Staff Report – Emily Lund: The request before us is a map amendment or rezone from Rural Residential 20 to General Rural Flexible. The property is located in Section 11 and Section 3 in the Town of Trenton. This rezone acreage is located on two separate parcels which total approximately 51.6 acres. The northwest parcel is identified as Outlot 2, V12 P58 being 11.6 acres, has frontage on Town Road 810th Street and the Mississippi River and is currently zoned RR-20. The southeast parcel is accessed through an easement through Walter & Marion Higbee property, has frontage on the Mississippi River and is currently zoned RR-20. The parcel of land was originally 21.3 acres (in the 1930's), but has gained land mass due to sediment accumulation through accretion and alluvion from the Mississippi River. Sediment accumulation has made Mr. Kessler's land mass larger and it is now around 40-acres in size. This was verified by both the WI Dept of Administration-Plat Review and US Army Corps of Engineers. Applicant and agent propose to apply for a Conditional Use Permit to establish an outdoor recreational use for a Campgrounds/RV Park on these properties in the future. Existing land uses on the parcels include productive forest land, wetlands, recreation and undeveloped. Nearby land uses include commercial uses, agriculture, residential and forest land. Adjacent zoning districts include Commercial, Rural Residential-20 and General Rural Flexible. The Trenton Town Board, upon review of the Town of Trenton Comprehensive Plan 2009-2029, recommended approval of this request at their January 8, 2013 meeting. The Town's Comprehensive Plan, on the "Future Land Use" map, identifies the area located riverward of State Highway 35 as being appropriate for "Mixed Uses". The "Mixed Uses" description is in the staff report. It should be noted that the establishment, expansion or intensification of an outdoor recreational use for Campgrounds/RV Park in the General Rural Flexible District requires the issuance of a

Conditional Use Permit by the Land Management Committee. As such, a Town Recommendation is required at time of application and will provide the Town the opportunity to apply the above criteria to any proposed conditional uses.

Pierce County Zoning Code 240-15 Purpose and Intent of Zoning Districts for General Rural, General Rural Flexible and Rural Residential 20 Districts are described in the staff report. The soils are also listed.

Staff Recommendation: Given that the Trenton Town Board has determined this proposed rezone of 51.6 acres from Rural Residential 20 to General Rural Flexible to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Holst stated he is familiar with this property and it is in the best interest to everyone to rezone. He doesn't know how it was ever Rural Residential 20 because it's mostly flood plain. **Holst moved to approve the request for a map amendment (rezone) from Rural Residential 20 District to General Rural Flexible District for Jeffery Kessler, owner, by Chris Willgrubs, agent, and forward a recommendation to the County Board of Supervisors/Sanden seconded. All in favor. Passed.**

Discuss take action on a proposed amendment to Chapter 240 to regulate adult entertainment.

Staff Report – Brad Roy: On March 6, 2013, staff presented draft code language regarding several commercial uses which have the potential for significant impacts but are not specifically classified and fall under the classification of “General Retail and Services”. Uses classified as General Retail and Services and could begin to operate in an existing structure within the Commercial District without the requirement of any permit or review. However, a Land Use Permit and Site Plan Review would be required for any new construction in the Commercial district. The LMC determined that Adult Entertainment uses should be a Conditionally Permitted use in the Industrial District and directed staff to consider whether other regulations are needed, specifically setbacks. Potential definitions to clearly define Adult Oriented Entertainment Business uses are;

- Adult Oriented Entertainment Business – any business whose primary business activity is characterized by emphasis on matters depicting, describing or relating to nudity, sexual conduct, sexual excitement or sadomasochistic abuse, such as an adult bookstore, adult theater, adult massage parlor, adult sauna, adult entertainment center, adult cabaret, adult health/sports club, adult steam room/bathhouse facility.
- Nudity – the showing of the human male or female genitals or pubic area with less than a fully opaque covering or the depiction of covered male genitals in a discernably turgid state and/or the appearance of bare buttocks, anus or female breast.
- Sexual conduct – acts of masturbation, sexual intercourse or physical contact with a person's unclothed genitals, pubic area, buttocks or female breast.
- Sexual excitement – the condition of human male or female genitals when in a state of sexual stimulation or arousal.

Staff has reviewed the setback requirements for this use contained in other County's Zoning Ordinances. Setbacks from residential districts and off-site residences ranged from 100' to 1500'; schools, churches and daycares ranged from 750' to 2000'. In one instance there is a 1500' setback from all existing residences. Staff is proposing the following setbacks”

- 1320' from schools, churches, daycares and parks
- 500' from residential zoning districts
- 300' from offsite residences

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed amendments are consistent with prior committee direction and provide direction regarding setback distances. If determined to be appropriate, the LMC should direct staff to schedule a Public Hearing and to consider adoption of the proposed language.

Chairperson Fetzer asked how the 1320 feet was determined. Roy stated that is the length of a 40. Sanden asked if these are based on some other code that was found. Roy stated yes, the definitions and setbacks. We looked at three counties in the surrounding area with this type of ordinance and found the ranges. We had some maps developed to show where our industrial districts are in relationship to schools and residential districts. Unfortunately we don't have a mapping layer that shows the churches and daycares. Holst asked if that is licensed daycares? Roy stated yes and noted that the proposed language would need to be reviewed by Corporation Counsel before the public hearing. We want to make sure the definitions work. Pichotta noted that on the back of the staff report is the proposed language done in the typical ordinance language with the underline and strike-outs. Sanden asked if there was anything about signage and suggestive signage. Pichotta stated Pierce County already has very strict language and size is limited. Sanden stated content will be tough because there are first amendment issues. Pichotta stated that is something we can look into, that would be a different part of the code. If the committee is comfortable with the setbacks as proposed and the language as read, he suggests staff should be directed to schedule a public hearing that will be a couple meetings out because of notification. Chairperson Fetzer stated the committee's consensus is to move language forward and hold a public hearing.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests for consideration at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for a farm and home business in the Town of Oak Grove for an electrical contractor. Sanden asked about the status of the Zimmerman request. Pichotta stated that the applicant is going back to the Town of Clifton on May 7, 2013.

Motion to adjourn at 06:20pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 1, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 15 th , June 5 th & 19 th , July 3 rd & 17 th , all in 2013.	Chair
3	Approve minutes of the April 3, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Winery/Nature-Based Operation, pursuant to Pierce County Codes 240-35B(6) and 240-39C, in the General Rural Flexible 8 District by Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Public hearing to consider a request for a map amendment (rezone) from Rural Residential 20 District to General Rural Flexible District for Jeffery Kessler, owner, by Chris Willgrubs, agent, on property located in part of the NW ¼ of the NE ¼ and part of the North Half of the NW ¼ of Section 11 and part of the SE ¼ of the SE ¼ of Section 3, all in T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
6	Discuss take action on a proposed amendment to Chapter 240 to regulate adult entertainment.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, April 3, 2013

Present: Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jon Aubart

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 17th, May 1st & 15th, all in 2013.

Approve Minutes: **Holst moved to approve the March 20, 2013 LMC minutes/Ross seconded. All in favor. Passed.**

Holst recused himself from discussion and voting on the first two agenda items due to a possible conflict of interest.

Public hearing to consider a request for a map amendment (rezone) from General Rural Flexible District to Industrial District for William F. Holst III, owner on property located in most of the NE ¼ and parts of the Eastern Half of the SE ¼ and the NW ¼ of the SE ¼, all in Section 33, and part of the SE ¼ of Section 28, approximately 174 acres, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Holst forward: Mr. Holst explained he is asking to rezone to Industrial because he feels it would be the best use for the property. His intention is to put a rail spur down the center of the property to try to develop a business park there. He is going to fill some of the area that is low next to the tracks and develop some sites that would be good for industrial use.

Staff Report – Andy Pichotta: This is a request to rezone 174 acres from General Rural Flexible to Industrial. Parcels are located in Section 33 and 28 in the Town of Trenton. This rezone includes acreage located on several separate parcels which total approximately 221 acres. The northeastern 500 feet of the property, that being the area bordering Highway 35 and the existing rail road track, is currently zoned Industrial. The requested rezone would result in the remainder of the parcels also being zoned Industrial, with the exception of a 300 foot strip along County Road K that is to remain zoned General Rural Flexible and Rural Residential 20. The 300 foot GRF “strip” would begin at the edge of the applicant’s property. Existing land uses on the parcels include nonmetallic mining, a ready-mix concrete plant, agriculture, and some forest/wooded land. Nearby land uses include industrial uses, agriculture, residential and forest land. Adjacent zoning districts include Industrial, Light Industrial, Rural Residential 20 and General Rural Flexible. The applicant, at the Town of Trenton’s request, has agreed to establish a berm within the proposed 300 foot strip of General Rural Flexible/Rural Residential 20 zoning; this is intended to create a buffer between the proposed industrial area and adjacent residential uses and residential zoning districts. Pierce County’s adopted Comprehensive Plan states: “The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. The Town of Trenton at their March 12, 2013 meeting, recommended approval of this request finding it consistent with their Comprehensive Plan and stipulated that:

1. 300 foot buffer zone to remain zoned agriculture along County K.

2. A berm be established.

Review of their Town's Comprehensive Plan, on the "Future Land Use" map, identifies the area located riverward of State Highway 35 as being appropriate for "Mixed Uses". Their plan (page 109) further states:

Mixed Use

Purpose: Development continues to be a key focus for Trenton's economy. By providing basic employment, industry serves as the foundation for further expansion in the retail and service sectors. Located near STH 63 and STH 35, there is a need for additional planned acreage to serve the industrial potential of Trenton. There are a number of business uses in the Town that are reliant on a highway arterial or collector road location. The Town wishes to reduce the potential for conflicting traffic movement, congestion and hazardous conditions along these highways. This plan attempts to balance the benefits to the Town's tax base that this type of development will bring with the impacts associated with highway business development. Design standards should be established for all development along the highway. Such standards may include both site design criteria such as landscaping and building design criteria such as construction materials. The design standards are intended to ensure high-quality development that is aesthetically pleasing and that reinforces the desired character of Trenton. Also in their Comprehensive Plan they identify Mixed Use Area standards. Criteria the Town is to consider include:

- Adequacy of access
- Assessment of need for public utilities
- Site plan review by the town
- Traffic volume assessment
- Need for landscape or visual buffer in certain circumstances
- Need for solid waste/hazardous material plan if warranted
- Lighting standards
- Days and hours of operation
- Access to main arterials to reduce commercial traffic on local streets
- Segregated/buffered from residential uses

It should be noted that the establishment, expansion or intensification of an industrial use in an Industrial District requires the issuance of a Conditional Use Permit by the Land Management Committee. As such, a Town Recommendation is required at time of application and will provide the Town the opportunity to apply the above criteria to any proposed industrial uses.

The next part of the staff report describes the purpose of General Rural, General Rural Flexible and Industrial Zoning Districts. General Rural and General Rural Flexible are agricultural districts that have a higher residential density than some of the other agricultural districts. Industrial is intended for uses that are more intensive than those allowed in Light Industrial District; heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The characteristics of the soils are listed in the staff report. The majority of it is sandy loam.

Staff Recommendation: Given that the Trenton Town Board has determined this proposed rezone of 174 acres from General Rural Flexible to Industrial to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Kurt Krahnke; lives on 174th Avenue, he was at the Trenton Meeting about the silica plant that was going in. By the time they got to that meeting it had already been decided that was what was going to happen. This is going to be in his backyard. He is against it. He feels it will affect the noise in the area, the wildlife and the water table. Ann Marie Rose, Trenton, is against the rezone and anymore industrial stuff. David Husom, lives on 162nd Avenue, he feels this will drop property values and is going to hurt the Township and County. He doesn't want to see a car crushing plant go in. Cindy T (?), County Road K, lives across from the current pit and frequently hears the trucks. She feels the lights are very bright. She read a letter from Evelyn Everts stating that Evelyn has

paid taxes for 68 years and is opposed to a sand washing business in the area. She doesn't want to see all the trucks on the highway and County Road K and is concerned about the well water being contaminated. She stated we have the beautiful Scenic Highway 35 as it belongs to every citizen. Cindy T (?) stated she has had her well water tested for a base line to know when her water changes. Bonita Huppert, resident of Trenton all her life, is opposed to this. She stated we need development but doesn't want to see the wildlife injured, the water table is irreplaceable. She feels this will make the neighborhood go down. Peder Christiansen, a farmer on top of the hill, stated he is neither for nor against this. When he looks out to the west he sees Red Wing, sand loading facility at Hager, Thomas & Betts, Purina, the blacktop plant, the railroad, the lock & dam, the nuclear plant and the Indians. This has all happened in his life time, when will it stop or where is it going to stop and what will happen in the next 100 years. **Chairperson Fetzer closed the public hearing.** Sanden asked Andy about the item of a 300 foot buffer along County Road K to remain agricultural, are they using that term loosely because he is seeing General Rural. Pichotta noted that General Rural is an agricultural zoning district. Sanden asked about another conditional use permit further down Hwy 35 where there were issues where there was Industrial and Rural Residential right next to each other. He looked at it and wondered who would zone that way. It looks like we're doing the same thing again. Pichotta stated he believed Dr. Sanden was referring to an issue in the Town of Ellsworth just east of town. Pichotta noted that Trenton was trying to mitigate that circumstance by requiring a buffer. Sanden asked if there have been any complaints. Pichotta indicated that there have been no complaints to him as of late. Sanden asked about standards, is a 300 foot buffer between potentially heavy industrial and residential uses adequate? Pichotta suggested that it depends on the type of use proposed as well as the height of the berm, presence of trees, etc. We don't really have any other situation like this where there is Industrial close to RR20. That is the challenge in the Town of Trenton, the Town has much of the County's Industrial zoned land and it happens to be surrounded by housing. The challenge is to permit industrial uses in such a matter to minimize impacts to adjacent property owners. Sanden stated he has mixed feelings; it is adjacent to already zoned Industrial and along a heavy industrial corridor with the rail and highway but he is uncomfortable with barely any buffer. Chairperson Fetzer asked about the berm. Mr. Holst stated they didn't specify but they want a berm wide enough and he was thinking six feet high and trees planted on top. This was at the Township level. Originally they were going to run it out to the other property and then we come up with the 300 foot to leave it so we would have a buffer there. It was recommended unanimously by the Town Board. We received no complaints at the Town Board level. Ross asked if they specified anything on the trees, the size or type. Mr. Holst stated they didn't care, either Norway Pine or Spruce is what he planned to put there because they are both dense and you can't see through them. Sanden asked what the current use is. Mr. Holst stated it is all, even the 300 foot that is zoned ag, is a gravel pit. Chairperson Fetzer asked if it is zoned for a gravel pit. Mr. Holst stated it is grandfathered in. Pichotta stated that it is a grandfathered use but the reality is that gravel pits are allowable in agricultural districts. Sanden stated the general motivation for the rezone is to allow for on-site processing? Mr. Holst stated no, he doesn't need any change for on-site processing; he has been doing that for 25 years. He intends to put a rail spur there so he can bring rail onto his property and develop a commercial site. Ross stated the rail spur will come about midway through the property. Mr. Holst stated they have to get it approved through the railroad, Burlington Northern, that's why they don't definitively know. They will have specifications. Pichotta stated with any industrial use in an Industrial District, a conditional use and site plan review is also required. As noted, the Town of Trenton has identified some standards with which they will weigh the request against. Mr. Holst stated that his understanding is any industry that wants to come in will have to come in before them again. If someone wants to build a silo or grain elevator, they will have to come before the committee again. Sanden stated so anything beyond the railroad spur, we will have another crack at. Pichotta, there is a request for the conditional use permit relating to the rail spur following this agenda item. Basically what we are considering is the suitability of the land not necessarily what the ultimate use will be. There are a host of uses that are arguably permissible. Sanden stated his concern is that if things change in the future will we have a chance to mitigate off-site impacts. Pichotta stated everything is conditional and with a conditional use permit if there are some issues that weren't anticipated, we can bring them in literally in

36 hours if we need to. Ross asked if that would address any issues of bringing in a car crusher. Pichotta stated bringing in a car crusher would require the issuance of a separate conditional use permit. Mr. Holst stated it would be the wrong direction to bring a car crusher in, his sales are in Minneapolis and he takes them by truck. **Ross moved to approve the request for a map amendment (rezone) from General Rural Flexible District to Industrial District for William F. Holst III on approximately 174 acres and forward a recommendation to the County Board of Supervisors/Sanden seconded. All in favor. Passed with Holst not voting.**

Chairperson Fetzer explained that the reason the County and the Towns created their own Comprehensive Plans is because Townships should know what works best for their Towns. When the committee makes decisions that are guided by Town Comprehensive Plans, which is what we just voted on here, you have to pay attention to what your Town Comp Plan states and the town level is the appropriate place to head off stuff. When it gets to us, if all the I's are dotted and the t's are crossed from the Town, it's tough for us to know what is better for a Town. Pichotta stated that a rezone has to be consistent with a Town's Comprehensive Plan, if it's not consistent with the Town's Comp Plan, we won't approve it. Because this requested rezone has been found to be consistent with the Town's Comprehensive Plan; that is why the committee approved it. Mr. Krahnke stated the first they knew of this is was the letter that the County sent. Chairperson Fetzer stated we don't necessarily know how the Town deal with notifications. Pichotta stated that certainly there was a public hearing regarding the adoption or amending of their comprehensive plan. We can't control who a Town notifies about different items. We can only control our process. Cindy T (?) stated last summer there was a room full of people at a Trenton Town Board meeting that lasted for two and a half hours and a lot of people expressed their issues, that Board sat in front of that entire building of people and Mr. Bunce said they have no say in this, you go to the County. That Board did absolutely nothing. Pichotta noted that a conditional use permit is handled differently than a rezone. A rezone is based entirely on the consistency of a Town's Comprehensive Plan. For a conditional use permit, we ask a Town for a recommendation regarding conditions that ought to be associated with allowing a proposed use. If their Town Comprehensive Plan also speaks to that particular use, we consider the guidance the comprehensive plan gives to be akin to the public interest for that Town. A Town has a tremendous ability to control conditionally permitted uses in their Town.

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the General Rural Flexible and Industrial Districts by William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Holst forward. Mr. Holst stated he is proposing to run a rail spur through the center of his property and develop businesses from that rail site. He is asking for permission to load and unload. He is trying to get some business started there. Sanden asked why a spur is required instead of just building a loading facility adjacent to the railroad. Mr. Holst stated the rail road won't allow you to load on a main line. They don't stop the trains; you have to get them off of railroad property to do anything else.

Staff Report – Brad Roy: The applicant is seeking a Conditional Use Permit to establish a Load-out Facility in the Town of Trenton. The proposed facility would be used to load/off load materials such as sand, gravel, corn and oil from a rail spur that is proposed to be constructed and connect with the existing BNSF railroad. The applicant has requested that an area 150' on each side of the anticipated alignment of the rail spur be authorized for this use. The applicant is essentially requesting concept approval for the proposed use/facility to demonstrate the viability of the site and to allow him to pursue the establishment of the rail spur. As such, no formal plans have yet been drafted regarding spur alignment or structures that may be needed to enable the transport of specific goods. The requested CUP would authorize the applicant to utilize an area adjacent to the proposed rail spur (150' on each side) for nonstructural use as a load out facility. Pursuant to 240-76 (A), expansion of the use to include structures will require issuance of an additional conditional use permit. The need for a new CUP(s) will ensure that the Town and the

LMC are able to address any issues (access, traffic generation, noise, dust, lighting, hazards, etc.) that may be associated with transporting a specific material. The site is currently comprised of two zoning districts, Industrial and General Rural Flexible. Utility Facilities >1,000 square feet are conditionally permitted in both districts. In the prior agenda item, the applicant has requested to rezone most of this site from General Rural Flexible to Industrial zoning. The establishment of certain future uses will likely be impacted by the sites zoning. The Town of Trenton's comprehensive plan identifies this site as appropriate for "Mixed Uses" and the town has indicated their support for Industrial zoning and the proposed use. The site currently has a 130 acre sand and gravel mining operation. The reclamation plan for the grandfathered mining operation states that future use will be agriculture and open space. Last year the LMC approved an application for a sand processing and rail load out facility on a portion of the property leased by Wisconsin Industrial Sand Company. A small Ready-Mix plant is also located on this site. Adjacent land uses are nonmetallic mining to the east and west, residential to the north across Hwy. 35 and agriculture to the south. Higher density residential, that being a Rural Residential 20 District, is located approximately one-half mile to the south of the proposed facility. Pursuant to §240-21(B)(1), this proposed unclassified use was determined to be most similar to a "Utility Facility >1000 square feet" and is therefore being processed consistent with that conditionally permitted use. A "Utility Facility >1000 square feet" is conditionally permitted in all zoning districts. Pursuant to §240-21(C), an amendment to Chapter 240 regarding this use will be presented to the LMC for consideration at a future meeting. PCC §240-76G. states, All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit. Staff suggests that a two (2) year renewal time frame for this proposed use, with a status report at one (1) year, may be appropriate. Issues to consider include traffic, noise, dust and the proximity of the nearby residential uses. The Town of Trenton recommended approval of this request on March 12, 2013 for the rail spur and use within 150 feet of the rail. There was no reference to the Town's comprehensive plan.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The applicant is authorized to utilize an area adjacent to the proposed rail spur (150' on each side) for nonstructural use as a load out facility. Any substantial change to the alignment of the rail spur shall require LMC review and approval. Any expansion of the use of the site shall be subject to issuance of a Conditional Use Permit.
2. A new mining reclamation plan, consistent with the requirements of PCC §241, shall be submitted and approved prior to the establishment of this use.
3. This CUP shall expire in 2 years with a 1 year status report to the LMC.
4. Applicant shall secure all necessary permits and approval from other agencies such as the WDNR, WisDOT, etc.
5. Prior to any nonstructural use of the site as a load out facility, applicant shall submit for LMC review information relating to type and quantity of materials to be shipped, frequency and type of traffic, a traffic impact analysis, a site plan and any other information deemed necessary by the Zoning Administrator.

Chairperson Fetzer opened the hearing to the public. Kurt Krahnke asked what kind of business will be going in there. Peder Christiansen asked if there is a time table for the berm to be built. Mr. Holst stated it is his understanding it will be built before he uses it. Pichotta stated that is his understanding also, prior to the establishment of the use on the site. David Husom has a comment about the beeping he can hear now in the summer time. He thinks there are already enough beepers going, he asked if he is going to use it as a loading area, can it follow the rules of the sand processing which would be white noise back-up rather than the beeping. Pichotta stated that is an appropriate condition to ask for, at this point what we are being asked for is approval of the concept of a load out facility in that area. The reality is, prior to the use

of that site, whether it be a nonstructural use or a structural use; structural use would require the issuance of a new CUP. A nonstructural use would require the review of this committee of what exactly the plans are. At that point, absolutely would be appropriate to place those sorts of conditions on there and if you do the site plan right, it can limit the need to back up. **Chairperson Fetzer closed the public hearing.** Sanden asked if Mr. Holst planned to build a load out facility. Mr. Holst stated he plans to use it for loading or unloading. He might bring in aggregates and the Highway has expressed interest in bringing seal coat rock there, he might bring some cement in for the ready mix plant. He knows a guy that does retaining walls located by the Twin's stadium and they are probably going to demolish where he is and he is looking for a new spot. He is also looking to load out his material if he can find a market that suits and anyone else that comes up with a plan that would be good for everyone. Ross asked if he knew about how many rail cars would be able to fit on the spur. Mr. Holst stated rail cars vary from 60 feet to 120 feet so it depends on the size of the car. He estimated roughly 80 to 120 cars.

Sanden moved to approve the conditional use permit for a Utility Facility >1000 square feet for William F. Holst III, with conditions #1 - #4 adding #5 as stated, due to the fact this is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed with Holst not voting.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.

Staff Report – Brad Roy: County Materials received a Conditional Use Permit for Nonmetallic Mining in April, 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. The operation plan states that excavation would create a floor elevation of 1050 feet above sea level, where all activity would be conducted. The average current floor elevation is 1100' and the processing area has an approximate elevation of 1160'. The elevated floor has contributed to issues of dust, noise and appearance. In April 2012 the hours of operation were reduced, a Fugitive Dust Plan was required and stockpile heights were limited in an attempt to better mitigate offsite impacts. At the request of the operator and with support from the Town of Spring Lake, the hours of operation were allowed back to 6am to 6pm Monday through Friday, Saturday 8am to noon. The number of allowable unreclaimed acres was also increased to 40. The average floor elevation of the quarry is 1100'. County Materials expressed a plan to lower the floor to 1075'. There are 36 unreclaimed acres on the site. Hydraulic conveyors were installed to mitigate dust on neighboring properties. Dust complaints continued after the conveyors were installed. A Fugitive Dust Plan was developed and approved by the Town of Spring Lake and the LMC in June of 2012. The site is internally drained. The stormwater is collected on the quarry floor. A stormwater pond has been installed; however water does not collect in it. Condition #4 states that stormwater pond design shall be reviewed by the Land Conservation Department. Currently no review has been completed by the Land Conservation Department. Stockpiles near the entrance of the processing area are higher than the berm. Condition # 26 states, Stockpiles shall be a minimum of 10 feet below the height of the berm at all times. This operation has received numerous complaints since it began operation about noise, dust and appearance. Complaints in the last two years have decreased, but adjacent landowners near the operation have continued to have concerns. The Town of Spring Lake was contacted for comments or concerns regarding the renewal of this conditional use permit. Mike Jacobson, Town of Spring Lake Supervisor, responded that the Town has not heard any concerns. Staff interprets the timeframe of Mr. Jacobson's statement as the Town has not received any concerns since the last renewal. The existing conditions are listed in the staff report #1 - #28.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the

public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions (changes in **bold**):

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department **within 6 months**.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 40 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in **the fall or at the request of the Town of Spring Lake**.
26. Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.
27. The Fugitive Dust Plan shall be implemented as approved.
28. Applicant is allowed to water anytime necessary to mitigate off-site dust impact.

Sanden asked if condition #4 is six months from today or when the pond is installed. Roy stated it is from today because the pond has already been installed. Pete Krautkramer explained they have two ponds, they made another pond that will take all the agricultural field from the south that goes through the valley,

before it goes through the valley it is collected in a pond with an overflow to catch all sediment off the field even. The other pond will take care of the whole facility. It's down in where they crush. Mr. Krautkramer asked if Jim Small can do a site plan, showing the size of the pond, what will go in there. Holst asked if Mr. Small is a state certified engineer. Mr. Krautkramer stated he doesn't know but Jim does it for all of their facilities. He can get it back in 30 days and in front of you. Pichotta stated it isn't something to come back in front of the committee. Basically we want our Land Conservation Department to be presented with a plan, prepared by an engineer that they will sign off on. It has to meet their standards and will be an internal review. Richard Johnson, Town of Spring Lake, stated he was at the meeting where the lady had the tape recorder so he has visited the site many times and sat in his pick-up. He stated they were operating and he didn't hear anything like what was on the tape recorder. **Holst moved to approve the renewal of the conditional use permit for Nonmetallic Mining for CMC-Spring Valley LLC with conditions #1 - #28/Ross seconded. All in favor. Passed.** Mr. Krautkramer stated he is still on schedule to get that lime end, screening, down in the hole a year from now, the wash end still won't be.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests for consideration at this time.

Departmental Update and Future Agenda Items

Pichotta stated we have no agenda items for the 17th. We do have a couple code amendments that could be brought forth. Pichotta was contacted by John Eager, Rock Elm Township, about moving forward as quickly as possible on the Adult Entertainment language, the reality is that even if we fast track that it's still going to take four months. Chairperson Fetzer stated it's probably pointless to get together for one item when the next meeting is in two weeks, May 1st.

Motion to adjourn at 07:15pm by Holst/Sanden seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 3, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 17 th , May 1 st & 15 th , all in 2013.	Chair
3	Approve minutes of the March 20, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a map amendment (rezone) from General Rural Flexible District to Industrial District for William F. Holst III, owner on property located in most of the NE ¼ and parts of the Eastern Half of the SE ¼ and the NW ¼ of the SE ¼, all in Section 33, and part of the SE ¼ of Section 28, approximately 174 acres, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Pichotta
5	Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the General Rural Flexible and Industrial Districts by William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake,	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, March 20, 2013

Present: Joe Fetzer, Jeff Holst, Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 3rd & 17th, May 1st & 15th, all in 2013.

Approve Minutes: **Ross moved to approve the March 6, 2013 LMC minutes/Aubart seconded. All in favor with Joe Fetzer not voting because of absence at the meeting. Passed.**

Public hearing to consider a request for a conditional use permit, pursuant to Pierce County Code, Chapter 240-39E, for a Private Outdoor Recreation Use for Lost Creek Ranch in the Primary Agriculture District for Lynette Weldon, owner on property located in the NW ¼ of the NW ¼ of Section 35, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Ms Weldon forward. Ms Weldon explained she is asking to do what she has been doing for the past seven years in Ellsworth; rescue horses, rehabilitate them and train and use them in all their programs. The programs they do are kid's camps, a buckaroo program that starts at age 4 all the way through their Grey Mare Club for women. They have also worked with Pierce County Human Services and with the school districts. They have interns from the University of River Falls. Ross stated he is very familiar with Lost Creek and they do a good job. He has heard a lot of really good feedback.

Staff Report – Jim Kleinhans: Lynette purchased this property last year and is creating her recreational, educational camp. Todd Dolan, Michelle Williams and Jim visited the site a couple weeks ago to get a feel of what her proposal is. The property is zoned Primary Agriculture and she had a facility like this in Ellsworth before and this property she owns now and wants to put it together. The Martell Town Board recommended approval of this request without any comments or reference to their comprehensive plan. Pierce County Code §240-88 addresses outdoor recreational and private uses and addresses campgrounds and riding stables. The commercial riding stable has a minimum lot size of 10 acres and she owns 18.5 acres. He mentioned to Lynette that she should have at least one acre of open space per horse kept on the lot. There are some buildings on the lot also. Surrounding land uses include agriculture, woodlands and residential. The application states that an indoor riding arena has been leased to enable clients to ride during inclement weather conditions. A 70 ft by 100 ft soft sided structure was recently added to the existing pole shed. Lynette was informed that the building would need commercial plan approval to be authorized for a commercial event. Jim hasn't seen any commercial rating for that building yet. The applicant is requesting a smaller bunkhouse to serve as some sort of a dorm for the younger clients, to accommodate 6 to 8 camp participants. Todd Dolan would have to inspect that building for uniform dwelling requirements. Michelle Williams would have to inspect that building for Department of Health issues. In the past, Lynette has utilized the service of a port-a-potty provider but recently they have been talking about putting something in more permanent, possibly a holding tank. They will work through permitting that with a plumber. Solid waste/trash disposal service is provided by Paul's Industrial Garage (PIG). There are no employees but several volunteers per day assist with chores. The Public Health

Department will license the facility as a recreational educational camp and also verify drinking water supply is safe. An infirmary will be provided for clients in the event of sudden illness. They can be separated from the rest of the students. Todd Dolan was there and he will inspect the building for UDC requirements and help us with the commercial rating on the building. The applicant indicated they have liability insurance for this business. Jim hasn't seen any documents. The application requests an on-premise sign and several off premise directional signs. They are about a half mile off of Hwy 63. They will have to work with the Highway Department to get those. A 24 square foot free standing on premise advertising sign can be allowed in this location.

Staff Recommendation: Staff recommends the Land Management Committee (LMC) determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. Activities shall be conducted consistent with the submitted application.
2. Documentation demonstrating that the riding arena meets Commercial Code standards (UCC) shall be submitted prior to use of that structure by the public. The bunkhouse shall be built to applicable standards (UDC/UCC). A land use permit shall be obtained for any future structures prior to construction.
3. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety and Professional Services and Department of Public Health).
4. Adequate portable satellite waste stations (1 per 50 people) shall be provided or alternately the applicant shall obtain sanitary permit approval and install a septic system.
5. Solid waste dumpsters or waste containers shall be located on-site and maintained.
6. The total number of horses maintained on the property shall be limited to 17 unless adjacent acreage is leased or purchased.
7. Hours of operation shall be 9:00am to 8:00pm, or as otherwise established by LMC.
8. Any advertising signs (either on-premises or off-premises) shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation.
9. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.
11. Property and containment fences around the facility shall be maintained.

Chairperson Fetzer opened the hearing to the public. Jennifer Flanagan and Ruth Harper both stated they are in favor of the ranch. **Public hearing closed.** Ross stated he would like to consider the hours of operation with a starting time of 6:00am or 7:00am with a camp. Then there possibly won't be an issue with neighbors. Holst asked about the liability insurance. Ms Weldon stated that she does have it. Pichotta stated he spoke with Corporation Counsel and Mr. Lawrence said he doesn't believe it needs to be a condition; he feels it's more of a business decision.

Holst moved to approve the Private Outdoor Recreation for Lost Creek Ranch, Lynette Weldon, with conditions #1 - #11 modifying #7 to read, "Hours of operation shall be 6:00am to 8:00pm", due to the fact this is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Passed.

Discuss take action on status report, review of tentative 2013 work plan and request regarding County adoption of airport overlay zoning ordinance for Red Wing Airport located in Section 6, Town of Isabelle, Pierce County, WI.

Rick Moskwa from the Public Works Department, along with him is Airport Manager, Tammie Dougherty, Benita Crow and Kaci Nowicki from Short, Elliot and Hendrickson, their consultants. Melissa

is no longer working with SEH. Kaci is the Planner in charge of the project moving forward and Benita is the Engineer for the airport for the City of Red Wing.

1. Reconstruction of the GA Apron and Tie Down Area – (FAA 90/10). Ms Crow explained they are in the process of a four project sequence replacing the worst pavement on the airport where the hangars are. They have previously taken care of two phases in 2009 and 2011. In 2013 they are looking to go just north of the aircraft fueling system. The project consists of taking up existing pavement and replacing it with new. There are no drainage issues, no changing the drainage or change in the type of pavement. Mr. Moskwa stated this is tied to Federal Funding, it's a 90/10 match. The project is roughly \$275,000 depending on bids. The City of Red Wing has its 10% match in its capital improvement program.

2. Complete the Land Use Zoning Process – (Reimbursement from State of Wisconsin in the amount of \$50,000 upon successful completion) Ms Crow asked if the committee wanted to wait until the end and go through the zoning then. The committee agreed.

3. Septic System Replacement – Backflow Prevention – (MnDOT 70/30) Mr. Moskwa stated the septic system replacement was one of the things identified on the report. They had some issues and have had to do some work on it and asked for a MnDOT Grant. That is a 70/30 grant. They are looking at a cost of about \$30,000.00. One thing Mr. Kleinhans mentioned in his report is that there might be too much going on with that system so it is going to be enlarged and they will work with the Zoning Office in Pierce County to address that.

4. Parking Lot Construction – (MnDOT 70/30) This is a proposed project. Currently they have one fixed-space operator at the airport that is looking at expanding his operation and building a significant hangar of maybe close to a million dollars with an admin building. He is funding this himself. If he secures financing and all the permits needed, they will then be building a parking lot between the SRE building and the fire hall. It will go right on the new pad where they put fill in last fall. Right now it is a private project so they can't say that they are going to do that.

5. Fuel System Tank Monitor and Decelerometer – (MnDOT 50/50) The fuel tank monitor is 20 years old and needs replacement; that's 50/50 split so that has been budgeted. We are also looking to buy a decelerometer; a way to measure braking action on the runway. This winter has been rather icy and now the crews just put their brakes on in the vehicle to determine how the runway should be classified: poor, fair, good or nil (not recommended to land). It gives the individuals a chance to attach a number to what poor, fair, good or nil would be. Ross asked if it's an emergency landing they would still be able to land. Mr. Moskwa stated that unmanned airports are a little harder to say that the runway is closed because there isn't anyone there after 5:00pm or 6:00pm. It's up to the pilot.

6. Runway Crack Sealing - (FAA 90/10) This is just like you would do for any of your pavement projects. We've done a lot of pavement for the past few years.

7. Purchase Snow Blower for the Tractor – (FAA 90/10) We are purchasing a snow blower for the tractor to help facilitate snow removal.

Revisiting the Zoning Process, Benita Crow stated she is the engineer for the airport and SEH Aviation Planner and will go through the history of the project. A condition of licensure in Minnesota for an airport is to have a zoning ordinance in place. MnDOT Office of Aeronautics had required the City of Red Wing to get a zoning ordinance adopted for the airport. A year ago they initiated the process of a joint airport zoning board, Mr. Holst and Mr. Kleinhans were a part of that. They had a series of meetings about every other month to develop the zoning ordinance. They ended up getting the ordinance together, the maps together, approved by the joint airport zoning board, had the public hearing consistent with Pierce County zoning regulations. The end results of a normal process is it would go to MnDOT, they review it, get comments back, possibly some tweaks, another public hearing takes place and the zoning ordinance is formally adopted. They have submitted it to MnDOT. There is some transition going on with MnDOT Office of Aeronautics. They are in the process of replacing the Director of Aeronautics as well as the Commissioner. They have had some communication with the folks in the planning group at aeronautics and they have told them it could possibly take five years for them to review this ordinance they spent a year putting together. Minnesota statutes prohibit the City of Red Wing from taking any action on the ordinance until MnDOT reviews it. So the reason they are here tonight is because the ordinance is very

close to or mimics the zoning regulations that you have right now. They want to express the concerns they have on how long it's going to take MnDOT to do anything and give Pierce County the opportunity to adopt it themselves as an airport overlay zoning ordinance. The benefit for you is everybody in that joint airport zoning board just took a year to develop this. It's zoned to the 5,000 feet that exists out there right now. The chances in five years of the players remaining the same both with the airport zoning board, the City of Red Wing and MnDOT Aeronautics, isn't good. Five years from now when MnDOT comes back with changes, we don't know what's going to happen. If Pierce County chooses not to take any action on it, it will sit for that period of time and sometime in the future get revisited. Ross asked if they ever fast-track those. Ms Crow stated "no" it's in a real state of transition because the previous director had expressed the desire to revisit MnDOT zoning at airports in general. She thinks everybody is a little concerned about doing any review until the director and the commissioner are established and they decide what direction they want to go. Ross asked if MAC ever gets involved. Kaci Nowicki, explained she doesn't know the exact situation of each of the MAC airports, there is MSP and they have six reliever airports around the cities. Some are zoned. There is a little bit of a battle between MnDOT and MAC on enforcing some of their ordinances. MAC was able to adopt an ordinance for MSP which is different than standard, which is what you are proposing to do, and they were successful. Ross stated MAC has a tendency to get involved and he didn't want us to get blindsided if they do. Mr. Moskwa stated he thinks we have to wait until there is a new commissioner and then they have to go to their elected state officials and ask to have it moved along. Holst stated the Joint Airport Board worked hard as a group and they actually came to some agreement but we represent Pierce County. For us to adopt an ordinance that may be modified by MnDOT; we're out on a limb. He doesn't see any reason for us to adopt it until your state signs off. Sanden asked if the overlay zone would be in our favor to adopt it so when the new people come in they would have less chance to change it. Mr. Moskwa stated your Corporation Counsel would have to look at it. Ms Crow stated that could be a perceived benefit. If you would adopt it at the 5000 feet which it is zoned right now, it could be enforced for a period of time that could potentially give you leverage when MnDOT would have a chance to review it. Holst stated there is a chance that MnDOT could throw this out. Mr. Moskwa pointed out that what we came up with is what your zoning standard is now. Mr. Kleinhans stated there is a little bit extra at the end of the runway, in the approach zones. There are a little more restrictive heights there. Holst stated this committee also needs to be aware of what we are going to change except for a little bit of extra height zone. We already have. It's not advantageous of us to change any of our ordinances. Mr. Kleinhans stated Bay City would have to do something as well. Mr. Moskwa stated he would like to thank the townships, Bay City and Pierce County for participating in this. They had a lot more people at these meetings. He would like to thank Mr. Holst and Mr. Kleinhans; they were especially helpful and could lead them on the rules. Chairperson Fetzer asked if we need a motion on this. Pichotta stated no action is needed.

Discuss take action on Travel/Training Requests. Pichotta stated there is one request for Emily Lund to attend the WCZA Spring Conference April 4th & 5th in Mosinee that you had approved for Jim to attend for one day. **Holst moved to approve the travel/training requests/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing to consider a rezone from General Rural Flexible to Industrial for Bill Holst in the Town of Trenton, 174 acres, he is also requesting a conditional use permit for a Utility Facility >1000 square feet for a rail load out facility not limited to sand and gravel.

Renewal of a conditional use permit for County Materials in the Town of Spring Lake.

Motion to adjourn at 06:45pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 6, 2013

Present: Jeff Holst, Jon Aubart, Jim Ross and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta, Brad Roy, and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 20th, April 3rd & 17th, all in 2013.

Approve Minutes: **Ross moved to approve the February 6, 2013 LMC minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for an Asphalt Plant in the Industrial District for Monarch Paving Company, owner on property located in the NW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: This operation was originally permitted in 2001 for nonmetallic mining and the asphalt plant. In 2008 the Zoning Office inspected the site and determined that the portion used for mining had been reclaimed in accordance with the approved reclamation plan. Final reclamation within the approved plan designates the site as a permanent asphalt plant and the bond associated with reclamation was released. Pierce County Code provides the opportunity for the LMC to require a bond for Asphalt Plants. On March 4, 2009, the LMC determined that no bond should be required since this is an Industrial use in the Industrial District. If Monarch proposes to mine this site in the future a new conditional use permit must be obtained. This facility is close to a concentration of residential properties, increasing the potential for negative off-site impacts. The original permit conditions included the establishment of a vegetative berm. The berm has been established around the facility and is being maintained, but will require more time to become completely effective. At a previous renewal a transportation route was designated for Minnesota projects. It was stipulated that trucks traveling to Red Wing shall be routed from 830th Avenue to Hwy 35 to Hwy 63. This route limits the impacts to town roads. A Stormwater Pollution Prevention Plan is on file in the Zoning Office for this site. There are two stormwater ponds on this site. One is a temporary holding pond and the other is an infiltration pond. When the temporary holding pond fills the water is then pumped to the infiltration pond. The Town of Trenton was contacted regarding this renewal request. The Town has in the past and continues to have concerns about the stormwater on the site. Staff has discussed the concerns with the operator onsite and has also presented the concerns to the DNR. The DNR is reviewing the operation to ensure consistency with DNR regulations. The county has received no complaints about this operation since the last renewal. The existing conditions are listed #1 - #6 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this conditional use permit be renewed with the following conditions:

1. Use shall be according to submitted plans.

2. The hours of operation are from 6am to 8pm Monday through Saturday.
3. The haul route for trucks traveling to Minnesota projects via Red Wing shall be routed from 830th Avenue to Hwy 35 to Hwy 63.
4. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
5. Height of stockpiles shall be limited to 35 feet.
6. This CUP shall be reviewed for renewal in two years unless compliance issues arise.

Chairperson Holst stated that normally the committee would ask the applicants to come up and state their request but since they have been here several times before and they aren't requesting a change in operation, there aren't any issues and it's just a renewal, he doesn't feel it necessary. **Ross moved to approve the renewal of the conditional use permit for Monarch Paving Co for a Hot Mix Asphalt Plant with conditions #1 - #6/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Brad Roy: The site was originally permitted for nonmetallic mining in 2001 and is currently the storage site for approximately 350,000 cubic yards of dredge materials taken from Corps Island on the Mississippi River near Diamond Bluff. The dredge material was covered with topsoil and seeded and is now vegetated. At the 2009 renewal there was discussion about whether the dredge materials would be used for permanent reclamation of the site or simply stockpiled for future use. Monarch had initially intended to use the material for final reclamation and to close the pit. They later notified staff that it is their intention to use the dredge material for “interim reclamation” and to then use the materials in their operations. This use is consistent with the pit’s approved reclamation plan. Last year the operator began utilizing the dredge material from the site for use in other projects. A groundwater response plan was reviewed and approved by the Land Management Committee on May 19, 2010. The site is internally drained. The floor of the pit is at 690 feet above mean sea level. Surface water is directed to the northwest near the pit entrance. Permitted hours of operation are 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35 towards the asphalt plant. No traffic is recommended along County Road K. The haul road was paved to reduce and address airborne dust concerns. Condition #12 states that, prior to placement of dredge materials on this site, a plan that describes activities and safeguards shall be presented for approval to the Land Management Committee.

- A groundwater response plan was presented to the Land Management Committee on May 19, 2010 and approved.
- EMES Inc is conducting groundwater and surface water monitoring. Samples are collected from residential wells, monitoring wells and surface water sites. Residential wells will be samples from outside spigots. The pH, specific conductance, temperature, dissolved oxygen and turbidity will be recorded for each well. The most recent sample was collected in September of 2012, although a final report has not yet been received from that sampling. Tests conducted in May 2012 revealed that water samples fell within national primary drinking water standards.

The County has received no complaints about this operation since the last renewal. The Town of Trenton has expressed concerns about the dredge materials and the potential for contaminants to reach groundwater. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.

2. Hours of operation are from 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season.
3. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35.
4. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
5. A 50 ft setback shall be maintained from all property lines for all mining activity.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
8. Reclamation shall be according to submitted plans.
9. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the County.
10. The approved Groundwater Response Plan shall be adhered to.
11. This CUP shall be reviewed for renewal in two years.
12. Any future use of this site for hydraulic material placement shall not be allowed until such time as information is presented that demonstrates, to the satisfaction of the LMC, that the impacts of said placement will not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area.

Roy stated we eliminated condition #4, blasting since it is not applicable to this operation. Ross asked if the hours work well for them. Mr. Bakke stated they hardly use the site. Chairperson Holst asked when they will get the final well testing results. Mr. Bakke stated that is a consultant hired by the Corp of Engineers. Chairperson Holst stated then we don't know. **Ross moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Monarch Paving Company with conditions #1 - #12/Sanden seconded. All in favor. Passed.**

Discuss take action on proposed language to regulate adult entertainment, lodging and large-scale retail.

Staff Report – Brad Roy: In 2012, staff presented information to the LMC regarding various commercial uses which have a higher potential for negative impacts to surrounding uses. As you may recall, many commercial uses fall under the classification of “General Retail and Services” and could begin to operate in an existing structure within a Commercial Zoning District without the requirement of any permit or site plan review. Concerns have been raised as to whether an adequate mechanism is in place to control or mitigate the potential impacts associates with uses established in such circumstances. It should be noted that in new construction were proposed to occur in conjunction with the establishment of a business in a Commercial District, a Land Use Permit and Site Plan Review would be required. The LMC has directed staff to review Adult Entertainment, Large-Scale Retail and Lodging to determine whether a modification to the process is warranted.

Lodging

Lodging is currently a Permitted use in the Commercial District. Issuance of a Land Use Permit would be required for the establishment of Lodging in the Commercial district, but there is no ability to deny the permit or to require consistency with town comprehensive plans. Site Plan Review would be required for any new construction in the Commercial district. Lodging is currently defined as: “A use which provides commercial transient lodging in individual rooms or units. Examples of such uses include motels, hotels, inns, cottages and cabins.” Pierce County Code currently limits the number of lodging units based on the size of the parcel. Potential impacts of Lodging include traffic, parking, lighting and noise. Incompatibility with surrounding uses could potentially result in conflicts and nuisance complaints. Changing Lodging to a Conditionally Permitted Use would require consistency with town comprehensive plans as well as provide opportunity for the LMC to place any necessary conditions on the business. The LMC may wish to consider the likelihood of whether this use could be established without the construction of a new structure or an addition to an existing structure, either of which would trigger the need for Site Plan Review by the LMC. Staff is seeking guidance as to whether the establishment of this

use should require the issuance of a Conditional Use Permit and, if so, whether any other zoning districts would be appropriate for this use.

Chairperson Holst stated we will discuss these, one-by-one. Sanden asked about the last sentence, the LMC may wish to consider the likelihood of whether this use could be established without the construction of a new structure; are you saying that someone could open up a hotel/motel in a currently existing structure and if that were the case should that fall under this possible conditional use permit. Roy stated that currently if there is an existing building in the commercial district someone could get a permit for lodging and there would be no review or anything unless they were to have new construction on that site, then that would trigger site plan review. Looking at the structures in the existing commercial districts, he doesn't know if any would fit for a new hotel/motel where it wouldn't require new construction. Pichotta stated that in most circumstances where someone would put in a hotel/motel, it will require new construction and thus require site plan review. Through site plan review, you can address certain things, buffers, screening, etc., but you can't say no. One of the reasons it may make sense for it to be a conditionally permitted use is because we have a lot of small commercial districts that have been established around the County. Zoning districts have been established by the Towns. Not all those commercial districts, given their proximity to other uses, are necessarily the best site for lodging. There may be cases where a small commercial lot is surrounded by houses and if someone wants to put in a motel that might not make sense given the surrounding uses and probability of impacts. So in those cases, it would be nice to have the ability to say no it's not the appropriate location. We don't currently have that. If we were a city and we had different zoning districts established in certain areas and it was planned out, it may be that it makes sense to allow lodging as a matter of routine in those districts. Given that we don't have control of what is zoned commercial everywhere, it makes sense for us to have the ability to identify certain sites that may not be appropriate for certain uses. Chairperson Holst stated we have other sites in the County under different zoning that would be appropriate. Maybe we open this up a little more. Pichotta stated we're asking if other zoning districts would be appropriate, for example, General Retail and Services and other commercial uses are permitted in Light Industrial District. It may be appropriate there. We have a lot of Light Industrial Zoning around and generally those are larger tracts that might actually make more sense. Sanden asked if we are concerned with lodging because of potential off-site impacts, large building footprint, late night traffic and how does a bed and breakfast fit into this. Pichotta stated it is defined differently. Ross asked if that was in all cases no matter the amount of rooms they are trying to put in. Ruth Wood asked about a situation in Minneapolis where someone wanted to put in an orphanage and the community voted it down, this has her thinking about halfway houses, sex offenders or drug abuse houses. Would those kinds of things be factored into what you are talking about? Pichotta stated that would be a whole other issue. These are commercial rooms for transient guests. Roy stated we have Institutional Use or Community Facilities, not sure which one it would fall under. Chairperson Holst stated we have a definite lack of hotel/motel space in Pierce County. Quite a few people talk about tourism but we have no place for people to stay. We're a drive-through destination. If we want to grab money out of them we need to provide lodging and do what we can to enhance our abilities to get these types of facilities as long as they are in the right place. Sanden stated he agrees but say there was a nightmare lodging situation, if we have a conditional use permit we have the ability to address impacts if that were the case. He stated he likes the idea of the conditional use permit and opening it up to Light Industrial. Ross asked about siting examples "such as", does the language need to be more specific. Roy stated "such as" is a good phrase. Pichotta stated it's not all encompassing. Sanden asked if there are any other zones that this would be applicable to. This does give them more control. Pichotta stated he didn't think you would want them in an agricultural district and we have the rural residential district. The other option is industrial and in some cases it might be appropriate. Chairperson Holst stated as we get to larger lodging, we will want them on city sewer and water. He thinks if someone comes in with a plan like a Metropolis, they would have to seek a rezone. Pichotta stated after we get our guidance today, over the next month or so, we will be bringing this back with specific language. Chairperson Holst stated we have reached consensus on this item.

Large-Scale Retail

There is no current classification or definition for Large-Scale Retail. Any application would be processed as General Retail and Services. A Land Use Permit and Site Plan Review would be required for any new construction in the Commercial district but there is no ability to deny the permit or to require consistency with town comprehensive plans. A Large-Scale Retail operation could open within an existing structure, with a valid General Retail and Services use, within the Commercial District without the requirement of any permit or review. This is, however, unlikely given the lack of existing large structures capable of housing such a use. Potential impacts and concerns include traffic, parking, lighting and noise. Incompatibility with surrounding uses could potentially result in conflicts. The LMC may wish to consider the likelihood of an application for this use in an area without municipal water and sewer services or whether this use could be established without construction of a new structure or addition to an existing structure which would require Site Plan Review. A potential definition of Large-Scale Retail is: "A shopping center, mall or free standing site whose primary use is or was a retail sales facility with at least one tenant or occupant located in a fifteen thousand (15,000) square foot or larger building or structure." Staff is seeking guidance as to whether Large-Scale Retail should be classified as a "stand alone" use and require the issuance of a Conditional Use Permit and whether any other zoning districts would be appropriate for this use. Sanden stated that by definition he feels they would have to build a structure. What if a big-box retailer comes in and we decide that it requires a new intersection and we want to pursue developer fees to pay for the intersection. Does it give us any more leverage if it goes through site plan review? Pichotta stated you could probably pursue broader conditions with a conditional use permit. Typically site plan review is more mitigating, layouts of parking lots, that sort of thing. Having a conditional use permit would be helpful given the complexity of permitting something like this. He questioned whether we would actually see one in the unincorporated area given that we don't have municipal sewer and water. Sanden stated he doesn't want to put up any more road blocks for development but seeing how it is a big operation and having a look at it would be a good thing. Ross stated his concern is if the conditional use permit gets issued and they come back for renewal and a different committee would look at things differently and make it tougher for them, we would be sitting with a big, empty building if they decide to pull out because it got too tough. Pichotta asked if Jim is asking if the conditions could be read differently by a future Land Management Committee. Ross stated if someone didn't want the big-box store there, they could interpret it differently to try to make it more difficult for them to stay. Pichotta stated that could happen for any use. Once you have established a conditionally permitted use, you have to have a valid reason for pulling the plug on it. There are some legal concepts that prohibit you from doing that. Chairperson Holst stated we're looking at something that probably isn't going to happen or isn't going to happen very soon. He agrees with Dr. Sanden; what kind of hindrances do we want to put on something that might not happen or could be beneficial. It would be great to have a conditional use permit to say that these are the things that you have to abide by. Pichotta stated we don't have any large commercial districts and if it was limited to a commercial district, they would have to rezone and a rezone has to be consistent with the Town's comprehensive plan. Retail and Services is allowed in the Light Industrial District and that would be a conditional use permit there. Consensus was to leave this alone. Pichotta stated it can always be revisited later.

