DHS 178 which address items such as:
 - Physical Layout
 - Water Supply
 - Sewage Disposal Systems
 - Toilets
 - Sanitary Stations
 - Garbage and Refuse

There is an existing sanitary system and holding tank that has been claimed to be used as a dumpstation for the campground of the previous owner. The applicant intends to update the systems to satisfy current state codes and use it for the resort. Phase 1 of the plan includes construction of 17 campsites. Further development of

campsites and cabins will occur based on demand. Staff is unclear if all campsites will have water, sewer and electrical services. The applicant will provide that information at the meeting. The applicant will also construct a pavilion near the volleyball courts (in the General Rural district) and replace an old sign and post with a new sign for the business. No dimensional information has been provided at this time. A survey of the site will be completed to verify all lot lines and setbacks prior to any resort construction. The applicant presented this request to the Town of Isabelle on December 18, 2017. The Town provided a list of recommended conditions as well as a list of concerns. The LMC should review Town Recommendations to determine which are appropriate for inclusion in any final approval.

Recommended conditions:

1. Each site shall not be occupied by more than six persons.
2. The number of vehicles at each campsite shall not exceed two (2) cars or six (6) motorcycles. For combinations of vehicles one car is equivalent to three motorcycles. Thus, one car and three motorcycles would be one limit. If four motorcycles exist, no cars would be permitted.
3. The campgrounds shall be closed to non-campers between 10pm and 6am. All visitors must leave the park by 10pm. No camping party may set up or take down a camping unit between 10pm and 6am.
4. Fires are allowed in fire rings and grill only. All fires shall not be left unattended and all fires shall be extinguished before being left unattended. The burning of garbage, plastic, glass, cans or other recyclable items shall not be permitted. To minimize the spread of diseases, firewood shall be purchased locally. Locally is defined as within a 25 mile radius of the site not including the State of Minnesota.
5. Electrical generators shall not be permitted at campsites.
6. Excessive noise is inconsiderate of fellow campers and of the general residences of the areas near the campground and bar area. Noise levels shall not exceed 80 decibels, DBs, at the property lines of Parcel #014-01019-0700 at any time. Additionally, the noise level shall not exceed 55 DBs 200 feet west of the West property line of Parcel #014-01019-0700 – which is the West property line of Parcel #014-01018-0910. In addition, noise levels shall not exceed 70 DBs (with the exception of air conditioners) at the property lines of Parcel #014-01019-0700 for a time duration of eight (8) hours commencing at 10 pm each day of the week except Friday and Saturday. The start time of the 70 DB limitation on Friday and Saturday shall be no later than 11pm.
7. Fireworks shall not be permitted at any time on Parcel #014-01019-0700.
8. The campground shall comply with all applicable codes and regulations of Pierce County and the State of Wisconsin such as but not limited to Pierce County Code 240, Pierce County Code Chapter 184, pierce County Public health Department, and Wisconsin Administrative Code Chapter DHS 17.
9. Storage at any campsite shall be limited to 80 square feet. Open storage shall not be permitted.
10. The warm weather camping season shall run from May 1st through October 31st. Approved electric, sewer, and water hookups shall be provided during the warm weather camping season for each campsite as shown in Exhibit B. Cold weather camping shall be permitted if and only if permanent restrooms as defined by applicable Wisconsin Codes are operational. Year round residences shall not be permitted at the designated campsites and cabin sites.
11. The maximum number of campsites including cabin sites as shown in Exhibit A shall be limited to 66.
12. The campground shall comply with all requirements listed in the Conditional Use Permit. The Conditional Use Permit is subject to an annual review by the Town of Isabelle, the Perce County Public health Department, and the Pierce County Land Management Department. Non-compliance with applicable requirements of the CUP may result in the immediate termination of the CUP.
13. The Town of Isabelle shall be provided with documentation verifying compliance the applicable Pierce County and State Codes including but not limited to sanitary codes, plumbing codes, electrical codes, and building codes.

Town Concerns:

1. One of the primary concerns is potential noise levels from Parcel #014-01019-0700.
2. The width and orientation of the roadways and campsites as shown appear to make parking and maneuvering campers difficult for normal drivers.
3. Six people at each of 66 campsites for a potential total of 396 people plus the bar patrons seems like far too many people for the area.
4. No screening per Section 240-31 is shown on the site layout.
5. Appears to be no intention of complying with DHS 178.04 – obtaining State approval before construction begins.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a Resort with the following conditions:

1. The resort shall be conducted as described in the application, unless modified by a condition of this permit.
2. A survey of all property lines, existing structures, and setbacks for cabins and campsites shall be completed. Land Management Department staff shall verify side yard setbacks and minimum campsite dimension requirements prior to campground operation.
3. State Plan approval for the required improvements to the sanitary dump station, holding tank, and sewer services, as well as associated service contracts and contact information, shall be submitted to the Land Management Department prior to construction.
4. If the applicant does not own the neighboring property to the west, a Screening plan shall be submitted to the LMC for approval. Any required screening shall be established prior to resort operation.
5. Internal roads, camping pads, and water and sanitary improvements shall be constructed or implemented prior to operation of the resort. Staff shall be contacted to verify prior to operation.
6. All advertising signage shall comply with the Pierce County Zoning Code.
7. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health-DHS standards etc.).
8. The applicant shall comply with conditions _____ as recommended by the Town of Isabelle dated December 18, 2017 unless specifically modified by another condition of this CUP.
9. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If the applicant has questions as to what constitutes an expansion or intensification, Land Management staff should be contacted.
10. This permit shall expire in one year. A status report shall be presented to the LMC in 6 months to verify compliance.

Something to consider for condition #8 when looking at the Town recommended conditions, a few years ago we made amendments to our campground code. What we tried to do is get out of the management of the campground so we removed a lot of those pre-existing, pre-determined conditions. When looking at the Town's concerns, think about what we need to focus on and what constitutes just basic campground management should be left to the applicant. Us, as staff sat down and looked at them and came up with a list of ones we feel are more appropriate. If you want, we can discuss that further. Chairperson Fetzer asked John if he would want to add anything. Mr. Grabrick stated in 2014 he had a conditional use permit and we had a squeaky wheel next to them which has now been removed. At the last meeting when the conditional use permit was pulled, he would like to apologize for his attitude when he left this room. He was a little more than heated under the collar. Chairperson Fetzer stated they appreciate that. Mr. Grabrick stated they have put a lot of thought into this resort and campground and he and Brad have spent a few moments together going through this. Right now in our area

the existing campgrounds are full. They get calls five or six times a week looking for space for people from Treasure Island or people that are looking to come fishing. So he knows that they will be well used. Their plan is to put forth this resort following all the appropriate codes. They will make sure that everything is in, based on codes. They have contractors giving them bids on the new roads, which include digging out the road, putting in 10 inches of breaker rock, covered by five inches of class five. We will have a minimum town road of nine tons so that we can bring these units in without mud without having any problems. One of the things mentioned in here are the plans for services. They will have water and electric to all 42 campsites. They are working with a designer that works with campsite sewers. It looks like we will probably do embedded, dropped tanks and have them pumped on a weekly basis. The recommendation from the designer was a 300 gallon drop tank under the camper with a flag system. They are working with an individual in Bay City who has been pumping their port-a-pots for the last four years, who will give them a contract on that which they will provide to Land Management. There will be eight cabins and a bathhouse that will share a new septic system. That will be designed to fit within the space noted on the plan. Only those eight which will be a 16ft x24ft will include a kitchenette and a bathroom. The remainder of the cabins will be dry cabins. They will sleep between four to six people and it will be air conditioned and heated and they will have to go to the bathhouse. They own four port-a-pots. When they get done with the full design they will probably put in four more, although most campers have their own bathrooms in them. They will make sure they have at least one port-a-pot for every 50 people just to conform with code. Chairperson Fetzer stated he appreciates the apology. The committee has to do this not to be best friends and to give in to everything. They have to answer for stuff they have on a CUP. If a CUP gets pulled they have to have reasons. It happens rarely but it does happen. **Chairperson Fetzer opened the hearing to the public.** Jeanette Sweasy, N1027 530th St, Bay City, on the Isabelle Planning Commission, stated she would like them to succeed and would like more taxes coming out of Isabelle. She does have some concerns and just wants to bring them up. She wants to make a correction on the recommended conditions. Those really weren't from the township, they have been modified from the request that John brought to the township so he came up, we did go through them and change some of them but they didn't originate from the township. She would like to reiterate for the township, the plan commission and herself. #1 he has big plans. Isabelle did a survey, it's been several years. The primary thing was that the residents want a quiet, rural environment. He has divided this into three phases; 66 sites with six people, if he maxes out that's 396 people with cars, vehicles and motorcycles. Her concern and some people in the township is that's like a little village/little town. It's not like an event. It's not a one-time thing. This is every day and every night. She thinks it's too much for the township and for that one road going in and out. So if he could just scale back and have fewer sites. If he could complete phase one and then look at the other two phases. That's only the first 17 campsites. She would like to see him succeed with that. If he puts in all the infrastructure; water, sewer, roads and everything. Her concern is what if it doesn't work. If he just does phase one before he goes on to phase two and three, at least it limits things. She doesn't remember the numbers that John used. She doesn't think the town wants have a business that will fail. It just sounds like it's real big and real dense. The other thing she wants to talk about is the parking. You have a map of the individual campsite. We were trying to figure out how you can fit those two vehicles in there with the camper. Bringing the campers in and out, on the big plan, it looks like it could be real difficult to take campers in and out. She thinks it would be better if the camp sites were bigger. She understands Pierce County needs two vehicles per campsite, if either the site itself was larger or fewer sites. Plan Commission did spend a little time with that wondering how that could work. Having it fit with the comprehensive plan. She's not sure this will fit with Isabelle Township's idea of quiet and rural. She does want him there. She knows Isabelle is concerned about the tax base. Campsites might not bring in as much money as a house or two. It is a residential area. She hopes they aren't looking at a short-term increase in tax base at the expense of long range plans of a small village in the township. Asking the committee to consider the scale of the project and see if it can't just be smaller, less dense. **Chairperson Fetzer closed the public hearing.** Roy read a letter from L. Ron Bartels, The Town of Isabelle has provided its recommendation relative to this CUP. The Town expressed concerns in its recommendations. Compliance by John Grabrick in a timely manner with State of Wisconsin and Pierce County rules and regulations is the main concern. An example is a recently built building that will allegedly be used as a storage building. It is no secret that in the future this building will be used for showers and other facilities for

the campers. Comments have also been made that the existing onsite septic system is sized for 30 campsites. Both of these items require documentation and permits for their intended use prior to construction. Issuing a CUP seems premature if the appropriate permits are not obtained. Roy stated, as for the structure, the applicant made it very clear that the intended purpose of that shed was to ultimately be used for the resort and campground. It was a timing thing that it needed to get built before winter and so we issued just a regular land use permit for storage. The applicant was well aware that commercial plan approval before the use could ever be done for the resort or campground. He was very upfront on what the intended use of that structure was ultimately going to be. Mr. Grabrick stated that Brad got the actual recommendations from the Town. As far as the building goes, he has had the state inspector out for other things and has had him tour the new structure. He has a set of drawings that are being duplicated so they can be sent in for state approval. As he has viewed the structure already, he doesn't see any issue for it. What we will get into and the majority of it is what the interior is; the handicap accessible toilet that's required, the shower and such. This has been pre-planned to that point. We just wanted to get things moving before we had everything, knowing we still had to have state approved plans before it could be used for its intended use. Chairperson Fetzer asked what cabins they are projecting, C1 – 8 or different ones. Mr. Grabrick stated C1 – 8 will be the first group that they put in and they will be the wet cabins. So the bathhouse and the first eight cabins all have a natural downhill flow toward where the septic system will be. They have a designer working on that right now. That will get approved along with the new cap for the existing storage facility. He checked with County Health and it was sized for 30 campers when it was first put in. Their mistake was they didn't put a sloped slab on it. They put a flat slab on the top. In order to conform to state it has to have a curve on three sides and has to be sloped in toward the drain line so that if you have an accidental spill, you can use the water hose to get everything into the hole. Holst asked if that will be rectified. Mr. Grabrick stated yes it will. They have a large list of things once the weather permits. Once the snow is gone so they can get the surveyor out, they already know where the irons are, they just need him to locate the actual property line and a couple midpoint spots to make sure everything conforms. Once he puts some reference points in then they can shoot in the pads. A concern that seems to be brought up is the space they have in the campground. With the exception of one small piece of roadway that is twenty-six feet in width, everything is thirty or thirty-one feet. If you have ever taken a tape measure to a street you know they are thirty feet wide. So if you can't drive on a city street, you won't make it in our campground. Holst stated most roads are generally twenty-six feet. Mr. Grabrick stated if an individual is incapable of backing a trailer up, he has a bobcat on site with a swivel point on the fork and he will park them. That gets into campground management. Holst stated 1500 square feet comes out to 30 x 50, is that the approximate size. Mr. Grabrick stated that is the exact size we are shooting for, if you go to any of the local campsites, none are going to come even close to that size. Holst stated he was in a campground up north that was about the size of the table, his spot. Roy stated he has the town recommendation. Aubart asked if it's what we're looking at here. Roy stated yes, what he put in there was his attempt to be word for word, there might be a few typos. Sanden asked if Mr. Grabrick has purchased the land to the west. Mr. Grabrick stated they are in the process if the financing comes through within the next couple of weeks they should be closing by April 23rd. Sanden asked if the owner has left. Mr. Grabrick stated the squeaky wheel left, the other owner is still on site and they have been pushing hard for the closing to happen so that they can finalize their divorce. Sanden asked if he can interpret updating the code in respect to campsites. Are you implying that many of the township recommendations are incorporated in the new policy? Roy stated what we did when we amended the code, we did have limitations on how many people could be on a campsite. We took those out. It was our feeling that isn't something for this committee or staff to determine, that would be better left for the campground manager to determine what a campsite is able to handle. Chairperson Fetzer stated just to police that stuff would be difficult. Roy stated when there is a list of conditions, he doesn't want to say any of them aren't valid but we need to look at what the role of this committee is and what the roll of staff is. In particular what we can enforce? Holst stated why don't you narrow it down for us, we can't read your mind. Sanden but to Jeanette's point, the four hundred plus would constitute off-site impacts which is under the purview of this committee. Chairperson Fetzer asked if this is phase one. Are we not looking at any of the other phases at this time? Roy stated we weren't presented with a phase. What we were presented was phases in general but to be built out as demand called for it. Chairperson Fetzer stated so

we're looking at the whole. Holst asked if you could narrow it down what you believe we should be looking at for the Town recommendations. Roy stated we felt condition 4, 6, 7, 10, 11 & a modification to number 12 would be appropriate. Number 12 stating, "Applicant shall provide an annual status report to the Town of Isabelle". Sanden stated condition 6, about noise level and you were mentioning what is enforceable? It gets into a lot of detail about the decibels at the next lot after midnight and after 10pm. Would you see that as difficult to enforce? Roy it would be but he also knows that was one of the main concerns and in fact an agreement was made between the applicant and the Town in our office regarding noise and decibel levels. He didn't feel comfortable removing or modifying that in any way. Mr. Grabrick asked if he could address that one. He stated they've had outdoor bands in the past. That is where the main concern for noise comes from. It has nothing to do with the actual campground itself. Obviously we are going to exceed some of these decibels when we're out there running heavy equipment. A bobcat, a chainsaw, all of these approach 95 to 100 decibels. If you know anything about decibels it's a logarithmic. 80 to 85 is 50 times higher when you get to 85. OSHA says between 80 to 85, if it's eight hours or more you have to wear hearing protection. They are worried about us having an outdoor band and having a lot of noise. We have spoken in length on this. If the bar decides to have a band on commercially zoned property, Pierce County doesn't have a noise ordinance, but we want to be good neighbors. We have a directional shape between the airport, the train tracks, if you have ever listened to a jet take off or listened to a train come down with the whistle, it's much heavier than a rock & roll band would be. We want to direct any of that sound to the residence to the west. It would be toward the east where trees would buffer it. We have already agreed that we would never have a band outside later than 10pm. Most of the time we are going to put the band inside but we can with directional speakers and such, stop it from going to the neighborhood. Our intention is to have maybe three bands a summer outside. It's not that it's going to be a concert hall every weekend but they wanted to make sure they don't have a noise problem with the neighbors. The average jet taking off is 120 decibels. The train coming through is running at about 115 to 120. We are between a couple of really noisy areas. The campground is not the issue with the noise, it's the bar and the band outside. Ms Sweasy asked if she could clarify something on the phases. They agreed he would do it in phases and if you look on the sheet he was going to complete phase one before he started on either phase two or phase three. So phase one was just campsites, just 17 campsites. Mr. Grabrick stated the actual agreement to that was they would get phase one done before they opened. So that they could get things out but it's going to be on demand because if he has a waiting list of 40 people he isn't going to wait a year or two years. When Brad and he talked about this, everything in the CUP has to be done within a year or we have to come back for more permits for buildings and for signage. It's going to be a revenue stream thing. He's not just going to build 24 cabins if he only has people wanting two cabins. The infrastructure, when you are out digging trenches and putting roads in makes more feasible sense to do that all at one time because you are only mobilizing the equipment one time, so the road ways, the waterlines, the electric lines will all be in this summer. The camp pads will also be in with that because you haul gravel in once, you don't want to be tearing your roads up. The campground itself will flow as the summer progresses. The cabins will come in as the cabins are needed. Right now he knows of the first eight cabins, he has reservations for six. Whether they build them on site or build pre-builds and set them on a concrete slab. Whatever needs to be done. Sanden asked Brad as to condition #12 for modifying, are you thinking like a six month annual review? Roy stated that was looking at an annual review for the Town of Isabelle. We are recommending for this committee review it, it expires in a year, status report at six months. What he felt was best and the same for the Public Health Department, he doesn't know what their review schedule is. So he doesn't know if this should state any other department except the Town of Isabelle so they are recommending "Applicant shall provide an annual status report to the Town of Isabelle". Each County Department can set up the schedule they feel is appropriate. Sanden asked about our condition #3 dealing with the septic system, were you stating that the permitting would basically take care of what Jeanette's concern was about the capacity of the septic system. Roy stated what he is going to need to do to get state approval is submit what the tank is supposed to hold. The state will review it and they send us a plan. Construction won't take place until it's approved by the State. A plumber has to have that. We would inspect the installation of it. He feels any septic issues will be taken care of just by making sure all necessary permits are obtained. Holst stated

that if the State permits are not obtained the CUP becomes null and void. Roy stated if the State permits aren't obtained, any septic system used on that is out of compliance. Holst requested clarification on the recommendation regarding #12 of the Town conditions. Roy stated we are recommending, "Applicant shall provide an annual status report to the Town of Isabelle". Aubart state he is a little fuzzy on that too Brad, what does that do? What is the effect of that? Roy stated it appears something that the Town wants. Aubart asked if it is essentially a status report to the Town of Isabelle. Roy stated the conditional use permit is subject to an annual review by the Town of Isabelle, the Pierce County Public Health Department, Pierce County Land Management Department. He thinks the Town just wants to be updated as to how things are going. Aubart stated it's really just a status report because the actual CUP is issued by this committee. Roy stated correct but it would be an opportunity for the Town to have a meeting, listen and if there are any complaints or concerns, which they could pass forward to us. Holst stated the Town will bring things to us that we're not aware of in a much quicker timeframe than annually if there are problems. **Sanden moved to approve the conditional use permit for a resort for Big Dog Daddy's Roadhouse LLC, John Grabrick, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #10, modifying condition #8 to include the Town of Isabelle recommended conditions #4, 6, 7, 10, 11 and 12, modifying #12 to "Applicant shall provide an annual status report to the Town of Isabelle/Aubart seconded.** Chairperson Fetzer stated before we go to the vote, the reason we do these CUP's is if there are issues with the campground or a gun range or any of that stuff and if our staff receives phone calls, people can get called back in, we are the mediator for businesses and individuals and neighbors to try to work things out. Holst stated he would like to commend the applicant on the detail he has brought forward this time and the straightforwardness and the whole general feeling of trying to get along with the County. It's very nice and much appreciated. **All in favor. Passed.**

Discuss take action on a request for renewal and potential modification of a conditional use permit for a Farm & Home Based Business, Construction Design Management, in the General Rural Flexible 8 District for Kevin G. Peterson, owner on property located in Lot 5, in the E ½ of the SE ¼ of the SW ¼ of the SE ¼ in Section 20, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Adam Adank: In 2011, the applicant received a Conditional Use Permit for a Farm and Home Based Business. The business is named Construction Design Management (CDM). The applicant makes erosion control logs that are used for construction site stabilization by using special bagging equipment to fill erosion socks with wood, corn stalks, and giant miscanthus grass. Due to several complaints being received since the last renewal, staff is referring renewal of the CUP to the Land Management Committee for review and potential modification. Condition # 5 states "renewal shall be referred to the Land management Committee if complaints or compliance issues arise." The legal description for the property is Lot 5, CSM V5, P53, in Section 20, Town of Clifton. The property is 6.782 acres in size. The property is zoned General Rural Flexible 8. Surrounding properties are all zoned General Rural Flexible 8. Adjacent land uses are residential and agricultural. Section 240-36(E) allows farm and home based businesses as accessory to single family residential uses subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
2. If located in the dwelling unit, the farm and home business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be 5 acres.
4. Such other conditions as specified by the Land Management Committee pursuant to Sec. 240-76 shall apply.

The applicant stated that up to 3 employees work at the business during times when the erosion socks are being made. Business operations are run out of a Quonset storage shed that is 40 ft by 120 ft with an addition that is 16 ft by 90 ft (6,240 sq. ft. total). The applicant has stated that approximately 3,184 sq. ft. of the Quonset storage shed is used for personal storage, personal vehicles, and a general use shop. The remaining 3,056 sq. ft.

are used for business activities. Equipment utilized for this business includes: trucks, trailers, skid steers, and erosion control equipment. The original application states that all of the equipment is to be stored in the shed except that trailers are parked outside. Pierce County Code Ch. 240-54 (A) Parking Requirements - requires 2 off-street parking spaces for contractor establishments. There is one service door and the site has more than 2 parking spots currently available. Established hours of operation are 8 a.m. to 5 p.m. Monday thru Friday, Closed on Saturday and Sunday. The applicant currently has two wall signs present on the property (photo attached). Pierce County Code § 240.60 (K) establishes that a wall sign may not exceed 15% of the area of the side of the building to which it is attached and it cannot extend more than six inches from the building wall nor beyond the end of the wall. After review, both signs were determined to be compliant. In May of 2017 staff received a complaint about a hoop structure placed on the property. Staff contacted the applicant and subsequently issued a LUP for a 32 ft. by 40 ft. hoop structure (1280 sq. ft.) that is currently used to store mulch for the erosion socks. This brought the total sq. footage of area utilized by the business to 4,336 sq. ft. Staff has received several complaints since the last renewal. The latest complaint was November 20, 2017. Staff visited the site on November 21, 2017 to determine if any compliance issues existed. The following is a list of complaints brought up by the anonymous caller and staff's response to each complaint.

1. A complaint that equipment used to operate the business was being stored outside and erosion socks were being stored outside under tarps. Staff observed one delivery truck and two trailers parked outside. Several pallets of erosion socks were being stored outside under tarps behind the Quonset hut and essentially out of public view. Staff is of the position that the equipment being stored was consistent with what was presented in the application and that the temporary storage of product behind the Quonset hut was not a compliance issue. Limited outdoor storage has been typically allowed of other Farm and Home Based Businesses, but was not explicitly addressed in either the application or conditions of the permit. Staff has proposed language to allow limited outdoor storage for LMC consideration.
2. A complaint that pallets were laying around the site and mulch was spilling out of the hoop structure. Staff observed a few stacks of pallets neatly stacked in the hoop structure and another few stacks of pallets stacked behind the Quonset hut, essentially out of public view. Staff also observed a small amount of much piled up right outside the front of the hoop structure. Staff's position was that the site was being well maintained and no compliance issues existed.
3. A complaint that erosion socks were being stored by the driveway and delivery trucks were making pickups during the night. Staff spoke with the applicant regarding this issue and he stated that approximately twice last summer individuals arrived later than anticipated to pick up products, but that in both cases pickup had occurred before 9:00 PM. Staff views these pickups as isolated occurrences that do not constitute a pattern warranting enforcement action.

Staff contacted the Town of Clifton regarding this CUP renewal. No issues or concerns were reported other than the complaint listed in the staff report.

The existing conditions are:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
3. No more than 8 persons not residing on the site shall be employed in the business.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise. Renewal shall be referred to the Land Management Committee if complaints or compliance issues arise.
6. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.

Staff Recommendation: Staff recommends the Land Management Committee consider whether existing conditions remain adequate to protect public health, public safety and the character of the surrounding area. If no additions or changes to the established conditions are determined to be necessary, staff recommends the

Land Management Committee renew this conditional use permit for a Farm & Home Based Business with the following conditions (suggested changes in **bold**):

1. Activities shall be conducted as presented in the application, including hours of operation **unless modified by another condition of this permit.**
2. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
3. No more than 8 persons not residing on the site shall be employed in the business.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise. Renewal shall be referred to the Land Management Committee if complaints or compliance issues arise.
6. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
7. **Limited outdoor storage is allowable if screened to the extent practical by existing buildings.**
8. **A Uniform Address Number (UAN) shall be assigned and a sign acquired and placed at the business driveway.**

Chairperson Fetzer asked Mr. Peterson if he would like to add anything. Mr. Peterson stated the name is Construction Debris Management, not Design, just so you have that correct. Adank stated he also wanted to add he has a couple pictures from March 29th of the site too. There is a little better picture of what's being stored behind the hut. Sanden asked if the pictures in the packet were provided by the applicant or provided by staff. Adank indicated that staff took these the day after the complaint. Sanden asked if he took these in the packet. Adank stated yes. Mr. Peterson stated the complaint on the 20th and you were out there on the 21st. You will notice there is no trailer. He has a 36 ft car hauler that they haul freight in. The fact that it's not there when the picture was taken, chances are he was not there the Monday before because they do overnight trips on hauling. The fact that the complaint came in, the trailer's not there tends to let him believe that the day that the complaint was made, the property was looking in the exact same shape as the day you took the picture. The complaints are coming from Peggy Steffl who is present. She placed flyers on the mailboxes of all our neighbors yesterday to try to get them to come and to back her and also stated in here if the board does not, again she will contact an attorney, which she did a year ago. We went through a few little letter writing campaigns and got that settled at that point. He has been on the property since 1996 and he has been running his construction business and other stuff out of that shed which was built in 1964. Everybody that is complaining about the process that we're down there has moved in after we've been there. The first complaint that he really received that got the County involved and he has been doing seminars for the County Land Management up until that point so they knew where he was, came about the same time that Tom and Sharyn Tock bought their property. They bought the property and it sat for two years without anybody living in it as they were finishing out stuff. That is when the very first complaint started coming in. The second complaints with Peggy started coming in after they put their home on the market. Peggy told me she was ticked at me because there was a person that came and looked at their home and he happened to stop by and talk to me down at the shed. He never got back to them and it was at that point that the complaints started. We do try to keep our place pretty neat. The product that we are currently working on, giant miscanthus, we were approached by a national company that is growing it. It is a grass product so it is agricultural. It is four times more absorbent than straw and wood mulch. It is a perennial crop that they are using to reclaim gravel pits. We got this product out of Wisconsin out of the Mathis Construction sites. He noticed on one of the pictures that Ms Steffl has shows a lot of miscanthus coming out of our hoop. They told us when they were bringing the first group. They were going to bring enough to put in our shed and then they were going to be bagging it in ag bags offsite. He was not there when they finished. The first day they were trying to hustle everything in and they dumped it without getting it into the ag bags on another location. What he dislikes about having this outside is miscanthus comes in at the 10% moisture content. In order for it to work efficiently in their socks and not create mold, they have to keep it at that level. The general feeling that he tries to do with the hoop building is keep the product in there no more than three quarters full so it doesn't get wet. When it's sitting outside like they left it, they had to get enough temporary tarps until they could get

enough sock going and get it filled. The lower picture on this one probably would have been taken the year before. That's a picture of wood mulch. When we were on a job site a few times, a semi would come in and drop 50 yards of wood mulch. When the semi would dump it and would leave it outside the shed, when we would get home that afternoon if we were on a job site, we would take the skidder and push it in because we can't afford to leave that out to get wet because then they get the mold and the mildew growing. The reason we are here is because of the complaints. Aubart stated the way the staff report reads this is an anonymous complaint. That's what they are and you went to the site to look at that and we're not able to verify the complaint as being valid, would that be a fair statement? The complaint is what it is. Roy stated the issue we've always had is there was some equipment stored outside, typically things behind the Quonset. In the original application it said the only thing that would ever be stored outside is trailers. So it kind of fell in an issue of is this a compliance issue or not due to the appearance of the property, every time he went out it appeared to be a well maintained property. However, having some pallets behind a Quonset hut, should that be viewed as a violation? He didn't think it was but he also knew at this renewal we could bring it to the committee and have more clarification. Aubart asked if it would be a violation of the existing recommendations. What you were saying is that was in the original application but not in the conditions. Roy stated the original application stated no outside storage except for trailers. Adank stated in the conditions it says "activities shall be conducted as presented in the application including hours of operation". The application states, "most" will be kept in shed with trailers parked outside. Equipment that will be operated on premises is truck and trailers, skid steers, erosion control equipment. It kind of says most will be kept in shed. Roy stated we were left with something very subjective, it was never addressed officially in a condition. Holst stated most is anything over the 50.1 percent. Roy stated we didn't feel it was right to treat it as a violation, however we wanted to bring it back to the committee at the next renewal, which is tonight. Chairperson Fetzer stated just to get some clarification on that. Aubart stated he is really struggling here, what is the problem? Roy stated the storage of equipment and materials outside. Aubart stated that's not the problem here. When you look at this property, it is a clean property. If this is the standard, there are a lot of other properties I wish looked like this. Holst stated that Clifton is an Ag Enterprise Zone and this is a farm based, agricultural based business in an Ag Enterprise Zone. He runs a relatively clean place here. What is clean to me may be different to somebody else, I accept that, but we have to use a standard that kind of is acceptable by this committee and he thinks, he doesn't see them in violation of anything. He does think it might clean it up if added the bolded conditions. Make it clearer. He appreciates how straightforward he is. If his 36 ft trailer would have been parked in front of the mulch pile when whoever drove by and took the pictures, they wouldn't have seen the mulch pile. Chairperson Fetzer stated he appreciates the fact that when there is a complaint, staff goes out to verify. When they get complaints they have to go out and check things out. It's not like they are going to pre-call and Hey, get this cleaned up before I come out. Peggy Steffl asked if they get to say anything. Chairperson Fetzer stated yes although this isn't a public hearing. Ms Steffl stated the photos don't represent what is typically out there at all. She has stacks of pictures. She certainly doesn't take a picture everyday but she has a nice sampling of what it looks like and they do call before they go out. They tell me that they are going to call before they go out. Chairperson Fetzer stated he can't believe that. Mr. Peterson stated they never call me. Ms Steffl stated Brad has told me I'm going to give Kevin a call and I'll stop out in a couple days. She has several pictures and Kevin has several violations and they never get reported. Whoever wrote this up stated there were no issues or concerns reported. After they kinda play with your head, saying no issues or concerns were reported with the Town of Clifton other than the complaints listed in the staff report. So there are issues and people on the Clifton Town Board work with Kevin so they are partners with Kevin. So they stay neutral. Let me give you what I gave the neighbors, I don't know how Kevin got a copy because I didn't give him one. These were just a small sampling of the pictures. She has pictures of him trying to start a recycling center at his property with twenty, rusty construction bins and old sheet metal and tarps constantly with old pallets strewn all over the place. She has piles of pictures of that stuff. To say that this is accurate on the report is ridiculous. Mr. Steffl stated that just the pictures you have in this renewal application shows violations. These very pictures, you've got a truck parked outside and trucks are supposed to be parked inside. You show the hoop house, that's intensification and expansion. That business has been intensifying and expanding for the last several years. They now do bulk handling, bulk

storage. It's pretty inaccurate in the current CUP. The current CUP talks about, basically implies the business is just storing a few things in the shed and operating a few skid steers and trucks. This is a manufacturing business. There is production. There is bulk handling. There is bulk storage. There is fabrication. If you look at your definition in part 240 of the code, operating within a residential neighborhood, the current CUP in that original eight year old or seven year old CUP is extremely misleading and extremely inaccurate as to what's been happening to that site over the last few years. More power to Kevin, he's got a good business going there, it looks like but it has been intensified, expanded. One of the provisions is, intensification or expansion requires a modified CUP. The original language from 2011 is still in that CUP. He doesn't believe that the provisions, even in the 2016 renewal are being followed. This hoop house is an example of expansion and intensification. Yet he doesn't believe the CUP has ever been modified to indicate that. The CUP doesn't really indicate that you are doing bulk handling, bulk storage. It doesn't indicate that there is trucking going on which is another industrial pursuit. There is a lot of stuff going on there. There is a mask under the umbrella of a farm & home business. Chairperson Fetzer stated he will take exception to the claim that our staff make a phone call before going out to check things. We have to deal with things and complaints that come in and I'll guarantee these people don't call up and say, give warning on people coming out. Am I correct? Roy stated that is correct. Ms Steffl stated she must have misunderstood. Chairperson Fetzer stated that upsets him greatly because we have good people in our County on our staff and we try to work with people, whether it's a business owner or neighbors. Roy stated first of all, this is an agricultural zoning district with a farm & home based business, putting up another structure but staying under the 5,000 sq ft. limitation has never been viewed that as an intensification. One thing that we do run into a lot, as staff, when it comes to complaints, is what is an intensification versus what is business growth. If things are getting busier on his site, it doesn't mean it's intensified it means the business has grown and is becoming busier. Holst stated an intensification would be an increase in employees, up and over the eight. It would be an increase of square footage over the 5,000 sq ft. It would be if he went from making erosion socks to widgets. Ms Steffl stated he added two delivery trucks last year. Pretty much there is always trucks outside. Ms Steffl stated she believes he is also running a delivery trucking business out of that CUP area. He also had a sign for another business. He finally took that down. Sharyn Tock, W11328 740th Ave, I'm dismayed Kevin, that you would say that the complaints started when Tom and I bought the place. When we bought the house in 2010, there was just the Quonset hut and that was it. There was nothing stored outside of it, just a dilapidated Quonset hut. It gave us pause, do we want to drive by that all the time but we thought it's just like an old cattle barn was what we were told. Fine. Things did not start getting stored outside until about the last few years. You can even see in the pictures you have taken, there is some kind of metal things next to this basketball hoop that is always there. Chairperson Fetzer noted that this is in an ag district so some of this stuff isn't going to pertain. Ms Tock stated we have no problem with the business, we want to be good neighbors, we just don't like looking at all this stuff piled up behind the Quonset hut. Chairperson Fetzer stated that's a trailer. Mike Rodewald stated the hoop structure that is there is placed on top of an old feed lot concrete. It does not have a foundation and it's bolted down to temporary blocks. He is having a hard time in his opinion, calling it a permanent structure since it has not foundation and it's what he would consider temporary. He has been buying material from Kevin for probably five years at least. Most of the time when he goes out there, he doesn't think it's ever looked anything different than the pictures Brad is showing. As far as other materials, other trailers for temporary storage of socks sitting out waiting for me to come pick them up. Jim and Deb Barron, the closest neighbor, directly south, he has lived there since '78 before the development and Kevin went in. That Quonset hut was Tagler's show barn. Up until Kevin took over, he could hear the roof rattling with the tin coming off. There has been a lot of that junk left by the previous owner, Tagler's, farmers. It has been constantly improving. Sometimes there is something outside. If Peterson's skid steer is running, he can hear it. His house is right on the road. He has been there for over forty years. He has more issues, he doesn't but others do, when Huppert's are combining beans and the semi is on the road. Their semi comes up turns around in the development and then their chase car blocks it. This is just part of living in Rural Flexible Ag zoning. We also farm for the farmers market. We have piles of bagged leaves on the hill. We have piles of tomato cages on the hill. We have a high tunnel on the hill. Our place probably looks a lot worse than Kevin's does. He has an old Massey Harris tractor and an M tractor that sit out in the field all summer

because they are ready to be used. They are not sitting in a parking spot, trailers move; equipment moves. His place has been improved consistently over the years, even prior to the conditional use permit. He would appreciate if it was continued on. One thing there is somebody watching him. Holst stated under this type of use in this type of district, are they required to have site plan review? Roy stated no, we have not typically done that. Mr. Steffl stated that he doesn't think anyone wants Kevin to lose his CUP. We don't want Kevin to go out of business. He would just as soon see his business continue to grow just under the confines that are defined in the CUP. Follow the provisions that are there and he thinks everything would be fine. He thinks every one of those complaints that were read, would not have been a complaint had the provisions in the CUP been followed. It's not about driving Kevin out of business, he likes Kevin, he's a good guy, it's basically just follow the provisions in the CUP. That's all they are asking. Mr. Peterson stated the attorney that wrote the letters to him went way beyond what's in the CUP. Holst stated perhaps what you are talking about should be discussed in a court of law. This is specific to this permit application tonight. Phil Gribble, W11338 740th, he is Kevin's neighbor to the north. He was the first person to buy a lot on their development in 1994. He has been there longer than anybody, even before Kevin was there. You are getting two different pictures, the pictures you took after the complaint and it looks just fine, right. These other pictures, he has been there a long time. Those pictures are out of context. Sure that was there when they took the picture but that's not what it looks like most of the time. It might happen every once in a while. So they dump a truck and Kevin takes care of it. It's never been an issue for him or his family in over twenty years that they have been there. They want that on the record. Chairperson Fetzer stated he appreciates every ones input, he honestly does. Just so you know, you have eyes on you obviously. Mr. Peterson stated his wife is harder on him than the neighbors. There was some stuff down there for a while that he had sold and the guy didn't come to pick up which really is what started this. When you have those bins sitting there and you are trying to get rid of and you are calling saying I need you down here. Chairperson Fetzer stated it's all about perception and the best we can do to appease people. We do go through that on our farm also. **Holst moved to approve the renewal of the conditional use permit for a Farm and Home Based Business for Construction Debris Management, Kevin Peterson with new conditions #1 - #8/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for an Accessory Residence in the Town of Oak Grove by David Chadima.

Public hearing to consider a request for a Nonmetallic Mining Operation in the Town of Clifton for John Rohl. The one that the Kinni River Land Trust has been involved in. Chairperson Fetzer asked if it's been a closed mine for a while and now they are opening it back up. Pichotta stated yes.

Motion to adjourn at 9:06pm by Sanden/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 21, 2018

Present: Jon Aubart, Joe Fetzer and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Absent: Jeff Holst and Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 4th & 18th, May 2nd & 16th, June 6th & 20th, all in 2018.

Approve Minutes: **Sanden moved to approve the March 7, 2018 Land Management Committee minutes/Aubart seconded. All in favor. Motion Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-67A(2), for John & Jill Erickson, owners on property located in Lot 1, Certified Survey Map (CSM) V2, P171, in the SW ¼ of the SW ¼ of Section 14, T24N, R15W, Town of Maiden Rock, Pierce County, WI.

Staff Report – Emily Lund: The applicant’s property is at the north end of 80th Street. The 80th Street Town Road right-of-way is located between the garage and house. The existing house is a nonconforming structure located ~42 ft from the center line and ~9 ft from the Town Road right-of-way. The applicants propose to expand the existing house to the south by adding 20’ x 29’ single-story with basement. The applicants intend to maintain the existing setbacks from 80th Street so the addition is out of the Town Road right-of-way. The 2.23 acres is located in Section 14, Town of Maiden Rock. The property is zoned Agriculture Residential. PCC §240-67A(2) states, “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76.” PCC §240-76A states, “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure or expansion or intensification of a nonconforming use.” PCC §240-27C states, “Town highways. Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 42 feet from the edge of the right-of-way, whichever is greater.” No permit renewal is needed for this request. The existing topography is a very gradual 5% slope to the Northeast throughout the property. The Town of Maiden Rock recommended approval of this request on February 21, 2018 without any conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found not contrary to the above, staff recommends the LMC grant this conditional use permit for the expansion of a nonconforming structure with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The applicants shall maintain the 42 ft setback from the centerline of 80th Street so the house expansion is out of the road right-of-way.

3. The proposed expansion shall not be located within the 80th Street Town Road right-of-way.
4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. The proposed expansion shall be completed within 12 months of CUP approval.
6. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer asked if this is a dead end road. Applicants stated yes. **Chairperson Fetzer opened the hearing to the public.** No public comment. **Chairperson Fetzer closed the public hearing.** Jill Erickson stated they appreciated staff taking the time and for coming out to the property to look at things. **Sanden moved to approve the conditional use permit for the expansion of a nonconforming structure for John & Jill Erickson, due to the fact it is not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on proposed Ordinance Amendments to Pierce County Code Chapter 240-29, Height Requirements, Chapter 240-32A(1), Minor Structures and Chapter 240-32D, Accessory Structures.

Staff Report – Brad Roy: As was discussed a couple meetings ago, we have had issue with new construction meeting the 35 foot height limitation on residences. We didn't make any additional language changes since this was last presented. This code amendment will allow for residential structures located in agricultural zoning districts to be increased to a maximum of 45 feet in height provided that all required setbacks and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. Height shall be measured from the lowest exposed portion of the structures exterior. If you recall, we wanted to limit this to the ag districts given that development patterns have already been established in most residential districts so allowing for taller structures might not be the best thing in those locations. Moving on to Minor Structures: this code amendment is to establish that non-habitable structures, of not more than 100 square feet, which can be easily moved and meet applicable setback requirements, are exempt from permitting. Any structures 100 square feet or less would be considered a minor structure and would not require a land use permit. Moving on to Accessory Structures, this one got a little complicated, looking at shipping containers, previously the code said that they had to be considered personal property and we couldn't permit them permanently. It also required that trailers and boats be considered personal property and limited the time that they could be placed on a property. Roy believes everyone was in agreement that it didn't seem reasonable. We took a look at that section and just tried to clean it up. In the end, we pretty much scrapped it all and started over. Now we are looking at Temporary Accessory Structures: structures such as, but not limited to, manufactured homes and shipping containers may be temporarily placed on a parcel only upon issuance of a land use permit subject to the following:

1. The land use permit shall expire no more than 12 months from the date of issuance and the accessory structure shall be removed from the premises upon expiration of the permit. A subsequent land use permit for a temporary accessory structure on the same parcel shall not be issued until 12 months has elapsed from the expiration of the previous permit.
2. Only one such accessory structure shall be permitted at a time.
3. A manufactured home may be permitted as a temporary accessory structure only in the agricultural districts.
4. Accessory structures such as shipping containers may only be permitted on a temporary basis in the residential districts.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions and if determined to be appropriate, approve said revision and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption.

Previously, you could only do the shipping containers in the residential districts temporarily but this would allow for shipping containers to be permanently permitted in an agricultural district. A manufactured home could be temporarily permitted in the ag district. We have seen in the past, where somebody in an ag district

gets a good deal on a mobile home and isn't sure what to do with it and they just need a place to store it. This would allow them to get a \$50 permit just to store it. They don't have to hook it up to anything, it can just sit there for a year and then they have to decide what to do. That couldn't be done in a residential district. Sanden asked Brad what the definition of a manufactured home is. Roy stated it's lengthy. Sanden said what he is saying and these are becoming more popular. They used to call them pre-fab homes. Now they have gotten pretty hi-tech where they will build the walls in some factory somewhere and ship it out. Roy stated we do not consider that to be a manufactured home. In fact, one thing we would like to do in the future is get rid of all of our references of a manufactured home since we deal with land uses. A home is a home. It's just a residence no matter how it is built. Pichotta stated that he has a couple thoughts on this, under condition #4 Accessory structures such as shipping containers may only be permitted on a temporary basis in the Residential Districts. It may be that we need to explicitly say that no such limitation on the use will occur in the agricultural districts. When we drafted this, we felt it was inferred and that took care of it but he now thinks additional discussion with County Corporation Counsel should take place. Pichotta noted that these amendments are going to take some time to get in front of the County Board simply because we are not going to get it in front of F & P at the next meeting. It's going to be a month and a half before we get it to F & P and then we will likely get it before the County Board in May. So it is going to take some time. He also noted that we did send a public hearing notice to all the Town Clerk's and a copy of the staff report to all of the Town Chairs. The fact that none of them are present tonight seems to indicate that they're comfortable with what we are up to here. Aubart asked if he is asking that we change the proposed language, it's hard to approve it then. Pichotta stated the expectation when you hold a public hearing is that there may be additional changes made to it based on discussion and comments that are received. You wouldn't need to bring it back for another hearing. His intent of bringing up the potential for added language is so if it's a little different when you see it at County Board, you are aware of why. Sanden asked if temporary is defined someplace. In other words in residential district what is meant by temporary? It only gets one 12 month permit and then it can't be renewed? Pichotta stated that is exactly what that means. **Chairperson Fetzer opened the hearing to the public. No public comment. Chairperson Fetzer closed the public hearing.** Sanden expressed his gratitude to staff for staying ahead of the game and making very common sense, workable, streamlined language. Chairperson Fetzer stated just cleaning stuff up as you see fit. It makes good sense. **Sanden moved to approve the proposed ordinance amendments to Pierce County Code Chapter 240-29, Height Requirements, Chapter 240-32A(1), Minor Structures and Chapter 240-32D, Accessory Structures and forward a recommendation to Finance and Personnel Committee and the County Board of Supervisors for approval and adoption /Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Kevin Etherton to an in-person training/workshop held by the Census Bureau in Madison. It's a local update of census address operation. We are starting to get questions from other municipalities in the County and it makes sense to have a point person. There will be no cost associated with the workshop itself. Given that it starts at 9:00am and its four hours away, he would like to send him down the night before and put him up in a hotel. There would be that cost. The dates would be April 4th and back on the 5th. **Aubart moved to approve the travel/training request for Kevin Etherton to attend the Census Bureau Workshop in Madison on April 4th & 5th/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for a Private Outdoor Use for the Prescott Sportsman's Club on their 40 acres they own in the Town of Oak Grove.

Public hearing to consider a request for Big Dog Daddy's Roadhouse, he is proposing a campground/resort on his parcel, which will consist of camping as well as cabins.

Request for a renewal of a CUP for a Farm & Home Based Business, Construction Design Management by Kevin Peterson in the Town of Clifton.

Motion to adjourn at 6:23pm by Sanden/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 7, 2018

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund, Adam Adank and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 21st, April 4th & 18th, all in 2018.

Approve Minutes: **Snow moved to approve the February 21, 2018 Land Management Committee minutes/Aubart seconded. All in favor with Holst abstaining. Motion Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from General Rural Flexible to Commercial District for Jared Murphy, agent for Ellsworth Community School District (Lindgren School), owners on property located in the NW ¼ of the SW ¼ of Section 12, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Emily Lund: The applicants are requesting to rezone the 8 acre parcel on which the Lindgren School is located. The School District accepted an offer from Hager City Glass to purchase the property contingent upon the property being rezoned to Commercial. Hager City Glass has outgrown their current facility and would like to move to this location, but needs the property to be zoned Commercial to operate their business (General Retail and Services). The property is in Section 12, Town of Trenton. Current land use is institutional, undeveloped and wooded. Adjacent land uses are agricultural, residential and wooded. The current and adjacent zoning is General Rural Flexible. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts is described; General Rural, General Rural Flexible and Commercial. Pierce County’s adopted Comprehensive Plan states: “The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. The value of land for agricultural use according to the USDA Web Soil Survey shows that the properties are in Prime Farmland or Farmland of Statewide Importance. The Town of Trenton recommended approval of this request on 2-13-2018 and identified one goal and four objectives from Chapter 8: Land Use of their Comprehensive Plan in support of the recommendation:

Goal 3: Provide for orderly development.

Objective 1: Seek to enhance the Town’s potential for quality growth and development without adversely affecting the existing services and facilities.

Objective 4: Maintain future land use activities that are compatible with existing natural resources and co-exist with agricultural activities.

Objective 5: To encourage non-residential development to balance the economic base.

Objective 6: Promote an organized development pattern that will minimize conflicting land uses and provide for controlled rate of development.

Staff Recommendation: Given that the Trenton Town Board has determined that this proposed map amendment (rezone) of 8-acres from General Rural Flexible to Commercial is consistent with their Comprehensive Plan, staff recommends the LMC approve this map amendment (rezone) and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Holst stated he thinks this is a reasonable use of this land. It is consistent with their comp plan. **Holst moved to approve the map amendment (rezone) from General Rural Flexible to Commercial for Jared Murphy, agent for Ellsworth Community School District (Lindgren School) and forward a recommendation to the County Board of Supervisors/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Multi Family Dwelling in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-17, for a senior living facility by Bernard Schoeder, agent for Ellsworth Community School District (Prairie View School), owners on property located in the NE ¼ of the NE ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Bernard Schoeder forward: Holst asked if this is the same piece of property that we have been reading about in the paper for several months. Mr. Schoeder stated the same piece. Holst stated very good, he is familiar with it then.

Staff Report – Adam Adank: The Prairie View Elementary School was recently closed due to the construction of a new Hillcrest Elementary School in Ellsworth. Consequently the Prairie View Elementary School building is now vacant and has no current use. The applicant intends to convert the existing one story, 23,840 sq ft school building into a senior living facility for adults age 55 and over. The applicant has stated that there will be no direct care or care for hire services provided. The building will be renovated to include 16 units total. Five of the proposed units will be 2 bedroom and the remaining eleven units will be 1 bedroom. Each unit will be approximately 31' x 32' and provided with a kitchen, bathroom, living area and its own interior and exterior entrance. The facility will also include a 40' x 60' community room and kitchen, an office area and a community restroom. The applicant plans to purchase a total of 9.00 acres located in the Weberg's Pine View Subdivision. The parcels are located in Section 1, Town of Trenton. The property is zoned Rural Residential 20. Adjacent zoning districts are Rural Residential 20, Commercial and General Rural Flexible. Adjacent land uses are agricultural and residential. PCC §240-88 defines Multiple-Family Dwelling as, "A building containing three or more dwelling units." PCC Table of Uses allows Multiple-Family Dwellings in the Rural Residential 20 zoning district with the issuance of a conditional use permit and does not reference any code provisions. The applicant proposes to utilize the existing exterior building shell and renovate the interior of the building. The footprint of the existing building will not change. The applicant has a building plan review appointment scheduled with the Department of Safety and Professional Services (DSPS) on March 22, 2018. The applicant was granted variance approval from the DSPS on December 12, 2017 to not install a sprinkler system due to lack of municipal water supply and allow the construction/use of a corridor with increased fire ratings not normally allowed by code. The applicant anticipates a 6 month to 1 year construction schedule with hopes to start renting out the dwelling units by January 2019. Access to the site is off of 170th Avenue which is a town road. The site has 4 existing light posts near the front of the building along 170th Avenue and an additional 2 existing light posts along the south east portion of the existing building as shown on the site plan drawing. The applicant proposes to place mounted lights on the exterior of the building at each private dwelling entrance. The school has an existing Private On-site Wastewater Treatment System (POWTS) sized large enough to accommodate the wastewater flows from the proposed 16 dwelling units. However, the existing drainfield is located on a 40 acre parcel that was sold to Larry, Adam and Eric Swanson in July of 2017. The applicant has stated that he will be designing a new drainfield to be located on parcel 030-01163-0900 on the west side of the property as indicated on the site plan. The applicant proposes to put a sidewalk around the entire building that connects to each of the 4 main entrances. Vegetation between the building and sidewalk will be removed. Each private outdoor entrance will also have its own individual concrete apron as shown on the site plan. The applicant has stated that all basketball hoops and playground equipment will be removed from the site. The applicant has proposed to convert the two temporary classrooms on the west side of the building to residential uses and move to a vacant lot on the property at a future date. Off-street parking per Pierce County Zoning Code Chapter 240-54A requires two parking spaces per dwelling unit for residential uses. The proposed senior living facility will have 16 dwelling units requiring 32 parking spaces. The proposed site plan delineates 37 parking spaces on the north side of the facility with the option for an additional 27 parking spaces on the south

end of the facility. The Wisconsin Department of Natural Resources requires an asbestos inspection for multi-family housing with five or more units. The Department of Health Services requires licensed inspectors and risk assessors to identify lead paint. When building surfaces or components are being renovated in any residential and child occupied buildings built before 1978, lead paint must be assumed present or identified through testing. The Trenton Town Board recommended approval of this request on 2-13-18 without any concerns or recommended conditions.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area.

If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for multiple family dwellings with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC.
2. The applicant shall work with the State of Wisconsin Commercial Building Inspector, Joe Merchak, to ensure compliance with the Commercial Building Code requirements. Applicant shall receive all necessary permits from the Department of Safety and Professional Services (DSPS) and other agencies as required.
3. The applicant shall work with the Wisconsin Department of Natural Resources and Wisconsin Department of Health Services to ensure all lead paint and asbestos regulations are followed during renovation activities and any future building maintenance/repairs.
4. The applicant shall work with a certified soil tester and certified plumber to obtain a State Sanitary Permit and install a new POWTS drainfield prior to the rental of any dwelling units.
5. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on or off property.
6. The proposed project shall be completed within 12 months of CUP approval. No renewal of this request will be necessary provided the use is established within 12 months of approval.
7. Applicant understands that expansion or intensification of this use will require modification to this permit or potentially, issuance of a new conditional use permit.

Chairperson Fetzer opened the hearing to the public. Larry Swanson, Town of Trenton, wanted to know if this permit is limited to the school only and not the entire nine acres for multi-use or multi-family buildings. Pichotta stated this permit would just authorize the use of the school. Anything in addition to that would qualify as intensification or expansion and would potentially require a new permit. So he is only authorized to work within the existing footprint of the school. Joyce Wilson, the two buildings that are attached, on here it says "the applicant has proposed to convert the two temporary classrooms on the west side of the building to residential". Is that also senior housing? Mr. Schoeder stated no, and that is just in the talking stage. Ms Wilson asked where on the property would it be located? Mr. Schoeder stated if it was located on the property, it would be located on the northeast corner and that if they are put in there, they will be completely remodeled and look like a duplex with two garages in the center. Ms Wilson asked if that would also be senior living? Mr. Schoeder stated that would be open to anybody. Chairperson Fetzer asked if that would be considered intensification. Pichotta stated yes, that wouldn't be part of this particular project. That would require a separate permitting process. Jim Wilson, stated we have a lot of children in that area, would there be any chance that you could leave that playground open for the kids? There is a lot of after-school activity. He was just curious if there would be a possibility of leaving some of the playground open for the kids in the area. Mr. Schoeder stated he really doesn't have anything against it but he has been encouraged by so many people to get rid of it. Mr. Schoeder asked if they live close by there. Ms Wilson stated right next door. Mr. Schoeder stated he would give them some of the playground equipment. Ms Wilson asked with there being so many kitchens, how many units, there is no sprinkler system or anything required? Mr. Schoeder stated the way that building is designed, it's got two firewalls. Every apartment is encapsulated. It's all concrete block so that is why we got this variance. There wouldn't have been any question about this in 2015. This is a new law that has come into effect now and it's really a project killer because it costs a lot of money. We wouldn't even be here talking if we would have had to

put that sprinkler system in. Mr. Schoeder stated there will be fire alarms in there, smoke detectors in every apartment, a security system also. Chairperson Fetzer asked if there is any further public comment.

Chairperson Fetzer closed the public hearing. Sanden stated he knows this is covered in condition #4, but have you looked into the soils in the area and if it's going to be conducive to a standard septic system because it's going to be a 16 unit. Adank stated that Bernard got a quote from Pelke Plumbing based on the soil evaluation from where the drainfield is located now. Holst stated its pretty sandy soil. If any place in the County perks, it should be there. **Holst moved to approve the conditional use permit for a multi-family dwelling for Bernard Schoeder, agent for Ellsworth Community School District (Prairie View School), due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7/Snow seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for General Retail & Services (hosting weddings and events) in the General Rural Flexible 8 and Light Industrial Districts, pursuant to Pierce County Code Chapter 240-36E by Julie Jacques, agent for Neal Wallace, owner on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Julie Jacques forward:

Staff Report – Emily Lund: The applicant is requesting a CUP to begin hosting seasonal outdoor events (e.g. receptions, graduations, birthdays, farm-to-table meals, etc) from April through October. Food and beverages will be catered to the site by vendors. No structures are proposed at this time; tents, tables and chairs would be brought to the site for use at an event. The applicant obtained a CUP for General Retail & Services for a Greenhouse located on this site on 10-3-2012. The property is located in Section 35, Town of Clifton. The property is zoned General Rural Flexible and Light Industrial. Pierce County Code §240-36E and Chapter 240 Attachment 1 Table of Uses allows General Retail & Services with a conditional use permit in the Light Industrial District. General Retail & Services is not a permitted use in the General Rural Flexible District. Pierce County Code §240-88 defines 'General Retail & Services' as "Establishments that provide goods and/or services to the consumer." Adjacent zoning districts are General Rural Flexible to the north and west; and Light Industrial to the east and south. Adjacent land uses are agriculture, light industrial and wooded. The 7.69 acre property has multiple grain bins, pole sheds, storage sheds and a greenhouse. The grounds will be utilized for event/gathering activities (e.g. weddings, receptions, etc.). The applicants want to keep the look and charm to enable farm-style events. The business will be located outside and operate seasonally from April to October. Hours of operation are proposed to be from 10AM to 12AM (Midnight), with tear down allowed to 1AM. They propose to have one event per day and up to two events per week. Applicant proposes to build a new pergola for the events in the future. The pergola size has not yet been determined. The applicants will apply for a land use permit prior to construction. The applicants plan to explore the possibility of updating an existing pole shed for indoor events and to provide a permanent restroom. The applicants won't be catering or providing alcohol. Food and beverages will be bought from off site and catered into the event by those individuals renting the site. Event holders will need to rent their own tents, tables and chairs from elsewhere, bring them to the site, set them up and take them down. Event holders will also need to hire their own music or other entertainment. The applicants will require that vendors performing services for the event holders supply copies of insurance and licenses. The applicants will not allow the use of fireworks. The business will be operated by the applicant, agent and 3 part-time employees. Access is north of State Highway 29 and west of 1250th Street. The applicants plan to landscape the property, including lining the main parking area with shrubs, flowers and trees. The applicants plan to have ample space for a typical wedding (250 guests), up to a maximum of 500 guests per event. Pierce County Code §240-54 specifies minimum parking provisions shall be 1 parking space per 3 guests and 2% of the total number of spaces shall be ADA approved. The plans submitted show ample parking area to fulfill this requirement, however, a portion of the proposed parking area is located in the General Rural Flexible 8 District, in which General Retail & Services is not a permitted use. The applicant is proposing to provide satellite toilets on site for customer use. The applicants propose to rent luxury restroom trailers from Onsite Companies. The typical ratio is one satellite toilet per 50 guests. Solid waste disposal bins are provided. PIG is hired to remove

collected recycling and waste. No outdoor advertising signs are requested at this time. There is an existing light pole located north of the greenhouse. No additional lighting is proposed. The Clifton Town Board recommended approval of this request on 2-6-2018. The Town said it is consistent with their comprehensive plan and did not specify any concerns or suggested conditions in their recommendation. PCC §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area.

If found not to be contrary to the above, staff recommends the LMC approve the proposed use with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. All activities shall take place in the Light Industrial district.
3. Adequate portable outhouses (1 per 50 people), or other acceptable restroom facilities, shall be provided.
4. Hours of operation shall be April to October from 10AM to 1AM.
5. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
6. Applicant shall secure a Land Use Permit for all future structures or signs prior to construction or installation. Applicant shall also comply with relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health and Family Services, etc.).
7. Maximum occupancy shall be limited to 500 people, with 2 events per week and 1 event per day.
8. There shall be at least 167 off-street parking spaces available. A minimum of 5 parking stalls shall be ADA compliant.
9. The use shall be established within 12 months of CUP approval. This CUP shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Sanden asked Lund if condition #2 implies that the proposed site plan will be changed to move the overflow parking out of the General Rural Flexible. Pichotta stated yes. Ms Jacques asked we can't have overflow parking in that location? Lund stated we will have to make it so it is in the Light Industrial District. She wasn't sure if it was to be a determination at the meeting tonight. Ms Jacques stated the other parking, the main parking is in the Flex 8 district. Lund stated the main event parking, as long as it's in the gray area then it's accepted. Ms Jacques stated it isn't, it's in the Flex 8. Lund stated so we might have to move the parking location. Ms Jacques stated there isn't enough parking area then. Lund stated we might have to sit down and look at this to see where we can put it because there are areas to the east of one of the big grain bin. Ms Jacques stated those are farm fields that they actually use as farming. Sanden asked if it would be acceptable if they were to modify condition #2 and say, all activities except overflow park must occur within the Light Industrial District - would that be acceptable? Pichotta stated that is acceptable. Snow asked about condition #7, you are limited to two events per week, with one event per day so basically you are only going to be open two days a week? Ms Jacques stated this isn't going to be a main business. This is just a diversification from the greenhouse. That is their main business so they would like that opportunity to rent it once a week, maybe twice. Snow asked so it can be opened any day during the week? Neal Wallace stated the greenhouse is now operating seven days a week until the 4th of July. They are supplementing that by having some events, weddings, etc that aren't really retail, but events. Those may go on through the summer. Ms Jacques stated it isn't going to be a high-buck, fancy place, we don't have the money to build a big beautiful thing so this is kind of going to be the inexpensive place to come have your wedding and put up a tent. Holst stated you are hoping to fill a niche that's probably not being met right now. Ms Jacques stated when they were looking to put her own daughter's

wedding on, they were looking at, that place was \$20,000 and this place is \$30,000. They are looking at filling that cheap-seat niche. **Sanden moved to approve the conditional use permit for General Retail & Services for Julie Jacques, agent for Neal Wallace, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #9, amending condition #2 to read "All activities, except overflow parking, shall take place in the Light Industrial District."/>**Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for CMC-Spring Valley LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.

Staff Report – Adam Adank: County Materials obtained a Conditional Use Permit for Nonmetallic Mining in April 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. The operation has remained mostly on the surface which has contributed to issues of noise, dust and appearance. The applicant still intends to move the operation of the quarry floor below the surface elevation. Timing of the move is dependent on product demand. A status report conducted in November 2013, modified the CUP to allow nonproduction hours from 6pm to 8pm Monday through Friday for maintenance and preparation. At that time condition #4 was also modified to require County Materials to work with the Land Conservation Department to ensure that the site is internally drained. The property is located in Section 9 and Section 16, Town of Spring Lake. The property is zoned General Rural. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. County Materials intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. The dry screening plant has been moved to the quarry floor. The original operation plan states that excavation would create a floor elevation of 1050ft, where all activity would be conducted. The average current floor elevation is 1100ft and the processing area has an approximate elevation of 1160ft. The average floor elevation of the quarry is 1100ft. County Materials has begun to lower the floor to 1070ft. The original CUP allowed no more than 30 unreclaimed acres at any given time. In April 2012, the number of allowable unreclaimed acres was increased to 40. This increase was supported by the Town of Spring Lake. During a site visit of the facility on February 26, 2018 Operations Manager, Ted Peterson, stated that the mine is currently at the maximum allowable unreclaimed acres and would like to increase the maximum allowable unreclaimed acres from 40 to 50 acres. Because of the short notice, staff recommended addressing this request as a CUP modification at a future LMC meeting. This would allow for County Materials to get a recommendation from the Town of Spring Lake. A Fugitive Dust Plan was developed and approved by the Town of Spring Lake and the LMC in June of 2012. In 2014, condition #4 stated, *storm water measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department as soon as practical. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days. Failure will result in this issue being placed on the next available LMC agenda for potential suspension of the CUP.* The Land Conservation Department inspected the site soon after the 2014 renewal. It was determined that the mining area is internally drained. A small portion of the processing area (~2,500 square feet west of the scale) drains to the North and not into the quarry. The water runs to a small sediment basin. Land Conservation believed that the measures in place are adequate with proper maintenance of the basin and limiting the contributing area. In 2016, condition #4 was changed to read, *storm water measures shall be implemented and maintained consistent with the Land Conservation Department recommendations.* The operation has received numerous complaints when it began about noise, dust and appearance. Staff has not received any complaints since the last renewal. Staff spoke with Town of Spring Lake Chairperson, Richard Johnson, regarding the renewal of this conditional use permit. Mr. Johnson stated the town has not received any complaints since the last renewal and has no concerns at this time. The existing conditions #1 through #28 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm with nonproduction hours 6pm to 8pm, Monday through Friday and 8am to noon on Saturday. Operation shall be closed on holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water measures shall be implemented and maintained consistent with Land Conservation Department recommendations.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be submitted consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in two years unless compliance issues arise.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 40 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line and at 1 ½ miles from property boundary and shall submit results to the Land Management Department. Such readings shall be taken three times annually and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand, barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC at the request of the Town of Spring Lake.

26. Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.

27. The Fugitive Dust Plan shall be implemented as approved.

28. Applicant is allowed to water anytime necessary to mitigate off-site dust impact.

Jim Small stated he doesn't have anything to add just wanted to say it's good to see everyone again. It's been two years and Ted was planning on coming, but he called this afternoon with the flu and didn't want to share with everyone. Ted talked to the Town. Jim stated that he doesn't get out there as often as he used too. He stated he knows Ted at least three or four days a week is out watching things. Jim still gets out there occasionally. He still takes the water samples so he can meet with the neighbors or at least talk to them on the phone to get permission and see if they have any issues. Most of them he talks to in person when he grabs the water sample. Everything seemed OK. As for the addition, he thinks they will have some areas that stockpile in the northwest corner too close and we'll meet with staff once it greens up to see if they can get some acres closed. They finally do have a face on the east side, the high wall that they can start putting material on 3:1 slope so that will take a lot of the overburden. It's a little tight still down in there due to where the rock is in the valley in there. We are getting some areas ready to reclaim if you guys are willing to close it out. It would be too tight. He thinks they are going to be over 40 even with that. Holst stated it takes a long time to establish a mine, a working mine and get everything to where you anticipated being when you start the mine. He thinks that they have progressed well and have done a good job of satisfying the wants and needs of the local people. Correct him if he is wrong, whatever we have asked them to do, whatever the Town has asked them to do, they have done. They have been a good neighbor. Mr. Small stated they have certainly tried. He thinks only once this season did they have a blast that was after 2:00pm. He thinks Ted called one of the guys. Mike Jacobson stated he got a call. Mr. Small stated they are watching all of the permit conditions very closely. He thinks it's been working out well with Ted there. Jim thinks he was at one town meeting in 2016 and Ted has been there a couple times since. We make sure to talk to the town occasionally, even when things are going good. Sanden asked, do I take that as far as the acres increasing, the allowable unreclaimed acres from 40 to 50. Was that what you were referring to? Mr. Small stated right. Sanden stated it's not now but may in the near future be required. Mr. Small stated yes, and they will try to get on the town for the April meeting then so with the Land Management Committee in a few months. Mike Jacobson stated they are doing a good job. He would ask County to make sure they got that fence up like they are supposed to. The snowmobile trail ran by it this year, they let us go by, which thank you for letting us do that. If you go off it, you are in a lot of trouble because it's straight down. That is on that east side running along 128. We are looking forward to some reclamation going on. He would say the sand maybe on condition 26 is above the berm. He knows you are having a hard time getting rid of that so he brings that just as, it's above it, but he knows you have a lot of it. Richard Johnson stated we haven't had any complaints from neighbors in the last year. Mr. Jacobson stated no, but he hears from Bill Klanderman saying he can see it from his place. Same with Tyvold's but it's not the noise or the dust. They have done a fantastic job of getting that under control. Chairperson Fetzer asked if they contact them. Mr. Jacobson stated Ted is very good on the phone. He gets a call or a text quite often. Chairperson Fetzer stated to just let us know if we need to do anything over and above. Mr. Jacobson stated they are here to serve. Chairperson Fetzer stated we are here to help you guys too. He asked if we need any action on this. Pichotta stated motion to renew. **Snow moved to renew the conditional use permit for CMC-Spring Valley (County Materials) for Nonmetallic Mining, with conditions #1 through #28/Holst seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F Holst III and William F Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and agent for Big Acres Inc, William F Holst III, Nancy J Beeler and Leon W & Donna L Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI. Jeff Holst recused himself from discussion and voting due to possible conflict of interest.

Staff Report – Andy Pichotta: In 2012, WISC obtained a Conditional Use Permit for a new underground mining operation in the Town of Diamond Bluff. On May 21, 2014, a Conditional Use Permit was obtained to expand the mine into the Town of Oak Grove. The mining process will be consistent to those at Maiden Rock and Bay City. The mined materials will be screened, trucked and conveyed in the tunnels. The sand will either be washed at a new proposed plant at the mine entrance in Diamond Bluff or in the proposed plant expansion at the existing Hager City processing plant. The washed sand will be dried and further processed in Hager City. The mining permit encompasses 59 parcels totaling 1,867 acres in Diamond Bluff and 27 parcels totaling approximately 985 acres in Oak Grove. Activities on the site will include blasting and screening underground as well as stockpiling and loading on the surface. The LMC, at the required 1 year status report on August 7, 2013, by WISC, found that “action” had commenced at the Diamond Bluff site within 12 months and that the “use” had been established. The property is located in Sections 1, 2, 3, 4, 10, 11 and 12, in the Town of Diamond Bluff as well as Sections 25, 33, 34, 35 and 36, in the Town of Oak Grove. These properties are zoned General Rural Flexible 8. Access to the mine entrance site is off of 1005th St, WisDOT recommends the intersection be upgraded to the B1 class. 1005th St will need significant upgrades. A road agreement was reached with the Town of Diamond Bluff. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. The entire mining process takes place underground using room and pillar mining. The sandstone will be mined in parallel tunnels approximately 30-foot wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The applicant is proposing to operate the facility 24 hours a day, seven days a week with up to 22 employees. WDNR regulates and monitors discharge water through the WPDES permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The mining operation is required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. Waste materials will be placed back in the mining tunnels. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. Wisconsin Department of Safety and Professional Services (DSPS) establishes uniform limits on permissible levels of blasting to reasonably assure that blasting does not cause injury, damage or unreasonable annoyance to persons or property outside any controlled blasting site area. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. A Land Use Permit for Filling and Grading in the Shoreland area was issued in September 2017, for construction of the storm water ponds. The applicants are currently completing a Hydraulic and Hydrologic Analysis of the ponds in the Floodplain. An archeologic study is also currently being completed with the DNR and Historical Society. The existing conditions #1 through #33 are listed in the staff report.

Staff Recommendations: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area and renew the permit with the following conditions:

1. Applicant shall submit verification of lease agreements before mining is conducted.
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties within 1000’ of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties. Mining under a leased property shall be a minimum of 100 feet from any well. A 200-foot buffer shall be maintained around structures.
4. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
5. A map of mining activity and areas of future expansion shall be provided to the Zoning Office annually.
6. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.

7. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
8. WISC shall develop a plan to respond to damage claims to wells or structures by surrounding land owners. WISC shall offer pre-blasting surveys to residents or owners of dwellings or other structure within 1500 feet (or as established by the applicable Town) and shall respond to claims of impacts/damage.
9. A ground water response plan, including accurate determinations of the groundwater level and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
10. Engineering analysis shall be conducted to demonstrate slope stability for the reclamation of the mine entrance area. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
11. A formal road agreement for 1005th St with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance. Road agreements shall be established with the appropriate municipality prior to any use of Town or County roads.
12. Applicant shall obtain all necessary permits for the proposed development within the Floodplain and Shoreland area.
13. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to site disturbance.
14. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences.
15. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
16. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
17. All loaded trucks shall be tarped in a manner acceptable with the Town of Diamond Bluff.
18. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
19. Applicant shall implement Fugitive Dust Plan as presented. Modifications to the Fugitive Dust Plan may be required by the LMC if warranted.
20. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster. All surrounding land owners within 1500 feet shall be given notice of the blasting schedule. Blasting shall be restricted to six days a week.
21. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, WisDOT, MSHA and other agencies, if required.
22. Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office.
23. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
24. This permit shall expire in two years. Applicant shall come before the LMC for a status report in one year.
25. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
26. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
27. Prior to beginning any mining activity within the Town of Oak Grove the applicant shall request to be placed on the agenda of the Oak Grove Town Board to review uses occurring in proximity to parcels authorized for mining. Concerns raised by the Town shall be presented to the LMC for review and potential CUP modification.

28. No ventilation shafts shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.
29. Any secondary access portal shall require issuance of a Conditional Use Permit for an expansion of this use.
30. Mining shall not occur on/under property zoned Light Industrial.
31. State Hwy 35/1005th Street improvements shall be completed before operation begins.
32. Clearing and benching of portal sites shall be completed before operation begins.
33. Applicable permits must continue to be pursued.