Adult Entertainment

There is no current classification or definition for Adult Entertainment. Any application would be processed as General Retail and Services. A Land Use Permit and Site Plan Review would be required for any new construction in the Commercial district but there is no ability to deny the permit or to require consistency with town comprehensive plans. As such, an Adult Entertainment operation could open within an existing structure within a Commercial Zoning District without the need for any permit or review. Potential impacts and concerns include traffic, noise, property devaluation, morality issues, increased potential for criminal activity and incompatibility with surrounding uses. Potential definitions to clearly define Adult Oriented Entertainment Business uses are:

* "Adult Oriented Entertainment Business" – an adult bookstore, adult theater, adult massage parlor, adult sauna, adult entertainment center, adult cabaret, adult health/sports club, adult steam room/bathhouse facility, or any other business whose primary business activity is characterized by

emphasis on matters depicting, describing or relating to nudity, sexual conduct, sexual excitement or sadomasochistic abuse.

* “Nudity” – the showing of the human male or female genitals or pubic area with less than a fully opaque covering or the depiction of covered male genitals in a discernible turgid state and/or the appearance of bare buttocks, anus or female breasts.

* “Sexual conduct” – acts of masturbation, sexual intercourse, or physical contact with a person’s unclothed genitals, pubic area, buttocks or female breast.

* “Sexual excitement” – the condition of human male or female genitals when in a state of sexual stimulation or arousal.

Other restrictions may be appropriate for this type of use. Setbacks from other uses – such as schools, libraries, churches, parks, playgrounds or daycare facilities, residences or residential districts should be considered. The LMC could also consider restricting the sale of intoxicating beverages in conjunction with such use. Staff is seeking guidance as to whether “Adult Oriented Entertainment Business” should be classified as a “stand alone” use and require the issuance of a Conditional Use Permit, whether this use should be allowed in any other zoning district and whether additional restrictions should be placed on the establishment of this use. Sanden stated that in cities they often restrict these types of uses to Industrial Districts. Pichotta stated we can do that, the first step is to make it a “stand alone” use separate from General Retail and Services and then identify appropriate districts for it. Chairperson Holst stated it isn’t the committee’s position to regulate the sale or use of intoxicated beverages. That is up to the townships to do it. He doesn’t have a problem with it being in an industrial district. Roy asked if they mean only in industrial. John Eager asked what that does to the bars in the commercial area that are already there. Chairperson Holst stated that an existing adult entertainment would become a pre-existing nonconforming use. Any new one would have to rezone and that would have to be consistent with the Town’s Comprehensive Plan. Then it would come here and the chances of us allowing the rezone of a one acre parcel probably isn’t going to happen. Ross stated he is OK with it being in the industrial district. Sanden stated he has an issue with the potential definitions in the Adult Oriented Entertainment Business. Adult massage parlor, adult sauna, adult health/sports club; what makes a place that does chiropractic massage to mostly adults, what is the difference. Roy stated looking at the last sentence that states “any business whose primary business activity is characterized by emphasis on matters depicting, describing, or relating to nudity, sexual conduct, sexual excitement or sadomasochistic abuse”. Sanden stated he would like to see that sentence first. Pichotta summarized the discussion stating that LMC director was that this would be a “stand alone” use, and would be conditionally permitted in an industrial district. Roy asked if there should be setbacks from schools, parks, etc. Ross asked if the industrial districts are already enough out of the way from those things. Pichotta stated there are some industrial districts that butt right up to rural residential districts. He asked if the committee is comfortable with the concept of setbacks from other uses and districts. We will just present some options about typical setbacks. Aubart asked if anyone has looked at the litigation of these things. Pichotta stated he will ensure that any language proposed will meet legal requirements. Mr. Eager stated you are not saying they cannot have them, you are just saying where they have to be. Chairperson Holst stated that if we put a setback on them of 1320 feet, we are basically telling them they can’t have them. Pichotta stated we can take a look at existing districts and check proximity to residential districts and other uses and see what makes sense.

Site Plan Review

The LMC should also consider whether modification of the activities that trigger the need for Site Plan Review is warranted. Currently it is only required for permits for new construction or additions to existing structures and buildings for commercial, industrial, institutional or multifamily uses. Establishing the requirement that Site Plan Review be conducted in situations where there is a significant change in operations for commercial, industrial, institutional or multifamily uses may be helpful in mitigating potential impacts to neighboring properties occurring from a change in use. It should be noted that, similar to a CUP, the LMC has the ability to place conditions on any Site Plan Approval. Pichotta stated what we are asking for is if there was a commercial district with a store front in it that sells flowers, if they didn’t construct any new buildings, they could turn it into car sales. A different use, would create the

potential for different impacts on the neighborhood as well as traffic flow. If we had the ability to review a change in use and if it was of a certain magnitude bring it before the committee for site plan review, that would make sense in some cases where there is a substantial change in use. He noted that he hasn't completely determined how to best create this mechanism. If we could have a change in use permit required and then we review it and if it's substantially different and has a high potential for creating nuisance issues in the neighborhood we would refer it to the Land Management Committee. Aubart asked what a substantial change in use is and what would trigger that review, would conversion to a "head shop" trigger a review? Pichotta stated we could try to come up with some language that includes changes in what is sold that may have impacts on the neighborhood. Aubart stated that is a real problem with municipalities that you don't have the say over what goes into a store front. Pichotta stated he understands his point and will work to include that in the definitions. Chairperson Holst stated that if the committee isn't comfortable with proposed language we can always throw it away. Mr. Eager stated once you start with the buildings, you are going to affect how small businesses grow. Pichotta stated the thought was to identify when a substantial change in use would result in obvious impacts to the neighborhood. We're not trying to hammer small business, just simply trying to head off issues before they occur. Ruth Wood stated one thing that comes to mind is the use of resources, environmental impacts like noxious gases, etc. Roy noted that uses that have noxious fumes or dust already fit the definition of heavy industrial. So if someone moves in to a site and they are creating those, the mechanism is there to stop that use at that site. Pichotta stated that his intent in bringing this forward was to consider putting in place a simple mechanism to catch those uses that would create nuisance impacts to the neighborhood that weren't there prior. Staff directed to bring language back for LMC consideration.

Discuss update to Department fee schedule. Staff Report – Brad Roy: The Action Plan contained in Pierce County's adopted Comprehensive Plan calls for an evaluation of the Land Management Department's existing fee schedule to ensure that fees recapture 75% of cost of providing a given service. The current fee schedule was adopted in 2004 (Resolution 04-16) and was also intended to recover 75% of program costs. The Comprehensive Plan also suggests utilizing a fee structure that "provides incentives to produce the activities or outcomes that the County wants to "encourage" and disincentives for activities or outcomes that the County wants to "discourage." Please consider the following excerpt from a document titled "Context for discussion of Pierce County's Comprehensive Plan" for further explanation:

Goal, Objective and Policy Language

Throughout the comprehensive plan the terms "encourage" and "discourage" are utilized frequently. The meaning will vary depending upon context.

- The County will consider goal, objective and policy statements that "discourage" a given condition or use – as not prohibiting the specific action – but as a statement that the condition or use is not the preferred outcome, except when relating to rezones (map amendments). In cases of rezones (map amendments), language discouraging the establishment of a use (or type of use) at a given location shall be interpreted as not supporting the establishment of that district at that location – if the town in which the rezone is proposed does not have a comprehensive plan. In cases where a town does have a comprehensive plan, the appropriateness of a proposed rezone shall be determined based on its consistency with that town's plan. (*Management Policies for the Entire County*)
- The county will strive to create processes and a fee structure that provides incentives to produce the activities or outcomes that the County wants to "encourage" and disincentives for activities or outcomes that the County wants to "discourage". (*Management Policies for the Entire County*)

To elaborate, in cases where the county plan "discourages" an activity – that activity should not be viewed as prohibited, but recognized as something that Pierce County wants to discourage county wide and for which a strategy to discourage that activity will be pursued. For example, the objective; "Discourage residential subdivision development on productive agriculture land" doesn't mean that residential subdivision development is prohibited on productive agriculture land – but that Pierce County will pursue

strategies to discourage the subdivision of productive agriculture land throughout the county through the establishment of a process and/or fee intended to make initiating that activity less attractive (i.e. fee could reflect full cost of service). Conversely, an activity that is to be “encouraged” might be subject to a simplified process with lesser fees. In the past, the Land Management Department Fee Schedule has “discounted” permits for many agricultural activities with lower fees. This past practice would appear to be consistent with the directive contained in the most recent Comprehensive Plan as agricultural activity and the preservation of agricultural lands continues to be an “encouraged” activity. It should be noted that Wisconsin Statute 66.0628 stipulates that any fee that is imposed by a political subdivision shall bear a reasonable relationship to the service for which the fee is imposed.

Discussion

LMC direction on the following issues/questions is necessary for staff to begin the development of a fee schedule proposal:

- Does the LMC want staff to pursue an amendment of the Land Management fee schedule at this time?
- Does recovering 75% of the cost to provide a given service remain a reasonable goal?
- Does the LMC support the concept of establishing a financial incentive (lower fees) to produce the activities or outcomes that the County wants to “encourage” and a financial disincentive (higher fees) for activities or outcomes that the County wants to “discourage”?
- If supportive of the above concept – are fees that recapture 50% of the cost to provide a given service a reasonable incentive for activities the County wants to “encourage” and is it a reasonable disincentive to recapture 100% of the cost for activities the County wants to “discourage”?

Staff Recommendation: Staff recommends the LMC consider the above information and provide general direction to staff regarding fee schedule development.

Ross stated that he is OK with the way the fees are and anything that increases the fees at this time when the economy is still trudging along wouldn't be favorable. It seems a little cumbersome to him to try and decipher between encourage and discourage throughout the entire comprehensive plan. The most important thing, to him, is to encourage business to come here. We need to continue for the County to grow. Chairperson Holst stated when the 75% number was decided on, we had a development boom going on. We could tell developers anything and they would pass that cost on to their customers. He isn't sure that remains a realistic or achievable goal. He feels we should modify that number or get rid of it. It doesn't affect the fee schedule and we can adjust that when things are better. Sanden asked if there is an estimate of what the department generates. Pichotta stated that wasn't the department as a whole but just the zoning subset. There are several different components to the Land Management Department; Planning, Zoning, GIS, Surveyors, Land Records Modernization; it was just one budget that includes the Zoning Administrator salary, the assistant, as well as Brad and the Zoning Secretaries. Chairperson Holst asked if the Planners budget was in there also. Pichotta stated no, the 75% directive doesn't recognize that much of his time is spent on zoning issues. Aubart says 75% of that division is that what we're talking about? Pichotta stated that the zoning budget is somewhere around \$350,000 and we are attempting to recoup 75% of that. We actually did better than that for several years but it may not be feasible to recoup fully 75%. Instead of changing anything, maybe as we make changes, say we decide to change site plan review and we decide there should be a fee associated with that, we can address that at that time. Rather than do a wholesale look at the fee schedule, what I'm hearing is the economic climate isn't in a good place for it. Many of the fees would likely be increased because typically fees don't go down. As far as “encourage” versus “discourage” that has little to do with business. It mostly has to do with a conversion of agricultural land to residential uses. Aubart stated the 75% is a goal or a target, if we don't make the 75% it comes out of the tax levy. We're paying the bills; He doesn't think we want to remove the target. Sanden stated if someone argues that we should lower the fees, then we can say we're not meeting our goal. Pichotta stated we're not out of line at all on our existing fees when looking at neighboring municipalities. Sanden stated after the second part about “encourage” and “discourage” and having

different fee structures for each; on one hand he appreciates that for a good mechanism for “encourage” and “discourage” and it wouldn’t be quite as arbitrary since we already have the words in the comprehensive plan, but on the other hand, the whole idea of having schedules as how we see something is not what he likes to see. Ross stated that part bothers him also. Sanden stated he would be against the dual fee structure. Pichotta stated that he didn’t see this as creating a dual fee structure and that from a legal perspective the proposed mechanism works. Committee came to a consensus to do nothing to the fee schedule at this time.

Discuss take action on recommendation regarding re-election of LMC Citizen Members. Pichotta reported: The 2-year terms of Land Management Committee (LMC) members Joe Fetzer and Eric Sanden will expire in April 2012. Shortly after their last election to the LMC, the term of appointment for the LMC Citizen Members was increased from 2 to 3 years (Ordinance 11-02). Therefore Mr. Fetzer and Mr. Sanden’s re-election would be effective through April 30, 2016. Pichotta stated he spoke with Mr. Sanden and Mr. Fetzer and both graciously agreed to continue to serve. Staff suggests the LMC forward a recommendation to the County Board of Supervisors supporting the re-election of Mr. Fetzer and Mr. Sanden as citizen members. Chairperson Holst stated we have two really fantastic citizen members on the committee. **Ross moved to re-elect Citizen Members Joe Fetzer and Eric Sanden to the Land Management Committee and forward a recommendation to the Pierce County Board of Supervisors/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are two requests at this time, one is for Mr. Kleinhans, the Zoning Administrator to attend the WCZA Spring Conference April 4th & 5th in Mosinee. He will only be attending one of the days. It looked like, in review of the sessions, the one day was clearly more applicable. There is a WCZA, Administrative Assistant training on March 27th at the Chippewa County Courthouse for Shari, Jacki and Tricia to attend. **Aubart moved to approve the travel/training requests/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for Private Outdoor Recreation Use for Lost Creek Ranch for Lynette Weldon in the Town of Martell.

We have requested the City of Red Wing be in attendance to talk about their plans for 2013 at the Red Wing Airport and also give us a status report on the zoning overlay effort. We don’t know if they are going to make it, they have requested that they be able to submit a report and we have told them a representative needs to be present.

Motion to adjourn at 07:25pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 6, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 20 th , April 3 rd & 17 th , all in 2013.	Chair
3	Approve minutes of the February 6, 2013 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for an Asphalt Plant in the Industrial District for Monarch Paving, owner on property located in the NW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼, Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on proposed language to regulate adult entertainment, lodging, and large scale retail.	Roy
7	Discuss update to Department fee schedule	Roy
8	Discuss take action on recommendation regarding re-election of LMC Citizen Members.	Pichotta
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, February 6, 2013

Present: Joe Fetzer, Jeff Holst, Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 20th, March 6th & 20th, April 3rd & 17th, all in 2013.

Approve Minutes: **Holst moved to approve the January 16, 2013 LMC minutes/Ross seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit, pursuant to Pierce County Code, Chapter 240-76A and 240-37A, for Expansion of an existing Nonmetallic Mining Operation in the General Rural Flexible and Primary Agriculture Districts, for Wisconsin Industrial Sand Company, agent for Kathleen Gordon & John Thayer, My Course LLC, Cynthia Hanson and Holst Farms Inc/MOAP LLC, owners on property located in parts of Sections 33, 34 and 35, all in T25N, R17W, Town of Hartland, Pierce County, WI. Jeff Holst recused himself from discussion and voting on this item due to possible conflict of interest. Chairperson Fetzer invited Rich Budinger forward: Mr. Budinger indicated that Jeff Himes will be presenting their request. Mr. Himes stated he is here along with Rich, Mark Krumenacher, Michele Maxson and Eric McLeod. Mr. Himes explained that they are requesting a new portal but aren't sure at this time where it will be located. It won't be used for production but a secondary entrance used for emergencies. They are also requesting vents but not sure where they will be located at this time either. Mr. Himes reviewed Wisconsin Industrial Sand's accomplishments, community impact and donations. They are pleased to be part of this community and a continuing business. Mr. Himes also noted that, in addition to the proposed expansion, they are requesting that the committee modify condition #7 of the existing CUP to state that real property owners within 1000 feet be notified before any planned blasting, via e-mail, text, phone, etc provided they request to be notified.

Staff Report – Brad Roy: Roy noted that Wisconsin Industrial Sand made this application whereas the other permits for this operation were requested by Wisconsin Specialty Sand. It's the same company and in some of the conditions Wisconsin Specialty Sand may appear but it's all owned by Fairmont Minerals; one company. The existing mining operation began in 2006. In 2008 the hours of operation were expanded to 24 hours a day. The CUP was last renewed on June 6, 2012. This expansion would eliminate the old CUP and the whole operation would be under this new CUP if granted. The applicant is now requesting expansion of the mining area into the Town of Hartland. No operational changes are requested. The proposed expansion would extend the mining tunnels into the Town of Hartland. Above ground disturbance would be limited. The applicant is proposing a secondary emergency exit from the underground mine on one of the expansion parcels. The secondary exit will not be used for production ingress and egress. The proposed expansion encompasses 13 parcels totaling approximately 516 acres. The primary use of the land is either agriculture or forested and undeveloped. Other area uses include low-density residential. The entire mining process takes place underground using room and pillar mining.

The sandstone will be mined in parallel tunnels approximately 30-feet wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The tunnels allow for the internal washing, sizing and storage of the sand. The blasted sand is screened and taken to an underground classifying area where the sand is sized and dewatered. Approximately 90% of the water is recycled. Water is supplied by two 1000 GPM fresh water wells, typically only one is used. High capacity wells are permitted by the WDNR. The sand is trucked offsite to a processing facility in Hager City. The trucks enter and exit the site directly from STH 35, in the Town of Isabelle. Groundwater elevation is mapped at approximately 720 to 740 feet mean sea level. The lower level of the mined sand is approximately 800 feet mean sea level, or about 60-80 feet above the groundwater table. The use of flocculants in the dewatering process has caused concerns from the general public regarding the possible contamination of groundwater. The use of flocculants is permitted by the WDNR which monitors the type and limits the amount used. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce dust from roadways during periods of dry or windy conditions. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. Concerns have been raised in other “frac sand” mining operations about the health effects of silica dust.

*In 2011 the DNR conducted a Silica Study to describe what is currently know about sources, health effects, exposures, controls and the regulatory status of silica in Wisconsin as well as in other states and countries. The Report states *“A recurring theme from the literature review and survey is that very little conclusive information exists regarding sources, controls or levels of silica present in ambient air. This lack of data means it is not currently possible to determine conclusively whether or to what extent the quantity, duration or types of silica emissions in the state may be a public health concern.”*

*On November 11, 2011 a group of citizens submitted a petition to the DNR for the promulgation of rules to govern respirable crystalline silica. That petition was denied on January 30, 2012. Deputy Secretary Matt Moroney concluded that: *“Because silica emissions are a component of particulate matter emissions, existing regulations that govern fine particulate matter can be used to control these emissions.”*

Wisconsin Department of Safety and Professional Services establishes uniform limits on permissible levels of blasting to reasonably assure that blasting does not cause injury, damage or unreasonable annoyance to persons or property outside any controlled blasting site area.

*SPS 370 addresses “unreasonable annoyance” as well as injury and damage to persons or property by requiring a pre-blasting survey, adherence to established blasting schedules, use of seismographs meeting minimum specifications and control of adverse effects.

*WISC will use controlled blasting techniques to minimize ground vibrations and seismographs to measure and document the resulting ground vibrations. WISC will offer pre-blasting surveys to residents or owners of dwellings or other structures and respond to claims of impacts.

A ventilation shaft may be needed in the future to provide clean air to the underground mine. The exact location of any potential shafts cannot be determined at this time. They are typically located on flat, easily accessible, leased property with access paths for maintenance and monitoring. In the past staff had received numerous complaints regarding trucks not being tarped, but have not received any such complaints recently. Roy noted that the last complaints received about this were in 2010. Within the past year staff received a complaint from an adjacent landowner regarding the required blasting notification. The neighbor stated that no notification has been given prior to any blasting. Staff contacted WISC about this complaint and was informed that all neighbors had been notified of the blasting schedule and have been given the option of having notices sent to them via phone, text or email before any blasting. The Town of Hartland recommended approval of this request without reference to its comprehensive plan on January 8, 2013. The conditions associated with the existing mine are listed #1 - #26 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends this conditional use permit be granted with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, Mine Safety and Health Administration and other agencies if required.
2. Applicant shall submit written verification from all real property owners granting access to the abandoned tunnels of which WSS will be accessing pursuant to this CUP.
3. Applicant shall submit verification of lease agreements before mining is conducted and before mining is conducted within the 100 foot setback to parcels of which WSS does not hold the mineral rights, subject to condition number 5.
4. Applicant shall comply with the conditions recommended by the Town of Isabelle. The Town of Isabelle recommended approval of this request on March 22, 2006, subject to the following conditions.
 1. A map of the facility and underground tunnels shall be posted conspicuously at the site.
 - a. This same map shall be provided to the Town Clerk of the Town of Isabelle and emergency officials.
 - b. This map shall be updated semi-annually
 2. A site stability study shall be completed by a professional engineer qualified for such work.
 - a. The stability of the site shall be monitored by a qualified professional engineer annually.
 - b. A copy of the engineer's report shall be made available to the Town of Isabelle
 3. The groundwater shall be monitored by professionals qualified to perform such work.
 - a. Check all wells within 1000 feet of company wells. This is the same as county requirements.
 - b. The groundwater shall be monitored annually as well as any time the Town of Isabelle deems appropriate.
 - c. A copy of this report shall be made available to the Town of Isabelle.
 4. A reclamation plan shall be prepared-
 - a. In compliance with the requirements of the County of Pierce.
 - b. Including a performance bond to insure that reclamation work can be completed after operations cease or the operating entity ceases to exist.
 5. Hours during which blasting operations can be performed will be unrestricted unless official complaints are registered with the Town of Isabelle.
 - a. Upon receipt of an official complaint to the Town of Isabelle, the Town of Isabelle will advise the operators of the facility of the hours of blasting restrictions.
 - b. Within 24 hours of notification, the operators of the facility shall not perform blasting between the hours of 9:00pm to 5:00am.
 6. Town of Isabelle does not control driveway permits onto a State of Wisconsin highway and therefore cannot approve or deny any such driveway. However, the Town of Isabelle is very concerned about trees on either side of the driveway blocking the view of the drivers on the driveway and the State Highway. The Town of Isabelle strongly recommends that sufficient trees be removed to promote safe vehicular traffic.
5. A 100-foot setback shall be maintained from all property lines for which Wisconsin Specialty Sand does not hold the mineral rights, except for any areas which were granted an exception to this requirement. An exception was granted on the west property boundary of the parcel subject to this CUP. Mining is permitted 57 feet from this boundary.

6. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
7. Real property owners located within 1000 feet of the parcel subject to this CUP shall be given 48 hours notice of any planned blasting. Blasting shall be restricted to six days a week.
8. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells located within 1000 feet of the parcels subject to this CUP.
9. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
10. After the asphalt and road gravel is removed, following mine closure, the road bed shall be graded so storm water will run laterally off the old road bed and not longitudinally down the old profile grade of the road bed.
11. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences and kept current.
12. Applicant agrees that any unforeseen erosion issues that arise during or after construction shall be addressed to the satisfaction of the county.
13. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
14. This CUP shall be renewed every two years.
15. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
16. The applicant shall submit written verification from the Department of Natural Resources that a binding agreement between the DNR and WSS is in place to preserve the conservation values of the existing DNR State Natural Area and associated tunnels. Such agreement shall also address access.
17. 590th Street shall be restored to the satisfaction of the Town of Isabelle.
18. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
19. Outdoor storage of any equipment and/or mining materials shall only occur on the parcel with the mine entrance.
20. Mining shall not encroach within 200 feet of any existing residence.
21. All loaded trucks shall be tarped.
22. A fugitive dust plan that utilizes industry standards and best management practices shall be developed and adhered to.
23. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
24. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
25. WSS/WISC will be subject to control methods deemed adequate by the Land Management Committee for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
26. A groundwater response plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
27. A map of the facility and underground tunnels shall be submitted to the Town of Hartland semi-annually.
28. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.

Chairperson Fetzer opened the hearing to the public. David Esterby, Hartland Town Chair, our last Town meeting was the biggest crowd we have ever had. These gentlemen were there and questions were asked but there was no opposition. It was approved unanimously by the Town Board. They have been

good neighbors and it's a useful product so there is no reason not to let them do it. Sarah Palodichuk, Town of Oak Grove, asked what the percentage of land in the County is the LMC willing to have mined. She stated she appreciates that they are such a good neighbor. She realizes that other businesses aren't good neighbors but it's probably because they don't trash the land. No amount of being a good neighbor can help something that is a nonrenewable resource. They are willing to put a lot of money into being a good neighbor because there is a lot of money in getting the sand out. There is nothing else like it. It concerns her because there is nothing else like it; what happens when it is gone? If it's so valuable, she feels it's equally valuable in the land where it sits currently. She feels there is a right to mine and that it is not all evil. The reclamation process she doesn't understand. She thought the DNR required reclamation above the ground but what's required below the ground? Fugitive Dust, studies are inconclusive, it's not currently possible to determine. This inconclusiveness concerns her. You don't know the answer so you move forward knowing it could be harmful or you don't know the answer and you wait until they have an answer. She believes the DNR is doing a study with WISC in Maiden Rock to learn more about this and there is a study recently put out by Crispin Pierce that raises some real questions. She knows that WISC has attacked Crispin Pierce's work in their CUP application and other places. She is sure they would tell you that it's not valid. Fact of the matter is that the professor has published stuff and it's harmful; not particularly WISC, but sand mines are causing environmental problems because of silica sand. The Trenton meeting when their CUP was approved with WISC, there were comments made about watering the sand and dust. They were asking about the fugitive dust and someone at the table said that if you can't see it they aren't going to spray it. Her concern is the sand you can't see and how does the fugitive dust plan handle sand that can't be seen. That's probably the biggest concern environmentally for the neighbors. Also it said something about the fugitive dust plan addressing windy conditions. If a truck is going 55mph down the road, she would assume that is enough wind that it should apply to all conditions of it being transported. She knows the DNR has a negative reputation right now for a lot of people and she knows that perception is reality for a lot of people. To say that the DNR is handling things is fine; that's the requirement. But she thinks there is still a concern based on the last conversation here about how the DNR monitors silica sand. The last time we were here was when the Diamond Bluff CUP was approved and that is the mine that Oak Grove Township is supposed to be an expansion of. After the meeting she was told by this board that if you would have had that many people here from Diamond Bluff as you do from Oak Grove, we might have been able to do something about it. Basically, she was made to feel like it's not her opinion as a Pierce County resident that matters but it's only the specific Township. That was hurtful to her because she cares about it as a whole, if someone were putting in a nuclear power plant, everyone in the County would have their say. But when it's a sand mine in Diamond Bluff, Oak Grove residents can't talk about it and it's right up to the border. So if there is anyone here from Hartland that doesn't want the mine, and maybe it's totally fine in Hartland, you really should say something because that's the people they listen to. Chris Wacek-Driver, one of the adjacent property owners, not either for or against the mine, the first that she learned of this was a week ago. She travels for a living. She doesn't attend the Township meetings. She has a little bit of a problem with it. She asked if this meeting is to approve this? Chairperson Fetzer stated yes. Ms Wacek-Driver stated she doesn't feel it's right. Chairperson Fetzer stated that's why things are required to be discussed at the Township level first. Frank Peterson, Hartland Township, stated he understands they are proposing to mine in the section his land is located in and he is concerned with this. He asked are we supposed to approve something when we don't understand what's happening? What's in it for us or is it just to take from under us. Pichotta stated mining will only be authorized under the parcels which are identified in the public hearing notice. It wouldn't actually occur under anybody's parcels that haven't entered into an agreement with WISC. It would not be under your property if you did not sign up for that and they would need to stay 100 feet back from the property lines underground if you are an adjacent neighbor. As far as a public notice, it does start at the town level. When anyone applies for a conditionally permitted use we ask them to first go to the Town to get a Town Recommendation. It gives the Town an opportunity to identify local concerns as well as weigh it against their comprehensive plan. Then when we accept an application, we do a public hearing notice which is two insertions in the Pierce County Herald, with the second being 7 days prior to the

actual holding of the hearing and then we send a notice to all property owners within 300 feet of the parcel where the activity is requested on. That is how we get the word out and that is what is required for notification. Ms. Wacek-Driver stated we got the letter that we are within 300 feet so that just means we're a neighbor to the activity going on? Pichotta stated yes, the activity that is proposed to occur. Mr. Peterson stated they would have no right to go under our property unless they get our consent. Pichotta stated that is correct. Cynthia Hanson, owner of one of the properties that is in the application, stated she has been working with Jeff since April on developing a contract. She is here to answer anyone's questions of landowners who would like to know how the process is conducted; the choices that they make and the arrangements that they make with the mine are all individual and tailored to what your needs and desires are. She has not been pressured in any way to do anything that she didn't want on her land. She has a 100 year-old Civil War land grant homestead that has been in her family for this long. She has a recreational property, livestock, 65 acres in the forestry program and is extremely concerned about her water and these conditions. To her satisfaction, every question she has ever brought up to the mine has been met. She is here tonight to answer any questions within the confines of the confidentiality agreement. Charles Brown, Isabelle Township, his family was originally involved with the lease and his step-grandfather opened the mine in 1938, so he has been around it quite a while and their farm is right above it. When this was first proposed to them, they took two years to decide whether or not this was a good idea. They brought in a Nonmetallic Attorney out of the twin cities to do the due diligence for them on their mining techniques and all the agreements. They have been working with this company for three years now. They keep an eye on things also. He has been watching for silica in the valley and he has yet to see a day when there is a lot of particulate matter. He grew up when you would drive down the hill and it was brown down there, the way it was run in the 60's. You have an excellent corporate partner here to extract the sand. We watch the trucks and they are covered now. They are doing a great job and we're glad to have them in the Township. John Girtman, Hartland Township, a landowner asked if the questions were going to be answered before you vote. Chairperson Fetzer stated a lot of them will be answered by WISC. Mr. Girtman stated he noticed the company is going to use a lot of groundwater to wash and it's going to be 1000 gals/minute taken out of the water table and with the years of drought he is concerned about lowering the water level to a point where it's not going to be good. Is there going to be a level that the water table can go down to, making the mining operation shut down so everybody in the County isn't going to be affected by this? Chairperson Fetzer stated we go through our public comments and then answer questions. **Public hearing closed.** Mr. Budinger thanked the committee for taking the time to review their request. He will go through and answer as many questions, Mark Krumenacher, Eric McLeod, Jeff and Michele can jump in as well. A general overview of what they are asking to do here is nothing different than they have been doing for the last five years at this facility, this company in particular. Before we started operating the mine in 2007, there were a number of different operators that had been at the mine since the 1920's. When we talk about industrial sand mining, underground mining, at this facility it is nothing new to this area. The mine was very active in the 50's and 60's. As far as the questions, what percentage of the County, he can't answer that one. Nonmetallic Mining has been a legal land use in Pierce County and also in the Townships that they operate their mines in. Aggregate mining, industrial sand mining has been going on for several years; it's all incorporated into nonmetallic mining. From a mineral usage stand point, as long as we need to use minerals, industrial minerals, nonmetallic minerals, there will always be mining going on. There are strict regulations that are applied to nonmetallic mining, not only in the Townships and the States where the operations are occurring but state wide from Department of Natural Resources in particular. When it comes to water usage, we are required to obtain a high capacity well permit which allows us to pump a certain amount of volume from the well with a maximum usage. The 1000 gals/minute may be listed as the usage on the well but we do not pump at that continuously. We pump when it's needed to resupply our washing operation. The majority of the water is set up on a recycling loop where water that is used to wash the sand comes out and goes into a settling pond and the fresh water is returned right back into the front end. The water losses that we occur at the mine are essentially the wet sand as it continues to dry, the water is returning to the water table and the wet sand is somewhat moist while it is being transferred down to Hager City where the dryer is. So the loss of water

is very low. The high cap wells will run as needed but they are not running all the time. Any adverse effects from the water wells would be identified through sampling procedures or also identified through our existing conditions. Any affects to the water level itself is a regulated use and as far as our impact we would have to fix that immediately. We also provide a positive social impact through our volunteer work and monetary donations but for the most part our sustainability programs. Sarah had made reference that of course they need to do that because they are trashing the land. Budinger stated that he wants to correct that, it's their company, it's their company's culture and they are not trashing the land either. They are managing a natural resource. They consider themselves to be a steward of a natural resource. In balancing environmental impacts and how they manage their business, it's what they do day to day. What they do on site in sustainability programs; they go far beyond compliance and take a tremendous amount of pride in making a positive impact to our environment. They do that many different ways. They have publicized many times as far as the number of hours they put in, the goals that they have for diesel usage, decreases in natural gas, decreases in their energy consumption and their carbon foot print and their tracking of greenhouse gases. The Fugitive Dust Plan that was talked about as far as the suggestion that if they don't see the dust they don't do anything about it - that's not the case. The Fugitive Dust Plan is a proactive plan that addresses any potential areas that could have dust emissions such as a gravel road or any part of the plants that would have stockpiles. They aren't going to have any at this facility. But the Fugitive Dust Plan is a proactive approach with water trucks, dust collection, asphalt and managing their storm water runoff. Reclamation plan is regulated by the State and also the County has adopted NR 135 which is a reclamation plan which typically doesn't include underground. It's for surface structures and it is incorporated to the area of the portals and the ingress and egress from the mining area. What they are putting into the mine; anything they would be putting back into the mine has to be approved at some point during their process of permitting through the Department of Natural Resources. The material they are putting back into the mine is the fine or coarse sand that's screened off at the Hager City plant or any other products that are not salable or marketable. Typically those sands will go into animal bedding locally. We also have a couple construction companies locally that will take sand oversize and undersize but any excess they have to haul back to the mine. As far as air quality, water quality, surface and groundwater, these are all very strictly regulated by the Department of Natural Resources and the County takes it to another level and requires us to do sampling as listed within the conditional use permit. As they go through the mining operation, they obtain permits through the state level and also have to go through this process of conditional use permit to be able to operate a nonmetallic mine on this property as well. They are here at a minimum of every two years to appear before the Land Management Committee to request an additional two-year conditional use permit. We do operate another mine in Pierce County in Maiden Rock as well as this mine so we're very active here at the County and also within our local Townships. Constant communication is required for us to continue our business and any issues we have, we have an open-door policy so anybody can come to the facility and talk to the Plant Manager, Jeff Himes. If Jeff isn't available, leave a message and he will get back to you with any questions or concerns. They value the feedback very highly. It's all part of their continuing improvement. Being the best neighbor is their number one goal. In conclusion, what they are asking for is additional property to add to an existing mining operation. The existing mining operation has been operating since 2007. Before that it has been operating since the 1920's at different levels. This is not a new underground mine, it's an existing underground mine. Because mining is, what Sarah had mentioned, going through resources, they do mine and extract the sand from the acreage that they are permitted for only. In order to continue to do business they have to replace their mining reserves. They always like to keep a certain amount of life of mine or time in front of them to satisfy their Board of Directors that continue to put capital into the business to replace equipment and keep the business successful. Jeff Himes stated he has been with the business for about a year and a half and has worked for a lot of mining companies. He takes exception to comments that they just do this other work because they are raping the land or whatever phrase she used. He has been very impressed with Fairmont's sustainable development process. It is a core value for the corporation. They do this because they want to be a fundamentally beneficial member of the communities they are in. This is a really good business for the region and the community. Sanden asked about the

groundwater test results from WPDES, are we privy to that, do we get updates or do we only get alerted if there is a concern. Roy stated we don't get updates. He isn't completely familiar with the whole process. We would get notified if there was a problem, we don't get annual updates. Sanden asked Mr. Budinger with those groundwater tests results, have there ever been any indication of polyacrylamides or derivatives. Mr. Budinger stated as far as the polyacrylamides, they don't test for them. They look at the suspended solids and the nitrates. There is a list of what they test for in the conditional use permit. As far as the polyacrylamides, there isn't a standard test. Mark can comment on this. There wouldn't be any detectable levels. The levels that they use for flocculants, polymers and water additives is such a small value and when we compare it to water drinking facilities or wastewater facilities, it's a very small fraction compared to what is being used in drinking water. The water additives, the polymers that they use have a designation after them of P for approved use and potable drinking water facility. They are approved from the DNR for drinking water facilities. When we talk about the usage, the amount of water that we have going around through the plant and the amount of polymer that we add, we're not looking for crystal clear drinking water, we're looking for water that's not like chocolate milk. We take the majority of the clays out of it the best we can and the difference is that it is such a small usage that it wouldn't be detectable in the water wells. That's compared to drinking water quality. That's all part of the DNR process as well. They have an approved list that we have to go through and choose which products to do our testing initially. It's a process they went through. If we want to use a product that isn't on the list, they have to submit it to the Department of Natural Resources and go through all the testing and approval process. So they were able to use two of the products that were on the list that are actively being used in Wisconsin for a number of different reasons; from water-drinking facilities to paper mills to a lot of industries using them for similar purposes. The usage is also noted as far as the volume of water additives per gallon that is in our system and it's a fraction of what is acceptable as far as human consumption. As far as the testing procedure and being able to pick up the volume of polyacrylamides, it's only done through mathematical purposes that we know how much is actually within the water. Ross stated he would like to point out a couple things; in terms of the amount of land that's allowed for mining that is hypothetical at this point. Every CUP that comes before this committee is a vetted process as mentioned earlier it's brought before townships ahead of coming to this committee. The process is taken very seriously. We are not just going to allow mines to come in because they say they want to come in. They have to prove they are capable of following those rules. Also the other point, this happened earlier in 2012, a quarry we have on the other end of the County, had not been following their CUP to the letter. It just happened that they followed on the agenda after we had issued a CUP for WISC and what was ironic about it was that the Spring Lake Quarry was coming before us because they had not followed the various restrictions of their CUP so we not only brought them back to discuss the matters, we brought them back every three months. Although this is a two-year CUP, it's not carte blanche. They can't just not follow the conditions and we'll see them in two years and discuss it then. What we did with Spring Lake is brought them back, discussed the issues and had them correct the issues. Many of us on the committee toured the mine to review firsthand that they were following, updating and correcting the issues at hand. Ross stated he wants it to be very clear that this is taken very, very seriously by the committee, the department head and staff. They take the time to follow through. We also believe that all matters are taken seriously by the parties involved. If encroachment was to happen, we would certainly want to know about that and follow up on that. He thinks it's very important that people know and he wants to make it very clear that this is taken very seriously whether it is before the committee at the time or in the future.

Aubart moved to approve the conditional use permit for Expansion of an existing Nonmetallic Mining Operation for Wisconsin Industrial Sand Company, agent for Kathleen Gordon & John Thayer, My Course LLC, Cynthia Hanson and Holst Farms Inc/MOAP LLC, owners, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #28 modifying the references to Wisconsin Specialty Sand to include Wisconsin Industrial Sand Company and modifying #7 to read "Real property owners located within 1000 feet of the parcels subject to this CUP shall be notified of the blasting schedule and be given the option of having notices sent to them

by phone, text or email before any blasting”/Ross seconded. All in favor with Holst not voting. Motion passed.

Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director. Holst moved to convene into closed session/Ross seconded. Roll call vote: Holst-yes, Ross-yes, Aubart-yes, Fetzer-yes and Sanden-yes. All in favor. Passed. 7:05pm

7:45pm Holst moved to return to open session/Ross seconded. Roll call vote: Holst-yes, Ross-yes, Aubart-yes, Fetzer-yes and Sanden-yes. Motion passed.

Motion by Holst/seconded by Ross to grant the Land Management Director a step increase based on a favorable annual review. All in favor. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated there won't be a meeting on February 20th. The next meeting will be March 6, 2013 and noted that renewal of Monarch Paving's conditional use permit for the asphalt plant and for the dredge material site will be on the next agenda.

Motion to adjourn at 07:50pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES – Pierce County Land Management Committee, January 16, 2013

Present: Joe Fetzer, Jeff Holst, Jon Aubart, Jim Ross, and Eric Sanden

Others: Andy Pichotta, Emily Lund, and Brad Roy

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 PM in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 6th & 20th, March 6th & 20th, all in 2013.

Approve Minutes: **Aubart moved to approve the January 2, 2013 LMC minutes/Ross seconded. Holst abstained from voting as he was not present at the meeting. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for an Accessory Residence, pursuant to Pierce County Code Chapter 240-40A, in the Agriculture Residential District, for Jean Busson, owner on property located in Lot 1 Certified Survey Map (CSM) V13 P55 being part of the NE ¼ of the NW ¼ of Section 19, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Jean Busson forward: Brian Busson, Jean's husband, was there on her behalf. They want a conditional use permit (CUP) for the Accessory Residence and put in a septic system to the shed.

Staff Report – Emily Lund: The request is for a CUP for an accessory residence. The property is located in Section 19, Town of Rock Elm. The property is in the Agriculture Residential zoning district. The Rock Elm Town Board recommended approval of this request on 11-12-2012. The Town Board stipulated that the septic system be brought up to code. The applicant owns 8.611 acres and has an existing barn, multiple sheds, house, detached garage, well, and septic. This request is to convert the existing 26' x 27' shed, which was permitted in 7-10-1990, into a cabin/accessory residence. The applicants visit this property to get away from town. In the future, the applicant may move or demolish and rebuild the existing principal residence. The principal residence (existing home) has an existing septic system is sized for 2 bedrooms, consists of one septic tank and two dry wells, and is in the process of being assessed by a plumber. The applicants propose to upgrade the septic system in the spring of 2013, if necessary, or have the accessory residence on its own compliant septic system. Pierce County Code (PCC) s. 240-40(A) allows accessory residences, which are accessory to single family homes in the Agriculture Residential District with the issuance of a CUP. Definitions for Accessory Residence and Accessory Building are provided in the staff report. Pierce County Code Chapter 115 Numbering of Buildings and Roads states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. The applicants indicated they do not plan to rent out either residence. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends that the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area. If found to be not contrary to the

above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall hire a Wisconsin Licensed Master Plumber to obtain a sanitary permit and the plumber shall install a septic system for the accessory residence.
2. If both the principal and accessory residences are connected to the same septic system, the applicant shall record an 'Affidavit regarding Common Private Sewage System' on their deed prior to issuance of a sanitary permit.
3. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. If either residence is to be rented to a nonfamily member, applicant shall obtain a separate universal address number for the accessory residence.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked if the square footage of the shed is smaller than the square footage of the primary residence. Mr. Busson stated yes it is.

Sanden moved to approve the conditional use permit for an Accessory Residence for Jean Busson, due to the fact it is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety, or the character of the surrounding area, with conditions #1 - #5/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, General Rural District, and the Primary Agriculture District pursuant to Pierce County Code Chapter 240-37 for Wieser Concrete, owner on property located in Sections 4, 9, & 10, T25N, R16W, Town of Salem, Pierce County, WI.

Chairperson Fetzer invited Red Mears from Wieser Concrete forward: Red Mears said he didn't have anything to add and the plant has been moving the same way it has been the past few years.

Staff Report – Brad Roy: This request is for four nonmetallic mines on the Wieser property. The mining product is used for the production of concrete products. Pierce County issued the original CUP in 1992. Reclamation plans and fees are submitted to Pierce County for pits 1 and 2. Pits 3 and 4 have been issued a DNR Chapter 30 permits which cover reclamation. There are no major changes planned. Volumes of material are dependent on the market needs. Mining operations are located primarily in Primary Agriculture zones. Mining has continued on a very limited basis. Acreage has remained similar since the previous renewal. Roy referred to a chart that shows mining background with 2012 open acres for each mine. The Quarry (#1) on the hilltop is located in Sections 9 & 10 and is the limestone source. Blasting operations are from 8:00 a.m. to 5:00 p.m. several days per year. After blasting, the limestone is crushed and transported to the bottom quarry via conveyor for washing and stockpiling. The mine behind the pre-cast plant (#2) is located in the valley and is mined for sand and gravel. Review fee calculation is \$200 plus \$20/acre, which totals $\$200 + (\$20/\text{ac} \times 40.3\text{-ac}) = \$1,006$ for the four pits. The Chairperson of the Town of Salem was contacted about this renewal and did not identify any concerns. Staff has not received any complaints about the mining operations in the last 2 years. Roy referred to the existing conditions listed 1-13.

Staff recommends that the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Renewal fee in the amount of \$1,006 shall be submitted to the Land Management Department.
2. All required permits shall be kept current with the DNR.

3. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
4. A 100-ft setback shall be maintained from all property lines for all mining activities.
5. The applicant shall notify the Zoning Office if groundwater is encountered.
6. Blasting shall be conducted by a state licensed blaster.
7. Blasting shall take place between the hours of 8am and 5pm.
8. Reclamation shall be completed consistent with the submitted plans.
9. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted annually for all wells within 1000 feet of any mine where blasting takes place. All results shall be provided to the Zoning Office.
10. Any unforeseen erosion issues shall be addressed to the satisfaction of the County.
11. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
12. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
13. The conditional use permit shall expire in 2 years.

Holst moved to approve the conditional use permit renewal for Wieser Concrete with conditions #1 - #13/Ross Seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated that he had two requests. The first being for Rand Kleugel to attend the Wisconsin Land Information Annual Conference in Lake Geneva, WI. Pichotta noted that the County receives a \$300 grant from the Wisconsin Land Information program for his attendance. The other is for Jim Kleinhans to attend a continuing education seminar February 12, 2013 in Eau Claire, WI.

Ross moved to approve the travel/training request for Rand Kleugel and Jim Kleinhans/Aubart seconded. All in favor. Passed.

Future Agenda Items.

A public hearing for a CUP for the expansion of the Bay City mine into the Town of Hartland.
Land Management Director's annual performance review.

Motion to adjourn at 06:14 PM by Sanden/Holst seconded. All in favor. Motion carried.
Respectfully submitted by E. Lund.

MINUTES - Pierce County Land Management Committee Meeting, January 2, 2013

Present: Joe Fetzter, Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Brad Roy, and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzter called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 16th, February 6th & 20th, March 6th & 20th, all in 2013.

Approve Minutes: **Ross moved to approve the December 5, 2012 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Home Business for woodworking and a knife sharpening business, pursuant to Pierce County Code, Chapter 240-36F, in the Rural Residential 8 District for Joel and Margie Swenson, owners on property located in the NW ¼ of the SW ¼ of Section 19, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzter invited Joel Swenson forward: Mr. Swenson explained he is a third generation carpenter/cabinet builder, and a licensed general contractor in the state of Minnesota. He is in the construction business with his brother and has several businesses in Minnesota. He would like to expand back to Wisconsin with custom cabinet work, custom woodworking; fireplaces, mantles and additionally knife and tool sharpening, carbide table saw blades; the works. He thinks it will be a lucrative small business. He has cleared hurdles at the Home Owners Association and the Township.

Staff Report – Emily Lund: The request is for a conditional use permit for a Home Business for ‘Super Sharp Construction Services, LLC’. The property is located in Section 19, Town of Clifton. The area was subdivided by a series of Certified Survey Maps in 2002 and is locally known as Gateway to the Valley-North. This residential development has an active Home Owners Association which administers and enforces the protective covenants. The parcel is zoned Rural Residential 8 and is 4.65 acres in size. Pierce County Code 240-15 discussed the purpose and intent of the Rural Residential 8 zoning district that states “This district is established to provide for residential development in predominantly rural areas not suited for agricultural uses, served by on-site absorption sanitary systems and private wells. The district is intended to protect quality, large-lot residential development from incompatible uses.” PCC 240-36F establishes that ‘home businesses accessory to principal permitted single-family residences’ are allowed in the RR 8 zoning district subject to issuance of a conditional use permit. A two acre minimum lot size is also required. Home businesses are limited to 1,500 square feet in an attached garage or accessory building. The applicants are proposing to utilize their attached 38’ by 32’ (1,216 sq ft) garage to conduct the business, which is consistent with the <1,500 square foot requirement. The proposed business would include building custom furniture, cabinets and woodworking projects, as well as knife and tool sharpening. The garage is fully insulated, heated and dry walled. It contains an insulated dust collection unit that is very quiet and does not exhaust outside. The property includes a large driveway and there is a bathroom located near the service door to the garage. Most work is anticipated to be conducted off-site as Joel Swenson is a licensed general contractor in Minnesota. According to the submitted narrative, the

proposed home business would allow Mr. Swenson to move his workload from Minnesota to his garage and reduce the commute time and gas costs. There will be no outside storage and no new buildings are proposed. Solid waste materials will be disposed of in Mr. Swenson's dump trailers which are located in St. Paul, MN, where he is general contractor. The applicant plans to run the business without any additional employees. The applicant proposes to be open to the public Monday through Saturday 7AM to 6PM and Sunday by appointment only. The applicant proposes to utilize the parking pad north of the garage for three regular parking spaces and one handicapped parking spot that will be located closest to the entrance. PCC 240-54I requires a minimum of one handicapped space be provided. The applicant proposes to utilize one on-premise, free-standing, non-illuminated advertisement sign. The home owner's association covenants restrict the sign size to 4 sq. ft. He proposes to have a 24" by 24" sign. The proposed sign must be located out of the road right-of-way per PCC 240-60C & D. The proposed business and sign have been reviewed and approved by the home owner's association. PCC 240-76G discusses expiration of CUPs and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit". The Clifton Town Board recommended approval of this request on 12-4-2012 stating that the "business would enable Joel to conduct much of his business in Wisconsin instead of Minnesota." The Town did not reference its Comprehensive Plan.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a Home Business for Super Sharp Construction Services, LLC with the following conditions:

1. The Home Business shall be conducted as described in the submitted application. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. Hours of operation shall be Monday through Saturday 7AM to 6PM and Sunday by appointment only.
3. Three regular parking spaces and a minimum of one handicapped parking space shall be delineated.
4. The one advertising sign may be placed on the site as proposed and shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle. Any additional advertising signage shall be in compliance with the Pierce County Code and shall be subject to the issuance of a Land Use Permit.
5. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked if the garage will be used to make the furniture or as a showroom. Mr. Swenson stated mostly fabrication. He has about 250 customers in the metro area. Generally he meets at the client's homes and very rarely will customers come to his home to look at a project in progress. Sanden asked how the materials will be delivered. Mr. Swenson stated he will take delivery or going and getting the materials in his trailers and flatbeds. Sanden asked about the proposed signage. Mr. Swenson stated one 24" by 24" sign which is allowed by the association. Ross stated his main concern is a huge volume of people. Mr. Swenson stated he will be picking up the knives/tools to sharpen and then deliver them back or mail them to the customers.

Sanden moved to approve the conditional use permit for a Home Business for woodworking and a knife sharpening business for Joel & Margie Swenson, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand Co – Maiden Rock Facility, on properties in the Agriculture Residential District owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa, William & JoAnn Steele, Jeffrey Von Holtum and Lost Creek Farms, all in Section 10, 11, 13 & 15, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand Co forward: David Echerdt, Assistant Manager of the Maiden Rock Facility, stated they are here to request renewal of their conditional use permit in Maiden Rock Township. Mr. Echerdt gave a summary of the products produced, number of employees, direct and indirect economic impacts on the community, an account of their annual support, their health and wellness program and environmental awareness, the reduction in water consumption by 50% and partnering with Red Wing Incinerator to recycle everything so they have zero waste. They completed the transition from LP to natural gas and now the Village of Maiden Rock residents have benefitted by being able to also use natural gas. Mr. Echerdt stated that this past year they had relocated and modified their rail load out facility which has helped in reducing train switching, a reduction in noise as it's further from the Village and residents, fewer emission points and less sand on the rail. Another major modification was the new wash plant facility which was the key element in reducing water consumption. Mark Krumenacher from GZA, stated the status of the unresolved issue of the damage claim support is mischaracterized in the staff report. We feel condition #11 has been addressed and should be removed. There have been no damage claims in the Village of Maiden Rock. Water sampling started in 2005 and structural surveys were offered in 2009 and 2011. The first Citizens Advisory Council or Community Advisory Committee (CAC) was in December of 2010 with the expansion of the mine and quite a few citizens showed up. The damage claim support is not new to Wisconsin Industrial Sand and was tweaked after the first meeting with the CAC. In March of 2011 a draft of the Damage Claim Response Plan was submitted to the Village of Maiden Rock, it was e-mailed to people and a meeting of the CAC held in April 2011 and folks came and had changes they wanted made. We made changes and resubmitted a draft and in May there was another meeting and no more drafts were submitted to Wisconsin Industrial Sand. In March of 2011, WISC implemented the groundwater sampling plan to satisfy the condition #12. In June 2011, Wisconsin Industrial Sand submitted the damage claim response plan and it was informally or formally rejected by Land Management staff. WISC looked at residences within 1500 feet of the mine rather than 1000 feet which the conditional use permit requires. They went to every property owner and 21 of the 26 people that they talked to agreed it was responsible. Three others understood the plan but were not going to sign anything. The others weren't interested. The staff report states WISC and CAC didn't reach an agreement; that is true. WISC feels they have a valid plan. Michele Maxson stated condition #17, Emissions from the ventilation shafts shall be monitored twice annually and the results shall be submitted to the Town of Maiden Rock and the Land Management Department. They did do a study back in 2010. They monitored up and down wind from the particular vent shaft before and after each blast. The testing was non-detect or way below standard levels. Each time they do a blast they have a MSA Alt Meter which is a 5 Meter and they also test the air underground before they put anybody in the mine. They do this every time as part of their MSHA requirements. Mr. Echerdt stated they go above and beyond to uphold a higher standard. They are good to their employees and good neighbors. They encourage people to contact them directly so they can resolve any issues quickly and professionally. Tonight they are represented by Rich Budinger, Eric McLeod, Michele Maxson, Danielle Dahms, Lauren Evans, Mike Melton, Mark Krumenacher, Al Nelson and Mark Redlin.