Chairperson Fetzer invited Rich Budinger forward. Mr. Budinger thanked everyone for taking the time to review the conditional use permit renewal. He introduced staff, most of which the committee has met, but one they have not: Mark Krumenacher, Eric McLeod, Lauren Evans – Sustainable Development Coordinator, Bob Sapp, who is new, General Manager for the operations up north which includes Maiden Rock, Bay City, Diamond Bluff, this operation, Hager City, Menomonie, WI and also on the other side of the river in Shakopee, Michele Maxson – Environmental Coordinator and Mark Waters – Process Engineer. For the most part, Mark and Rich will be able to answer questions. Mark has been working on the project on-site, storm water pond and development and that sort of thing. Rich gave a brief update. We were here last April for an update, the one year and Maiden Rock as well. Operations are continuing to be positive within all of their operations in Pierce County producing sand at Maiden Rock, loading unit train rail cars, unit trains at Hager City. Bay City; they are continuing to be active there, frequently inspected by MSHA but they haven't been pulling any sand out of the mine recently. They are active: ventilation, ground control, the normal mining activity. Hager City is active with the rail yard. They are operating the plant from time to time to keep things ready and available for more sand when the markets return to hopefully what they were three years ago, here in the near future. Can't tell you exactly when business will return to the levels that they were experiencing in the past but they are hopeful that it will be soon with the price of oil as it is increasing. They also are pursuing other industrial uses besides oil and gas industry and that is going pretty well for them, trying to diversify their product portfolio more and more. They have over 50 employees at Maiden Rock and Hager City. They have an additional 20 plus at Menomonie and they are currently hiring, increasing their operating schedule to 24/7 at Maiden Rock. Even during the downturn that they experienced, they continued to invest in their community through volunteer hours. They still maintained expectations as far as their sustainable development program. They are proud of that and continue to do that as long as there are people working in the business model, they will be giving back to the community as much as we have in the past. Sanden asked if this office or the few affected Townships received any complaints since the last renewal? Pichotta stated no, much of what they are doing is permitting and pursuing permits other than mining. Chairperson Fetzer stated there are a couple people from Oak Grove here, do you have anything that you would like to say. Debbie McClure stated that Andy touched on it a little bit. She was just wondering about an update around Diamond Bluff, what is going on down there and the last year when we got together for the review and looked at the report, there is quite a few infrastructure type things that you were doing there, wondering where you are at with that and how your schedule looks now for when you anticipate being able to start mining in Diamond Bluff. Is that report available, the one that was January 31st. Mr. Budinger asked if it was the activity report. Ms McClure stated the annual audit. Mr. Budinger stated they have an annual report that they submit. Mr. Budinger stated once a year and they recently submitted one, even though this is a CUP renewal they submitted an activity report. Andy, you may have that. Pichotta stated yes, we have that. Mr. Budinger stated you didn't mention a lot of that activity, some was mentioned in the staff report but not all of it. Pichotta stated yes. Ms McClure asked if that is something they can get a copy of. Pichotta stated certainly. Mr. Budinger stated Mark has been working on the project so he can give an update. Mark Waters stated we have been working on their hydraulic plan for the pond design. They have been working on the grading issue and getting permits updated to where they need to be, some of the studies that need to be done in the area. They have kept up on all the regulations that they need to follow. It's an ongoing process for them. Ms McClure asked if they have started anything with the road. Mr. Waters stated nothing with the road except engineering design. Mr. Budinger stated the idea is that the road will eventually be asphalt to control dust. It's a gravel road right now. Any kind of construction activity, so when they commence construction, they will protect the road at

that point. By doing that, it will control any kind of track out that would happen during construction. The other idea is that before construction begins, they want to make sure that they are doing their erosion control work. The first thing they intend to do is put in a stormwater pond. As they essentially break ground and start doing foundations and start doing a development, they are susceptible to the two-three inch rains they could see in the spring and the next thing you know that soil wants to move. So they want to make sure they protect the Wind River, it's a major concern of theirs. The pond that they design will slope down to that point. Everything that goes down from the slope will go through that pond. They are in the process of doing that. They had every intention of breaking ground this last fall but we're working with the DNR on continued permitting for storm water. So general permit or individual permit, we should have heard from them a couple days ago but he doesn't think that they have heard from Jim Devlin, the agent that is helping with the stormwater permitting plans. It's been an on-going basis, literally every week we are in communication with the DNR. As of right now, they do not have any firm schedule on breaking ground. They want to take care of the first few steps which are the pond, erosion control, establishing the grade. Their intention is that if the market conditions return and they are very active at all of their facilities and Diamond Bluff is under construction. He can't tell you exactly when construction will begin. Tom Breen asked Andy if all of these things required are in your hands then, the map of mining activity and the ground water elevation results and copies of plans and audits. You have those and they are available for public perusal. Pichotta stated they certainly would be. Chairperson Fetzer asked if there are any other questions. **Snow moved to renew the conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand Company with conditions #1 through #33/Aubart seconded. All in favor. Passed with Holst not voting.**

Discuss take action on a request for renewal of a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Jeff Holst recused himself from discussion and voting due to possible conflict of interest.

Staff Report- Andy Pichotta: In 2012 WISC obtained a Conditional Use Permit for a new underground mining operation in the Town of Diamond Bluff. The mining application stated that no washing would be done on site. In 2014, the applicant modified the plan and obtained a CUP to construct a wash plant to wash the sand from the mine. The washed sand will be trucked to the WISC dry plant in Hager City. The proposal included the construction of a wash plant, conveyors and a new load out tank building. The application also stated that a temporary wash plant may be constructed for use during the construction of the permanent wash plant or the material may be trucked offsite and brought back for processing after the plant is operational. The mining application detailed the conversion of the existing residence into an office and construction of a maintenance building. The proposed hours of operation of the plant are 24 hours per day, seven days per week. Front end loaders, trucks, mining equipment and conveyors will be routinely operated outside of the mine. The site plan for the plant was approved by the LMC on June 18, 2014. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. On January 7, 2015, the LMC approved an expansion of the existing WISC processing facility in Hager City, which, it was stated at that time, would remove the need for the proposed wash plant in Diamond Bluff. In the past, WISC has wanted to maintain the flexibility of having each option for the location of a wash plant. Clarification of WISC's future plans should be requested. The property is located in Section 12 Town of Diamond Bluff. The property is zoned Industrial. The mined sand will be conveyed to a scalp screen to remove coarse sand and water will be added creating slurry. The material will then be pumped to the wash plant through a slurry pipe. The wash plant will remove clays and fine material from the sand. Flocculants will be used to remove the clays and fines and will remain in the material which will be placed in the tunnels. The wash sand is conveyed to storage bins. Trucks will be loaded inside a new load out tank building. The process, when fully implemented, has been designed so that the sand will not be exposed to the open-air. Two high capacity wells will be needed for the wash plant. The WDNR permits high capacity wells. The proposed system will reuse 90-95% of the water. The proposed operation will include the need to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution

Control and Countermeasures Plan. WDNR regulates and monitors stormwater and process water through the WPDES permits. WISC will obtain the WPDES permit if necessary. A Fugitive Dust Plan has been developed for the operation. There may be some temporary storage of mined sand as the adits to the mine are being constructed. Once mining operations are in full production outside storage will not be needed. Access to the mine and processing facility site entrance is off of 1005th St, WisDOT recommends that the intersection be upgraded to the B1 class. 1005th St will need significant upgrades. A road agreement has been reached with the Town of Diamond Bluff. A Land Use Permit for Filling and Grading in the Shoreland area was issued in September, 2017, for construction of the stormwater ponds. The applicants are currently completing a Hydraulic and Hydrologic Analysis of the ponds in the Floodplain. An archeologic study is also being completed with the DNR and Historical Society. The existing conditions are listed #1 through #11 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends the Land Management Committee to renew this CUP with the following conditions:

1. Activities shall be conducted consistent with the submitted plan, unless modified by another condition of this CUP.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies as required.
3. Any unforeseen dust, erosion and/or stormwater issues that arise shall be addressed to the satisfaction of the county.
4. Applicant shall obtain all necessary permits for construction and signage for the site.
5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.
6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. The Fugitive Dust Plan shall be adhered to.
8. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
9. The applicant shall complete the WisDOT recommended upgrades to STH 35 and receive all necessary permits and approvals.
10. Applicant understands that any expansion or intensification of this use will require CUP modification or potentially issuance of a new Conditional Use Permit.
11. This permit shall expire in two years. Applicant shall come before the LMC for a status report in one year.

Chairperson Fetzer asked Rich if he wanted to add anything. Mr. Budinger stated no, they did a great job covering it. He thinks what we talked about before applies to this as well. Thank you. **Aubart moved to approve the renewal of the conditional use permit for Heavy Industrial Use, a proposed washplant for Wisconsin Industrial Sand Company with conditions #1 through #11/Sanden seconded. All in favor. Passed with Holst not voting.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for expansion of a nonconforming structure for John & Jill Erickson in the Town of Maiden Rock.

Public hearing to consider and take action on proposed ordinance amendments to Chapter 240-29 Height Requirements, Chapter 240-32A(1) Minor Structures and Chapter 240-32D Accessory Structures which are the ones that we talked about a few meetings back.

He noted that we did also get a completed application from the Prescott Sportsman's Club for a Private Outdoor Recreational Use in the Town of Oak Grove. The public hearing will be on April 4.

Motion to adjourn at 7:23pm by Snow/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 7, 2018 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 21 st , April 4 th & 18 th , all in 2018.	Chair
3	Approve minutes of the February 21, 2018 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a Map Amendment (Rezone) from General Rural Flexible to Commercial for Jared Murphy, agent for Ellsworth Community School District (Lindgren School), owners on property located in the NW ¼ of the SW ¼ of Section 12, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for a Multi Family Dwelling in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-17, for a senior living facility by Bernard Schoeder, agent for Ellsworth Community School District (Prairie View School), owners on property located in the NE ¼ of the NE ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI.	Adank
6	Public hearing to consider and take action on a request for a conditional use permit for General Retail & Services (hosting weddings and events) in the General Rural Flexible 8 and Light Industrial Districts, pursuant to Pierce County Code Chapter 240-36E by Julie Jacques, agent for Neal Wallace, owner on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI.	Lund
7	Discuss take action on a request for renewal of a conditional use permit for CMC-Spring Valley LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.	Adank
8	Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and agent for Big Acres Inc, William F. Holst III, Nancy J. Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
9	Discuss take action on a request for renewal of a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, owner on property	Roy

	located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	
10	Discuss take action on Travel/Training Requests.	Pichotta
11	Future agenda items.	Pichotta
12	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, February 21, 2018

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 7th & 21st, April 4th & 18th, all in 2018.

Approve Minutes: **Aubart moved to approve the February 7, 2018 Land Management Committee minutes/Sanden seconded. All in favor. Motion Passed.**

Discuss take action on a request for renewal of a conditional use permit for Belle Vinez Winery, a conditionally permitted use, in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-76A, for Shannon and Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: Belle Vinez was here in 2016 to request an expansion to year-round operations. A food and wine plan detailing how food operations are incidental/subordinate to winery operations was approved in 2014. The winery opened to the public in May of 2015. It includes a variety of structures. We, as staff, haven't received any complaints since the status report last year. Staff reached out to Town of Clifton Chairperson, LeRoy Peterson, who indicated that the Town has no concerns about a renewal. The existing conditions are listed #1 through #26 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area. If no additions or modifications are necessary, staff recommends the LMC renew this permit with the following conditions:

1. Activities shall be conducted consistent with the application unless modified by another condition of this approval.
2. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
3. The winery shall produce "wine" as defined by the State of Wisconsin.
4. Applicant shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations.
5. The applicant shall obtain necessary licenses from the Town of Clifton.
6. Applicant shall obtain all other necessary permits from state and municipal agencies.
7. The parking lot shall have at least 71 parking spaces. There shall be no on-street parking.
8. Seating capacity for the pavilion and plaza shall not exceed 120.
9. Applicant shall install signs detailing the need for reservations and no parking on the street.
10. Hours of operation shall be 11am to 9pm.
11. Full menu food service (pizza and appetizers) may be provided Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm. Limited menu food service (appetizers only) may be provided in the tasting room during regular hours of operation.

12. No beer or liquor shall be served in the tasting room.
13. Lighting shall comply with the Land Management Department policy.
14. Sound system shall only be within the structures.
15. No audio bird repellent shall be used onsite.
16. Weddings and special events may not exceed established business hours and must be conducted consistent with the other conditions of this permit.
17. This Conditional Use Permit shall expire in 2 years.
18. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
19. Berm shall be established on the east perimeter of the property with adequate vegetative cover.
20. Adequate vegetative cover shall be established to visually screen the parking lot from the road.
21. Applicant shall adhere to the approved Food and Wine Plan and shall ensure that food operations remain incidental/subordinate to winery operations.
22. Sound shall be limited to no more than 80 decibels at the property line.
23. Promoted access route shall be along County Road M.
24. Arrangements shall be made to establish a visual screen along the southern property boundary, if requested.

Staff recommends removing condition #10 because it's no longer necessary and condition #24 because it is redundant. Staff also requesting to modify new condition #17, that this permit would expire in two years but no longer have the one year status report. Chairperson Fetzer asked if this is the status report? Roy stated no this is the renewal. Chairperson Fetzer asked if without complaints, it could be renewed administratively. Roy stated if the committee is comfortable with doing that, we could do that. Pichotta stated that as staff we were thinking it would be appropriate to create the potential for administrative renewal after one more renewal cycle. Chairperson Fetzer noted that we didn't have any problems at the last renewal, did we? Roy stated they were in, in 2016 to request expansion. One neighbor was opposed to it but there were no compliance issues. At the status report last year there had been no compliance issues or complaints. After talking to the Town, I know that they haven't received a complaint within the year. Sanden noted that the last condition has been modified as well. Roy stated yes, the one neighbor directly to the south, there is an opening in the tree line. At one point, the neighbors said they wanted a fence, which the applicants had agreed to put in but then that neighbor changed her mind and didn't want the fence. We wanted to leave it open for that dialog to be able to continue. Chair Fetzer asked Mr. Zimmerman if he wanted to add anything. Josh Zimmerman stated that Brad covered it pretty well. We did open in 2015, the committee approved expanding our hours in 2016, thank you. What the expanded hours means is, we are open year-round now. We do operate the business limited hours in the winter. Our typical hours in the summer are Thursday through Sunday. In the winter we do scale back to Friday evenings, Saturday, Sunday but we close earlier Sunday than we typically would in the summer. Just because we have had so many issues in the past with neighbor complaints and to be fully transparent, law enforcement was called out to our facility twice this past year. The first time was in regards to loud music coming from the winery. When the officers arrived on scene, they actually found out that music was coming from another neighbor's horse barn. Then the other incident was there was concern we were staying open past our 9:00pm hour, which is a Wisconsin State Law for wineries, so officers arrived to our facility at 9:01pm and verified that everyone was out of the building and we had no issues. Again, fully compliant with both of them but just wanted you to be aware that law enforcement was dispatched twice last year. The only CUP requirements that we should just touch on to make sure we are still compliant is our road parking condition. We have never had an incident with customers parking on that road. We have 76 stalls so very rarely do we ever fill those. The only time this has ever happened is we host a charity event every year that gets very busy. So when that does happen, we have spill-over parking in our production parking lot for vendors and different things like that. The last aspect would be the wine sales and having food and retail being subordinate to that. Based on end-of-year numbers that we have reconciled, we are still fully compliant there. Wine sales still dominate with 67% of total sales. Sanden stated he appreciates his candor.

Snow moved to renew the conditional use permit for Belle Vinez Winery, Shannon and Angel Zimmerman with conditions #1 - #24/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a request for a rezone from General Rural Flexible to Commercial for the Lindgren School in the Town of Trenton.

Public hearing to consider a request for a conditional use permit for multi family dwelling in the former Prairie View School in the Town of Trenton.

Public hearing to consider a request for a conditional use permit for General Retail & Services to host weddings and events in the Town of Clifton.

Discuss take action for renewal of a conditional use permit for County Materials for their facility in the Town of Spring Lake.

Request for renewal of a conditional use permit for Nonmetallic Mining by WISC in the Town of Diamond Bluff/Oak Grove facility.

Discuss take action on renewal of a conditional use permit for Heavy Industrial Use for the proposed wash plant associated with that same mining operation.

Motion to adjourn at 6:11pm by Aubart/Snow seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, February 7, 2018

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 21st, March 7th & 21st, April 4th & 18th, all in 2018.

Approve Minutes: **Snow moved to approve the December 6, 2017 Land Management Committee minutes/Aubart seconded. All in favor with Jeff Holst abstaining because of absence at the last meeting. Motion Passed.**

Discuss take action on a proposed amendment to Pierce County Zoning Code Chapter 240-29 Height Requirements.

Staff Report – Brad Roy: Recently we have been getting more requests for two-story homes and then depending on the lot they would have a walkout out the back. Measuring those to get the 35 foot height limitation: we've had builders and potential home construction people say they are having a hard time meeting that 35 foot height limitation with the way we've always done are averaging. To come up with a way to make those determinations, it's becoming complicated. We were challenged on our previous method of determining structure elevation so now we are looking at the ground elevation. Our GIS person can do that but that takes more time and if he's not in we can't give somebody an answer. One thing we came up with was to grant an exemption for residential structures in the ag districts for a total height of 45feet. That would essentially measure from the lowest exposed point to the highest point which in essence allows a person to build a two-story home and have a walkout basement. Then we wouldn't need to do all the ground elevation averaging. It just simplifies the process. The language we have written down probably will get changed before we hold a public hearing. We're wondering if the committee is OK with the concept. Pichotta stated it would be similar to how we do commercial structures, if you recall. They can go up to a certain height but for every foot they go up, they have to be another foot back from the setback. Sanden asked for argument sake what would happen if that structure that is 35 feet and has been permitted and does have a walkout. It still meets that by measuring up to 45 feet but what if it doesn't account for the one foot setback. Pichotta stated it was already constructed and would be a pre-existing nonconformity. Would it to occur, it was already existing and we missed something. Sanden stated now if you are going to go above, it measures 45 feet from the walkout. That means now it is 10 feet above the setback and now you have to account for 10 more feet of setback. Maybe when it was originally built that wasn't a requirement but like you said it was a nonconforming use. Pichotta stated we are not proposing to do this in the Rural Residential Districts because typically when you have a Rural Residential District the lots are smaller and often times you have an established pattern. So rather than allow somebody to necessarily pop one in that is 10 feet higher than all of the neighboring houses, that is why we are proposing to do it in all the ag districts. Holst asked if that included Ag Residential. Pichotta stated that would be an ag district. Pichotta stated we are looking for guidance if you are comfortable with this we will finalize the language and bring it back for a public hearing. We have a couple different proposals here for your consideration tonight and we would probably bring them all forth at the same time. Chairperson Fetzer asked if the biggest reason it was at 35 feet was for fire. Pichotta stated it was his understanding the ability for folks to

reach that height used to be part of it. Aubart stated that modern equipment has changed that. Holst asked if we need action or just direction. Pichotta stated direction if there is consensus. Committee consensus to move forward.

Discuss take action on a proposed amendment to Pierce County Zoning Code Chapter 240-32A(1) Minor Structures.

Staff Report – Brad Roy: This was something that we have brought to you in the past but never scheduled a public hearing because we have always tried to group them. This would allow structures 100sq feet or less to not require a permit. Everyone's garden shed that they get at Menards, won't require a land use permit so long as they still meet the 10 foot setbacks and setbacks to the road. We get complaints from some people that the cost of the permit is almost as much as the cost of the shed they are putting up. They don't feel a permit is necessary and in a lot of the cases, he would agree with them. Snow asked about the tiny houses that people are starting to move into. Roy stated that is still a residence so it still requires a permit. Pichotta stated unless it's on wheels. Roy stated this would be for non-habitable structures. We're just looking for direction. Committee consensus to schedule a public hearing. Pichotta stated it doesn't have a permanent foundation and could be easily moved, knowing that easily moved is pretty subjective. Chairperson stated yes, skids on the bottom. Pichotta stated that is the thought. Holst stated everybody thinks that you don't need one now if you have skids on the bottom of it. Pichotta stated technically every time that you move it, you should get another permit.

Discuss take action on a proposed code amendment to Pierce County Zoning Code Chapter 240-32D Accessory Structures regarding shipping containers.

Staff Report – Brad Roy: 240-32D requires some personal property to be permitted as an accessory structure, one of those being a shipping container. Others are boats, truck bodies, buses and trailers. We have always thought: I don't know where someone was supposed to put their boat and trailer other than in their yard and it doesn't seem reasonable to require a permit. Also these permits are only good for eight months and then you are left telling someone you can keep it for a while but you have to move it. What we are looking to do is strike boats, truck bodies, buses, railroad cars, trailers from that section and also we would add that shipping containers located in residential districts would need to be permitted as accessory structures but in the ag districts they would just be permitted as a permanent structure. Those are getting to be more common. People aren't buying sheds they are buying shipping containers. We can now permit them permanently. Holst asked if we have any people using them as homes yet. Roy stated we do have one out in the Town of Clifton. He doesn't know if it's been built yet, he thinks it was late last year. Holst stated if you go to other parts of the country they are pretty common. Roy stated it was a unique design, he thinks there were five of them. Hartung stated there were seven, two wide, three long and one upright for the stairs. Roy stated it's out by the Riviera Airport. They said they went to the association and everyone was OK with it. Roy stated we do not enforce covenants. Pichotta stated as part of this too, we're proposing to go from eight months to twelve months for a temporary use. The thought behind allowing them into residential districts is, you see where someone will put one of these in their yard and move all their stuff into it and do some rehab on their house and then move it all back when they are done. Or similar to those pod storage you see on TV. Sanden stated they do have those companies that drop it off and you fill it up and they come and haul it away if you are moving. Does that require a permit? Pichotta stated technically it would. If they did it rather quickly, we probably wouldn't know about it, especially since we aren't out there patrolling. Roy stated he doesn't know what the timing is. Our code allows for something, if it's not there for more than seven days. Chairperson Fetzer stated we could add a week or half month in there but if something is sitting for longer than that, you know. Roy stated our code says seven days. We would be reasonable and we're not going to be out there on the day eight with a ticket. We would talk to them ahead of time. Pichotta stated the reality is that the code calls for a permit to store a boat in your yard. We've never even thought about enforcing that. That's just kind of non-reasonable. Consensus? Chairperson Fetzer stated it looks good.

Discuss take action to authorize staff to apply for and accept a Strategic Initiative Grant available through the Wisconsin Land Information Program (WLIP).

Staff Report – Andy Pichotta: If you recall, when we talked budget last year, he brought up the fact that they hadn't yet announced whether a Strategic Initiative Grant was going to be offered this year and he would bring it back if they did, here we are. The Strategic Initiative Grant is for \$50,000.00 and it's to achieve some of the benchmarks that the program that the State has established. Basically, we are on benchmark number three: completion of county parcel fabric. We were going to utilize dollars out of the Land Records Modernization fund versus the grant to do these same things. They were actually proposed in our budget. But instead of having to tap that fund, we can use these grant dollars to do it. That means that we can retain those fees for use in the future because that's a non-lapsing fund. The projects are listed: ESRI Parcel Fabric, Parcel Updates and Changes just kind of maintenance on the system, Update Software/Hardware in the Register of Deeds Office and also acquire a building footprint to be used on not the aerial photos but basically your political maps (?). If you are comfortable with that he would recommend that the Land Management Committee authorize staff to apply for and accept the available Strategic Initiative Grant Funds. Aubart asked Andy what the updating of the Fidar Software, we just had something on F & P on Monday. Julie was in and they were talking about it. Pichotta stated they wanted to acquire some new microfiche readers. Holst stated he thinks they acted on that earlier. **Aubart moved to authorize staff to apply for and accept a Strategic Initiative Grant through the Wisconsin Land Information Program (WLIP)/Holst seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Zimmerman winery, Belle Vinez, is up for renewal.

Town of River Falls; assuming they get us the necessary information. They did a rezone that needs to be approved by the LMC.

Pichotta wants to get some guidance from the committee in regards to the Outdoor Recreation Plan. We have been waiting for Mississippi River Regional Planning to give us a final document for a very long time. We finally got it, do you want to see it before we schedule a public hearing or should we just schedule a public hearing. Sanden asked if there was anything controversial. Pichotta stated not at all, it's just a wish list of projects and inclusion in the plan makes them eligible for certain grants. Chairperson Fetzer stated he would like it to go to public hearing right away. Committee consensus.

Motion to adjourn at 6:21pm by Snow/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, December 18, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst, and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: January 15th, February 5th & 19th, March 4th & 18th, and continuing with the first and third Wednesdays of each month, all in 2020. Committee consensus to continue with current schedule.

Approve Minutes: **Gulbranson moved to approve the September 4, 2019 Land Management Committee minutes/Sanden seconded. All in favor with Joe Fetzer and Jeff Holst abstaining because of absence at the last meeting. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for a Trucking Company in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-36D, for Zeverino Investments LLC, David Zeverino, agent for James & Lori Boles, owners on property located in the NW ¼ of the NE ¼ of Section 1, T26N, R20W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited David Zeverino forward. Mr. Zeverino stated we can start with the staff report.

Staff Report – Emily Lund: Mr. Zeverino created DZ Trucking LLC in 2010 and started a dump truck hauling business. He currently owns the five adjoining land parcels located to the south of the land pertaining to this request. If this CUP is approved, Mr. Zeverino intends to purchase the parcel from James & Lori Boles through the recently created Zeverino Investments LLC and move his business to the site. The agent's home is situated on a 140.56 acre parcel and is located in Section 1, Town of Oak Grove. The agent proposes to purchase a 29.25 acre parcel that is located in the NW ¼ of the NE ¼ of Section 1, T26N, R20W, in the Town of Oak Grove. The property is zoned General Rural Flexible 8. Pierce County Code (PCC) §240-36D allows for farm and home based businesses accessory to permitted single-family residences through issuance of a CUP in agricultural zoning districts, subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
2. If located in the dwelling unit, the farm and home based business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home based business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be five acres.
4. Other conditions specified by the Land Management Committee pursuant to §240-76 shall apply.

Current land use is agricultural. Adjacent land uses are agricultural and residential. Mr. Zeverino is seeking this CUP to allow the construction of a new 80ft x 120ft building. The business is intended to be operated out of 5,000 square feet with the remaining 4,600 square feet of the structure intended for use as personal storage. The business portion includes a shop to repair and maintain six dump trucks, an office for dispatching and business administration, with the remaining area to be used for personal storage of tractors and vehicles. A large parking lot is located around the building where dump trucks will be parked and maintained on the property daily. As you can see on the map, there are two possible project areas. PCC §240-55B states "parking lot landscaping

design shall be done in accordance with minimum landscaping requirements on file at the Zoning Office.” The Land Management Committee’s 2-7-2007 adopted policy requires screening stating, “Vegetation or fencing shall be placed between nonresidential development and adjacent properties so as to render the development as visually unobtrusive, as is practical, from adjacent properties or from public view. Native vegetation should be utilized whenever practical.” To comply with this policy, Mr. Zeverino has proposed to construct a berm on the north and west side of the building and parking lot and plant trees on the berm to soften views from neighbors and public view. PCC §240-54G discusses lighting stating, the Land Management Committee’s 2-7-2007 adopted policy also discusses lighting standards for power and orientation of light fixtures stating, “ No exterior light fixture may be placed or oriented so that the lighting element or associated convex lens is visible from an adjacent lot line, ordinary high water mark line, or public road right-of-way easement line.” The site will not be open to the public and dump truck hauling is performed off-site. Normal business hours of operation are 6AM to 6PM, Monday thru Friday. The applicant proposes to have seven total employees: six for driving dump trucks and one mechanic. PCC §240-54A requires two off-street and one handicapped parking spaces.

Driveway access is off State Road 29. The owners and agent have contacted Jill Proud and Dan Anderson from Wisconsin DOT. Once the land is in Mr. Zeverino’s name or has an accepted offer to purchase, the WisDOT will proceed with a “rural commercial use access application. The applicants will also need to secure a driveway permit from WisDOT and will need to obtain a Uniform Address Number and sign from the Department of Land Management. Applicants will need to hire a Wisconsin Licensed Master Plumber to obtain a state sanitary permit prior to securing any other permits. The applicants plan to establish one on-site advertising sign with this CUP that will state the company name and telephone number. The sign face area is proposed to be 6ft x 4ft and shall not exceed 24 square feet per PCC. Applicants currently utilize Paul’s Industrial Garage (PIG) for trash pick-up and propose to utilize that service at the new business location. The Oak Grove Town Board recommended approval of this request on 11-18-2019 without identifying any specific conditions or concerns. PCC §240-76G discusses expiration of Conditional Use Permits and states, “All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit.”

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons, not residing on-site, shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. There shall be at least two parking spaces delineated, with a minimum of one space for handicapped parking.
6. Applicants shall establish a vegetative screen within 12 months by constructing a berm on the north and west side of the building and parking lot and plant trees on the berm to soften views from neighbors and from public view. (The LMC should consider whether establishing tree size and number is necessary.)
7. No exterior light fixture may be placed or oriented so that the lighting element or associated convex lens is visible from an adjacent lot line or public road right-of-way easement line.
8. The applicants shall secure a driveway permit from WisDOT and shall obtain a Uniform Address Number and sign from the Dept of Land Management.
9. Applicants shall hire a Wisconsin Licensed Master Plumber to obtain a state sanitary permit prior to any other permits.
10. The business/storage building shall maintain a 10ft setback from rear and side lot lines; 110ft setback to the centerline or 77ft from the right-of-way of State Road 29, whichever is greater; and shall not exceed 35ft in height above grade elevation. Applicant shall submit documents demonstrating compliance with all setbacks for each building.

11. Applicants shall work with the Town Building Inspector, All Croix Inspections, to determine whether or not commercial plan review and approval is required from the Dept of Safety & Professional Services.
12. The applicant shall secure a permit from WisDOT for an advertising sign. The advertising sign shall not exceed 24 square feet, comply with the zoning code standards, and signs shall be located outside the state road right-of-way.
13. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPA), etc.).
14. This conditional use permit shall be renewed every two years. Permit may be renewed administratively if no compliance issues arise.
15. Applicant understands that expansion or intensification of this use may require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. Ted Bowen, Town of Oak Grove, asked if there would be a noise ordinance in the future, he is concerned about jake braking. Chairperson Fetzer asked Mr. Zeverino if he was going to be trucking in and out of his place. Mr. Zeverino stated the only time they would be trucking in and out would be while building the berm, if they were hauling dirt to build the berm. Otherwise, no, the trucks go out, they work for the day and then they come back. Mr. Bowen stated more or less like a garage. Mr. Zeverino stated yes, they won't be hauling anything in and out except when they are building the berm or constructing the driveway. Our guys won't use the jake brakes empty. That's why they are building on the state highway versus the town road, plus it's safer getting in and out too. Chairperson Fetzer stated if it becomes a problem, either you talk to your neighbor, or bring it to our attention and we will address it. **Chairperson Fetzer closed the public hearing.** Sanden asked about the screening issue. Can we let the applicant put in what he thinks is prudent and if that becomes an issue, either before the two year time limit or before, reassess and have him add to it? Pichotta stated we certainly could. Chairperson Fetzer asked Mr. Zeverino if he has a plan for screening. Mr. Zeverino stated building the berm and then evergreens. Chairperson Fetzer asked size wise? Mr. Zeverino asked whether there is a limit as to how close can he go to the property line? Pichotta stated there is not. Mr. Zeverino asked about the berm, if they are to build it vertically, can they go right up to the property line? Pichotta stated yes. Mr. Zeverino stated it could be 20 feet wide and 8 – 10 feet high and then they would plant evergreen trees, probably two rows, and stagger the trees on the top of the berm, natural grass on the side. Chairperson Fetzer stated it sounds like you have a really good plan already. We've done enough of these before, is there a certain size on the trees? Roy stated 8ft to 10ft has been a typical height. The staggering of the two rows has depended on the species of the trees to figure out how wide is it going to grow to. Mr. Zeverino stated are you talking 8ft maximum or minimum for height? Holst stated when you transplant them; they start at 8ft. Mr. Zeverino stated anything bigger, they usually die, you have to water the heck out of them. Holst suggested to let the applicant choose to seed the size of trees to his choosing and let them grow to where he feels they need to be. Chairperson Fetzer agreed with that because it sounds like he has a good plan already. **Holst moved to approve the conditional use permit for a Farm & Home Based Business for a Trucking Company for Zeverino Trucking LLC, David Zeverino, agent for James & Lori Boles, owners on property located in the NW ¼ of the NE ¼ of Section 1, T26N, R20W, Town of Oak Grove, due to the fact that the proposed use is determined to not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #15/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-29D, for Verizon Wireless, Brian Kabat, agent for Kurt & Tracy Henn, owners on property located in the NE ¼ of the SE ¼ of Section 25, T25N, R16W, Town of Salem, Pierce County, WI.

Staff Report – Adam Adank: Wireless Communication Service Facilities are permitted with a Land Use Permit. However, Pierce County Code Chapter §240-29 requires towers to comply with the height requirements of other commercial structures. Verizon Wireless is seeking a height exemption pursuant to Pierce County Code

§240-29D to construct a new Wireless Communication Service Facility (WCSF) exceeding 35ft in height in the Town of Salem. The complete project proposal includes erecting a self-support wireless communication tower with a total height of 199ft, constructing an equipment platform, and installing supporting equipment to improve broadband and wireless services in the county. The proposed WCSF is located in the Town of Salem. The property is zoned Primary Agriculture and requires 10ft side and rear yards in this zoning district. Adjacent properties are zoned Agriculture Residential, General Rural, and Primary Agriculture. Adjacent land uses are residential, agricultural, and woodland. Access to the site will be off of County Road CC. The site is currently an agricultural field owned by Kurt & Tracy Henn. The proposed structure is a self-support lattice tower with a height of 190ft. A 9ft lightning rod is to be placed on top of the tower which makes the overall height of the structure 199ft. PCC §240-41C(3)(d) states, “WCSF Support Structures shall comply with the height requirements of §240-29D.” PCC §240-41C(3)(d)[1] states, “If engineering certification reveals that the WCSF support structure, or an existing structure, is designed to collapse within a small area than the requirements of §240-29D the certification fall zone shall be applied to the setback requirements of §240-29D.” Certified fall zone engineering certifications state “*In the unlikely event of total separation, this would result in collapse within a radius equal to 40% of the tower height.*” Therefore the maximum certified fall zone radius is 79.6 feet. PCC §240-29D states, Industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setback and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. PCC §240-27C addresses town road setbacks and states, “Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater.” PCC §240-27B addresses county highway setbacks and states, “Except as provided in Subsection E, the required setback for all structures fronting on county highways shall be 100 feet from the centerline of the road or 67 feet from the edge of the right-of-way, whichever is greater.” Using the 79.6ft fall zone radius, the structure has a right-of-way setback of 111.6ft from County Road CC and 86.6ft from 230th Ave; side and rear yard setbacks are 54.6ft. In the proposed location, the tower is approximately 124.5ft from the County Road CC right-of-way and 330ft from the 230th Avenue right-of-way. The proposed tower is over 900ft to the nearest side or rear property line. No structures are located within the 79.6ft fall zone of the proposed tower location. Staff will verify appropriate setbacks prior to issuing a Land Use Permit for the structures. PCC §240-88 defines:

FALL ZONE – the area over which a support structure is designed to collapse.

SUPPORT STRUCTURE – an existing or new structure that supports or can support a mobile service facility, including a mobile service support structure, utility pole, water tower, building or other structure.

YARD – A required area on a lot, unoccupied by buildings and open to the sky, extending along a lot line to a specified depth or width.

YARD, REAR – A yard extending along an entire rear lot line from the rear lot line to the depth or width as specified in the yard requirements for the applicable district.

YARD, SIDE – A yard extending along an entire side lot line from the side lot line to the depth or width specified in the yard requirements for the applicable district.

State statutes do not allow a permit for a WCSF to expire. This allows the applicant to receive a Land Use Permit for a WCSF and construct it at any time in the future. In order to monitor possible future changes on neighboring property, prior to the construction of the WCSF, staff is suggesting placing an expiration date on this approval.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed WCSF height exemption and determine if any changes or modifications are necessary. If none, staff recommends the LMC grant approval of the height exemption with the following condition:

1. This approval shall expire in two years if construction of the proposed WCSF has not commenced. In such case, a new height exemption will be needed prior to construction.

Mr. Kabat stated that Adam covered it very well and he stated that his client continues to work hard to improve service for the benefit of residents of the County and they can't do that without the support of the land owners they work with and the support of this committee. They do appreciate the support. Gulbranson asked when do

you have to put a light on, 200ft, is it? Mr. Kabat stated 200ft and above, below if the FAA mandates it. Gulbranson suggested that you are OK on this one. Mr. Kabat stated we are.

Sanden moved to approve the request for Height Exemption for a proposed Wireless Communication Service Facility for Verizon Wireless, Brian Kabat, agent for Kurt & Tracy Henn, with condition #1/Gulbranson seconded. All in favor. Passed.

Discuss take action on a request for Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-29D, for Verizon Wireless, Brian Kabat, agent for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Adam Adank: This structure is 150ft with a 9ft lightning rod, 159ft total height. The fall zone certification on this tower says the fall zone radius is less than half of the structure height. Therefore the maximum certified fall zone radius is 79.5ft. Using the 79.5ft fall zone radius, the structure has a right-of-way radius of 111.5ft from County Rd VV and 121.5ft from US Hwy 63 and 54.5ft from side yards. In the proposed location the tower is over 1,000ft from County Rd VV, 270ft from US Hwy 63, and 71.5ft from the nearest side or rear property lines. The baseball field appears to be approximately 150ft from the proposed tower location. The property is also located in the Red Wing Airport Height Limitation zone. This overlay district sets a maximum structure height of 927ft above sea level on the proposed property. The existing contour elevations on the property range from 710ft – 730ft above sea level with the proposed tower location near the 716ft contour elevation. With a tower height of 159ft, the proposed structure would have an overall elevation height of approximately 875ft above sea level. Everything else is about the same. **Aubart moved to approve the Height Exemption for a proposed Wireless Communication Service Facility for Verizon Wireless, Brian Kabat, agent for Ellsworth Baseball Association, with condition #1/Gulbranson seconded. All in favor. Passed.**

Discuss possible code amendments to Pierce County Code Chapter 225 Vehicles, Disposal of.

Staff Report – Adam Adank: The Pierce County Disposal of Vehicle Ordinance (Chapter 225) was adopted in 1978 and has never been updated or amended from the original text. The ordinance does not allow for any disassembled, dismantled, junked, inoperable, wrecked, or unlicensed vehicles in open view on public or private property. Properties in violation typically try to gain compliance by screening vehicles from public view, removing vehicles from the property, or proving that the vehicles in question are licensed and operable. However, when working with the property owners in violation, the most common questions staff receives are what can I use to screen the vehicles and where does the screening need to be located? Based on the current ordinance language, staff feels that the ordinance is lacking the appropriate amount of context to properly enforce the current code to a standard that will satisfy the intent of the ordinance. Below are a few examples of code amendment concepts staff feels should be discussed:

- Would adding a definition section help clarify instances where the exact meaning of a word is unclear or could be misinterpreted? A few examples of words that need defining are screening, vehicle, public view, junked, etc.
- Should any vehicles be exempt from the ordinance (e.g. vehicles that have collector plates).
- Based on the current code language, it appears the intent of the ordinance is largely focused on aesthetics. Currently all zoning districts are held to the same standard. Should certain zoning districts be allowed to have an established number of disassembled, dismantled, junked, inoperable, wrecked, or unlicensed vehicles in public view (e.g. ag districts vs residential districts)?

Staff Recommendation: Staff recommends the Land Management Committee discuss the proposed concepts, and if necessary, direct staff to draft ordinance amendments for future LMC consideration. Sanden asked if someone is working on their vehicle, is that considered disassembled? Pichotta stated that is a good question, largely, we are complaint driven so we don't necessarily go out and look for issues with cars. If we did go out and look, we would find a lot of them because many rural properties have them. What we are really looking for today, is direction as to whether you want us to look into this and propose some amendments. Pichotta noted that this is not a zoning ordinance. If we want to treat different zoning districts differently, we may actually

have to put it in the zoning code in order to make that happen otherwise it would likely apply to the whole county. What we really need to do is look into what our options are. The ordinance doesn't have a purpose and intent statement, and it doesn't have any definitions. It's kind of difficult to enforce in many cases. Holst asked if we are getting many complaints anymore. Pichotta stated that its actually one of the more common things that we get complaints on. It's usually someone complaining that their neighbor got one more car and now they've got three or four sitting there and they don't like it. Roy stated we get that issue a lot. They are working on it. The problem is when they are working on three or four and this has been going on for years. Another issue we always have in the summer, with demolition derby vehicles; those show up. Those vehicles are never going to get licensed. One issue we have as staff, when does it stop being someone's hobby and when is it become a problem. The code doesn't establish that line so we're left trying to figure it out on our own. Adank stated the ordinance does reference disassembled, dismantled, or parts thereof too. And it references seven days to remove the stuff and that's just not always reasonable. Holst stated apparently you haven't bought any car parts. A lot of times you get tearing stuff apart that you can't even get the part for two or three weeks. Gulbranson likes the part about treating a residential area a little different than maybe out in an ag or rural area. Sanden agreed with one exception and then it becomes a zoning issue and that becomes messy. Pichotta stated we could look at strategies to address that. Aubart stated there aren't a lot of definitions here and vehicle isn't defined. Holst stated it doesn't look like anything is. Aubart stated you could start there. Pichotta stated we almost have to start from scratch and basically have to write an ordinance. The question is do you want us to do that? Aubart said it's kind of interesting; last month at the Law Enforcement Committee, there is a problem, actually Melstrom's was there and Jerry's Towing was there, what they are running into is abandoned vehicles. They get called and then nobody gets paid. The problem is that they aren't worth anything right now. They were talking about that, people walk away from them and what do you do with them. Pichotta asked if there was any conclusion reached. Aubart stated no. Who's going to pay? No, there was no conclusion. It was just brought up as a problem. Pichotta stated it's us and Solid Waste too, because they are already dealing with it in some respects. Holst asked if it's like a fire call, wherever they abandon them, the Township has to pick up the cost. Aubart stated that may be a solution. Gulbranson asked where we are getting most of the complaints in residential areas or rural? Roy stated rural and he would have big reservations about putting this in the zoning ordinance. Roy said then we are going down a property maintenance road and people are going to come in and say what about cutting your lawn, trimming your trees, etc. It's been nice to say we do not have a property maintenance ordinance. Sanden stated that if this is complaint driven, maybe you just need some clear definitions, so when or if the issue arises, you folks have some solid ground. Holst stated it's not a land issue but a solid waste issue and maybe it should be kicked over to Melstrom's court. Sanden stated we did have that one several months ago about the aesthetics, turned out it was a lot of ag implements. He would hate to have anything that would outlaw that. Chairperson Fetzer stated as he was talking to Andy today, he was sitting at his shop and they have stuff, tankers, etc sitting around outside. Sanden stated that is why he thinks having a residential focus rather than an ag district focus may make sense. Pichotta suggested perhaps establishing a minimum lot size. Typically, residential lots are a good bit smaller. Lund asked how did Land Management become responsible for this? Holst stated Solid Waste wasn't enforcing this. When we hired Brad, we hired him as an enforcement guy. You were hired to enforce for multiple agencies. Roy stated to work with multiple agencies. Pichotta stated this ordinance has been in the zoning office since it was enacted in '78 and it hasn't been amended at any point. Holst stated nobody ever enforced it. They would go after a guy if he had 20 cars, there was a little bit of value so they would haul them to the junkyard. They got that one cleaned up then some neighbor would complain about another one. They would have about two a year. Then they got rid of the bigger players and now they are down to complaining about a car or two. Roy stated the lack of a screening definition is the problem. Holst stated if you could say plant two - four foot pine trees on them in four years they are going to be covered up. Adank stated once they are screened the next question is about environmental impacts. Chairperson Fetzer stated fluids draining. Sanden asked what about an incremental approach, start by putting a solid definition. That way when you go up to someone, you can have a bit more authority and say according to our requirements, these are your options. Pichotta stated we could perhaps incorporate distance too, so that cars that are located a long way from public view are treated differently. We could get creative. Sanden stated he likes the minimum

lot size to keep it away from the ag districts. Pichotta asked if that was the direction the committee wanted to give. Should we look for some minimal things that we can do to this to make it easier to give folks guidance, maybe loosens things slightly in ag districts. Sanden stated as long as you don't think it's too little. Chairperson Fetzer stated it would be a step in the right direction. Sanden asked if it was reasonable to put language in that states, upon complaints received? In other words you are not going to go out and proactively manage this. Pichotta stated we do have prosecutorial discretion. Sanden stated it probably doesn't need to be put into writing. Holst stated he thinks some definitions; what a vehicle is, what screening is. Sanden stated what is not a vehicle. Holst stated then you will have some of us ag violators that have piles of old junk tractors and stuff sitting around. Aubart noted that in the one section of the code, removal from private property, he doesn't know if you can go on there and remove it. He thinks that is likely illegal. Chairperson Fetzer stated is it something you can take care of with fines or what? That is really the only way, if they can prove that they are working on it. If something is sitting there for more than a year, it's probably junk. Holst stated you don't have a collector's heart. You buy these things and that's a project. He has about 15 old John Deere tractors and he will start them up on the 4th of July and drive them downtown Diamond Bluff and then they come back. He is going to work on that. Then next year on the 2nd he starts them back up again. Aubart stated just past Melstrom's is an old 40's pickup with a tree growing out the back of it. He thinks it looks cool. He looks at it every time he drives by. But that would be a violation. Roy stated but when you have a neighbor that calls about it then it's a nuisance. Aubart stated he hopes it never moves. Chairperson Fetzer stated that he understands nuisance complaints but he can understand it more in a residential area than out in the country. He stated that if he drives by somewhere and sees a bunch of trucks, he doesn't care. Sanden reiterated his recommendation of starting by out by looking at definitions. Committee consensus to direct staff to propose new definitions in Chapter 225.

Discuss possible code amendments to Pierce County Code Chapter 240 Outdoor Storage.

Staff Report – Brad Roy: Commercial outdoor storage of property (boats, campers, etc) is currently only allowed in the Industrial District due to the definitions Heavy Industry and Light Industry. Staff has received numerous inquiries and regarding the permitting of outdoor storage in the Commercial and Light Industrial Districts as well as part of permitted Mini-Storage facilities, which the code specifically does not allow. The Industrial District is intended for uses with the potential for significant impacts, on and off site. Staff suggests that outdoor storage of property in the Industrial District is not the best use of that district and would like the LMC to consider:

- Should the commercial outdoor storage of property (boats, campers, cars, etc) be permitted in the Light Industrial or Commercial Districts as stand-alone operations?
- Should outdoor storage of property be permitted as part of mini-storage facility?
- Should outdoor storage of property be permitted in the Agricultural districts?

Staff Recommendation: Staff recommends the Land Management Committee discuss the proposed concepts, and if appropriate, direct staff to draft ordinance amendments for future LMC consideration.

This really came up last spring/summer with the flooding of Trenton Island. The campgrounds down there needed to remove all the campers and we were left with a rush of where can they technically go that is permitted. That pushed this. We might be in this situation again. Chairperson Fetzer asked if there is any way to have a temporary permit on something like that? That you know is just going to be a short-term deal. Holst stated unfortunately last summer's short-term deal turned into pretty much all year. Roy stated that temporary uses currently are allowed for less than seven consecutive days and no more than ten days in the year. It's more for your garage sales. Gulbranson asked about the outdoor storage like the new one they just allowed down in Trenton. Are they allowed outdoor storage? Pichotta stated no. Gulbranson stated but the one down the road has outdoor storage. Roy stated yes, that was permitted under the old code. All he knows is that it was allowed for storage and it doesn't say much more than that. We weren't in position to change that. That question was brought up. Gulbranson stated our ordinance in Town says no outdoor storage. When they have those storage units but River Falls, you allow it? Aubart stated yes. Roy stated in our mini-storage code, it explicitly states no outdoor storage. If that is something you are OK with, we could just remove that line from the current code.

Gulbranson stated he isn't in favor of that but a temporary thing, every year we used to pull them up on the island road and then they would move them back. It's been going on for years. Do they ever not get moved back? Where do they usually put them? Roy stated the campgrounds now, they haven't had to move them in many years so this is the first time a lot of them moved off the site. Holst stated quite a bit of stuff got stored at that Red Eye Express. Roy stated that was a violation so we were left with, what do we do, if we start fining them, where are they going to go. That individual actually got bad information from the town board. Gulbranson asked if Trenton was the only spot where this happens. Pichotta stated they are the primary location. Chairperson Fetzer asked if they would like something written up to allow it? Pichotta stated we are asking the committee if you think it's appropriate to allow outdoor storage in places where it's currently not allowed. If so where? Basically, industrial land is intended for the worst types of uses and things that generate vibration, sound, and traffic. Truth be told, outdoor storage typically doesn't generate those things so there is the question of whether that really is the best use of the limited amount of industrial space that we have in the County. Holst stated if this is specific to Trenton Island flooding, then he thinks we need to come up with some sort of a solution for that. He would hate to see this turn into something where we've got people parking stuff all over in ag districts, year round. He does think we should be able to give them some sort of ability to use it for a couple months until the water goes down. Pichotta stated another consideration, not to confuse it all, but under General Retail and Services, which is a permitted use in a Commercial District, is car sales. What's that but outdoor storage of cars that are for sale, or trailers, or RV's for that matter. That is all general retail and services, and in a defacto sort of a way, we already allow it in some respect - but not storage just for the sake of storage. Maybe it's something that should be allowable in Commercial and Light Industrial. If it's in a Commercial District and a permitted use, then we have site plan review so we do have the ability to look at screening. It would take some amendments relating to Light Industrial because right now Light Industrial is basically defined as everything being inside of structures. But we've seen where as part of a commercial use in a Light Industrial District, Fullerton Lumber for example, outside of town, there was an outdoor storage component to that. We kind of allow it in some certain cases when it's part of a use that involves that. Should we allow it as a standalone sort of a thing? Should we look at some tweaks to commercial and light industrial and bring them back for your consideration? Gulbranson asked about the one storage place that allows them in Trenton, if you look at the license plates, probably 90% are Minnesota because Red Wing probably doesn't allow them in their neighborhood so they are dragging them over in Wisconsin and parking them. Holst stated that if it's got a license plate on them there isn't a thing we can do about them. Gulbranson stated no there is not, but we are helping them out. Aubart stated but they are paying for it. Chairperson Fetzer stated the biggest thing is the emergency down in Trenton. Pichotta stated that is what is driving this. That leads us to a discussion about Industrial Districts and what's a good use there. Aubart asked if we have any outdoor storage in the Industrial District. Pichotta stated we had Bill Schroeder, he is zoned Industrial down there, and he did take in some RV's during the flood. Not standalone, not where they permitted it. Holst asked what do we do with PIG where he has his little two, three campers there. We permitted him to have two or three campers there and that's an Industrial zoned area so now all the sudden he changes to I'm going to store campers here. What do we do when we get into that? We are limiting him now to three or whatever the number is. Pichotta stated unless it's a campground, right. He had a multiple CUP or two CUP's. Holst stated he had his PIG Fair or whatever it was. That kind of went out by the wayside. Gulbranson stated so you could also have a potential for this at Hwy 29 & 63, up there. They are advertising storage up there now. Is that outdoor or all indoor? Roy stated they are proposing mini-storage there. We haven't seen an official plan but have had discussions. Pichotta asked if the committee wants staff to look at the temporary thing. Sanden asked if it was too wonky to put in language about under emergency conditions then it's allowable under light industrial. Holst added and maybe ag under emergency conditions. Sanden agreed. Chairperson Fetzer asked if people would have to apply for a permit to allow it. You wouldn't want to wait for it to go to a public hearing. Holst stated we should give staff the ability to issue these permits for up to 90 days or 60 days or whatever you think. Pichotta stated where we are at here is, basically look at language relating to allowing it in the Commercial and Light Industrial Districts but only in an emergency or some sort of a situation that warrants quick action, then staff is authorized to issue a temporary permit. Then maybe have a mechanism that kicks it to the committee if it's over a certain amount of time or it

looks like it's going to be. Let us dig into it and see what we can come up with. Aubart stated you could limit it to 30 days or 60 days and then renew it. If it's a flood, you don't know it could come back up. Holst stated this was the screwiest season on the river ever. Gulbranson stated in '65 it was pretty bad, wasn't it. Holst stated it didn't go on all year. 1965 flooded in the spring and subsided. Other floods happened in July and subsided. This year it stayed high all year. Pichotta stated that if the committee is OK with it, staff will look into some options specifically to deal with flooding issues and try to come up with a mechanism to deal with it, that is probably administrative versus committee driven, so that we are able to deal with it on an administrative level. We will present it to you in a month or two. Committee agreed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated Big Dog Daddy is still not up and running. He was going to come back after he had the DNR land purchase dealt with. Roy stated the purchase is final and now he owns the land. The problem was he stopped the prep work on it, because if he couldn't get the land, he would have to move roads and move buildings. When it came for a status report there was nothing really to report until this got done. Now we can do the status report but the problem is that his permit renewal is in March or April. Do you want him coming in twice in three months or do we just do the renewal in March or April and go from there. Chairperson Fetzer stated we will just do the actual renewal. Pichotta stated the other agenda item, likely, is Final Plat for Cory Huppert Plat in the Town of Clifton. There are a couple housekeeping issues that will be brought forth in the next few months. We won't have one on the first Wednesday in January as it is a holiday. So the next meeting will be January 15, 2020 and then we will go back to the 1st and 3rd Wednesdays. At a minimum the final plat will be on the next agenda.

Motion to adjourn at 7:07pm by Gulbranson/Sanden seconded. All in favor. Motion passed.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 18, 2019 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates for 2020, proposed January 15 th , February 5 th & 19 th , March 4 th & 18 th , and continue with the first and third Wednesdays of each month, all in 2020.	Chair
3	Approve minutes of the September 4, 2019 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for a Trucking Company in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-36D, for Zeverino Investments LLC, David Zeverino, agent for James & Lori Boles, owners, on property located in the NW ¼ of the NE ¼ of Section 1, T26N, R20W, Town of Oak Grove, Pierce County, WI.	Lund
5	Discuss take action on a request for Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-29D, for Verizon Wireless, Brian Kabat, agent for Kurt & Tracy Henn, owners on property located in the NE ¼ of the SE ¼ of Section 25, T25N, R16W, Town of Salem, Pierce County, WI.	Adank
6	Discuss take action on a request for Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-29D, for Verizon Wireless, Brian Kabat, agent for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Adank
7	Discuss possible code amendments to Pierce County Code Chapter 225 Vehicles, Disposal of.	Adank
8	Discuss possible code amendments to Pierce County Code Chapter 240 Outdoor Storage.	Roy
9	Discuss take action on Travel/Training Requests.	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(12/6/19)

MINUTES - Pierce County Land Management Committee Meeting, September 4, 2019

Present: Jon Aubart, Neil Gulbranson and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Jon Aubart called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 18th, October 2nd & 16th, all in 2019.

Approve Minutes: **Sanden moved to approve the August 21, 2019 Land Management Committee minutes/Gulbranson seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-40A, for Dale & Sheila Olson, owners on property located in the SE ¼ of the SE ¼ of Section 6, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Aubart invited Dale & Sheila Olson forward. Mr.

Olson stated they bought their property in 1989 which consisted of an old barn, a pole shed and a mobile home with attached addition. They lived there for two years and then built a new residence in 1991 and got a second address for the mobile home. They rented out that mobile home until 2016 at which time it had deteriorated to the point it really wasn't habitable anymore. They demoed the mobile home and left the addition which is a structure on posts, conventionally framed up with sheetrock and fiberglass insulation and shingle roof. They subsequently purchased a small job site office trailer to replace the mobile home kitchen and bathroom, since the addition had no plumbing or anything in it. Due to the fact that more than a year has lapsed of no residency there, they have to apply for a new permit.

Staff Report – Adam Adank: In December of 1984, a Land Use Permit was issued for the applicant's property to authorize a mobile home. A 12ft x 36ft addition was later added to the mobile home that included a living room and bedroom. At that time the mobile home was considered to be the Primary Residence. In March of 1991, another Land Use Permit was issued to authorize a single family dwelling on the property. Both residences were connected to the same septic system. After the single family dwelling was built, the mobile home was used as a rental unit. In 2017, the applicants decided to remove the mobile home from the property due to its deteriorating condition but the 12ft x 36ft living room/bedroom addition remains on the property. The applicant would now like to move an 8ft x 28ft office trailer onto the property and attach it to the existing living room/bedroom addition. The office trailer would be converted to have a kitchen and bathroom area. The office trailer and existing living room/bedroom addition would have a total square footage of 656 feet. The proposed new accessory residence now requires a conditional use permit given that the previous use has been discontinued for a period of time exceeding 12 consecutive months. The applicants own 14 acres in the Town of Martell. The property is zoned Primary Ag. Pierce County Code (PCC) §240-40A allows accessory residences which are accessory to single-family residences in the Primary Agriculture District with the issuance of a CUP. PCC §240-88 defines Accessory Residence as:

- A. A dwelling unit that is accessory to a nonresidential use on the same lot, is the only dwelling unit on the lot, and provides living quarters for the owner, proprietor, commercial tenant, employee or caretaker of the nonresidential use.

- B. A dwelling unit located in an accessory building located on a residential parcel.
PCC §240-88 defines Accessory Building as, “building, not attached to a principal building by means of a common wall, common roof, or an aboveground roofed passageway, which is:
 - A. Subordinate to and serves a principal structure or a principal use.
 - B. Located on the same lot as the principal structure or use served.
 - C. Customarily incidental to the principal structure or use.

The existing primary residence has three bedrooms and a total floor area of approximately 3200 square feet. The existing conventional septic system was permitted and installed in 1984 and is sized for a three bedroom house. The existing single family dwelling has an address of N8589 690th Street. The mobile home that was removed from the property had an address of N8593 690th Street. The proposed accessory residence would continue to use the N8593 690th Street address. The proposed accessory residence would continue to use the N8593 690th Street address. Other existing structures on the property consist of a 36ft x 54ft pole barn to the north of the accessory residence, a 20ft x 24ft car port, a 34ft x 48ft barn, and a 32ft x 48ft pole shed to the south of the proposed accessory residence. The Martell Town Board recommended approval of this request on 12-11-18 without any concerns or recommended conditions. The Town did not reference its Comprehensive Plan. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall work with the Town Building Inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The applicant shall obtain a sanitary permit for the connection of the accessory residence to the existing septic system or obtain the proper permits to install a new septic system. If connecting to the existing septic system, the applicant shall either expand the existing tank and drainfield or record a per capita flow statement documenting that the septic system sizing is based on number of occupants and not the number of bedrooms.

After talking with Michelle Williams of the Public Health Department, a third condition is proposed:

3. Applicant shall acquire necessary permits (DATCP, Pierce County Public Health, etc) if the accessory residence is to be used as a tourist rooming house for short term rentals.

Chairperson Aubart opened the hearing to the public. No public comment. **Chairperson Aubart closed the public hearing.** Sanden asked, looking at the aerial photo, is he interpreting this correctly that the photo is an old photo showing the original trailer and the red is the new trailer. Pichotta stated yes the structure with the X over it is no longer there. Sanden asked what was that? Mr. Olson stated the trailer, that’s what is getting moved over, it has been moved over. Gulbranson asked if there are any plans to use it as a short-term rental? Mr. Olson stated they’ve talked about it but don’t feel it would be in their best interest. We’re not inclined to be hosts of an Airbnb or something like that. Gulbranson asked if the applicants knew about the third recommendation. Mr. Olson stated not until now but he was aware that there had been discussions about short-term rentals and things like that. We have never had any issues or problems renting it. It’s a desirable location; it has its own yard; there’s a car port that people can park in. They have never tried to get rich off of it or anything like that. It’s been very easily rented.

Gulbranson moved to approve the conditional use permit for an Accessory Residence for Dale & Sheila Olson, due to the fact that the use is determined to not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3 as amended/Sanden seconded. All in favor. Passed.

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for BS Construction Inc and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼ of Section 15 and the N ½

of the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Roy stated he spoke with the applicant today and they are unable to attend. They have a big project up in Hayward and couldn't make it down. We have talked about the conditions and had no opposition to what we are recommending.

Staff Report – Brad Roy: BS Construction/Steve Schoeder Properties owns a mine which was expanded in 2006. In 2006, the mine operator at that time and the Syllas agreed to allow mining within 50 feet from the property line as long as the mining did not encroach within 400 feet from the house and peak particle velocity would not exceed .35 inches per second. On September 5, 2012 the LMC modified the condition regarding peak particle velocity from the blasts. The peak particle velocity was raised from .35 to .50. It was stated that the low peak particle velocity makes it more difficult to blast the rock as it gets closer to the Sylla's structure. The higher peak particle velocity will allow the blasters to obtain a higher frequency in the blast and utilize electronic detonators with proper timing to get better results for the operators and the Syllas. The previous operator was instructed to report back to the LMC after the next full-face production blast with the peak particle velocity limit of .50 to determine if any modifications to the permit were necessary. To date there has not been a full-face production blast with a peak particle velocity limit of .50. At the 2017 renewal, Condition #14 was added to allow for continued use of the .35 peak particle velocity without a signature hole and full-face blast requirements. The Sylla's continue to be concerned about the effects of the blasts to them as well as their structures. As the blasting gets closer to their residence they believe that higher peak particle velocity will make the blasting less tolerable to them. A partial face blast was recently conducted. The blast was designed to stay under .35 peak particle velocity. The reading at the Sylla residence was .64. Other nearby graphs showed peak particle velocity below .35. No other blasts have occurred since then. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road S. Bechel Sand and Gravel has a lease with the owners. Mining activity is sporadic and the operators have expressed a willingness to work with the Syllas. Due to the unplanned peak particle velocity of the last blast, the blaster (Terry Johnson, Quick Supply Co.) recommends that a signature hole be completed prior to any other blasts. He stated this will help the blasting process for the site and produce better results for the mine operators and the surrounding land owners. Besides the issue with the blasting near the residence, the Sylla's have two concerns about well testing and dust control. The well was last checked in 2014 and dust issues come up during certain conditions (strong north winds). Staff was unable to contact the Chair of Rock Elm. Tim Bates, Rock Elm Chairperson, stated no one contacted him and he didn't know anything about it until something was happening and people were at the Town meeting last month quizzing him about the blasting. He got the notification about this meeting so thought he should find out what's going on. Roy continued stating the existing conditions are listed in the staff report #1 - #14.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate or whether additions and/or modifications are necessary. If no additions or modifications are necessary staff recommends the LMC renew this permit with the following conditions: Roy stated we are proposing to change #6 to remove any talk of peak particle velocity and signature hole. We are proposing to remove #13, the old number 13 and changing it now, a signature hole blast shall be conducted prior to any other production blast. Results shall be presented to the LMC to determine if any modifications to the permit are necessary. Signature hole blast shall occur no later than December 31st, 2019.

1. Hours of operation shall remain consistent with daylight hours or Monday through Friday, 6:00am – 9:00pm during the construction season with an occasional Saturday, 6:00am – 6:00pm, property owners within 300 feet and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. **Peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibrations.**

7. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. Fifty foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Operator shall ensure that fly-rock does not negatively impact adjacent properties.
13. ~~The operator shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions.~~
13. **A signature hole blast shall be conducted prior to any other production blast. Results shall be presented to the LMC to determine if any modifications to the permit are necessary. Signature hole blast shall occur no later than December 31, 2019.**

Bill Sylla Jr stated he and his brother recently bought his mom & dad's house so he is here to speak as the owner. He is a little concerned as it's written, there is actually no inclusion of the peak particle velocity at all anywhere in the conditions. Anything that talked about it has been stricken. When this was originally handed down to them and the Schoeders, it was contentious but you guys tried to make a choice and it was decided at that point to be 400 feet from the house, 50 feet from the property line and the .35 peak particle velocity. That wasn't great for them, probably not great for the Schoeders either but that was what was given. They really think they should do the signature hole which makes sense because obviously there is some weird stuff about the rock there. Even though they are designing for lower numbers, they are getting numbers that are quadrupling their design factors. They are concerned that there is no peak particle velocity there and they really believe that it would be fair to keep the .35 in there as the standard. The signature hole should happen because he feels it's going to allow them to keep that. They understand it may not be quite as lucrative to blast at a lower peak particle velocity. They can't use as much powder but ultimately that was the deal that was first cut with them. The board had to make a tough choice which neither side was particularly happy that night but that was the deal as it was struck and they just think it would be fair to stick to it. They really believe the peak particle velocity should stay at .35. It's fair, it's what started. They think it would also be good to improve communication and get contacted earlier. He brought this up to Brad about a month ago. If there was a way they could talk to the blaster before the blast is actually designed. Right now they are getting a 48 hour notification and at that point the hole is in the ground and there is really no way to change anything at that point. It's either going to go or not. There was a blast this year. It did exceed not only .35 but .65 and that was a partial face blast designed to be .20. That was surprising to see those numbers. The numbers came in really, really high even though it was designed really low. They had a new pump put in December of 2018. There was a well test done recently by Bechel in compliance with the CUP. Nitrates went from a little over 12.7 parts per million to 17.4. He has to admit he doesn't really understand the geology behind the nitrates in the well but he knows that part of the conditions were to test for nitrates. The nitrates are up almost 50% since the one blast. They would really like to see a signature blast done and really need some type of peak particle velocity of some type and he thinks it's fair to stick to .35. Pichotta stated what the intent was, was that a signature blast would be done, the applicant would come back prior to any production blast and then we would then have a discussion about the peak particle velocity. The intention wasn't to eliminate .35. It was to basically say, you are going to do one blast between now and the time you come back to this committee for consideration. As far as the concern about adequate notice, he suggested bumping notice up from 48 hours to a week. Bill Sylla Jr stated they don't know when the drilling starts. It would be good to talk before the drilling starts. Pichotta suggested that if you knew a week before, that would give you an opportunity to reach out to the gentleman that is designing it and have a discussion. Bill Sylla Jr stated he doesn't know when the drilling starts, is it a two week process, a week process. Roy stated before the last blast, they were drilling the day before. He stated he didn't know if that is typical. Bill Sylla Jr stated he just thinks it would be good to communicate a little better. Pichotta stated the other suggestion he would have on condition #13 to make it clear what our intention was, the signature hole

blast shall be conducted prior to any other production blast. Results shall be presented to the LMC to determine if any modifications to the permit are necessary prior to any production blast. The signature hole blast shall occur no later than December 31, 2019. That time frame, December 31, 2019 basically what that is, is an effort on our part to bring that to a head to get this addressed so that the conditions can be established, we understand where we are at, and then everybody knows what to expect in the future. That was the goal in establishing the December 31st timeframe for them doing a signature hole. Chairperson Aubart stated so you would anticipate after that signature hole then that would set that. Pichotta stated then they will come back and we will have a discussion about peak particle velocity .50 versus .35. We have a different blaster now. It's his understanding from Brad, he seems to explain things in a manner which is perhaps easier to understand than the prior guy. Sanden stated to satisfy the Sylla's, would there be any situation where a signature hole blast that would argue against the need to define a peak particle velocity? Is that a possibility, should we include that language in condition #13 any modifications to the permit such as determining peak particle velocity as necessary. Pichotta stated he doesn't know that we necessarily need to include that. That is our intent. If we add the little blurb that he suggested, prior to any production blasts, that means between now and the time they come back to see us again that they only have the ability to do one blast and that is the signature hole blast. He doesn't anticipate that the .35 has gone anywhere at all. He thinks that is the base line for our discussions so it wasn't their intention to throw it out. Bill Sylla Jr stated he didn't think it was but let's just say a meteor was to hit us and we were to all pass away untimely tonight. As we walk out of here, this is a public record and if we could just keep something in there about any peak particle velocity at this point. He would just be more comfortable. Roy stated we could add that in whether it's its own condition or in to #13. The issue after leaving the site and talking with the blaster last time, was you can put whatever limit you want on there but without a signature hole blast, there's no saying anyone can design a blast to reach .35. That was his thought. He thought he did everything he could to stay under the limit and it went way over. The only way to be at any limit, .35 or .50 or whatever is to get a signature hole in there so they know what they are dealing with. Sanden asked so it's not likely, unless they do a signature hole and everything comes out so great, that they say, there is no need for a peak particle velocity. Roy stated no, the signature hole will basically give them the guidelines to design the blasts going forward. Bill Sylla Jr stated he thinks they collect a bunch of data at all the surrounding places based upon one shot. Then they figure out how the energy is propagating throughout all the rock nearby and it allows them to do some computer math somewhere and come up with something that meets our limit. He would just really be comfortable if there was a limit in here. Sanden stated that would explain the discrepancy reading between the .64 reading and the .35 reading that the materials near the Sylla's home is different than the other direction and they weren't expecting that and the signature hole would kind of answer that question. Roy stated right away they thought there might have been an issue with the seismograph that was off. We never got results from that, they did send the seismograph in for testing, if it was fine or not. Even with that question, the blaster was still recognizing a signature hole was needed. Sanden stated maybe the material near the home was denser than in all the other directions. He would also like to reduce this gentleman's need for flying back every six months. Pichotta suggested on condition #6, the part that is struck that says peak particle velocity shall not exceed .50 inches per second, not strike that and change the .50 to .35. The reality is that it doesn't really change anything but it does put in there that that is the peak particle velocity and if that gives them a comfort level, why not. Sanden asked if the blaster would be comfortable with that too? They would be able to operate their mine with that? Pichotta stated basically they can't operate their mine until they do a signature shot if you approve this as proposed. Bill Sylla Jr stated it's possible that they will blow the signature hole and it'll come back that they will say the rock is such a manner that it's financially unreasonable to do anything less than .7. There is a chance that once they do this, they will find good data or bad data, we don't know. Gulbranson asked if we are changing the 48 hours on #6 also. Pichotta stated yes, to one week. Bill Sylla Jr stated we can make whatever is reasonable with the blaster. Gulbranson stated you could also call him tonight if you wanted too. Bill Sylla Jr stated sure, that's no problem. Pichotta stated the week will just make sure you have plenty of time. Sanden asked Andy if he was comfortable that putting in the .35 is not going to affect the operation one way or the other. He doesn't completely understand the operation here but if he is comfortable that the .35 wouldn't impede the operation of the mine then he would agree. Pichotta stated it is his sense that .50, while it was

proposed, it was never proven to be a good viable option, and .35, we didn't have issues with that, or fewer issues. Bill Sylla Jr stated when they were designing to try and hit a .35, they would occasionally going through it but if they are designing for a five then we're going to get sevens. Pichotta stated that having it at .35 just puts it back to where it was for most of the time this CUP has been active, at least in the last decade. Pichotta read through all of the changes; #1 will remain the same relating to hours of operation, #2 would remain the same relating to permits from other agencies, #3 Financial assurance, that would still be required, #4 Compliance with NR 135 is required, #5 Blasting needs to be done by a state certified blaster, #6 will be stated as this, "Property owners located within a 1,000 feet shall be given adequate notice (7 days) of any planned blasting. Peak particle velocity shall not exceed .35 inches per second, the last line, A signature hole process will be conducted to minimize vibrations, will be struck. #7 Well tests for nitrates and suspended solids, and dissolved solids shall be conducted for all existing wells within 1,000 feet of the mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter. Results shall be provided to the Department of Land Management. #8 Dust control measures shall be implemented when necessary. The operator will water when necessary. #9 This CUP shall be renewed every two years. #10 50 foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings. #11 A vegetative buffer shall be established to screen adjacent residences. #12 Operator shall ensure that fly-rock does not negatively impact adjacent properties. #13 will state "A signature hole blast shall be conducted prior to any other production blast. Results shall be presented to the LMC to determine if any modifications to the permit are necessary prior to any additional production blast. Signature hole blast shall occur no later than December 31, 2019." Roy stated his only issue is the date, December 31st. He doesn't know if there will be an issue with that. Bill Sylla Jr stated they are hauling pretty quick right now so whatever they blew down recently is going to be gone shortly. He doesn't know what timeframe the blaster has but he thinks it's going to occur. He doesn't think it's going to be stagnant like it's been the last couple of years. Bill Sylla Sr stated it's long way from sporadic, it's pretty busy. Roy asked if the Bechel's came and talked to him. Sanden asked, the Bechels are aware of this date also? Roy stated we sent them a staff report. Pichotta stated if we want to, no later than December 31, 2019 or later agreed upon date, agreed upon by the owner, operator and neighbors. We could do something like that too if we wanted to leave ourselves the ability to be more flexible. Gulbranson asked if it makes a difference if you blast in the cold winter or different times of the year? Sanden stated he would think so. Bill Sylla Jr stated as long as it happens before the next production blast, we're comfortable. Pichotta stated he recommends that we strike the deadline date then. Bill Sylla Jr stated as long as it happens. **Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for BS Construction/Steve Schoeder Properties with conditions #1 - #13 with modifications as discussed/Gulbranson seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated we don't have any renewals or applications for the September 18th agenda so the next meeting would likely be in October.

Motion to adjourn at 6:35pm by Sanden/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, August 21, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 4th & 18th, October 2nd & 16th, all in 2019.

Approve Minutes: **Gulbranson moved to approve the August 7, 2019 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Sanden not voting because of absence at the last meeting.**

Public hearing to discuss and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the General Rural District, pursuant to Pierce County Code Chapter 240-67A(2), for Richard & Jeanette Clifford, owners on property located in the NE ¼ of the SE ¼ of Section 20, T25N, R16W, Town of Salem, Pierce County, WI.

Staff Report – Andy Pichotta: This is a request for a CUP for expansion of a nonconforming structure. The applicant's own numerous parcels in the Town of Salem. The 40 acre parcel with their home and attached garage is located along 410th Street. The existing house is a nonconforming structure with the closest portion of the house located 48ft from the center line of 410th Street. In 1982, the applicants received a variance to enable the construction of their 26ft x 30ft attached garage. At that time, a variance was the only mechanism available to expand a nonconforming structure. Further expansion(s) must be consistent with the current code. The applicants are requesting to build a 14ft x 24ft attached 1-car garage on the north side of the existing attached garage. The exterior wall facing 410th Street will start 50ft from the road centerline and end flush with the back of the existing garage. The roof height and the front and back overhang will line up with that of the existing garage, which will result in the front having a 4 foot overhang. The property is zoned General Rural. Adjacent properties are zoned General Rural & Primary Ag. Adjacent land uses are agricultural, residential, and forested. Pierce County Code (PCC) §240-67A(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that they meet the provisions of the chapter or a conditional use permit is granted as provided in §240-76." PCC §240-27C states, "Town highways. required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road 42 feet from the edge of the right-of-way, whichever is greater." The nearest intersection is more than 1,175 feet north of their driveway. The nearest dwelling is located more than 870 feet south of the proposed expansion. The proposed expansion will not result in a building closer to the road or road right-of-way. The Town of Salem recommended approval of this request on 7-31-2019. The Town did not reference its Comprehensive Plan and had no concerns or suggested conditions.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends the LMC approve this conditional use permit with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC.

2. The proposed 14ft x 24ft attached 1-car garage shall be located no closer than 48ft from the centerline of 410th St.
3. The applicants shall follow Pierce County Solid Waste Code Ch 201 and Wisconsin Administrative Code NR447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.
5. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the hearing to the public.** Chairperson Fetzer asked Mr. Clifford if he would like to add anything. Mr. Clifford stated no, it's basically all been covered.

Holst moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Richard & Jeanette Clifford, due to the fact it is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #5/Gulbranson seconded. All in favor. Passed.