Staff Report – Brad Roy: The WISC mining operation encompasses approximately 1,700 acres total with approximately 1,200 acres located in the Town of Maiden Rock. Of the 1,200 permitted acres in the Town, approximately 283 have been mined to date. The mine operates 24 hours a day, seven days a week. In April, 2012 a new loadout facility was constructed which included a conveyor and a rail car loading spout. The new loadout facility is intended to increase efficiency while reducing noise and dust. A fugitive dust plan has been developed for the loadout facility. WISC has begun using a new wash plant with a water recycling system which has reduced the amount of water used. A prior GIS mapping error,

discovered in 2011, erroneously depicted the entire processing plant as being located within the Village of Maiden Rock. Although much of the plant is located within the Village; the Maintenance Shop, Primary Screening Tower and Secondary Screening Tower are located within the Town of Maiden Rock and are thus subject to Pierce County oversight. As these structures were originally permitted by the Village of Maiden Rock, staff sought legal advice regarding the need for County permitting and ultimately determined that no additional permits or approvals would be required for the already permitted structures. However, all future construction within the area in the Town of Maiden Rock will be subject to County permits. Also, if issues relating to the use of these structures arise, it would be appropriate for the LMC to establish conditions intended to mitigate those issues or concerns. An updated Reclamation Plan (per §241) was submitted and approved last year. Tunnels are created by blasting; WISC uses a room and pillar method. The entire mining process takes place underground. Surface activity is largely limited to the processing plant. There are two ventilation shafts in the current mining area that extend up to the surface. A new shaft(s) will eventually be necessary to provide clean air to the underground mine. The exact location of any potential new shafts cannot be determined at this time. There are currently 4 wells on-site. Three of the wells are high capacity wells capable of pumping 1,000 gallons per minute, with the other being a residential capacity well. WISC is currently using one of the three high capacity wells for processing activities. The current mining activity takes place at approximately 800-830 ft. MSL; the Water-Table elevation in this area is mapped at approximately 750 ft. MSL. Blasting typically takes place six or seven days a week; the blasts usually occur around 5:30 pm. WISC has provided staff with updated copies of the operation's Storm Water Pollution Prevention Plan, Spill Prevention, Control and Countermeasures Plan and the Wisconsin Pollutant Discharge Elimination System Permit from the DNR.

- Staff has received past concerns from citizens regarding the mining operation. The concerns include:
 - Health effects of silica dust in the air.
 - Potential depletion of the aquifer.
 - Potential contamination of the aquifer and surface water.
 - Various issues within the Village including safety risks due to truck traffic and railroad use, noise and uncovered trucks.
 - Effects of blasting on wells and structures.
 - Potential decrease in property values.

WISC submitted a Groundwater Response Plan for the facility. The plan addresses the source and use of groundwater within the facility as well as measures to protect the quality of the water. As part of this plan, WISC has installed two transducers and data loggers to continuously measure and record groundwater elevations in two residential water supply wells located within the permitted mining area.

The Town of Maiden Rock recommended approval of the request to expand the mine in 2010. Condition 14 stipulates that the following Town recommendations shall be complied with:

- Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
- The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
- The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.

The current conditions are listed in the staff report #1 through #15. There is an unresolved issue regarding Condition #12. *WISC and the Citizen Advisory Committee shall develop a plan for WISC to respond to damage claims to wells or structures by surrounding land owners. The Land Management Staff shall receive a copy of the agreed upon plan; any failure to comply with the plan will be brought to the Land Management Committee.*

- WISC and the Citizen Advisory Committee were not able to reach an agreement on a damage response plan.
- WISC developed a plan referring to structures and wells within 1500' of the active or former underground mine boundaries.
- A WISC generated Damage Claim Response Plan was submitted to staff which outlines procedures for submitting a claim if a property owner believes their well or structures on their property have been affected by WISC activities. It also provides a timeline for WISC to respond to those claims and correct the situation.
- 21 of the 26 residents within the 1500' area have agreed to the plan.

Staff is proposing additional conditions due to general concerns regarding industrial sand mining:

- A fugitive dust plan be developed for the processing facility and submitted to the Zoning Office.
- The operator shall provide notice to the County of any orders to cease and desist from MSHA.
- Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.

The Town of Maiden Rock was contacted regarding this renewal. Residents have expressed concern to the Town about air emissions from the ventilation shafts. WISC performed air monitoring test in 2011 and submitted the results to the Town. There has been no additional air monitoring since then. The Town of Maiden Rock would like for air monitoring to be conducted at the ventilation shafts twice a year.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5 am up to four times per week, including Saturday.)
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
5. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
6. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
7. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
8. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
9. This permit shall expire in two years.
10. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
11. WISC and the Citizen Advisory Committee shall develop a plan for WISC to respond to damage claims to wells or structures by surrounding land owners. The Land Management Staff shall receive a copy of the agreed upon plan; any failure to comply with the plan will be brought to the Land Management Committee.
12. The Town of Maiden Rock's recommendations/comments shall be adhered to.
13. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current studies suggest a significant public health threat from such emissions.

14. A fugitive dust plan shall be developed for the processing facility and submitted to the Zoning Office.
15. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
16. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
17. Emissions from the ventilation shafts shall be monitored twice annually and the results shall be submitted to the Town of Maiden Rock and the Land Management Department.

Roy stated staff removed conditions #4 and #13 regarding reclamation plan and groundwater. The only additions are conditions #14, 15, 16 & 17. We would like clarification from the committee on condition #11.

Sanden asked about the Town of Maiden Rock and the monitoring of air from the ventilation shaft. Roy stated that past results have shown no issues. The Town believes it would just provide neighbors with peace of mind that it is continually being monitored. Sanden asked which standard they are using. Ms Maxson stated that is the OSHA air quality standard, MSHA, EPA and NAAQS. Aubart asked about condition #11, who sits on that committee and where do they get their authority? Roy stated there is no formal authority. It is a group of citizens working with the mine to resolve issues. Knowing that, we put that in as a condition that since there was already an open dialog between the groups and it seemed to be a good format for coming up with a damage response plan. However, looking back, it might not have been the best method. Aubart stated his concern is that you wouldn't ever know who will be on the committee from month to month. How do you get to a claims plan and are we going to satisfy everybody? That won't happen. Roy stated when the condition was placed, all of the potential problems were probably not considered and it was hoped that a consensus could be reached. Sanden asked if the CAC and the MRCC are the same. Mr. Budinger stated no, CAC is an open meeting where they discuss what's going on at the plant, groundwater, air quality, truck traffic, economic development, blasting, damage claim response plan, etc. There was some success with the CAC on the damage claim response plan. The document is a result of the discussion and it got to the point where they couldn't agree on details anymore so WISC decided to go to the neighbors that would be affected and engage them. Negotiations with the CAC had broken down and it was difficult for us to make any progress at that time. The CAC continues but it is different people that come and go. Sometimes there are as few as two people there and sometimes there are 15. Different questions come up each time. During the last two years we've gone through a huge construction phase. So there are a lot of questions about the new wash plant and usage. MRCC is Maiden Rock Concerned Citizens, a group that was created in the Village. They are a different entity that represents the Village. Ross stated he wanted to clarify, when Brad read the staff report, he read blasting takes place 6 – 7 times and he just wants to be clear that it is 3 to 4 days a week. Roy stated the mine corrected us and it is 6 – 7 days a week. Aubart asked about condition #17 the emissions monitored twice annually. He asked Brad what his thought was on that. Roy stated the expectation would be that this would be done semi-annually, once in the middle of the year and once at the end. Not just two at the end of the year to get them done. Ross, if we aren't getting good participation in the CAC, maybe it's OK not to have that in there. It seems it's such a heavily regulated industry anyway and there is a lot of information available to people. Aubart stated CAC meetings for information are really good but when trying to come to an agreement it's a lot more difficult. If it went back to the Township or to a specific group, we would be a little more successful. In this format he doesn't see how it would work. Sanden asked Pichotta what are the advantages or pit falls of having them working with the Town of Maiden Rock. Pichotta stated that he believed it to be very appropriate to ask them to work with the Town. Typically, if someone is requesting a CUP, we ask them to go to the Town first to secure a recommendation. It seems that might be an appropriate avenue for this particular issue also. Chairperson Fetzer noted that the LMC members had received a letter in the mail this afternoon, and asked Pichotta to read it into the record. Pichotta stated that this is a response to Wisconsin Industrial Sand Company conditional use permit request by Fred Harding, Maiden Rock. Pichotta read Mr. Harding's letter verbatim. The letter raised concerns about two conditions from the 2011 conditional use permit that the MRCC feels were not met satisfactorily; damage remediation plan and air quality monitoring. Mr. Harding provided links to several internet sites for information regarding studies on these subjects and offered recommendations to rectify the concerns. Chairperson Fetzer stated that he didn't receive this

letter until late today and he likes to do some background checks on information and he didn't have time to access the sites. The rest of his information came to him last week so he had time to go through and process things. This doesn't happen very often but he would appreciate information coming in earlier. Fetzer suggested that there is typically plenty of notice that issues are coming up for discussion by the LMC.

Aubart moved to approve the conditional use permit renewal for Wisconsin Industrial Sand Company with conditions #1 - #17 amending condition #11 to read "The proposed Damage Claim Response Plan shall be presented to the Town of Maiden Rock for review and a Town Recommendation regarding the proposed parameters secured within the next 6 months"/Sanden seconded. All in favor. Passed.

Discuss take action on a request for a rule exception to the road frontage requirement pursuant to Pierce County Code 237-26C on property owned by Mary A. Qualls, located in the SE ¼ of the SE ¼ of Section 14, T27N, R18W, Town of River Falls, Pierce County, WI. Chairperson Fetzer invited Laurence Murphy forward: Mr. Murphy stated that he represents Mary Qualls, with him is Carl Beers, who proposes to purchase the property from Ms Qualls, and Jerome Rodewald, Town of River Falls Zoning Administrator. Ms Qualls has approximately 40 acres in River Falls Township served by a private easement. She would like to downsize and use this access to a 10 acre parcel and attach the 30 acres to Mr. Beers' property which would give him 90 acres. It's a nice road going in that serves five parcels. In doing this, they are not looking to create another building site. This parcel has no road frontage. The Town of River Falls took a look at it.

Staff Report – Emily Lund: This request is for a rule exception to the requirement that any lot created under Chapter 237 (Subdivision) have 66 feet of frontage on a public or private road. The applicant owns 40.1 acres, plans to retain 10.001 acres with the proposed CSM, and plans to sell the remaining land to adjoining property owner, Carl Beers. The proposed CSM contains approximately 49 feet of frontage along 780th Street, which in her opinion is a private road, which is not enough to satisfy the 66' road frontage requirement. If a rule exception to the frontage requirement is not granted, it would be necessary for the applicant to purchase additional land with road frontage in order to achieve compliance with the Subdivision Code. The property is located in Section 14 and is subject to Town of River Falls Zoning regulations. Pierce County Code Subdivision of Land 237-26C states "Every lot in a land division shall front or abut on a public or private street for a distance of at least 66 feet unless a rule exception is granted by the Land Management Committee." Pierce County Code 237 regarding Rule Exceptions states,

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception."

River Falls Town Board approved the CSM on December 17, 2012. River Falls Town Zoning Administrator, Jerome Rodewald, indicated that private road 780th Street was created in 2001 before the Town had established a private road standard (adopted 2002). The Town indicated this private road has the maximum parcels allowed on a private road. If the road were to serve additional residences it would need to be brought up to town road standards. The requested rule exception would not increase the number of residences served by the existing private road, but would allow the Qualls to transfer land to the adjoining land owner and retain their home on a 10.001 acre parcel. An alternative to a Rule Exception would be for the applicant to purchase additional land from the south adjoining property owner, the Wisconsin DNR. This would allow the land division to comply with PCC 237 because it would allow this lot to abut or front the private road for a distance of at least 66 feet. However, the purchase of public land from the DNR may not be a feasible option.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this situation warrants a rule exception.

Sanden asked if additional residences would result in the future could we go back and require additional frontage or upgrading the road to Town standards. Lund stated she believes that is a zoning regulation of the Town of River Falls to monitor. Once this is recorded it has been a severed piece of land unless someone would add onto it later it is a completed deal. Pichotta stated no additional parcels are being created, the 30 acres is being transferred to an adjoining property owner. It is allowing an existing situation to continue; instead of the house sitting on 40.01 acres it will be sitting on 10 acres. Sanden stated so if it were to be subdivided in the future it would go through subdivision and there it would be addressed. Mr. Rodewald stated that one option would have been to create a lot greater than 15 acres so a certified survey map and a rule exception wouldn't have been necessary.

Sanden moved to approve the request for a rule exception to the road frontage requirement pursuant to PCC 237 for Mary A. Qualls as the requested rule exception will not nullify the intent and purpose of the subdivision ordinance/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Jim Kleinhans to attend a WOWRA (Wisconsin Onsite Wastewater Recycling Association) Conference in Stevens Point on January 24, 2013.

Aubart moved to approve the travel/training request for Jim Kleinhans/Ross seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Public hearing for an accessory residence in the Town of Rock Elm

Renewal of conditional use permit for nonmetallic mining for Wieser Concrete in the Town of Salem

Motion to adjourn at 07:18pm by Ross/Sanden seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 2, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: January 16 th , February 6 th & 20 th , March 6 th & 20 th , 2013.	Chair
3	Approve minutes of the December 5, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Home Business for woodworking and a knife sharpening business, pursuant to Pierce County Code Chapter 240-36F, in the Rural Residential 8 District, for Joel & Margie Swenson, owners on property located in the NW ¼ of the SW ¼ of Section 19, T27N, R19W, Town of Clifton, Pierce County, WI	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand Co – Maiden Rock Facility, on properties in the Agriculture Residential District owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa, William & JoAnn Steele, Jeffrey Von Holtum and Lost Creek Farms, all in Section 10, 11, 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
6	Discuss take action on a request for a rule exception to the road frontage requirement pursuant to Pierce County Code 237-26C on property owned by Mary A. Qualls, located in the SE ¼ of the SE ¼ of Section 14, T27N, R18W, Town of River Falls, Pierce County, WI.	Lund
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, December 17, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta and Tracie Wold

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 7th & 21st, February 4th & 18th, all in 2015.

Approve Minutes: **Holst moved to approve the December 3rd, 2014 LMC minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on bids received for a one-half ton, extended cab, 4 wheel drive pick-up truck to be utilized by the County Surveyor.

Staff Report: On September 30, 2014 the Finance and Personnel Committee authorized the transfer of funds (\$30,000) from Personnel line item of the Surveyor Budget to the New Equipment line item and authorized the purchase of a replacement vehicle for the County Surveyor. Bid specifications were originally distributed in mid-October, however, only one bid was received and that bid exceeded the available funds. Bid specs were distributed to Cernhous Chevrolet, Ellsworth Ford-Mercury, Quinn Motors-Ellsworth & Roen Ford- River Falls. Two dealers submitted bids prior to the deadline.

Ellsworth Ford-Mercury:

- 2015 Ford F-150 Supercab 4x4 5.0L V8 \$29,118.28
- 2015 Ford F-150 Supercab 4x4 2.7L V6 Ecoboost \$28,478.28
- 2014 Ford F-150 Supercab 4x4 5.0L V8 \$26,923.28.

Ellsworth Ford-Mercury notes that a 2015 truck would need to be ordered and would take approximately 10-12 weeks for delivery. The 2014 truck would be secured from another dealer and could be available in approximately 1 week.

Cernhous Chevrolet:

- 2015 Chevrolet Double Cab 4x4 4.3L V6 \$27,600
- 2015 Chevrolet Double Cab 4x4 5.3L V8 \$28,600, both are base models.

Staff Recommendation: Staff recommends that the Land Management Committee select the lowest and responsible bid and authorize the Land Management Department to purchase that vehicle from said bidder.

Holst moved to approved the purchase of a 2014 Ford F-150 Supercab 4x4 5.0L V8 for \$26,923.28/Ross seconded. All in favor. Passed

Discuss take action on Travel/Training Requests. Pichotta stated that there were no travel or training requests at this time.

Departmental Update and Future Agenda Items. Rezone in the Town of Trenton for Wisconsin Industrial Sand and a CUP for Industrial Use also by Wisconsin Industrial Sand down in the Town of Trenton. Weiser Concrete renewal of CUP for nonmetallic mining in the Town of Salem.

Motion to adjourn at 6:03pm by Holst/Ross seconded. All in favor. Motion carried.
Respectfully submitted by T. Wold

MINUTES - Pierce County Land Management Committee Meeting, December 3, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Dillon Hayes and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 17th if needed, in 2014. Pichotta stated that meeting will be needed. It would be our desire to go with the 1st and 3rd Wednesday's in 2015, as has been the habit for the last several years. Consensus was to follow that schedule for next year's meeting dates.

Approve Minutes: **Ross moved to approve the November 19, 2014 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Fetzer not voting due to his absence from the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Agriculture Residential District pursuant to Pierce County Code Chapter 240-67A(2), for Sagstetter Triple Star Farm Inc, David Sagstetter, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Dave Sagstetter forward: Mr. Sagstetter explained that he would like to add a garage onto the house so he doesn't have to go up and down steps and make it more level to get in. He has slippery steps and it will head to the west.

Staff Report – Dillon Hayes: Mr. Sagstetter is requesting to expand the existing residence on his property. The west wall of the house is currently 98' from the centerline of County Hwy S. He intends to add a 24' x 24' attached garage on the west side of the existing house. Access to the garage will be located on the north side of the building and the west wall would be approximately 74' from the centerline of County Hwy S after construction. The 40 acre parcel is located in the Town of Rock Elm. Pierce County Code §240-27B states "the required setback for all structures fronting on county highways shall be 100 feet from the center line of the road or 67 feet from the edge of the right-of-way, whichever is greater." In Pierce County Code §240-67A(2) additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76. That section states that a conditional use permit shall be required for an addition to or expansion of a nonconforming structure. In this particular case setback averaging was not applicable due to the distance to adjacent buildings. No permit renewal is needed for this request. The septic system is located to the east of the existing dwelling, with the well to the north. The proposed addition will have no affects to the setbacks to either feature. Due to the nature of existing topography in the road right-of-way, it appears that construction of the proposed garage will have a negligible effect on the safety of vehicles travelling County Highway S. The Town of Rock Elm recommended approval of this request on November 10, 2014 without specific conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
2. The applicant shall work with the local building inspector, All Croix Inspections, LLC, to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.**

Sanden asked if Dillon could expand on the second bullet - the reference about the topography having a negligible effect. Hayes indicated that the county highway is lower than the proposed location of the garage so if a car were to leave the highway they would have to travel uphill to reach it. Chairperson Fetzer noted that the property is also located on a corner. It's in a slower traffic area.

Holst moved to approve the expansion of a nonconforming structure for Sagstetter Triple Star Farms Inc, David Sagstetter, with conditions #1 - #3, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural Flexible 8 District for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ of Section 29, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Joe Rumpca & Brad Rumpca forward:

Staff Recommendation – Brad Roy: Rumpca Excavating owns and operates a nonmetallic mine on 80 acres. An expansion was authorized in 2002 through the issuance of a Conditional Use Permit (CUP). The materials mined are gravel and limestone. The operation plan states that 60 of the 80 acres will be mined and extraction will extend to an elevation of approximately 900 feet. The applicant has indicated that industrial (frac) sand is present on the site and that they intend to continue extraction of that material and will seek to construct a wash facility for the industrial sand. The construction of a wash facility would require either issuance of a CUP for a Mining Accessory Use or potentially a CUP for an Industrial Use, which would need to be located in an Industrial district, dependent on the intensity of the proposed use. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road MM. Portable crushing equipment is brought in to make C/5 Gravel, Recycled C/5 and Screened Hard Rock. Trucks are used to haul the product. Blasting is conducted by a bonded professional explosive company. Blasting infrequently takes place on this site. No explosives are stored onsite. Hours of operation are 7:00am to 6:00pm Monday through Friday and 7:00am to 4:30pm on Saturday. Blasting is between the hours of 8:00am to 4:00pm Monday through Friday. Crushing is between the hours of 7:00am to 4:30pm Monday through Friday. A 100 foot setback has been maintained for all extraction. A scale and scale house are located on the site. The neighboring property to the east had previously mined near the property line. If it is determined to have crossed the property line, the applicant would like the ability to mine within the 100 foot setback to connect the two neighboring extraction areas. No complaints have been received about this operation. Staff has contacted the Town of Clifton Chairperson regarding this renewal and no complaints or concerns were reported. The current conditions for the permit are listed #1 - #12 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if it is found that no changes or modifications are necessary to protect the public interest, public health, safety or character of the area, renew this conditional use permit with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-foot setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.

4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of the proposed mining operation.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Dust control measures shall be implemented along haul roads.
8. Hours of operation are 7:00am to 6:00pm Monday through Friday and 7:00am to 4:30pm on Saturday.
9. Recycling of concrete, asphalt and bricks into Class five materials is allowed.
10. Reclamation shall be according to submitted plans.
11. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
12. This CUP renewal shall expire in two years.
13. A new reclamation plan shall be completed if extraction differs from the approved plan on file.
14. Applicant understands that expansion or intensification of this use shall require a new conditional use permit and potentially a rezone depending on the intensity of the proposed use.

Sanden asked about the first paragraph where it states materials mined are gravel and limestone. Then in the second paragraph it states continuing to mine frac sand. Roy stated there shouldn't be the word continue, basically, frac sand is present, they would like to continue mining including the frac sand. Sanden asked about clarifying the neighboring property to the east had previously mined near the property line. If they have crossed the property line then they would like to connect it. Is the neighbor violating the 100 foot setback? Roy stated that mining would have taken place years ago, what's done is done. If it was determined they crossed the property line. Mr. Rumpca stated it did happen long before they ever purchased it. Roy stated it might make sense to connect it. Mr. Rumpca stated if they stay 100 feet they would have a really sharp ridge then it would drop off really fast on the other side into his property.

Sanden moved to renew the conditional use permit renewal for nonmetallic mining for Rumpca Excavating Inc with conditions #1 - #14, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District for Bechel Sand & Gravel LLC, owner on property located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Matt Heath forward:

Staff Report – Brad Roy: The applicant recently acquired the property and continued the existing mining operation. Diesing Trucking received the original CUP in 2006 for this site. Mining had previously taken place on this site, but was discontinued prior to 2001. Because the use was discontinued before 2001, no reclamation had taken place. Sand is mined from the site and waste industrial sand is also stored in the mine. Portable processing equipment is used when necessary. The applicant has been working with the Town of Isabelle regarding the use of town roads. The need for an agreement with the Town of Isabelle when hauling materials from Muskie Proppant is established in Muskie Proppant's Conditional Use Permit. The mine was originally considered "grandfathered." Due to this, activity taking place prior to 2001 was not consistent with many of the mining regulations that are currently in place. All new mining activity has been consistent with the current rules and requirements. The mining site has approximately 3.5 unreclaimed acres; the total extent of the mine will be approximately 6.5 acres. Access to the mine is off of 150th Avenue. Sand screening and sizing equipment is placed on the site when necessary. There is no blasting on this site; sand is extracted with excavating equipment and trucks. There are numerous residences located within close proximity to the site; staff has not received any complaints about this operation. A 100 foot setback will be maintained from property lines for all new extractions. Waste sand from Muskie Proppant's processing facility in the Town of Union is being stored on the site. Staff has contacted the Town of Isabelle Chairperson regarding this renewal. Brad received a phone call

today. The Town has had no complaints or concerns about it. The current conditions #1 - #7 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if it is found that no changes or modifications are necessary to protect the public interest, public health, safety or character of the area, renew this conditional use permit with the following conditions:

1. Hours of operation remain consistent with daylight hours Monday through Friday, Saturday hours will be 8:00am – 4:00pm.
2. Applicant shall receive all necessary permits from other agencies.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. A 100 foot setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement.
5. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.
6. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
7. This CUP shall expire in two years.

Sanden asked Brad if the reclamation plan addresses previous owner's lack of reclamation. Roy stated yes, it will look at the disturbed area and look to reclaim the whole site.

Aubart moved to approve the conditional use permit renewal for nonmetallic mining for Bechel Sand & Gravel LLC with conditions #1 - #7, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the area/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are two travel/training requests. A request for Emily Lund and Dillon Hayes to attend the West Central Zoning Administrators Conference in Eau Claire on December 12th regarding Farmland Preservation and Shoreland Zoning. The second request is for Emily Lund to attend a meeting on December 17th at the Land Conservation Ag Service Center in Baldwin that I have asked her to attend. There will be no costs for either meeting. **Holst moved to approve the travel/training requests for Emily Lund and Dillon Hayes/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Discuss take action on proposed amendments to the Pierce County Farmland Preservation Plan, the Town of River Falls has requested to amend their land suitable for agricultural preservation map that is contained in the plan.

Discuss take action on the truck bids received for the County Surveyor vehicle, Pichotta noted that we have received two bids already.

Motion to adjourn at 6:24pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 3, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: December 17 th , if needed, in 2014.	Chair
3	Approve minutes of the November 19, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for Expansion of a Nonconforming Structure in the Agriculture Residential District for Sagstetter Triple Star Farm Inc, David Sagstetter, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Hayes
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural Flexible 8 District for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District for Bechel Sand & Gravel LLC, owner on property located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, November 19, 2014

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Dillon Hayes and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 3rd and December 17th if needed, all in 2014.

Approve Minutes: **Ross moved to approve the November 5, 2014 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Holst not voting due to absence at the last meeting.**

Aubart moved to amend the agenda to hear item #6 for Todd & Kelly Johnson before item #5 Truck Bids/Ross seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Commercial District to General Rural Flexible District for Larry V. Swanson Trust, owner on property located in the SW ¼ of the SE ¼ of Section 36, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Holst invited Mr. & Mrs. Swanson forward: Larry Swanson stated their son, Eric, wants to buy the house and they will put a mobile home on the property for his mother to live in. Sanden asked what the timeframe on this is. Mr. Swanson said as soon as possible. He needs to be in the house by April.

Staff Report – Emily Lund: This map amendment is for 1.26 acres from commercial to General Rural Flexible. The property is located in Section 36, Town of Trenton. The applicant has a farm business and sells seed corn commercially. The existing house on the property is accessory to the commercial use on the property. The applicant's mother lives in the existing home. The applicant's son, as stated wants to move on the property and the mother would like to live in the mobile home. In order for this to be permitted, a portion of land needed to be rezoned to an agricultural zoning district. The existing parcel is 40 acres, the southern 30 acres which includes the business and house is zoned Commercial. The northern 10 acres of the parcel is zoned General Rural Flexible. The proposed rezone will be for the area around the existing house, but not the business. Existing land uses are commercial, agricultural and residential. Adjacent land uses are agriculture, residential, institutional/school and forested. Adjacent zoning district is General Rural Flexible and Rural Residential 20. Pierce County Zoning Code 240-15 Purpose and Intent of Zoning Districts are listed in the staff report. The soils information is provided. The Trenton Town Board recommended approval of this rezone request on 10-14-2014, stating "Looks ok to 100% of Town Board. Meets the comprehensive land use goal to provide an opportunity for the continuation of agriculture." The Land Use Goals from the Trenton Comprehensive Plan are attached.

Staff Recommendation: Given that the Town of Trenton has recommended approval of this rezone request and has indicated that the rezone is consistent with the goals and objectives of the Town's

Comprehensive Plan, staff recommends that the LMC approve the request and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the hearing to the public. Barry Barringer, Town of Trenton, wondered if when the Town Board or Planning Commission passes judgment on conditional use permits and variances does the Land Management Committee pass judgment on the Towns recommendation. Pichotta stated a rezone is made based on consistency with the Town's Comprehensive Plan, if the Town finds it to be consistent with their Comprehensive Plan, we accept that recommendation unless upon review of the Town's Comprehensive Plan it doesn't appear to be consistent, then we have a policy to kick it back to the Town Board for some additional information. In cases of a variance, a recommendation isn't required simply because a variance is a quasi-judicial function that goes through the Board of Adjustment. If someone makes a judgment as to whether the Town Board was accurate in their determination that it appears to be consistent, basically the committee would review those things and if it doesn't meet the smell test, it would be kicked back to the Town Board. Mr. Barringer asked if this would be considered a spot zone. Pichotta stated it technically wouldn't be considered a spot zone because it is the continuation of an existing district across the road. The existing district across the road is General Rural Flexible so it is an extension of that existing zone. A spot zone is a rezone that one who is similarly situated couldn't expect the same treatment and a rezone that wouldn't be consistent with the Town's Comprehensive Plan. **Public hearing closed.** Sanden asked what the nature of the commercial use is. Holst stated it's an ag supply business. He sells seed corn. They have done this for multiple generations at the same location. Sanden asked if it's the same family. Holst stated yes.

Sanden moved to approve the map amendment (rezone) from Commercial to General Rural Flexible for Larry V. Swanson Trust and forward a recommendation to the County Board of Supervisors/Aubart seconded. All in favor. Passed.

Discuss take action on a request for a rule exception from minimum setback to lot lines in Chapter 237-26H for a 2-Lot Certified Survey Map (CSM) for Todd and Kelly Johnson, owners on property located in the NW ¼ of the NE ¼ and the NE ¼ of the NW ¼ of Section 1, T26N, R18W, Town of Trimble, Pierce County, WI. Chairperson Holst invited Mr. & Mrs. Johnson forward: Kelly Johnson stated they would like to separate two and one-half acres with the house, barn and shed and sell it which would leave about 14 acres. They have already had a driveway permit approved and had a soil test sent in. They would like to create a second buildable lot for future sales.

Staff Recommendation – Emily Lund: This request is for a rule exception from the minimum setback to lot lines for a 2-Lot Minor Certified Survey Map (CSM). The applicants own two lots of record in the unincorporated Village of Beldenville that were created prior to the adoption of the Pierce County Subdivision Code (PCSC). The property is 17.3 acres with a dwelling, garage and farm structures. They are splitting the land to sell as stated. The property is located in the Village of Ellsworth Extraterritorial Zoning (ETZ) District so they reviewed the CSM on 11-17-14 and the Plan Commission recommended approval. On 12-1-14 the Village Board will look at it again. The existing garage is located over the west lot line, so it does not meet the 10 ft minimum setback to the lot lines per PSCS 237-H. Pichotta stated this is a little unusual because we have a structure that extends over an existing property line. He did have a discussion with legal counsel regarding this issue and indicated that it's a situation that should be dealt with by the owners and adjacent property owners. Legal counsel encouraged us to encourage the applicant to do that but it should have no bearing on the decision tonight.

Rule exceptions per PCC Subdivision of Land §237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted

shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The CSM is located in the NW ¼ of the NE ¼ and the NE ¼ of the NW ¼ of Section 1, T26N, R18W, Town of Trimble. Surrounding land use is agricultural, residential and woodland. All property is in the Village of Ellsworth ETZ District, so they have zoning and density oversight. The CSM cannot be approved or recorded if the LMC denies this request even if the Village approves the request. Staff will update the LMC of the Village of Ellsworth Plan Commission decision at the meeting.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Sanden stated we are looking at a minimum setback issue. Is it the garage that is in violation? He asked the applicants how long that garage has been there. Mr. Johnson stated 60 – 70 years. Sanden asked if there have ever been any problems with the neighbors. Mr. Johnson stated oh no, Roy and Bev Berning, two nights ago at the Town meeting he stated it's been there for sixty years and they have no issue. Lund stated there used to be a railroad that ran through there in the 30's so a lot of the houses popped up. Mr. Johnson stated theirs was probably one of the first in Beldenville before the Big Horn and Clyde's. Holst stated he lives in a small unincorporated village and most of their buildings are on somebody else's property so this is nothing new. Pichotta reminded the committee that they need to state a rationale for the decision. **Sanden moved to approve the rule exception from minimum setback to lot lines in for a 2-Lot Certified Survey Map for Todd and Kelly Johnson based on the precedent of the garage being there for over fifty years and no issues have arisen with the neighbors in that time/Ross seconded. All in favor. Passed.** Holst suggested the applicants talk to the neighbors and get a Quit Claim Deed because neighbors change and they aren't always as understanding.

Discuss take action on bids received for a one-half ton, extended cab, 4 wheel drive pick-up truck to be utilized by the County Surveyor. Pichotta reports: On September 30, 2014 the Finance and Personnel Committee authorized the transfer of funds from the Personnel line item of the Surveyor Budget to the New Equipment line item and authorized the purchase of a replacement vehicle for the County Surveyor. Bid specifications were distributed in mid-October to four different folks. We received a single bid from Cernohous Chevrolet out of Prescott for a 2015 4.3 liter V6 Chevy Silverado for \$31,000. The bid notes that the vehicle could be outfitted with a 5.3 liter V8 for an additional \$975. As you are aware even if it is for the 4.3 liter V6 exceeds the amount of money available.

Staff Recommendation: Staff recommends because the bid exceeds the available funds, the Land Management Committee reject the bid and authorize staff to redistribute bid specs to other area auto dealers. He has reason to believe that we will receive a few more bids this time. Some folks had intended to respond but for whatever reason did not.

Aubart moved to reject the bid and resubmit bid specs to other auto dealers/Ross seconded. All in favor. Passed. Aubart asked if we need to get this done in 2014. Pichotta stated we need to at least accept the bid in 2014.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Pichotta introduced the Department's newest employee, Dillon Hayes, the Zoning Specialist/Code Compliance Officer.

Departmental Update and Future Agenda Items

Public hearing to consider a request for expansion of a nonconforming structure in the Town of Rock Elm for David Sagstetter.

Renewal request for a conditional use permit for nonmetallic mining for Rumpca Excavating in the Town of Clifton.

Renewal request for a conditional use permit for nonmetallic mining for Bechel Sand & Gravel for the former Diesing pit in the Town of Isabelle.

In your folders is a copy of a press release. This is by the Public Health Department basically announcing an institute for Wisconsin's Health to lead an impact assessment of industrial sand mining in western Wisconsin. A number of health departments are participating including Buffalo, Barron, Chippewa, Clark, Dunn, Eau Claire, Ho-Chunk Nation, Jackson, LaCrosse, Monroe, Pepin, Pierce, Rusk, St. Croix and Trempeleau. He just wants the committee to be aware before you start to hear and see things in the press.

Motion to adjourn at 6:22pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, November 5, 2014

Present: Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Absent: Joe Fetzer & Jeff Holst

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 19th, December 3rd and December 17th if needed, all in 2014.

Approve Minutes: **Sanden moved to approve the October 15, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for rule exceptions to the minimum lot size established in Chapter 237-26A, from minimum setback to lot lines in Chapter 237-26H, from minimum lot width at building setback line in 237-26G and to erosion control plan requirements in Chapter 237-17A(3)(a) for a 3-Lot Major Certified Survey Map (CSM) for John Schade, Kenneth Van Allen and Robert Sanden, owners on property located in Government Lot 3, SE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Ross invited John Schade, Kenneth Van Allen and Robert Sanden forward: John Schade stated they are here to get their lots approved. The Town Board and the Town Planning Commission approved the CSM.

Staff Report – Emily Lund: Each applicant has an existing lot of record with dwellings and other structures present that were created prior to the adoption of the Pierce County Subdivision Code (PCSC). Their existing legal descriptions are long, confusing metes and bounds descriptions. The applicants sought Johnson & Scofield surveying to complete a CSM to make the legal descriptions shorter, clear and accurate. The existing lots are smaller than the 1 acre minimum lot size established per PCSC §237-26A. The existing structures do not meet the 10 foot minimum setback to the lot lines per PCSC §237-26H. Lot 4 does not meet the 100 foot lot width at the building setback. This CSM redraws three existing lots and is considered to be a Major CSM per PCSC §237-9B. An erosion control plan is required for the creation of Major CSM per PCSC §237-11 and per §237-17A(3)(a). Staff has walked the site and has verified that no erosion issues are present on the proposed lots. Rule exceptions per PCC Subdivision of Land §237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The CSM is located in Government Lot 3, SE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton. Surrounding land use is agricultural, residential and woodland. All three parcels are zoned Rural Residential 20. The following conditions must be present for a proposed land division to qualify for this type of rule exception (LMC policy):

- No roads are being constructed as part of the land division.
- No erosion problems are present on the property.
- There are no problems with stormwater or surface water flow on the subject property or that originate on the subject property.

No roads are being constructed as part of this proposed land division.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Sanden asked Emily if she could put this in layman's terms; what is going on is they had it by metes and bounds and they want to get it surveyed to clean up the description and in so doing they discovered it was below the minimum lot size or are we actually looking at a brand new CSM? Lund stated Dr. Sanden is right, there was metes and bounds descriptions, which is a paragraph reading versus having a map. Having a map recorded gets rid of all the changes. They had land sold back and forth to help create it and clean it up. Lot 4 is too narrow. It's only 80 feet wide and a lot of the buildings are less than 10 feet from the lot lines. Sanden stated this was all just discovered because the survey was done. They haven't changed anything? Pichotta stated they are cleaning up an existing situation. A lot of times when you have surveys that were done 50 years ago and surveys that were done 100 years ago, that are small lots that overlap in some cases. This cleans all of that up. The reason they hired a surveyor to do this was to clean it up. It wasn't that this was discovered through the process. These issues were known with these existing lots. This is to make a messy situation clean. **Sanden moved to approve the rule exception to the minimum lot size, minimum setback to lot lines, minimum lot width at building setback line and to erosion control plan for a 3-Lot Major Certified Survey Map for John Schade, Kenneth Van Allen and Robert Sanden/Aubart seconded.** Pichotta stated as part of the motion it should be mentioned that this will not have the purpose of nullifying the purpose and intent of the Subdivision regulations and that it is consistent with the language in the code. **Sanden amended his motion to include the wording "in approving the rule exception, finding that strict compliance with the regulations will not result in a better design and that substantial justice will be secured and the rule exception will not have the effect of nullifying the purpose and intent of the chapter."/Aubart stated his second stands. All in favor. Passed.**

Discuss take action on a request for approval of a 3-Lot Major Certified Survey Map (CS M) for John Schade, Kenneth Van Allen and Robert Sanden, owners on property located in Government Lot 3, SE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.

Staff Recommendation – Emily Lund: This request is for the approval of the CSM itself. It was previously discussed and the committee approved a rule exception so therefore staff recommends that the Land Management Committee (LMC) approve this major CSM with the following condition:

1. The applicants pay the Department the CSM review fees in the amount of \$425.

Sanden moved to approve the 3-Lot Major Certified Survey Map (CSM) with condition #1 for John Schade, Kenneth Van Allen and Robert Sanden/Aubart seconded. All in favor. Passed.

Discuss take action on a request for a conditional use permit renewal and potential modification for Valley Vineyard by Rudy Jungwirth, owner on property located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Brad Roy: The applicants operate Valley Vineyard Ltd, which first received a Conditional Use Permit for a Farm and Home Based Business in 2008. Grapes are grown and the wine is produced onsite. Guests can sample the wine and purchase bottles in a tasting room. Last year the LMC

suspended the permit due to noncompliance of the condition requiring the development and implementation of a Waste Stream Management Plan. The permit was renewed on November 6, 2013 after the Waste Stream Management Plan was finalized and implemented. There have been no operational changes since the renewal. Commercial activities take place in the accessory structure to the residence. Screening has been established as required by the LMC. A certified plumber inspected the septic system and determined it to be in proper operating condition. The hours of operation are Wednesday through Sunday, 10am – 6pm. Staff has not received any complaints about the operation since the last renewal. Staff contacted the Town of Oak Grove Chairperson, Sara Palodichuk, regarding this request and if complaints were received by the Town. Staff did get a response after the report was mailed out and no complaints have been received by the Town. The existing conditions are listed in the staff report #1 - #14. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether any additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area, if none staff recommends renewal of the permit with the following conditions:

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking with one space delineated for handicap parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The hours of operation shall be Wednesday through Sunday, 10am to 6pm.
7. Food served shall be incidental to wine tasting and must not require a food license, no “carry in” foods shall be allowed.
8. Activities outside the scope of this CUP (including catered food service) may be authorized by the Oak Grove Town Board consistent with the Town’s Special Event Ordinance.
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. Applicant shall discontinue the use of the audio bird repellent.
11. This permit shall expire in one year, renewal may be granted by the LMC.
12. Winery waste water and by-products shall be disposed of in a manner consistent with the DNR/DSPS approved Waste Stream Management Plan. Full implementation of Waste Stream Management Plan (including installation of winery holding tank) shall be completed prior to December 16, 2013.
13. If a new owner wishes to continue the business with the established conditions prior to the permit expiration, a proposed business/operations plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.
14. Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).

Pichotta stated there are neighbors present. They may want to make comments. Ben Huppert and Mike LaCasse are present but have no comments. Sanden asked Brad, just to repeat, there have been no complaints, the noncompliance issues have been addressed, the screening has been in place? Roy stated yes, that is correct. Pichotta noted that condition #11 states the permit shall expire in one year, renewal may be granted by the LMC. You could consider whether a two year renewal would be appropriate, you could consider the potential for an administrative renewal. It depends on how comfortable you are with the use. Sanden asked if it was appropriate to add unless complaints are received? Pichotta stated typically we don’t say complaints, we say compliance issues. The reason being, one could file a complaint simply to get it in front of the committee, which could be OK anyway but to use the word complaint ... Ross stated it opens it up. **Sanden moved to approve the conditional use permit renewal for Valley Vineyard by Rudy & Cathy Jungwirth with conditions #1 - #11, amending #11 to read “this permit**

shall expire in two years unless compliance issues arise. Renewal may be granted by the LMC. Aubart asked if Dr. Sanden wants administratively if there are no compliance issues? Aubart stated he doesn't have a problem with that. Pichotta stated if there are compliance issues, it will come back. Chairperson Ross stated let's leave it. Roy stated there were 14 conditions. Sanden amended the motion to include conditions #1 - #14/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a request for a Rezone from Commercial to General Rural Flexible in the Town of Trenton

Discuss take action on bids received to replace County Surveyor vehicle

Motion to adjourn at 6:18pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, October 15, 2014

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 5th & 19th, December 3rd and December 17th if needed, all in 2014.

Approve Minutes: **Ross moved to approve the October 1, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Eric Sanden not voting because of absence at the last meeting.**

Discuss potential for air quality monitoring at County conditionally permitted Frac Sand Mining/Processing Facilities. Chairperson Holst invited Wisconsin Industrial Sand Company and Dr. John Richards forward:

Staff Report – Brad Roy: Industrial sand mining operations in the county have raised many concerns from the public. This agenda item is to discuss the air quality standards that are currently in place and to discuss the air monitoring efforts of the industrial sand facilities and any potential need for air monitoring at the facilities. The staff report summarizes many reports and information which were also provided to the LMC for review. Dr. Richards, who conducted the WISC and EOG studies, is here to present those findings.

Staff Recommendation: Staff recommends the Land Management Committee review the information provided and discuss and consider the potential need for air quality monitoring at County permitted mining and processing sites.

Jeff Himes stated crystalline silica is not a new issue to the mining industry. The industrial sand companies formed the National Industrial Sand Association (NISA) seven or eight years ago specifically to address the issue of concerns over dust and silica in mining. The members of NISA are committed to eliminating silica dust as a health hazard in the work environment and around their facilities. Working with the Mine Safety and Health Administration (MSHA), the Occupational Safety and Health Administration (OSHA), NIOSH, the companies that develop methods for monitoring and controlling silica dust in the work place is a group that developed the Occupational Health Program for exposure to crystalline silica in the industrial sand industry and also developed the dust control handbook for industrial minerals mining and processing. These are the benchmarks and the guides they use to control dust in their work environments and eliminate the hazards to their employees in the workplace. Industry has also worked with the EPA and the DNR's in the various states to establish emission standards for particulate matter. Particulate matter is regulated by a number of agencies through permitting and inspection. Particulate matter emissions are controlled in their facilities with enclosures around the equipment, dust collection devices such as bag houses, also water and sweepers for roads and stockpiles. The performance of their process is both monitored internally and by the agencies. Some things they look

at internally is to observe the work place and the work area around the plants for dust. They do stack observation. They have particulate matter monitors in their stacks. They use material in the dust collectors that is ultraviolet. They put it in, pull it up and they can see leaks in the bag house. Using that they measure the differential pressure across the bag houses and they also employ a sampling process that was developed by NISA and the industry and also used by MSHA to monitor dust for the employees. They actually wear monitors for a shift and measure the exposure levels. They are looking very closely at this all the time. Fairmount Sandtrol and three other companies have voluntarily conducted ambient air studies and the results of these studies are what Dr. Richards will go over. Dr. Richards ran this program, pulling and analyzing the data. Dr. Richards serves as the president for Air Control Techniques. He is an expert in air pollution control equipment and performance optimization with over 40 years of experience. He supervised and participated in air emission tests of more than 200 industrial facilities. He has 25 years working with enforcement agencies, establishing standards and training the regulators in the industry. Dr. John Richards explained that he started out in the public health service in the 60's. When EPA formed December 2, 1970 he got pulled in as most people in the public health service did. He started out in enforcement and stayed in that group for about three years that had emerged from a group of two which he was staff and there was a manager. They eventually grew to five by the time he left and now there are thousands. He has had an enforcement exposure and work area for quite a while and he thinks he understands how the agencies work and you will see that come through. He also had a chance to start in the early days of ambient air monitoring. That has been something he has done along with other work but it is not just ambient air monitoring. He does a lot of testing in facilities so we not just see what is at the fence line, they see what is right at the equipment coming off too. That continues to be a major line of work to do the emission factor testing and also stack testing. That is his background in perspective as he goes through this information. Also one other note, he works in many industries from power to cement. Most major industries they have some contact with including a lot of wood products. The one thing you will see is particle size is everything in this business and as you see the evolution of standards from the 60's to now, gradually there has been concern with smaller and smaller particles. So he wanted to define what sizes are of concern now. They have sizes ranging of concern in the business all the way from .1 micrometers up to about a hundred. Just to give you a frame of reference, take a hair and cut it with a scissors, page 2 of presentation, that chart has been used for about 45 years. When it gets up to 100 micrometers, it's so large that it really doesn't travel very far and it makes a noise when it hits the ground. So it's different stuff and it's really not air pollution at that point. When it gets down to .1 micrometers it thinks it's a gas. It stopped having a particular characteristic and you will hear within five to a ten year time frame that there will be a concern going beyond .1 down to about .01. That is called ultrafines but that is not anything relevant to the metal industry. We have had a pollutant here that spans a major range. It's a very diverse set of pollutants all the way from .1 thinking it's a gas to a hundred micrometers thinking it's a rock. The characteristics change considerably across this very broad range. We have to talk very explicitly about the size ranges that are of interest in each of the monitoring programs. He has put three of those in brackets in the document. He goes from 0 to 2.5 in the PM2.5, according to how EPA measures it. PM4 which he will spend a lot of time on tonight goes from 0 to 4 micrometers so it's a little bigger bite of that particular size range. PM10 takes another further bite up to 10 micrometers and there used to be something called Total Suspended Particulate (TSP), which they thought was about 100. If you look at the analyzer's it was probably more like 50. As the regulations promulgated by EPA and picked up by the states like Wisconsin have progressed in 40 years, gradually the emphasis has moved downward into the size ranges. We are basically going to be talking about PM4 and PM2.5. The concerns over some of the bigger particulate really has abated and more concern on the smaller sizes. Sanden stated one of the things he was interested in, from what he read in some of the preliminary reports, was that PM2.5 and smaller were the main concerns because they could get deeper in the lungs. Your studies, very good studies, were using the PM4 which includes PM2.5, is PM4 of that size also a concern for health issues? Dr. Richards stated it's a good question, why PM4 and not some other size category. First, PM4 from the occupational standpoint, is what is called respirable. If we had an exact 4 micrometer particle, that would be the largest one that can get into your lung defenses down into the deep lung and cause trouble. So from

the occupational standpoint, PM4 has always been their standard. Occupational health and environmental are two different fields that have suddenly come together in this area. All the health effects on crystalline silica, almost 100% is on a PM4 basis. In the California office of Health Hazard Assessment back in 2005, they had to set a standard, it was logical for them to say pick a number, pick a size range that is consistent with our health effects data because we have a wealth of that over 30 years and virtually none on any other size category. We are basically matching how California set the standard. Most states have also picked up the same. Actually the smaller you get in that category, the more concern it is and actually the less emissions there are. There is one very complicated curve, a professor at the University of Minnesota did the fundamental research back in the mid 70's that really defined how ambient air particulate behaves and it's become the basis for all standards since then. There are two types of particulate in the ambient air; there is very small stuff called fine mode and there is very big stuff we call coarse mode and there is actually an intermodal gap where there is not much. There are sizes where we don't have much in that size range. The fine mode material comes from power plants and automobiles and some agriculture and it travels hundreds to thousands of miles. You could very easily have Denver fine particulate coming over top of here. Some of your particulate is going to go all the way to New York and over to Denmark before it's done. It goes until it is removed from the atmosphere which is a very slow process. The coarse mode particulate comes from grinding down some material. You have to break it down physically one way or another. You are basically reducing the size. There is a limit to how much energy you can do in a size reduction just like you can't rip up a sheet of paper into a thousand individual pieces. Those are what we call attrition particles. It's really the energy levels that bring the curve on the right down to a zero point, page 2 of presentation. The sources and characteristics of those particulate are entirely different and EPA has tried to recognize that and regulate them as independent groups. They regulate PM2.5, with fine mode particulate standards and regulate the other material with what is now called the coarse particulate or the PM2.5 to 10 particulate. PM10 used to take both of those and mesh them together and it never really worked, caused a lot of confusion, law suits. He thinks EPA has finally gone back to the fundamental science and done a little more coherent job of regulating those two entirely different groups. Dr. Richards explained the curve of the PM4 crystalline silica in the chart on page 2 of his presentation. Sanden asked if the y axis is percent? Dr. Richards explained the vertical axis is a measure of the magnitude of emissions. It's just a conceptual drawing. There are entirely different sets of sources that contribute to this also; agriculture, mining industry are mostly over in the coarse mode; gases emitted from power plants and cars like SO2 and Nitrogen Oxides, organic compounds and ammonia compounds tend to get into the atmosphere as gas, react to form particles and that is how they get down to this size range, it's not a grinding process. It's a chemical process; photochemical or condensation. Ross stated that when Mt St Helen's erupted they said ash came all the way this far. It would be similar to that. Dr. Richards stated that is a pretty violent physical reaction but yes, some of it would drift all the way. Some of that gaseous material, the SO2 from Mt St Helen would react about 4% per hour and drift to the east as sulfates. Particulate is not one category it is really two fundamental categories. There will be three distinctive categories of size of particulate that are really three characteristics of pollutants but the PM4 is one of those distributions. Ross stated the ultrafine is coming? Dr. Richards stated that is basically a power plant and car issue. It's very fine, once it gets out it reacts immediately to grow. It so quickly grows into the fine mode. Previously they have ignored it and now it might not be ignored. As research starts to build there will probably be greater focus on that. A quote for the DNR "Crystalline silica's ubiquitous material is present everywhere from a lot of sources..." so when we start to think about how we are going to monitor around sand facilities we have to realize that we have a host of other sources around us so we're going to expect to have a background concentration and there is going to be some variability in that background concentration. There is hardly any place where you can't find exposed soil. Agricultural operations have always been an issue. A little bit of construction and almost all industry has some crystalline silica emissions to a certain extent. We're in that mix of a lot of sources. The other issue about crystalline silica is it's about 12% of the crust. It's present in every continent. It's present in virtually every state and almost all soil and rock. The fundamental rule is if you disturb any soil or rock you have the potential to get a little bit of PM4 crystalline silica. It's probably the most unusual air pollutant