Discuss take action on publication of agendas. Staff Report – Andy Pichotta: As you may be aware, the Pierce County Herald was recently combined with the Red Wing Republican Eagle. The “new” Republican Eagle now serves Goodhue County, MN and Pierce County, WI. The Herald published the Land Management Committee meeting agendas without charge up until the recent merger. Staff has been informed that Pierce County will, moving forward, be charged to publish LMC meeting agendas in the “Public Notices” section. Cost would likely range from between \$25 which would be for a very short agenda or \$75 or a bit more depending upon the length. Some of the legals get to be pretty lengthy, especially some of the sand mines. A short meeting notice (basically stating that the LMC will be meeting as well as when and where) could be placed in the “Government Calendar” section for no charge. Public hearing notices will continue to be submitted and published for a fee, as has been the case for many years and as required for rezones and conditional use permits.

Staff Recommendation: Staff is seeking direction as to whether the publication of LMC agendas in the “new” Republican Eagle, for a fee, is a worthwhile expense, or whether a notice in the “Government Calendar” section would be sufficient for keeping the public informed.

Chairperson Fetzer stated when this switched over, he is hearing a lot of people are going to be cancelling their subscription to the new paper, not cancelling but just won't be renewing. He doesn't see a point in paying money for something that not many people here are reading. Holst stated there was a meeting yesterday with Brad Lawrence, Jason Matthys and himself and they came to the conclusion that, in the long term, they would, for the County as a whole, try to expand the webpage. Put a page on there that specifically addresses agendas and things like that. Upcoming agendas, public meeting notices, etc and post it. In the short term, we will continue to use the paper. We still feel that the Herald, although it's based in Minnesota paper now, probably still has the necessary circulation at this time, but we'll phase away from that over the period of a year. We'll let people know what's happening and probably have to expand our bulletin board area out here. That will meet the letter of the law. County's under 250,000 people don't need an official paper. This department does a good job of notifying adjacent land owners or land owners within a close enough distance that it becomes a big thing and word of mouth is still a good way to get stuff around. Believe me if it's not welcome or wanted people hear about it. Sanden asked how often does staff receive complaints, either formal or informal about “I didn't know this...” is that something common or rare? Pichotta stated he hasn't heard any complaints. Pichotta asked Shari if she did. Hartung stated it's very rare. Gulbranson stated a condensed notice is free? Pichotta stated yes. Holst stated for the time being. Aubart asked Holst, you are saying that's good enough? Holst stated he would believe that it would be. Aubart suggested that then you could call and ask what is going on or go to the website. He would rather spend money on the new website. Pichotta asked if there was a consensus on the decision to discontinue publishing agendas. All committee members agreed.

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Kevin Etherton, our GIS guy, to attend the GIS/LIS Convention in St Cloud on October 2nd through the 4th. He will stay at the Best Western. He will use the County car. This is one of those things that we receive a grant for. **Gulbranson moved to approve the travel/training request for Kevin Etherton/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated we have a public hearing for an Accessory Residence in the Primary Ag District for Dale & Sheila Olson in the Town of Martell.

Potentially, either on the next meeting agenda or the one after, the renewal of the CUP for nonmetallic mining for BS Construction and Steve Schoeder Properties on a mine in the Town of Rock Elm.

Motion to adjourn at 6:17pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, August 7, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson and Jeff Holst

Others: Andy Pichotta, Emily Lund, Adam Adank and Shari Hartung

Absent: Eric Sanden

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 21st, September 4th & 18th, all in 2019.

Approve Minutes: **Aubart moved to approve the July 17, 2019 Land Management Committee minutes/Gulbranson seconded. All in favor. Passed.**

Public hearing to discuss and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Primary Ag District, pursuant to Pierce County Code Chapter 240-67A(2), for Janna Cowen, owner on property located in the SW ¼ of the SE ¼ of Section 3, T27N, R17W, Town of Martell, Pierce County, WI.

Staff Report – Adam Adank: The applicant’s property is a 4.0 acre lot located on State Road 29. The applicant is requesting to build a 14’ x 16’ bedroom addition and a 6’ x 6’ deck addition off the east side of the existing dwelling. The existing dwelling is a nonconforming structure located approximately 96 feet from the centerline of State Road 29. The Department of Transportation (DOT) right-of-way extends 70 feet from the centerline of State Road 29 making the Pierce County right-of-way structure setback distance 147 feet from the centerline. The proposed addition will not extend any closer to State Road 29 than the existing dwelling. The existing dwelling is a two bedroom house with both bedrooms upstairs. The proposed addition would make the dwelling a three bedroom house. However, the applicant is proposing to remove the closet from one of the upstairs bedrooms and turn that room into an office/storage room. By removing the closet from the existing room the dwelling would still be considered a 2 bedroom house for septic system purposes. The parcel is located in the Town of Martell and is zoned Primary Agriculture. Adjacent land uses surrounding the property are agricultural and residential. The nearest driveway is approximately 190’ to the west of the applicant’s driveway. Pierce County Code (PCC) 240-67A(2) states, “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76.” PCC §240-76A states, “A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use.” PCC §240-27A states, The required setback for all structures fronting on state and federal highways shall be 110 feet from the centerline of the road or 77 feet from the edge of the right-of-way, whichever is greater.” The existing well and septic system are each located on the north side of the house and meet the required setbacks from the proposed expansion. SPS 383.25(2)(C)(1) states, A municipality may not issue a building permit to commence construction of any addition or alteration to an existing structure when the proposed construction will modify the design wastewater flow or contaminant load, or both, to an existing POWTS, unless the owner of the property:

- a. Possesses a sanitary permit to either modify the existing POWTS or construct a POWTS to accommodate the modification in wastewater flow or contaminant load, or both, or

- b. Provides documentation to verify that the existing POWTS is sufficient to accommodate the modification in wastewater flow or contaminant load, or both.
- 2. For the purposes of this paragraph, a modification in wastewater flow or contaminant load shall be considered to occur:
 - b. For dwellings, when there is an increase or decrease in the number of bedrooms.

The proposed expansion will not result in a reduced line of sight for vehicles traveling along State Road 29. The Town of Martell recommended approval of this request on 6-11-2019. The Town did not reference its Comprehensive Plan and had no concerns or suggested conditions.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends the LMC approve this conditional use permit with the following conditions:

- 1. Activities shall be conducted as submitted in the application and as presented to the LMC.
- 2. The applicants shall maintain the 96 foot setback from the centerline of State Road 29.
- 3. The overall number of bedrooms in the house shall not exceed 2 bedrooms and the designed wastewater flow of the Private-Onsite Wastewater Treatment System (septic system) shall remain the same. One of the existing upstairs bedrooms shall be converted from a guest bedroom to an open space and the existing closet shall be removed. Staff to verify.
- 4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
- 5. The proposed expansion shall be completed within 12 months of CUP approval.
- 6. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Chairperson Fetzer invited Janna Cowen to speak. Ms Cowen stated one of the upstairs bedrooms is sort of a weird hybrid to start with because she has used it as a computer room and an office and a guest bedroom. It will no longer be a guest bedroom and she will move downstairs as she gets older. **Holst moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Janna Cowen, due to the fact it is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Gulbranson seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for Steven & Joan Tyvoll, owners, on property located in the NW ¼ of the SE ¼ of Section 10, T27N, R15W, Town of Spring Lake, Pierce County, WI.

Staff Report – Emily Lund: The applicants received an after-the-fact CUP on 8-16-2017 to operate a Retreat Center, “River Apostolic Center,” a non-profit, tax-exempt, Christian Retreat Ministry. On 8-15-2018, they received their first renewal before the LMC. This is their second renewal request and the department has not received any complaints within the past two years. The 30-acre property is located in Section 10, Town of Spring Lake and is zoned General Rural. Pierce County Code (PCC) §240-88 defines Retreat Center as “A facility or facilities used for professional, educational, organizational, or religious meetings, conferences, or seminars and which may provide meals, housing, and recreation for participants, and may include multiple related uses managed as one operation.” The applicants utilize the house and pole shed for 1-2 hour long worship gatherings on Sundays and occasional weeknights. Their home and pole shed are handicap and wheelchair accessible. In the future, they propose to provide a home school co-op. Children (2-5 families) would meet twice a month for fellowship and group learning. The existing conditions are listed in the staff report #1 - #7. The Public Health Department recently contacted our office regarding this operation. Applicants should contact the Pierce County Public Health Department to determine if licenses and/or water testing are required. The Town Building Inspector conducted a final inspection for the structure on 9-5-2018 and no issues

were found. On 8-9-2018, the applicants recorded an affidavit for their septic system to set a “Per Capita Flow” sized based on occupants, flows and loads of their existing septic system. Based on the “Per Capita Flow” affidavit, the maximum retreat center members/guests shall not exceed 50 people. If a gathering exceeds 50 people, the applicants shall have adequate portable outhouses (1 per 50 people) provided. There is no meal program, but an occasional potluck meal is offered. Current attendance is between 8-14 members. Staff has not been provided any information whether the applicants intend to add new members in the future. There are more than 20 off-street parking spaces available, with one space ADA compliant. No advertising signs and no retail activities are planned at this time. Applicants will need to obtain a Land Use Permit prior to sign placement if they choose to have advertising signs in the future. The Spring Lake Town Board recommended approval of this request on 7-11-2017. The Town Chair and Supervisor indicated no issues or complaints were reported within the last year.

Staff Recommendations: Staff recommends the Land Management Committee consider whether the current conditions remain adequate to ensure public health and safety. If determined to be appropriate, staff recommends the LMC renew this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate (proposed additions are in **bold**):

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. There shall be at least 20 off-street parking spaces available, with a minimum of one parking space ADA compliant. There shall be no on-street parking.
3. Applicants shall obtain a Land Use Permit prior to construction if they choose to have advertising signs in the future.
4. Based on the “Per Capita Flow” affidavit, the maximum retreat center members/guests shall not exceed 50 people. If a gathering exceeds 50 people, the applicants shall have adequate portable outhouses (1 per 50 people) provided.
5. **Applicant shall contact the Pierce County Public Health Department and shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Dept. of Safety & Professional Services, Department of Public Health – DHS standards, etc).**
6. Applicant understands that expansion or intensification of this use will require modification to this CUP.
7. **The CUP shall be renewed every two years. Renewal may be completed administratively if no complaints or compliance issues arise.**

Chairperson Fetzer asked Ms. Tyvoll if everything is going well out there. Ms Tyvoll stated yes. Chairperson Fetzer asked Town Chairperson Richard Johnson if he had anything to add. Mr. Johnson stated, no, they haven’t had any issues or concerns relating to it. Chairperson Fetzer stated he appreciates that any time something comes up in Spring Lake, you guys are always in here. We appreciate that. Mr. Johnson stated they feel they owe it to the citizens of the Town and to the committee while doing this work.

Holst moved to approve the renewal of the conditional use permit for a Retreat Center for Steven & Joan Tyvoll with conditions #1 - #7/Aubart seconded. All in favor. Passed.

Discuss take action on proposed 2020 Land Management Department budget. Staff Report – Andy Pichotta: Pichotta stated there is a memo as well as the proposed budget sheets. Going through the primary areas of the budget there is a slight increase of 1, 2 & 3 %. Almost in all cases, this is due to increased personnel costs. Pichotta discussed the Land Records Modernization Fund and Grants, stating the Strategic Initiative Grant will again be available for 2020. He reviewed the itemized budget for a total of \$126, 263.16, stating that none of this comes out of the General Fund. Revenues should be slightly the same or maybe a little higher. Looking at Land Records Modernization budget, we are proposing expenditures of \$40,262.00. All of these funds are the retained fees; nothing comes out of the General Fund. The Surveyors budget; the proposed changes are in personnel costs. The County Planner budget; this includes salaries for about half of the office. Salaries are proposed and again most of the changes are within the personnel section. There is a proposed increase under postage. With our three-year maintenance letters, we have to go back further in time so that will be an increase in number that we send out each year. He did offset that to a certain degree, if you recall when we switched to the new style of signs, we needed to get some inventory on hand so he is proposing to reduce

that by \$500.00. GIS, budget relating to Kevin's position. The proposed changes are through the personnel side of things. Most of what he does, we are able to capture through the Land Records Modernization program. Land Information Grant, this takes into account three different grants; Base Budget, Strategic Initiative and a Training/Education Grant. He does anticipate the Strategic Initiative Grant going away in the not-so-distant future. Total proposed expenditure is \$87,000.00. Zoning expenditures, all of the proposed changes are in the personnel side. The budget as a whole, about 96% is personnel and around 4% is operating. The estimated revenue side of things, he is anticipating similar to past years, we increased our fee structure, but are anticipated about the same revenues. Under 2018 Actual, there was an insurance recovery for \$7715.01. We had some hail damage that wasn't all that bad so he chose not to have it fixed. Revenues in the Zoning Dept, Admin suggested he bump it up. Similarly with Sanitary, he bumped it up for 2020, same thing for Land Records Fees. Holst asked how we are doing year-to-date. Pichotta stated we are actually about where we were last year. He stated we either see new houses or we see conditional use permits. It seems to be either one or the other. This year we are seeing more houses and the conditional use permits have less to do with entrepreneurial activity and more expanding nonconforming structures. We've seen a lot of those and will see another at the next meeting. Wisconsin Fund is being discontinued. This is the last year one would be able to apply for that. If you meet certain income parameters, you are able to get a grant to help you pay for a replacement septic system and they have discontinued that so the last year we will see any money coming in will be 2020. **Gulbranson moved to approve the proposed 2020 Land Management Department budget as presented/Aubart seconded.** Chairperson Fetzer added that every year you do a fantastic job on the budget. There isn't really much you can do on the increases and it always stays pretty darn tight. Kudos to you. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta stated we have a public hearing for Expansion of a Nonconforming Structure in the Town of Salem for Richard Clifford.

Motion to adjourn at 6:30pm by Aubart/Holst seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, July 17, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 7th & 21st, September 4th & 18th, all in 2019.

Approve Minutes: **Sanden moved to approve the July 3, 2019 Land Management Committee**

minutes/Aubart seconded. All in favor with Fetzer and Gulbranson abstaining because of absence at the last meeting. Passed.

Discuss take action on a request to modify conditions for Belle Vinez Winery, a conditionally permitted use, in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-76A, for Shannon and Angel Zimmerman, owners, on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: The applicant received a Conditional Use Permit (CUP) to establish the “Belle Vinez” winery with incidental food service in August 2013. The applicants also reside on the 20 acre parcel. The Land Management Committee approved an expansion in 2016 to allow year-round operation and a Food and Wine Plan, detailing how the food operations will be incidental and subordinate to winery operations, in 2014. The operation opened to the public in May 2015. The commercial structure includes a tasting room, kitchen, dining area, restrooms and offices/conference rooms. The applicant is requesting to modify condition #11 to allow for two additional hours of operation for special events only, such as corporate events or weddings. The tasting room is permitted to be open seven days a week. The hours of operation are 11am to 9pm. Off-sale wine and other various crafts are sold in this area. Only appetizers are served in the tasting room. Customers of the tasting room are welcome to use the plaza and lounge for seating. The pizza service is open Thursday through Sunday with hours of operation being 11am to 9pm with lights out by 10pm. (The wording of this condition has been discussed at previous meetings and it was concluded that service for the customers would stop at 9pm and customers would leave the premises by 10pm). Condition #10 states, Hours of operation shall be 11am to 9pm. Condition #16 states, Weddings and special events may not exceed established business hours and must be conducted consistent with the other conditions of this permit. The Town of Clifton recommended approval of this request on July 2, 2019 with the following comment: The Clifton Town Board approved the CUP modification/expansion of operating hours for special events (2 hours or 12:00am).

Existing conditions #1 through #24 are listed in the staff report.

Staff Recommendations: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate off site impacts. In no additions or modifications are necessary, staff recommends the LMC modify this permit with the following conditions: (staff is proposing to modify conditions 10 and 16 to address the requested modification and is proposing to remove conditions 19, 20 and 24 due to completion of those items by the applicant)

1. Activities shall be conducted consistent with the application unless modified by another condition of this approval.

2. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
3. The winery shall produce “wine” as defined by the State of Wisconsin.
4. Applicant shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations.
5. The applicant shall obtain necessary licenses from the Town of Clifton.
6. Applicant shall obtain all other necessary permits from state and municipal agencies.
7. The parking lot shall have at least 71 parking spaces. There shall be no on-street parking.
8. Seating capacity for the pavilion and plaza shall not exceed 120.
9. Applicant shall install signs detailing the need for reservations and no parking on the street.
10. Hours of operation shall be 11am to 9pm. **Hours of operation for special events shall be 11am to 11pm with lights out at 12am.**
11. Full menu food service (pizza and appetizers) may be provided Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm. Limited menu food service (appetizers only) may be provided in the tasting room during regular hours of operation.
12. No beer or liquor shall be served in the tasting room.
13. Lighting shall comply with the Land Management Department policy.
14. Sound system shall only be within the structures.
15. No audio bird repellent shall be used onsite.
16. Weddings and special events ~~may not exceed established business hours and~~ must be conducted consistent with the other conditions of this permit.
17. This Conditional Use Permit shall expire in 2 years.
18. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
19. ~~Berm shall be established on the east perimeter of the property with adequate vegetative cover.~~
20. ~~Adequate vegetative cover shall be established to visually screen the parking lot from the road.~~
21. Applicant shall adhere to the approved Food and Wine Plan and shall ensure that food operations remain incidental/subordinate to winery operations.
22. Sound shall be limited to no more than 80 decibels at the property line.
23. Promoted access route shall be along County Road M.
24. ~~Arrangements shall be made to establish a visual screen along the southern property boundary.~~

Chairperson Fetzer invited Shannon Zimmerman forward. Mr. Zimmerman stated Brad hit it very well. The motive behind this really is that we have a lot of different guests who want to host an event; could be corporate, could be wedding and very simply at 9pm no bride is really going to want to do that. They lose out on those sort of things. The Wisconsin State law and the interpretation by the Department of Revenue, earlier this year, has now modified and expanded the hours. So by right and is permissible by law, with the licenses we hold, we could technically be requesting to 2am or 2:30am. Sanden asked if they could give the committee an idea of how many of those special events they are looking at. Mr. Zimmerman stated he would use what his wife is saying are the requests that they have coming in. Probably speculate two a month and part of the motivation there is that they want to accommodate but don't want to be shutting down for their normal guests and customers who are there. He is estimating probably two and on a busy month maybe three. Chairperson Fetzer asked if he is thinking just on Fridays or Saturdays. Mr. Zimmerman stated this would most predominantly be a Friday and a Saturday. All the other conditions exist and you saw the letters from the neighbors, if you haven't or aren't aware, it's a pretty darn good neighborhood these days. Sanden asked if staff has received any complaints on this operation since it's been active for six years now. Roy stated not in the last year and a half or more since the Borgstadts' moved. Sanden stated it sounds like it was isolated. Roy stated yes, it was.

Holst moved to approve the modification of conditions for Belle Vinez Winery a conditionally permitted use, with conditions #1 - #21/Gulbranson seconded. All in favor. Passed.

Discuss take action in a request for potential modification to approved Site Plan for Mini-Storage in the Commercial District, pursuant to Pierce County Code Chapter 240-36K for WD LLC, Jay McGrath, owner of property located in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: On November 7, 2018 the applicant received Site Plan Approval for Mini-storage in the Commercial District. At the meeting the neighboring land owner (Hager Heights Drive In) presented concerns to the LMC regarding the safety of a stormwater pond near the property line and his customers. He wanted a fence or barrier to help keep people out of the pond. The LMC placed Condition #3 on the approval which states, “Applicant shall work with Department of Land Management staff on a fencing plan.” Initially, staff directed the two property owners to work together to determine what type of fencing would be best. Discussions between the property owners broke down and no agreement was able to be reached. At that time staff informed the applicant that chain-link fence 3-4 feet tall would be needed on the southwest property line which wraps around the north and south sides a short distance. The two landowners recently agreed to a land sale, which is yet to be completed, which would result in the driveway being located entirely on the Hager Heights property and also to remove the easement from the MC Storage property. If the sale were to be completed, the Hager Heights property owner would no longer request a fence. The applicant is now questioning the need for a fence due to the total depth of the pond being three feet and the pond outlet being one foot above the pond bottom. The three conditions are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine if any additions or modifications to the previous approval are warranted.

Chairperson Fetzer invited Jay McGrath forward. Mr. McGrath stated we are just excavating the pond. We have it all filled in now. From their parking lot is only three feet down and from the bottom of the pond to the bottom of the outlet is only 12 inches above the bottom of the pond. Last year while all the excavating was going on, the pond was quite a bit deeper. Now all final grading is done. Chairperson Fetzer asked if everything is OK with your neighbor as far as no fencing necessary. Mr. McGrath stated he guessed so. Chairperson Fetzer asked if we need to get that in writing and also is the neighbor here? Chairperson Fetzer asked the Dudens’ if everything was OK with them. Dawn Duden stated yes, with the recent action it definitely looks like the pond is up to grade now. Chairperson Fetzer stated he just wants everything above board so feel free to state your concerns if you have any. Pichotta stated it’s good that the neighbors have an agreement as far as this but really the role of the committee is to look at this from a public health and safety perspective, look at traffic flows, look at landscaping issues. Pichotta noted that there is a couple of photos in your staff report. Although that is not exactly accurate given those were taken some time ago, there is fill in there and not standing water at this point. Mr. McGrath stated from that photo that Brad took the other day, we’ve put about three feet of sand in there now. We just have a little bit of the topsoil to put on top to grow grass. Holst asked if you put sand in there as opposed to riprap rock? Mr. McGrath stated yes, three feet of sand and then we’ve got to do riprap rock on the end of the outlet yet. We’re waiting for that to dry. Holst noted that you’re not completely graded yet. McGrath stated all the sand is in there, they just have to bring in some topsoil. Sanden asked how this situation differs from the other countless stormwater ponds in Pierce County. Because there is a grade there that goes down to it that makes it a special concern? Mr. McGrath stated he thinks it was the depth of the pond last year while we were discussing this. Sanden stated he doesn’t want to set a precedent unless there is some clear distinction of this situation opposed to the average one. Pichotta stated this is almost like a CUP where it’s hard to set a precedent because each situation is unique. You should judge it on its merits and if you are comfortable that there is not an issue. Aubart stated he has spent way too much time on this item. He did some digging in the City of River Falls, there are 225 ponds, some up to a depth of up to eight feet. There is none that have fences and they are all in neighborhoods. We have had no incidences. These are uncommon, that is the way things are built today. Those are on public and private lots. That does not include some of the pervious surfaces and they range from grass wells to ponds that hold water year round and are several acres. To him, it’s not an issue. Gulbranson stated he thinks he asked this question the last time, with this sale, in the future if you decided to fence all your property, would this meet setbacks? It was noted that there are no setbacks for a fence.

Chairperson Fetzer stated he appreciates your input, Jon. The max depth of that can only be 12 inches? Mr. McGrath stated yes.

Sanden moved to approve the modified site plan approval and strike condition #3, no fence needed/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for Wisconsin Frac Sand Inc, John & Marjorie Kralewski Family Partnership, Dean & Mary Holden, Edmund & Dawn Daleiden, William & JoAnn Steele, Jeffrey & Kelly Von Holtum and Schaul's Gas Inc, owners, of property located in the S ½ of the SE ¼ of Section 3 and the N ½ of the NE ¼, the SW ¼ of the NE ¼, the E ½ of the SE ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 10, the W ½ and parts of the SE ¼ of Section 11, the W ½ of the NW ¼, the E ½ of the NE ¼, the N ½ of the SW ¼, the W ¼ of the SW ¼, the SW ¼ of the SW ¼, the SW ¼ of the NE ¼ and parts of the E ½ of the NW ¼, parts of the E ½ of the SE ¼, parts of the NW ¼ of the NE ¼, all in Section 14 and the W ½ of the SW ¼, the NE ¼ of the SW ¼, the W ½ of the SE ¼ of the SW ¼, part of the S ½ of the NW ¼, part of the NE ¼ of the NW ¼, of Section 13, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI.

Staff Report – Adam Adank: The WISC mining operation encompasses approximately 2,077 acres total with approximately 1,587 acres located in the Town of Maiden Rock. Approximately 580 acres have been mined to date. Due to market conditions the mine shut down in April of 2016 but started back up in January of 2017. The mine recently shut down again in May of 2019. Before the shutdown, the mine was operating 24 hours a day, 5 days a week and employed 46 people. The goal is to have 70 employees working 24 hours a day, 7 days a week. Since the shutdown, only four employees are onsite daily to maintain ventilation, make sure everything is stable underground, check pumps, etc. All DNR and other permits are being kept active and all major assets remain onsite to allow the mine to start back up if market conditions change. The mine received its first CUP from the Land Management Committee (LMC) in 2004. In April 2012, a new loadout facility was constructed with a conveyor and railcar loading spout. A fugitive dust plan was developed for the loadout facility. The mine was expanded in 2013 and the LMC approved the location of a new vent shaft in 2014. WISC began using a new wash plant with a water recycling system that reduced the amount of water used in their process. Most of the activity associated with the operation takes place within the Village of Maiden Rock, which houses the processing plant. As far as issues pertain to the request, nothing has really changed since their last renewal. Staff has not received concerns/complaints about this request since the last renewal. Staff contacted the Town of Maiden Rock Chairman regarding this renewal request; the Town did not have any concerns at this time. The existing conditions are listed in the staff report #1 through #17. The applicant is requesting to amend condition #2, as reflected below in the recommended conditions, to only require comprehensive water testing on residential wells during times of active mining. The amendment of condition #2 was presented to the Town of Maiden Rock on 6/19/2019 and the Town had no objection to the proposed change.

Staff Recommendation: Staff recommends that the Land Management Committee determine whether any additions or modifications are necessary, if none, staff recommends the Land Management Committee to renew this CUP with the following conditions (proposed additions are in **bold**):

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5 am up to four times per week, including Saturday.)
2. **When blasting has taken place**, comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management. **If no blasting has taken place within a calendar year, well testing is not required to be conducted that year.**

3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
5. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
6. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
7. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
8. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
9. This permit shall expire in two years.
10. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
11. The Damage Claim Response Plan, as approved by the Town of Maiden Rock, shall be adhered to.
12. The Town of Maiden Rock's recommendations/comments, from the January 19, 2011 public hearing, shall be adhered to.
 - a) Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
 - b) The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
 - c) The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.
13. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat from such emissions.
14. A fugitive dust plan shall be developed for the processing facility and submitted to the Zoning Office.
15. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
16. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
17. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LMC.

Chairperson Fetzer invited WISC forward: Lauren Evans, Sustainable Development Coordinator for the Region and now she has a roll in Environmental Health and Safety. Alyssa Moody, one of the regional folks that is in their environmental department. Aaron Scott is one of their directors as well. Condition #2, just looking for some clarification, the way it is written, We would need to complete a second round of testing in the fall for those properties that are not leased and fall within 1,000 feet of mining activity. Our last blast was on May 2, and the facility is now idle. They completed their spring round of residential well testing on June 2nd. So they have completed sampling since then. Typically they would complete that sampling twice a year for a majority of the residences because of the second part of that condition. So it's about 20 residences that they would have to test again this fall. She was wondering if they would still need to test in the fall or if they would wait until the next calendar year to determine if they would have operated since then. Chairperson Fetzer asked if there have been issues. Ms Evans stated no, in fact the last round of sampling that they did is consistent with all of the previous rounds. Some of these residences they have been testing for ten years or more so they have quite a bit of data. This last round, any concerns that they have been monitoring or addressed, went down, all positive indicators. Sanden asked if there is any possibility for delayed impacts, given the geology there, if you do something in January but it may not show up until September. Ms Evans stated that they have done the

comprehensive testing during a idle period so they do have results of when they were idle back in 2015. Ms Moody stated we were idle April 2016 through January 2017 and we did not suspend sampling during that time. Ms Evans stated so we have those results but we didn't go through them comprehensively to determine the factors but we didn't see any impacts or changes on the other side. Ms Moody stated in general, the results across the board have been fairly consistent. We will see minor fluctuations at different residences but there is nothing that really spiked during that time when we were idle. Holst stated he believes that it's advantageous to the company and to the citizens that are having their wells tested, to have them tested yet this fall. The simple reason is that it builds continuity to the program and it also builds consistency. Holst stated he has been here since this whole process started with these people and he doesn't see the room full of people up in arms any more. It's a small price to pay, go back to corporate and tell them they have to pay it. Ms Moody stated it's not a small price. Holst stated it's a small enough price. Mr. Scott stated it's just a high cost. Chairperson Fetzer stated he could go either way. The blasting had been done. Your blasting had been going pretty much five days a week. Ms Evans stated at the beginning of this year, as activities slowed before we idled, it was not five days a week, two to three at the most. Some weeks we didn't blast. Mr. Scott stated our production fell off until we made the decision to idle the facility. Chairperson Fetzer stated that is just his opinion, but he could go either way on this. He also looks at the community, peace of mind. Aubart asked what their projections or do they have any current projections. Mr. Scott asked for Maiden Rock, right now it's idle. They are optimistic that the market could shift and turn around. Right now, we are seeing this across Wisconsin and Minnesota. We are optimistic that someday we will be back up and running that is why we want to continue on with the permits and making sure that we are doing everything right. He doesn't have a crystal ball for the market conditions, it's tough. Ms Evans stated they have one other item they want to ask about. On condition #12, this is not something that we discussed at the Town Board, they see it as an administrative change. That condition was placed after the January 19, 2011 public hearing with the Town. These were requests from the town, 12a addresses the residential well sampling, and the historical averages have already been established so that part of the condition has been met. Every time they sample they share data with the owners so they are thinking that could be combined with condition #2 which addresses the residential well sampling. 12b they have satisfied that condition already. There was testing that was done on the airshafts before and after blasting for three consecutive years. That data was shared with the Township and also provided in the annual reports to the County. There were no concerns there so we did not have to continue testing. Then 12c is really stated again in condition #17, it says they would not be able to build new portals or more than three airshafts and condition #17 says no ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LMC. It's really kind of cleaning up the language here. We just want to make sure we are not going to be held accountable for something that we've already completed or have to do some kind of testing again. Adank stated we did talk about that we're hesitant to recommend taking it out without talking to the Town. Holst stated since it's a condition that they have met, and it doesn't cost them anything to continue to meet it, and they should start blasting during the period that we've OK'd it again, just to cover our posterior with the Town of Maiden Rock, it should remain in effect. It's important and we can address it the next time they come in for renewal if they see fit to talk it over with the Town or if you talk to the Town in the meantime and want to come back in and change the conditions. Sanden stated it seems the committee might be a little split on condition #2 whether or not to have them do it two times each year, so he is pondering a motion of cutting it back to one time each year and see where the committee stands on that. Holst stated that if no blasting takes place within the calendar year, well testing is not required to be conducted that year. Sanden stated if you read further down it says, "Testing of the wells on properties on which mineral rights are not leased and fall within 1,000 feet of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year." Holst stated when you go to the bottom that would take care of that, "If no blasting has taken place within a calendar year, well testing is not required to be conducted that year." So we're talking about one time and if they discontinue blasting, they don't test. Aubart asked if they stay down until this time next year, then are they required to do two tests in 2020. Sanden stated it does say testing two times each year. Aubart stated it doesn't make a lot of sense if we are requiring them to test two times in six months. Gulbranson stated the last blast was May 2nd. Chairperson Fetzer

stated the last test was in June. Sanden stated which came up clean, I think what they are saying is why should they have to test another time if no blasting has occurred. Mr. Scott stated if blasting does come back we would be testing again as stated. Gulbranson asked if you test this fall again, wouldn't that keep things clean in case somebody were to sell their home. A new owner would be hanging out there and this would keep it clean. Sanden stated he thinks that is what Jeff was saying. Holst stated he thinks it's advantageous to the company to continue testing the water under the conditions that they have today for this calendar year. After that the conditions change if they don't blast in a calendar year or if they blast within six months of the calendar year they test it once, something like that. He knows he has seen people come in with tainted water they claim was these guys fault. In reality it wasn't but I think it's a good, cheap, insurance policy to test the water. If you guys want to say you don't have too, you go ahead, but he has been yelled at too many times. Holst stated if you really wanted to see it, you should have seen it when the dredgers were around. Those were interesting samples of water and in the same being said, they wouldn't allow people to test their wells. He thinks it is just a lot cleaner for all parties if it stays in there for the second time this year. Gulbranson stated he tends to agree with Jeff on that, it keeps it clean. **Sanden moved to approve the renewal of the conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand Co with conditions #1 through #17, amending condition #2 as presented/Holst seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District pursuant to Pierce County Code Chapter 240-37E, for Muskie Proppant LLC, owner of property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.

Staff Report – Adam Adank: This facility was permitted in 2011 and began full operation in 2012. Due to market conditions Muskie shut down operations at the plant in June 2015. The plant restarted operation in January 2017 and was producing washed and dried sand at capacity up until September 2018. In September of 2018 the plant shut down again and has had no work activity at the site since. At the time of the shutdown the facility grounds were treated with a biodegradable material to keep any remaining sand on the ground in place. Grounds are mowed, and the building is inspected to insure there are no issues. Water sampling, testing, etc. continues on site as well. At this time the company is unsure of the future of the plant but would like to renew the permit as there is always a possibility that they could resume operations. Again issues pertaining to this request have not really changed. However, Land Management staff received two complaints regarding track out on Highway 10, since the last CUP renewal. One of these complaints was due to the sweeper being down for a one to two day period where staff was hand sweeping the track out. Since that time they have purchased an extra sweeper attachment to use as a backup. In May 2018 a utility worker position was created with the main responsibility to monitor the driveway, dust control, and sand piles. No complaints have been received since the creation of that position. Staff has contacted the Town of Union Chairman regarding this renewal request; the Town did not have any concerns at this time. It should also be noted, Pierce County Code (PCC) §240-76I discusses termination of Conditional Use Permits and states, "Termination. If an established conditional use is not conducted in conformity with the permit or this chapter, the conditional use permit may be terminated by action of the Land Management Committee. If an established use permitted as a conditional use ceases for a period of more than 12 months, the conditional use permit shall terminate, and all future activity shall require a new conditional use permit." If the applicant wishes to retain "active" status, activities related to processing, even if very minor, will need to be conducted. The existing conditions are listed in the staff report #1 through #13.

Staff Recommendations: Staff recommends the Land Management Committee consider whether any modifications to the existing conditions are necessary. If no changes or additions are necessary, staff recommends that the LMC renew this CUP with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.

3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.
5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. The Fugitive Dust Plan shall be adhered to.
8. Byproduct shall be utilized in the reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code.
9. Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.
10. The facility shall be subject to control methods deemed adequate by the LM C for silica emissions if current or future studies suggest a significant public health threat exists.
11. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
12. Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.
13. The conditional use permit shall expire in 2 years.

Chairperson Fetzer invited Tom Olson forward: Mr. Olson stated it's tough right now. Obviously we would like to keep the CUP in place and if the market does change, we see a chance to get it restarted, we would like to run the facility. Chairperson Fetzer asked Maiden Rock is keeping four people busy down there and you guys are pretty much shut down. Mr. Olson stated they have two other mines and they bring people up to inspect it and mow the lawn and keep up on that maintenance. Holst stated he assumes that they run a conveyor from time to time. Mr. Olson stated no, we do not. Mr. Olson, We bump everything once in a while to make sure motors move and bearings aren't seized up. They do run all the pumps, once a quarter. Sanden stated given that they have to have some active status, even if very minor, would you be able to accomplish that before September. Mr. Olson stated yes. Pichotta stated the activities he described actually fit the bill. Holst stated but it would be a lot clearer if he ran a conveyor. Mr. Olson stated he will run all the conveyors quarterly. **Gulbranson moved to approve the renewal of a conditional use permit for Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, with conditions #1 through #13/Holst seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67A(2) for Michael Dorricott, owner on property located on Lot 2, Marissa's Addition in the NW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.

Staff Report – Adam Adank: On August 1, 2018 the applicant was granted a Conditional Use Permit for expansion of a nonconforming structure located at W9636 295th Ave in the Town of Diamond Bluff. The applicant proposed to construct a 2-3 bedroom dwelling addition off the west side of the existing nonconforming garage. Due to the wet spring and the applicants busy work schedule, he has been unable to get started on the proposed development and is seeking permit renewal. The proposed building plans are the same as those presented in 2018 with a four foot setback from rear property line. In 1995, a former property owner obtained a Land Use Permit (LUP) for a 14' x 70' mobile home and a 26' x 30' garage. When the garage was constructed it encroached on the 10' rear yard property line setback. The applicant was able to estimate a property line boundary by running line from two apparent property markers. Based on these markers the existing garage is approximately 5'6" from the rear yard property line. Lot lines have not been verified by a surveyor. The location of the existing mobile home in relation to the rear yard property line and existing garage restrict the applicant's area to build. The applicant intends to live in the mobile home during construction of the proposed dwelling. The property is zoned Rural Residential 20. Pierce County Code (PCC) §240-67A(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76." PCC §240-76A states " Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a

nonconforming structure, or expansion or intensification of a nonconforming use.” PCC §240-23 states, “Minimum requirements. Developments shall meet the minimum requirements for the applicable district shown in the Table of Dimensional Requirements.” PCC §240-42E states, “Temporary residence during construction of principal dwelling. An existing dwelling or manufactured home may be used as a temporary residence during construction of a new dwelling on the same parcel, subject to the following:

- (1) A land use permit shall be obtained for the temporary residence.
- (2) A temporary residence, if a manufactured home moved onto a lot, shall comply with all setback requirements of this chapter.
- (3) Such temporary residence shall be connected to an approved wastewater disposal system.
- (4) A permit for a temporary residence shall lapse at such time as the principal dwelling is completed and has been connected to utilities or 12 months from the date of issuance, whichever is earlier.
- (5) The temporary residence shall be removed or destroyed at the time the permit for such temporary residence lapses or converted to a nonresidential use.

A sanitary permit was obtained in 1995 for a 3 Bedroom Private On-Site Wastewater Treatment System (POWTS). The existing well is located under the front part of the existing trailer over 14’ from the proposed addition and the septic system is located south of the existing trailer. Both meet the required setbacks from the proposed addition. The proposed expansion area is currently used as open yard space and should not negatively impact the functionality of the site. The nearest dwelling is located approximately 125 feet to the west of the proposed expansion. The Town of Diamond Bluff recommended approval of this request on 7-12-2018. The Town did not reference its Comprehensive Plan. The existing conditions are listed in the staff report #1 through #7.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the established conditions are adequate to protect the public interest, public health and safety, and character of the area. If no additions or modifications are deemed necessary, staff recommends the LMC renew this conditional use permit with the following conditions:

1. Activities shall be conducted as proposed in the application and as presented to the LMC unless modified by another condition of this permit.
2. The applicant shall maintain a rear yard property line setback of four feet. Lot line shall be verified by a registered land surveyor or as agreed upon by the adjacent property owner.
3. A Sanitary Reconnect Permit shall be obtained prior to any construction.
4. The applicants shall follow Pierce County Solid Waste Code Ch 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. The applicant shall follow PCC §240-42E. Temporary dwelling during construction of principal dwelling and secure all necessary permits.
6. The proposed expansion shall be completed within 12 months of CUP approval.
7. Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary.

Holst moved to approve the request for renewal of the CUP for Expansion of a Nonconforming Structure for Michael Dorricott in the Town of Diamond Bluff with conditions #1 through #7/Gulbranson seconded. All in favor. Passed.

Discuss take action on proposed changes to GIS Specialist position description. Staff Report – Andy Pichotta: Staff is proposing to change the position description associated with GIS Specialist position in the Land Management Department. The proposed change would transfer the duties of the Land Information Officer (LIO) from the Director to the GIS Specialist position. The GIS Specialist position is currently responsible for the development and implementation of the County’s Land Records Modernization Plan and is responsible for planning, budgeting, and monitoring Department expenditures from the Land Records Modernization Fund. The proposed change would formalize the position’s role as the County’s point person for GIS and Land Information related issues. The Land Management Director would continue to be responsible for oversight of the GIS function and Land Records Modernization efforts.

Staff Recommendation: Staff recommends the Land Management Committee review the attached draft position description to determine whether changes or clarification are necessary. If no changes are needed, staff recommends the position description be approved as written.

Pichotta noted that the LIO function isn't mentioned anywhere in my position description nor is it mentioned in the GIS Specialist. He did a little research and found in about half the cases around the State, that position that Kevin has, has those duties. Basically what it would enable him to do is sign off on the reports that he submits to the State of the activities that he has completed. **Aubart moved to approve the proposed changes to GIS Specialist position description/Holst seconded. All infavor. Passed.**

Pichotta stated he is requesting that agenda item #10 be removed as no action is necessary for that item tonight, it is his understanding that administration is coming up with a process for pay for performance and hopefully we will be able to address this through that. Chairperson Fetzer stated agenda item #10 has been stricken.

6:53pm Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director. Motion to convene into closed session by Aubart/Gulbranson seconded. Roll call vote: Holst – yes, Gulbranson – yes, Aubart – yes, Fetzer – yes, Sanden – yes.

7:27pm Committee to reconvene into open session and take action on closed session item, if required. Holst moved to reconvene into open session/Sanden seconded. Roll call vote: Holst – yes, Gulbranson – yes, Aubart – yes, Fetzer – yes, Sanden – yes. Holst moved to grant a favorable performance evaluation to the Land Management Director /Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta stated we have a public hearing for Expansion of a Nonconforming Structure in the Town of Martell for Janna Cowen and also the proposed 2020 Budget.

Motion to adjourn at 7:31pm by Holst/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 17, 2019 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 7 th & 21 st , September 4 th & 18 th , all in 2019.	Chair
3	Approve minutes of the July 3, 2019 Land Management Committee meeting.	Chair
4	Discuss take action on a request to modify conditions for Belle Vinez Winery, a conditionally permitted use, in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-76A, for Shannon and Angel Zimmerman, owners of property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on a request for potential modification to approved Site Plan for Mini-Storage in the Commercial District, pursuant to Pierce County Code Chapter 240-36K for WD LLC, Jay McGrath, owner of property located in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for Wisconsin Frac Sand Inc, John & Marjorie Kralewski Family Partnership, Dean & Mary Holden, Edmund & Dawn Daleiden, William & JoAnn Steele, Jeffrey & Kelly Von Holtum and Schaul's Gas Inc, owners, of property located in the S ½ of the SE ¼ of Section 3 and the N ½ of the NE ¼, the SW ¼ of the NE ¼, the E ½ of the SE ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 10, the W ½ and parts of the SE ¼ of Section 11, the W ½ of the NW ¼, the E ½ of the NE ¼, the N ½ of the SW ¼, the W ¼ of the SW ¼, the SW ¼ of the SW ¼, the SW ¼ of the NE ¼ and parts of the E ½ of the NW ¼, parts of the E ½ of the SE ¼, parts of the NW ¼ of the NE ¼, all in Section 14 and the W ½ of the SW ¼, the NE ¼ of the SW ¼, the W ½ of the SE ¼ of the SW ¼, part of the S ½ of the NW ¼, part of the NE ¼ of the NW ¼, of Section 13, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
7	Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District pursuant to Pierce County Code Chapter 240-37E, for Muskie Proppant LLC, owner of property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Roy

8	Discuss take action on a request for renewal of a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67A(2) for Michael Dorricott, owner on property located on Lot 2, Marissa's Addition in the NW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.	Adank
9	Discuss take action on proposed changes to GIS Specialist position description.	Pichotta
10	Discuss take action on Office Managers 2019 step increase.	Pichotta
11	Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director.	Chair
12	Committee to reconvene into open session and take action on closed session item, if required.	Chair
13	Discuss take action on Travel/Training Requests.	Pichotta
14	Future agenda items.	Pichotta
15	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(7/5/19)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647

MINUTES - Pierce County Land Management Committee Meeting, July 3, 2019

Present: Jeff Holst, Jon Aubart and Eric Sanden

Others: Andy Pichotta, Adam Adank, Emily Lund, and Tracie Albrightson

Acting Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 17th, August 7th & 21st, all in 2019.

Approve Minutes: **Sanden moved to approve the June 5, 2019 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public Hearing to consider and take action on a request for a conditional use permit for a Map Amendment (Rezone) from Commercial District to General Rural District for Brent & Tiffany Gregg, owners, on property described as Lot 1, Certified Survey Map (CSM) V12, P100, in the NW ¼ of the SW ¼ of Section 6, T27N, R15W, Town of Spring Lake, Pierce County, WI.

Brent Gregg stated he bought the property a few years ago with intentions on building. There once was a mobile home on site. When it came time to build, they realized it was zoned Commercial. Sanden asked if Mr. Gregg owns the land to the east of said parcel that is also zoned Commercial. Gregg stated no.

Staff Report – Emily Lund: The applicant is proposing to rezone the 2.367 acre property from Commercial to General Rural to enable construction of a residence. Prior to 4-22-2009, the applicants parcel was a part of the adjacent parcel to the east. At that time, a mobile home was on the property as an accessory residence to a commercial use (allowed per 240-40A(1)). After the land was subdivided, the mobile home was no longer accessory to a commercial use and became a preexisting nonconforming use. The applicants have removed the mobile home and the land is currently vacant. The parcel's address is N8714 250th Street in Sec. 6, Town of Spring Lake. Adjacent land uses are agricultural, commercial, residential and mining. The parcel is currently zoned commercial. Adjacent zoning districts are Commercial and General Rural. Purpose and Intent of Zoning Districts states: General Rural is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and/or are compatible with surrounding rural land. Commercial is established to provide for retail shopping and personal service uses to be developed either as a unit or in individual parcels to serve the needs of nearby residential neighborhoods as well as the entire county. The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage or other nuisance factors. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The soils are Vlasaty Silt Loam which is Prime Farmland and Whalen Silt Loam which is Farmland of Statewide importance. The Town of Spring Lake recommended approval of this request on 6-11-2019. They stated, "A residence has been on this site for years and the Town of Spring Lake wants to keep this parcel as a residential site." They also referenced Objective 8.4.1 in the Land Use section of their Comprehensive Plan to support the

recommendation that states, “Promote an organized pattern of development that will minimize conflicting land use and provide for controlled development.”

Staff Recommendation: Given that the Spring Lake Town Board has determined that this proposed map amendment (rezone) of 2.367-acres from Commercial to General Rural is consistent with their Comprehensive Plan, staff recommends that the LMC approve this map amendment (rezone) and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the public hearing. No public comments. **Chairperson Holst closed the public hearing.**

Sanden asked how we would minimize conflicting land use in the future if one would to arise, having a residential right next to commercial. Pichotta stated the establishment of a new commercial use would, at a minimum, require site plan review. This is a historical use that’s being allowed to continue and the Town likely viewed this as not so much minimizing conflicting uses but to provide for controlled development and to allow the site to continue to be used for housing.

Sanden moved to approve the proposed map amendments (rezone) and to forward it to the County Board /Aubart seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure (Deck) in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-67A(2), for David Lofgren, owner of property described as part of the NW ¼ of the NE ¼ of Section 2, T26N, R15W, Town of Rock Elm, Pierce County, WI.

David Lofgren stated he has been there about 1.5 years and it was his dad’s estate that he purchased. They are in the process of doing some remodeling. This project is on the south side of the house. The deck is not going beyond the house towards the road at all. The reason for the 4 to 6 feet within the 110 foot setback is to make room to go into the doorway that will also be handicapped accessible.

Staff Report – Adam Adank: The applicant’s property is a 102.11 acre parcel located along State Road 72. The existing house is a nonconforming structure with the closest portion of the house located 94’ from the center line of State Road 72. The applicant is requesting to build a 6’ x 36’ deck with a wheel chair accessible entrance ramp off the south side of the existing house. The road right-of-way along this portion of the property angles from 33’ to 45’. The angled right-of-way makes the structure setback somewhere between 110’ and 122’ feet from the centerline of State Road 72. A survey would be needed to make a final setback determination. The proposed deck will start approximately 104’ from the centerline of the road. The wheelchair ramp will start approximately 109’ feet from the centerline of the road. The wheelchair ramp and a 5’ x 5’ deck landing are exempt from road setbacks per Pierce County Code 240-27(G). However, the rest of the deck is subject to the appropriate road setbacks. Staff presented the applicant with an option so that only the exempted 5’ x 5’ deck and ramp is within the setback, which would not require a CUP, but the applicant opted to apply for the CUP. This parcel is located in the Town of Rock Elm and zoned Agriculture Residential. PCC § 240-67A.(2) states, “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in § 240-76.” PCC § 240-76A states “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use.” PCC § 240-27(G) states, “The following structures shall be permitted within the required setback of highways, provided that they do not violate any other provisions of this chapter: (7) Structures, such as ramps and landings, lifts or elevator housing, which are designed and intended to comply with the requirements of the Americans with Disabilities Act or fair housing laws to make existing buildings accessible to disabled people and where no feasible alternative locations exist.” Pierce County Code (PCC) § 240-27A states, “State and Federal highways. Except as provided in Subsection E&F, the required setback for all structures fronting on all State and Federal highways shall be 110 feet from the center line of the road or 77 feet from the edge of the right-of-way, whichever is greater.” Adjacent land uses surrounding the property are agricultural, residential, and commercial. The nearest driveway is located approximately 100’ to the north of the applicant’s driveway. The proposed expansion will not result in a

reduced line of sight for vehicles traveling along State Road 72. The Town of Rock Elm recommended approval of this request on 6-11-2019. The Town did not reference its Comprehensive Plan and had no concerns or suggested conditions.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC approve this conditional use permit with the following conditions: 1) Activities shall be conducted as submitted in the application and as presented to the LMC. 2) The proposed deck shall be located no closer than 104' from the centerline of State Road 72. 3) The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials. 4) The proposed expansion shall be completed within 12 months of CUP approval.

Chairperson Holst opened the public hearing. No public comments. **Chairperson Holst closed the public hearing.**

Sanden moved to approve the expansion of a nonconforming structure with conditions 1-4/ Aubart seconded. All in favor. Passed.

Discuss take action on Preliminary Plat Approval for Hidden Hills of the Kinni, for Cory & Gena Huppert, owners, by Dan Kugel, agent, on property zoned General Rural Flexible 8, described as the entire NE ¼ all in Section 9, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: On 1-2-2019, concept plan approval for the 164.9-acres with 33-lots and 2-outlots was granted by the LMC. The applicants are now requesting preliminary plat approval for the first phase, a 60.7-acre, 13-lot, 1-outlot subdivision. The property is located in Sec. 9, Town of Clifton. The Huppert's own 164.9-acres of land zoned GRF-8 that allows for the creation of 33 lots and 2 outlots. This is the first phase which would create 13 buildable lots and 1 outlot. Cedar Corporation reviewed the Storm Water & Erosion Control Plan on behalf of the Land Conservation Department. On 6-20-2019, the Land Conservation Committee recommended approval to the Land Management Committee with the following conditions: 1) Storm water runoff models are completed using Atlas-14 precipitation amounts. Revisions were submitted last Monday and that item still needs to be revisited and revised. 2) Storm water runoff models shall assume pre-development "good hydrologic conditions" for all land covers (consistent with NR 151.24(4)(a), the condition of the 34.5 acres of cropland must be revised in the HydroCAD model, which has been addressed. 3) The preliminary plat must show that no land cover disturbance can occur west of the "drainage easement" as shown in the current storm water modeling. If the development plans are different, the storm water model must be revised to reflect. The Land Conservation Director indicated that an 8' wide gravel walking trail in the woodland areas west of the drainage easement could be established without triggering the need for additional modeling. 4) A copy of the Cedar Corporation memo regarding 'protective areas' in 'cold water communities' be submitted to Land Management Committee for their review. 5) Contractor and owners of 'Hidden Hills of the Kinni' agree provide construction timelines to Pierce County Land Conservation Department. Land Conservation staff will be contacted once construction begins. 6) Storm water and Erosion Control Plan review fees are received by Land Conservation Department. Review fees were paid on 6/20/2019. Pierce County Code § 237-17C.(4) states, "Before preliminary plat may be approved by the Land Management Committee, it shall be referred to the Land Conservation Department and Committee for review of its erosion control plan, upon whose written comments the Committee shall condition and accept or, where insufficient, reject a preliminary plat as submitted." Drainage easements are delineated between Lots 3-4 and Lots 5-9. Storm water retention ponds are located between Lots 3-4, Lots 7-9, and Lot 9-Outlot 1. This project's construction site activities are regulated by the WI DNR per chapters NR 151 and 216, Wis. Admin. Code, and Ch. NR 283, Wis. Stats. A Wisconsin Pollutant Discharge Elimination System (WPDES) Permit and Notice of Intent (NOI) were submitted to the WI DNR on 4-10-2019. WPDES Permit No. WI-S067831-05 was conditionally approved on 6-3-2019 and expires 3 years from the permit issuance date. The WI Dept. of Administration – Plat Review does not object to this preliminary plat and certifies it as complying with requirements of Sec. 236.16 and Sec. 236.20, Wis. Statutes as stated in their letter dated 4-24-2019. They had two comments: 1) Reference maps

indicate a watercourse crossing the west part of the subdivision. If such watercourse exists, it must be shown and identified on the final plat. If the watercourse is a perennial navigable stream, then provisions of s. 236.16(3) and s. 236.20(c) apply. 2) Streets within the subdivision must be clearly marked “dedicated to the public” on the final plat. The estimated cost of installing erosion control measures was \$18,500. An irrevocable letter of credit in the amount of 200% (or \$37,000) of the estimated cost of installing and maintaining erosion control measures was submitted on 6-5-2019. The irrevocable letter of credit is currently being re-reviewed by the County Corporation Counsel’s office after a number of requested changes were made. The document will need to be approved by the Pierce County Corporation Counsel and shall be renewed if the erosion control measures are not completed within the initial timeframe. Proposed lots meet the slope and frontage requirements. Preliminary soil borings which demonstrate the suitability of each lot for a private on-site wastewater treatment system were conducted and evaluated by Mary Jo Huppert. Draft covenants were submitted and staff review will be completed before final plat approval. Pierce County plat review fees were paid on 6-14-2019. Per §237-17B(3), staff reviewed the site to determine if the property was subject to any hazards to life, health, or property; no such hazards were found. Traffic control signs and uniform road numbering signs shall be installed at the intersections of 825th Avenue & 1090th Street and 823rd Avenue & 1100th Street. All proposed parcels meet the 3-acre minimum lot size for the Town of Clifton. The Clifton Town Board approved (Phase 1) the preliminary plat of “Hidden Hills of the Kinni” showing a new Town Road access onto the existing 1090th Street with the condition “new roads to be built to Town Road Standards and roads must have (4) houses per ½ mile” before being taken over by the Town of Clifton. The submitted road plans have been revised and there were two comments that the town engineer made for revisions. A Developer’s Agreement between the developer and the Town of Clifton was signed and submitted.

Staff Recommendation: Staff recommends the Land Management Committee approve this request for preliminary plat approval with the following conditions: 1) Conditions of preliminary plat approval shall be met prior to construction and installation of roads and erosion control measures. 2) Roads shall be built to Town of Clifton Town Road Standards prior to final plat approval. Town road construction shall be coordinated with Town of Clifton’s engineer. 3) All required DNR permits (i.e. WPDES & NOI permit) shall be secured and all conditions met. 4) All required DOA-Plat Review conditions shall be met. 5) All conditions recommended by the Pierce County Land Conservation Department and Committee shall be met (1-6). 6) A statement of completion that is signed and stamped by a certified professional engineer that the erosion control and storm water measures have been installed according to approved plans shall be submitted. Any deviation from approved plans shall be noted on as-built plans that shall be submitted with the statement of completion. Any issues requiring follow-up (punch list) should be listed along with a proposed schedule for completion. 7) Erosion control measures shall be installed according to approved plans and associated conditions, and the site stabilized, to the satisfaction of the Land Conservation Department, prior to final plat approval. Applicant understands that final plat approval will not be granted until the Department of Land Management is notified by the Land Conservation Department, in writing, that the project is eligible for final plat approval. 8) Applicant agrees that any unforeseen erosion issues that arise during construction will be addressed to the satisfaction of the county. 9) The irrevocable letter of credit in the amount of 200% (or \$37,000) of the estimated cost of installing and maintaining erosion control measures that was submitted shall be reviewed and approved by Corporation Counsel. The letter of credit shall be renewed if the erosion control measures are not completed prior to the expiration of the letter of credit. 10) Traffic control signage and uniform road numbering signs shall be installed at the intersections of 825th Avenue & 1090th Street and 823rd Avenue & 1100th Street prior to final plat approval. 11) Finalized covenants shall be reviewed and approved by Corporation Counsel prior to final plat approval. 12) Applicant shall obtain all necessary sign permits (i.e. temporary new development signs; on-site construction signs; on-premises residential neighborhood signs).

Sanden asked for clarification on Cedar Corps. recommendations, are they implying they make some kind of an official designation of Outlot 1 to be not developable. In their letter, site plan #1 it states, “However the plat shows no formal building restrictions and labels on Outlot 1 as intended for a walking trail.” It states in NR 115 they require a 75’ protective area from the top of the channel starting at the top of the 12% slope. Then the paragraph after that does talk about how the DNR has some jurisdiction, however, there is also some

requirements of recommending something by us. Pichotta stated an Outlot by definition is not buildable. So there can't be any construction on it. It would need to be converted and it wouldn't be eligible for a variety of reasons to be converted to a building site. Sanden clarified that at a future date they couldn't change it to a buildable site. It will always, in perpetuity, be unbuildable. Pichotta stated in Land Conservations recommendations it states, "no land cover disturbance can appear west of the drainage easement." It was his assessment that that basically covers it, given we actually don't have the option to override Land Conservations recommendations. We have the option to either condition approval or we reject as insufficient. So if the LMC didn't like what Land Conservation recommended, it would need to be kicked back over to them. Sanden stated it would be redundant and perhaps over-stepping our authority to put that in as a condition. Pichotta stated that the committees review is essentially to look at whether it conforms to the tenants of the subdivision code and if it does conform, they are eligible for approval. Sanden asked if at the next step we take a closer look at the site design. Pichotta stated no, this is that. In the past the committee used to have to look at proposed storm water and erosion measures to determine adequacy. About half way through the boom of the early 2000's is when Land Conservation became involved. At that time there was discussion about the potential creation of a storm water ordinance and the current checklist was created. So our role lessened a little bit part way through the first building boom. Land Conservation typically works with a consultant so they didn't have to do as much of the ground work themselves. Lund stated we are kind of like the facilitators in this respect in making sure it meets the requirements of the preliminary plat section of Chapter 237.

Sanden moved to approve the proposed preliminary plat approval with conditions 1-12/ Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items. Request to modify conditions for Belle Vinez Winery. Potential modification for the site plan that was approved for mini storage in the commercial district for Jay McGrath in the Town of Trenton. Request for renewal of CUP for non-metallic mining operation of WISC in the Town of Maiden Rock. Request for renewal of CUP for heavy industrial use, sand processing facility, for Muskie Proppant in the Town of Union. Proposed changes to the GIS Specialist position description and the Office Managers 2019 step increase. Director's performance evaluation.

Motion to adjourn at 6:33pm by Sanden/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by T. Albrightson

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 3, 2019 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 17 th , August 7 th & 21 st , all in 2019.	Chair
3	Approve minutes of the June 5, 2019 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Commercial District to General Rural District for Brent & Tiffany Gregg, owners, on property described as Lot 1, Certified Survey Map (CSM) V12, P100, in the NW ¼ of the SW ¼ of Section 6, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure (Deck) in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-67A(2), for David Lofgren, owner on property described as part of the NW ¼ of the NE ¼ of Section 2, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Adank
6	Discuss take action on Preliminary Plat Approval for Hidden Hills of the Kinni, for Cory & Gena Huppert, owners, by Dan Kugel, agent, on property zoned General Rural Flexible 8, described as the entire NE ¼ all in Section 9, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, June 5, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 19th, July 3rd & 17th, all in 2019.

Approve Minutes: **Gulbranson moved to approve the May 15, 2019 Land Management Committee minutes/Holst seconded. All in favor with Aubart and Fetzer abstaining because of absence at the last meeting. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure (Garage) in the Primary Ag District, pursuant to Pierce County Code Chapter 240-67A(2), for Matthew Matzek, owner, on property described as Lot 1, Certified Survey Map (CSM) V14, P40, in the SW ¼ of the SW ¼ of Section 29, T27N, R17W, Town of Martell, Pierce County, WI>
Staff Report – Adam Adank: The applicant’s lot is located at the intersection of 690th Ave and County Road J. Lot access is from County Road J. The applicants are requesting to tear down their existing detached garage and build a new garage in the existing footprint. The existing garage is a nonconforming structure located 91’7” from the center line of County Road J. The applicants are also proposing to add additional square footage to the structure by constructing a second story on the new garage. The additional square footage constitutes an expansion and triggered the need for a Conditional Use Permit (CUP). The applicants propose to rebuild the new garage on the existing garage foundation. The existing foundation has walls that extend approximately 12” above grade allowing the applicant to remove all other parts of the detached garage. The total height of the proposed structure will be 26 feet tall. The parcel is located in the Town of Martell and is zoned Primary Agriculture. Pierce County Code (PCC) §240-67A(2) states, “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76.” PCC §240-76A states “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use.” PCC §240-27B states, “County highways. Except as provided in Subsection E, the required setback for all structures fronting on all county highways shall be 100 feet from the center line of the road or 67 feet from the edge of the right-of-way, whichever is greater.” The existing well and septic system are each located on the north side of the house and meet the required setbacks from the proposed expansion. Adjacent land uses surrounding the property are agricultural and residential. The nearest driveway is approximately 230’ to the south of the applicant’s driveway. The proposed expansion will not result in a reduced line of sight for vehicles traveling along 690th Avenue or County Road J. The Town of Martell recommended approval of this request on 5-14-2019. The Town did not reference its Comprehensive Plan and had no concerns or suggested conditions.
Staff Recommendations: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, and no modifications to the site layout are necessary to achieve efficient traffic flow and circulation, or to mitigate off site impacts, staff

recommends that the LMC approve this conditional use permit and the proposed site plan with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC.
2. The applicants shall maintain the 91'7" setback from the centerline of County Road J.
3. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Chairperson Fetzer asked Mr. Matzek if he would like to add anything. Mr. Matzek stated no, he didn't feel there was anything more to add. Holst stated this seems pretty straight forward.

Holst moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Matthew Matzek, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, safety or the character of the area, with conditions #1 - #4/Sanden seconded.

Aubart asked if he would have to renew this. Pichotta stated no, as long as it's established within 12 months. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta stated we don't have anything for the June 19th agenda. Next meeting will be July 3rd. Gulbranson and Fetzer stated that they would likely be absent from the July 3rd meeting.

Motion to adjourn at 6:10pm by Aubart/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 15, 2019

Present: Jeff Holst, Neil Gulbranson, and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund, Adam Adank and Tracie Albrightson

Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 5th & 19th and July 3rd & 17th all in 2019.

Approve Minutes: **Sanden moved to approve the May 1, 2019 Land Management Committee minutes/Gulbranson seconded. All in favor. Passed.**

Public Hearing to consider and take action on a request for a conditional use permit for a Utility Facility >1,000 square feet in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-41E, for Dairyland Power Cooperative, owner, by Garret Seebandt, agent, on property located in the NE ¼ of the NE ¼ of Section 7, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Garret stated they need to expand on the substation. They are going to be purchasing .6 acres to the south to add a driveway. The current driveway is narrow, unsafe and difficult to access the substation.

Staff Report-Emily Lund: The applicant is requesting to expand an electrical substation which was originally permitted on September 12, 1977. Due to population growth in the Prescott area, the power load continues to increase. The expansion is not only necessary for reliable electrical service, but also for safer working conditions. The expansion will remain within the existing 1.15 acre parcel. The applicants propose to purchase a separate parcel (±0.5 acre) adjoining south of the existing parcel for intermittent parking and to add an additional driveway. This property is located in Section 7, Town of Oak Grove. This and the surrounding property are zoned General Rural Flexible 8. The property is bordered by agricultural and institutional uses. PCC Ch. 240, Attachment 1, Table of Uses lists Utility Facilities (>1,000 sq.ft.) as being allowed in General Rural Flexible Zoning Districts with an approved Conditional Use Permit. PCC Section 240-41(E) states Utility Facilities are subject to the following: 1) No land use permit shall be required for any installation that is at or below grade elevation nor for electrical distribution poles, towers and wires. 2) Those structures which are four feet or less above grade elevation need not meet setback requirements nor need they be placed on conforming lots. 3) Electrical substations shall be enclosed by a chain link fence at least 10 feet high. Such structures shall additionally be located at least 75 feet from a dwelling unit and 50 feet from any residential lot line. 4) Utility facilities where the land area bounded by the location of such structure or equipment is less than 1,000 square feet shall be exempt from the permit requirements of this chapter and shall not require a land use permit. 5) Utility facilities in the Exclusive Agriculture District shall be consistent with agriculture use per 91.01(10)Wis. Stats. Applicant has an existing 75'x77' secured area and the expansion is an additional 31'x77' (overall 106'x77'). Within the new secured area, they propose to install fence, have a future feeder circuit, move an existing feeder circuit, and add an 8'x12' control building. The security fence is required to be 10 ft high and located within the property lines and out of the 1170th Street right-of-way. Pierce County Code §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit". The Town of

Oak Grove recommended approval of this request on 4/15/2019 without any comments or recommended conditions.

Staff Recommendation: Staff recommends the LMC consider the above and determine whether the proposed use at the proposed location would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC approve this conditional use permit, with the following conditions: 1) Activities shall be conducted as submitted in the application and as presented to the LMC. 2) The security fence shall be installed to a height of 10 feet above the grade elevation. 3) The applicants shall not encroach on 1170th Street right-of-way. 4) The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials. 5) Best management practices shall be implemented to prevent off site impacts from ground disturbance activities. 6) The proposed project shall be completed within 12 months of CUP approval. 7) Applicant shall contact the Town Building Inspector, All Croix Inspections, to determine if a building permit is required and shall secure any permits determined to be necessary. **Chairperson Holst opened the hearing to the public. No public comment. Public hearing closed.**

Sanden asked if a 12 month time period would be sufficient. Garret stated they will be starting the project this fall, but it might move into next year. He asked if they get delayed, can they ask for an extension. Pichotta stated they can put in a condition of approval to extend the time frame if the committee wishes to.

Sanden moved to approve with conditions 1-7 with amending condition 6 to read, "the proposed project shall be completed within 24 months of the CUP approval"/Gulbranson seconded. All in favor. Passed.

Public Hearing to consider and take action on a request for a conditional use permit for Nonmetallic mining in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-37A, and Reclamation Plan hearing, pursuant to Pierce County Code Chapter 241-15A(2)(a), for Tommy and Michelle Heath Revocable Trust, owners on property located in the SW ¼ of the SE ¼ of Section 27, T25N, R15W, Town of Union, Pierce County, WI.

Greg Bechel stated he would be the operator of the sand pit. The idea is for local sand. They don't have any small scale fill sand pits in the Plum City area. They make bedding sand and with the dairy prices the way they are, they are trying to get locally sources sand so they don't have to go as far and to keep the prices down.

Staff Report- Brad Roy: The applicants are requesting a permit to operate a sand mine of approximately 4 acres. It is estimated that 90,000-95,000 cubic yards of material will be removed. The applicant has previously mined the area for personal/agricultural use which did not require a permit. A Reclamation Plan was also submitted for the proposed mine. The post-mining land use is proposed to be agriculture and natural area. Neighboring properties are zoned Agriculture-Residential. Surrounding land uses are agricultural, woodlands, and residential. The total extent of the mine would be approximately 4.2 acres. Access to the mine is to be off County Road U. The applicant is proposing to remove the material from a hillside. The site has moderately steep slopes with approximately 40 feet of relief. The site will be internally drained. No more than one acre is proposed to be open at any one time. Sand would be extracted utilizing excavating equipment and trucks. Sand screening equipment is to be placed on the site when necessary. No other processing would take place onsite. No structures are proposed. There will be no blasting on site. Hours of operation are proposed to be daylight hours, with an occasional Saturday. The application does not provide any additional details regarding hours. The LMC may wish to establish hours for weekdays or Saturdays in condition #6. Mining is proposed to occur approximately 450 feet from the nearest property line. Pierce County Nonmetallic Mining Policy requires a 100 foot setback will be maintained from property lines and 200 feet from all existing residences. Floodplain is present on the property. No mining will take place in the floodplain. A Reclamation plan for the mining area was submitted and satisfies the requirements of PCC §241. The post mining land use is to be agriculture and natural area. All overburden and topsoil will be stored on site and used for final reclamation. All slopes will be reclaimed to 3:1. Topsoil will be replaced at depth of 3" – 6". The area not returned to agricultural use will be seeded using DOT seed mixtures. Silt fence or other erosion control measure will be used as needed. A driveway permit from the Pierce County Highway Department will be needed to enable access to County Road U. The Pierce County Highway Commissioner has expressed concerns about a new mining operation accessing

onto County Road U and the condition of the road. The Town of Union recommended approval of this request on April 16, 2019. No concerns or recommended conditions were listed.

Staff Recommendation: Staff recommends the LMC consider the above and determine whether the proposed use at the proposed location would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate. 1) Operations shall be consistent with the submitted plans, including the designated mining area, unless modified by another condition of this permit. 2) Applicant shall comply with all requirements of Pierce County Code Chapter 241, Nonmetallic Mining Reclamation. 3) Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required. 4) Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. 5) A fugitive Dust Plan shall be developed and implemented for the mining site and haul roads. 6) Hours of operation shall remain consistent with daylight hours Monday through Saturday. 7) A map displaying the proposed final reclaimed contours for the Reclamation Plan shall be submitted to the Zoning Office. 8) Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county. 9) The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel. 10) A 100-ft setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement. 11) Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations. 12) Applicant shall pay the \$1,000 Nonmetallic Mineral Extraction initial fee. 13) Any expansion or intensification shall require a new conditional use permit. 14) This CUP shall expire in two years. 15) A driveway permit shall be acquired to enable access to County Road U. A Uniform Address Number (UAN) and sign shall be obtained and placed. 16) The applicant shall enter into a road agreement with the Pierce County Highway Department if deemed necessary by the Highway Commissioner. Bechel stated it used to be a sand pit that Pierce County used to haul out of and they used the same existing driveway. Holst stated the road issue will be discussed at the Highway Department and that is where you will address the driveway. Roy stated we need an address out there and part of that is getting a driveway permit from the applicable jurisdiction. Although this is an existing access, we still need something from the Highway Department to get the address number. In talking with the Highway Commissioner, it was all about the intensity of the use. **Chairperson Holst opened the hearing to the public.** No public comment. **Public hearing closed.** Sanden asked for explanation on the internal drainage. The pictures make it look like it's kind of a gully, so where does it stop. Matt Heath explained it will be internally drained. They will be mining into a hillside with a relief of about 40 feet. They are going to have to drop the floor about 1.5 feet to contain the water that comes off of the hillside. Anything north or above the hillside that is at higher elevation will be routed around so they are not contaminating any more water.

Gulbranson moved to approve the Conditional Use Permit with conditions 1-16 as it will not be detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Passed.

Discuss take action on a request for a Height Exemption for a proposed Wireless Communication Service Facility, pursuant to Pierce County Code Chapter 240-41C, for Verizon Wireless, Chris Barton, agent, for Ronald & Marlys Johnson, owners, on property located in the SE ¼ of the NE ¼ of Section 17, T26N, R18W, Town of Trimble, Pierce County, WI.

Staff Report-Adam Adank: Wireless Communication Service Facilities are permitted with a Land Use Permit. However, PCC §240-29 requires towers to comply with the height requirements of other commercial structures. Verizon Wireless is seeking a height exemption pursuant to Pierce County Code §240-29D to construct a new Wireless Communication Service Facility (WCSF) exceeding 35' in height in the town of Trimble. The complete project proposal includes erecting a self-support wireless communication tower with a total height of 259 feet, constructing an equipment platform, and installing supporting equipment to improve broadband and wireless services in the county. The applicant is located in Chicago and was unable to attend. If

the LMC has any issues or concerns the applicant requests the item be deferred to a future meeting so he could be present. The property is zoned agriculture residential. PCC §240-23 requires 10 foot side and rear yard setbacks in this zoning district. Adjacent property is zoned agriculture residential and primary agriculture. Adjacent land uses are residential, agricultural, and industrial. Access to the site is off of County Road O. The site is currently agricultural and wooded land owned by Ronald and Marlys Johnson. The proposed structure is a freestanding lattice with a height of 250 feet. A nine (9) foot antenna is to be placed on top of the tower which makes the overall height of the structure 259 feet. PCC§240-41C.(3)(d) states, "WCSF Support Structures shall comply with the height requirements of §240-29D." PCC §240-29D states, "Industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setback and yards are increased by not less than one foot for each foot the structure exceeds 35 feet." PCC §240-27B addresses county road setbacks and states, "Except as provided in Subsection E, the required setback for all structures fronting on county highways shall be 100 feet from the centerline of the road or 67 feet from the edge of the right-of-way, whichever is greater." The 259 foot structure has a right-of-way setback of 324 feet from center line of County Road O. Side and rear yard setbacks are 234 feet. In the proposed location, the tower is 789 from the center line of County Road O and 495' 10" from the nearest side or rear property line. Staff will verify appropriate setbacks prior to issuing a Land Use Permit for the structure. Definitions: FALL ZONE – the area over which a support structure is designed to collapse. SUPPORT STRUCTURE– an existing or new structure that supports or can support a mobile service facility, including a mobile service support structure, utility pole, water tower, building or other structure. YARD - A required area on a lot, unoccupied by buildings and open to the sky, extending along a lot line to a specified depth or width. YARD, REAR - A yard extending along an entire rear lot line from the rear lot line to the depth or width as specified in the yard requirements for the applicable district. YARD, SIDE - A yard extending along an entire side lot line from the side lot line to the depth or width specified in the yard requirements for the applicable district.

Staff Recommendation: Staff recommends the LMC review the proposed WCSF height exemption and determines if any changes or modifications are necessary. If none, staff recommends the LMC grant approval of the height exemption.

Sanden stated with his numbers it looks like the rear setback is exactly 234 feet, which is what is exactly needed but with no structures on the edge he doesn't think it will be a problem if it falls over.

Sanden moved to approve the height exemption for the WCSF /Gulbranson seconded. All in favor. Passed.