because it's present everywhere from so many different natural and anthropogenic sources. It's hard to pulverize down to small size ranges and that's one of the reasons the mountains are still there. It didn't just breakdown and blow away. It's a hard material. He didn't really prioritize that but if he did the wind erosion of un-vegetative soil would be the dominant one. If he went regionally out to the west New Mexico, Nevada, Southern California that general area where they have very little rainfall, they are going to have higher background levels than you would have in Wisconsin or if you would go to the southeast. There are standards that have come into place and been in place for quite a while as have agency programs to implement them and enforce them. The PM2.5 standard is 35 micrograms per cubic meter on a 24 hour basis. That's how the measurements are done. It's on a midnight to midnight basis. We get a filter sample that we have already obtained the weight of the filter before the sample, we have the additional weight of the particulate. That's going to be our concentration, our weight then divided by the flow. Very standard measurement 35 micrograms per cubic meter is a pretty low number. Part of the air in this room right now, indoor air, he is guessing, might be at probably 10 – 15 micrograms per cubic meter in here just from walking on rugs and moving clothing. The annual standard is 12 micrograms per cubic meter, just as a background in Wisconsin, the PM2.5 annual concentrations have been decreasing steadily over the last five or six years. You can't take much credit, it's really the power plants out west that are controlling their fine particulate and that's really what is causing that reduction. The reductions we make are being seen in Pennsylvania and New Jersey. This is a federal standard and Wisconsin has to adopt it and they have. Sanden asked what the EPA recommendation was. He thought it was 3 micrograms per cubic meter. Dr. Richards stated he will get to that. That was never an EPA recommendation. These are the federal standards. PM10 is the 24 hour standard. There used to be an annual standard but they dropped that about four years ago because there was no clear health effects tied to an annual number. It used to be 50 and that was taken away four years ago. Ross stated it used to be 50 micrograms? Dr. Richards stated 50 micrograms averaged over a year. Where this was a 24 hour and you can have one exceedance a year and you evaluate it over a three year period. It's your second highest number averaged over three years. This is not an ambient air quality standard that is adopted by EPA and required at the State. This is something that was adopted by California and perhaps they had more motivation to do it because with their topography and climate there's a little more concern. Sanden asked about the ambient being ten times that, isn't that kind of odd? Dr. Richards stated what they did when they set the standard they didn't compare back to PM2.5 or PM10, they took the fairly basis of industrial hygiene health effects data and extrapolated to this number and at the time they had no PM4 crystalline silica data and they did not have a test method. Holst asked if they arbitrarily picked a number out of the air. Dr. Richards stated basically that's what they did. With a great deal of consideration of papers and a lot of debate. There was really no basis. When he was asked to develop a method, when they saw that standard coming into view so at least someone could go out and measure and see what it is. That is when he got into the picture. Prior to that he measured crystalline silica in a lot of other facilities for a number of years. Now they are just trying to adapt to the OEHHA basis which is 4. That is for a 70 year chronic exposure. So they are saying that if you breath 3 micrograms per cubic meter 24 hours a day for 70 years that would be bad. That is on their best judgment of the health effects data. They actually evaluated for convenience over a one year period because no one wants to measure for 70 years. It was an impractical basis. That came out in 2005 and they did a flurry of studies in California to see where people are at. Turns out the numbers are pretty low. They didn't have very high numbers; the highest number was about a 2 microgram per cubic meter single day value when a farmer was tilling his field very close to their upwind monitor. On the worst day, the farmer got the 2 one day. Our downwind monitor really had virtually nothing. We're going to find that agriculture is one of those little sources but we don't think agriculture ever pops up to a 3. The DNR has been monitoring at many sites since 1997. They have been monitoring PM10 since 1988 and actually TSP since the 60's. There was a standard for TSP from 1970 to 1987 and then it was delisted. The mineral industry in Wisconsin has been doing PM10 monitoring since 2011. There used to be a variance procedure but that is now very rarely given. There are at least 13 mines running PM10 monitors right now. The PM4 crystalline silica, there was no requirement from the State to do it. There were enough questions raised that they thought it was in everyone's best interest to get some solid data out there both

for the industry and the communities around the facilities. In this case, they are very much focused on the fence line of the facilities rather than the DNR and EPA samplers that tend to be in very defined community areas but not source specific. They are in a region, like a neighborhood or a mid-scale or a large urban area setting. They are trying to characterize large areas. They are very much looking at local impact at the facilities, what is right at the fence line. If you had a house right across the street what are you seeing, that is the focus of these studies. In trying to develop the sampling methods to do this, they knew they had to have a sensitive technique. This is going back to 2005. They knew they had to have a sensitive technique and a sensitive analysis technique because everything from California and for that matter the pre-OEHHA Days, they knew they would have low ambient concentration so they needed something more sensitive than most EPA sampling. They knew they would have to have multiple monitors because you don't just have one source but others around it, a network and a sensitive set of monitors. So they developed the technique in 2005 and did a flurry of studies and then the interest didn't peak again until the Wisconsin issues were raised about 2010 and 2011. So now they are back using that method. Others have had other local concerns and developed methods independently and they are almost identical to theirs. Everybody that has looked at it has come back to the same basic approach. There are a large number of qualitative samplers that give them an indication of real time of short term particulate concentrations. None of them are sensitive to crystalline silica or tell us what the crystalline silica concentration is. They are all subject to significant interferences and they don't have any benefit of the QA experience that has been developed over 40 years of EPA research and how to monitor air quality. They have a lot of significant down sides. So they have dismissed those. Despite that others have seized on those and tried to make the best interpretation. It's almost impossible to make sense out of the numbers. So they abandoned that. The plants that are using NIOSH600 samplers which are battery powered cigarette size packs that they put on their chests and read what the breathing zone concentrations are, are not sensitive enough for ambient work. They will go down to about 1 ½ to 2 micrometers per cubic meter but they need it to be way lower than that. So they have dismissed those. There is a series of highball samplers that came out in 1989 used extensively and a bunch are sitting around in warehouses but again they are not sensitive enough and the filters had a little bit of quartz in them. Quartz is crystalline silica. That wasn't going to work. They finally came down to the most advanced EPA 2.5 sampler that there is. That is the 2.5 sampler that meets federal reference method standards in 40 CFR Appendix L. That has been extensively researched. They know the performance characteristics. There are extensive QA with it. It's a good basis. They are close to home with what they know with 40 years of method development. They have a great monitor. It's used extensively throughout the country and all they had to do to it was adjust the flow rate which he can do by going into the menu and say instead of 16.7, give me 11.11 liters per minute and he will have a PM4. Holst asked how they settled on that number. Dr. Richards stated it took months and months to settle on that number but they did a series of studies where they took microsphere accurately sized microspheres so they knew exactly what their size was and they challenged the instrument with just that one size and measured the removal efficiency. How much the instrument saw versus how much was in the air. They recreated that curve which is not their curve it's actually the old NIOSH600 personal sampler curve. What they wanted to do was have an instrument for ambient that exactly matched the performance characteristics of the instruments that health effects studies used in plant so they could compare their data with the health effect's data. They don't want to abandon 30 years of health effects data by creating some new method that is a little different and creates questions. He should have mentioned that when he says PM4 they really mean that they are collecting PM4 with a 50% efficiency. It's called the cut size. It is a curve, you don't just get one size absolutely and not the next size. They capture all the way up to 6 or 8 micrometer size particles; that they shouldn't be catching and they don't catch a few that are smaller than they should be. But all the EPA instruments have this 50% cut ties specification. So they just adjusted their flow so their curve exactly matched NIOSH600 and also the instrument manufacturer, after they did their test, they asked them what their data would suggest for it and they came back with the same curve so they had it. An independent conclusion that that instrument and they ceased on one instrument and said they would run that unit. They felt they had a pretty good instrument. The instrument is a Thermo Fisher Partisol 2000i. It's about a \$10,000 piece of equipment; a

very precise flow control, a very good analytical capability so they know their flows, temperatures and everything. There is a filter that goes into the assembly on the right. That is going to be a poly vinyl chloride PVC filter that they slip in and seal and the air will come down through a separator and remove all the stuff that shouldn't be there and take all the stuff that is PM4 and put it on a filter. The operator will come with a cassette holder, pull that out, never having to touch the filter, put it in its holder, carry it back to the shop, unload it and send it off to the lab. The lab will do NIOSH7500 x-ray to fraction on it. They will also measure the PM4 particulate mass so they know total mass, total crystalline silica. This instrument is used all over the US, including the DNR. The beauty of the method is that the agency can, if they want to do PM4 sampling and if they want to check our work, or anybody else that wants to check their work. These instruments are there, there is no cost to adjusting it, there is no cost to using a different filter. It's commercially available off the shelf stuff that they could just do. If anyone wants to recheck them, the equipment is out there to do it. There is nothing proprietary or hard to get. If the agencies want to convert to monitors, more power to them. Ross, how is the height determined and does it even come into play? Dr. Richards stated there is a detailed spec in the CFR about that. That sensor at the top has to be 2 to 7 meters above the ground, according to EPA design specifications. So they have to set it in such a way. They generally set it on a platform up here because we have the snow issue. They like to be able to get at it. The head can't be more than 7 meters above the ground. It also has to have 360 degree exposure to the winds and that's why you see that circular head. There is no bias as to how the wind approaches it. It's going to capture it. Ross asked if he knew how they came up with 7 meters. Dr. Richards stated not a clue. Holst suggested that it's probably the California studies. Dr. Richards said he thinks the 2 to 7 meters has been around since the early 70's. If you went much lower, there would be ground dust and that's why we have the 2. The 7 would be a little harder to figure out. His guess is that it was probably the intake site of the commercial instruments at the time they set the standard. With these they can do a 24 hour operating period. They run it exactly like all other monitors in the state from midnight to midnight. You can set these electronically to start so you don't have to sit out there to start and you don't have to recover the filter at midnight the next day. You set it and it starts on its own and goes off. Their limit of quantification is .3 micrograms per cubic meter which is really what they thought they had to have because the standard is 10 times that. They wanted to be able to characterize down to at least one-tenth of what California thought was a health concern. There are stringent QA procedures which DNR does for all their analyzers and they took that DNR/EPA requirement and they doubled it. They said they would do the QA steps twice as often as they normally do for other studies partly because they had a lot of different operators. They did not operate the instruments themselves. They had someone at the plant that was designated. In the case of Maiden Rock, they hired an individual from the community, one of the plant employees worked part-time on it. EOG hired an individual that came from Minnesota and he went around to four mines and was dedicated to it. Since they had people that were not ambient monitors prior to this, they thought they wanted to have them first get used to doing a QA and then be able to check that there wasn't a month period lapse before they found an issue. They had to have a network of samplers because they had multiple sources of crystalline silica. They would do an upwind, downwind concept. They would put one monitor in the downwind location underneath the dominant downwind location and then put another identical monitor right next to it. It would only operate every fourth sample cycle. They never used that data to characterize air quality it was just to check the other one. They would have one upwind monitor that would give them the air quality approaching the source. In this particular plant the wind almost always went in this direction because there was a mountain not too far and it channeled the winds. In Wisconsin, sometimes the winds would go in the opposite direction. At which point they would re-designate the analyzers for that day. The one where the wind was approaching was the upwind and the one where the wind had passed over the facility was the downwind. If the wind was coming across the facility then they would call it a crosswind and designate that. They would have to analyze their data every single day according to their meteorological data and they would put a met tower at the plant wind direction and wind speed measurements so they would know what those wind directions were. Ross asked what kind of plant? Dr. Richards stated all the plants they are talking about, sand producing facilities. Any plant they do it, they put a met station. They would also sample on the same days EPA and DNR sample

and PCA also. Everybody in the Country samples in the same frequency so if you are on a third day cycle, you are going to sample both on the purple and orange days (from presentation) of the chart. The day of the week you are sampling changes. You get a representative picture. They take the data from these studies and compare them to the DNR data, the EPA data, the Minnesota data, the Illinois data and all of them are taken on the same day so that they know if there is a regional air quality issue they will be able to pick that out. They just adhered to the standard sampling schedule. There is an EOG facility around Barron County that is a mine, Mathy Construction had a facility in Downing, EOG had three facilities in Chippewa County; two are mines and one is a processing facility, the Maiden Rock mine and processing facility here and then down in Monroe County the Cataract Green site. At the time they did the monitoring this was a green field, no activity, it literally was a vegetated field, no farms around it. It was a wonderful site because it gave them a control, no truck traffic, not even any residential traffic. The only cars going onto the site were their individual ones to change the filters. They also had a US Silica site, not too far away, at Sparta in a community adjacent to an apartment complex in a community park right on the north fence line of the facility. The total of those four companies they had nine separate facilities, 19 separate monitoring locations which is starting to approach the scale of a state monitoring network. DNR has 30 PM_{2.5} monitors in the state. At this point they now have 19 monitoring locations for a fairly small population of sources. A pretty large sampling network and a lot of data gets generated from that size of a network. Some of the data presented in two forms, one is an average and one is a maximum. The average number at Maiden Rock, location one was right in the Village along County Road S, near what used to be an ambulance station. Location two was on the southwest corner of the facility, fairly close to State Road 35. Location three was up the hill near the vents of the underground mine up at the top of the hill. In the area the topography channels the wind either upslope to the top monitor or downslope. In both cases it crosses the facility. Location two and three, one of those was always the downwind site. The Village of Maiden Rock site gave them a community reading of what they had. Their averages ran from .07 in the Village to .43 at the southwest site and at the northeast site it was .12. All of them well below 3. This was a year's worth of data. Sanden asked if he characterized location two or three as either upwind or downwind from the site? Dr. Richards stated more often than not, about 60% of the time the wind came from the southwest and was channeled right across the entire facility, right over the top of the vents for the underground mine, up the hill. So they found a spot right up there and sometimes it would come down from the northeast across the facility and go across location two and go out across the railroad tracks to the river. Sanden suggested that location three was the predominantly downwind site. Dr. Richards stated they defined it day by day. They would take the met data and say on these individual days, was the wind going from the northeast to the southwest or the southwest to the northeast. It almost never came from the north because the hill blocks it. Holst asked about the 125 micrograms per cubic meter. Dr. Richards stated that is a typo. It should be 1.25. They had .69 in town, 2.19 at the southwest site and 1.25 on the northwest site. Dr. Richards stated at the Cataract Green site which is their green field site, they had .06 micrograms per cubic meter over a year study and the max was .81. Even in a site that doesn't have any agriculture activity, no construction activity, they had a maximum of .81. This starts their picture of regional variations. It's not a surprising number if it was in California it would be a higher number. The EOG facilities, which there are four facilities, they had more than a thousand 24 hour measurements and they averaged .08 and the maximum was 2.16 micrograms per cubic meter at of all those four. There was one outlier that he did throw out. One day there was a period in one of the mines where they had no activity because they only ran four months a year, no truck traffic but a farmer had right of access across the facility and he was taking silage back and forth for a number of hours. He was literally feet away from the monitor and the wind just carried it right into the monitor. That one 24 hour reading was 8.16. When looking at the lack of mine activity, this is a statistical outlier; it's not related to the mine at all. At Downing they had two facilities, this is a fairly rural area but there is a lot of farming around it. They averaged .1 and 1.25. The maximum are starting to sound fairly familiar from site to site. At Sparta they had the lowest numbers .04 micrograms per cubic meter and a max at .56. Looking at all this different data and they were the only ones that had access to all the different data, the plants didn't see this data from all the other facilities and he isn't sure they knew much of all the other facilities. They could see all

the monitors respond, both upwind and downwind, days they would all go up a little bit and days they would all go to zero, below detection limits and it all behaved the same. When they look at the Wisconsin 2.5 data they see the same pattern. They think they are seeing typical background conditions. All the monitors over a space of about 50 – 60 miles seem to have variations that are very consistent. There is an entirely different set of data prepared by the DNR, cited in their silica study. They took speciation data where there are special monitors that they run. They are actually required by EPA to run them. They run every third day, they take the filter and analyze it for a number of different elements and one is silicon. Silicon is the main component of crystalline silica which is SiO_2 . They took the total silicon value and element value and calculated the total crystalline silica that could be there if 100% of silicon element was present at SiO_2 . This is the numbers that they have for Mayville, Milwaukee and Waukesha, which are unfortunately all located in the southeastern part of the State. But you get a feel of the numbers elsewhere and their averages aren't that much different than what we see and they might even be a little bit high because they assumed 100% is crystalline silica and it's probably more like 50% or 60%. When we look at that air quality and we have that sort of data for every State around this region, we can expand that analysis considerably from what DNR has done. What we're going to see is there are very typical levels. Most of the monitors aren't running anymore because they have been shutting them down out of cost considerations. To the extent that they can get this data, they will be able to see that the regional variation is a very normal part because there are a lot of sources that contribute very little, and that causes some day to day variations. On PM_{2.5} data, this is from a fairly short time frame; October through August of 2013 going into 2014. This was from the Eau Claire DNR monitoring site which is just south of I-94 on the east side of Eau Claire where I-94 takes a turn to the south. This is their daily average PM_{2.5} numbers and they did the sample every six days, not as frequent as Maiden Rock or EOG. They put their PM₄ particulate data on top of that chart. They saw a very good correspondence between their PM₄ particulate matter and the PM_{2.5} data. They took two things out of that: one, their PM₄ data stacks up very well against the DNR data. Two, you get a feel of the daily variations and concentrations that occur. They can start looking at the region variations, not just using crystalline silica data but also tapping into the PM_{2.5} data. Unfortunately, DNR only has one site out this way, that's Eau Claire. They are urban oriented. There are a few in Madison, there are a lot in Milwaukee and there are just a few scattered around. Sanden asked if he is reading it correctly, we are seeing levels of 25, whereas that is like an order of magnitude higher than what you were showing on the previous pages of the presentation where the maximum was 1.25. What is he missing? Dr. Richards explained the lower numbers are PM₄ crystalline silica. They are a very small component of PM_{2.5}. Where now he is talking about total particulate; everything that could be in particulate matter is being measured. The standard is 35 for a 24 hour reading. Of the seventeen hundred measurements, they didn't have a single one where a PM₄ data would indicate above 35. This is a very conservative estimate because they weren't just looking zero to PM_{2.5}, but zero to PM₄. So they have taken a bigger bite and still not approaching 35. He likes these curves because it shows these variations. Air quality is not constant. There is day to day, weather related variations. Sanden stated it shows a beautiful correlation. Dr. Richards stated they have a high correlation. They also had very good co-located monitors when they ran the two monitors. The lab did not know those were co-located. They just got filter numbers. They had excellent correlations between the two samplers. First of all, it told them the samplers were running right and that the operators were doing a good job and the lab was being consistent too. California was an entirely independent study. They had no role in it, no knowledge of it until it popped up on the internet. About the same time they were doing testing in California and sand plants, the south coast, which is LA, did a study at an elementary school in Duarte which is a little east of Pasadena, near Azusa and Irwindale. San Gabriel mountains are just to the right of here. There was a concern about crystalline silica in 2006. They developed a method very much like theirs, slightly less sensitive but no real significance. There were four sand mines, two in Irwindale right on the interstate, both very large facilities. There is one on the western Azusa area and that was a very large sand mine. They had another large one just on the edge of the San Gabriel Mountains. Because of the wind flow, there was either an upslope or a downslope and it would change diurnally. But the wind was always going right across the school no matter how the wind blew. So they put a monitor at Royal Oaks Elementary and he doesn't

show all the data but they averaged .4 micrograms per cubic meter the maximum 24 hour value they got was 1.1 micrograms per cubic meter. They had this natural elevated background because it's a very arid part of the country with fairly frequent high winds. Also very heavy interstate traffic, there were two major arteries going right by this area. So there was a pretty good mix of stuff and the maximum value they had was 1.1. Also he has just seen data from Winona that is also very similar. PCA put a monitor near the main bridge going over Winona and got .3 to .4. They only had two detects in eight months of sampling every six days. As independent people do this we are starting to see the same numbers emerge. It's probably because the characteristics of crystalline silica don't break down. If it did, it would probably effect a lot of different industries and sectors. All the concentrations at nineteen locations were well below the PM2.5 number. There are many sources but collectively all of them are small. If they were to put these upwind/downwind of a large farm, he thinks they would get pretty much the same answer, very little numbers. Even by a large construction site. Wherever you go, there are a lot of little contributions that don't add up to high numbers. There is very extensive control required. This really started in the early 70's as the State Implementation Plans developed regulation to supply the stationary sources, the agencies grew in sophistication. The suite of regulations became greater and greater. So there is already in place regulations designed to monitor and control the sources in the facility. When he does testing now, versus testing in the early 70's, they see a much slower emission rate. That is reflected in the emissions data published by the EPA, some of which he developed. They see that sort of impact of the State regulatory programs. You can look back and over time say the State programs have been effective, the set of regulations is effective, so he is an advocate of the State Agencies. He thinks they deserve some credit for the way this has reduced emissions across the board. There are protections in place and monitors which he thinks are more effective for quick response to problems and correction of issues than a fence line monitor which is telling him what happened four to six weeks after it did. Holst stated basically a fence line monitor is a nonpoint monitor. It doesn't track it back to a point. Dr. Richards stated no it does not, on the other hand stack monitors have an opacity monitor right on the stack. It's reading out every second, actually integrating in the six minute averages and the hour images. That's a continuous reading. Jeff Himes mentioned the static pressure gauges they have across the instruments and that reads out all the time. They can be put into your control system and see the operation. Mr. Himes stated those monitors are in their stacks and (DP) Differential Pressure across the bag house manifold if that goes out of their range, then he receives an email. They are closely monitoring that. It's on the control software and they are expected to react. They will get an email every half hour. Rich gets those emails also so Jeff gets a phone call on the fourth one. Dr. Richards stated there are also visual observation procedures that are not well understood outside of the agency context but both plant operators and agency personnel can use visual techniques to identify a problem. There are standard procedures for doing that and responding to it. There are a lot of those things that have been built in over 40 years. The agencies have not been quiet; they have developed a lot of protective measures which he feels are a quicker response and more directed at the problem where a fence line monitor you know roughly what happened at the end of your property line but you don't know what for weeks and weeks afterwards. Holst asked if in Dr. Richards' opinion if visual monitoring is a necessary part of the equation. Dr. Richards stated it is required in certain areas. They have subpart triple O of what is called New Source Performance Standard (NSPS). They are required on all new facilities to run a visible emission check and then there are also things you can do whenever issues occur. There are two levels of that, a standard method 9 and method 22 version of it. Each of which can be used to identify and respond to a problem. The beauty of that data is you know exactly where you got the issue and you aren't waiting days later. It doesn't persist and you know exactly what you have to address. The things that they have used a lot in plant operation and maintenance programs have more effectiveness than plant fence line monitoring. Its main role was characterizing general conditions of industry and where problems may or may not be. That does a good job of that. For operating a facility, it's a blunt tool that doesn't really give you the kind of timely focused information you need. The data is backed up by a fairly voluminous quality assurance data set because they knew there would be a lot of questions about the data they wanted to be able to have anybody go back through any individual measurement and track it back and have enough data that if they want to go out and do it for themselves,

so be it. They wanted to give them that foundation to just go out and do it. He thinks they will see the same thing they have, just as PCA has seen the same thing and some of the agencies in California have seen the same thing. The QA data is there to help people get some comfort with the data. Sanden stated he has taken more experimental design courses and statistics analysis courses than he cares to remember. He can tell you the study Dr. Richards did, he is to be commended. It's a very high quality study. The co-location of the stacks, that just verifies, the blind analysis, sending the filters in, the third-party company that analyzed the filters had no idea who they were or where the filters came from. It was impeccably done and he has a lot of confidence in his work and is to be commended. Why PM4, when he first read it he didn't think it captured PM2.5 but it does. Dr. Richards stated in the air quality field it's strange to talk about PM4, in an air pollution group, PM4 is not a common term. It's only in the crystalline silica subject area. Occupationally, they talk about nothing but PM4. Sue Galoff, Public Health Director/Health Officer, stated they are here to listen and learn. The comments about the study are echoed by them and they also had two of the toxicologist at the State Health Department look at Dr. Richards' study. They felt it was very well done and had reliable results. They are here to listen and learn and as a resource if there are questions or further information that the committee would like them to help uncover for them. Debbie McClure, Town of Oak Grove, she wanted to also commend the study. She has read a lot of this information prior to coming tonight and happy to see the power point and hear it better explained. She would encourage that the monitoring is something that we keep in place as we go forward with mining within the County. She doesn't know if we need to do it on such an extensive basis since we have apparently a year worth of data. Her own skepticism says she would want to see more than a year but she thinks as we go forward with new mining opportunities, it's a good way to substantiate and validate the efforts that the mining companies are putting into their mitigations. She agrees mitigation control is very good. One question is when we talk about the monitoring in the stacks, what are those readings, what particulate level? Dr. Richards stated you are sending a light beam across the stack and when it does the particulate that is rising up through the stack will scatter light. The loss of the light or what is called the de-continuation of light is opacity. They see a very sensitive indication if there is particulate in there that wasn't previously there. Generally, the monitors will be running zero to 2% opacity which is the limit of the instrument. When they have a bag break, in a bag collector, and suddenly they have dust going out that is going to jump up 30% or 40% and indicators immediately go off if you have had a rise off that baseline value and indicate it. EPA has a requirement to have those monitors in place and very detailed specifications on how they have to run. They are checked on a regular basis so they know that they stay in alignment and they have the proper response. There are checks on the instrument so we can check for drift. They are actually a very reliable instrument. This is about as small a source that they are put on. Mostly they are used for large power plants and cement plants, refineries, etc. They are very expensive instruments. The average opacity monitor or continuous emission monitor might cost anywhere from \$20 to \$50 thousand dollars plus another \$10, \$15 or \$20 thousand more to hook it up. They are about 8 – 10 times what an ambient monitor costs. It's a very sophisticated instrument with more QA requirements than virtually anything they have. It's the primary tool used in the US for monitoring source emissions. You just usually never see it used on such small sources as this. It's very unusual to see such an expensive instrument moved down to such a small source. It's a very good way to check all the enclosed emissions that are picked up through the ventilation system, pulled into the fabric filter, which is a very efficient collector and then emitted. The emissions standards the DNR has promulgated are breathtakingly low. He can't go to any other industry that he works with and see emission requirements as stringent as here. So DNR has certainly been active. Sanden asked for comparison of the MSHA levels that are acceptable within the mine. Dr. Richards stated that is an issue that is changing over time. Right now it's about 100 micrograms per cubic meter with an action level at 50 micrograms per cubic meter, they have to start doing more extensive monitoring and responding. That may change or not. There is a lot of debate going on if they will change that standard or not. Mr. Himes stated generally they go half that for their basis. Sanden stated 50 or 25, 50. Mr. Himes stated if they go to 50, the mine will go to 25. Sanden asked as we start to consider this more in the future and look at things like risk management, in a very general sense, what does this kind of monitoring cost? You've done this for a year or two. He doesn't need an accurate

breakdown, he wondered if they are talking thousands of dollars, tens of thousands of dollars, or millions of dollars to carry on this type of monitoring in the long term. Dr. Richards stated he would give them a few major components so you can see how it adds up. The instruments cost \$10 - \$12 thousand dollars to purchase. They have several instruments on-site already. The accessory equipment that goes with it is probably about another \$5,000. There is a calibrator that has to be recertified each year. There are pumps that you will have to replace and what not. That is the capital cost that doesn't include the costs of installing it; run power out to it and build a platform. There are MSHA standards as to how that platform is built. It's not just building a platform or deck. The filters to analyze for crystalline silica, depending on what lab you use, on average its running anywhere from \$85 to \$120 or \$130 so every day that you do a sample, you have that cost. In addition you have blank filters that have to be analyzed because that is another QA step. Ten percent of the filters that you analyze are blanks that have been charged in the machine, pulled right back out and shipped so you can check the integrity of your entire handling process. So you are going to spend a fair amount to the labs. One of the bigger costs is going to be the labor costs of having someone go out there and change the filter, interrogate the instrument and there is a pretty long list of data he has to write down. They don't trust electronics. They want to see it on paper, a duplicate backup. He will have to spend time to audit the sample every two weeks, do leak checks, every year they will have to do a three-point calibration on it and also there is a requirement for state agencies that they have matched and they have an independent person, which turns out to be them, come in every quarter and do their own audit. They have to pay for them, the troop up here to do that. When all is said and done, they are well into the hundred thousand plus to set up the monitoring network and it can go well beyond that. Some of the studies that he has talked about are substantially above that. Mr. Himes stated that the Maiden Rock study is between \$150,000 to \$200,000 for one year of data. Sanden stated they will certainly have more discussion on this in the coming months. Just to throw out an idea, they have a base line of data showing that they are well below compliance. Maybe for new mines if they don't have the safety protocols that the Maiden Rock mine has, maybe they could initiate a need for monitoring to see if they might be an anomaly. Holst stated this is a lot of data for the lay people to comprehend as opposed to a bunch of guys with funny letters behind their names. Sanden stated they did a good study and it shows that it doesn't seem to be an issue, if he can simplify it to that. Holst stated to the lowest common denominator he came to the same conclusion. That doesn't shirk the committee's responsibility to the community in making sure that every player is as good as the players in this study. Sanden stated he would also say it's very useful to make sure the community is very confident in the committee and that they are keeping an eye on their safety. Even if we expect the outcomes to be favorable, it may still warrant us to require that to show the data and prove it to us. Mr. Himes stated, as you have observed, this study was very extensive over a number of facilities, large body data, well analyzed and the great news is that the air quality in Wisconsin is really, really good. The additional great news is that no single source, particularly mining or agriculture, is contributing to the degradation of the air quality. The industry is going to continue to monitor, a study is starting up at Fairmount Sandtrol Company in Illinois along with some other facilities of a similar scale. They are continuing to build this body of data and watch this as Dr. Richards pointed out from a control standpoint their best tools are the observation, the instant measuring, the visual inspections, stack inspections, looking at if they have dust blowing off the road; that is their best control. In terms of continued monitoring of this type it's historical, after-the-fact, it's a great piece of information to have to analyze but it really doesn't fit well as a required monitoring program to go on a long-term basis. The fence line is too late to use as a control but as they collect their data with the other studies they are glad to continue to share that and bring information forward to the committee. Eric McLeod wanted to follow up with something Dr. Sanden was alluding to as it relates to the permit that they have for the Hager Facility but it's a provision in every CUP that you issue. You have the ability to change conditions in the future if the situation warrants. If data in the future were to suggest that there were a larger concern that you needed to address, you can address it as needed. The reason they are presenting this information is to let the committee know what they have learned. There will be additional information in the future as Jeff said, they would be happy to share with the committee. They have shared it with many others. It's important to them as a company and as an industry it's an important issue. As

future facts arise you can evaluate it and make future decisions. The committee always has that authority. For the time being, they feel pretty good about their track record, the way they have operated their facilities in this County and elsewhere. They hope they can continue to do so, consistent with the conditions that are in the permit. Sanden stated he appreciates them sharing the data because there is a concern out in the community regardless of what they show, they are still on edge.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Rule exception to minimum lot size in the Town of Trenton

Conditional use permit renewal for Rudy Jungwirth

Motion to adjourn at 7:17pm by Aubart/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 15, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 5 th & 19 th , December 3 rd & December 17 th , if needed, all in 2014.	Chair
3	Approve minutes of the October 1, 2014 Land Management Committee meeting.	Chair
4	Discuss potential for air quality monitoring at County conditionally permitted Frac Sand Mining/Processing Facilities.	Roy
5	Discuss take action on Travel/Training Requests	Pichotta
6	Future agenda items.	Pichotta
7	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/3/14)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

Ellsworth, Wisconsin 54011

ZONING OFFICE 715-273-6747

PLANNING OFFICE 715-273-6746

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, October 1, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Jim Ross

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Absent: Eric Sanden

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 15th, November 5th & 19th, all in 2014.

Approve Minutes: **Ross moved to approve the September 17, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Joe Fetzer not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Nursery, in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-35B(4), for Bryan and Lucinda Reuvers, owners on property located in the NW ¼ of the SW ¼ of Section 9, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs.

Reuvers forward: Mr. Reuvers explained they are requesting to change their conditional use permit from a Farm and Home Based Business to a Nursery permit.

Staff Report – Emily Lund: The applicants obtained a permit to run a landscaping/retail home business on January 21, 2005. The business grew beyond the allowable parameters of that permit and the applicant applied for and received a CUP for a Farm & Home Based Business on January 21, 2009. Because the applicants are proposing to exceed the 5,000 sq ft. requirement of the current CUP, the applicants are now requesting approval of a CUP for a Nursery to accommodate their business expansion. The property is located in Section 9, Town of Trenton. The property is zoned General Rural Flexible. A dwelling is located on the property. Adjacent land uses are agricultural and forested. A nursery is conditionally permitted per Pierce County Code (PCC) §240-35B(4). PCC §240-88 defines ‘nursery’ as “a facility or facilities used primarily to raise trees, shrubs, flowers, produce and other plants for sale, of which at least 50% are grown on site. Landscaping and horticultural services may be offered along with the sale of garden products such as rakes, shovels and pots. The sales of garden products shall not occupy more than 25% of the sales area.” Applicants own 30 acres, where 4 acres are the home and nursery; 1 acre for field grown trees; 12 acres are crop production; and 13 acres are wooded. They grow and sell trees, evergreens, shrubs, perennials and bedding plants. 85% of sales are from nursery plants and 15% of sales are miscellaneous items, such as bulk mulch, soils, pots and garden accents. This meets the minimum requirements in the definition. They have a 144 sq ft office, one 2700 sq ft greenhouse and a second 1440 sq ft greenhouse. Applicants have 3 part-time employees and family members help during spring planting. Seasonal hours of operation are April to October, Monday - Saturday 8:30am – 6pm and Sundays 11am – 5pm. Limited hours in November – December for Christmas tree and Holiday planter sales. The applicants have met the off street parking requirements. A portable outhouse is provided during the operating season. Equipment includes a small tractor, trailers, tillage equipment etc. Advertising signs are

located at the driveway entrance (2 ft x 6 ft) and off premise directional signs are located along Hwy 35 at County Road K and the intersection of County Road K and 340th Avenue. Signage is consistent with PCC §240-61F and G. Applicants request expansion for the bedding plant growing area with additional 20ft x 40ft greenhouse. And small portable 12ft x 30ft hoop houses for crop production during spring months. The facility is licensed and inspected annually by DATCP. License numbers are provided. The Town of Trenton recommended approval of this conditional use permit on 9-9-2014. The Town did not reference its comprehensive plan; therefore it is assumed that their plan is silent regarding this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends that LMC approve this request with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Applicants shall work with the Town of Trenton Building Inspector to determine whether commercial plan review and approval is required for the building from Department of Safety & Professional Services.
3. Adequate portable outhouses (1 per 50 people) shall be provided and maintained.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.
5. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on or off property.
6. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no compliance issues arise.
7. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the conditional use permit for a Nursery for Bryan and Lucinda Reuvers with conditions #1 - #7, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/ Ross seconded. Holst stated they are a real class outfit and sell good nursery products. All in favor. Passed.

Discuss take action on modification and possible revocation of a conditional use permit for a campground for John Grabrick (Big Dog Daddy's Roadhouse) located in the General Rural District in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Mr. Grabrick forward: Mr. Grabrick apologized for missing the last meeting. There was an incident that involved a staff member getting murdered. He just has some general comments. They have been working diligently to log out/brush out the campground area. They have put in hundreds of hours back there. He knows they are a little bit behind. Survey has been done. They are in the process of a legal modification to the property. The survey shows a variance between the property line and the existing fence line of over 40 years. They are proceeding through the legal system under WI Statutes 893.25. This put them behind on the screening plan. It will change just a little bit, the layout of the campground. The screening plan; they have picked out the vegetation that will go in. Part of the issue is the six campers on site and it has been that way for portion of the summer; two he owns and are for storage/one is a toy hauler that they can drop the tailgate and run a lot of heavy equipment in because they don't have extra buildings onsite. Two are campers that come on weekends and they are employees who stay for free. Two are paid campsites who came from Mr. Sippi's area during the flood. He understands they are over the limit of three which is what they are allowed without the camp permit. If they need to, they can off load the two units that he owns for the winter. The others are moving to Texas that will only leave two campers; one which is an employee and one which is a gentleman who wishes to stay onsite for a little bit longer. He is asking the committee to extend their screening plan to one of the next upcoming

meetings and let them continue to move forward with this project. They are working hard to have a nice working business.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for a campground on his 5 acre parcel on June 4, 2014. The permit required that screening be established between the neighboring residence and that a screening plan be submitted for Land Management Committee for review and approval within 3 months. The screening plan was placed on the September 17, 2014 LMC agenda. Staff contacted the applicant multiple times regarding the required screening plan. No screening plan was received by staff and the applicant was absent from the meeting. The LMC directed staff to place the Campground CUP on the next available LMC agenda for possible revocation. Staff contacted the applicant to inform him of the LMC decision. He stated that he has the screening plan and will bring it to the upcoming meeting. The property also has a commercial bar and a mobile home. At the time this report was developed and as of today, staff did check, there are the six camping units on the property. The zoning code allows camping by no more than 3 camping units to be present on a single parcel without proper permits. The definition of campground is included in the staff report. By definition the site is currently being operated as a “campground”. Conditions 1, 3 and 4 have not been satisfied and therefore the campground cannot legally be in operation. The use is in violation of the conditional use permit. Staff has initiated enforcement actions. Pierce County Code §240-76I states: If an established conditional use is not conducted in conformity with the permit or this chapter, the conditional use permit may be terminated by action of the Land Management Committee. The current conditions are listed in the staff report #1 - #12.

Staff Recommendation: The Land Management Committee should consider whether the applicants failure to comply with established conditions merits revocation pursuant to §240-76I or if the applicant shall be granted additional time to satisfy the requirements.

Ross asked about the screening plan and noted that he didn't understand the connection between the need to go through the legal process of lot lines and having the screening plan in. Couldn't you still get the plan in while that process is being done? It should be relatively close. Mr. Grabrick stated the plan does change because the property line is surveyed versus the fence line of 40 years varies by up to 28 feet. So that moves where the screening plan is actually put in. Ross asked if it is going back. Mr. Grabrick stated it's actually on the side line. The existing fence line of 40 years is here and here is the survey, the campground is on this side so it will vary how it slides from side to side. The screening plan will actually include this particular shrub called a pyramidal arborvitae. They grow up to 20 feet in height. They will start with 6 footers. Ross asked if they have done a soil test to make sure those will grow. Mr. Grabrick stated yes, they have taken care of all of that. They have a quite a variety of vegetation that does grow there already and these will flourish in that soil. Ross asked if they did a PH Balance test. Mr. Grabrick stated yes. Holst asked if he has a plan as of today. Mr. Grabrick stated he does not have a computer generated sketch. Holst asked if he has a plan, a hand sketch, any type of written diagram to show this committee that you have a plan. Mr. Grabrick stated give him five minutes and he could put it on the survey. Holst stated time is money. Aubart asked Mr. Grabrick when he received the survey. Mr. Grabrick stated that it should have a stamp on it. They received it about a week after it was done. Aubart asked if he notified Mr. Roy about the survey and the problems with the screening. Mr. Grabrick stated he doesn't know if they had covered it in one of their phone conversations. Roy stated they had talked about Mr. Grabrick's plans for the legal challenge and how there might be a change to that screening plan depending on how that ended up. We also discussed that something still needs to be presented to the committee by the deadline. It could have been option A, option B type thing. Mr. Grabrick stated he can do that tonight. Option A would be to keep things 10 feet off the surveyed property line and it would stretch for approximately 150 feet to screen the neighboring property because there is heavy vegetation along most of that, it's just to screen the campground from the home. Option B would be to float that back to whatever property line comes out of the legal challenge. It looks like we will be putting in at least 100 of these shrubs when we finally put it in. Aubart stated we currently don't have anything as far as the layout of the campground. Mr. Grabrick stated the layout of the campground was originally put into the CUP when he first came in. It was a hand drawn sketch that was close to scale. It can now be transposed onto

the survey. Aubart stated the current condition #1 states a surveyed layout of the individual campsites as located within the campground. That is what we are looking for is a surveyed layout. We aren't looking for a hand sketch transposed onto this document. This document was completed on August 4, 2014 and it appears that nothing has been communicated to Mr. Roy and if he recalls correctly, the information was that we would have that screening plan at the last meeting. We were given the information that you were going to drop that off. He doesn't know that that is unreasonable at this point. We still have the issue with all the campers there. How many campers were there during the motorcycle run? Mr. Grabrick stated there was the same six. During the motorcycle run there were vendor's trailers that came in. There was a mechanical bull that was transported in the back of a toy hauler. There was a group called Motorcycle Ride to Freedom which brought another trailer along but none of those were camper units. They were just used for transporting equipment. Aubart stated you are telling him tonight that there were six campers there over the course of that weekend. Mr. Grabrick stated correct. There was one that was called a Cyclone that was a toy hauler but that was what they brought the mechanical bull in. It was not used for camping. Aubart stated to Mr. Grabrick that frankly he doesn't believe what he is telling him because he knows better than that. Mr. Grabrick stated what he is asking for is to come to the next meeting with a completed survey. He will have Mr. King take the original sketch and put that to scale on the survey and they will bring that in and hopefully that will satisfy what this committee is looking for. Aubart stated we still have condition #4 that we are already using it as a campground and the internal roads, the camping pads, the water and sanitary improvements shall be constructed and implemented prior to operation of the campground. You don't have any of that. Mr. Grabrick stated that is correct. They are in the process of obtaining the financing that it takes to put that in. It's kind of hard to come up with money when you can't make money. You can't make money when you can't operate the property. He understands where the County is coming from. The people have been using the old campsites as they were. Two of them pay for camping and the rest are either storage or free. That is his mistake for allowing them up there. He wasn't prepared to give a complete screening plan tonight when Mr. Roy and he talked, that wasn't part of what they discussed on the schedule. It is something he can get done by Mr. King in a short amount of time for an upcoming meeting. Holst asked Mr. Grabrick if he was aware of the conditions #1 through #12 on the original CUP. Mr. Grabrick stated yes sir. Holst stated you were aware that you were in violation of some of those conditions, correct? Mr. Grabrick stated by allowing more than three campers, yes sir. Holst stated by not meeting items #1 and #3 and #4. Mr. Grabrick stated yes sir. Holst stated you were aware that you were in violation of your CUP. Mr. Grabrick stated it's very apparent to him at this time, yes. He isn't going to try and BS you with anything. Holst stated a simple telephone call would have gone a long way on the last meeting. Ross stated as a point of reference, he understands the need to make money but we would never allow a temporary permit while somebody builds something out. The process is the process. How that works out with your banks or financiers, we still need that permitting process because otherwise all the work is done and we have no real recourse. We have to go back and solve issues. Mr. Grabrick stated he makes no excuse for it. There are other campgrounds in the area that have been grandfathered in and they get away with murder based on the current rules that he has to follow. Chairperson Fetzer stated that is neither here nor there. Mr. Grabrick stated it is what it is. They still hope to have the services and the pads and roads built before snow flies. They will be meeting with the financiers in the next three weeks for a final decision on their part and once that money is there they will be able to start putting it in. All he is asking for is a little additional time to get the screening plan in. Holst stated that the screening plan is not the issue here today. It's the fact that you are in violation of three of the conditions of your CUP. That is the big issue in his mind, maybe not with the rest of the committee. Chairperson Fetzer stated it's the screening plan; it's the whole works. Mr. Grabrick stated he and Mr. Roy have talked about temporary storage and he guesses that isn't going to work out. The three campers that are not being used for camping, they had talked about shrink wrapping them and just getting a temporary storage permit. Worst case, he will haul them off site to another property that he owns. Aubart asked if we are in compliance with condition #2 even; the location and number of porta-pots shall be delineated on the survey, well we don't have a survey. Pichotta stated basically the way to think about this is, all of these conditions needed to be satisfied before he could establish a modified campground and

by virtue of having more than three campers - by definition he has a campground. That is how he is in violation is by having too many campers there. There was no timeframe associated with several of those conditions other than they had to be done prior to the use of the property as a campground. The time frame associated with the screening; because that is recognition that you have a residential use next to commercial use and the need to mitigate the impacts to the neighboring property are perhaps more instant than the actual establishment of the campground. That is why there is a timeframe associated with the screening plan. That was the committee's position that that was something that needed to be addressed sooner than later given the use next door. Ross stated given the planting seasons as well. Mr. Grabrick stated the particular shrubs prefer to be planted in the spring. Trimming them or doing any maintenance to them at all, according to the botanist, its spring time not fall. Pichotta noted that a ticket has been issued to Mr. Grabrick in regard to the camper issue per the directive of the committee at the last meeting. Aubart asked if there is anything he couldn't do without the conditional use permit; obtain the survey, he can do that without the CUP. Holst stated he can do everything except have more than three campers on his property. Pichotta stated in order for him to have more than three campers present on the property he has to fulfil those conditions. Aubart stated his point is that he can do those things and bring them back and reapply. Pichotta stated yes. Aubart stated if those things are met, he would be more inclined to grant the conditional use permit. We're on the other end of this now. Mr. Grabrick stated he doesn't see any financial institution putting \$80,000 on the line when there is no permit in place to allow that campground to be there once the services are put in. Holst stated he understands that but you should have thought about that 90 days ago sir. It's not our responsibility to look the other way when you knowingly violate what we have asked you to do. Ross stated he concurs with that. He would feel so much better if we would have seen a plan and no more than three campers were ever on there. Those little things would have gone a long way to make that difference. He understands the point as well but a violation is a violation.

Aubart moved to revoke the conditional use permit for a campground for John Grabrick due to his failure to comply with conditions/Holst seconded. All in favor. Passed.

Discuss take action on site plan review for Wieser Concrete Properties LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI.

Chairperson Fetzer invited Andy Wieser forward: Mr. Wieser explained that about a year ago the committee approved a conditional use permit for expansion and they finally got all the conditions met except one. They are still waiting for the 23rd of October for their LOMR. He thinks it's just a matter of waiting until that date, he hasn't heard any different. They would like to get approval and they have a building they are going to tear down ahead of that and do some excavation work just to get prepared for the 23rd.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for an expansion of nonconforming structures on January 15, 2014 for the concrete manufacturing facility. The requested expansion will allow the facility to produce larger products that are currently available from other Wieser facilities. The expansion of the existing facility will increase efficiency by allowing incorporation of existing processes such as rebar fabrication, utilization of concrete pumping systems and the extension of overhead cranes. Portions of the facility as well as the expansion area located in the floodplain as mapped in 2011. The applicant pursued a Letter of Map Amendment (LOMA) to remove the lands from the floodplain. The applicants received a Letter of Map Revision (LOMR) from Federal Emergency Management Agency (FEMA), the revision will become effective on October 23, 2014. Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The site is off of Hwy 10 and the property is zoned Industrial. Neighboring land uses are undeveloped woodland and residential. The residential use is to the south of the facility across Hwy 10. The expansion area will be to the west of the existing structure. The applicants will remove a portion of the existing structure and then build the expansion. The height of the structure

will be 43' which will match the existing roof line. The access points off of Hwy 10 will not change. The plan delineates 59 parking spaces with one designated for handicap parking. This satisfies the parking requirements of §240-54 of two spaces plus the peak employee shift for manufacturing facilities. Drainage of the site will also remain unchanged as there will be no increase in the area of impervious surface or a change to the grading of the site. Runoff will continue to flow to the southwest of the site to a grass drainage way in the right-of-way of Hwy 10. Two-way traffic flow will continue unchanged around the facility. A lighting plan has been submitted. The only new lighting will be placed on the expansion structures. The Department Lighting Policy is listed in the staff report. The septic system has been inspected and was determined to be adequately sized for the proposed expansion. The applicant intends to start construction as soon as possible after the LOMR becomes effective on October 23. The CUP requires that DSPS approval for the building expansion shall be submitted to the Land Management Department prior to construction.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the proposed plan are necessary. The LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations. The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Holst asked if Mr. Wieser has DSPS approval already. Mr. Wieser stated yes and submitted a copy to Mr. Roy. Holst asked when they intend to have it done. Mr. Wieser stated February. We hope to have it enclosed by the first of the year. Holst stated if we give you a timeframe of May. Mr. Wieser stated they should be good. He stated he thinks the CUP was extended at the time to 18 months. Roy verified that. Mr. Wieser stated we are into almost 12 months, May or June for sure. They should be occupying it by June. Holst stated the fact that we have dealt with the applicant many times over the years; he doesn't think a surety is needed. As long as it meets the conditions on the CUP, he wouldn't have any trouble with it. **Holst moved to approve site plan review as presented for Wieser Concrete Properties LLC/Ross seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for American Materials, agent for Marvin and Mina Gilles, owners on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.
Chairperson Fetzer invited Candy Anderson forward: Ms Anderson, Geologist for American Materials, stated Brad's report was very thorough and they are not proposing any changes and just asking for another two year renewal.

Staff Report – Brad Roy: This nonmetallic mining operation was originally permitted in 1978. American Materials received an updated permit in 1998. All permits have been kept current since then. The operation involves mining dolomite/limestone and subsequent crushing and sizing. The mining site has approximately 9 unreclaimed acres. Access to the mine is off of US Highway 10. The surrounding land uses are farmland and woodland. Overburden is stripped and stored onsite. Extraction is completed with drilling and blasting. All blasting is done by a certified blaster. Portable equipment is brought to the site for processing. The highwalls on the site are currently approximately 40 feet in height. There has been no blasting on the site since 2007, so no well samples have been collected since that time. Hours of operation are 6:00am to 9:00pm, Monday through Friday and 6:00am to 12:00pm on Saturday. Renewal fees for this mine are \$200 + \$20 per acre of expansion. No complaints have been received about this operation. All appropriate information has been submitted to the Zoning Office. The existing conditions are listed in the staff report #1 - #10.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the

character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-ft setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells within 1000 feet of the mining operation before blasting commences and annually thereafter. Applicant shall not be required to test wells on properties where owners have not granted access.
6. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday.
7. Reclamation shall be according to submitted plans.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. Applicant shall pay renewal fees.
10. This CUP shall expire in two years.

Holst asked if this is the same site where all that debris washed into the road at one time. Ms Anderson stated yes that was in 1997. She was here way back then. **Holst moved to approve the renewal of the conditional use permit for Nonmetallic Mining for American Materials, agent for Marvin and Mina Gilles, with conditions #1 - #10/Ross seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent for Gregory Bisel, owner on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Chad Johnson forward: Mr. Johnson, Pierce County Highway Commissioner representing Mr. Bisel. He spoke to him on the phone yesterday and he is aware of the renewal and agreed Mr. Johnson would handle it.

Staff Report – Brad Roy: Mr. Bisel owns a nonmetallic mining operation along Hwy 10. The Pierce County Highway Department is the current operator on the site. In 2008 there was an errant blast which extended the mining area within the setback to USH 10. In February, 2010, the LMC allowed the Hwy Dept to mine within the Hwy 10 setback to remove a portion of the high wall that had become unstable. The mining site is approximately 17 acres in size. Access to the mine is off of US Hwy 10. The active mining area is approximately 6.5 acres. Mineral extraction has extended into the 100 foot setback on the north end of the property line, however this activity had taken place before 1998 and there has been no mineral extraction within the setback since that time. A mining road encircles the outside edge of the mine and crosses the north property line. The Highway Department is in discussions with the property owners about leasing the property. The existing high walls are approximately 100 feet in height. The original plan states that the high walls will be benched to limit the heights to 35 to 50 feet. The original plan states that the mine will be restored to slopes of 3:1. A dry run is present on the property. The mining area has not disturbed the dry run at this point, but future expansion may become an issue. The rock is removed by drilling and blasting. Crushing and processing of the rock takes place onsite. Storage of the product is in the active mine as well as on an adjacent property across Hwy 10. The adjacent property is considered to be a pre-existing nonconforming use, so a permit is not required on that site. There are no wells on the property; therefore no washing takes place onsite. The operation typically removes 30,000 to 40,000 tons of material each year. Blasting takes place dependent upon when material is needed. Hours of operation are 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm. There have been no erosion issues on the south wall facing Hwy 10. A fence has been installed along the north edge of the pit, per condition 5. A groundwater response plan has not been submitted at this time. The applicant is working with the DNR on developing a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential

sources of storm water pollution and spills of oil-related materials and other chemical and establish controls to minimize any potential impacts to surface or ground water. The water-table elevation is approximately 20 feet below the mine floor. The existing conditions are listed #1 - #14 in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions #1 through #13, removing the old condition #5 that required the fence:

1. Hours of operation shall be 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm.
2. A 100 foot setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur.
3. A groundwater response plan detailing resources used to protect the quality of groundwater beneath and adjacent to the extraction operation and proposed response to encountering groundwater shall be submitted to the Zoning Office. The Zoning Office shall be notified if groundwater is encountered and further operations shall cease until the response plan is implemented.
4. Reclamation of the mine shall adhere to the original plan which states that slopes shall be restored to 3:1. Due to the location of the northern high wall and the potential for land development on the northern adjacent parcel high walls or steep slopes would create unsafe conditions.
5. The owner shall notify the Zoning Office when the operator of the mine is no longer a public entity. Modifications to the permit may be required at that time.
6. Applicant shall comply with NR 135 Annual Reclamation Permits.
7. All blasting shall be done by a certified state licensed blaster.
8. Residential property owners located within 1000 feet of mining operations shall be given a two day notice of any planned blasting.
9. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation annually.
10. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
11. Applicant shall receive all necessary permits from other agencies.
12. This CU P is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
13. A renewal fee of \$200.00 plus \$20.00 per acre of expansion shall be paid.

Mr. Johnson stated this construction season they acquired material from the Hwy 10 project and have begun reclamation on the backside of that wall along Hwy 10. It's not to its final shape yet, the contractor is going to shape it yet this late fall. So they have started the reclamation process in an area where they are not going to mine any further. **Holst moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent for Gregory Bisel with conditions #1 - #13/Ross seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Discussion about air monitoring in conjunction with frac sand mining or processing. There will be folks from the Public Health Department present also.

Motion to adjourn at 6:55pm by Aubart/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, October 1, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 15 th , November 5 th & 19 th , all in 2014.	Chair
3	Approve minutes of the September 17, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Nursery, in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-35B(4), for Bryan and Lucinda Reuvers, owners on property located in the NW ¼ of the SW ¼ of Section 9, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
5	Discuss take action on modification and possible revocation of a conditional use permit for a campground for John Grabrick (Big Dog Daddy's Roadhouse) located in the General Rural District in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
6	Discuss take action on site plan review for Wieser Concrete Properties LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
7	Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for American Materials, agent for Marvin and Mina Gilles, owners on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.	Roy
8	Discuss take action on renewal of a conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent for Gregory Bisel, owner on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(9/19/14)

MINUTES-Pierce County Land Management Committee Meeting, September 17, 2014

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Absent: Joe Fetzer

Others: Brad Roy & Tracie Wold

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 1st & October 15th, November 5th & 19th all in 2014.

Approve minutes: **Ross moved to approve the September 3, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a proposed screening plan for a conditionally permitted campground located in the General Rural District for John Grabrick, owner, on property located in Gov't lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Holst asked if Mr. Grabrick was present. Mr. Grabrick was not present.

Staff report-Brad Roy: The applicant received a conditional use permit for a campground on the 5 acre parcel on June 4, 2014. The permit required that screening be established between the neighboring residences and that a screening plan be submitted for Land Management Committee review and approval within 3 months. Staff contacted the applicant multiple times regarding the required screening plan. The applicant stated that the plan was completed and would be delivered prior to the development of this report. At the time this report was prepared and distributed no plan was received. By not submitting the plan within the established timeframe the property is in violation of the CUP. The property also has a commercial bar and a mobile home. Pierce County Code §240-39A.(7) states: Each campground shall be screened by means of vegetative screening, as described in Section 240-31D, along all lot lines. Section 240-31D refers to the Landscaping Policy which was adopted on February 7, 2007. The policy states: Vegetation, earthen berms and or fencing shall be placed between nonresidential development and adjacent properties so as to render the development as visually unobtrusive, as is practical, from adjacent properties or from public view. Native vegetation should be utilized whenever practical. Vegetated screening buffers shall be maintained in good condition. The neighbor has presented multiple concerns to the LMC regarding this campground. The current conditions are listed 1-12. At this time, conditions 1, 3 and 4 have not been satisfied and the campground cannot begin operation. The zoning code allows camping by no more than 3 camping units on a property without permits.

Staff Recommendation: The applicant is in violation of the CUP. The LMC should consider whether additional time for submittal of a screening plan is warranted or whether this issue should be placed on a future agenda for possible permit revocation pursuant to §240-76I. Roy stated the letter is from the neighbors, who are present at the meeting. Roy mentioned that up to this time, we still haven't heard from the applicant regarding this issue. Chairperson Holst asked

if we have contacted him multiple times, Roy stated we contacted him before September, asking which agenda he wanted to be on, the first one or this one, and he chose this one. The week leading up to the development of the staff report Roy contacted him letting him know we needed the plan by Monday last week to develop the staff report and by Tuesday we didn't have anything so Roy called him again and he said he would drop it off on either Tuesday afternoon or Wednesday morning. That is the last we have heard from him. Sanden said that with respect to the other issues, cutting down the neighbors trees on their property and more campers than allowed, are these both issues that our office would take up or is that something that the Sheriffs Dept. would be called in for? Roy stated the tree cutting is a trespassing issue but the number of campers is an issue that our office deals with. Mr. Grabrick has been given tickets for it with the most recent being a couple months ago. Being that since the time the tickets were issued, he has gone to the town and gotten the recommendation, he's going through the permitting process for the camp ground, we eased back on enforcement because he is working on bringing the property into compliance. Now this greatly changed our attitude towards it, as he is in violation of his camping permit which isn't in operation yet, but we will start up enforcement action again being that it would start with citations again. Sanden added maybe cease and desist if it gets to that. Sanden also stated for the record that these kinds of issues where we have incompatible land use, we have to tread a very thin line as to trying to satisfy both parties and that is really hard to do, so we operate in good faith. We want to make sure we are not being too onerous in our application of these, but we expect the same good faith in return. The last time he was here we gave him the benefit of the doubt to see how it would go, recognizing that we would need to make it more strict if there were some problems. Sanden has a real problem with that since he doesn't seem to be operating in good faith and that is the crux of what we have to rely upon here. Ross asked how many tickets there were issued. Roy stated four. Two from our office and two from Public Health. Roy stated one ticket for sure was operating a campground without a permit which refers to the number of camping units being utilized, which was more than three. Sanden is concerned that per the code and per our CUP recommendations, the vegetated screen is the result we came up with and in part because the fence was going to be too expensive. And now he is taking away vegetation which we are going to have to have him replace. It doesn't sit well. Aubart asked if we need a motion and then he moved to pull his permit. Holst asked if we could do that on this agenda and Roy said no. Then they suggested we suspend it, but keep writing him tickets in the meantime and Roy agreed (just writing tickets) would be the cleanest way to do it. Since the agenda specifically focuses on the screening plan not the camping operation, we will put it on a future agenda for pulling the permit and we can step up enforcement in the meantime. **Aubart made a motion to put it on the first available future agenda with possible permit revocation/Sanden seconded.** Chairperson Holst asked if there was any further discussion and Sanden thanked the neighbors for providing the pictures as it does help. Kim Peterson mentioned that he is having a flood run rodeo there this weekend and she didn't know if he applied for the necessary permits for that. Chairperson Holst stated he didn't believe he needed to unless he has over 10,000 people for three days and Chairperson Holst didn't think he would reach that threshold, with that being said, we take very seriously our CUP and when the conditions aren't met. It's very rare that they are not met, but we take that very seriously. **All in favor. Passed.**

Discuss take action on the County Recreation Goals and Actions for the Pierce County Outdoor Recreation Plan. Staff Report-Brad Roy: The Mississippi River Regional Planning Commission is updating the Pierce County Outdoor Recreation Plan; the updated plan will be for

2015-2019. The purpose of the plan is to provide guidance information to help develop and improve the County's recreation resources and to make the County and other local municipalities eligible for the DNR grants. A public hearing will be scheduled in the future to adopt the final plan. An important component of the plan is to prioritize the general recreational activities for future development strategies. The next step for the LMC is to include action items the County would like to complete to enhance or improve the outdoor recreation within the county. This can also be considered a "wish list" for the County. Inclusion of a project into the Outdoor Recreation Plan may provide the potential for grant funds which may not otherwise be available. The Parks Committee has established its priorities earlier this year. The general activities included in the Outdoor Recreation Plan should be given a priority of High, Medium or Low to give guidance for future planning. The priorities of the current plan are listed in the staff report. Roy believes the only high priority was under fishing for expanding the parking lot and boat launch on Trenton Island. The Parks Committee discussed this item at the July 14, 2014 meeting. They established the following priorities: they have high and medium priorities looking at the Trimbelle recreation area, the walking trails and the multi-use trail. Also things for the Trenton Island boat launch. Looking at picnic area, some upgrades at Nugget Lake and some medium priority for the shooting range for upgrades.

Staff recommendation: Staff recommends that the Land Management Committee prioritize the general activities of the Outdoor Recreation Plan. Sanden asked about them having "continued planting oaks at Nugget Lake County Park" twice is that to heighten its priority by showing it actually affects more than just one subarea or is that in inadvertent duplications? Roy stated it doesn't heighten it, but thinks it is just to display that the project would help in multiple categories. Sanden feels that we should defer to the park committee on this. The fact that we are talking about the Trimbelle Park and that kind of thing but other than that it seems like more of their jurisdiction. Sanden asked how does it get battled out, we have the RPC giving one set of priorities and then we have the parks committee doing another set, do they just debate it on their own? Chairperson Holst stated the regional planning will do what we tell them. He also stated we provide the list to them and then they update the plan. Sanden asked if we then have to pick which one we prefer and Roy stated we should just work off of the park list and if there is anything additional you would like to see done or something we wanted to move to a higher priority we can make those changes, or if we disagree with the parks committee and want to lower a priority. Chairperson Holst thinks we could suggest to cross off one of the "continue to plant oaks at Nugget Lake Park" but other than that, he doesn't see a lot of problem. He agreed that this is what they have come up with and we should just stamp it and move on. Sanden's only suggestion would be to "plant native prairie grass" should be a higher priority, but he thinks that is a more personal thing and not an interest of the County. Chairperson Holst added that he has seen this in the works for 20 years now and it has evolved into this workable piece. Roy mentioned it is a nice document to have when people have questions on what they can do and where, everything is listed. Town of River Falls and Clifton have talked about putting some projects in this plan, but nothing yet. **Sanden moved to move this forward with using the parks committees' priority list with the modification of the redundancy of "continued planting oaks in Nugget Lake"/Ross seconded. All in favor. Passed.**

Discuss take action on proposed amendments to Pierce County Code Chapter 240 (minor structures, Light Industrial use requirements, etc.). Staff Report-Brad Roy: Through the process of administering the Zoning Code, staff has become aware of issues and inconsistencies

that may warrant a modification of the ordinance. The Zoning Code requires that a Land Use Permit be obtained for accessory structures. §240-32 exempts minor structures from this requirement. There is no definition of minor structures in the code. In the past staff has required that even small storage structures obtain a Land Use Permit for a fee of \$50. In many cases the public assume that these small storage structures do not need a permit and would place them on their property without permits. In these cases staff is required to begin the enforcement process which may take considerable time. Staff believes that the use of these types of small structures is generally insignificant and can reasonably be considered “minor” and exempt from permits. However, setback requirements would still apply. Staff is proposing the following amendment to the Zoning Code. § 240-32. Accessory structures. In the minor structure list it would now read: Minor structures, such as birdhouses, yard light poles, birdbaths, doghouses (housing dogs which are licensed as the personal pets of the residents of the property), tree houses, noncommercial fuel storage tanks and pumps, clothesline poles, lawn ornaments, flagpoles, mailboxes, garbage containers, ice fishing shanties and school bus waiting shelters. Non habitable structures of not more than 100 square feet, that do not have a permanent foundation and can be easily moved and meet applicable setback requirements, are also exempt. Light Industrial uses are required to be conducted indoors. Warehouse and Storage facilities are required to be constructed on concrete slabs. However, seasonal boat and vehicles storage buildings are not required to be on concrete slabs. The language in the current code is confusing and unclear. Staff is proposing the following amendment: To remove the last part...All structures shall be on concrete slabs except seasonal boat and vehicle storage buildings. Removing, “which may be on concrete slaps”.

Staff recommendations: Staff recommends the Land Management Committee review the proposed revisions, and if appropriate, direct staff to schedule a future public hearing to adopt the amendments. Sanden appreciated what LMD is doing. He also suggested that we add a hyphen between the words “non” & “habitable”. **Ross made a motion that we approve as stated and directed staff to schedule a future public hearing/ Sanden seconded. All in favor. Passed.**

Discusses take action on a proposed interdepartmental transfer of budgeted funds from Salaries line item to New Equipment line item and authorize the purchase of 2 new department vehicles. Staff Report-Brad Roy: As you are aware, the Land Management Committee and Department recently eliminated the Surveyor Technician position. Although that position has been vacant, the position’s salary was included in the 2014 Department Budget. Similarly, the Planning Secretary position (now Office Specialist) was vacant for 7 months of 2014. These two vacancies have resulted in approximately \$66,900 that was budgeted for salaries in 2014 not being spent. As part of staff’s discussion with Administration regarding the 2015 budget, it was suggested that an interdepartmental transfer of funds be pursued to utilize these dollars for new vehicles for the Department. Purchase of 2 new vehicles now would eliminate the need to purchase a vehicle in 2015. As you are aware, the Department currently has a 1998 Jeep Cherokee, a 2001 Chevy 1500 HD, and a 2002 Ford F150. All vehicles are showing substantial wear. Staff is proposing to replace the 1998 Jeep and the 2001 Chevy with new (or possibly used) vehicles. The 2002 Ford would continue to be utilized and would likely be proposed to be replaced in 2016 or later. Staff did discuss the potential for leasing vehicles with Administration, per prior LMC directions, but was encouraged to pursue this course of action.

Staff recommendations: Staff recommends the Land Management Committee authorize the

transfer of \$25,000 from 101-1251720-111 (County Surveyor-Salaries) to 101-1251720-812 (County Surveyor-New Equipment); and \$17,000 from 101-1251720-111 (County Surveyor-Salaries) and \$8,000 from 101-1356300-111 (County Planner-Salaries) to 101-1456400-812 (Zoning- New Equipment). Said transfers will enable the purchase of two new Department vehicles. Aubart asked what the cost of leasing was but Roy was not sure. He was told that leasing makes sense on a higher number of vehicles. Aubart asked what the cost difference was of leasing two vehicles verses 10 vehicles and also asked who said it wasn't feasible. Ross stated that it was his understanding that the discussion was part of Pichotta's budget discussion with the Finance Director and the Administrative Coordinator. Chairperson Holst said that he was at the budget meeting and it was stated that we didn't have enough vehicles to pursue it and we ran them so long that it was beneficial for the County to buy them and run them into the ground as opposed to leasing. Aubart asked who ran the numbers and Chairperson Holst said no one that he was aware of. So Aubart asked how do we know it is beneficial. Chairperson Holst said Administration wasn't keen on leasing. Aubart added that the vehicle we are keeping is 12 years old. Ross stated that he thinks we need to collectively look at ways to pool resources, as businesses do it all the time. They bring departments together and say this is how it's going to be, whether it's office supplies or cars. Sanden was wondering if we could make the motion with the caveat that we approve it as it is right now, but we also engage in some County wide plan for looking at leasing. Sanden stated he didn't want to forgo this onetime windfall and let it get lost because it gets taken away from us. **Sanden moved to approve the proposed interdepartmental transfer of budgeted funds from salary lines to new equipment line items and authorize the purchase of two new department vehicles recommending the County considers a long term leasing solution for all the vehicles in the County system/ Ross seconded. All in favor. Passed.**

Discusses take action on Travel/Training requests. Roy stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items.

Public hearing for a conditional use permit for the Reuvers Nursery in Trenton. They were under a farm and home based business but have run out of room with the 5,000 sq./ft. limit so now they want to go to the nursery designation which doesn't have the space limit.

Site plan for Weiser Concrete in the Town of Salem

CUP renewal of the Gilles mine for American Materials in the Town of Union

CUP renewal of the Bisel mine for the Highway Department in the Town of Salem.

Also, potentially the Grabrick campground CUP.

Motion to adjourn at 6:40pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by T. Wold

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 17, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 1 st & 15 th , November 5 th & 19 th , all in 2014.	Chair
3	Approve minutes of the September 3, 2014 Land Management Committee meeting.	Chair
4	Discuss take action on a proposed screening plan for a conditionally permitted campground located in the General Rural District for John Grabrick, owner, on property located in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
5	Discuss take action on the County Recreation Goals and Actions for the Pierce County Outdoor Recreation Plan.	Roy
6	Discuss take action on proposed amendments to Pierce County Code Chapter 240 (minor structures, Light Industrial use requirements, etc.)	Roy
7	Discuss take action on a proposed interdepartmental transfer of budgeted funds from Salaries line item to New Equipment line item and authorize the purchase of 2 new department vehicles.	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(9/5/14)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

PLANNING OFFICE 715-273-6746

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, September 3, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund, Kevin Etherton and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 3rd & 17th, October 1st & 15th, all in 2014.

Approve Minutes: **Ross moved to approve the August 6, 2014 and August 27, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Jeff Holst recused himself from discussion and voting on the first agenda item due to a possible conflict of interest.

Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, and Reclamation Plan, pursuant to Pierce County Code Chapter 241-15A(2)(a), for William F. Holst III, owner on property located in N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited William Holst forward:

Staff Report – Brad Roy: The applicant is requesting to expand a pre-existing nonmetallic mining operation. This would be an expansion of an existing 110 acre mining operation that has been active since before the Town of Trenton adopted County Zoning. The applicant has acquired adjoining land and now wants to expand the existing mining operation. An expansion onto property that was not part of the original “grandfathered” parcel requires that a conditional use permit be secured prior to any mining. The new property is approximately 22 acres and the area to be mined is approximately 20 acres. The applicant anticipates that it will take many years, up to 50, to extract all of the material from the area of the proposed expansion. The mining activities proposed to occur on the expansion parcel will be consistent to those occurring on the existing 110 acre mining area. Last year, the LMC and County Board approved a rezone of this and surrounding properties owned by the applicant. The rezone designated most of the property Industrial, but also left a 300’ strip of land along County Road K as General Rural Flexible (GRF). As part of the rezone the Town of Trenton required that a berm was to be constructed within the GRF strip to act as a buffer to future industrial uses for the surrounding landowners. Nonmetallic Mining is conditionally permitted in both the Industrial and General Rural Flexible zoning districts. The site is currently used for agriculture. Surrounding uses include mining, agriculture, industrial uses and higher density residential. The Town of Trenton required the berm that is currently being constructed. Farm structures are currently present on the proposed expansion site but will be demolished when the rental agreement expires. The site is currently flat with the greatest relief at less than 15 feet. The applicant has stripped the topsoil on part of the site, but has not removed any material. The existing mining operation will continue south onto the new property. No operational changes are proposed to occur on the new property. The area will be mined in 100 foot sections from east to west to allow for extraction of sand and

gravel. These sections will begin at the existing mine and continue to the south. There will be no blasting or chemicals used, extraction will be done with front end loaders. The mined materials will be hauled north to the existing mine for processing. Processing there will include crushing, screening, sorting, grading and blending with use of conveyors, screeners, stackers and other equipment. Any washing of the sand will take place in the existing mine. The washing will be needed to remove fines and will use an existing high capacity well. Servicing and fueling of equipment will take place in the existing mine. Extractions will go approximately 40 feet below the existing grade. This will result in the elevation of the floor of the pit being at 712' which is only a few feet above the water table. Ground water has been encountered in the adjoining mine. The proposed mining operation will be required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans will identify potential sources of storm water pollution and spills of oil-related materials and other chemical and establish controls to minimize any potential impacts to surface waters. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The Department's Mining Policy requires that a groundwater response plan detailing resources used to protect the quality of the groundwater beneath and adjacent to the extraction operation shall be required. Pre-testing for nitrates, suspended solids, and dissolved solids must also be conducted for all existing wells within 1000 feet of the proposed extraction operations. When most of the mineral deposit above the water table has been removed, the applicant will explore the possibility of mining below the water table. This decision will need to be made at a future time. The applicant cannot, at this time, determine if mining below the water table will be economically feasible many years in the future. The entire site, new and existing mining areas, will be internally drained. The applicant intends to operate 24 hours per day, seven days per week. The application did not detail any proposed lighting for the facility. The Department has a policy regarding lighting fixtures and orientation. The application states that mining will not occur within 100 feet of the property lines, which is consistent with the Department's Mining Policy. The Mining Policy also requires that no mining occur within 200 feet of existing residences. The reclamation plan states that the proposed post-mining land use will be industrial uses, which is consistent with the current zoning district. No specific use was listed as any future use will be dependent on market conditions. The topsoil will be striped and stockpiled in the existing mine. The plan states that 4"-6" of topsoil will be redistributed at the time of reclamation to support vegetative growth. All reclaimed slopes will have a 3:1. If a pond is ultimately constructed, a 4:1 slope will be constructed from the final ground surface to a point where it intersects the water table. Due to the mining sequence contemporaneous reclamation is not possible for the site. The reclamation plan states that spruce trees may be planted at the top of the slopes and along the berm. The plan did not state the number or the size of any potential trees. The LMC may want to specify whether or not trees are to be planted and if so, the number and size. The Town of Trenton recommended approval of this request on March 12, 2013, with the justification that nonmetallic mining is already being conducted in this area. It should be noted that substantial time has passed since the Town recommendation was generated. Staff has received calls from concerned neighbors regarding noise, hours of operation and groundwater quality.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to not be contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate by the LMC:

1. Activities shall be conducted consistent with the application unless modified by another condition of approval.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSAH and other agencies if required.
3. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other

agencies. If they are not required, applicants shall submit verification from those agencies stating that said plans are not required.

4. A ground water response plan which details resources to be used to protect the quality of ground water beneath and adjacent to the extraction operation, and a proposed response to encountering ground water, shall be provided.
5. Prior to extraction of any material from below the water table the applicant shall present proposed plans to the LMC for review and approval.
6. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.
7. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to any material extraction from the site.
8. A 100-foot buffer shall be maintained from the active mining to the property boundaries. A 200-foot buffer shall be maintained around existing offsite residences.
9. Hours of operation within areas zoned General Rural Flexible (GRF) shall be limited to 6am to 7pm Monday through Friday.
10. Testing of the wells on properties within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, annually. Base line data shall be obtained prior to mineral extraction. Test results and the base line data tests shall be provided to the Department of Land Management.
11. Applicant shall obtain all necessary permits for structures, signs or activities not discussed in this plan from the Zoning Office.
12. A new reclamation plan detailing the entire mining area, new and existing shall be submitted within 3 months.
13. Any lighting shall comply with the Land Management Department Policy.
14. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
15. This permit shall expire in two years.

Chairperson Fetzer opened the hearing to the public. Cindy Taube, lives along County Road K, presented pictures to the committee, taken from her driveway showing what is happening across the field. This is a few feet from her mailbox to where the berm is being built. She already hears the current mine and sees the lights. Since Mr. Holst took down part of the back berm she sees and hears the railroad more. She realizes Mr. Holst owns all of that property but it used to be a real scenic field. She is opposed to expanding that mine to within feet of her mailbox. You can hear the tracks of the big machinery very clearly from her driveway. She sees the lights more from the processing equipment as well. Do we need to expand that mine? It's not going to be an economic boon for the area. It doesn't add to the quality of life or the look along County Road K. Granted that is Mr. Holst property, but she questions the need to mine the entire field. Standing on County Road K, you can feel the equipment in the trucks when they are dumping the dirt. Her first wish would be not to expand into that current one but if that is not an option, then she would really like to tighten up hours and the days because it is very visible. She is also very concerned about ground water issue. A couple years ago, she did have her well tested. Ground water is something that once we mess it up, it's tough to fix it. She is not sure of the extent of people in the area that received notice of this hearing. She knows Mrs. Evert has a lot of property in that area and she didn't receive notice. Her concern is that there is only a handful of them that the berm is sitting in their front yard. She realizes that the committee does due diligence about notifying by guidelines. Just because that piece of property can be mined, is it the right thing to do? It really significantly impacts the value of her property. Every day she walks on that County Road. The big trucks are there. You hear and see it. Her feedback is she does not want to expand it and Mr. Holst is well on his way to building that berm and knocking down the back one. Cathie Jo Van Houten, lives on the corner of County Road K, she sees the berm and hears all the noise and everything. She knows the neighbors go to bed at 7:00pm to 7:30pm at night and get up at 5:00am. If it was to start at 6:00am, that wouldn't be too bad because most of them are on their way to work. She agrees that it is a scenic valley that they chose to live in and Mr. Holst has

chosen to mine it and make it look ugly. She doesn't know if he has taken the time to look into selling the property and making a profit off of selling two acre lots like they have up the road. She has her property tax statement and her property value has gone down \$14,000.00. She doesn't know if her property taxes are going to go down or not but it has affected her personal property. Her husband's family has been on that property for more than fifty years and she was hoping her daughters would be on there for another fifty years. In fifty years, even in ten years they are not going to want to be there as well as maybe twenty neighbors. She doesn't feel that her property is going to get valued and then again if Mr. Holst feels he has to continue with it, it is his decision. But for the Town of Trenton, she doesn't think it is the best decision to go ahead with that. Her concerns are with the other field that adjoins that property. It is also his, in the future is he going to want to take that also from the corner of County Road K straight across, and want to mine this? In the past, they have had the bluff committees that have protected the bluffs in that area, the County is mining up above and it's becoming an eye sore on the bluffs themselves. She has no connection to the bluff committees that want to save the bluffs but that is the river road and no one likes driving down the river road anymore. The bicyclists come down County Road K, they choose to take K because it's off of Highway 35. It's less traveled. All these points come up to what is good for the neighbors. Cindy Wittenberg, lives on the corner below Cathy on County Road K. She is in agreement with everything that they are saying. Their property values have also dropped \$19,600.00. It is an eye sore. Her and her husband used to sit out on their deck, look out at the flowers and enjoy the front of their yard and the bluffs but it is nothing but an eye sore. She has COPD and the dust has been really bad. She doesn't think it's right that this can be done and their property has to lose its value like this. Tom Breen, can someone in the room verify that there is going to be what will become an after-the-fact open forum next Tuesday in the Town of Trenton. A forum on this subject, he saw that in the paper this last month. Pichotta stated he is aware that the Town of Trenton is considering adopting some changes to their comprehensive plan. They are also considering a blasting ordinance. They are also considering a nonmetallic mining licensing ordinance and a mining moratorium ordinance - all next Tuesday. It's a public hearing so it's a discussion at the Town Board Meeting. Sharan Wendel, lives directly across the street from this. She bought this property about four years ago and invested over a million dollars into this community in building that property there. One of the reasons she bought it was because there weren't any rules and of course if there weren't any rules for her, then there are no rules for her neighbors. She understands that. She isn't really big into telling people what they can do with private land. However, one thing that she did do is a lot of due diligence in buying that particular property. She tested the ground water carefully. She tested for radon, a lot of environmental things and it came back pristine. Of the concerns she has here, foremost is ground water because once that is in trouble it's hard to recover. She is an engineer by background. It will be great to say that they are going to fix it but those of them that are drinking that ground water may not realize there is a problem until it's a little late. So she is very concerned about ground water testing and she sees that they are proposing testing the wells within a 1000 feet. She believes her well is within the 1000 feet. When she looks at how the ground water runs, she is on the bluff going to the river. She believes all water tries to run to the Mississippi which means it's going to run right through his mining operation before it gets to her house and then the Mississippi. Her second concern is the proposed hours of operation. When she reads back, it says specifically in GRF. But within 300 feet of County Road K, you will only operate between 6:00am and 7:00pm but the mining is still 24/7 on the other side of that berm. Is that correct? That she has a concern with also. Her house is pretty far back from County Road K but even as far as it is back, she can still hear everything going on there. She can hear all the trucks and she didn't realize until one of the neighbors spoke that the trees have been removed because she hears it a lot louder than it used to be. Now she understands because there was a back berm that she wasn't aware of. Her concern for noise is not so much for her but the gentleman across the street, his house is surrounded by that berm. She isn't one to tell people what they can do with their private land but there should be some mitigation if you are going to mine it, to make sure while you are enjoying the rights of your land that you are not negatively impacting the enjoyment of surrounding lands. If you were, she has an issue of running 24/7. That is a big concern. If you do operate 24/7 then there should be some mitigation. She sees there is talk of trees, she wouldn't want to see one foot trees that will

take 40 years to get big enough to block the sound. You can do things with bigger berms, plant it so it's landscaped with trees to mitigate some of that thing but not with young trees, more mature trees. If you are testing the wells, she doesn't know if once a year is sufficient for testing the wells. If it's your drinking water, would you really want to know what's going on with your drinking water? **Public hearing closed.** Sanden asked when the material is extracted and moved off to market, do those trucks run down County Road K? Mr. William Holst stated they have never run trucks down County Road K. The only time they have ever run a truck on that road is if someone is making a delivery. Their exit is on Highway 35. They don't even have an exit to County Road K. Sanden asked if the well testing once per year is part of the DNR permit processing? Roy stated the well testing is our policy. Mr. Holst stated he would like to clarify a couple things for the people. He owns currently 280 acres there that is permitted for sand and gravel operation. It's all zoned Industrial. This berm was a condition that the Town of Trenton placed on them when they had the public hearing there. This wasn't his idea, the Town of Trenton told him to put the berm there. Chairperson Fetzer asked where the berm is, along County Road K? Mr. Holst stated he has some pictures to present. Chairperson Fetzer asked how high the berm is. Mr. Holst stated he thinks it's about seven feet but he hasn't measured it. It's pretty good size. Sanden asked if the Town condition didn't include any plantings. Mr. Holst stated they recommended some trees on top which they plan to do. Ross asked if they specified a size. Mr. Holst stated no, they did not. They didn't specify the size of the berm either but we wanted to make something that was substantial. The other thing everyone is concerned about their ground water. He is not mining below the ground water on this 22 acres, he is just removing the gravel that is dry. He is not in the ground water. He takes it over to his pit that has been there for 30 years. He has been operating there for 30 years. Sanden asked if he or staff could explain the bullet item where it says applicant will explore the possibility of mining below the water table. This decision will need to be made at a future time. Mr. Holst stated yes, and if he decides to do that they need to come back and ask that of the committee. That is not being asked for at this time. Chairperson Fetzer asked Mr. Holst if there is anything else he would like to add. Mr. Holst stated they do not run trucks on County Road K and they are not going to put up any lights on this 22 acres. All that they do is take the material, haul it to their site and screen it there. They don't even do that at night. They are permitted to do it but they don't. The only lights are on the equipment and once they get down the 40 feet, they will be 40 feet below and no one will be able to see anything plus the height of the berm. Sanden asked if it does go below the water table is that considered an expansion and would trigger another review? Roy stated it wouldn't be an expansion and condition #5 would require them to come back before the LMC before they go below. Also, we were not aware of a dust issue so it might be worth noting to put a required Fugitive Dust Plan as a condition as well. Ross asked if the bulk of the noise being heard now is a result of the berm being built. Ms Taube stated she could always hear it and see the lights on the top of the equipment before. Now with the original back hillside with the trees knocked down, it is amplified. She can honestly say she has never seen a truck on County Road K but there is a road built through it where they come over that back berm and are dumping there dirt right there. That front berm isn't going to mitigate the noise. When you took down the mature trees, that will accentuate and you will really hear the noise of the processing down below. Sanden asked Mr. Holst about the original piece that is currently being mined, is that permitted for 24 hours a day. Mr. Holst stated yes, he has been in business there for 30 years and it's grandfathered in. Sanden asked due to the mining sequence, contemporaneous reclamation is not possible at this site and the possibility of this being a 50 year project, does that mean it wouldn't be reclaimed for 50 years? Mr. Holst stated no, this 22 acres, they figured there are two million tons in there and he thinks that would be mined between five and ten years. Then that could be restored as they go. They have to get to the back because they can't keep driving over what they restore. This property is all zoned Industrial and 24 hour use is allowed in the Industrial zone. That is his understanding. Sanden asked when this was last heard by the Town of Trenton? He knows the approval was back in 2013. The berm, was that a more recent decision? Mr. Holst stated no, that was made at the same time. Sanden asked staff if there is any precedent in Pierce County for limiting hours of operation in an Industrial site specifically for mining operations or in general. Pichotta stated he can't remember a case where we have limited hours of operation in an Industrial District. The reality is that we don't have that much Industrial Zoning. Most

towns have been careful about where it is placed. In theory, you could place conditions on use but an Industrial District by definition is intended for a higher intensity uses, those types of uses that generate noise, dust and vibration as well as the potential for 24 hour operation. If you felt it was appropriate, you could limit but he cautions because that is the purpose of the district for these sorts of uses in general. When the Town had that buffer, berm, they were recognizing that. The difficulty is when you have an Industrial District next to a higher density residential development. In an ideal world, you would have a bit more buffer between them versus the proximity that we are seeing here. That makes siting things a little more of a challenge for the committee. Aubart asked if staff have a recommendation in regards to the tree planting on the berm, what would be appropriate. Pichotta stated in the past, we have required Balsam or Spruce or something that retains its needles throughout the year. We have also required larger trees versus smaller trees in cases where they are to provide a fairly instant buffer. Chairperson Fetzer stated typically 8 to 10 feet. Pichotta stated yes, in a couple cases even taller than that. Sanden stated in the past, in some cases, haven't we placed that onus on the applicant and asked them to come back with a screening plan. Pichotta stated we have done it both ways, dictated it as well as asked for a plan. Ross stated staggered trees too. Chairperson Fetzer said yes, in some cases and it actually works very well because it's a lot better barrier. Sanden stated the same could be said for a Fugitive Dust Plan, have the applicant come back with it and we keep tabs on it and if it doesn't work we can adjust it as needed. **Sanden moved to approve the conditional use permit for Nonmetallic Mining for William F. Holst III, due to the fact this is found not to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area with conditions #1 - #15, adding #16. A screening plan for the berm shall be submitted within six months. Trees to be utilized shall consist of conifers of no less than 8 feet in height.**

17. A Fugitive Dust Plan shall be submitted to the Land Management Committee for approval. Pichotta asked if he wants those plans submitted prior to the use commencing. Sanden stated we wouldn't have to because we will be seeing this again. So he stated six months for the plan to be submitted, if that is consistent with what we have seen in the past. Pichotta stated that is consistent and it maybe that in this particular case a status report would be appropriate. Sanden added another condition.

18. A status report shall be presented to the Land Management Committee within 12 months of approval/Aubart seconded. Ross stated in any issuance of CUP's, it's important for people to understand that at any time if there are any issues, they can be brought back and reviewed. As Dr. Sanden stated we will keep this under review so it's imperative that we make that point. In one case we had a quarry come back every three months for a while until certain things were satisfied. **All in favor. Passed with Jeff Holst not voting.**

Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for Riding Lessons, Boarding and Camps, in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-39D, for Rochelle Wrisky, owner on property located in the SW ¼ of the NW ¼ of Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.

Chairperson Fetzer invited Rochelle Wrisky forward:

Staff Report – Emily Lund: The applicant owns 20 acres and currently 2.7 acres are used to train horses through horseback riding lessons, boarding and day camps. They propose to expand the use with an indoor arena to enable year-round use. The property is located in Section 29, in the Town of Clifton. The property is zoned Primary Agriculture. A dwelling is not located on the property. Private outdoor recreational uses are conditionally permitted. Surrounding land uses include agriculture and woodlands. The nearest residence is 1,300 ft to the southeast at W11544 Cty Rd MM. The driveway is within an easement and extends 2,200 ft east of 1170th St to the buildings. The name of the business is "Wrisky Ranch". There are 10 – 12 horses maintained at this business. The facility is proposed to be open to customers daily between 6AM to 10PM. Riding lessons are afternoon appointments. Day camps are offered to customers Monday through Friday from 8AM to noon. There is no overnight camping for customers. An annual open house is scheduled for parents to watch their children ride the trained horses. The existing structures include 36' x 88' pole shed and two port-a-hut sheds, which one is used for horses

to take shelter and the other for storage. The applicant proposes to build a 60' x 72' riding arena east of the existing pole shed. The building location is over 100 ft to all property lines. The riding arena will require certification under the commercial building code to address issues such as snow load, wind shear and footings for the safety of occupants. Todd Dolan, All Croix Inspections will address the commercial building criteria. The Public Health Dept licenses such facilities and verifies the drinking water supply is safe. Portable satellite waste containers will be provided (1 per 50 people) and maintained for patrons. Applicant hired Darrel's Septic from River Falls to maintain the portable satellite. Equipment to be used includes a skid steer, tractors, truck and trailer. Solid waste/trash disposal service is provided by Paul's Industrial Garage (PIG). Applicants have 1 employee to assist with instructing clients to train horses. Applicants have liability insurance through Allied Insurance through Croix Insurance, Prescott, WI. Applicants have an on-premise sign incorporated into their landscaping, pictured in the staff report. Off-premise directional signs can be obtained from the Highway Dept or the WI Dept of Transportation depending on the location. Off-street parking per Pierce County Zoning Code Ch 240-54(A) for commercial recreation requires 1 space per 4 patrons. The area allows for at least 25 parking spots. The Clifton Town Board approved this request on 8-5-2014 stating that the public facility is consistent with their comprehensive land use plan.

Staff Recommendation: Staff recommends the Land Management Committee (LMC) determine whether or not approval of this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services; Department of Public Health).
2. The riding arena shall be commercially rated, approved by DSPS and a copy of the approval submitted to the Department prior to construction.
3. Adequate portable satellite waste stations (1 per 50 people) shall be provided and maintained.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.
5. The total number of horses maintained on the property is limited to 20 based on the acreage unless adjacent acreage is leased or purchased for additional pasture.
6. Hours of operation shall be 6AM to 10PM, or as otherwise established by LMC.
7. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on or off property.
8. A copy of liability insurance and any changes to the insurance shall be submitted to the Land Management Department.
9. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially the issuance of a new conditional use permit.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked what the anticipated maximum patrons are at one time? Ms Wrisky stated the maximum would be the yearly showcase in the fall and would be around 50, the top so far has been around 30 with parents and grandparents. **Holst moved to approve the conditional use permit for a Private Outdoor Recreational for Riding Lessons, Boarding and Camps for Rochelle Wrisky with conditions #1 - #10, due to the fact this is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Discuss take action on a status report and potential modification of the conditional use permit for a Retreat Center in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners on property located in the SE ¼ of the SE ¼ of Section 33, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Melissa Deyo and Donald Dufek forward:

Staff Report – Emily Lund: The owners purchased the property on 4-17-12 and received CUP approval on 5-2-12 to change the use of the agriculture barn to a retreat center for country-style weddings and receptions. Many neighbors were in opposition of the change in use, so a status review was conditioned part of the approval. The preparation for the use has taken longer to complete because a few expensive projects were not anticipated. The Town Building Inspector, Todd Dolan reported that on 7-31-2012, the applicants received commercial plan approval from DSPS for a dance hall that was seasonal, unheated and without water sprinklers. As originally proposed, they added a new deck with stairs to the east of the barn and a handicapped accessible ramp to the west. New wiring was added and an air test was completed by the inspector. A mop closet, water fountain and two bathrooms were added within the upper level of the barn, as required by the Uniform Commercial Code (UCC). On 6-4-2012, the Department issued a state sanitary permit to replace the septic system to the residence. On 8-28-2012, the Department issued a state sanitary permit for the retreat center’s septic system. The Department inspected both mound system installations on 10-4-2012. On 9-4-2013, a landscaping plan was presented to screen the parking area from County Road N. The LM C approved CUP modifications with conditions 6-9. The property is located in Section 33, Town of Martell. The property is zoned Primary Agriculture. The property is on County Road N and is 40 acres. The owners have had personal parties at this property, but no commercial weddings have taken place at this time. The bathroom stall dividers need to be added before UCC final inspection. Applicants constructed stairs to the wedding barn and they need to be modified so they are 48 inches wide. The landscaping screening has not been planted on the property per condition 7. Conditions stating, “Closing time to be 9:00pm; No parking on Town or County Roads; and No fireworks allowed,” were inadvertently removed during the last modification to the CUP. Staff believes they should be added. The original permit stated, “Closing time to be 9PM.” Clients are concerned about the early time, Ms Lund stated she doesn’t believe they are getting bookings because of the early time, and they are requesting to modify this condition and to set closing time to be 10PM.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions (modifications are in bold):

1. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health & Family Services, etc.).
3. Maximum occupancy shall be limited to 150 people, 3 events per week and 1 event per day on Friday, Saturday and Sunday.
4. The maximum capacity of 150 persons will require 50 available parking spaces, with a minimum of one space for handicapped parking.
5. Advertising signs shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
6. Applicants shall work with Todd Dolan, Martell Building Inspector, to secure final approval from DSPS prior to holding any events.
7. Applicants shall establish a vegetative screen, consisting of no less than five spruce trees, 9-12 feet tall, between the parking lot and County Road N within 12 months.
8. A status report shall be made to the Land Management Committee in one year.
9. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
10. **Closing time to be ____ PM.**
11. **No parking on Town or County Roads.**
12. **No fireworks allowed.**

Aubart asked about condition #3, we are saying six events per week with three during the week and one on Friday, Saturday and Sunday? Ms Deyo stated no, just three per week, one on Friday, one on Saturday and one on Sunday. Aubart stated it says three events per week AND one on Friday, Saturday and Sunday. Pichotta stated it isn't artfully worded. Aubart stated the way he reads it, it would be six. Ross stated if you drop the word "and". Sanden asked if the Town of Martell has spoken to staff regarding their feeling on the closing time. Lund stated she hasn't spoken to them recently. The last time she spoke to Eric, he stated there is no one complaining to him. Holst stated we can try the 10PM, he doesn't see this getting out of control. These people have done what we have asked of them. They have done as much as they can and been true to their word. Aubart stated he was thinking 11PM, but on some other things we have had a decibel level. Holst stated 85 decibels at the property line. Aubart asked what the closest residence is. Ms Deyo stated she thinks it's about a quarter mile. Mr. Dufek stated that is where they put the spruce trees. Aubart stated realistically, when you are looking at weddings, that is why he asked if the events are during the week and the weekend, if you are looking at Friday, Saturday and maybe a Sunday you might want it modified earlier. He doesn't think 11PM is unreasonable for those kinds of events. Not that people have to stay that long either. Ross stated there is a lot of competition out there where people can go. Ms Deyo stated she has given a lot of tours and spoken to a lot of people and as soon as she mentions it's a 9PM end time they are hesitant. She stated they had their wedding there and the neighbors didn't even know they had a live band playing. Aubart stated we could do it for 11PM with an 85 decibel reading. Roy stated the way he remembers the decibel reading is it is 80 decibels at the source of the sound and then that ended up being about 50 decibels at the property line. Holst stated you couldn't even talk at the property line. Roy stated he believes normal conversation is 50 – 55 decibels. The way we placed it at Vino in the Valley, for the source of the sound it couldn't go above 80 decibels. Ross stated just leave it out and we could deal with that later. **Aubart moved to approve the status report as presented and modifications to the conditional use permit for a Retreat Center for Melissa Deyo and Donald Dufek with conditions #1 - #12, adding 11PM to condition #10/Sanden added an amendment to condition #3, taking the word "and" out/Ross seconded.** Chairperson Fetzer asked if we need condition #7, Pichotta stated if it's done it could be struck. **All in favor. Passed.**

Discuss take action on update to Pierce County Land Records Modernization Plan. Pichotta reports: Pierce County's Land Information Council recently met to discuss proposed updates to the Land Record Modernization Plan and to review proposed expenditures from the Land Records Modernization Fund and the WLIP grant program. Minor changes were proposed to be made to the plan to reflect progress made since the last update and to establish the need and timeframe for acquisition of new ortho photos and LiDAR. Proposed changes are shown in *bold italics*. Proposed changes to the plan were approved as written by the Council. Also at the meeting, representatives from Pictometry and Ayres Associates each presented proposals for acquiring LiDAR for Pierce County. Each proposal was of a similar cost, but Pictometry's proposal included a 3 year license for their proprietary software that provides a user friendly tool for utilizing the new ortho photos and LiDAR data. The Council unanimously recommended Pictometry's proposal due to the similarity in cost and the additional software component. Andy asked Kevin Etherton, our new GIS Specialist, to attend tonight's meeting to be introduced and to give him an opportunity to present the proposed changes to the Land Records Modernization Plan as he is largely responsible for its implementation. Etherton explained he came from a company called Lawrence Group, which he was with for seventeen years, and they changed their name to NCompass and then changed the name again to GuideK12. He explained that currently all tie sheets have been scanned and indexed and should be available on the County's website by early 2015. They are working with ProWest to get that information on the website and he will be doing some of that in-house as well to save some costs. Etherton went over each of the changes to the plan, noting that new Orthophotography will be acquired in 2015/16. He discussed free GIS data being available on the website, pursuing making GIS data layers available on the PWA web mapping site for download, stating most counties are now doing that. Sanden agreed with him, stating Dakota County used to make you pay for their mapping services and now they have gone to a fee structure where it's all free. Etherton stated it

would save him time, gathering data for requests but stated he thinks we should charge for additional services that require his time. Sanden stated customized mapping. Etherton stated yes. Sanden asked if Pictometry sold them on the Oblique imagery. He thinks Oblique photography is an over kill in Pierce County. If we get built up to a larger extent then maybe Oblique would make sense. Etherton stated he thinks Emergency Services would benefit as well as Zoning. Pichotta stated the cost differential between acquiring LiDar and six inch pixel ortho photos and the cost of getting obliques is the same price. Sanden asked if you got ortho photos and obliques would you have to pay double? Pichotta stated they come together. Holst stated you get twice the product for the same money where as if you get the orthos, the other outfit would charge us over and above the ortho cost for some of the other things. Pichotta stated it's actually cheaper to get the more deluxe package. Holst stated it looked like even he could run the software. **Sanden moved to approve the proposed updates to the Land Records Modernization Plan as presented/Ross seconded. All in favor. Passed.**

Discuss take action on proposed 2015 Land Management Budget. Pichotta reported: The proposed 2015 Budget is 2.8% below what was approved for last year. Holst stated he noticed that the Planning Budget took a jump and the Zoning Budget went down. Pichotta explained that with the restructure of the personnel; Zoning Budget for this year consisted of Zoning Administrator, Asst Zoning Administrator, Code Compliance Officer, a full-time secretarial staff and a part-time secretarial staff and now the two secretarial positions are part of the Planner Budget. Aubart stated that would reflect in the Health Insurance. Pichotta stated yes. County Planner Budget; Salaries went up because two positions were added to it. Health Insurance went up 80%, we have no control over these costs. There is no change to Operational Costs. Total change in the Planning Budget is 49.9%. The Zoning Budget; the Salaries went down almost 30% and Health Insurance by a similar amount. He did make a few changes in the operating side of things; Other Professional Services has been eliminated. He did increase in the Telephone line item because we have regularly exceeded what was budgeted. He increased the Training and Conferences line item slightly. This was a slight overall reduction in operating costs of the Zoning Budget. Note that under New Equipment, he is proposing to purchase a new vehicle. We have a 98 Jeep Cherokee, which has several issues, a 2000 Ford F150 and a 2002 Chevy Silverado all of which are starting to show their age and have some issues. Given that we didn't fill some personnel positions this year, we will be returning about \$94,000.00 to the General Fund. So that might make possible, if the committee was so inclined, we could pursue the unbudgeted expenditure yet this year, utilizing those dollars as that would not have an impact on future budgets. Chairperson Fetzer stated you are looking for a second vehicle. Pichotta stated he should note also that the Sheriff's Department has available a 2009 Ford Expedition that has 139,000 miles, high on miles but is in good shape. The Sheriff stated she will sell that to us for \$8,000.00. Aubart asked if Andy has ever looked into leasing vehicles? Pichotta stated no. Aubart stated Jason has looked into Enterprise Fleet Vehicles. He knows St. Croix County that is what they are doing on all their vehicles now. They turn them over every two to three years. He doesn't know if that is an option. But Jason (in the Sheriff's Department) has done quite a bit of work on that. Holst stated you have a new set of tires every year, oil changes. Aubart stated all the maintenance is included. Ross stated you can modify the vehicles. Aubart stated you can put radios in them. He stated he doesn't know how the numbers work but it may be something you want to check into. Holst stated it would get away from running them into the ground. Chairperson Fetzer stated it would be easy to budget every year. Pichotta stated it would be a fixed monthly payment. He stated he is willing to look into that. Holst asked wasn't it cheaper for the Sheriff's Department? He stated they are used to getting new used vehicles all the time. Aubart stated it was pretty close but you don't have to worry about other issues and if you end up with a problem car, it goes back. Holst stated we would have time to modify this between now and the actual budget, even though we accept the budget tonight we would have the process to go forward for F&P and Full Board time. Aubart stated he was thinking of timeframes and other dollars. Maybe get one this year and another next year to stagger them out. Pichotta stated the next budget is the County Surveyor, as you recall we eliminated the Surveyor Tech position and that is now a one-man division. Salary will go down about 39% and no changes are proposed in the operating side of things. County Planner – GIS, this is also

a one-man division within the department. Personnel has gone up largely due to the previous employee didn't have health insurance and Kevin does, a little increase despite the fact that his salary is a little less. No changes in the operating side of things. Land Information Grant and Land Records Modernization Fund, for budgetary purposes, we are viewing these as the same because they are both used to further the contents of the Land Records Modernization Plan. When someone records a deed in the Register of Deeds Office, \$8.00 goes into a fund which is the Land Records Modernization Fund which is the lower budget on your spreadsheet. What they did with the budget bill last year is increased the amount that each county was guaranteed under this program so it's \$100,000.00 minus whatever you take in and the State will make up the difference. We took in \$51,000.00 in a twelve month period they will give us for 2015, \$49,152.00. Basically, we have \$100,000.00 a year guaranteed whether we retain it or get it from what is submitted to the State by other Counties. The proposed expenditures out of that fund, for the last couple years we have not spent everything that we have taken in, the goal in not spending that was to build up a base to enable us to acquire LiDAR. We have a little room in there so we are proposing expenditures that total \$140,000.00 potentially. We will probably spend somewhat less than that because there are a number of line items that are included that we don't know if we will be getting - that flatbed scanner for the Register of Deeds Office or the receipt printer are examples. This is the third time that has been included in the yearly budget, we are waiting for those to die, then we will replace them but we need to include them because if they are not identified as an expense then we couldn't use those dollars for that. Pichotta went over the potential figures for the Grant and Land Records Fund. It's going to be about \$140,000 maybe a bit less. Once we have acquired LiDAR, the rest of the expenditures should be much smaller than those large outlays. Next is the Park Development Budget. Andy isn't proposing any expenditures but it's almost certain that Parks will be. The last expenditure budget is WI Fund that is a budget that assists folks who meet certain requirements in replacing their sanitary systems. The Revenue budget demonstrates the fees for the last couple of years and what we are anticipating for the next year. The one thing that was a bit surprising was in 2012 we had \$136,000.00 in fees associated with land use permits and last year we only had about \$60,000.00. We did issue quite a few permits but they weren't for things that generate a lot of money. They weren't for new houses, they were for sheds and decks and those sorts of things. He thought he was being conservative in his estimate for 2014 given what we had seen in 2012 but for 2015, he is estimating \$65,000.00 for zoning permits. Everything else is relatively unsurprising. Capital improvements, as you know, he has been bumping out vehicles for the past ten years. It's probably time to replace something. What he is proposing for 2015, 2016 and 2017 is replacing vehicles but if we can do something creative with leasing a vehicle he is all for it. The 3-Year Budget and Staffing Summary, as noted we are down to 8.5 full-time equivalents, he does not see that changing for the foreseeable future and does not see our operating budget changing much although a lease payment would change the operating budget somewhat. Capital improvements might change too. Sanden stated he thinks it represents a good balance and your estimates are right on track even with an increase in health insurance, you were still able to come in 2% below budget. He commends him. **Sanden moved to approve the 2015 Land Management Budget as presented/Ross seconded. All in favor. Passed.** Aubart asked if we would be able to do a modification on the 17th when we meet again. Pichotta stated he thinks we are beyond the timeframe because he has to meet with Administration tomorrow regarding the budget.

Discuss take action on Travel/Training Requests. Pichotta stated there are two travel/training requests one is for Emily to attend the WCZA District meeting on September 11th in Rice Lake. There will be no overnight requirements. The other is for Kevin to attend the GIS/LIS Conference in Rochester, MN October 2nd & 3rd. The cost is \$265.00 and would require a one night stay so a total cost of about \$367.00 which we have in the budget. **Ross moved to approve the travel/training requests for Emily Lund and Kevin Etherton/Aubart seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated for the 17th we have three items, discuss take action on a screening plan for a conditional use permit to operate a campground for John Grabrick in the Town of Isabelle.

Discuss take action on County Recreation Goals and Actions for the Pierce County Outdoor Recreation Plan which we are updating this year.

Some potential amendments to the zoning ordinance regarding minor structures; periodically when we see things in the code that we think need tweaking, we will bring some of those forward. One of those is to suggest that a 10ft x 10ft Menards shed as a minor structure and not require a land use permit for it. Some other Counties do that.

Motion to adjourn at 7:42pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, September 3, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 17 th , October 1 st & 15 th , all in 2014.	Chair
3	Approve minutes of the August 6th & August 27th, 2014 Land Management Committee meetings.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, and Reclamation Plan, pursuant to Pierce County Code Chapter 241-15A(2)(a) , for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for Riding Lessons, Boarding and Camps, in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-39D, for Rochelle Wrisky, owner on property located in the SW ¼ of the NW ¼ of Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
6	Discuss take action on a status report and potential modification of a conditional use permit for a Retreat Center in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners, on property located in the SE ¼ of the SE ¼ of Section 33, Town of Martell, Pierce County, WI.	Lund
7	Discuss take action on update to Pierce County Land Records Modernization Plan.	Pichotta
8	Discuss take action on proposed 2015 Land Management Budget.	Pichotta
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/22/14)

MINUTES - Pierce County Land Management Committee Meeting, August 27, 2014

Present: Jeff Holst, Pierce County Board Chair

Jon Aubart, Pierce County Supervisor

Dan Reis, Pierce County Supervisor

Bill Schroeder, Pierce County Supervisor

Jim Ross, Pierce County Supervisor

Jim Nordgren, Council President, City of River Falls

Dave Hovel, Mayor, City of Prescott

Gerry DeWolfe, Village President, Village of Ellsworth

Paul Schwebach, Executive Director, Pierce County Economic Development Corporation

Jo Ann Miller, Administrative Coordinator

Andy Pichotta, Director of Land Management

Peggy Nelson, Clerk, Village of Ellsworth

Cindy Polzin, Senior Director of Legislative and Local Affairs, Governor's Office

Chairperson Holst called the meeting to order at 8:30am in the Pierce County Boardroom, Ellsworth, WI.

Committee members participated in a dialogue on issues of interest in Pierce County with Cindy Polzin, Senior Director of Legislative and Local Affairs from the Governor's Office. For informational purposes only, no action taken.

Motion to adjourn at 10:51am by Jim Ross/Jon Aubart seconded. All in favor. Motion carried.

Respectfully submitted by J. Miller

MINUTES - Pierce County Land Management Committee Meeting, August 6, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 20th, September 3rd & 17th, all in 2014.