Discuss take action on a request for amendment to an approved Site Plan for Mini-Storage in the Commercial District, pursuant to Pierce County Code Chapter 240-36K for WD LLC, Jay McGrath, owner on property located in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report- Brad Roy: On November 7, 2018 the applicant received Site Plan Approval for Mini-Storage in the Commercial District. At the meeting, the neighboring land owner (Hager Heights Drive In) presented concerns to the LMC regarding the safety of a stormwater pond near the property line and his customers. He wanted a fence or barrier to keep people out of the pond. The LMC placed condition #3 on the approval which states, "Applicant shall work with Department of Land Management staff on a fencing plan." Initially, staff directed the two property owners to work together to determine what type of fencing would be best. Discussions between the property owners broke down and no agreement was made. At that time staff informed the applicant that chain-link fence 3-4 feet tall would be needed on the south-west property line which wraps around the north and south sides for a short distance. The applicant informed staff that, because of an easement along the southwest property line, the fence would need to be placed into the downslope of the pond which could impact the ponds effectiveness. He is also questioning the need for a fence due to the total depth of the pond being 3 feet and the pond outlet being 1 foot above the pond bottom. The property is bordered by a Commercial zoning district to the north, west and south and a Rural Residential 20 district to the south. An Industrial district is located to the east and is currently used for agriculture. Access to the site is off of 170th Ave. The engineered

stormwater pond will decrease the total stormwater runoff for the site. The stormwater will exit the pond through a culvert into the ditch along 170th Avenue. The Site Plan was approved with the following conditions: 1) All signage shall be permitted by the Zoning Office and WisDOT when applicable. 2) All lighting shall comply with the Department Lighting Policy. 3) Applicant shall work with the Department of Land Management staff on a fencing plan.

Staff Recommendation: Staff recommends the Land Management Committee determine if any changes or modifications to the previous Site Plan Approval are warranted.

Holst stated that generally this is a matter that is taken up by the committee with discussion amongst themselves. But being all are going to have to live with one another for quite some time, he suggests we talk about it aloud. Jay McGrath stated the concern when he was excavating was when he had a pretty good sized hole there and that's what they saw. Now that they have realized that has been filled in, not totally yet, but it will only be 3 feet down from their parking lot elevation and from the top of the pond to the bottom of the outlet is only 1 foot in elevation, max. So there will never be more than 1 foot of water in there and as it fills in with segment it will vary too. Dawn Duden stated that until the pond and water way are complete it's hard to really determine if that's what the water depth will be. Their concern is public safety. McGrath stated he has to comply with the DNR pond that they designed for him. Dawn Duden thinks the mishap originated with the easement because the pond was placed in the middle of the easement. She thinks they are coming to terms with a legal land transaction. McGrath stated yes, they are working on that. Holst asked if this meeting was premature. McGrath stated he does not think so because now he thinks they understand that the pond is only going to be a 3 foot elevation where last fall they made a comment about an 8 foot hole there, which it was. Russ Duden showed some pictures to the committee. He then showed an aerial overall view of the water they are dealing with. Out on the end of that at the widest point down where the culvert is currently located, it's full of mud on the bottom and he's guessing it is 4 to 6 feet deep right now. The reason they are having a hard time with this deal and signing off on the fence situation, he needs to see more action done in regards to the easement and the entire fence situation. The silt fence right now is holding back the little kids with the bicycles, any transportation, it gives them a guide line. But it's not helping them with their situation with it collapsing his traffic back and forth. He cannot get 18 wheelers in there, or oversized traffic because they are afraid of the silt fence. If the pond is going to stay the way it is, the fence will have to be put across the top of the culvert and go to Hwy 63 and across. McGrath stated he is still in the middle of construction. He is going to be bringing the pond up to grade. Final grade still needs to be done along the whole waterway that the DNR designed for him. Russ Duden stated that all were made aware of the easement back on April 5th. Survey stakes from November have been replaced. That is when the new 25 foot setbacks were put into place. He is trying to work with it and get the easement figured out and dealt with. He is not dropping the fence at this point. Gulbranson asked if there is a time frame of when the pond will be done. McGrath stated this summer, hopefully within the next month, to month and a half. Or if they would be happy with that, we could say, "once the pond is brought up to actual depth, then no longer a fence is needed". Russ Duden stated that will not happen until the easement is all addressed and taken care of. McGrath asked if he was holding a fence over his head for the easement. McGrath stated he doesn't care about the fence. He has emails, Brad has talked to Russ about the fence, said that he is not concerned about it. Dawn Duden stated if the water is only 1 foot deep, then they are not concerned about it. McGrath stated the water will not be more than 1 foot deep when he gets done. Dawn Duden stated the seasons will prove that if the filtration works like it's supposed to. Holst stated on the 15th of March we were supposed to have a river reading of 11 feet in Red Wing. But the water did what it wanted to do. Until we know how deep the water is, he isn't ready to say no fence. So get your grade up, get the easement taken care of and come back here. And get along with each other because you are both going to be there a long time and nothing is worse than having an upset neighbor. He does see the ability to reach some sort of an agreement. McGrath stated the pond will be brought up to grade, he has to or the DNR will be on him if he doesn't. Pichotta stated the suggestion to leave it as is for a while makes sense. He doesn't feel the fence decision should be based on whether or not the easement is taken care of. It should be based on public health safety which he noted it will be. He suggests that once things are a bit more finalized then we can make a determination as to whether or not,

from a public health and safety perspective, it's necessary to put a fence in to ensure that folks don't wander into the pond.

Sanden suggested we put this on a July meeting. No action was taken. Approval stands as is. Gulbranson clarified that the decision regarding whether the fence stays or goes is up to the committee. Pichotta agreed suggesting that input will be taken from both parties.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

For the first meeting in June, Pichotta stated there will be a public hearing to consider a request for a CUP for expansion of a nonconforming structure that being a garage in the Town of Martell. Also possibly discuss the outdoor rec. plan.

Motion to adjourn at 6:40pm by Sanden/Gulbranson seconded. All in favor. Motion passed.

Respectfully submitted by T. Albrightson

MINUTES - Pierce County Land Management Committee Meeting, May 1, 2019

Present: Jon Aubart, Neil Gulbranson, Jeff Holst and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta, Adam Adank and Shari Hartung

Acting Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 15th, June 5th & 19th, all in 2019.

Approve Minutes: **Sanden moved to approve the April 3, 2019 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on proposed amendments to Pierce County Code Chapter 240-35, Agricultural Uses (Keeping of Domestic Fowl in the Residential Districts), §240-40D(2)(a) Residential Uses, §240-88 Definitions and §240-17 Table of Uses.

Staff Report – Adam Adank: The raising of backyard fowl in residential areas has become quite popular. Current zoning ordinance language under §240-35 Agricultural uses, prohibits animal husbandry, including domestic fowl, in residential zoning districts. On April 3, 2019, the Land Management Committee finalized proposed amendments to §240-35 Agricultural Uses. The proposed amendments would allow domestic fowl on residentially zoned parcels. The proposed amendments would also clarify and better define which agricultural uses are allowed in specific zoning districts. An updated Table of Uses chart has also been drafted to reflect the proposed ordinance amendments. Staff proposes the following code amendments:

§240-35 Agricultural uses.

A. General Cultivation agriculture.

~~(1) Barnyards, feed lots and farm structures housing animals shall be located at least 100 feet from navigable water and shall be located so that manure will not drain into navigable water.~~

~~(2)(1) General Cultivation~~ agricultural practices shall be allowed in all agricultural zoning districts without issuance of a land use permit, except that structures shall require a land use permit.

~~(3)(2) General agriculture practices, except for barnyards, feed lots and uses involving agricultural structures, shall be allowed in all nonagricultural zoning districts without issuance of a land use permit.~~
Agricultural structures shall not be the principle structure in a residential, commercial, or industrial zoning district.

B. General Agriculture.

(1) Barnyards, feed lots and farm structures housing animals shall be located at least 100 feet from navigable water and shall be located so that manure will not drain into navigable water.

(2) General agricultural practices shall be allowed in all agricultural districts without issuance of a land use permit, except that structures shall require a land use permit.

B C. Agricultural business operations. [Added 6-26-2012 by Ord. No. 12-07]

Nothing has been changed in this section.

(1) Agritourism.

(2) Direct market agriculture.

(a) Except for temporary structures not exceeding 160 square feet of floor area, all structures associated with direct market agriculture shall meet all setbacks and other provisions of this chapter. Temporary direct market structures which do not exceed 160 square feet of floor area shall be considered a minor structure such as those listed in §240-32A(1).

(b) Only one direct market structure shall be permitted on a lot.

(3) Farmers market.

(a) Such use shall principally involve the sale of farm and garden products, but other types of merchandise may be sold, provided such merchandise occupies not more than 25% of the indoor and outdoor display area of the farm market.

(b) At least one off-street parking space shall be provided for each 200 square feet of indoor and outdoor display area.

(c) Combined indoor and outdoor display areas shall not exceed 2,000 square feet.

(d) The farmers market shall obtain site plan approval and a land use permit.

(4) Nursery.

(5) Orchard.

(6) Winery.

D. Domestic fowl.

(1) For parcels under 2 acres in size:

(a) No more than 10 domestic fowl shall be allowed on a parcel.

(b) Roosters (non-castrated male chickens) shall not be allowed.

(2) For parcels 2 acres or more in size:

(a) There shall be no limitation on number or sex of domestic fowl.

§240-88 Definitions:

Animal husbandry: The raising of livestock.

Cultivation Agriculture: Low impact agricultural uses that involve the cultivation of soil and harvesting of crops, including horticulture; floriculture; grain production; forest crop; and specialty crop production such as viticulture; maple syrup; mint and willow; and truck farming.

Domestic Fowl: Any domestic breed of chicken or duck. No other species of bird shall fall under this definition.

General Agriculture: Any agricultural use, except those listed for intensive agriculture, including apiculture; animal husbandry; dairying; floriculture; forage crop production; forest crop production; grain production; grazing; horticulture; orchards; specialty crop production, such as maple syrup, mint and willow; viticulture; and truck farming. Agricultural uses with higher amounts of input and output compared to cultivation agriculture including but not limited to animal husbandry; grazing; dairying; apiculture; etc.

Livestock: Any horse, bovine, sheep, goat, pig, domestic rabbit or domestic fowl, including game birds raised in captivity. Domesticated animals used in an agricultural setting to produce income, labor, or commodities such as meat, eggs, milk, leather, wool, or other animal byproducts. For the purposes of this ordinance, horses shall be regulated under outdoor recreational uses.

Pierce County Code Section §240-40D(2)(a) regarding second farm residences would also need to be amended as shown below if proposed changes in §240-35 are approved.

§240-40D(2)(a): Such manufactured home shall provide housing for farm employees who assist farm operators engaged in ~~general agriculture or intensive~~ agriculture activities or for parents and/or adult children of farm operators.

Staff Recommendation: Staff recommends the LMC consider the proposed amendments and any input gathered through the public hearing, to determine if changes or additions are necessary. If determined to be appropriate, a recommendation that the proposed amendments be approved should be made to the County Board of Supervisors.

Sanden asked if the Ag Residential Zone, is that for the purpose of this regulation, considered agriculture or residential. Pichotta stated that is an agricultural district. **Chairperson Holst opened the hearing to the public.** Pichotta stated he was asked to bring up some concerns raised by Jerry Kosin, Town of Oak Grove. Mr. Kosin had suggested that perhaps two acres was not big enough for more than ten chickens and had suggested three

acres or more may be more appropriate. Gulbranson asked if he wants us to change from two to three acres. Pichotta stated his concern is that you might have someone on a small lot who decided to become a commercial egg producer. Pichotta stated he thinks he addressed Mr. Kosin's concerns, but he did tell him he would share his comments. Sanden stated he doesn't think ten chickens are a lot of chickens. Chairperson Holst stated two acres is a pretty good size chunk of ground. Sanden stated you could put ten chickens in a small coop. Pichotta stated he thinks he was concerned that someone might have 2.1 acres and decide they were going to have two hundred birds or something along those lines.

Chairperson Holst closed the public hearing. Gulbranson moved to approve the proposed amendments to Pierce County Code Chapter 240-35, Agricultural Uses and forward to the County Board of Supervisors for approval/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta stated we have four for the next meeting: Public hearing for Dairyland Power for an expanded transformer station in the Town of Oak Grove.

Public hearing for Nonmetallic Mining in the Town of Union.

Request for a height exemption by Verizon for a 250 ft tower to be located in the Town of Trimbelle.

Request to amend Site Plan Approval for the McGrath project in the Town of Trenton, apparently there has been difficulty coming into an agreement relating to the chain link fence that was to go around the stormwater pond. We are hoping that will be resolved but it's possible it won't and then we will need to bring it back in front of the committee for resolution.

Motion to adjourn at 6:11pm by Sanden/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, April 3, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 17th, May 1st & 15th, June 5th & 19th, all in 2019.

Approve Minutes: **Aubart moved to approve the February 26, 2019 Land Management Committee minutes/Holst seconded. All in favor. Passed.**

Chairperson Fetzer asked for a motion to hear Agenda item #5 first and then Agenda item #4. Holst moved to amend the Agenda, hearing item #5 first/Gulbranson seconded. All in favor. Passed.

Discuss take action on proposed amendments to Pierce County Code Chapter 240-35, Agricultural Uses.

Staff Report – Adam Adank: At the February 6, 2019 Land Management Committee meeting staff presented a proposed concept that would allow domestic fowl to be kept in residential zoning districts. Staff also suggested redefining the terms “general agriculture” and “intensive agriculture” to better describe which agricultural uses are allowable in specific zoning districts. Staff, utilizing the input from the LMC, has drafted proposed revisions to §240-35 Agricultural Uses. Staff has also drafted several new definitions and proposed changes to existing definitions for better clarification. An updated Table of Uses chart has also been drafted to reflect the proposed ordinance amendments. Staff proposes the following code amendments:

§240-35 Agricultural uses.

A. General Cultivation agriculture.

- (1) Barnyards, feed lots and farm structures housing animals shall be located at least 100 feet from navigable water and shall be located so that manure will not drain into navigable water. Cultivation agriculture shall pertain to low impact agricultural uses that involve the cultivation of soil and harvesting of crops, such as horticulture, floriculture, grain production, forest crop, and specialty crop production (viticulture, maple syrup, mint + willow, truck farming).
- (2) General Cultivation agricultural practices shall be allowed in all ~~agricultural~~ zoning districts without issuance of a land use permit, except that structures shall require a land use permit.
- (3) General agriculture practices, except for barnyards, feed lots and uses involving agricultural structures, shall be allowed in all nonagricultural zoning districts without issuance of a land use permit. Agricultural structures shall not be the principle structure in a residential, commercial, or industrial zoning district.

B. General Agriculture.

- (1) Barnyards, feed lots and farm structures housing animals shall be located at least 100 feet from navigable water and shall be located so that manure will not drain into navigable water.
- (2) General agricultural practices shall be allowed in all agricultural districts without issuance of a land use permit, except that structures shall require a land use permit.

~~B~~ C. Agricultural business operations. [Added 6-26-2012 by Ord. No. 12-07]

- (1) Agritourism.

- (2) Direct market agriculture.
 - (a) Except for temporary structures not exceeding 160 square feet of floor area, all structures associated with direct market agriculture shall meet all setbacks and other provisions of this chapter. Temporary direct market structures which do not exceed 160 square feet of floor area shall be considered a minor structure such as those listed in §240-32A(1).
 - (b) Only one direct market structure shall be permitted on a lot.
- (3) Farmers market.
 - (a) Such use shall principally involve the sale of farm and garden products, but other types of merchandise may be sold, provided such merchandise occupies not more than 25% of the indoor and outdoor display area of the farm market.
 - (b) At least one off-street parking space shall be provided for each 200 square feet of indoor and outdoor display area.
 - (c) Combined indoor and outdoor display areas shall not exceed 2,000 square feet.
 - (d) The farmers market shall obtain site plan approval and a land use permit.
- (4) Nursery.
- (5) Orchard.
- (6) Winery.

D. Domestic fowl.

(1) Agricultural Districts

- (a) Domestic fowl shall be allowed in all Agricultural Zoning Districts

(2) Residential Districts

- (a) For parcels under 2 acres in size:
 - (1) No more than 10 hens or capons shall be allowed on a parcel.
 - (2) Roosters shall not be allowed.
- (b) For parcels 2 acres or more in size:
 - (1) There shall be no limitation on number or sex of domestic fowl.

§240-88 Definitions:

Animal husbandry: The raising of livestock.

Cultivation Agriculture: Low impact agricultural uses that involve the cultivation of soil and harvesting of crops, including horticulture; floriculture; grain production; forest crop; and specialty crop production such as viticulture; maple syrup; mint + willow; and truck farming.

Domestic Fowl: Any domestic breed of chicken or duck. No other species of bird shall fall under this definition.

General Agriculture: Any agricultural use, except those listed for intensive agriculture, including apiculture; animal husbandry; dairying; floriculture; forage crop production; forest crop production; grain production; grazing; horticulture; orchards; specialty crop production, such as maple syrup, mint and willow; viticulture; and truck farming. Agricultural uses with higher amounts of input and output compared to cultivation agriculture including but not limited to animal husbandry; grazing; dairying; apiculture; etc.

Livestock: Any horse, bovine, sheep, goat, pig, domestic rabbit or domestic fowl, including game birds raised in captivity. Domesticated animals used in an agricultural setting to produce income, labor, or commodities such as meat, eggs, milk, leather, wool, or other animal byproducts. For the purposes of this ordinance, horses shall be regulated under outdoor recreational uses.

Pierce County Code Section §240-40D(2)(a) regarding second farm residences would also need to be amended as shown below if proposed changes in §240-35 are approved.

§240-40D(2)(a): Such manufactured home shall provide housing for farm employees who assist farm operators engaged in ~~general agriculture or intensive~~ agriculture activities or for parents and/or adult children of farm operators.

Staff Recommendation: Staff recommends the LMC review the proposed amendments to determine if the language is consistent with prior committee direction, and if so, direct staff to schedule a public hearing to consider adoption.

Aubart asked about Domestic Fowl, that's chickens or ducks, so you can't have turkeys? Chairperson Fetzer stated or pheasants, or ostrich or emus? Pichotta stated the limitation would only apply in the residential districts. Holst suggested that's not the way it reads. Pichotta stated that we wouldn't want to preclude someone from having turkeys or whatever in the agricultural districts. Adank suggested that the other animals would fall under animal husbandry. Aubart stated if they are domestic fowl, and you are excluding no other species. Pichotta stated that D would refer only to what we define as Domestic Fowl that would be chickens and ducks. Aubart asked are you saying no other bird falls under it so there is no limitation. You could read it that way. Pichotta stated but only in the ag districts. Because we are limiting Domestic Fowl, that being chickens and ducks. Roy stated in an ag district, if it's turkeys, then we would just consider it animal husbandry. Aubart asked why we are even putting Domestic Fowl in the Agricultural District? Chairperson Fetzer suggested that we are coming down to definitions. Holst stated we are getting fine-tuned so that when we get technical on something other than this thing, then we're consistent. Holst stated you have two definitions for the same thing. We want one definition. Chairperson Fetzer asked when we get to the definitions, why are we defining Domestic Fowl as any domestic breed of chicken or duck? Holst stated then we leave out all the other stuff in the ag districts. Aubart stated it's confusing to him. Holst stated if it's confusing to you, think of all of us that don't read these things on a daily basis. Pichotta stated he understands his point. We will make an adjustment to reflect that concern. Aubart asked if we even have to have under D. Agricultural Districts period. If you eliminate that, they are allowed there regardless. Is there any reason to have agricultural districts under D. Roy stated he thinks we are going to need it or else this will get hung up in Corporation Counsel's Office. If we are only addressing it in the residential districts, then basically we are saying it's not allowed anywhere else. So that's why we put it in there for agricultural districts. There have been other things where we felt like it's implied and we were directed by Corp Counsel that you need to actually say it, don't assume it's implied. Gulbranson asked if you could just say that Domestic Fowl in a residential area is defined as this. I had a guy ask me if he could have ten ostrich. This takes care of that, it doesn't allow them in a residential area. Roy asked so then we just scratch 1(a). Chairperson Fetzer asked what the definition of viticulture is. Adank stated it is grapes. Holst asked what you do with mint and willow. Adank stated that language is in the existing code. Sanden asked in the first area 240-35(1) under Cultivation Agriculture, B General Agriculture, it jumps right into the restrictions, for consistency should there be a short definition to distinguish it from Cultivation Agriculture. Adank stated we could do that or just scratch 1. Pichotta stated we could scratch 1 and just go with the definition in the back. Adank stated he put it in there because when we are reading this, then you just don't have to jump back to the definition to look up again what exactly Cultivation Agriculture is. Maybe we should put the definition under B for General Ag. Sanden stated either or. Holst stated be consistent in the way we do it. Sanden asked if he was reading it right, so Cultivation Ag would be any type of agriculture that doesn't require any buildings or significant impacts. Like a cornfield would be Cultivation Agriculture. Pichotta stated yes. Sanden stated a dairy operation would be General Agriculture. Pichotta stated yes. Aubart stated generally in statutes, definitions are in the front so when you read the rest of it, and here they are in the back. Holst stated this is zoning. Pichotta noted that is generally how zoning ordinances are written. Aubart asked if we want to move the definitions to the front, then you don't have to have that. Pichotta stated the structure of zoning codes varies widely and whoever was hired back in the 90's to write our zoning code, basically took Door County's ordinance and worked off of that and that is why it's structured the way it is. Pichotta stated that if the committee is comfortable, we will make the changes that we have talked about, discuss it with Corporation Counsel, and schedule a public hearing. **Sanden moved to approve the proposed amendments for Pierce County Code Chapter 240-35, Agricultural Uses/Gulbranson seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Resort in the General Rural Flexible and Commercial Districts, pursuant to Pierce County Code Chapter 240-39G, for John Grabrick, Big Dog Daddy's Roadhouse LLC, owner on property located in part of Government Lot 3, in Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: The applicant is requesting to renew a CUP for a Resort. The resort will operate year-round and include 42 campsites, 24 cabins, a support structure with bathrooms and showers, and

infrastructure (new roads, septic, electrical and water services). No cabins or campsites have been constructed at this time. The applicant has removed vegetation and prepared the site for utility installation. A survey of the site was completed and it was determined that there is a discrepancy with the existing fence line and east property line. The applicant has been in contact with east property owner about purchasing the necessary adjoining property. A Bar and Grill and mobile home is currently on the property. The applicant had previously stated the intention of purchasing the neighboring property to the west and making that his primary residence. The applicant did not purchase that property and will continue to reside onsite. Resort is defined as: A facility for transient guests where the primary attraction is generally on-site recreational features or activities and may include multiple related use managed as one operation. Surrounding land uses are the Red Wing Airport to the north, railroad right-of-way to the south, vacant DNR property to the east and residential to the west. The proposed design is for camping cabins line the exterior west, south and east borders of the property. The 42 campsites will be in the interior area. Interior roads will have a minimum width of 26'. The applicant is proposing two styles of cabin. One style of cabin will have full bathroom and kitchenette. The other style will be a sleeping cabin. The applicant received a Land Use Permit to construct a shed in 2016. The structure was permitted to only be used for storage. The applicant intends to use this structure for the resort bathrooms and showers. The structure will need to have Commercial plan approval from DSPS, prior to resort use. The plan is to also include retail space within the structure. A rezone of that area (including the Bar and Grill) to commercial will be needed. Pierce County Code 184 regulates campground under the Public Health Department. At this time, the Public Health Department has not issued a permit for the site. There is an existing sanitary system and holding tank; the applicant intends to update the systems to satisfy current state codes and use it for the resort. Phase 1 of the plan includes construction of 17 campsites. Further development of campsites and cabins will occur, based on demand. As he said, he has completed a survey. It hasn't been submitted until that property line issue is resolved. Staff contacted the Town of Isabelle Chairperson regarding this renewal and he stated that the Town has no concerns about renewing the permit at this time. The 6 month status report, required by condition #10, was not submitted by the applicant. Condition #4 requires the applicant to submit a screening plan, since they do not own the property to the west. The existing conditions are listed #1 - #10 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the additional conditions or modifications are warranted. If additions or modifications are not necessary, staff recommends the Land Management Committee renew this Conditional Use Permit for a Resort with the following conditions:

1. The resort shall be conducted as described in the application, unless modified by a condition of this permit.
2. A survey of all property lines, existing structures, and setbacks for cabins and campsites shall be completed. Land Management Department staff shall verify side yard setbacks and minimum campsite dimension requirements prior to campground operation.
3. State Plan approval for the required improvements to the sanitary dump station, holding tank, and sewer services, as well as associated service contracts and contact information, shall be submitted to the Land Management Department prior to construction.
4. If the applicant does not own the neighboring property to the west, a Screening Plan shall be submitted to the LMC for approval. Any required screening shall be established prior to resort operation.
5. Internal roads, camping pads, and water and sanitary improvements shall be constructed or implemented prior to operation of the resort. Staff shall be contacted to verify prior to operation.
6. All advertising signage shall comply with the Pierce County Zoning Code.
7. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health-DHS standards etc.).
8. The applicant shall comply with the following conditions, numbers 4, 6, 7, 10, 11, and 12 as modified, as recommended conditions of Town of Isabelle dated December 18, 2017 unless specifically modified by another condition of this CUP.

4. Fires are allowed in fire rings and grill only. All fires shall not be left unattended and all fires shall be extinguished before being left unattended. The burning of garbage, plastic, glass, cans or other recyclable items shall not be permitted. To minimize the spread of diseases, firewood shall be purchased locally. Locally is defined as within a 25 mile radius of the site not including the State of Minnesota.
6. Excessive noise is inconsiderate to fellow campers and of the general residences of the areas near the campground and bar area. Noise levels shall not exceed 80 decibels, DBs, at the property lines of Parcel #014-01019-0700 (applicant parcel) at any time. Additionally, the noise level shall not exceed 55DBs 200 feet west of the West property line of parcel #014-01019-0700 which is the west property line of parcel #014-01018-0910 (neighboring residential parcel). In addition, noise levels shall not exceed 70DBs (with the exception of air conditioners) at the property lines of Parcel #014-01019-0700 for a time duration of eight (8) hours commencing at 10pm each day of the week except Friday and Saturday. The start time of the 70 DB limitation on Friday and Saturday shall be no later than 11pm.
7. Fireworks shall not be permitted at any time on Parcel #014-01019-0700.
10. The warm weather camping season shall run from May 1st through October 31st. Approved electric, sewer and water hookups shall be provided during the warm weather camping season for each campsite as shown in Exhibit B. Cold weather camping shall be permitted if and only if permanent restrooms as defined by applicable Wisconsin Codes are operational. Year round residences shall not be permitted at the designated campsites and cabin sites.
11. The maximum number of campsites including cabin sites as shown in Exhibit A shall be limited to 66.
12. Applicant shall provide an annual status report to the Town of Isabelle.
9. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If the applicant has questions as to what constitutes an expansion or intensification, Land Management staff should be contacted.
10. This permit shall expire in one year. A status report shall be presented to the LMC in 6 months to verify compliance.

Chairperson Fetzer asked John what was with not submitting a status report. Mr. Grabrick stated that one just slipped his mind. He was busy preparing the site. They have been cutting trees like crazy. They are working in conjunction with the DNR to remove all the Black Locust from the site because it's very nasty. They have taken out about 200 trees already and have about another 100 to go. He has from the DNR, a land use agreement, so they are taking all the remaining trees off the DNR property as well. So they have about one hundred feet of trees that they are taking off the adjoining property line. That is to clear all the Black Locust out. He also has purchased 125 new trees through the county program so they will be putting in maples and flowering crabs throughout the site to replace the vegetation that they have removed. They should be installing utilities very shortly which means they have to talk to Public Health and find out what their final requirements are. They do have portable restrooms on site that they can move around as needed. Once the State approves their plan for the building that they put up two years ago, they will then install the bathrooms and showers in that so they can have their year-round camping. The screening plan which they now need to put forth, Brad and he had discussed, a year or year and a half ago, for fencing and/or vegetation between his property and the neighboring property to the west. He had a bid in on it but he got outbid by someone from out-of-state. They didn't realize what they were buying so he would imagine that within 12 months that will be back up for sale and he will be buying it anyway. His plan is to get the utilities in for Phase I and II this year. Phase III, they need to bring in some extra fill and fill in the back part of the lot. They have a couple contractors on board with that now. They are just waiting on those projects so they can get the extra fill in. Chairperson Fetzer asked about the lot line. Mr. Grabrick stated the east lot line, between the DNR and the fence line that were there don't coincide. There is about a thirty foot discrepancy at the midpoint of the property. He has been in contact with the DNR and has various emails that have gone back and forth. They just didn't want him to make it part of the public record but they are in process of doing the paperwork to sell him the needed property next door. He would assume it would

be the 70 foot that he asked for and the 100 foot that they gave him to clear trees on. Once that is done then he will submit the final survey to Brad and we can go forward from there. **Holst moved to renew the conditional use permit for a Resort for Big Dog Daddy's Roadhouse LLC with conditions #1 - #10/Chairperson Fetzer asked if there is another six month status report due. Staff stated yes. Chairperson Fetzer stated that would be six months from now, around October/Aubart seconded. All in favor. Passed.** Gulbranson asked if we typically put the Town's recommended conditions in with the numbers like that. Have we had them in the past like that? Pichotta stated we have. We have that in the case of a number of the mining conditional use permits where the Town recommended a variety of conditions to be placed and the LMC identified specific recommended conditions to be included in their approval.

Discuss take action on proposed amendments to Land Management Department Fee Schedule.

Staff Report – Andy Pichotta: The Land Management Department's fee schedule has not been reviewed in a number of years. We talked about it a few years ago after we had done the update to the Comprehensive Plan but at that time it was determined that economic conditions weren't right to increase fees. This time we went through with a couple things in mind - to ensure that the fees continue to be reasonable and take into account staff time involved in permit issuance, and also to ensure that there is a fee for all the different services that are provided by the Department. Given that we hadn't really done any kind of whole sale amendment to it since 2004, a number of things that we do weren't included in there. We also included in the back of your packet, for your information, three different fee structures from different counties; St. Croix, Polk and Dunn. You can see that they are all over the board with how complicated they are and how much the fees are. What we aren't doing is trying to make ours comparable to other counties. We are simply trying to make sure ours does an adequate job and remains reasonable in a fee perspective and make sure to a certain degree that it is in line with what the other counties are charging. The first page dealing with Private Onsite Wastewater Treatment Systems, State Sanitary Permits; these are kind of the brunt of the things that he is proposing an increase in. He is proposing for State Sanitary Permits to go to \$400.00 basically a flat fee for those, increasing the holding tank replacement to \$250.00, the transfer to \$100.00, and a renewal down from \$150.00 to \$100.00. County Sanitary Permits; the only one he is proposing to increase is the System Repair from \$125.00 to \$200.00, to be somewhat consistent with what the other counties are doing. Wisconsin Fund Application; the Wisconsin Fund is being sunset so there is no longer going to be a need for that. In the Zoning Permit section under Agricultural Uses; a principal structure will remain \$100.00, proposing an accessory structure be bumped up to \$100.00 and we will eliminate and just say ag structures are \$100.00. An addition will remain \$50.00. Direct Market Ag that would be a road side stand greater than 160 sq ft, he doesn't foresee seeing anything like that but that will be a \$50.00 fee. Farmers Market would be a \$100.00 permit because there are some siting issues for staff to address. Under Commercial and Industrial, no changes proposed at all there. Institutional and Outdoor Recreational Uses, no change there. You will notice as you go down the page, Outdoor Recreational Uses, Principal Structure Use is two asterisks next to it; that would be a fee in addition to a public hearing. For some of these uses, there is a little bit more of a fee, it's for things that require more staff time and will almost undoubtedly be contentious. Residential uses; he had considered looking at a flat fee for all principal residential structures but that probably wasn't the right way to go. The average fee for homes in 2018, was \$393.00. So when looking at a principal structure of about 3,000 sq ft, he had thought about going with a lesser fee but in order to maintain our revenues and pay our share in the general fund, he proposed to leave that as is. Moving on to Accessory Structure less than 100 sq ft, those are now exempt from fees since they no longer require a permit. Proposing to create a fee for a deck, \$50.00, for the last two decades we have been permitting decks as an addition and in a lot of cases it seems like \$100.00 for a deck is a little bit hefty. After-the-fact will remain the same. Down on the bottom of the page, Miscellaneous Uses, Wireless Communication Service Facility, we are proposing to create a two-tiered fee structure for cellphone towers. One being towers that are 35 – 110 feet in height, those would be \$500.00 permit fee, still have all the same requirements but a lesser fee given the shorter stature. Then the tall towers would be \$3,000.00, that is the maximum we can charge and we can only charge it once. That was dictated in state statutes a few years ago. The thought behind these shorter towers is we don't want the fee to be an impediment to someone putting up short towers, like the WiFi Guy that was here a bit back. We added a fee

for Filling and Grading, we dealt with that under Other before. Under Temporary, proposing to create fees for Temporary Camping during Construction as well as Temporary Contract or Real Estate Office, each of those would be a \$50.00 fee. Signs; on-site/off-site would be the same, Uniform Address Number sign and the replacement, as you recall we went to the two-sided signs so the costs have gone up a little bit. It's \$19.31 for the sign and \$4.50 for the letters so we are looking at around \$25.00 a sign in parts just going in. So for the initial UAN we are proposing \$75.00 because we have to identify the address, then create the sign. The replacement sign would be \$30.00 which means we make about \$4.00 on those. We're not proposing any changes in the CSM's or Plat fees. The next page is headed with the public hearings. A public hearing for a CUP would remain the same and a variance would remain the same at \$500.00, a rezone is the same at \$500.00 also. Miscellaneous fees; these are fees that are all new and are basically for things that weren't covered in our previous fee structure which we had largely used Other for; Site Plan Review in front of the committee, \$100.00, Site Plan Review Administrative, \$50.00, Rule Exception, which is in the subdivision code, \$100.00, Height Exemption, \$100.00, Wind Energy Systems – Small, basically a personal sort of permitted use would be \$100.00. A large system would be \$500.00 and it would be a CUP also. Solar Energy Systems, small, basically personal use would be \$100.00 fee, large would be \$500.00. Copies; photo copies would remain at 25 cents a page, Tapes/CD's \$5.00. In asking about ordinances, no one could remember the last time anyone came in and bought an ordinance from us. GIS Map Purchase, basically proposing to simplify this. We have the pre-printed County Maps that everyone got a copy of some time ago and even folks on the County Board, \$3.00 a piece for those or 5 for \$10.00. Sometimes we get folks that want to buy some and resell them, tourist shops or something. Rather than differentiate between a town zoning map or a town map with or without an ortho; if we are going to print a map for someone, if it's an existing map, \$3.00 for 8 ½ by 11, 11 x 17 would be \$5.00, 24 x 36 would be \$10.00 whether it's got ortho photos, a zoning map or just an address map. It basically uses the same amount of ink. For custom maps, digital data transfer, and other, if someone comes in and says I want you to create a map for me of the ground I run, we would charge a base of \$40.00 an hour for Kevin's time and do it in 15 minute increments. Now we also have a laminator. We only want to laminate our stuff for the general public. If we start laminating for folks coming in we will be the default Kinkos in town. So we will do our own stuff, that doesn't mean we won't do stuff for other departments. So we are proposing for the custom maps, the smaller stuff would be \$10.00, the 24 x 36 would be \$20.00 to laminate. That is the extent of what we are proposing. Sanden asked about the fees, are they meant to cover 100% of the cost of staff going out there or is it some percentage of. Pichotta stated we used to look at doing 75% of the zoning function but the reality is our four budgets are so interconnected that it's really hard to isolate just the zoning part. We have tried to keep our fees reasonable so it's not a hindrance to someone that wants to do something entrepreneurial or build a house. We try to keep up with what the neighbors are doing but don't necessarily use that as the yardstick by which we decide we are charging enough. If the committee wants us to try and capture a certain proportion of the general fund outlay, certainly we could do that. Sanden stated he wasn't suggesting, he was just wondering and the next question was going to be, do these proposed increases cover whatever percentage that was. Pichotta stated he doesn't know that it's necessarily going to. We will see some additional revenues based on it, probably 10 or 15%. We are not taking in nearly what we were in '05, '06, and '07. We were taking in \$100,000.00 more than what we are now. Things are a bit quieter and that was largely platting and new homes. Gulbranson asked if the County charges any kind of an impact fee for parks or anything. Pichotta stated no, we don't have the ability to do that. We used to have a payment in lieu of a land dedication when you created buildable lots by a CSM. We lost that ability, he believes in '06 or '07. That was the time all the towns started doing impact fees. Holst stated not all of the towns, some of the towns. Gulbranson stated the Village just dropped them this year. Pichotta stated if the committee is comfortable with these fees or if you want to give me some direction to bring something back, otherwise we will work with Corporation Counsel to develop a resolution to move forward. We don't have to bring it back to the committee, just move it forward to F & P and ultimately to the County Board. Holst stated it looks good since we haven't increased them since 2004, compared to the rest of the County we're not keeping up, but sometimes we have to provide public services and we're not in it to get rich. Your department shouldn't be expected to be a revenue department when nobody else is. Sanden stated that is why people pay taxes. Holst stated the services that they demand from this department are wanted by the public.