Approve Minutes: **Ross moved to approve the July 16, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a status report for Belle Vinez Winery for Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Angel and Joshua Zimmerman forward: Josh Zimmerman stated he will go through the staff report and hit on the activities they have completed to date and some of the upcoming items that are still on the agenda. August of 2013, the CUP was granted. In January 2014 the site plan was approved. They came up with their food and wine subordination plan and also their wine making equipment plan in March 2014. In April they cleared their TTB approvals with the Federal Government. Chairperson Fetzer asked what TTB is. Ms. Zimmerman stated Tax, Tobacco and Trade. Mr. Zimmerman stated that will allow them to be a winery and produce alcohol. June 2014, they received their Wisconsin Winery Permit which allows them to act as a winery in Wisconsin. In July of 2014 the sanitary permit was approved and also received their Clifton Class B Liquor License and their Wisconsin Wastewater Treatment Plan was approved by the State for the winery and lounge and they also received their building permit. To date they are still under construction, a little bit of delays with the weather and waiting on other permits so construction started about two weeks ago with the earth work happening a bit before, but under way now. They are expecting to complete, hopefully, in November 2014. That pushes their grand opening out until May of next year. They don't anticipate having any time this year to open the building up. Some of their upcoming activities that they still need to take care of are their DNR Waste Stream Management Plan. This would be the plan they work with the DNR on for wine waste, etc. Shannon and Josh met with Pete Skorseth last week and developed a plan. They have a verbal agreement and now it's down to the contractors to draw up a formal plan to have agreed upon and signed off by the DNR. Once that happens they will deliver it to the Department of Land Management and this committee. Some other items; fencing around Shannon and Angel's pool. Through January into April and some this fall as well, they will be obtaining their on-site reviews and licenses through the Health Department. They need to obtain a food processing license before they can actually make wine. That application has been submitted this week, anticipating by the fall to have their DNR plan, food processing license where they can begin wine production this fall. Still on track following all the conditions but unfortunately, will not be able to open this year.

Staff Report – Brad Roy: The applicant received a Conditional Use Permit (CUP) to establish "Belle Vinez", a vineyard and winery with incidental food service in August 2013. The applicants also reside on

the 20 acre parcel. The operation is intended to build interest and demand for Belle Vinez brand wine, which is to be produced onsite. Off-sale wine along with various craft and wine related products are also proposed to be sold. The Land Management Committee approved the site plan of the operation on January 15, 2014 as well as a food and wine plan, detailing how the food operations will be incidental and subordinate to winery operations, on March 5, 2014. As stated, construction of the facility just recently started. The original plan was for the construction to begin this spring and for the facilities to be open to the public by July, 2014. The construction and operation timeline was modified due to delays in obtaining necessary permits as well as the weather. The first batch of wine is to be produced this fall. The new proposed opening date will be May 2015. This permit will expire in August 2015, renewal can be granted by the Land Management Committee. As with all CUPs, if unanticipated issues or concerns arise, the permit can be placed on a Land Management Committee agenda for review and potential modification at any time. Applicants went through the activities to date and the upcoming schedule. The existing conditions are also listed #1 - #26 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area.

There are also some letters that the Department received. They are in the committees folders. Chairperson Fetzer asked if they plan on selling just the wine that they produce there, is that correct? Mr. Zimmerman stated yes. Chairperson Fetzer asked, no other? Mr. Zimmerman stated no, they do have intentions of importing grape juice to blend with theirs. Yes, all the wine still will be produced on site. Sanden asked if they anticipate producing at least 5,000 gallons this first year? Mr. Zimmerman stated yes. They are targeting 6,000 gallons for the upcoming year with the anticipation of moving to 9,000 gallons in years to follow based on conversations with other local wineries and the demand they have. Sanden asked if he could characterize the progress of the waste stream management plan. Have there been any problems or issues with that process. Mr. Zimmerman stated no problems. The plan they have laid out thus far is for the production shed; adding a separate holding tank there. A non-domestic holding tank, which they will get a septic service agreement and have that pumped out, as well as the solid waste plan with the DNR, at harvest time to bring in a dumpster, which they say is a very common practice, to throw the grape skins, stems all in there and have that hauled off. Sanden asked if that will be completed before May of 2015? Mr. Zimmerman stated yes. We are hoping in the next month or two because they cannot produce wine until that is taken care of and they want to be producing this fall. They are anticipating that in the next month, two months tops. Sanden asked staff, as far as the addition of the viewing room, is that something we need to address? Pichotta stated basically the site plan review which was conducted earlier this year looks at the relationship between the facility and adjoining uses and tries to assure that it is made compatible to the greatest degree possible. We don't typically look at exactly the rooms and how it is configured. It has more to do with the use. It's typically not the level of detail that is gotten into by this committee as far as site plan review goes. Sanden asked if the viewing room isn't anticipated to change the footprint of the building as originally presented. Mr. Zimmerman stated originally they had tables there for guests and they removed some of that size. There will be less guests but there will be a tank or two in there where people can look in there and see the wine making process on a much smaller scale. Sanden stated the short time that he has been on this committee, they have been pretty diligent about trying to help entrepreneurs fit in with their neighborhood. We are not shy about putting on conditions. So far everything that has come before him has been on the up and up. He hopes that relationship continues so we can make sure this is going to fit in nicely with your community. Holst stated as the County, you and your father have been a good to work with. You have kept your word with us. Twenty-six conditions tell him that you will continue to keep your word with us. And hopefully give some satisfaction to your neighbors. In a perfect world we wouldn't need any, today's world we need some.

Holst moved to accept the status report for Belle Vinez Winery for Shannon and Angel Zimmerman, as presented/Sanden seconded. All in favor. Passed.

Discuss take action on a status report, potential renewal and modification of the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Tim Stauffer, Kenny King and Kevin Accola forward:

Staff Report – Brad Roy: This facility was permitted in 2011 and began full operation in 2012. The facility was originally processing sand from a mining operation located in Pepin County. The operation now also processes sand acquired from a mine in Dunn County. Muskie recently processed sand acquired from a Wieser Concrete owned mine in the Town of Salem as part of a test to determine the quality of that sand and plans to acquire more sand from that site. Sand is trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The facility also has byproduct storage stockpiles, storm water ponds, a high capacity well, process water treatment facilities and elevators for the storage silos. The final product is primarily trucked to St. Paul or Chippewa Falls to be loaded on rail but is also loaded for over-the-road shipping to North Dakota and Montana. The applicants originally planned to return the waste sand (including byproduct) to the Pepin mine to be used in reclamation. This was apparently not clearly stated in the Reclamation Plan approved by Pepin County. Pepin County has not allowed the applicant to return the waste sand at this time. Waste sand continues to be trucked to another mining site in the Town of Trenton to be used for reclamation. The hours of operation are generally five days per week 12 hours per day 6:00am to 6:00pm for the quad axle trucks; semi-trucks hauling are spread out over 20 hours per day. The applicant indicated intent to expand hours of operation to 24 hours per day, seven days per week when volume dictates. Industrial uses within the Industrial District typically have not had hour restrictions due to the purpose and intent of the district. A Fugitive Dust Plan has been submitted. The plan details potential sources, control measures and daily record keeping. Staff had received multiple complaints regarding dust in the facility's first year of operation. Since the last renewal, no complaints have been received. Muskie, along with WISC, will be involved in an upcoming discussion with the LMC regarding Frac sand and the potential need for air monitoring at mining and processing sites. There have been no changes to the storage of byproduct since the last renewal. Waste sand is currently being trucked to Trenton for reclamation purposes. There have been no complaints about engine braking since Condition 6 was added. The applicant has indicated that they are continuing to pursue additional product sources which may result in new travel routes. Staff has contacted the Town of Union Chairman regarding this renewal request; the Town did not have any concerns at this time. The existing conditions are listed #1 - #14 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. The following conditions are recommended #1 - #13; the only change being removing #14 of the status report every 120 days. Condition #13 remains unchanged that the permit is good for one year, so they will be back again next year. Pichotta stated we added the potential to renew this particular permit at this time. 120 days status report but the renewal would have been next month so rather than have them come back in a month, we wanted to create the opportunity for the committee to actually renew the CUP for them. Aubart asked about the waste sand and how long can you continue to take it to Trenton or is there any conversation about returning it to Pepin County? Mr. King stated conversations continue but they are not getting anywhere. As far as Trenton, reclamation on that property, there are a lot of years they can haul there. Holst stated it took about four years to dig that hole and it will take about 80 to fill it. Aubart stated the other question is that he knows they are hauling a lot to Montana and North Dakota at this time, but trucks lining up along Highway 10, has that been an issue. Mr. King stated they stay on top of it, the trucks pull up and they park on the highway and employees go out and get them off the road right away. Chairperson Fetzer stated from what he sees, and he lives in the area, they are doing a nice job, cleaned up things well, compared to some early issues and everything is going well. He appreciates it and they seem to be good neighbors. Mr. Accola stated they did just receive notice that they have been accepted into the DNR's Green Tier Program. So they are expected, through that program, to maintain compliance with all of their permits and go above and beyond some of the regulations.

Aubart moved to accept the status report and renew the conditional use permit for Mining, Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, with conditions #1 - #13/Ross seconded. All in favor. Passed

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated there is nothing on the agenda for August 20th. He wanted to make the committee aware that Jim Kleinhans has retired and Brad Roy has been hired to replace him.

Motion to adjourn at 6:22pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, August 6, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 20 th , September 3 rd & 17 th , all in 2014.	Chair
3	Approve minutes of the July 16, 2014 Land Management Committee meeting.	Chair
4	Discuss take action on a status report for Bellevinez Winery for Shannon and Angel Zimmerman on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on a status report, potential renewal and modification of the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, July 16, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 6th & 20th, September 3rd & 17th, all in 2014.

Approve Minutes: **Aubart moved to approve the June 18, 2014 Land Management Committee minutes/Ross seconded. All in favor. Motion passed with Jeff Holst abstaining because of absence at the last meeting.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from General Rural Flexible 8 to Light Industrial for Lot 5, Certified Survey Map (CSM) V13, P148 and Light Industrial to General Rural Flexible 8 District for Lot 6, Certified Survey Map (CSM) V13, P148 for Daniel and Janice Keller, owners on property located in part of the W ½ of the SE ¼ of Section 3, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Daniel & Damian Keller and Larry Murphy forward: Mr. Murphy explained he is here with Toby and Damian Keller. He stated they own Hi-Fold Doors which is located on the subject property and the Keller's are doing some estate planning. Toby currently lives in the house next to the business which is currently on Light Industrial Zoning. If you look at the existing business, part of the building ended up on General Rural Flexible Zoning. At some point they may be selling off the residential house. They are looking at the future of the business and what Toby might do with it with the rest of the family. We went to the Township to get the CSM approved and there are a lot of concerns about the boundary lines so we are going ahead with the zoning process.

Staff Report – Emily Lund: The property is located in Section 3, Town of Oak Grove. The owners had the house and business (Hi-Fold Doors) on Lot 1. The zoning map shows the old lot in gray. The pink lines are the new lot lines. If the zoning map stays the same then the house becomes a nonconforming use and a conditional use permit would be required for any future expansions. The purpose of the rezone would make the zoning map fit with conforming uses. Existing land uses are light industrial, agricultural, residential and forest. Adjacent land uses are agriculture, residential and forested. Adjacent zoning district is General Rural Flexible 8. The list of Pierce County Zoning Code, Purpose and Intent of the zoning districts involved with this rezone is in the staff report. The Town of Oak Grove have their signed form from the Town Chair. The Oak Grove Town Board recommended approval of this rezone request on June 16, 2014, stating “The proposed rezone was a request of the Town Board due to a recent subdivision of the two parcels. If not for the rezoning of the property, the parcels would each be part light industrial, part GRF-8. The rezoning is consistent with Chapter 7, Goal 1, of Oak Grove’s comprehensive plan which supports economic activity that does not detract from the rural way of life. It is also consistent with Chapter 9, Goal 1, Objective 1, which addresses land use conflicts. As it is, the zoning is not accurate and clarifying the inconsistencies will benefit the future users and neighbors of these properties.” Pierce

County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. Pierce County Land Conservation Department has indicated that the land is not in the Farmland Preservation Program. Soil information is provided in the staff report.

Staff Recommendation: Given that the Town of Oak Grove has recommended approval of this rezone request and has indicated that the rezone is consistent with the goals and objectives of the Town's Comprehensive Plan; staff recommends the LMC approve the request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.**
Holst moved to approve the Map Amendment (Rezone) request for Lot 5 & 6 for Daniel and Janice Keller and forward a recommendation to the Pierce County Board of Supervisors/Ross seconded.
All in favor. Passed.

Discuss take action on a request to amend a conditional use permit for an accessory residence in the Agriculture Residential District for Corrine Young, owner on property located in the NE ¼ of the SW ¼ of Section 20, T24N, R15W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Ms Young forward: Staff Report – Emily Lund: Ms Lund explained the applicant is requesting an amendment to the conditional use permit for an accessory residence. The applicant obtained a CUP authorizing an accessory residence on 11-5-2008. She complied with the conditions by obtaining a separate address sign and a land use permit. The applicant received approval for CUP renewal on 11-18-2009 because the construction of the apartment above the garage was not complete, the Town Building Inspector needed to complete the final inspection of the structure to ensure it met the Uniform Dwelling Code, and the use was not established within 12 months of CUP issuance. On 7-29-2009, the applicant obtained a land use permit for a home business to also be located above the garage. The use is for an art and science learning center for adults and children. A sign was also permitted for "Running Dog Ranch." Today the applicant is proposing to amend the CUP and transfer the accessory residence use from the room above the garage to a park model manufactured home. The property is located in Section 20, in the Town of Maiden Rock. The property is zoned Agriculture Residential. The applicant owns 28 acres with a house, two barns, a coop, a shed, two storage buildings, a detached garage with a room (currently permitted accessory residence) upstairs and a new, unpermitted 320 sq ft park model manufactured home and proposed deck. Pierce County Code §240-40A allows accessory residences which are accessory to single family homes in the Agriculture Residential District with the issuance of a CUP. There are two definitions from the code listed in the staff report regarding Accessory Residences and Accessory Buildings for your information. The Maiden Rock Town Board recommended approval of the original request on 9-16-2008. The applicant will be required to hire a Wisconsin Licensed Plumber to obtain a reconnection sanitary permit and connect the park model to the existing mound system. The water and electrical have been connected. A portable holding tank for the park model is currently being used. A Land Use Permit for the park model manufactured home will need to be obtained. The mobile home must be newer than 1976 and the structure must be a minimum of 14 feet wide. No renewal is needed for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed amendment to this conditional use permit would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve the amendment of this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall hire a Wisconsin Licensed Plumber to obtain a County Sanitary Permit and connect the park model to the existing mound system.
2. The applicant shall obtain a Pierce County Land Use Permit for the park model manufactured home and deck. The manufactured home shall be newer than 1976 and the structure shall be a minimum of 14 feet wide.

3. The applicant shall work with Todd Dolan, the Town of Maiden Rock Building Inspector, to determine whether a Town building permit is needed and to ensure the structure is Uniform Dwelling Code compliant.

Sanden asked if he could be reminded what is the purpose of the accessory residence? Ms Young stated they have instructors come in that are there for more than one day and they can't afford to come if they aren't provided with a place to stay. So basically, they give it to them for free and take a donation if they are able to do that. They are also thinking about possibly offering it to class participants that come and need a place to stay. It will depend on whether an instructor has already asked for it or not. It would be something used mainly in the summer, too cold to use in the winter. They have family that come and will want to use it. Sanden asked what park model refers too. Lund stated it's smaller than a mobile home and put on running gear and it still has the amenities for a small livable space. Ms Young stated it's got a full bedroom, a bathroom, a kitchen, dining room, living room, it's like a home. Pichotta stated it's kind of like an RV that's not meant to be hauled around. It's nicer than what is typical. Holst stated that is why they would have to attach the deck to make it over 14 feet wide, because normally they are eight or ten feet wide. The deck would make it comply with our code. Ms Young stated this is about twelve feet wide by itself. **Holst moved to approve the amended conditional use permit for an accessory residence for Corrine Young due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Ross seconded. All in favor. Passed**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Status report for Shannon Zimmerman and his winery in the Town of Clifton.

Status report and potential modification of a CUP for Muskie Proppant for their processing facility on Hwy 10 in the Town of Union.

Sanden asked Andy what happened to the Red Wing Airport status report. Pichotta stated we will get Rick Moskwa in here; he wasn't available for this meeting. He was available for the one we cancelled but given that was the only item we didn't feel it was prudent to hold a meeting just simply for that.

Motion to adjourn at 6:16pm by Ross/Aubart seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, June 18, 2014

Present: Jon Aubart, Joe Fetzer, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 2nd & 16th, August 6th & 20th, all in 2014.

Approve Minutes: **Ross moved to amend the June 18, 2014 minutes to clarify at the top of the third page that “Michael” Holst is the applicant /Sanden seconded. All in favor. Motion passed.**

Discuss take action on a request for Site Plan Review and Height Exemptions for the Diamond Bluff Wash Plant in the Industrial District for Wisconsin Industrial Sand Company, owner on property located on the west 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Justin Hegarty and Mike Murphy forward: Mr. Murphy is the Plant Superintendent at the Hager City location and Mr. Hegarty is from GZA, Geo Environmental, he is an Environmental Engineer who helped design the site layout. Mr. Murphy stated they have both reviewed the staff report and would like to have Brad read the report.

Staff Report – Brad Roy: WISC is seeking Site Plan Review of the recently permitted wash plant in the Town of Diamond Bluff. The washed sand will be trucked to the WISC dry plant in Hager City. New construction will include the new wash plant building, conveyors, load out tank building and maintenance building. An existing residence will be converted into an office. The wash plant will remove clays and fine material from the sand. The mined sand will be conveyed to a scalp screen to remove coarse sand and water will be added creating slurry. From there the slurry will go to another scalp screen to remove more coarse material. The material will then be pumped to the wash plant through a slurry pipe. The wash sand is conveyed to storage bins. Trucks will be loaded inside a new load out tank building. The process, when fully implemented, has been designed so that the sand will not be exposed to the open-air. The site has received Conditional Use Permits for Nonmetallic Mining, Heavy Industrial Uses and Filling and Grading in the Shoreland Area and Wetland District. A height exemption pursuant to Pierce County Code §240-29D is also being requested. Various structures are proposed which are greater than the 35 foot height limitation established in the Zoning Code. The property is zoned Industrial. Adjacent land uses are agriculture, low-density residential and undeveloped areas. Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Access to the mine entrance site is off of 1005th St. The road will need significant upgrades if the proposed facility is approved. The applicant and the Town of Diamond Bluff have discussed a road agreement for 1005th St. No formal agreement has been made at this time. The applicant submitted a conceptual request to the WisDOT regarding the Hwy 35/1005th St. intersection. WisDOT

recommends that the intersection be upgraded to the B1 class. This will widen the intersection to allow trucks to enter and exit simultaneously and create a 200' right turn lane on northbound Hwy 35. Haul trucks will enter the site on 1005th St. and enter the Load Out Building and make a continuous forward loop back to 1005th St. This action should reduce the need for backup alarms at the facility. The road and area around the structures will be paved. A Fugitive Dust Plan has been developed for the operation. The plan details the measures to be taken to reduce roadway dust from temporary stockpiles and roadways during periods of dry or windy conditions. The plan details the use of a watering truck and potentially a sweeper for roadways and water cannons for any stockpiles. Initially there may be some temporary storage of mined sand as the adits to the mine are being constructed. After mining operations are in full production, outside storage of sand will not be needed. Construction is estimated to take two to three years. The proposed hours of operation of the plant are 24 hours per day, seven days per week. Front end loaders, trucks, mining equipment and conveyors will be routinely operated outside of the mine. The site has 36 parking spaces with two spaces reserved for handicap parking. Pierce County Code §240-54 requires one space per employee during the peak shift as well as 2 spaces for manufacturing/trade contractor establishments. The peak shift at the plant will have 22 employees. Restrooms are to be located in the Office Building. The applicants have designated an area for a new septic system, but final location will be determined after soil testing. A lighting plan for the site was developed and depicted on the attached documents. The lighting is intended to stay onsite in the working areas. MSHA regulates lighting and may require modifications to the plan. WISC is proposing multiple structures greater than 35 feet. Pierce County Code §240-29D states that industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setbacks and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. The structures and heights that the applicant is seeking an exemption are:

Wet Plant Building 95'

Load Out Tank Building 95'

Pierce County Code §240-23 does not specify a rear or side yard setback in the industrial district. However, to grant the exemption described in §240-29D the structures must be a minimum of 60 feet from the property lines. The structures will be over 200 feet from the east property line. The Load Out Tank Building is 77 feet from the west property line and the Wet Plant Building is 60 feet from the west property line. The applicants will leave as much of the hillside undisturbed as possible. Stabilization and vegetation practices will be implemented at the disturbed areas. The exact location of the mine entrances cannot be determined at this time. The soil of the hillside will have to be removed to the bedrock to allow geologists to examine the rock and decide where the entrances shall be located. The submitted documents are based on the information that the applicants have at this time. Prior to construction the applicants will obtain a WDNR General Stormwater Permit for Construction Activities which will include the erosion control Best Management Practices (BMPs). The BMPs will follow the Conservation Practice Standards provided by WDNR. Stormwater issues regarding drainage, pond design and wetlands were discussed in detail at the Filling and Grading public hearing on May 21, 2014. No advertising signs have been proposed at this time.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed plans, considering; existing and proposed structures, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, access, traffic generation and circulation, lighting, drainage, etc. to determine whether there are modifications that would result in a site design that would better promote compatibility between land uses, create safe and attractive site layouts, protect property values and contribute to efficient land use in Pierce County. The following conditions also recommended:

1. A permit for a new septic system shall be obtained prior to any construction of structures or use of the office.
2. All structures proposed to exceed 35' in height may be constructed as long as zoning code provisions are not violated.

Sanden asked Brad about bullet #2 on page 2, was there a misprint, “mined sand as the exits to the mine”? Roy stated no, it was written “edits” it is supposed to be “adits”. Mr. Hegarty stated it’s a word for portal into the mine. Sanden asked to be refreshed about the road agreement with the Town of Diamond Bluff, was that a condition of the original permit? Roy stated yes. Sanden asked if the buildings are in the floodplain. Roy stated no. Sanden asked if the proposed building is 60 feet back from the property line. Roy stated yes. Ruth Wood asked about the setback, it states that the building must be set back one foot for each additional foot in height. What is the required setback? Pichotta stated there are no setbacks specified in the Industrial District. You are allowed to be 35 feet at the property line. Pichotta noted that it used to be that the Land Management Committee could grant height exemptions between 35 feet and 60 feet through this same mechanism. The approval of something above 60 feet actually required the issuance of a Variance by the Board of Adjustment. In order to qualify for a Variance from the Board of Adjustment there needs to be unique property limitations and hardship can’t be self-created. There is specific criteria for variances. The Board of Adjustment struggled with issuing variances because those standards were difficult to apply to a circumstance like this. So the inclusion of language in the zoning code which had to be brought in front of the County Board for approval was actually at the request of the Board of Adjustment. Ms Wood asked if processing would be possible without having a 95 foot structure. Mr. Murphy stated it does take a 95 foot structure in order to complete the process because it’s a top down process. Ms Wood asked what the purpose of height limits in the code was. She assumed it was primarily aesthetic. Is that basically the intention? Pichotta stated yes that is basically the intention. A height exemption can only be granted for a commercial or industrial structure. We included commercial structures largely because the State dictated that counties and municipalities can no longer have much to say about cellphone towers so we included commercial structures as well. The way that the State had dictated it, you could put a cellphone tower on a very small lot and the reality was that it could fall on other people’s properties. That is why we included commercial structures. Ross asked about page 2, the peak shift of the plant will be 22 employees. Are you saying that 22 employees total or on site at that time? Mr. Murphy stated that is what it said. He thought there were 36 employees. Roy stated there are 36 parking spaces. Mr. Murphy stated 22 employees comparing it to Bay City. Bay City has around 16 employees at peak. So 22 might be during the development stage of the mine and it may back off from there. He can’t see it exceeding 22, it definitely won’t exceed 36. Roy stated it was 30 or so total employees for the whole project, he remembers from the other meetings. Sanden asked about lighting at the top of this tower or lighting on anything above 35 feet? Mr. Murphy stated it will depend on MSHA regulations. At the existing facilities they keep lighting as low as possible. There is really no reason to have anything that high. They just need to illuminate the ground surface. He wouldn’t anticipate anything being at that height unless MSHA saw a need for it. Sometimes if you have catwalks that go up the outside of the building or have a bucket elevator, there may be a switch light but it wouldn’t be on all the time. Sanden asked if the lighting would have a cowling so it would be directional lighting. Mr. Murphy stated yes.

Sanden moved to approve the request for site plan review as presented and height exemption for Wisconsin Industrial Sand Company with conditions #1 - #2/Ross seconded. All in favor. Passed.

Discuss take action on proposed amendments to the Land Management Department Staffing Plan.

Pichotta Reports: Staff is proposing several changes to the Staffing Plans associated with the Land Management Department. The Surveyor Tech position has been eliminated from the Surveyor Staffing Plan and an Office Manager/Clerical Staffing Plan has been created which contains the newly created Office Manager position as well as the former Planning Secretary and PT Zoning Secretary positions. It should be noted that most secretarial positions in the County have now been renamed as “Office Specialists.” In looking through these sheets - zoning is much the same as it was although the secretarial positions that fell within that division have now been moved to a separate sheet. The Zoning Administrator position will change as Jim Kleinhans has indicated his intention to retire and his last day in the office will be July 25, 2014. Chairperson Fetzer asked how many years he has been with the Zoning Department. Pichotta stated twenty years. The Office Manager/Clerical staffing plan - as you may note

the secretarial positions have been renamed the Office Specialist and Part-time Office Specialist. Then Planning will largely remain the same except the Planning Secretary has been moved, that would include himself and the GIS Specialist, Rand Kluegel who is retiring effective July 7, 2014. We will be hiring there too. Pichotta noted that two vacancies have been advertised: one for a fulltime Office Specialist and the other for GIS Specialist. The deadline for both is June 25th. We are doing screening that week. Interviews are two weeks later. GIS interviews are on Monday, July 7, 2014 and the Office Specialist will be on July 8th. The County Surveyor Tech position has been eliminated. He has modified the GIS Specialist position to note that one of their duties is to assist the County Surveyor in his statutorily required duties as County Surveyor. If a live body is needed to go out in the field, that would be the default person. The reason for doing that, with better equipment most surveyor crews are now one person. One person can adequately do it with the technology that is available. The reason we might need another body out there is safety issues. Like if we have Louie doing some work on a highway where it can be a safety issue due to traffic, also Louie occasionally has to do work on the meander lines on the Mississippi River and Pichotta would prefer that he not be out in a boat by himself trying to locate monuments. Those are the proposed changes to his staffing plan and will be a part of the budget that you will be seeing again quite soon. Aubart asked what they approved the last time when the committee talked. Pichotta stated as far as the position names, he had suggested call the clerical positions something along the lines of Administrative Assistants or Land Management Secretaries and there had been some resistance to that. The recommendation from this committee was to call them Land Management Secretaries and shortly after that he learned that through the Carlson/Dettman study, there was a recommendation to change all secretaries within the County to the classification of Office Specialist.

Staff Recommendation: Staff recommends the Land Management Committee review the attached draft Staffing Plans to determine whether changes or clarifications are necessary. If no changes are needed, staff recommends the Staffing Plans be approved as written.

Aubart moved to approve the proposed amendments to the Land Management Staffing Plans as presented/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated we had one item for the first meeting in July that was to have the gentleman from Red Wing Airport come in but given that there are no other agenda items, he recommends not meeting on July 2nd. Just for your information, we haven't formally been served but the Town of Oak Grove met on Monday night and it is his understanding that they intend to challenge the decision to approve the conditional use permit for the Oak Grove expansion that occurred several weeks back. Chairperson Fetzer asked if this comes back in front of us or goes right to circuit court? Pichotta stated it goes to circuit court where the judge reviews the record associated with the decision and determines whether the committee followed the correct theory of law, exercised their judgment or imposed their will. He basically ensures that the decision meets legal muster. A review of the materials is also done, basically to look to see if there was information presented that supports the judgment even if there was sufficient material to justify a different judgment. The courts don't substitute their judgment for the committee's judgment, it's just based on a determination as to whether proper procedures was followed. Chairperson Fetzer asked if our attorneys have looked at this. Pichotta stated this action is not unexpected, but formal review by our attorney had not yet happened as we have not seen their argument. Sanden asked Andy to keep the committee up to date.

Ruth Wood stated she read most of the minutes on that discussion and she thought another issue that the Chairman of Oak Grove spoke and she seemed quite upset that the conditional use permit might be granted when the terms were specific that the use had to be underway in a year. She asked if that has

anything to do with the suit. Pichotta stated yes, it almost surely does. Pichotta encouraged Ms Wood to stick around for a few minutes after the meeting to have a short discussion.

Motion to adjourn at 6:30pm by Sanden/Aubart seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 18, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 2 nd & 16 th , August 6 th & 20 th , all in 2014.	Chair
3	Approve minutes of the June 4, 2014 Land Management Committee meeting.	Chair
4	Discuss take action on a request for Site Plan Review and Height Exemptions for the Diamond Bluff Wash Plant in the Industrial District for Wisconsin Industrial Sand Company, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
5	Discuss take action on proposed amendments to the Land Management Department Staffing Plan.	Pichotta
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(6/6/14)

MINUTES - Pierce County Land Management Committee Meeting, June 4, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 18th, July 2nd & 16th, August 6th & 20th, all in 2014.

Approve Minutes: **Ross moved to approve the May 21, 2014 LMC minutes/Sanden seconded. All in favor. Motion passed with Holst not voting due to his absence from the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for Bruce Andrews Seamless Gutters in the Agriculture Residential District pursuant to Pierce County Code Chapter 240-36D, for Bruce Andrews, owner on property located in the SE ¼ of the SE ¼ of Section 4, T24N, R16W, Town of Maiden Rock, Pierce County, WI.

Chairperson Fetzer invited Mr. Andrews forward:

Staff Report – Emily Lund: The property is located in Section 4, Town of Maiden Rock. The applicant contacted the Department office and informed staff he was operating a seamless gutter and metal roofing business. He wanted to construct a new building for business storage. Staff found that a CUP was not in the property file. Attached to the staff report is the letter communicating with him. Section 240-36D allows farm and home based businesses accessory to permitted single-family residences shall be permitted by a conditional use permit in agricultural districts, subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
2. If located in the dwelling unit, the farm and home based business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be 5 acres.
4. Such other conditions as specified by the Land Management Committee pursuant to Sec 240-76 shall apply.

The 6.6 acre property is located in the Agriculture Residential zoning district. The applicant owns Bruce Andrews Seamless Gutters. The company was established 14 years ago and has operated at this site since the business began. Residential is the other land use on this property. Adjacent uses are agricultural and forested. The applicant lives on-site and operates his business out of a 400 sq ft office/storage area in the house basement and 1,120 sq ft material storage area in half of the detached garage. The sales and installation work is primarily performed off-site. Phone calls, accounting, billing and storage are completed on-site. Within the next 12 months, the applicant intends to build a 24' x 54' (1,296 sq ft) shed for personal storage. He proposes to move his office out of his basement and have that in the other half of the existing detached garage, which would be a total 2,240 sq ft for the business area. He plans on adding a bathroom in the detached garage and connecting to the existing conventional septic system. The

applicant shall obtain a Land Use Permit from the Department's office for a new personal storage building. A State Sanitary Permit shall be obtained by applicant's hired Wisconsin Licensed Plumber. The applicant currently has 7 full-time employees. The busy season for them is from April to November weather dependent, but is usually year around. Standard working hours are Monday through Friday 7AM to 6PM. Shipment delivery (Semi, UPS, etc) is occasional Monday through Friday. Bathroom facilities are provided in the basement of the home. The residential septic system is supported by a 3 bedroom conventional septic system. No advertisement signs are wanted at this time. One business vehicle is left outside and 2 vehicles are stored inside the garage. Applicants have P.I.G. contracted on a weekly basis for trash pick-up. The owner keeps metal to recycle. During the on-site visit, staff verified that the aluminum recycling pile is out of public view. Pierce County Code (PCC) §240-54A requires 2 off-street parking spaces for contractor establishments. PCC §240-54I requires handicapped parking spaces should include 2 percent of the total spaces created, with the minimum of one space. There are 3 employee parking spaces in front (west side) of the home and 1 handicapped parking space is available by the basement office entrance. The Maiden Rock Town Board recommended approval of this request on 6-8-2014. The Town justified their approval by stating, "No concerns. Been in business and has had no calls on any problems at the Township."

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. There shall be at least 2 parking spaces, with a minimum of one space for handicapped parking.
6. If the applicant constructs an advertising sign on-site in the future, he shall obtain a Land Use Permit form the Department's office at that time.
7. Applicants shall work with Todd Dolan, Maiden Rock Building Inspector, to determine whether or not commercial plan review and approval is required from Department of Safety & Professional Services.
8. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), etc.).
9. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Aubart asked when the letter went out. Lund stated December 18, 2013. Pichotta asked Emily about the date in the staff report it says 6-8-2014 for the Town of Maiden Rock's recommendation. Lund stated that actually occurred on January 8, 2014. **Holst moved to approve the conditional use permit for a Farm and Home Based Business for Bruce Andrews Seamless Gutters with conditions #1 - #10, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Floodplain District and Shoreland Area, pursuant to Pierce County Code Chapter 240-41E, for Michael Holst, owner on property located in the SE ¼ of the SW ¼ of Section 21, T26N, R18W, Town of Trimble, Pierce County, WI. Chairperson Fetzer invited Mr. Holst

forward: Jeff Holst recused himself from discussion and voting because of possible conflict of interest but wishes to retain his right to speak as an individual. Mr. Michael Holst explained he has worked close with Jim and Emily on this project. There are three jobs he would like to do; repair a driveway that goes through the floodway back to his quarry and some fields. That driveway has been there for a long time and it functions fine but when it floods, there is some damage so he wants to repair that. He would like to pour cement in the driveway, grade, riprap both sides of the driveway and seed down about an acre. That will be part of the grass that they will mow and keep a heavy sod patch there. There are two other ones, one crossing in the back end of his property that goes to a farm field and he has NRCS plans on that. One other little corner, shown on the aerial map, crossing the creek; the corner is eroding into the field. He would like to slope it to a 3:1 or 4:1 slope and riprap it to the normal high water line. All these spots are 100ft to 120ft long either side. He would like to get it done before it gets too hot and dry for seed to grow. This is three jobs and he is a one-man show. He would like to have a couple done by the 15th of September on account of the trout. If he doesn't finish, he would ask for an extension.

Staff Report – Jim Kleinhans: Mr. Holst has these projects that he just described. They are in the Spring Creek, directly upstream from the Trimbelle River. Trout water so we have to be extra cautious and careful with how the work is done. Land Conservation and NRCS designed these practices and they will be doing construction checks on the projects. We'll make sure they go according to plan. He thinks Jeff and Dennis Fritz are making sure they are done appropriately. Mr. Holst stated that Dennis worked with him real close on all this stuff, now he is gone so Jeff is going to slip in there and take over. Kleinhans stated this is an area that has generated some erosion so it's been a hit for the Trimbelle River so it's a good thing Mike has decided to do this to stabilize the area. There are three different components listed on the first page of the staff report. He provided the filling and grading conditions out of our Shoreland Code and its floodplain too so we have to think about hydraulic analysis but there are elevations associated with the plan. It does not appear to raise water level on adjoining property. They are staying pretty close to the existing grades on the reconstruction of the existing road and for the riprap, Mike has applied for a State permit from the Department of Natural Resources and has received that. There are some timelines for completion of the work: September 15th would be a cutoff. Then no earlier than May 15th because they are trout streams so he has to abide by those things to protect the trout populations. The seeding recommendations were put into the plans and they are pretty consistent. Each phase of the project involves about 120 feet of horizontal distance along the streams. The Trimbelle Town Board recommended approval of this conditional use permit during their May 13, 2014 meeting stating the project will reduce erosion and sedimentation and no specific concerns were suggested provided the plan is followed.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Seeding shall be completed in a timely fashion to establish suitable ground cover by September 15, 2014.
2. Operation and management for all erosion control elements as presented be followed to the satisfaction of the County until after all re-graded areas are stabilized.
3. The applicant shall notify the County of any changes to the construction plans for review and approval by Land Management staff.
4. Excess materials from the various construction activities shall not be placed in the floodplain.
5. The project shall be completed within 12 months of approval or a permit extension be requested.
6. State permit conditions shall be adhered to for construction.
7. Vegetation removal in the near shore area shall be minimized to adhere to Section 240-46 or other allowance by the LMC.

If you look at this section, typically you can't clear cut any 33 feet in every 100 feet along a stream and 35 feet inland. With some of these projects for river restoration, there is a lot of vegetation removed. What he

saw on the site is a lot of box elder and he thinks Mike will try to protect any good species that are there. We should think about how many trees are removed on our different segments of the stream.

8. Notify Land Management Department staff for compliance checks upon completion of each phase of this request. And he would like to add Land Conservation Department staff since they will do the construction checks to verify the design.
9. Driveway development in the project area shall not extend above adjacent land grades so as not to impair flood water flows.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Ross asked Jim to explain his statement about condition #7. Kleinhans stated if you look at the top of the second page of the staff report, vegetation and cutting 35 feet inland. Paragraph two says; an alternative to Subsection B(1), a special cutting plan allowing greater cutting may be permitted by this committee upon issuance of a conditional use permit. Which is why we are here but the application for such permit shall include a sketch of the lot location of parking, topography of the land, existing vegetation, proposed cutting and proposed replanting. What it boils down to is the Land Management Committee can allow a greater degree of cutting with a conditional use permit and call for additional planting. So some of this might be more where you have vegetation removal and you would want to maintain a buffer between a residential property or if there is a real sensitive area where you have soil conditions where they would erode a lot. In this case we don't have an adjacent residential use that is going to see this. The screening buffer is not an issue. He thinks it's more for a stream side protection and cover for the critters that migrate through the area. It's Mike's property, he's the contractor and he's not going to do anything that's going to cause him more work and have to patch it up. If you go to some of these sites where John Sauer comes out and does work on the streams, he widens it out and takes all the vegetation away from the stream and then they come back and plant some. It doesn't look like it did before. They remove a lot of undesirable species if you consider box elder undesirable. You try to promote better trees in the area. Mr. Holst stated he marked off some oak trees and some maple trees and he has gone around them but those box elders are really hard to grade with those things hanging over. He figures on leaving a green buffer strip. He isn't going to plant corn right up to the creek. He will leave 50 to 60 feet that is going to be green, clover and grasses; probably mow it once a year. So it's a filter strip. If the creek floods, and it will, then it catches the silt in that filter strip and it comes right back. He has another spot where he has been doing that for twenty years since he's lived there. He is concerned about the trees and there isn't an abundance of good trees but there are a few oaks and maples. He will plant some trees maybe but he wants to leave that strip. Sanden asked if the box elders are right on the stream? Mr. Holst stated for the most part they are hanging. Every time it floods, it floods under them and then they tip over. The grass won't grow under them. Sanden stated his concern is being a cold water stream for trout, that does also provide shade and keeps that a cold water stream. If you do remove all the trees along that strip it could actually heat it up. These are probably spring fed so it's probably not that big a deal but maybe that should be thought of. Mr. Holst stated there are some big black willow and some big cottonwood trees that he isn't going to touch because they have a pretty good root system but the box elders really raise heck with the grading and the erosion. Every tree that is worth saving, he will save it. If they riprap that and narrow that stream down the water is moving faster so it's going to stay cooler too. **Sanden moved to approve the conditional use permit for Filling and Grading Floodplain District and Shoreland Area for Michael Holst with conditions #1 - #9, amending #8 to add "and Land Conservation Department staff," due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed with Holst not voting.**

Discuss take action on a deferred conditional use permit application to operate a campground in the General Rural District pursuant to Pierce County Code Chapter 240-39A, for John Grabrick, owner on property located in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Mr. Grabrick forward. Mr. Grabrick explained they put the gloves on and went at it at the Town of Isabelle and it took about two and a half

hours to knock out the agreement that you have listed as Campground Rules. After a very long discussion with the neighborhood and the board members, they are proposing a campground with 42 sites total and we agreed that we would do 33 for this year. The services would be put in for the other nine and then next year when we take a look at this again they will turn it on for the other nine. They have a lot of infrastructure that needs to go in. Right now they are just in brushing out, taking out the dead trees and then they will have the surveyor come in and do a complete survey of what the campground looks like and make sure that everything is where it needs to be. We'll take out any trees that are in the way of camp pads but they will replant because they are taking out a lot of scrub trees. There are about 30 or 40 trees that are tipped over, rotted up. It's not a nice area back there. They have one point of contention that seems to be coming up; that is the next door neighbors, the Peterson's. She sent in another letter today. She brings up the bar property and the volleyball courts. They are in the process of trimming trees over there and putting up a five foot high orange plastic snow fence. They don't want people getting hurt on the volleyball courts and they are trying to stop the ball from going onto her property as she has requested. To put any kind of a hard fence there, if someone is chasing down a ball, they don't want to have anyone smashing into a wood wall and breaking a shoulder. They are trying to do what they can to appease their neighbor. She is asking for the moon and they are trying to do what fits in the budget. Sanden stated he thought the last time Mr. Grabrick had said he was going to be making a vegetative fence along the side. Mr. Grabrick stated along the campground they are doing a vegetative screening but what she is bringing up in her letter is the volleyball courts up front, which is not associated with the campground and they are here on the campground. They are trying to take care of both issues. As they get into this brushing out, there is a lot of sumac, a lot of black locust. He is meeting next week with the DNR and discuss the property line along the State owned land and they are going to take a look at his backyard as well and tell him what they think about the trees they are taking out. They have a program right now to eliminate all the black locust so they are bringing out a spray to use so the shoots don't keep coming up. They are going to take a ten foot strip along the State land and brush out on their side of the fence line so that they can keep the locust out of the campground. They are also going to go through and eliminate the thirty some years of garbage that have accumulated, just to be good neighbors and clean it up.

Staff Report – Jim Kleinhans: John was here on May 7, 2014 to request a conditional use permit where the committee deferred action. This went back to the Town of Isabelle for clarification on some of their issues. You have an attached document that spells out what the Town thought for some of their issues for campground rules. This is a five acre parcel in the General Rural zoning district along 135th Avenue. The improvements there include bar, mobile home and sanitary dump station. John is requesting a campground. Jim has listed the 16 items in the staff report, out of the County Code that are pertinent to campground requests. Also the section on landscape buffer for tree requirements and screening are listed on page 2. He included quite a bit of information that relates to the licensing by the Public Health Department for the committees information and for the applicant so he knows what's expected to run a campground with all amenities. Mr. Grabrick is requesting approval for 42 individual campsites plus a general tent site area in the middle of a five acre parcel. The tent sites are not defined. The County Ordinance talks about a defined area with a minimum square footage so it was kind of hard to recommend that tent site area without more defined lineal representation. They County Code requires two off-street parking places per campsite and John provided a typical campsite diagram that provides two parking spaces on each campsite, with an additional parking area that would accommodate approximately 50 vehicles behind the bar. That would allow for overflow parking. The Town of Isabelle Supervisors revisited this conditional use permit request during their May 19th meeting and clarified the campground rules that are attached. The Health Department inspections in the past determined compliance issues with electric, plumbing and water supply system, sanitary dump station and solid waste issues that will need to be corrected before John operates his campground. The property will need to be surveyed to verify side yard setbacks are met. The 50 foot setback is based on the zoning code requirements. Again the discussion about vegetative screening between the campground and the adjoining property, the owner has requested a fence and the committee has discussed some sort of a living fence but we should think about our vegetative screening that was adopted to protect some nonresidential development from adjacent

residential uses. The application states the water and electrical will be upgraded this spring. As far as he knows, Mr. Grabrick hasn't started any upgrades besides trimming trees. The water and electrical improvements will require some review by different agencies like the Department of Health to make sure they are up to snuff.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a campground with the following conditions:

1. A surveyed layout of the individual campsites as located within the campground shall be provided to Land Management Department staff to verify side yard setbacks and minimum campsite dimension requirements, per DHS 178.11 prior to campground operation.
2. The location and number of porta-pots shall be delineated on the survey consistent with the requirements of DHS 178.09. Plans for the required improvements to the sanitary dump station and the holding tank, as well as associated service contracts and contact information shall be submitted to the Land Management Department.
3. Screening shall be established between the campground and the adjacent residential use. Screening shall consist of _____ and shall be implemented prior to operation of the campground. Staff shall be contacted to verify establishment prior to operation.
4. Internal roads, camping pads, and water and sanitary improvements shall be constructed or implemented prior to operation of the campground. All necessary permits shall be obtained.
5. All campground advertising signage shall comply with the Pierce County Zoning Code.
6. The total number of campsites available shall be limited to _____. Additional sites may be authorized by the LMC upon renewal.
7. A campground management plan, consistent with the provisions of PCC 240-39 and the Town of Isabelle document titled "Campground Rules", shall be implemented. The "Campground Rules" shall be implemented as written unless specifically modified by another condition of this CUP.
8. The vehicle access route shall be modified to allow for continuous travel to the campground overload parking area to minimize congestion.
9. This permit shall be reviewed for renewal by the LMC in 12 months to ensure that all required improvements are completed and conditions are met and to verify that the use has been established.
10. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health-DHS standards etc).
11. The proposed undefined tent sites (located in the middle of the defined sites) shall not be utilized for that purpose until consistent with applicable zoning and public health standards and authorized by the LMC.
12. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If the applicant has questions as to what constitutes an expansion or intensification, Land Management staff should be contacted.

Sanden stated this came up in a previous issue, for condition #3 are you looking for language adequate to provide complete screening or are you looking for specific trees and placement? Kleinhans stated as the section reads, and it was a policy adopted several years ago, native vegetation shall be utilized whenever practical. Vegetative screening buffers shall be maintained in good condition. Different trees provide different benefits. If we put in evergreens they are going to provide a little bit of sound protection and more of an understory than if we recommend hardwoods, you tend to get a canopy. He recommends that we do some sort of screening that has alternating spruce. Around the airport we used black spruce, some cedars and a mixture to provide visual screening for the airport. Sometime the applicant can provide what he would like to see on his property. We haven't looked at anything. If not, you can work something out

now. The neighbor wanted some sort of a hard fence for security so the committee can think about that as well. A hard fence would be a security fence typically eight foot high. If we go with a vegetative buffer, we want to make sure that those trees are watered. That is a sandy area down there. Make sure drought tolerant species are utilized, if you get enough of a tree to begin with to establish some kind of buffer, not that they use seedlings. Sanden stated he thought black spruce need pretty wet conditions. Would white spruce be a better choice? Kleinhans stated either one but they used some of those at the airport. Holst asked if those were the ones that died. Kleinhans stated he isn't going to plant near as many as the airport planted and they transplanted some of the cedars over there also. Our buffer requirement talks about native vegetation. Holst stated maybe if you get some buckthorn over there it will act as a buffer and also as a deterrent. Kleinhans stated we are talking about noninvasive species too. Something desirable, something he wants on his property and something the neighbors can look at too, something that will provide a reasonable screen in a reasonable amount of time. This committee has done that before. Two rows alternating seems to work well. Holst asked what the linear depth of the lot is. Mr. Grabrick stated it's quite deep. Holst asked if it is a 40 deep. Kleinhans stated no, it's only five acres. Ross stated he thought it was 550 feet for the campground part. Mr. Grabrick stated that what their intention is, is to have a landscape company come out once they get the brush and the trees cleared. To look into vegetation that will grow there. They have some long-needle pines that are growing already. They might look at some more pines, put in some cedars, something that they can manicure and sculpt when they are done. They would like to put a nice row in there one to two deep, very similar to matching what's on the neighboring property. They have a similar screening on their property. They want to put something in that is nice. A hard fence especially an eight foot high fence is going to look like a prison. They are looking for something natural for people that want to come camping. He knows there have been some security concerns with the neighbor, but that was before they bought their property. He has checked with the Sheriff, once they started activity there, all that activity went away. They haven't seen any of that since they moved on the property. For example, he thinks they are worried about noise. The campers that they have coming in are not going to be noisy. They worry because we have a sign out front that says welcome bikers. On Saturday they had 440 bikers come in on the Make-a-Wish Biker Run. They had no complaints. They were some of the best customers they have ever had. Sanden stated we could ask for security fence later if any problems do arise. Ross asked Mr. Grabrick if he has talked to any landscapers yet. Mr. Grabrick stated he has talked specifically with a landscape architect that is a friend of his. He has agreed to come do some drawings once they decide what species they want to put in. He stated they are on a sugar sand site and it's hard to keep water on the surface so they need something that is going to grow in that environment. If it gets to be a concern over time, they will do something along the border where the houses are. He thinks that is their biggest concern that they don't want to look out at the campground. The campground is going to be behind them. He stated they want to make this a nice campsite. It's not one that they want to bring in the Hell's Angels or the Outlaws and turn it into a biker camp. They want a nice campground. Kleinhans stated if you look at the map that Rand generated, roughly a third of that property on the west side is vegetated already. Kleinhans said he has a pretty good established buffer for part of the campground right now. It's just that small area between the volleyball courts and the existing tree line that we should think about. The entire length of the lot is 600 feet long so maybe there is only 100 feet. Holst stated maybe we could ask for site plan review in three months, he would have an idea of what he wants to do and we would have an idea of what might grow there besides steel fence posts and security fence. Chairperson Fetzer stated he would think as a neighbor, he understands the security issues, but he wouldn't want to see a wall up either and having some nice trees might do it. Holst stated he had a neighbor that put up a 14 foot high pole barn steel fence for a security fence. Good fences make good neighbors. He understands what you are trying to accomplish with your natural environment. But he also understands that when you come back here every 12 months and at a later date we might say we want a fence. That will be an incentive for you to be a better neighbor. For them to be a better neighbor to you too. Sanden stated he would like to hear what the landscape architect has in mind and let them be the judge. Holst stated down there, just about everything you put there is going to die. It takes a tremendous amount of dedication to keep something alive. Mr. Grabrick said if

they need to they can actually bring in materials. He knows one of the sand pits is looking for a place to dump some of their fines. They could build a berm out of that. That supposedly will grow things. If they have too, they will put something else on there. This will take them the better part of the summer just to build this campground. By the time they get done brushing, cutting trees and located the services a lot of this is being done by him. He will hire the appropriate individuals as needed, where they need to have a license. Right now they have the old campground that has services but they are very inadequate. The first thing they are going to do is retool the dump station, put new concrete on top of it with the proper slope. Ultimately they have in plans to have hard sewer connections to all 42 sites which means they won't really need the dump station anymore but it will still be there. The tent site itself, it's not that they want to put tents all over all summer long, but they want a general tent area that they can come back with and get a special permit for some of the events that will be held during the course of the year. When motorcycles come in and they come in with tents, they don't always have a thousand square feet, they put the tents side to side so you can put more bodies in there. That takes a special permit. **Holst moved to approve the conditional use permit request for a campground for John Grabrick with conditions #1 - #12, modifying #3 to state Screening shall be established between the campground and the adjacent residential use. A screening plan shall be submitted for Land Management Committee review and approval within 3 months and #6 will read limited to 33, due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded.** Chairperson Fetzer asked if this will come back in front of the committee in a year? Holst stated three months. Pichotta said the way it was stated a screening plan in 3 months. Chairperson Fetzer said in one year for the conditional use permit. Pichotta stated in a year it will go before the Town to make a recommendation for the remaining nine sites. Holst said it may be advantageous for the applicant if we change that to nine months and that would give him the entire next season if we enlarged it by the other. Ross stated you could get started earlier, John. Holst stated by that time everybody should know how good a neighbor you are or are not. Mr. Grabrick stated that will get them in before the start of camp season next year. Holst stated he gets going in the spring and could put people in there Memorial Day instead of 4th of July. Sanden said you are amending condition #9 from 12 to 9 months. Yes, he will second that. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

WISC Site Plan Review and Height Exemptions for the Diamond Bluff Wash Plant.

Discuss take action on proposed amendments to staffing positions.

Motion to adjourn at 6:55pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 4, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 18 th , July 2 nd & 16 th , August 6 th & 20 th , all in 2014.	Chair
3	Approve minutes of the May 21, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for Bruce Andrews Seamless Gutters in the Agriculture Residential District pursuant to Pierce County Code Chapter 240-36D, for Bruce Andrews, owner on property located in the SE ¼ of the SE ¼ of Section 4, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Floodplain District and Shoreland Area, pursuant to Pierce County Code Chapter 240-41E, for Michael Holst, owner on property located in the SE ¼ of the SW ¼ of Section 21, T26N, R18W, Town of Trimble, Pierce County, WI.	Kleinhans
6	Discuss take action on a deferred conditional use permit application to operate a campground in the General Rural District pursuant to Pierce County Code Chapter 240-39A, for John Grabrick, owner on property located in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.	Kleinhans
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(5/22/14)

MINUTES - Pierce County Land Management Committee Meeting, May 21, 2014

Present: Jon Aubart, Joe Fetzer, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 4th & 18th, July 2nd & 16th, all in 2014.

Approve Minutes: **Sanden moved to approve the May 7, 2014 LMC minutes/Aubart seconded. All in favor. Passed with Chairperson Fetzer not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for an electrical business (Matt's Electric) in the General Rural Flexible District pursuant to Pierce County Code Chapter 240-36D, for Matthew Feuerhelm, owner on property located in the SW ¼ of the NW ¼ of Section 14, T26N, R17W, Town of Ellsworth, Pierce County, WI. Chairperson Fetzer invited Matt Feuerhelm forward. Mr. Feuerhelm explained he has been in business since 2001 and didn't realize he needed a conditional use permit. He runs a small operation and usually has six employees maximum.

Staff Report – Emily Lund: The property is located in Section 14, Town of Ellsworth. Staff received complaints from the public and investigated their validity. Staff found that a CUP was not in the property file. The 15.38 acre property is located in the General Rural Flexible zoning district. The applicant owns Matt's Electric Inc. The company was established on 10/1/2001 and operated at this site since the business began. Other land uses on this property are residential and agricultural. The agricultural land is rented out. Adjacent uses are agricultural, woodland and residential. The applicant lives in the home on-site and operates his business out of a 30ft x 60ft (1800 sq ft) pole shed, which is used for storage and product fabrication. There are (2) 8ft x 49ft (384 sq ft each) semi-trailers for business material storage. The work is primarily performed off-site. Some minor fabrication (less than 10%) is performed on-site. Currently there are no plans for other buildings or expansions of the business. The applicant intends to build a personal residential 3-car garage within the next 5 years at which time a Land Use Permit needs to be obtained from the Department's office. The applicants currently have 4 full-time and 1 part-time employees. The busy season for them is from May to mid-November weather dependent. If the season is really busy, they may have 2 more full-time employees. Standard working hours are Monday through Friday and sometimes Saturday during the busy season. They work from 7am to 5pm and also provide emergency after hour service. Shipment delivery (UPS, FedEx, Speedy Delivery, etc) is on a daily basis Monday through Friday. Bathroom facilities are on-site. The applicant owns a chemical toilet (satellite) that was purchased and is currently serviced by Johnson Sanitation. It is seldom used and is located outside the pole shed. The bathroom inside the house is more often used and accessible to all employees. The residential septic system is supported by a 3 bedroom mound septic system. The applicant proposes one on-site advertising sign that is 4ft x 8ft (32 sq ft) that will say the company name and telephone

number. The employees take their business trucks home with them on a daily basis. Applicants have P.I.G. contracted on a weekly basis for trash pick-up. River City Metals picks up a separate scrap metal dumpster as needed. Lamps are recycled on a regular basis to various companies. Cardboard is recycled as needed. Pierce County Code 240-54(A) requires 2 off-street parking spaces for contractor establishments and the property has more than 2 parking spots available. PCC 240-54(I) requires handicapped parking spaces should include 2 percent of the total spaces created, with the minimum of one space. There are 10 employee parking spaces, 8 business trucks parking spaces and 1 handicapped parking space is available. The Town Board of Ellsworth recommended approval of this request on 11-4-2013 and a copy is included in the staff report. The Town justified their approval by stating, "The Town's Comprehensive Plan, Chapter 9, identifies land use which would be commercial as this business is a specialty contractor or personal service business and is consistent with the desired character of the town."

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. There shall be at least 2 parking spaces, with a minimum of one space for handicapped parking.
6. The advertising sign shall not exceed 32 square feet, comply with the zoning code standards and signs shall be located outside of road right-of-way.
7. Applicants shall work with Todd Dolan, Ellsworth Building Inspector, to determine whether or not commercial plan review and approval is required from Department of Safety & Professional Services.
8. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), etc.)
9. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked about deliveries, are there any semis? Mr. Feuerhelm stated he has a short semi deliver once or twice a week. Big trailers deliver once every couple months. Sanden asked staff about the complaints received. Lund stated someone wanted to bring in an electrical business out to a subdivision and because the zoning district was rural residential and it wasn't agricultural district, it didn't allow them to bring this establishment there so they made a complaint about Matt's Electric, saying they didn't have a permit so she had to check the validity. Sanden stated it had nothing to do with his operation. Lund stated nothing personal to him.

Sanden moved to approve the conditional use permit request for a Farm & Home Based Business for Matt's Electric with conditions #1 - #10, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for a Nonmetallic Mining Operation in the General Rural Flexible 8 District pursuant to Pierce County Code Chapter 240-37A and Reclamation Plan hearing, pursuant to Pierce County Code Chapter 241-15A(2)(a), for Wisconsin Industrial Sand Company, agent for Big Acres Inc, William F. Holst

III, Nancy J. Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand Company forward: Jeff Himes explained WISC is requesting approval for a conditional use permit to operate an underground mine in the Town of Oak Grove. Their overall plan is to develop a mine in the towns of Diamond Bluff and Oak Grove, build a wash plant in Diamond Bluff which will supply wash sand to the Hager City drying and screening facility. The properties included in this application are a part of this mine. This will be an underground mine essentially the same as the Bay City and Maiden Rock mines. The type of mining is underground room and pillar, intersecting tunnels on their grid system. The tunnels will be around 25 x 25 typical overburden thickness is 170 to 200 feet thick. Bay City and Maiden Rock mines which are currently operating have been running since 1910 and 1920. The process will be exactly the same as the other two mines, drilling and blasting, loading the sand from the faces, screening, washing, processing the sand, draining it and hauling the washed sand to the Hager City Facility. It should be pointed out that the washing process is in Diamond Bluff. The Oak Grove portion is going to be just the underground operation and nothing other than that. On the surface, we will be including some ventilation shafts to provide fresh air to the mining operation and we may include portals to add ventilation and safe access and escape ways. This is all the same as the Bay City and Maiden Rock mines. The reason they are pursuing this project and the benefits to WISC in bringing this operation into production is to provide more sand production capability to provide a growing market in the industrial business and benefits to the community are construction jobs while they build and develop the facility and also 20 – 30 additional jobs at the mine, also additional jobs at the Hager Plant when it is expanded. Fairmont has added 133 jobs to the region since we started working in this area ten years ago. Impacts, generally they consider dust, noise, trucks, lights, in this case the entire operation is underground in the Town of Oak Grove. There will be no dust issues. Everything is operating underground other than some vibration from blasting. Some moderate noise from the ventilation shafts will be no noise issues. They aren't running production trucks on the Town Roads. Lighting will not be an issue. All the trucking will be in Diamond Bluff and Trenton Townships, not in Oak Grove. In conclusion, the proposed mine provides jobs, very low impact in the Town of Oak Grove. It will not interfere with any current surface activities. We believe the proposal is consistent with the Town Comprehensive Plan. It does not detract from the rural way of life. It supports the continued operation of farms. We are operating successfully with the conditional use permits we have at Bay City and Maiden Rock. We are requesting a similar conditional use permit with similar conditions for this operation in Oak Grove. Sanden just wanted to be clear; you said no truck traffic, how does the sand get transported from this mine to its ultimate destination? Mr. Himes stated the sand is dug by front-end loader at the face underground, hauled to the screening apparatus to take out the big chunks and then it's basically slurried at that point and then pumped to the wash plant in Diamond Bluff Township. All underground.

Staff Report – Brad Roy: WISC is seeking an expansion of the Diamond Bluff underground mine which was permitted by the LMC in 2012. At that time the applicants indicated that they intended to expand the mine into the Town of Oak Grove, pending a recommendation from the town. The applicant has now secured a recommendation and is requesting an expansion of the mining area into the Town of Oak Grove. The proposed expansion would extend the mining tunnels; above ground disturbance would be limited to ventilation shafts and potentially a secondary exit. The mined materials will be screened, trucked and conveyed in the tunnels and eventually pumped through a slurry pipe to a wash plant in the Town of Diamond Bluff. The washed sand will be trucked from Diamond Bluff to the dry plant in Hager City. Mining operations will be similar to those in the WISC Maiden Rock and Bay City mines. Mining is not expected to commence in the Town of Oak Grove for 10 years or more. It has been suggested that the fact that “mining” has not physically commenced at the permitted mine site in the Town of Diamond Bluff means that the “use” has not been established and consideration of a conditional use permit to authorize expansion of the mining area is not appropriate at this time. Pierce County code 240-76(G) states: “Expiration. All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition of the permit, the permit shall expire at the end of the time limit.” The LMC, at the required 1 year status

report on August 7, 2013 by WISC, found that “action” had commenced at the Diamond Bluff site within 12 months and that the “use” had been established. Given this determination by the LMC, it is appropriate to now consider a request from WISC to authorize additional areas for future mining activity. Many uses require that substantial engineering and design be completed prior to any construction or site disturbance occurring. Additionally, some uses, such as mining, require permits from multiple agencies and levels of government and can require even longer timeframes to be fully operational. Given this, it is not reasonable to expect a particular use to be fully established and operational within 12 months. It is for this reason that Pierce County Code uses the standard of “action has commenced to establish the use” when considering whether a use has been established. It should also be noted that the fact that mining is proposed to take place in two different townships does not impact the status of the mine as a single project from a County Zoning perspective as both towns have adopted County Zoning. A Reclamation Plan has also been submitted for the proposed above ground disturbance and will be discussed. No formal action is required for the Reclamation Plan. Proposed expansion parcels are located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove. The property is zoned General Rural Flexible 8. The proposed expansion encompasses 27 parcels totaling approximately 985 acres. The primary use of the land is agriculture, forested and undeveloped. The proposed underground mining would not cause a change to the current uses. Adjacent land uses include agriculture, forested, undeveloped, a commercial orchard, residential, and a platted residential land division (zoned Rural Residential-12). The application included the commercial orchard property which is zoned Light Industrial. Nonmetallic mining is not an allowable use in the Light Industrial District. The entire mining process takes place underground using room and pillar mining. The sandstone will be mined in parallel tunnels approximately 30-foot wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. In the tunnels, the mined sand will be trucked and conveyed to a scalp screen to remove coarse sand and water will be added creating slurry. From there the slurry will go to another scalp screen to remove more coarse material. The material will then be pumped to the wash plant through a slurry pipe. Water is supplied by two high capacity wells which are to be located in the Town of Diamond Bluff. High capacity wells are permitted by the WDNR. The wash water will be recycled using a closed-loop sand dewatering system. The applicants have not indicated any intention for a high capacity well to be located in the Town of Oak Grove. The washed sand in Diamond Bluff is trucked offsite to a processing facility in Hager City. The haul route in the operation plan does not detail any production traffic within the Town of Oak Grove. A ventilation shaft may be needed in the future to provide clean air to the underground mine. The exact location of any potential shafts cannot be determined at this time. They are typically located on flat, easily accessible, leased property with access paths for maintenance and monitoring. The applicants have also indicated that a secondary access portal may be necessary in the Oak Grove mining area. It would be intended as a secondary access and also for emergencies and not for production. The location of any access portal cannot be determined at this time. Groundwater elevation in the mining area is mapped at approximately 720 to 800 feet mean sea level. The lower level of the mined sand is approximately 60-80 feet above the groundwater table. The applicant is proposing to operate the facility 24 hours a day, seven days a week with up to 22 employees. WDNR regulates and monitors discharge water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The permit will include the erosion control Best Management Practices (BMPs) which will follow the Conservation Practice Standards provided by WDNR. The mining operation is required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of stormwater pollution and spills of oil-related materials and other chemical and establish controls to minimize any potential impacts to surface or ground water. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. The wash plant will remove clays and fine material from the sand. The clays and fines go to thickener tanks which use flocculants and then to a filter press or plate press. The press will remove the water and create a cake of clay and fine material which will be placed back in the mining tunnels. The use of flocculants in the

dewatering process has caused concerns from the general public regarding the possible contamination of groundwater. The use of flocculants is permitted by the WI DNR which monitors the type and limits the amount used. The flocculants will remain with the clay and fine materials and be placed back in the mining tunnels, where it will degrade. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. Concerns have been raised about the health effects of silica dust. New information regarding the potential impacts of silica dust is emerging as well as methods for mitigating the dust. WISC has submitted information regarding the air monitoring done by WISC, the DNR as well as the mining industry. A discussion as to whether additional air monitoring is warranted will take place at an upcoming LMC meeting. Wisconsin Department of Safety and Professional Services (DSPS) establishes uniform limits on permissible levels of blasting to reasonably assure that blasting does not cause injury, damage or unreasonable annoyance to persons or property outside any controlled blasting site area. SPS 370 addresses “unreasonable annoyance” as well as injury and damage to persons or property by requiring a pre-blasting survey, adherence to established blasting schedules, use of seismographs meeting minimum specifications and control of adverse effects. WISC will use controlled blasting techniques to minimize ground vibrations and seismographs to measure and document the resulting ground vibrations. WISC will offer pre-blasting surveys to residents or owners of dwellings or other structures and respond to claims of impacts. WISC will develop a blasting schedule with consistent times. Surrounding landowners will be given the option of having notices sent to them via phone, text or email before any blasting. Pierce County has, through its adopted comprehensive plan, acknowledged that the responsibility for accomplishing planning objectives set forth in comprehensive plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The County further establishes “that it will seek to further each Town’s planning goals and objectives when considering the establishment of conditionally permitted uses.” The County’s plan states that “the county will consider adherence to the goals, objectives, and policies of an adopted or amended comprehensive plan to be consistent with the public interest for decisions relating to that governmental unit or municipality.” (Pierce County Comprehensive Plan page 13) The Town of Oak Grove recommended denial of this request on April 21, 2014. The recommendation is based on the Oak Grove Comprehensive Plan, Chapter 9 – All Conditional Uses: *Goal 2*, “Ensure that the proposed conditional use will be compatible with surrounding land uses that exist when the proposed use commences.” *Objective 1*, “To consider and review proposed conditional uses that will commence within a reasonable time of the Town’s consideration of the conditional use permit application.” *Policy 1*, “Town will generally not recommend approval of a conditional use permit application if the proposed conditional use is not expected to commence in the Town within 12 months of the issuance of the conditional use permit.” The Land Management Committee, on October 17, 2012, adopted a Policy titled “LMC action when a Town Recommendation is purported to adhere to an adopted Town comprehensive plan but appears to be unsupported by said plan.” The policy states that in cases where a Town provides a Town Recommendation that purports to be consistent with that Town’s adopted comprehensive plan, but upon review appears to be unsupported by that plan, the Land Management Committee shall, after holding a public hearing, defer action on the conditional use permit request and shall refer the issue back to the Town for additional consideration and clarification. Staff has reviewed the Town of Oak Grove’s recommendation and believes that it is supported by the Town of Oak Grove Comprehensive Plan. Pierce County Nonmetallic Mining Policy establishes setbacks for mining operations to be 100 feet from property lines and 200 feet from residences. Due to the proximity of adjacent higher density residential (Rural Residential-12), staff suggests that a larger setback to the RR-12 Zoning district should be considered. The Rural Residential – 12 Zoning District is established to provide for residential subdivision development in predominantly rural areas not suited for agricultural uses, served by on-site absorption sanitary systems and private wells. The District is intended to protect residential development from incompatible uses. An increased setback would also be consistent with the guidelines established in the Oak Grove Comprehensive Plan. The Town of Oak Grove Comprehensive Plan discusses nonmetallic mining in detail, however, that guidance was not referenced in their recommendation regarding this request.

- A Reclamation Plan was developed for the mining operation.
 - The structures, vents and ramp are to be removed.
 - Mine openings are to be closed in accordance with agreements to be determined with the WDNR and to allow continued ingress and egress of bats.
 - The flat areas will be returned to a condition for potential agricultural use.
 - The sloped areas will be seeded with natural grasses.
 - The final land use will be dependent on future land use trends.

The existing conditions are listed #1 through #24 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends this CUP for an expansion of a nonmetallic mining operation be granted with the following conditions, additions and changes are shown in bold:

1. Applicant shall submit verification of lease agreements before mining is conducted.
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties. Mining under a leased property shall be a minimum of 100' from any well. A 200-foot buffer shall be maintained around structures. **Mining shall not encroach within 400 feet of a Rural Residential zoning district.**
4. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
5. A map of mining activity and areas of future expansion shall be provided to the Zoning Office annually.
6. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
7. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
8. WISC shall develop a plan to respond to damage claims to wells or structures by surrounding land owners. WISC shall offer pre-blasting surveys to residents or owners of dwellings or other structures within 1500 feet (or as established by the **applicable** Town) and shall respond to claims of impacts/damage.
9. A groundwater response plan, including accurate determinations of the groundwater level and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation, and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
10. Engineering analysis shall be conducted to demonstrate slope stability for the reclamation of the mine entrance area. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
11. A formal road agreement for **1005th St.** with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance. **Road agreements shall be established with the appropriate municipality prior to any use of Town or County roads.**
12. Applicant shall obtain all necessary permits for the proposed development within the Floodplain and Shoreland area.
13. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to site disturbance.
14. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences.

15. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
16. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
17. All loaded trucks shall be tarped in a manner acceptable with the Town of Diamond Bluff.
18. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
19. Applicant shall implement Fugitive Dust Plan as presented. Modifications to the Fugitive Dust Plan may be required by the LMC if warranted.
20. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster. Notification to all surrounding landowners within 1500 feet shall be given notice of the blasting schedule. Blasting shall be restricted to six days a week.
21. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, WisDOT, MSHA and other agencies if required.
22. Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office.
23. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
24. This permit shall expire in two years. Applicant shall come before the LMC for a status report in one year.
25. **Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.**
26. **Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.**
27. **Prior to beginning any mining activity within the Town of Oak Grove the applicant shall request to be placed on the agenda of the Oak Grove Town Board to review uses occurring in proximity to parcels authorized for mining. Concern raised by the Town shall be presented to LMC for review and potential CUP modification.**
28. **No ventilation shafts shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.**
29. **Any secondary access portal shall require issuance of a Conditional Use Permit for an expansion of this use.**
30. **Mining shall not occur on/under property zoned Light Industrial.**

Chariperson Fetzer stated he will now defer to Andy Pichotta. Mr. Pichotta stated that the committee should have in their folders a copy of a Memo from him with the subject Town Recommendations and the Public Interest. There are copies available on the table. Pichotta proceeded to read the memo. According to Perce County Code 240-76 a conditional use permit (CUP) is required for the following:

- Establishment of each use permitted as a conditional use,
- An addition to, or expansion of, a nonconforming structure,
- Expansion or intensification of a nonconforming use,
- Expansion of a use permitted as a conditional use.

Pierce County has, through its adopted comprehensive plan, acknowledged that the responsibility for accomplishing planning goals and objectives set forth in comprehensive plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The County further establishes “that it will seek to further each Town’s planning goals and objectives when considering the establishment of conditionally permitted uses.” The County’s comprehensive plan states that “the county will consider adherence to the goals, objectives, and policies of an adopted or amended comprehensive plan to be consistent with the public interest for decisions relating to that governmental unit or municipality.” (Pierce County Comprehensive Plan, page 13). In order for a Conditional Use Permit application to be considered complete, Pierce County requires that a Town Recommendation Form be submitted along with

other required materials. The Town Recommendation Form enables a town to provide input and make recommendations regarding the potential issuance of Conditional Use Permits. As noted above, a recommendation that is tied to the planning goals and objectives of adopted comprehensive plan is to be considered to be consistent with the “public interest” for that municipality. The term “public interest” is defined at the bottom of the second page. A Town Recommendation is required as part of a Conditional Use Permit application whether a town has adopted a comprehensive plan or not. Pierce County Zoning Code (Chapter 240) states that “the Land Management Committee shall review each conditional use permit application for compliance with all requirements applicable to that specific use and to all other relevant provisions of this chapter. In approving conditional uses, the Land Management Committee also shall determine that the proposed use at the proposed location will not be contrary to the public interest and will not be detrimental or injurious to the public health, public safety or character of the surrounding area.” (Emphasis added.) From a practical perspective, when a town cites goals, objectives, and/or policies in their recommendation regarding a proposed conditionally permitted use, the Land Management Committee must seek to ensure that any decision made, or condition placed, will not be contrary (see #1 below) to the long term or intermediate end that the goal and/or objective cited is intended to accomplish. A policy, if one is cited, should be viewed as the town’s recommendation as to how that particular goal or objective could or should be accomplished. It may be that a variety of strategies or required conditions could be employed to accomplish the cited goal or objective and it is the Land Management Committee’s responsibility to ensure that any condition placed is reasonable and meets a legitimate regulatory purpose (see #2 below). It must be noted that the Land Management Committee is ultimately responsible for decisions regarding the issuance of a conditional use permit and said decisions are appealable by any aggrieved party. Pierce County, in creating a mechanism through which a town is able to further the goals and objectives of their comprehensive plan, did not relinquish its authority or responsibility in making discretionary decisions regarding the issuance of conditional use permits. Decisions regarding approval or denial of a proposed use or the establishment of conditions must still be made based on the standards contained in Chapter 240-76 of the Zoning Code. Approval continues to be based on a determination by the Land Management Committee that “the proposed use in the proposed location will not be contrary to the public interest and will not be detrimental or injurious to the public health, public safety or character of the surrounding area.” Conditions placed must be reasonable and relate to a legitimate regulatory purpose, such as public health, safety, welfare or protection of the public interest. Persons aggrieved by conditional use permit decisions issued by the Land Management Committee may, within 30 days of filing of each such decision in the office of the Zoning Administrator, file a certiorari review action with the Pierce County Circuit Court.

- (1) Public Interest – 1. The general welfare of the public that warrants recognition and protection.
2. Something in which the public as a whole has a stake; est., an interest that justifies governmental regulation. (Black’s Law Dictionary Seventh Edition)
Contrary – Opposite in character or nature. (Webster’s Third New International Dictionary)
- (2) Conditions established as part of the issuance of a conditional use permit are generally legal and acceptable if they meet the following tests:
Essential Nexus Test: The limitation must be designed to remedy a harm to public interests or to address a need for public services likely to result from the proposed development.
Rough Proportionality Test: The limitation must be commensurate with the extent of the resulting harm or need for services.

Chairperson Fetzer opened the hearing to the public. Sarah Palodichuk, Town Chair, Town of Oak Grove, Andy, thank you for summarizing a lot of what she had to say in this Memo. It’s a little hard to process the end part of it having not seen it before. She assumes everyone on the committee has read the Towns Recommendation in whole. To be clear, our recommendation to deny this application is about the zoning issue here and the securing of zoning on a piece of land indefinitely. They are open to the discussion of mining in Oak Grove and they are open to the discussion of WISC mining in Oak Grove. We feel that this particular request is premature. Therefore, we recommended denial of the request. As a side note, on the first page of the staff report, starting in the third paragraph, it states that it has been

suggested that the fact that mining is not physically commenced. That was not their suggestion. That is not the point they were trying to make at all. She doesn't think anyone in Oak Grove disputes the fact that there have been actions taken in Diamond Bluff. She was at the meeting when the committee renewed their permit in 2013. She knows they have said that there have been actions taken. That is not their point of discussion at all. So those paragraphs are not what they are talking about. What they are talking about is if you look at Pierce County Code 240-76A and it talks about an expansion needing its own conditional use permit. Nowhere does it say that Section G that talks about expiration does not apply to expansions as well as the initial conditional use permit. More specifically, this conditional use permit is a brand new conditional use permit in the Town of Oak Grove. Their comprehensive plan says that they generally will not recommend approval of a conditional use permit if use is not to begin in 12 months. So on both levels, Oak Grove Comprehensive Plan and the Pierce County Code, she believes this is an inappropriate, premature, unripe issue. Back to Andy's Memo, they did rely on the two different documents that Pierce County has sent out most recently, the policy adopted 10-17-2012 where she and fellow Board Member Debbie McClure attended where it says like Andy had said, the Town Recommendation shall be considered to be consistent with the public interest for the town and also with 240-76E(1) where it says that, Andy quoted it, where it says that the decision you make shall not be contrary to the public interest. Based on those two things alone, she feels that this committee is compelled to deny this application. If you choose not to do so, she respectfully requests that you read an express finding of justification for not following your own policy into the record. Her last point, if you do choose to set aside their recommendation of denial. They specifically asked staff if we would have the opportunity to submit a revised recommendation if our rationale was deemed inadequate to support their recommendation. She knows that the Land Management staff has said that it is consistent with their comprehensive plan but if you feel it lacks adequacy then they respectfully request that you send it back to us. He knows better than to just repeat something she heard in a conversation, because she has learned the hard way about that, but she did meet with Andy Pichotta and with their town attorney and asked about that and had made sure they had established the correct procedure. Also she is in an awkward position as Town Chair because she did have that conversation and herself and the town attorney told the Planning Commission that information as well. And to have her Planning Commission rely on her word that we would have a chance to submit further recommendation if theirs was inadequate is a huge responsibility in her town. Not only did the planning commission rely on the information she was given but the town board did as well. She feels like their recommendation was given appropriately that it is clear that their recommendation of denial is in the public interest and that they would like the committee to follow that recommendation. Alternatively if you choose not to follow that recommendation, they would request that you send it back to them for further recommendation. She could spend 25 minutes going through every page of the document that was just handed to her. If this decision is going to be finalized tonight and you intend to approve it as it is written, then later in the meeting she would like it if you would give her the 20 minutes to go through page by page because she does have notations page by page which as Town Chair it's probably appropriate for her to present to the committee. She has said her process portion of what she has to say but if there is going to be further conversation without having it be sent back to the town, she would appreciate being able to share the substantive portion. Thank you. Jerry Turley, Estates of Diamond Bluff, if you look on the back page you can see that the proposed mining area butts right up to a number of our properties. We have had a lot of discussions on whether the setbacks are enough to protect our properties and wells and septic tanks. These setbacks they don't think are anywhere near adequate to protect us from continuous blasting over decades. It talks in here about there will be a plan to address damages. He would like to see something specific on what damages are going to be so that if they have to replace a well or septic tank that there will be a fund set aside so they don't have to go in court to be readdressed for the damages, because there is no way as individual homeowners they could battle with a big company like that. If there could be a fund set aside to handle that, that would be administered by a third party, it would alleviate a lot of their concerns. If you look at the map, on the proposed parcels on the right hand side, it has the boundary going right up to 435th Ave. There is a coulee that runs there and there is an easement trail that runs down to Smith's Landing. He wants to know specifically why that

easement trail is included. Does somebody intend to make that into a road? He can't see any reason why a mine 200 feet underground needs to include that easement as part of the parcel. Roy stated as part of the application, you look at the whole parcel so that parcel includes that portion up to the road. Roy can't imagine with setbacks that that is a mineable portion of that parcel but since it is part of the whole parcel, it is included on the map. Mr. Turley stated what he thinks he is hearing is that it's included and he isn't hearing a specific reason that it's not going to be included on the mining operation like a new exit. Roy explained a new exit would have to go back to Town and also this committee. Mr. Turley stated he understands it would go back to the Town but the Town has already recommended not to approve it and I think everybody here knows which direction that is headed, sounds like the Town's recommendation is going to be overruled. That doesn't carry much weight. Pichotta stated when you factor in setbacks; that pierce simply couldn't be used for anything. It just is a reflection of one of the applicant's property lines. It's the simple reason that that is included. Mr. Turley asked if there is any way that this is approved that it could be amended that that section of the trail and easement would not be used for mining operations? Pichotta stated he doesn't think that an amendment would be required based on the existing conditions that are recommended, mining could not occur within 400 or 500 feet from there. Mr. Turley stated reading through this, a lot of the verbiage is what he would refer to as weasel words, that don't actually mean anything in a court of law so that if anybody ever contested this, he doesn't think it would hold up at all. Pichotta stated he respectfully disagrees. Cindy Jensen, lives in Oak Grove in the Estates of Diamond Bluff, she would like to refer to the staff report on page 4, she just wanted to state that the bullet that talks about the recommendation by the staff that they suggest a larger setback because of the Rural Residential 12 Zoning District, she doesn't see anything in the recommendation that addresses that but it sounds like staff has recommended that and she suggests and agree with that. Chairperson Fetzer stated we bumped it up to 400 feet. Pichotta stated that is in condition #3. Ms Jensen also agrees with the recommendation that Sarah has made from the Town Board. She doesn't understand why a permit is given for parts of Oak Grove when in fact this permit is going to expire in two years but we are stating that there is going to be no mining in Oak Grove for eight to ten years. She is not sure why we are approving a permit and doesn't understand why that is necessary. Burt Levy, resident of the Town of Oak Grove, he fully agrees with the position of the Town of Oak Grove in regard to the mining CUP application by WISC. He has been very involved with the updating of their Comprehensive Plan and the crafting of a fair ordinance in regards to non-metallic mining. I have researched many of the issues (legal, environmental, economic and social) and sat through innumerable Town meetings where we were under the guidance of our Town attorney, Cedar Corp and others who were in constant contact with the County Land Management Office. Under the advice of the county and our consultants, we arrived at the Plan and Ordinance that are stated in the Town's response that you have before you. A response that is both fair and legal. As stated in the Town Recommendation, Oak Grove has no idea when WISC might cross the border from Diamond Bluff to Oak Grove. It could be 5, 10 or 80 years or never. This is a patently unfair encumbrance on future land use and casts a shadow on the evaluation of any nearby properties. The argument that this CUP is an extension of an existing mine totally disregards the fact that individual applications for any CUP have to be made to all townships involved. There are no extensions of any project into an adjacent municipality unless that municipality also approves it. The logical conclusion of WISC's insistence that this is an expansion would negate any necessity of a CUP application to any adjacent municipality that they or anyone else wanted to expand in to. That is, since we were granted a CUP in "X" Township we are automatically granted a CUP in "Y" Township. That's absurd. In that the Town of Oak Grove has exercised due diligence along with extensive time and money to comply with all state and county provisions concerning this matter, your finding must be to uphold the decision by the Town Board of Oak Grove to reject the CUP at this time on the basis stated. Tom Breen, Oak Grove, Aspen Creek Development, he too wants to speak in support of their Town Recommendation. He wants to speak to the lingo in the approval about this conditional use permit proposal is not contrary to public interest, not detrimental or injurious to the public health or public safety or detrimental to the character of the surrounding area. That is what it is not in your mind if you pass this. What he would like to know is what you think are the benefits for the 40,000 plus residents for Pierce County if this mine advances into

Oak Grove. Can any of the board or zoning staff please give us some positive comments on what is to the good besides 22 jobs and monetary gain for two or three families who are selling the rights to their property? Debbie McClure, Supervisor in the Town of Oak Grove, over the last two years she thinks she has been here almost as often as Sarah has and as often as the WISC people have. Looking at all of the different conditional use permits that have been passed, she recalls back when we were looking back at the initial one, she has notes from August 1, 2012. At that time there were a number of people from Oak Grove that attended the meeting and maybe two or three people that were here from Diamond Bluff. Whether it was overtly said or not, during that time period, it was clear communication to her and to some of the others that were here that that conditional use permit had to do with Diamond Bluff and that Oak Grove would have their day another day. What she is reading in this, now that we are talking expansion, is that maybe Oak Grove should have been considered at that time when we were saying that this is not something we want to be part of, at that point. She agrees with what Burt and Tom were saying with why even ask us for a conditional use permit if this was all going to be put together as one, it's basically a formality for the Town. The Town has spent thousands and thousands of dollars to have lawyers and consultants to go through this. It certainly would be a waste of our money and time and the efforts of Jerry and Gene that put this all together. They worked very diligently on the ordinance. She doesn't see anywhere in here that the ordinance is referenced as one of the conditions. She doesn't know that it necessarily has to be but she would like to make sure they are understanding that any conditional use permit issued now or five years from now would be subject to the ordinance or an agreement of those terms of the ordinance with the mining company, primarily because they have their own set of setbacks, they have their own descriptions of the types of activities, they have their own blasting schedules, things like that. If they are just going to be lumped in with Diamond Bluff that's not really a fair statement for them to come back with a conditional use permit of their own, a recommendation. Again, she supports the work of the previous board and she knows it's the board that she is on that is making this recommendation. Again, not anti-mining, not that they don't want to talk about it; they don't want to talk about it now, she doesn't think that we talked to Diamond Bluff ten or twelve or twenty years ago about this particular mine. She is sure it would have been considered premature if they were talking about that fifteen years ago in Diamond Bluff about a conditional use permit. She thinks it's premature now. Verna Seleski, lives in the Estates of Diamond Bluff, her property is one of those that will be adjacent to you proposed mine. She just wants to support what her township board has come up with and she hopes you take into consideration all the time and effort they put into coming up with their recommendation. It wasn't done overnight, it took a long time to come to this decision and it wasn't done easily. Please really take a long, hard look at it and weigh it heavily. Brent Glass, lives in Diamond Bluff Estates, he wants to show support to the Town of Oak Grove and the decision that they made in regards to the permit and part of what he is taking a look at is, he recently moved into that development. Obviously, as most everybody knows, that development has had a tough time taking off in regards to the recent economic times. When you are looking at doing a conditional use permit, maybe the mine isn't going to start for ten years, but if you do pass a conditional use permit he thinks that is going to have a direct effect on that community and those empty lots they currently have. As well as the effect on the road that they currently have that is not up to County standards. He just hopes you take that into account when you are looking at something that obviously can come back at a later time. He attended one of the town meetings and he got up and he probably wasn't the most popular person because he got up said he wasn't anti-mining but he is pro-common sense. What can we do in taking a look here what potentially passing this conditional use permit may have influences that is not really seen here tonight within that development. Jan Amberson, lives in Oak Grove, they have been here for about eleven years so they participated in full with the last Oak Grove Board on rewriting our rules and regulations and comprehensive plan. She is here to support the current boards wanting to delay the comprehensive plan until there actually is an appropriate time for it. Based on data from the US Geological survey, sand used for frac sand mining has increase from 3 tons in 2005, and for decades before that, to an estimated 30 – 40 million tons in 2011 and it's continued to increase to now. She mentions this to remind us how dramatically the industry has changed in the past nine years. We have no way of knowing what the industry will look like in another ten years. The sand mining boom may

continue or it may collapse do to forces we cannot foresee. Likewise, Oak Grove has changed substantially since they moved here eleven years ago. She attended most of the meetings as the previous town board worked for a year with our advisors to update our comprehensive plan and write a nonmetallic mining ordinance to accommodate the changes. Oak Grove will continue to change also. Consequently, we cannot know today what Oak Grove will need or support ten years from now or what WISC will need or support for that matter. Consideration of any CUP should only occur within a year of when it would be needed. Dennis Donath, lives in Oak Grove, has lived there for 29 years and he also represents Pierce County on the Mississippi Parkway Commission that has to do with the Great River Road. He has sat through many town meetings during the development of the comprehensive plan and ordinance. He thinks they did a fine job and he fully supports the action of the town in denying the CUP. Michael MacGregor, Supervisor of Oak Grove, reiterate that the past planning commission and the town board members, both past and present, have worked very hard on this CUP and they came to the right decision in postponing this until actual within a 12 month timeframe with doing something with that property. He thinks they all met together with the lawyers and came to a very good decision and he respects what they decided. Mindy Allsop, Oak Grove Township, she also agrees with the recommendation of the township and they are their elected officials and they respect their decisions and she believes they have the public interest at heart and that it is very important to them. She would just like to agree with the recommendation. Pichotta stated there is an email that he received late in the day from Mark McClure that was included in front of each committee member. Chairperson Fetzer asked Pichotta to read it. Pichotta read: Hello Mr. Pichotta, I am a resident of Oak Grove Township and cannot attend tonight's meeting. I would like to offer my opinion for the board to consider. I have attended the public meetings with the Oak Grove Planning Commission and the Oak Grove Town Board for 2 years regarding WISC and the Town Ordinance. I agree with and support the town's recommendation to deny the CUP at this time for WISC. The Oak Grove Town Board and residents have had several public meetings to come to this decision and I support the decision. I have not talked with anyone who is for a conditional use permit for WISC. One reason I moved out this way was to hopefully get away from local governments who do not honor the majority of the people's wishes. I believe that it is in the public interest to not have a land use in place now that won't actually be used for many years and at that time may not be compatible with the surrounding land. Thank you. Kathy Breen, Oak Grove, she supports the denial of the CUP at this time in Oak Grove. Sarah Palodichuk, Town of Oak Gove Chair, in the Town Recommendation form on the 2nd page, they did make mention of the nonmetallic mining section of their comprehensive plan, her intent was to show that in case things did go the way that they did tonight, that that is a reservation of us being able to clarify our position on those things. Ms Palodichuk stated that she wants the opportunity to be able to clarify their recommendation, she wants you to look to those things and see that they did note that. Chairperson Fetzer stated that with you being the town chair, you have every right to go through that. Ms Palodichuk asked every right to go through what? Chairperson Fetzer stated your recommendation. Ms Palodichuk stated she will do that, she doesn't feel that she has had enough time in the past 24 hours since she got this staff report to present anything but her personal opinion. It makes more sense for her community to be able to have these plan commission members here and to have their input into this. It is not her place to sit here and unilaterally say that this is the essence of what our town has said but since you have requested that, she will. Chairperson Fetzer stated that he thinks that it is important and if you have something to say, it needs to be said. Ms Palodichuk stated she knows but this recommendation that you have is written out, it's well thought out, it's edited, it has been proofread by their lawyer to make sure she makes sense and well Jeff and Eric have heard me talk plenty and she thinks they would appreciate her written word more than her spoken word. It puts her in a situation where she is reading something into the record commenting on a staff report rather than formally responding to it. Ross stated maybe he misunderstood something, he didn't hear a request coming from the Chairman, Ross thought you wanted to say something more as well. Ross stated that the Chairman wanted to give you that opportunity if that was an opportunity you wished to have. Ms Palodichuk stated, Thank you Mr. Ross, what she said is, she would like to have that opportunity if they aren't going to be given the opportunity to review this. She was told by the Land Management staff that they would be able to review this if their recommendation wasn't taken. That is

what she was told, that is what she is relying on, that is what these gentlemen are relying on and Ms McClure is. So if we are not having the opportunity to formally review the recommendation, then she would like to comment on it. So if you can let her know if after a motion is made, if she can have the chance to comment on it, she would appreciate it. Chairperson Fetzer stated typically public comment time is now. Ms Palodichuk stated she is well aware of that but she is relying on information that she was given and this isn't a he-said she-said situation. You can tell by the words. You guys know darn well that if she wasn't told that, you would have probably a ten page document from me. You guys know that. So are we going to be given the opportunity to review it again if you choose to deny our recommendation? Pichotta stated that as far as the assertion that he promised you that you would have the opportunity to review it again, his recollection is a bit different than yours. You called him, first you talked to Brad, he wouldn't give you an answer, so you called me and I recited to you line and verse the policy relating to LMC action when a town recommendation is purported to adhere to adopted town comprehensive plan but appears unsupported by said plan. You asked for an assurance that we would kick it back to you if we did not accept, or if the committee didn't like your recommendation. I told you it wasn't about the committee liking your recommendation, it was whether or not you submit a recommendation that purports to be consistent with your comp plan and if we look at the comp plan and we can't see the correlation, you could rest assured that it would, in all likelihood, be kicked back to you, per that policy. Ms Palodichuk stated she does recall that phone call and at that time Pichotta told her that the Land Management Committee would be the ones to decide, that you can't force them to follow their policy that they would be the ones to choose to follow the policy. That is what she was told at that time in that phone call. But prior to that she also sat down with you, with the town attorney and had the same discussion and he relayed the same discussion to our planning commission that she had that they would be guaranteed another time to look at it. Pichotta stated he disagreed and would not have guaranteed that because he can't guarantee committee action. Ms Palodichuk stated she shouldn't have used the word guaranteed, that they could be assured that, she doesn't know how to get around the fact that they were relying on the policy adopted on October 17th and that it (the issue) would be sent back to the town. This goes back to Mr. Kosin and the heliport issue and everything else. This is the precise reason, in her opinion, why that policy was adopted. Is because they felt like they had that before Andy's memo was sent, they had in black and white you shall find our opinion in the public interest, you shall not act contrary to public interest, that was the black and white and we should have assurance with that. They would like to address numerous issues including protection of property values, setbacks and recommendations associated with their town ordinance. She knows it is not his job at all to enforce their town ordinance but just like in the Valley Vineyard issue where you refer in your conditional use permit to our Special Events Ordinance, we would like here reference to our Nonmetallic Mining Ordinance. We were told that, and she will not use assured or guaranteed or anything like that, in their understanding that if their recommendation was not deemed adequate for the committee that it would get sent back to them. She very intentionally reserved those issues. She articulated them for the committee because she has, the whole town has, very clear direction on those issues. She is not going to address setbacks specifically but as an example, you have the 400 foot setback. That is contrary to their comprehensive plan. These are the things that they deserve to be able to address and they are willing to address. We were told we would have a second chance to address, although that is your decision as a committee to abide by that policy. You know her intent. She believes you know her intent. She has been here enough and spoken to you enough that you know she would never send this document to you like this with one argument mentioning the alternatives. She would have sent a list of five alternative arguments. At this time she is asking the committee if they want to hear her personal opinion on every recommendation that you made, then Ms McClure's personal opinion on every recommendation that you made and Mr. Johnson and Mr. Chase and maybe Mr. Kosin as our County Board Representative. Mr. Kosin stated maybe not. Ms Palodichuk stated she just wanted to include him. If this is their only chance to talk, it's not the right way to do things. Ross stated as he looks at this recommendation, and just for the sake of discussion, it says the town would generally not recommend approval of the CUP application if the proposed conditional use is not expected to commence in the town within 12 months of issuance of the conditional use permit. That is what was sent to us. He

thinks there are some operative words in there, generally being one of them but what he hears coming out of the Town of Oak Grove and the Planning Commission is that is what you were centering on. Is that true as to why you didn't recommend approval? Ms Palodichuk stated it is and she agrees that generally is operative but she gave the committee a discussion of the word generally. Ross stated, no he understands but you are saying there are more reasons than that but this is what was sent to us as to why you do not recommend approval. Is he understanding this correctly? Ms Palodichuk stated that is their primary argument but in her discussion generally, she shows that they have been willing to sit down and work on recommendations. The fact that they have made an effort to work on recommendations with the mine, she thinks shows the committee that they would be more than willing to submit recommendations unilaterally. Roy stated there was the concern about specifically referencing the town ordinance. It would be his position that condition #21 would be applied to that instance. Ms Palodichuk stated she would like a more specific reference than that and she would like the other recommendations to at least address, not everything in the ordinance is appropriate to this group, obviously. That is the whole point of having an ordinance that would be separate but there are some very specific things in the ordinance that they would like pulled out as well as a reference to their Nonmetallic Mining Ordinance. Pichotta stated as far as making adherence to the Town's ordinance a condition of approval - what we don't want to do is get in a position where if the town were to administer their ordinance in an unreasonable way, or do something that was unlawful, where compliance with our permit is in jeopardy or they violate a condition where we don't have control over that other process. Given that that is an independently administered ordinance, we don't have any control over how it is administered and if they are found to be in violation of it - he doesn't know that we want to be in a de facto way requiring that they adhere to an ordinance that we have no control over. Ms Palodichuk stated she doesn't disagree with his position but except that you do reference their Special Events ordinance which you and I both think is written pretty poorly, in Valley Vineyard. That is not the precedence of this group. Although like she said, the opinion you just gave her may be the best way of handling it but she would like time to discuss it. She hears what he is saying very clearly. John Kinneman, they own 240 acres on E and 35, between himself and his sisters. He asked if anyone has done an environmental impact study on that whole fragile area? Pichotta asked what fragile area are you referring to? Mr. Kinneman stated on page 2 of the staff report, groundwater elevation is mapped at approximately 800 feet above sea level. Do you know what the elevation is there? Do you? Roy stated we have a topographic map which shows the elevations. Pichotta noted that generally a public hearing is an opportunity for the public to comment not for one to shout questions at staff. Kinneman said who do I ask? This is my first meeting. Pichotta stated perhaps we should move along from the public hearing and give the hydro geologist an opportunity to speak. Mr. Kinneman stated so no one has done an environmental impact study. Chairperson Fetzer stated he is sure someone knows what the mean sea level is. Right in front of him, he does not have it. Mr. Kinneman asked what the groundwater level is at E and 35? It's at zero, when they did Hwy 35, they hit a spring there. Do you realize how fragile that whole area is? Has anybody looked into this? Chairperson Fetzer stated that would be a question for the applicant. Mr. Kinneman stated it says they are going to dig 60 to 80 feet above the groundwater level, OK. Now is that where they are going to stop? That's not a question. Are they going to stop at 60 feet? Or are they going to go 300 or 400 feet? Where are they going to get the water to wash the sand? Is that coming out of the Mississippi? Or is it coming out of the Jordan vein? Now the sludge from the mining operation; where does that go; back in the mine? Chairperson Fetzer stated typically yes. Mr. Kinneman stated that whole area is called the Wind River Valley. That is so fragile an area. It is not like Maiden Rock. It is not like Pepin because they are mining right on the bluffs, right by the river. So the impact there is not any comparison to Diamond Bluff and Oak Grove. There is actually no comparison. You have probably in that one area, how far do they plan on mining? Chairperson Fetzer stated probably in the proposed area. Mr. Kinneman asked if they knew how many valleys are in that one area. Probably 20 or 30. Mr. Kinneman stated to do a study on that one area would take years to see if it's feasible and environmentally friendly. You could never pass that in a year. It would take so long just to see, the depth of this, it took ten years to get a gravel pit passed in Canon Falls. Because they were going down 300 feet, cause they were worried about the water table. Like he said on 35 when they came through and redid the road, they opened

up a spring and he has a pond east of Hwy E, so far he has spent \$8000 dollars redoing that pond. He has no idea what they are going to do in that area. It's not just digging through and making a pit, there is no way. Cause you got water seepage, once you open up these holes, it's going to be costly running. There is no way they could stop that, it'd be impossible. Where are the studies? You have all this information but he has no amount of the water that is being used, where the sludge is going. He hasn't seen anything on that. Chairperson Fetzer stated he is sure WISC will answer that, sir. Ms Palodichuk again asked if the committee could give her some direction as to the expectation that the Oak Grove Plan Commission and Board have that based on your policies it would be sent back to them for review if they decided not to accept their recommendation of denial. Chairperson Fetzer stated once we get done, we will get to that. Chairperson Fetzer asked for any further comment. Erin Bauman, lives in the Estates of Diamond Bluff, she just wants to say that she supports everything that Sarah has to say. Chairperson Fetzer asked for any more public comment. Ms Allsop just wants to know why you wouldn't go along with the recommendation of the Town Board. If they have all the facts and stuff supporting their view on it, she doesn't understand why the committee would rush through this and approve that when you have all these people here stating why we don't agree with it. The Town Board spent all this time on their recommendation and like she said about the heliport, that was the reason it was denied. That is all water under the bridge. That is why they wanted to set this up so everything was supported, why would you not respect their recommendation? Chairperson Fetzer asked for any more public comment. **Chairperson Fetzer closed the public hearing.** Jeff Himes stated they will go through these in the order that they were stated. Mr. Turley's comments on the setbacks and blasting; they believe even the 400 foot setback is excessive, they are mining at 100 and 200 foot setbacks at the moment very successfully without causing damage. They are using quite technical blasting techniques to control ground vibration and the energy that goes into the ground. They monitor with seismographs to ensure the vibration created by blasting does not cause damage to structures, certainly concrete or septic systems or wells. They believe what they are operating under currently is more than adequate to address that issue. The question on the damage plan, they have submitted damage plan to the Town and also to the County which covers the issue if damage is caused the process they go through to mitigate that. He would point to their past performance in the mines they are operating. They have not had issues with damage from blasting, damaged wells or damage to structures. Mr. Breen's comments on what are the benefits to Pierce County. Mr. Breen interrupted stating that he asked the board or staff to answer that, you guys he doesn't want to hear from. Mr. Himes stated the issue came up on addressing this portion of the project as an expansion. They would take the position that it is not an expansion. It was submitted at the same time as the application in Diamond Bluff as a combined project. This shouldn't be viewed as an expansion. It's one project. Mr. Kinneman's comments will be addressed by Mr. Krumenacher. Mark Krumenacher stated that it is evident that this is the first meeting you were at, based on some of the comments, it would appear that you might be under the impression that this is an aboveground, surface quarry and not an underground mine that is going to be mining approximately 25 to 30 foot thick layer of sand 200 feet below the ground surface. The mine entry is going to be in Diamond Bluff Township and through tunnels that are about 30 feet by 30 feet, seventy feet apart, they will continue underground. That is the way the mining is going to proceed. All of the questions, do you know the groundwater elevation, the ground elevation, how fragile the area is, the hydro geology and the issues of potential concern for this underground mine were addressed in the application that was submitted over two years ago and every one of the questions that you asked were answered, responded to, addressed in that application package. The application was provided in electronic format to the County and is available as a pdf that you can obtain and read yourself. Eric McLeod, stated he will be very brief and wants to offer a few comments about some of the legal issues that are presented here and he provided the committee with a detailed letter so he won't repeat the information that was included in that letter to the committee but he provided some of the background on where they have been in this process and where we are now in light of the nature of the recommendation that has been made by the town. He thinks the starting point in this process and the analysis that the Land Management Committee needs to undertake is the fact that this is a lawful use of land in this particular zoning district. It is a conditionally permitted use but it's a lawful use. The obligation of the Land Management Committee is to make a

determination as to whether or not this would be contrary to the public interest. That is a determination that you make every time you address a conditional use permit application and make a decision. The public interest is not whether or not certain members of the community don't want a particular use of land to occur. That is not the public interest. The public interest is something that focuses on the effects, the impacts, the issues of health, safety, welfare that may arise based on certain aspects of a particular proposed use. It's not a referendum on whether or not a particular lawful use of land should be allowed. That is frustrating for folks who live in the area because many of them, despite what some have said, do not want mining in their community. We can't debate that opinion. We are not here to try to persuade them that they should want mining in their community. Our opinion is that much of their opposition is based on a misunderstanding of what mining entails but again we're not going to have that debate here and we don't think that is a productive use of this time. The bottom line is that we go back to the first principal which is this is a lawful use of this land and the question for the committee to address is whether or not this is contrary to the public interest. He thinks Andy Pichotta provided a very nice summary of what that analysis is supposed to look like. He makes reference to the Essential Nexus Test and Rough Proportionality Test. What do those things mean? They relate to whether or not there need to be conditions to mitigate against certain impacts so as to protect folks in the surrounding area. That is what conditions are all about. There are a number of conditions that are already applied to the existing CUP. There are several conditions that have been proposed to be added to the existing CUP. The question is, do those conditions accomplish the mitigation of any potential impacts that could negatively affect health, safety, welfare of the folks in the community. That is the issue here. It's not the procedure of whether or not their recommendation is proper or not or whether they should have some additional opportunity to address those proposed conditions. This committee needs to make a decision. The reason why it needs to make a decision is because they have been at this process for more than two years. With all due respect to the Town Chair who says they deserve more time to address the substance of what is being proposed here. The substance of which has part of a conditional use permit that you issued a year ago. But that they need more time to address the substance of what's being proposed here in this process, we think is unfair to the folks whose property is the subject of the CUP and to Fairmont Minerals, Wisconsin Industrial Sand, who have been very patient over a course of two years to seek a decision by this committee as to a particular use of land; a use of land that is lawfully allowed in this particular zoning district. So we think it is incumbent upon the committee to make a decision based on the process that they have had up to this date, based on the laws that govern this process and they ask that the committee make a decision tonight. One thing that he wants to touch on because it hasn't been specifically referenced but is alluded to in the staff report, there is something that is called the Diminishing Asset Rule. That is something that members of this committee may have heard about. This is something that he talked to the Town Chair and the Town's lawyer about at some length and it is something that was simply dismissed by the Town and the Town lawyer as being irrelevant to their decision. When there is a mine permitted, all contiguous land is part of that mine and any activity anywhere on that contiguous property makes all the other property to be deemed in use. The point being that the essence of mining is the extraction of minerals from all of the property. It's not a use that occurs on one little corner. That isn't going to expand naturally. Mining expands naturally, that is the nature of the use. So when you start, the law says, Supreme Court Authority says, if you start mining on one part of this property, that is part of the larger permitted mine, all of the property is in use. The idea that we are not going to be mining in the Town of Oak Grove within a year is irrelevant to the question about whether the land is in use as a matter of law. That is why the staff report has it right. They will have satisfied that requirement in the ordinance as well as the Town's Recommendation that is based on their comp plan. They will be satisfying the requirement that they will be in use within twelve months. It will be in use based on a legal principal called the Diminishing Asset Rule. That was explained quite clearly but it was dismissed, it was rejected. That is the Town's prerogative. If it wants to take the position that it did and it wants to make a recommendation that this should be denied as premature because we won't be operating in the Town within twelve months. But it has an impact on the property owners who have been waiting for two years and Wisconsin Industrial Sand who has been waiting for two years for a decision from this committee. The idea that they should get one