Aubart asked if the department uses any flash drives for copies or just CD's. Pichotta stated we just use CD's. One thing we didn't really talk about is there was data listed in there at \$250.00 per megabyte which is a really small amount of data. With the Land Information Program what they have done is we have to provide our data to the State and then the State puts it out for free on their website so we are going to do the same thing. Data that was developed using Land Records Modernization dollars is going to be available to folks for their use but if they want us to do anything value added that is where the \$40.00/hour comes in we would charge folks if they want us to do something with it or included in that was the data transfer. If somebody shows up and wants to buy LiDar for the whole County, basically they just have to pay for Kevin's time for him to transfer it onto their device. We have to be careful and don't want to be poking strange flash drives in our equipment. Aubart was just thinking about the amount of data you can get on CD's and the way data is going, 32 GB flash drives for stuff. Pichotta stated years ago you use to have a big book drive and now you can fit it on a little card. Sanden stated the opposite may be for the department to buy flash drives and that would be part of the price. That way you would know there isn't malware on it. Aubart stated that is what he was thinking because it goes from a tape to a CD, what's the next medium that you will use. **Holst moved to approve the proposed amendments to the Land Management Department Fee Schedule and forward to the County Board of Supervisors/Gulbranson seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta proposed that the committee meet on May 1st at 6:00pm. We will have the public hearing for the proposed Agricultural Uses amendment.

Motion to adjourn at 6:55pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, February 26, 2019

Present: Jon Aubart, Neil Gulbranson, Jeff Holst and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta and Shari Hartung

Acting Chairperson Jeff Holst called the Pierce County Land Management Committee meeting to order at 6:30pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 6th & 20th, April 3rd & 17th, all in 2019.

Approve Minutes: **Gulbranson moved to approve the February 6, 2019 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving Co, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Andy Pichotta: This is a request for renewal of the Conditional Use Permit for Nonmetallic Mining in Section 28, Town of Trenton. This operation was originally permitted in 2001 and is currently the site for the storage of dredge materials taken from Corps Island in about 2009 or 2010. The property is zoned Industrial. There have been no complaints or concerns raised since the last renewal. We did get ahold of the town chair and he had no comments or concerns. Pichotta noted that the applicants are present if there are any questions.

Staff Recommendation: Staff recommends the Land Management Committee renew this conditional use permit with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. Hours of operation are from 6:00am to 6:00pm, Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season.
3. The haul route for commercial trucks is from the pit entrance of County Road K to Hwy 35.
4. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
5. A 50 foot setback shall be maintained from all property lines for all mining activities.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
8. Reclamation shall be according to submitted plans.
9. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
10. The approved Groundwater Response Plan shall be adhered to.
11. This CU P shall be reviewed for renewal in two years.
12. Any future use of this site for hydraulic dredge material placement shall not be allowed until such time as information is presented that demonstrates, to the satisfaction of the LM C, that the impacts of said placement will not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Monarch Paving Co, with conditions #1 - #12/Gulbranson seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Pichotta stated we haven't had a lot of agenda items as of late. We don't have too many moving forward so what he would propose is our next meeting will be April 3, 2019 and we will have at least three things on the agenda; one will be the renewal of Big Dog Daddy's conditional use permit, the other will be proposed Fee Schedule which we haven't reviewed in a long time and proposed language regarding keeping of chickens in residential districts.

Motion to adjourn at 6:33pm by Aubart/Sanden seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, February 6, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Emily Lund, Adam Adank and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 20th, March 6th & 20th, all in 2019.

Approve Minutes: **Sanden moved to approve the January 2, 2019 Land Management Committee minutes/Gulbranson seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Kennel in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-36I, for Jerry & Debra Hallis, owners on property located in the SW ¼ of the SE ¼ of Section 11, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Emily Lund: Mr. & Mrs. Hallis have been raising dogs as a hobby and operating a kennel on their property since May 24, 1999. They began breeding and selling golden retrievers, but now only breed and sell tea cup poodles that range between 3-6 pounds each. The American Kennel Club has completed inspections in the past and the report states they were in compliance. The owners were apparently not aware that a kennel permit was required until the American Kennel Club Inspector mentioned it during a recent inspection. The property is in Section 11, Town of Oak Grove, Pierce County. Current land use is agricultural and residential. Neighboring land uses are agricultural, commercial, and residential. The applicants own 35 acres in the General Rural Flexible 8 District. Pierce County Code (PCC) Table of Uses allows ‘kennels’ in the General Rural zoning district with the issuance of a CUP subject to the provisions in §240-36I:

1. All dogs shall be housed indoors during the hours from 9:00pm to 6:00am.
2. Minimum side and rear yards for all structures associated with kennels shall be 200 feet.
3. Except as exempted here, all kennels shall be screened from public highways by vegetative screening as described in §240-31D. Structures located at least 200 feet from the centerline of public roads are exempt from the screening requirements.
4. There shall be no more than two adult dogs in a single enclosure unit.

Pierce County Code (PCC) §240-88 defines ‘Kennel’ as “any establishment wherein or whereon eight or more dogs over the age of five months are kept.” The applicant built an addition onto the north side of their home that they use to house the dogs. The addition is located within 200 feet of the centerline of the town road but is shielded from public view by the applicants’ home. The addition is located more than 200 feet from side and rear yard lot lines. Applicants indicate that they have dedicated that mud room to raising tea cup poodles and have ceramic tile on the floor for easy clean-up. To the northeast of the house, the applicants have a fenced in area so dogs have outdoor accessibility and so they can be exercised. This fenced in area is located within 200 feet for the centerline of the town road. The fence facing 570th Avenue has two layers. The inside is chain linked and the outside has tall wooden fence panels for security and screening. Adult dogs are separated from puppies and males are separated from females. This spring they plan to install artificial turf on the ground to help prevent digging and promote cleanliness. Driveway access is off 570th Avenue. Pierce County Code §240-54 does not specify parking requirements for this type of operation. There are several off-street parking spaces

available. Applicants don't employ anyone else and don't plan on hiring additional help. Applicants currently have 20 tea cup poodles and would like a maximum of 23 poodles. When the owners retire, they plan to eventually stop breeding the dogs and reduce their number of dogs as each pass away. The Oak Grove Town Board recommended denial of this request on 8-20-2018 because "...it does not meet the distance requirement in the Town's kennel ordinance..." The applicants proposed operation complies with the zoning requirement of 240-36I Kennels. The Zoning Office does not enforce the Town Kennel Ordinance. However, it is a standard condition that an applicant must acquire all necessary permits and licenses from applicable agencies (DSPS, DNR, and Towns). The approval of this CUP requested by the LMC would not eliminate the need to comply with the Town of Oak Grove's Kennel Ordinance and dog licensing requirements. An approval would rather certify compliance with Pierce County Zoning Code standards and provide the applicant with time to work with the Town to resolve kennel permitting issues. If a solution with the Town cannot be reached within the initial term of the conditional use permit, the applicant would likely be in violation of the CUP and enforcement action/revocation would be commenced if required.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a dog kennel with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC.
2. All dogs shall be housed indoors during the hours of 9:00pm to 6:00am.
3. There shall be no more than two adult dogs housed in a single enclosure unit.
4. Vegetative screening shall be installed to screen the fenced-in exercise area if activities are determined by staff to be readily visible from the adjacent public road during leaf on conditions.
5. Any buildings or advertising signs shall comply with the zoning code standards and applicant shall obtain any necessary permits.
6. One off street parking space shall be delineated.
7. This conditional use permit shall expire in one year.
8. The applicant shall comply with all applicable State and local rules and regulations, and shall acquire all necessary permits and licenses from other applicable agencies (DATCP) and the Town of Oak Grove.
9. An inspection of the facility by DATCP shall be conducted annually and the report submitted to the Zoning Office and the Town of Oak Grove. If a DATCP inspection of the kennel is not required, a written explanation of that determination shall be provided and an inspection of the facility by the American Kennel Club shall be conducted annually and a report submitted to the Zoning Office and to the Town of Oak Grove.
10. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.

Chairperson Fetzer opened the public hearing. Jerry Kosin, Town of Oak Grove Chairperson, one thing that they didn't comply with in Oak Grove was the 1500 feet from the back door of the kennel. They only went and got two signatures and that was just down the road. We have talked to these people quite a few times at meetings. At the one meeting they told us they would just keep doing this regardless of what our code says. He doesn't know where we are at. They haven't asked to come to Oak Grove to a meeting for quite a while but they have been dealing with this since probably a year ago. None of the dogs are licensed which is our problem, not yours. **Chairperson Fetzer closed the public hearing. Chairperson Fetzer invited Jerry & Debra Hallis forward:** Mr. Hallis stated they do agree to abide to whatever they need to do, like getting the dogs licensed. Chairperson Fetzer asked if they just raise dogs? Mr. Hallis stated it's a business. Chairperson Fetzer asked if they are registered. Mr. Hallis stated every one. Chairperson Fetzer asked how many pups they have a year, typically? Mr. Hallis stated it depends. Mr. Hallis stated they are not all breeding dogs, some are pets, some are older and spayed, you fall in love with them. Chairperson Fetzer asked if the committee has any questions. Gulbranson asked on condition #1, Activity shall be conducted as submitted in the application, does that restrict them to the Tea Cup Poodles so they can't change it to Shepherds or Huskies or Saint Bernards'. Lund stated

yes that's what that means. Sanden asked also other than what is listed on the first page in the staff report, the table of uses, is there anything else in the Pierce County Code that this is in violation of? For example you have looked at the side and rear yard setbacks and they are in compliance with the County, maybe not the Town. Lund stated that is correct. Holst asked if the 1500 foot setback is a Town Ordinance. Lund stated yes it is in the Town's Ordinance. Holst noted that it's up to the Town to enforce that. Mr. Kosin asked to speak again. It is 1500 foot, according to their attorney that is like a circle from the back door of their house where they keep the dogs. They only brought us two signatures. But there are a lot of homes involved. Chairperson Fetzer asked if they had more signatures they would be ok? Mr. Kosin stated maybe, at our public hearing they would have had to have signatures to convince some people. Chairperson Fetzer asked if Kosin was ok with the use. Mr. Kosin stated he isn't ok with it. Chairperson Fetzer stated they will still have to deal with you if it goes through us. Mr. Kosin stated 1500 feet, they will have to get a signature from every homeowner in that area, then they will start dealing with them. Chairperson Fetzer stated our biggest thing is public health and public safety. Those are the big things that we have to look at. Holst stated if they have been running a kennel since '99 and the town just found out about it, apparently they do a good job of hiding things because the dogs weren't an issue. Chairperson Fetzer asked if given the length of time there is there the potential that the use is grandfathered in. Mr. Kosin stated it's been in the code for quite a while he would have to look. Gulbranson asked if there have been complaints, like barking or anything? Mr. Kosin stated no. Deb McClure, Town of Oak Grove Supervisor, stated they had one escape. Mr. Kosin stated the 1500 feet was just one thing in the code they didn't meet, there were some other things also. Holst stated the way this looks to him is if they don't come into compliance with the Town within a year, then their CUP goes away. Is that the understanding of the rest of the committee? Pichotta stated we would have to bring it back to the committee for that. Chairperson Fetzer asked if this would come back in front of the committee if everything is taken care of. Pichotta stated that would be our intention. Renewal would be by this committee and he would hope at that point even if they haven't got things resolved, we would hear what efforts have been made.

Sanden moved to approve the conditional use permit for a Kennel for Jerry & Debra Hallis, due to the fact this is found to not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #10/Aubart seconded. All in favor. Passed.

Discuss take action on proposed amendments to Pierce County Code Chapter 240-35, Agricultural Uses. Staff Report – Adam Adank: The raising of backyard fowl in residential areas has become quite popular in recent years. Some cities and villages within and nearby Pierce County have created ordinances to allow a limited number of fowl to be kept within their municipal boundaries. Staff is proposing to allow limited domestic fowl and structures in Rural Residential zoning districts. The proposed amendments would be regulated under Agricultural Uses in §240-35. While deliberating how to incorporate the regulation of domestic fowl into the Agricultural Uses section, staff discovered some inconsistencies in the code. Pierce County Code §240-35A(3) states: *General agricultural practices except for barnyards, feed lots, and uses involving agricultural structures, shall be allowed in all nonagricultural zoning districts.* However, the Pierce County Table of Uses chart only reflects “general agriculture” as a permitted use in agricultural districts. This means that the ordinance and table of uses chart are contradicting. In addition to the inconsistency described above, the current definition of general agriculture appears to be blended with language relating to intensive agriculture. This makes it hard to decipher which activities (for example animal husbandry) can be viewed as general agriculture and which activities should be viewed as intensive agriculture. The current definition of “general agriculture” is: *any agricultural use, except those listed for intensive agriculture, including apiculture; animal husbandry; dairying; floriculture; forage crop production; forest crop production; grain production; grazing; horticulture; orchards' specialty crop production' such as maple syrup, mint and willow; viticulture; and truck farming.* “Intensive agriculture” is not defined in the Zoning Ordinance and not referenced in the Pierce County Table of Uses chart. Staff believes that it would be appropriate to re-define “general agriculture” and create a new definition for “intensive agriculture” to better regulate specific agricultural uses in certain districts (specifically animal husbandry). The new definition of general agriculture would describe/list agricultural uses

that would be allowed in all zoning districts. The new definition of intensive agriculture would describe/list higher impact agricultural uses only allowed in agricultural districts. Staff asks the committee to consider the following questions when discussing the proposed amendments:

1. Should domestic fowl be allowed in residential zoning districts and if so, how many domestic fowl should be allowed on a residential parcel? Staff thought 6 may be an appropriate number based on the examples listed below:
City of Prescott allows 6 (2012)
Village of Ellsworth allows 10
Dunn County allows 4 in residential
Buffalo County allows 12 in residential districts
City of Hudson allows 5
City of River Falls does not allow chickens (2010)
2. Does the committee feel comfortable using the terms “general agriculture” and “intensive agriculture” to separate the regulation of different intensity agricultural uses?
Staff would propose activities such as animal husbandry, grazing, dairying, and apiculture to fall under “intensive agriculture.”

Staff Recommendations: Staff recommends the Land Management Committee discuss the proposed concepts, and if appropriate, direct staff to draft ordinance amendments for future LMC consideration. Holst stated this has been a real controversy in some areas. He has seen some of these ordinances where they talked about male chickens are disallowed. He feels that is prejudiced against the male. Adank stated he will take that into consideration. Holst commented on animal husbandry and intensive agriculture; I believe chicken ranching would be animal husbandry. Sanden stated that is the way he would look at it too. Sanden asked what the committee thinks about the term intensive agriculture. Sanden suggested that it implies a lot of offsite impacts. He stated he was thinking production agriculture but he is assuming some people could sell their eggs and that could be production in terms of doing it for profit. Pichotta stated basically the keeping of chickens is proposed to be an exemption from all of this. You are right that keeping of chickens for their eggs would be considered production agriculture, but we are proposing to exempt it in residential districts. Aubart asked why we were trying to fix this. Aubart stated for the record he could take you to at least three different chicken coops in the City of River Falls. To him, when you put a number like six across the County that doesn't make a lot of sense. He will argue that the sale of eggs wouldn't even come close to paying for the food. Aubart stated then we get into that whole argument. If you just do it for your friends or neighbor or whatever, now that is production agriculture. Sanden stated it would have to be some kind of terminology where agriculture is their main income. Pichotta stated as far as why we are looking at this, two things, the keeping of chickens in residential districts has repeatedly come up and our code doesn't allow it so he has difficulty looking the other way on it. When we have inconsistencies or we find issues in our code, the policy has been to address them. Aubart stated it does allow it, it says general agriculture practices except for those things. Holst stated in the ag district but he wants it in the residential district, RR20 and Ag Res. Pichotta stated there is not a definition for intensive ag and some things are considered intensive that shouldn't be. Gulbranson stated so if you allow six chickens, then are there rules that are going to go with that, if they start flying all over the neighborhood. The neighbors complain or they are running all over. Pichotta stated he isn't sure what new language would look like yet. We would look at what other folks have. In some of the residential areas like in Prescott; you have quarter acre lots. A lot of our residential lots, zoned residential are ten acres or more. Chairperson Fetzer stated he is thinking the same thing. ok, he can have six chickens on his quarter acre lot, the guy that has ten acres, I should be able to have more, no, sorry that is the rule. Pichotta stated this is why we are having this discussion. Pichotta stated perhaps if you have minimal acreage you can have the minimal number and for additional acres, it goes up. That is why we brought this to you. We want to know what you think before we start drafting language. Adank stated they would be allowed in any ag district but limits would just apply in residential districts. Chairperson Fetzer stated there are residential districts that are five acre lots people are buying, a lot of that. Holst stated Intensive agriculture sounds to him like an animal feed lot. That bothers him. He thinks we do have the definition for controlled animal feed lot in our ordinance someplace or not. That one we maybe need or maybe we don't need.

Pichotta stated that the county has a manure storage ordinance, so we regulate through that versus through the zoning code. Chairperson Fetzer stated right now the terminology is intensive agriculture? Pichotta stated it is but it's not defined. He agrees; it's a loaded term. Sanden suggested what if we went the other direction and rather than trying to redefine general agriculture, keep that term the same for what we all know it is and for these ones that have hobby farms, call it something like accessory ag or ancillary ag. If we were to come up with some term that meant someone that was not in the business of agriculture as their primary income, a hobby farm or dabble in some of these things. Leave the term of general ag as we know. Pichotta asked if the new term is just going to reflect allowable ag uses in residential districts or in all districts. Holst stated in all districts including residential districts. Pichotta stated let us work on that. How about chickens, do you want us to look into that? Should it be some sliding thing or carte blanche allowed with no number restrictions? That could be an option because most lots are not small. Most towns out there have a two and a half to three acre minimum lot size. So almost every lot is at least that big and in fact most cases they are bigger. Holst stated our minimum lot size allowable on a new one is one acre. Two acres on RR20, but the minimum lot size is one acre. Gulbranson asked if we allowed them in a residential development, if they put a covenant on that they can't have it, then they couldn't? Chairperson Fetzer stated that supersedes us. Pichotta stated that is not up to us to enforce covenants. Holst stated it's no different than what we did here tonight. Let the town enforce their 1500 feet cause that one time we spent a lot of money and when it came time to get paid, we didn't get anything and the town took all the money. Pichotta stated that was the dog kennel situation in the Town of Gilman. Sanden stated his inclination is if it's not a problem, not put a number on it and trust that they will keep things reasonable. Give them the latitude but then someone is going to come back with 3000 chickens on their acre. Gulbranson asked you want a number? Pichotta stated or direction to not bring forth a number and to come up with some language for your consideration. Chairperson Fetzer stated he is guessing that you have to have a number. You have to be black and white because somebody is going to abuse it. Pichotta stated here is an idea, perhaps the number, whether it be six or ten, that applies to lots less than one and a half or two acres. Everything else there is no limitation and in that way where you have your built up areas, those folks are limited slightly. Holst stated you see a lot of these guys raising range chickens now and they will have their little hut and drag their little hut around the yard. They can have 50 or 60 birds and it doesn't bother anybody and it keeps the wood ticks down. Pichotta stated we have a breakdown of lot size in the County. Seventy percent of residential zoned lots are four acres or less. Thirty percent are less than an acre. An additional 19 percent are between one and two. He likes the idea of six for small lots less than two acres and then if it's bigger than two acres, there is no limitation. Sanden said look at those numbers and decide what the cutoff is. Holst asked what the Village of Ellsworth's number for chickens is. Gulbranson stated ten and he didn't think they have had a complaint on it. Pichotta stated maybe the number ought to be ten because your lots in town are typically small. So I think where we are at is: two acres or less, six or ten, should we be consistent with Ellsworth and then as far as general ag and intensive ag we're actually going to swap meanings. General ag is going to become basically, production ag, ag that we are used to. We will come up with a new term for agricultural uses that are also allowable in residential districts and move forward. Chairperson Fetzer stated that works for him and asked if everyone else was ok with that. Committee agreed. Chair asked if a motion was needed. Pichotta stated just direction. We will come up with some draft language now that we have some guidance.

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests. The first one is for Tracie Albrightson to attend a Skillpath Conference located in Bloomington on February 22, 7:00am to 5:00pm just there for the day and we have funds budgeted for this. The next one is for Kevin Etherton to attend the WLIA Conference in Appleton on February 20th – the 22nd. There will be a hotel required. We get a grant for this. The last one came up between committee meetings so he wasn't able to bring it to the committee. He did attempt to talk to Mr. Fetzer but he was unable to reach him he did talk to Mr. Holst who approved it. It's for Adam Adank to attend a FEMA Floodplain Training in Emmitsburg, MD. It's a four day course from March 18th through the 21st. Focus is on concepts of floodplain management maps, studies, and ordinance administration. All costs are reimbursed by FEMA except for meals. If we want to take action on this as part of

the other two that would be fine or we wouldn't necessarily need to. He just wanted to bring it to the committee's attention.

Gulbranson moved to approve the travel/training requests for Tracie Albrightson, Kevin Etherton and Adam Adank/Sanden seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Pichotta stated we have a renewal of a conditional use permit for Monarch Paving for their gravel pit in the Town of Trenton. He hates to have a meeting just for that but if we don't take action on it, that CUP will expire.

Motion to adjourn at 6:41pm by Holst/Aubart seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, February 6, 2019 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 20 th , March 6 th & 20 th , all in 2019.	Chair
3	Approve minutes of the January 2, 2019 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Kennel in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-36I, for Jerry & Debra Hallis, owners on property located in the SW ¼ of the SE ¼ of Section 11, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
5	Discuss take action on proposed amendments to Pierce County Code Chapter 240-35, Agricultural Uses.	Adank
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(1/25/19)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, January 2, 2019

Present: Jon Aubart, Joe Fetzer, Neil Gulbranson, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Joe Fetzer called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 16th, February 6th & 20th, March 6th & 20th, all in 2019.

Approve Minutes: **Gulbranson moved to approve the December 19, 2018 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on Concept Plan for Cory & Gena Huppert, owners, by Dan Kugel, agent, on property zoned General Rural Flexible 8, located in the entire NE ¼ and the fractional NE ¼ of the SE ¼, all in Section 9, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: Dan is here and will be bringing out the plat for everyone to see. He works for Ogden Engineering and applicants are requesting concept plan approval for a 164.9 acre, 33-lot, and 2-outlot subdivision in the Town of Clifton. They intend to complete the plat in phases. The property is located in Section 9, Town of Clifton. Current land use is agricultural and recreational. Surrounding land use is agricultural, recreational and residential. This land is not in any Farmland Preservation programs as per the Land Conservation Department. The property is in the General Rural Flexible 8 Zoning District. This plat conforms to the surrounding land and meets the zoning density. With all the contiguous land the applicants own included, the calculation is $(164.9 \text{ ac}) \times (8/40) = 32.98 \approx 33$ residential lots. Proposed lots 22-24 are located within Kinnickinnic River Blufflands and comply with Section 240-45B. The Wisconsin Wetland Inventory Map indicates no wetlands in this project area. The FEMA FIRM maps indicate no floodplain in this project area. Most of the proposed lots have slopes less than 12%, except exterior lots 3-9, 14-18, and 22-24 to the west and south. The 12% slopes have a dark yellow line and 20% slopes have a dark pink line. The acreage of each lot is not shown on the proposed concept plan. To determine suitability of the site for subdivision, staff reviewed the site for hazards of life, health or property, no such hazards were apparent. Town of Clifton approved this concept plan on December 4, 2018.

Staff Recommendation: Staff recommends the Land Management Committee approve this concept plan with the following conditions:

1. Applicant shall secure preliminary plat approval prior to beginning construction of roads or installation of erosion control and stormwater measures.
2. The County minimum lot size of 1 acre and the Town of Clifton minimum lot size of 3 acres, excluding right-of-way and easements shall be met.
3. The proposed Town roads shall be numbered in accordance to Pierce County Code Chapter 115 (Numbering of Building & Roads) and shall be determined by the Pierce County GIS Specialist.
4. Applicant shall obtain all necessary sign permits.

Chairperson Fetzer asked Dan if he would like to add anything. Mr. Kugel stated that pretty much does it. The picture showing the concept of the entire area but they plan to do it in phases, depending how the conditions are, how the market goes. Chairperson Fetzer asked how much of this land is currently farmland? Mr. Kugel stated, acreage wise, he is not sure. Its visible what is not wooded is farm land. Chairperson Fetzer stated over half of it

was farmland. Pichotta stated there should be a map inside of your folder which identifies prime soils and you will see that this piece is almost entirely prime soils. Chairperson Fetzer asked if the Town of Clifton doesn't have any language, some towns do. Pichotta stated, if you recall when we did the update to the comprehensive plan, we have language in there discouraging folks from subdividing prime ag land but it is all based on Town Comprehensive Plans and what they have in place. What we didn't want to do is necessarily dictate to the towns. If this was a rezone, we would be looking at soils and the Town of Clifton's Comprehensive Plan in relation to what they have for the agricultural preservation section of it. This land was zoned this way all the way back since 1998 so it's basically the owner's right to subdivide it as he sees fit, as long as he does so consistent with any town subdivision ordinance and our subdivision ordinance. Gulbranson asked about the town roads, he asked if they will be turned over to Clifton? They aren't going to be private, so then how are the standards when they build these roads. Is somebody out there looking at that? Lund stated we will be looking at the standard and in the past when we had a plat come through, the last one that was approved was in 2006 so it's been several years, we had an engineer on staff that reviewed the plans from the Land Conservation Department. But the Town of Clifton does have a Town Road Standard and a Town Private Road Standard. Usually, once it's built, we hire the Highway Department to go out there and check it. That is billed to the applicant to make sure it's been built properly. Holst stated there is nothing better than a cul de sac to piss off a town patrolman. He also noted that it looks like a pretty good chunk of farm ground. Sanden agreed with that. Aubart asked Andy to explain the whole process of the plat since he hasn't been here for one. Pichotta stated a plat is a three-step process. You can create two lots over-the-counter by submitting a Certified Survey Map (CSM). But if you are going to create three or four in a five year period, you need to first come to the Land Management Committee to present it and ultimately, approval is administrative. But if you are going to create five or more lots in a five year period, there is a three-step process; the first step is concept plan, where basically the whole project is presented as a big picture sort of a look. Then once concept is approved, the next step is preliminary. In order to receive preliminary plat approval, they will have to submit soil tests for each of the lots, the surveyor will draw out and they will be platted out and staked, then it is reviewed by the State. The makeup of the roads is identified. The layout of the roads is identified. It will have to go back to the town also. Once preliminary plat is approved, final plat can only be granted once the roads are constructed and everything is in place. Sanden asked if he could add that vested rights kick in after preliminary plat. Pichotta stated yes. Aubart stated because then they put in all the roads. Sanden stated then they put all that effort into it, you're right. Pichotta stated basically as long as someone complies with all the conditions of preliminary plat, they are guaranteed final, so you can't switch the game three-quarters of the way through. Gulbranson asked what the Kinnickinnic River Blufflands is. Pichotta stated there is a section of our zoning code, that is kind of like the St Croix Riverway where it's more restrictive and larger setbacks associated with the bluff lines. You don't want disturbance of slopes. It's a lot less onerous than the St Croix Riverway and it is aimed at protecting the Kinnickinnic Watershed. So there is a little bit extra stuff relating to setbacks, typically. You may recall in the past we have had folks come in and seek a CUP for cutting of brush and burning of stuff along those Kinnickinnic hills, so there are some things other than setbacks that are required as part of that overlay district. Roy stated those will come into play later, not at lot creation. When someone applies for a house we will have to look at those extra requirements. At this point, there isn't much to consider. It would be more for the home owner to consider. Chairperson Fetzer asked, assuming everything goes through, in your three phases how are you expecting to do it, so many in the first phase and then after how many years are you looking at more? Mr. Kugel stated right now phase one would be lots 1 – 13, the upper part and then beyond that depends on how well they sell or how fast they fill up. **Holst moved to approve the concept plan for the plat for Cory & Gena Huppert in the Town of Clifton with conditions #1 - #4/Aubart seconded.** Chairperson Fetzer stated it is sad to be losing about 100 acres of good land there. It's sad to see good farmland go downhill or into buildings because you don't get that stuff back. But that is the townships way of looking at things and I guess we can't overrule how they want to run their townships. Holst asked if there is any part of that township that is in the Ag Enterprise Zone, did that ever get established? Pichotta stated that this farm is not participating in any Ag Enterprise programs. **All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural, General Rural Flexible and Primary Ag Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for Kathleen & John Thayer, My Course LLC, Cynthia Hanson and MOAP LLC/TROLL KING LLC, owners on property located in part of Sections 33, 34 and 35, all in T25N, R17W, Town of Hartland, Pierce County, WI and for Wisconsin Specialty Sands Inc, owner and agent for Nellie Anderson, My Course, Charles & Lynn Brown, Lynn Brown, Dennis Potts, Florness Farms LLC, Gregory & Debra Anderson and Margaret Chesley, on property located in part of Sections 2, 3, 4 and 10, all in T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: The underground mining operation began in 2006; in 2008 the hours of operation were expanded to 24 hours a day. In 2013, the LMC approved an expansion of the mining area into the Town of Hartland. Activities on the site include blasting, screening, washing and sizing underground in the mining tunnels. Washing is done in clay-lined ponds within the tunnels. The washed sand is then trucked to the processing facility in the Town of Trenton. Trucks enter and exit the site directly onto STH 35. The permitted mining area encompasses approximately 1300 acres. The primary use of the land is either agriculture or forested and undeveloped. Other area uses include low-density residential. The entire mining process takes place underground using room and pillar mining. Mining is accomplished by drilling and blasting. The tunnels allow for the internal washing, sizing, and storage of the sand. The blasted sand is screened and taken to an underground classifying area where the sand is sized and dewatered. Approximately 90% of the water is recycled. Water is supplied by two high capacity wells which are permitted by the DNR. The lower level of the mine is approximately 60 – 80 feet above the groundwater table. The use of flocculants is permitted by the WI DNR which monitors the type and limits the amount used. The facility has a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of storm water pollution and spills of oil-related materials and other chemicals, and establish controls to minimize any potential impacts to surface waters. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce dust from roadways during periods of dry or windy conditions. The site is currently not in production, but activities are taking place to keep the permit active. The following actions are/have been completed.

1. Monthly in-house Inspections for SWPPP (Storm Water Pollution Prevention Plan).
2. Monthly in-house Inspections for SPCC (Spill Plan Control and Countermeasures).
3. Quarterly Storm Water Discharge in-house Inspections.
4. Regular in-house Primary and Secondary Escape Inspections along with any needed scaling or cleaning of tunnels.
5. Quarterly MSHA Regulatory Inspections (MSHA inspects our underground and surface areas for compliance).
6. Annual in-house continuity and Ground Checks of electrical components.
7. Fire Extinguisher in-house Inspections.
8. Maintaining Electrical systems inside and outside of mine for capacitor chargers, lights and electrical components.
9. Maintaining water management system within underground workings to keep water away from electrical equipment.
10. Semi-annual AED and Oxygen in-house Inspections.
11. Allowing Annual Bat counts with WDNR.
12. Allowing Continuation of Scientific studies related to Bat Vaccines for WNS (White Nose Syndrome).

Staff has not received any complaints about the operation since the expansion in 2013. The applicant has received a permit from WisDOT to mine under Hwy 35. Staff contacted the Towns of Hartland and Isabelle regarding this renewal. We heard from Isabelle, they have no concerns. Did not hear back from the Town of Hartland but he doesn't think they started mining in the Town of Hartland yet so he doesn't expect for there to be any concerns. The existing conditions associated with the mine are listed in the staff report #1 - #27.

Staff Recommendations: Staff recommends the Land Management Committee determine whether any changes or additions to the existing conditions are necessary. If no changes or additions are warranted, staff recommends this CUP be renewed with the following conditions #1 - #27 with no changes:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, Mine Safety and Health Administration and other agencies if required.
2. Applicant shall submit written verification from all real property owners granting access to the abandoned tunnels of which WSS/WISC will be accessing pursuant to this CUP.
3. Applicant shall submit verification of lease agreements before mining is conducted and before mining is conducted within the 100 foot setback to parcels of which WSS/WISC does not hold the mineral rights, subject to condition number 5.
4. Applicant shall comply with the conditions recommended by the Town of Isabelle. The Town of Isabelle recommended approval of this request on March 22, 2006, subject to the following conditions.
 1. A map of the facility and underground tunnels shall be posted conspicuously at the site.
 - a. This same map shall be provided to the Town Clerk of the Town of Isabelle and emergency officials.
 - b. This map shall be updated semi-annually.
 2. A site stability study shall be completed by a professional engineer qualified for such work.
 - a. The stability of the site shall be monitored by a qualified professional engineer annually.
 - b. A copy of the engineer's report shall be made available to the Town of Isabelle.
 3. The groundwater shall be monitored by professionals qualified to perform such work.
 - a. Check all wells within 1000 feet of company wells. This is the same as county requirements.
 - b. The groundwater shall be monitored annually as well as any time the Town of Isabelle deems appropriate.
 - c. A copy of this report shall be made available to the Town of Isabelle.
 4. A reclamation plan shall be prepared –
 - a. In compliance with the requirements of the County of Pierce.
 - b. Including a performance bond to insure that reclamation work can be completed after operations cease or the operating entity ceases to exist.
 5. Hours during which blasting operations can be performed will be unrestricted unless official complaints are registered with the Town of Isabelle.
 - a. Upon receipt of an official complaint to the Town of Isabelle, the Town of Isabelle will advise the operators of the facility of the hours of blasting restrictions.
 - b. Within 24 hours of notification, the operators of the facility shall not perform blasting between the hours of 9:00pm to 5:00am.
 6. Town of Isabelle does not control driveway permits onto a State of Wisconsin Highway and therefore cannot approve or deny any such driveway. However, the Town of Isabelle is very concerned about trees on either side of the driveway blocking the view of the drivers on the driveway and the State Highway. The Town of Isabelle strongly recommends that sufficient trees be removed to promote safe vehicular traffic.
5. A 100-foot setback shall be maintained from all property lines for which Wisconsin Specialty Sand/Wisconsin Industrial Sand Company does not hold the mineral rights, except for any areas which were granted an exception to this requirement. An exception was granted on the west property boundary of the parcel subject to this CUP. Mining is permitted 57 feet from this boundary.
6. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
7. Real property owners located within 1000 feet of the parcels subject to this CUP shall be notified of the blasting schedule and be given the option of having notices sent to them by phone, text or email before any blasting. Blasting shall be restricted to six days a week.

8. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells located within 1000 feet of the parcels subject to the CUP.
9. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
10. After the asphalt and road gravel is removed, following mine closure, the road bed shall be graded so storm water will run laterally off the old road bed and not longitudinally down the old profile grade of the road bed.
11. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences and kept current.
12. Applicant agrees that any unforeseen erosion issues that arise during or after construction shall be addressed to the satisfaction of the county.
13. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
14. This CUP shall be renewed every two years.
15. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
16. The applicant shall submit written verification from the Department of Natural Resources that a binding agreement between the DNR and WSS/WISC is in place to preserve the conservation values of the existing DNR State Natural Area and associated tunnels. Such agreement shall also address access.
17. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
18. Outdoor storage of any equipment and/or mining materials shall only occur on the parcel with the mine entrance.
19. Mining shall not encroach within 200 feet of any existing residence unless owner authorization has been obtained.
20. All loaded trucks shall be tarped.
21. A fugitive dust plan that utilizes industry standards and best management practices shall be developed and adhered to.
22. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
23. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
24. WISC will be subject to control methods deemed adequate by the Land Management Committee for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
25. A groundwater response plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
26. A map of the facility and underground tunnels shall be submitted to the Town of Hartland semi-annually.
27. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the applicable town and approved by the LMC.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand Company with conditions #1 - #27/Gulbranson seconded. Holst recused himself due to the fact there could be a conflict of interest. All in favor. Passed with Holst not voting.

Discuss take action on Travel/Training Requests. Pichotta stated he has one travel/training request for Kevin Etherton, our GIS Specialist, to attend the Wisconsin Land Information Association annual conference. This is something we actually get grant funds for. It will be February 20th through the 22nd at the Red Lion Hotel in

Appleton, WI. **Aubart moved to approve the travel/training request for Kevin Etherton to attend the Wisconsin Land Information Association conference in Appleton/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated we don't have any agenda items for the next meeting. We have some things we are working on in-house but we think a little more time would be prudent on those. It does seem like we are not having a lot of meetings and the reason for that is, we are seeing less of CUP's, but if you recall we've taken some of the site plan review stuff and doing more of that on the staff level instead of bringing it before the committee. Because there has typically not been issues with our CUP's, more and more of the renewals are handled administratively so it's really just the new stuff that's complicated that comes to you guys. He hasn't decided if it's good or bad that we are having less meetings. Chairperson Fetzer stated he thinks we did the right thing, it simplifies our meetings and as long as there aren't issues on things, why come in and have more six and ten minute meetings. Pichotta stated we will meet that first meeting in February.

Motion to adjourn at 6:25pm by Aubart/Holst seconded. All in favor. Motion passed.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 2, 2019 – 6:00 p.m.