sort of a test shot across the bow to see if this would be successful, if it's not successful they ought to have another 90 day period, 6 month period, we don't know how long it would be to make a further recommendation that they had an opportunity to make over the course of the last two years and certainly since December when we made a formal request that this process take place and we actually get the Town to take some action. They appreciate the frustration of the folks in the Town who don't want mining. That is something they can't convince them of otherwise. At the same time it's a lawful use, it is not contrary to the public interest. It may be controversial but that does not mean that there is a basis to deny this or delay it any further. They think the committee should move forward and make a decision. Sanden asked about the Essential Nexus Test and the Rough Proportionality Test, there was a third prong with the Supreme Court Case and that was the Ripeness Test. Does the last statement that you made about the contiguous nature of mining and expansive nature, is that in your professional opinion, address the Ripeness Test. What he has been hearing from the Township apart from the other things, is this CUP request is premature. Does that reflect at all on the Ripeness Test? Mr. McLeod stated he thinks what the Town's position is that ... Ms Palodichuk interrupted stating that she would prefer he not characterize the Town position. Mr. McLeod stated the Town, in writing, recommended this be denied on the basis that we would not engage in mining activity within the Town within twelve months. He doesn't think that is characterizing the Town's recommendation, he thinks that is clearly what it says. Their position that WISC's application isn't ripe is directly contrary to the Diminishing Asset Rule which he just tried to explain. If we just keep it very simple, if we have 100 acres in the Town of Diamond Bluff and 100 acres in the Town of Oak Grove, Wisconsin Industrial Sand has control over those 200 acres and it wants to permit a mine on those 200 acres. It's going to start somewhere. In this case, it's going to start in the Town of Diamond Bluff. But the law says that once it begins mining anywhere within that 200 acres, all 200 acres are deemed to be in use. That's a legal principle. We're not actually mining in the Town of Oak Grove once we start in the Town of Diamond Bluff. But the law presumes we are making use of all the land because mining depends upon their ability to continue to expand from one location and continue to extract minerals from the entire area. The ripeness issue goes to whether or not they can apply for a CUP if that 100 acres in the Town of Oak Grove will not be mined or in use within twelve months. As a legal matter, it is presumed that that land is in use within twelve months so long as they are taking action in the Town of Diamond Bluff. That is what the ripeness issue involves, whether or not we are entitled to permit all of this property based on the overall mine plan. The difficulty in addressing the issue and explaining what all this means is the fact that they have land that is in two different townships. But there is one zoning authority, Pierce County Zoning Code that governs everything that is on the table here, both the permitted property in the Town of Diamond Bluff but also the property that is at issue today in the Town of Oak Grove. Once there is an approval for all of this property, it doesn't matter. He appreciates the folks in the Town of Oak Grove don't like that conclusion but as a legal matter it doesn't matter that some of the land is in Diamond Bluff and some is in Oak Grove. Once the land is permitted as a single mine, all land is deemed in use once any of it is being used. That's the ripeness issue. When he addresses the Essential Nexus Test and the Rough Proportionality Test, those are legal principles you are supposed to use when determining what types of conditions you think are appropriate to apply to this particular use. Not every use, some uses may be less intensive, some may be smaller in nature and so forth. When you are determining what conditions you are going to apply, if any, the law doesn't presume that any conditions were necessarily be required in a CUP. But when you are determining what conditions should be included in a CUP, it's a reasonable test. What's the concern you are trying to prevent against and what's reasonably necessary to prevent it. The conditions that exist in the current CUP, they have shown, quite clearly, have been effective in preventing the kinds of concerns that you would have about an industrial activity. The question that they raised with the Town, as part of this process, is what conditions that are currently stated in the Diamond Bluff piece of this, the permit that was issued last year, which again are very consistent with the other CUP's that they have for the other properties in Pierce County. What about those conditions are inadequate in the opinion of Oak Grove, to protect the Town of Oak Grove against whatever they perceive as the concerns that they have got. What additional conditions do you need, what about these conditions is inadequate? The response was, based on a misguided opinion,

was not well we think this is inadequate, we need this additional condition, it was we want to just say no and we need a legal way in which to do that. Their lawyer advised them that they could say no on the basis of this twelve month rule. Sanden asked so then the condition going up to a 400 foot setback, if it was recommended to go to 4 miles, that would then fail that Proportionality Test. Mr McLeod stated he thinks that is absolutely right. Sanden asked to the layman driving past this site, given that the access will be underground, the material that is pumped out will be underground, but for the vent shafts, what would he see as he is driving past this property? Would there be any change to the landscape on the surface? Would there be any alteration to the stormwater movement? What would he see from that location? Mr. Himes stated other than the vent shafts and the potential portal for a secondary access for escape, you would see nothing. It would be a farm or woods, whatever it is now. Sanden asked about the impact of the blasting if he lived nearby. Mr. Himes stated depending on the distance from the blasting, what you may feel is a vibration similar to a door slamming in the house or some vibration; a train going by. They measure that with seismographs to make sure that the blasting is of such frequency and amplitude that it's not going to cause damage or undue nuisance or any other negative impacts. Sanden asked as far as the groundwater, as you mentioned, this was covered quite extensively in the earlier phases of this process but it might not hurt to repeat that. Is there anything more unique about this location than we addressed in Diamond Bluff from the standpoint of groundwater? Mr. Krumenacher, from a standpoint of groundwater, no, the mining horizon is approximately fixed near the top of the Jordan Sandstone. The top of the Jordan Sandstone is at approximate elevation 800 feet. Where the mine portal is going to go in Diamond Bluff, the Wind River, what you see as a water body, the Wind River is the surface expression of groundwater. So that is the groundwater table at elevation about 750 feet. It's much less than 800 feet. The mine will start in that bluff about 50 or so feet above the water table. The mining horizon will stay relatively horizontal through the bluffs. The groundwater table may rise up and approach the mining horizon which is roughly 770 to 800 or 780 to 810. The top elevation moves a little bit. But the mine for the most part will stay above the water table. If they find that the water table further away from the coulees is up into that mining horizon, it makes mining extremely difficult if not impossible. The ground would be saturated and they can't operate in it, it would not really act like quick sand but it would be pretty similar. Sanden asked does the permitting process take on extra precautions at that point? Mr. Krumenacher stated no, the same precautions are in place the only difference might be if the groundwater table rises up and it's in the bottom portion of the mining horizon, they might be able to dewater that with horizontal or vertical wells and discharge that water elsewhere in the mine where the water table isn't so high. But in the existing two mines, they have not had to do that across large scale mining horizons. There are isolated areas near the tops of ridges where they have gotten very close to the groundwater table and they wanted to set a foundation for a grizzly which is where the start of the process is. They had to dewater a little bit but that was only to lower the water table maybe five feet. It's not a major action. As far as precautions go, the precautionary measures that they take in the underground mine are the same whether the water table is two feet or two hundred feet. The methods are the same. Sanden asked if the fluctuation of groundwater table is that a seasonable event? Mr. Krumenacher stated the groundwater table fluctuates seasonally a few feet, not a lot. Again if you look at surface water, rivers and streams like Wind River and the Mississippi River and big lakes, the surface water is a surface expression of the groundwater. It is groundwater there just isn't any ground over it. As you go away up in elevation away from that surface water, the water table also rises, so the water table surface actually mimics the ground surface topography. So if Wind River Valley is actually elevation 750 and the high ground on 35 is elevation 1000, there is 250 feet there. The water table will rise to some extent. It doesn't rise one for one but it roughly mimics the topography. Sanden asked if he could characterize the difference at this site as versus the Diamond Bluff site when it comes to things like groundwater. Mr. Krumenacher stated no, there is no difference. The Oak Grove portion of the mine is the same from a hydro geologic perspective, which is groundwater, from a surface water basin perspective. The only difference is an artificial political boundary between Diamond Bluff and Oak Grove. There is no physical difference. Sanden stated one of the issues is property values. Roy stated we've investigated this type of mining in general to find there is nothing conclusive that we could come up with. You can find a half a dozen appraisers who say it has a negative

affect and you can find a half a dozen who say it has no affect at all. Sanden stated that does refresh his memory. It was more of a general study. Ms Palodichuk asked if she could respond to Eric McLeod's comments about their personal conversation. Chairperson Fetzer stated yes. Ms Palodichuk stated that she didn't mention any of that because their lawyer had advised them that is private conversation to sit down with the four of us. She does not recall the Diminishing Assets conversation that he is referencing so she would appreciate it if the committee would disregard any characterization of her response. She does agree with the things he said about the Diminishing Assets Rule. She thinks that is the most important part of their recommendation of denial is that they have told us that they will take care of the details later, for right now we just need the zoning to secure the leases. That is what precisely locks in that zoning and that is the concern that the Town of Oak Grove has. As far as the Diminishing Assets Rule applying to this particular mine, in the Wisconsin Town's Association is that, are you familiar with Senate Bill 632 but it did not get voted on by the Senate this past session, but it was an attempt to codify the Diminishing Assets Rule. So right now the Diminishing Assets Rule is a court decision and it is not statutory. The Diminishing Assets Rule was developed with smaller gravel pits that go from 40 acres to maybe 80 acres. If you run out of that 40 you can acquire the land to keep going with your gravel pit. It has never been used to apply to a mine that is 3,000 acres. And that same conversation when she asked them about their reserves in Maiden Rock and Bay City, they said that they had similar amounts of reserves, let's assume 2500, a similar amount of reserves in those two places, and Mr. Himes response was, Sarah, we will take all the land we can get. If there is something available around Maiden Rock, we'll take it. That is the concern here. She put the numbers in the Town Recommendation Form but she will revisit them for the committees benefit. In Maiden Rock they have mined 533 acres mined in the past approximately 100 years of which eleven years they have said that they have mined approximately half of that so let's say 300 acres to be generous. In Bay City, they have mined 240 total acres in the past 100 years, the past seven years they have owned the mine, they mined approximately half of that, say 150 to be generous. If you take that out to about 22 or 25, maybe 27 acre average because they won't give us the rate of mining to know when to expect them in Oak Grove, it could be 80 years before they go through the Diamond Bluff land that they have. Now that is their rate of mining that they are giving me. You are asking us to secure that zoning presumably under the Diminishing Assets Rule for 80 years. This is the heart of the problem and she is very glad that he mentioned it. Granted they can just dig a tunnel to Oak Grove, that is the lay of the land. Mark has said before in different meetings would indicate that they would come up to Oak Grove sooner. When you look at it, it is a move to keep that land from competitors. It possibly could be better for our residents who have minable land in Oak Grove to not allow WISC to secure it because a competitor could come in and mine it at some point. There is that possibility there. The other thing is that she is extremely offended that he suggests that they are just looking for a way to say no. She is the most frugal Town Chair you will ever see in the meetings; she would not waste lawyer money, certainly not a few hours of it on a fake negotiation with the gentlemen seated at the table there. She made a good faith effort to sit down with them; to discuss issues to be told that I'm just looking for a way to say no is ridiculous. She has put hundreds of hours into this and there is no way she would waste her time if she just wanted to say no. If she just wanted to say no, she would have found a way to do it a year ago. But she was not Town Chair then. She ran for this position so she could work with the mine and find a way. She sat down with all these people here that live in the Estates of Diamond Bluff and said you need to be prepared that mining is coming to Oak Grove and you need to be prepared to sit down and say this is what we can live with and this is what we can't. We sent a resident went down to visit the mine to say we want to talk about the good neighbor policy, we want to get something in writing to talk through these things. They have made every effort and to be characterized differently is very offensive. Whether or not that application has been before our board for the past two years is heavily disputed and every time it's mentioned it makes her cringe. She would like the board to tell her, Jeff says it is permitted as a single mine, Andy says it's an expansion. The code says that it would be an expansion that has its own conditional use permit. Pichotta stated he disagrees, that if it's an expansion, it's an expansion of the existing use. It's all encompassed on one CUP. When you authorize an expansion, one CUP replaces the previous CUP and includes the expanded use. Ms Palodichuk stated so the code is incorrect there or my

reading of the code is incorrect? Pichotta responded that her reading of the code is incorrect. Ms Palodichuk stated if he would read the code so he can see what it says for himself, she would appreciate it. Property values issue, she is not qualified to talk about the property values but the feeling of their planning commission is not only concerned for the property values that are there but for the future development of Estates of Diamond Bluff. There is a lot of trouble there. There is probably a hundred open lots. If there is a sand mine right next door, that land becomes less lucrative. Aubart asked Sarah, what you are saying is that your recommendation is consistent with the Oak Grove's Comprehensive Plan. So you would agree with staff's assessment that your recommendation is supported by your comprehensive plan? Ms Palodichuk stated she believes their recommendation is supported by their comprehensive plan. Ross asked Mr. Breen to repeat his question for the committee. Mr. Breen asked the committee or zoning staff if you could state the benefits of the Oak Grove residents and those of Pierce County of 40,000 plus, most of those aren't going to be rewarded with monetary gain or get a job at this mine, what will be the positives to the community out of this mine. Ross stated industry. He also chairs the Industrial Development Committee for the County working with the Economic Development Corporation and other committees on the County. There are a number of ways that you can better a community and one is a legal use of land in this case as we do have with farming and other operations. There is a number of things that we would look at in time that might disrupt the area in a different way; the topography or taking prime farmland or something like that but he doesn't want to speak on behalf of his colleagues. When he looks at industry overall; if it is a legal use and it is a good use of land, to him that weighs very heavily into that, a decision along with other industries that have come in to this region. We do have a responsibility as a community as a whole to find different ways to utilize resources, create jobs and do a number of things. We have had just as much opposition towards wineries too. Sometimes people just see it differently. He hopes to answer his question, he looks at the overall picture of what we do as a County and try to find ways to best benefit it. Mr. Breen wants to respond that what he has read, the farmland is not what it used to be once you mine under it, in terms of what it can produce with reclamation effort. He fears for the small business people on Hwy 35 with trucks on the roadway in regard to loss of jobs and loss of income, and tax base. Ross stated his answer to him is he has traveled all over the world and taken cruises, all kinds of good stuff. They pull into a harbor, he has no more idea than a goat about the numbers of all the containers that were shipped or rail traffic. He does remember the beaches he went to and different things, as people would remember their view of Lake Pepin and the Scenic Drive. As a general rule he wouldn't know whether a truck went by once or a hundred times. We have rail traffic estimated at 54 trains a day, we do utilize our roads, we utilize our rivers, we utilize them for lots of different things and there are ways to make good uses of all of it so that everybody benefits. He owns a business along 35 and he has seen no negative impacts of trucking. That is all he can tell you about that. Chairperson Fetzer stated as far as farmland, he does have friends, other farmers, he farms, that sand mine goes under and they have seen no negative effects on their crops. **Aubart moved to approve the conditional use permit for expansion of underground nonmetallic mining operation for WISC with conditions #1 - #30 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, amending condition #3 removing the 400 foot setback to Rural Residential Zoning District that was added in there and he would amend #11 the language "Road agreements shall be established with the appropriate municipality prior to any production use of Town or County roads."/**Ross **seconded.** Chairperson Fetzer questioned the removal of the 400 foot setback, stating he feels it's a good idea to keep that setback, Aubart stated he doesn't necessarily disagree but based on Sarah's comments that they (the Town) wanted to establish those setbacks, they can certainly do that and we can amend the CUP if they come back with that recommendation at a renewal or otherwise bring it forward. They may want 500 feet but he doesn't know the justification for that so that is his thought to maintain what the committee has required in the past. Ross agreed. **All in favor. Motion passed.**

Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Shoreland Area and Floodplain District, pursuant to Pierce County Code Chapter

240-41E, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand Company: Mr. Himes stated staff has done a good job of covering this topic in the staff report.

Staff Report – Jim Kleinhans: This is a conditional use permit for filling and grading in the Shoreland/Wetland Area and Floodplain Districts. There was a map provided by the department that illustrates where the different districts of regulation are based on different colored lines for shoreland/floodplain and shading for the various wetlands on our map in that area. They are requesting the filling and grading permit for the development of the portals and the buildings and surrounding amenities for the operation of the nonmetallic mine. As you can see from the map, the development is directly adjacent to the Wind River Floodplain. Some of it is in, for instance the stormwater pond, which he will get into. There is some specific review and approval required for this type of request. There are multiple components to the project that require review and approval that include things like the truck turn around area which will be filled, the road from 1005th going down Hwy 35, the road going up to the portals, construction of the stormwater detention basin and all soil erosion control elements to prevent unauthorized discharge of sediment into the Wind River and adjacent wetlands. GZA Geo Environmental provided the study, design and supporting information for the road alignment, stormwater conveyance systems and the infiltration /retention basin needed to support the development. Under the code, Shoreland/Wetland areas designated on the wetland inventory map and in the Shoreland/Wetland areas have some restrictions. But they do allow for maintenance, repair, replacement and reconstruction of existing town and County highways. If you look at the plans that were submitted, the road will be expanded because it is currently a single, a fairly narrow road that will be developed in order to allow for truck traffic in and out of the facility. The Wetlands in the area are on the Wind River side and on the north side of the road; it proceeds fairly steeply into the bluff area. The road development will focus primarily on the hilly side to the north. The filling and grading of the zoning code in the Shoreland/Wetland Area, within 300 feet of navigable water is required for various square foot disturbances on various slopes. There are areas of flat and areas of 12% to 20% and areas of excessive of 20% grade on this plan that need to be reviewed. Because we are dealing with the floodplain a hydraulic analysis is required for determining if there is a restriction to floodwaters or raising the floodwater on adjacent properties. If there is an increase in floodwater, based on the development, the permit would have to be denied or some sort of mitigation efforts would have to be made to determine what the floodplain impact is. Reconstruction of State Hwy 35 begins with a 300 foot shoreland setback area impacts the intersection of Hwy 35 and 1005th Street where a new type of intersection is proposed. A type B1 to allow for a turning lane for trucks traveling north on Hwy 35, the culvert that is underneath the road will be replaced by a 63 inch diameter arched steel culvert. Channelized surface flow extends up Hwy 35 to the north quite a ways. Plus additional surface water flow will be brought in from the reconstruction of the road from going toward the mine portals. The road, 1005th Street, is currently owned by the town, operated by the town. The road reconstruction will have to be approved through the town at some point. The road plans were modified after staff had a chance to review the plans proposed by GZA. We sat down with the Land Conservation Director and modified a number of elements to be more consistent with best management practice standards. Those plans are what were presented to you. So this plan has been modified a bit in the last couple months to be more consistent with standards and Land Conservation Department protocol. The filling and grading area going up to the mine portal which is probably the steepest area of grading that is proposed would be regulated up to elevation 744 within that 300 feet. There are some areas on this development for the road where surface water flows exceeded the standard of five feet per second so we are asking that the ditches and the tire berms be beefed up a little bit in those areas to prevent surface waters from eroding the site that could cause an impact to the Wind River. This area on the map is probably the steepest area and the closest proximity to the Wind River. So we want to make sure we have due diligence in the design, the application and the maintenance of best management practices in this area. Development area in a proposed wet plant building, loadout tank and maintenance building and office parking lot, traffic circulation; this will substantially increase the amount of

impervious area and increase surface water flow runoff rates. The proposed stormwater retention basin is designed to collect the stormwater from this area, treat the water with infiltration into the surrounding area and allow for some surface water runoff from the detention basin during periods of extreme runoff or possibly frozen conditions. The stormwater detention basin has a three phase discharge element proposed. One with waters that will not infiltrate into the ground, some will flow through an overflow pipe or some will flow over the top of the basin if discharge rates are extremely high. But this system was engineered to encourage infiltration into the groundwater so not all of that material will be flowing directly into the Wind River. The sedimentation basin was designed to allow for maintenance with a skid steer where there is a ramp flowing down directly south of the traffic turnaround area. So the area can be maintained and sediment removed from the site so it does not discharge into the Wind River. There are mapped wetlands adjacent to the project that will require delineation and that will occur when ground conditions are more favorable. It was very difficult during the winter to identify that. The wetland maps are somewhat general as you can see from the map provided by this department. Additional permits will be required for the project from the Department of Natural Resources. Those permits have not been pursued at this point. They are going to work through the County application process first but eventually a Chapter 30 permit and WPDS Permit will be required under NR 151. Town of Diamond Bluff recommended approval of this conditional use permit on January 9, 2014. The basis for your decision here is how the best management practices are designed, applied and maintained.

Staff Recommendation: Staff recommends that Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Reconstruction of 1005th Street must meet Town of Diamond Bluff approval.
2. Applicant shall conduct a wetland delineation for the area impacted by the expansion of 1005th Street and the stormwater retention basin to determine whether these improvements encroach on the adjacent wetlands. Any potential wetland encroachment must meet WI DNR and Army Corp of Engineers approval.
3. Hydraulic analysis shall be approved by WI DNR floodplain engineer for the stormwater retention ponds. Going to take off the area where it says to relocate 1005th Street because there were some modifications to the plans that were presented.
4. Installation and management of all erosion control elements shall be as proposed and shall be maintained to the satisfaction of the County until after all regarded areas are stabilized.
5. Applicant shall incorporate heavier seeding and mulch rates than proposed to stabilize slopes in excess of 10 percent immediately after final grading. He would like to add a comment under #5 with the grading of these areas adjacent to the river that the grading be conducted at a time when optimum growth and ground cover can be established so we don't have a lot of exposed areas on a steep grade left open until time that the soils can be stabilized with seeding and mulch.
6. All floodplain development including stormwater ponds and road construction shall not increase flooding impact on adjacent properties unless a drainage easement or flood map amendment is secured as per PCC Sec. 238-23A3.
7. Drainage controls along the mine portal entrance shall be reinforced with heavier rip rap or with reduced spacing to handle flow velocities in excess of 5 feet per second.
8. The applicant shall submit any proposed changes to approved construction plans for review and approval by Land Management staff.
9. Excess materials from the road construction shall be either moved off site or protected with seeding and BMP's and not placed in the floodplain.
10. The project shall commence within 12 months of approval.
11. Applicant shall obtain all other necessary permits (DNR, ACOE) for activities authorized under this permit prior to construction.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden stated we don't have all of the BMPs in front of us but asked Jim for his professional opinion with the upgrade of the culvert, do you see any impact on the flow of water going into the wetland or is the engineering measures proposed adequate? Kleinhans stated certainly the water is going to leave the site faster than the wooded condition that it is in now and crops. We are adding a lot of impervious surfaces, we're adding buildings. We are building a road that is on a grade that is in excess of 10% slope so the water is going to come out of there fast. One of the issues we think about next to a stream, worst case scenario, middle of July when you have high temperatures, a warm rain coming down, try to determine what the impact of that stream would be. But it's not a classified trout stream, he checked with Marty Engels the Fisheries Manager. He said it would be a minnow type stream, they have never found trout in that stream but he doesn't monitor the stream a lot. But if you look at the design of the stormwater pond it's a 700 foot flow around the pond. The pond was also modified at the discharge part of it. Originally it was going to be piped from the pond outlet directly to the stream. Mark's group modified that so that at the outlet of the pond, the pipe extends just a short distance then it goes overland flow again into the stream which he thinks is a lot better design. Sanden stated like an infiltration bed. Kleinhans stated right and then the pond is designed to infiltrate material instead of letting everything to flow off the site. He thinks they did a fine job designing stormwater basins for a site that is so tight to the river. Sanden stated he didn't articulate his first question well enough, he was referring to the natural flow that currently goes into the wetland. He is assuming that this road in some ways would intercept that flow and the culverts would direct it on its normal course. That was his question, where the measures the engineers took, in your mind, adequate to continue that natural flow. Kleinhans stated yes, if you look at some of the items around 1005th Street that go directly toward the wetland, they added retention basins prior to the pipe going out of the discharging into the wetland so that is going to contain more water and it will keep that rapid influx of water from going directly into the wetland so they have handled that by adding some features on the north side of the road that will improve runoff potential. Mr. Himes asked what the modification to condition #3 was? Chairperson Fetzer stated relocated 1005th Street. Kleinhans stated originally the road was going to be relocated through the floodplain potentially into the wetlands. Now the plan is to bring the road that extends to the east of the facility to assess the farm fields. We're not going to put that road down through the floodplain. It's going to go right through the development. It will go to the north side of the stormwater basin. Originally it was going to go to the right of it as you are going into the project. So he didn't feel there was a need for that condition. **Sanden moved to approve the conditional use permit for filling and grading in the Shoreland Area and Floodplain District for Wisconsin Industrial Sand Company due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #11, amending condition #3 to strike the last half of the sentence after the word ponds. Amending condition #5 to add Final Grading be conducted at a time of optimal establishment for growth of vegetation and amending condition #10 to replace the word completed with commenced/Aubart seconded. All in favor. Passed.**

Discuss take action on proposed changes to Department position descriptions; Planning Secretary, Zoning Secretary, PT Zoning Secretary, GIS Specialist.

Staff Report – Andy Pichotta: Staff is proposing a number of changes to the position descriptions associated with Land Management Department staff. A restructure of support staff is proposed with a new office manager position overseeing other clerical/secretarial staff (Zoning Secretary and PT Zoning Secretary). The office manager position would be supervised by the Department Director. Minor changes are also proposed to the GIS Specialist position to reflect an increased role in supporting the efforts of the County Surveyor.

Staff Recommendation: Staff recommends the Land Management Committee review the attached draft position descriptions to determine whether changes or clarification are necessary. If no changes are needed, staff recommends the position descriptions be approved as written.

Pichotta asked if the committee would like him to go through each particular description. Chairperson Fetzner stated no. Pichotta stated these descriptions have all gone through the HR Manager. There was some discussion about the titles associated with the secretarial positions and they felt that because there wasn't a change to the duties associated with those positions that a name change to the Zoning Secretary and the Part-time Zoning Secretary weren't warranted. His suggestion was to call them something along the lines of Land Management Secretary to reflect the fact that those positions serve the activities of the entire department not just the zoning function but the HR advice would be to remain the same. Aubart asked we aren't changing the job description or job duties, it would be simply a title change to more accurately reflect what they actually do or who they support? Pichotta stated that is true, yes. Ross stated he is OK with Land Management Secretary. Aubart stated it just makes more sense. **Aubart moved to approve the changes to Department position descriptions and change the title to Land Management Secretary to more accurately describe what they do and who they support/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a Farm & Home Based Business for Bruce Andrews Seamless Gutters in the Town of Maiden Rock.

Public hearing for Filling and Grading in the Floodplain/Shoreland Area for Michael Holst in the Town of Trimble.

Discuss take action on a deferred conditional use permit application for a campground for John Grabrick in the Town of Isabelle.

Motion to adjourn at 8:45pm by Sanden/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 21, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 4 th & 18 th , July 2 nd & 16 th , 2014.	Chair
3	Approve minutes of the May 7, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for an electrical business (Matt's Electric) in the General Rural Flexible District pursuant to Pierce County Code Chapter 240-36D, for Matthew Feuerhelm, owner on property located in the SW ¼ of the NW ¼ of Section 14, T26N, R17W, Town of Ellsworth, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit to authorize the expansion of an underground Nonmetallic Mining Operation in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-37A and Reclamation Plan hearing, pursuant to Pierce County Code Chapter 241-15A(2)(a), for Wisconsin Industrial Sand Company, agent for Big Acres Inc, William F. Holst III, Nancy J. Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
6	Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Shoreland Area and Floodplain District, pursuant to Pierce County Code Chapter 240-41E, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Kleinhans
7	Discuss take action on proposed changes to Department position descriptions; Planning Secretary, Zoning Secretary, PT Zoning Secretary, GIS Specialist.	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(5/9/14)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, May 7, 2014

Present: Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 21st, June 4th & 18th, all in 2014.

Approve Minutes: **Sanden moved to approve the April 16, 2014 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit to operate a campground in the General Rural District pursuant to Pierce County Code Chapter 240-39A, for John Grabrick, owner on property located in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Ross invited John Grabrick forward. Mr. Grabrick explained that about a year and a half ago he bought the Hideaway Campground and Bar with the intent of resurrecting the entire business which included both the bar and a campground. He believes originally there were 24 campsites there. Due to inconsistencies with the permit and the former owners, the campground could no longer be grandfathered in so now they have to move the campsites to the interior of the property. They use to border along the State owned property to the east side. Now because they have to move things inward 50 feet they are rearranging the entire campground going from the original 24 to a maximum of 42 permanent campsites with some tent space in the interior. They have the grounds there for up to 75 campsites but they are cutting that back to 42 to make them a little larger and user friendly. The minimum size of a campsite per code is 1,000 square feet. They are at almost 1800 square feet per campsite. They are adding two parking spaces. They will have sewer, water and electric to each of those 42 sites with new roads and new gravel pads. They are currently cleaning out brush and all the trees that have been blown over. They intend to use half of the old existing sites and those will be the easiest to get on line. They can get those services put in, in a short time. Over the course of the summer they will continue with the improvements as they clean out all the brush and trees and get the road work done. They have a need for a lot of gravel, a lot of earth correction back there. Ross asked about the site selections A – I, are those the concrete ones and the rest are gravel? Mr. Grabrick stated for the most part yes, there are a couple #14 and #1 - #4; those will be pull-through. Two of those will have concrete as they will be handicapped accessible and the others will just be a gravel pull-through. Sanden asked how long a time period between now and the last time it was used as a campground. Mr. Grabrick stated it's in the staff report and he believes the last time was 2009. He thinks that in 2003 was the last time it was an active campground. Sanden asked if he has any plans at this time to re-establish the bar. Mr. Grabrick stated the bar has been in operation for a full year now. Part of that plan is to put in a full commercial kitchen so it will be more of a bar and grill with food services. Ross asked how the work with Public

Health has been going. Mr. Grabrick stated good. They have a food permit in for the small kitchen up front and have gone through all the homework that they need to do for putting in the full kitchen.

Staff Report – Jim Kleinhans: John purchased the property in 2012. The campground was last licensed by the Public Health Department in 2003. Kleinhans noted that he has listed the Zoning criteria and also the Public Health criteria for what it takes to establish a campground in the staff report. In 2009 the previous land owners inquired about operating the campground but were never able to bring the property into compliance with all the issues. John has to comply with our code and the current Public Health Department requirements. He applied for a variance in April and that wasn't approved. So he redesigned the campground. It's a five acre property in the General Rural District. That's an allowable use with a conditional use permit. He discussed the zoning code criteria for a campground. There are 16 items that are listed in the staff report. He also discussed the landscape buffer and the tree requirements in the zoning code. With the screening section from our policy, we talk about native vegetation to separate certain uses that may have conflict. Definition of a campground; there are sections from the Public Health Department and what is regulated by them along with Administrative Codes regarding water supplies, sewage disposal, location of toilets, sanitary station, garbage and refuse. The property was equipped with a sanitary dump station but that is in need of some repair and John has recognized that. John is requesting approval of 42 individual campsites plus a general tent area that would include about 80,000 square feet in the middle of the project. The sites labeled A – I are potential future sites as the others get developed. The Town of Isabelle reacted to this request several months ago and they have provided an Exhibit A for proposed campground rules with a recommended maximum campsites of 30 sites at this property. The Pierce County Code talks about two off-street parking places per campsite and John designed a typical campsite layout that includes area for two vehicles on each site plus he has proposed a parking area behind the bar for overflow parking that will help accommodate extra cars for visitors. The property eventually needs to be surveyed to get the exact yard setbacks to the campsites. Right now they are looking at tree lines and fence lines. That will have to be determined in order to get the sites as close as he is to outside property lines and still maintain the 50 foot separation. There is going to be a need for a vegetative screening plan along the west property line where there is a residence. At the public hearing at the Board of Adjustment meeting that individual asked that we consider a security fence. Water and electric will need to be upgraded before any campsites are operational because of the new design. He does have a solid waste removal contract with Paul's Industrial Garage and then a company by the name of Suburban will be providing porta-pots. Those will have to be spaced in accordance with regulations per the Department of Health licensing agreements.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a campground with the following conditions:

1. A surveyed layout of the individual campsites shall be provided to Land Management Department staff to verify side yard setbacks and minimum campsite dimension requirements, per DHS 178.11 and Pierce County Zoning Code.
2. The location and number of porta-pots shall be delineated on the survey consistent with the requirements of DHS 178.09. The associated service contracts and contact information shall be submitted to the Land Management Department.
3. Screening shall be established between the campground and the adjacent residential use. Screening shall consist of _____ and shall be implemented prior to operation of the campground. Staff shall be contacted to verify establishment prior to operation.
4. Internal roads, camping pads, and water and sanitary improvements shall be constructed or implemented prior to operation of the campground. All necessary permits shall be obtained.
5. All campground advertising signage shall comply with the Pierce County Zoning Code.
6. The total number of campsites available shall be limited to _____. Additional sites may be authorized by the LMC upon renewal.

7. A campground management plan, consistent with the provisions contained in the Town of Isabelle document titled "Campground Rules", shall be implemented. The "Campground Rules" shall be implemented as written unless specifically modified by another condition of this CUP.
8. The vehicle access route shall be modified to allow for continuous travel to the campground overload parking area to minimize congestion. If you look at the site plan, the idea is to bring the road to circle past campsite #33 right through the additional parking spaces so people don't have to turn around in #33 and circle back through the entire campground.
9. This permit shall be reviewed for renewal by the LMC in 12 months to ensure that all required improvements are completed and conditions are met and to verify that the use has been established.
10. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health-DHS standards etc).
11. The proposed undefined tent sites (located in the middle of the defined sites) shall not be utilized for that purpose until consistent with applicable zoning and public health standards and authorized by the LMC. Jim sent a copy of the staff report to Michelle Williams in the Department of Health and she said she typically looks at tent sites on an event status with a temporary permit. For instance a Flood Run, those events have typical, defined campsites but during an event like that where there is a big influx of people, they look at special conditions where they make sure you have additional porta-potties and wherever the tent sites are they make sure the area is covered for garbage removal and things like that where you have an influx of a lot more people.
12. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If the applicant has questions as to what constitutes an expansion or intensification, Land Management staff should be contacted.

Included with the staff report was the campground rules listed as Exhibit A. Jim provided Mr. Grabrick's application where he spells out his intentions and then the typical campsite pad. Jim did hear from the Department of Natural Resources today regarding the use of the property that is adjacent to the campsite, which is a wildlife area managed by the Department of Natural Resources. There are some rules associated with that wildlife area. He will list the specific items that they provided:

No overnight camping is allowed in the wildlife area.

Litter deposition is a constant problem on State owned lands and they want to make sure the campground adjacent to the wildlife area will not impose any litter deposition.

No unleashed pets

No motorized vehicles, restricted to foot traffic only

No target shooting

No discharge of fireworks

Chairperson Ross opened the hearing to the public. Kim Peterson, adjacent to proposed campground at W7071 135th Ave, she has some concerns since this site hasn't been licensed as a campground. She was fully aware that it would be operated as a bar when she acquired the property. When Mr. Grabrick acquired the property, while starting the bar, it's already been operating as an illegal campground. Since they have acquired the property, they have had three break-ins at their house, numerous times of trespassing as well and people banging on their windows at 3:00am. She would suggest an 8 foot privacy fence along their property line just so they don't have break-ins and such anymore. Ron Bartels stated in Exhibit A they talked about noise levels of 80db, he is asking the committee if that is an appropriate number because this residence is relatively close to the property and that number may be too high. He is asking them to consider other locations where there are restaurants and bars and determine if the 80db is an appropriate number. Dennis Potts, Town of Isabelle, asked John, we have on the recommendation maximum campsites of 30 and you are asking for 42. How soon do you intend to get to 42 campsites, five years down the road, four, what are your intentions? Mr. Grabrick stated the infrastructure needs to be put in which means we have to break the ground, put in the new waterline, the new sewer, the new electric

and those will be put in this summer. As long as we are doing that we will be adding the gravel for the road and developing the campsites. The services are there so to get payback on them we would look within the first twelve months of putting 42. When we came to the Town of Isabelle, we asked for 30, that was using the existing campground exactly as it is today and that variance was denied. When the variance was denied and we have to go through and redo the entire campground, it makes more sense both fiscally and physically to do it all at one time. Mr. Potts stated that when you put in electrical and water, you are going to do it for 42 right away. Mr. Grabrick stated that is correct. Ms Peterson stated she is also concerned about her property value with a campground next to her place. **Public hearing closed.** Sanden asked Mr. Grabrick about the porta-potties, when you mentioned it you stated that every site will have sewer and water. Mr. Grabrick stated that is correct, the 42 campsites will be self-contained, they will have their own sewer and water and drain to a central tank which they will have pumped on a regular basis. But the zoning ordinance still says that he has to have a porta-pot for the tents and others within a 400 foot area. We currently have three porta-pots on site which will cover our volleyball leagues that they have and some of the other campers. The intent is that once everything is done in the campground they will put in a permanent structure but that won't be this year, and that will include flush toilets, showers, laundry and that will be located on the far east side next to the residence that is on site. Sanden asked Brad what kind of decibel levels were required for Vino in the Valley. Roy stated Vino in the Valley was 80 decibel limit but the sound outputs were contained to the pavilion. So that condition was that all the speakers had to be in the pavilion and nowhere on the site could the sound be over 80 decibels. If it's 80 decibels in the pavilion, it's going to be about 50 decibels at the property line. Sanden asked if he remembered what the decibel level was for cars driving by. Roy stated for County Materials, when measured, highway traffic of semis was 80 decibels. It might have been 100 but 80 sounds right and that was standing on the shoulder when traffic was going by. Mr. Grabrick stated when we had the Town of Isabelle Board meeting the recommendation was 85 and we agreed to drop to 80 decibels but he would remind this committee that this campground sits between the railroad tracks, which we have a train every 12 minutes and on the other side is the airport where we have jets landing. They are above the 80 as well. If we contain the campground to 80 he thinks they will be well within the trains and the other. Sanden asked Jim to describe the difference between a security fence and a privacy fence. Kleinhans stated security could be a wooden structure or screening vegetation but he thinks that what Kim has asked is that we have more of a secure lot line defined there so that people don't pass freely between the vegetation; a more secure buffer between the campground and their property. Jim stated he wants to mention one more thing about the porta-pots. There are independent campers and dependent. Independents will be the ones that are hooked up to the septic lines that John is going to put in but a lot of people will just be in a tent and if the bar is closed or if they don't have enough porta-pots around they will be heading for a tree line. That is why the State has this minimum number of facilities available for campers. So there is some sort of standard there. Aubart asked about the decibel levels, anywhere along there will be at 80 decibels whether you are at campsite #33 or #23? The description states that at the legal boundary line of the campground and bar area at any time (Town of Isabelle's rules), then it drops to 75 decibels overnight. Is that what we are looking at? Chairperson Ross asked Mr. Grabrick if he is planning on bands in the bar. Mr. Grabrick stated yes, they have a few special events during the year and learned a lesson by aiming the tent in one direction the music travels to the residence so if we put it on the west side and face it toward the east it plays against empty ground and won't disturb the residence as much. We can do that by putting panels on a tent and aiming the speakers in the right direction and making sure the band doesn't crank it up as loud as they can. Chairperson Ross asked if these are outdoor concerts. Mr. Grabrick stated basically outdoor events. For the Flood Run we can get a thousand people coming through and that's a charity event. There are a lot of people that hit that event but we can't accommodate that many people at one time. The majority of the time we will have our bands inside the building but if someone wants to have an outdoor wedding and put a large banquet tent in some of the open area, that's where the concern is coming from with the noise levels. We have trains on one side five times an hour and we have planes landing all day long. Sanden asked Mr. Grabrick when he went to the Town Board where they recommended a maximum campsite of 30, did you go without the current plan as we see it? Mr. Grabrick

stated that is correct, it was the existing campground. If you look at the site plan that you have, campsites #1 through #16 were existing and then on the far left hand of that, the empty area with the dash line, there is another grouping of existing campsites. So we had 30 all on that one road. They still fit but the zoning rules now say that we have to have a 50 foot buffer between the property line so that wipes out a whole row of campers. It makes us redo the entire services, electric, water & sewer (there is no sewer except for a dump station). Sanden asked for the Flood Run, you get the special permit for that? Mr. Grabrick stated they haven't been that big yet, they are only 12 months into operation. As they grow and expect to have people coming in that will exceed what the campground is, they will definitely come in for permits. Chairperson Ross stated he thinks the question was more for Mr. Kleinhans. Kleinhans stated we regulate the layout and location of the campground but the tent sites, 1.3 acres in the middle, there were no pads or improvements suggested. So that runs afoul of what we do in zoning. He asked Michelle Williams about it and she said they typically handle things like that, for instance at the Gaslite, they have a big event down there. They do that with a special permit on a temporary basis, maybe one weekend. He wanted the committee to be aware of that, that it is still regulated but not according to our campground rules. Sanden, do we need to look at this with the possibility of a thousand people being here and put in certain safeguards but that would be handled under that other permit process. Kleinhans stated yes. Mr. Grabrick stated that the neighbor said she has been broken into several times since he bought the property and he went to the Sheriff's Department and asked them, the only reported break-in there was six months prior to his buying the property. Nothing reported to the Sheriff's Department since he bought it. So if there are issues there, they are not being reported to the police. He also presented pictures of the property line. There is a two strand barbed wire fence between his property and the Peterson's. They plan on using vegetative screening which will be pine trees, cedar arborvitae and they plant those so they have almost a solid wall of vegetation. It will be at least ten feet from the property line so they can maintain it all the way around. He can't see putting the money into an eight foot fence because it's not his campground that is doing anything. To address the issue of running an illegal campground, the zoning says he can have three campers per address without a permit and he has two addresses on that property and he has had no more than six campers there at any time. Sanden asked Jim about the Town of Isabelle Campground Rules, #8 states or #9 says no storage then the backside it does mention that the campground will operate during warm season with year around storage of campers. Can you explain that discrepancy? Kleinhans stated at the variance hearing, John suggested that there would be seasonal campers during the summer; warm season campers and winter campers. Some folks might want to buy a season pass and leave their campers there. It's a little different here because we normally dealt with floodplain campgrounds. In this case, they don't have to leave every 180 days. If they do a year-round lease they could leave the camper there. Sanden stated it would be nice if the campground rules were more specific on #9, just saying no storage? Pichotta suggested that Town representatives are here and you could ask them. Often times campgrounds will allow a small storage shed associated with each unit. It could be that is what they were referring to. Pichotta asked Mr. Bartels on #9, was that storage of RV's or storage of Menards shed with stuff in it? Mr. Bartels stated all of the above. Pichotta stated you didn't want campers there year round? Mr. Bartels stated it was brought up at that meeting. Mr. Potts stated it wasn't for the campers, you can leave the campers there year round but any other storage we don't want. Mr. Bartels explained there were discussions during that meeting with John and everybody else that camping season was May 1st to November 1st. Mr. Potts stated that is correct. Chairperson Ross stated versus year round. Sanden asked if it was appropriate to ask the Township what their interpretation of the number of campers given this new configuration or is that something that would be best handled at the Township meeting? Pichotta stated typically when a Town generates a recommendation it is a formal action taken at a Town Board meeting. It certainly would be appropriate given that they have not seen this new configuration and the fact it was proposed to them in a totally different layout. They could be asked for clarification in response to that. Are you suggesting you may want to kick it back to the Town? Sanden stated no. He would just like to ask them. Given what you have heard by the petitioner as far as the new configuration, do you still hold to the maximum campsites at 30? Or given the new configuration, what are your feelings about moving it up to the 42 that he is asking for. Mr. Bartels stated he doesn't know. Mr. Potts stated the way he has it laid

out he doesn't see any problem with the 42 when he looked at it here. How close are they going to be together? Another issue, the camping season is May 1st to November 1st; that is actually one month longer than other campgrounds. Chairperson Ross stated we are going to have to stop discussion. Your Town Board is represented by three members total is that correct? Mr. Potts stated right. Chairperson Ross stated we are going to have to stop discussion because you represent a quorum with two of you here. Chairperson Ross asked if the hand written notes on the campground rules were written by the Town Board. He wants to make sure we have a clean copy of campground rules to make sure we aren't misinterpreting what you want. On DHS 178.12, States the Department of Commerce or designated agent, is that now WADC and does it matter if that is in there. Pichotta stated it's going to be the Public Health Department. Pichotta stated the reason we included those Public Health Standards is because there is a tremendous amount of overlap. We require a certain size site and they require that each site be within 400 feet of a porta-pot. To not look at that would be an incomplete picture of what is required because there is a lot more required than what is contained in our zoning code. Kleinhans stated they do their licenses annually to verify that items are addressed. We get reports on that. Aubart asked about sending it back to Town. Sanden stated that sounds reasonable. Pichotta stated what you are suggesting is to defer action until such time as the Town of Isabelle has had an opportunity to reconsider the request. Aubart stated yes to review the updated plan and then come back with the rules the way they want to see them. **Aubart moved to defer action on the conditional use permit request for a campground for John Grabrick until the Town of Isabelle has an opportunity to review the application with the proposed additional sites/Sanden seconded. All in favor. Passed.**

Discuss take action on Site Plan Review and a request for height exemptions in the Industrial District for Wisconsin Specialty Sands Inc, owner on property located in the NE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Ross invited Jeff Himes and Mark Krumenacher forward: Mr. Himes stated this is the site plan and the request for height variances on some of the structures on the site. Brad has done an excellent job of covering everything in the staff report.

Staff Report – Brad Roy: WISC is seeking Site Plan approval of an expansion of its mineral processing and rail load out facility in the Town of Trenton. Washed sand is transported by truck to the plant and is dried and sorted by size and then loaded into rail cars to be shipped. A Conditional Use Permit for the expansion was approved by the LMC on April 2, 2014. The applicant proposed to construct additional structures and equipment on the site, similar to what is currently there. Expansion of the plant will include new paved areas, hoppers, conveyors, dryer, scalp screen, screen house and silos to store the sorted and dried sand. A number of height exemptions, pursuant to Pierce County Code §240-29D, are also being requested. Various structures are proposed which are greater than the 35 foot height limitation established in the Zoning Code. Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Access to the site is off of 770th St. The site is at the bottom of a bluff that is situated approximately 60 feet vertically below the elevation of Hwy 35. The surrounding land uses are Industrial and Residential. The neighboring Rural Residential 20 (RR20) zoned property located directly east of the project is now owned by WISC. The nearest RR20 district to the project area is located south across the rail line approximately 500' away. There is a higher density residential district located approximately ½ mile to the east of the project site. The residential district is located on a bluff top that is approximately 60 feet vertically above the facility. WISC does not own the land neighboring that residential district. In past similar situations the LMC has required buffering. In this case, effective buffering may be difficult due to elevation. The staff report was inaccurate as it was pointed out tonight. We talked about how existing vegetation would remain, including the trees in the southeast. Those have been removed for the rail expansion project that was approved. But due to the bluff and the distance to the construction the LMC should consider the effectiveness that any buffering may have on surrounding land owners. Pierce County Code §240-30B(5) states buildings in

industrial districts located adjacent to railroads are exempt from any front, rear and side yard setbacks. Concerns have been raised by neighboring landowners about a potential increase in the level of noise generated at the site as well as concerns about impacts on property values. Additional noise will be present during the construction of structures authorized by the expansion, but WISC has indicated that the expanded plant, when operational, will not create more noise than prior operations. Trucks on site utilize white noise backup alarms during the day and flashing lights at night. Most of the trucks entering use a continuous forward loop to eliminate the need for the alarm. The facility has 17 parking spaces with one space reserved for handicap parking.

- Pierce County Code §240-54 requires one space per employee during the peak shift as well as 2 spaces for manufacturing/trade contractor establishments.
- The peak shift at the plant will be 13 employees.

Restrooms are located in the Office Building. There is one wastewater disposal system on the site. An inspection should be done to ensure the system is sized appropriately for the expanded use. A lighting plan for the site was developed and is depicted on the proposed site features map. The lighting is intended to stay onsite in the working area. MSHA regulates lighting and may require modifications to the plan. WISC is proposing multiple structures greater than 35 feet. Pierce County Code §240-29D states that industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setback and yard are increased by not less than one foot for each foot the structure exceeds 35 feet. As previously noted, Pierce County Code §240-30B(5) states buildings in industrial districts located adjacent to railroad access are exempt from all front, rear and side yard setbacks. The structures and heights that the applicant is seeking an exemption for are listed, the tallest being the Screen Tower Feed Elevator at 120'. All of the structures listed above substantially exceed their height in distance from neighboring property lines except the Screen Tower Feed Elevator which is proposed to be located 120' from the rail road right-of-way. All proposed structures, including the Screen Tower Feed Elevator, qualify for a height exemption, consistent with 240-29D. Much of the newly disturbed area will be paved. Stormwater at the plant generally flows toward a stormwater pond northwest of the plant area. The proposed construction will not change the stormwater flow direction of the site. Silt fence will be installed along the project area to retain sediments on site. Prior to construction the applicants will obtain a WDNR General Stormwater Permit for Construction Activities which will include the erosion control Best Management Practices (BMPs). The BMPs will follow the Conservation Practice Standards provided by WDNR. Sand is stored outside on the site. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from truck traffic on paved roads and railway dust from rail traffic, during periods of dry or windy conditions. Various methods for dust suppression are present and proposed on the site and listed in the staff report as well. Staff has received recent complaints about the increased use train horns. Federal rules require that all trains sound their horn when people are present within the railroad right-of-way. The increased use of horns has been due to the construction of the additional rail siding which were permitted last year. No new advertising signs have been proposed at this time.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed plans, considering; existing and proposed structures, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, access, traffic generation and circulation, lighting, drainage, etc to determine whether there are modifications that would result in a site design that would better promote compatibility between land uses, create safe and attractive site layouts, protect property values and contribute to efficient land use in Pierce County. The following conditions also recommended:

1. The existing septic system shall be inspected by a Certified Plumber to determine if it is sized appropriately and the applicant shall complete any recommended upgrades.
2. All structures proposed to exceed 35' in height may be constructed as long as zoning code provisions are not violated.

Sanden asked Brad, as far as the building heights, there are no surprises here are there? Roy stated no, and he thinks that the 120' elevator will now be the tallest structure on site. Sanden asked about the vegetative issue on the southeast corner. Is that something that can be replaced? Mr. Himes explained they intend to plant trees where they have disturbed the area, where they put the railroad in. They will put some plantings in that area. The trees Brad was looking at were on an old aerial photo but they have been removed as part of the rail project. Sanden stated given the residents to the east is there any recommendations for additional screening on the top of the bluff. Is that something that would be feasible given the height of the structure? Roy stated they don't own that land. They own where the rail siding project is and that is 60 feet below. Sanden asked about lighting, any issues? Roy stated the lighting plan looks good the way it's designed but that could be subject to change. They own all the neighboring property surrounding it so a change here and there shouldn't get to any other residence unless they are shining it across the rail line. Sanden asked if the lighting will be directional. Mr. Himes stated Lisa Flynn was here several meetings ago, she is in the house that we bought and in response to a comment she made: we modified the lighting and she was happy with it.

Sanden moved to approve site plan review for Heavy Industrial Use and multiple height exemptions for Wisconsin Specialty Sand Inc. as presented with conditions #1 - #2/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for a Farm & Home Based Business for Matt's Electric in the Town of Ellsworth.

Public hearing to consider a request for a conditional use permit for expansion of an underground nonmetallic mining operation in the Town of Oak Grove.

Public hearing to consider a conditional use permit for Filling and Grading in the Shoreland Area/Floodplain District

Discuss take action to the number of position descriptions within the department including Planning and Zoning Secretaries, Part-time Zoning Secretary and GIS Specialist.

Motion to adjourn at 6:58pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 7, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 21 st , June 4 th & 18 th , 2014.	Chair
3	Approve minutes of the April 16, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit to operate a campground in the General Rural District pursuant to Pierce County Code Chapter 240-39A, for John Grabrick, owner on property located in Government Lot 3 in the NE ¼ of Section 7, T24N, R17W, Town of Isabelle, Pierce County, WI.	Kleinhans
5	Discuss take action on Site Plan Review and a request for height exemptions in the Industrial District for Wisconsin Specialty Sands Inc, owner on property located in the NE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(4/25/14)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

MINUTES - Pierce County Land Management Committee Meeting, April 16, 2014

Present: Joe Fetzer, Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Chairperson Fetzer stated the first order of business is to elect a Temporary Chair: Holst nominated Jon Aubart, Chairperson Fetzer asked for any other nominations. Ross moved to close nominations and cast a unanimous ballot/Chairperson Fetzer stated so moved.

Temporary Chairperson Aubart opened the floor for nominations for election of Committee Chairperson. Holst nominated Joe Fetzer. Temporary Chairperson Aubart asked for any other nominations. Ross moved to close nominations and cast a unanimous ballot/Holst seconded. All in favor. Passed.

Chairperson Fetzer opened the floor for nominations for election of Committee Vice Chairperson. Ross nominated Jeff Holst. Chairperson Fetzer asked for any other nominations. Ross moved to close nominations and cast a unanimous ballot/Aubart seconded. All in favor. Passed.

Next meeting dates: May 7th & 21st, June 4th & 18th, all in 2014.

Approve Minutes: **Ross moved to approve the April 2, 2014 LMC minutes/Aubart seconded. All in favor. Passed with Holst abstaining because of absence at the last meeting.**

Jeff Holst recused himself for the next agenda items, from discussion and voting, due to a possible conflict of interest.

Chairperson Fetzer stated that agenda item #8 for Filling and Grading in the Shoreland Area and Floodplain District has been stricken from this evenings agenda.

J. Larson, Town of Diamond Bluff, asked why that agenda item has been removed. Pichotta stated that it was determined that additional information was needed, and rather than have the LMC defer action on the item, the applicant opted to remove it from tonight's agenda. We anticipate it being brought back before this committee on May 21st.

Public hearing to consider and take action on a request for a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, all in T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Jeff Himes, Eric McLeod and Mark Krumenacher forward.

Staff Report – Brad Roy: In 2012 WISC obtained a Conditional Use permit for a new underground mining operation in the Town of Diamond Bluff. The mining permit encompasses 59 parcels totaling

1,867 acres. Mining has not yet begun at this time. Activities permitted include blasting and screening underground as well as stockpiling and loading on the surface. The mining application stated that no washing would be done on site. The applicant has modified their plan and is now requesting to construct a wash plant to wash the sand from the mine. The washed sand will be trucked to the WISC dry plant in Hager City. New construction will include the new wash plant building, conveyors and a new load out tank building. The mining application detailed the conversion of the existing residence into an office and construction of a maintenance building. A temporary wash plant may be constructed for use during the construction of the permanent wash plant or the material may be trucked offsite and brought back for processing after the plant is operational. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. The proposal includes moving the existing 1005th St into the Floodplain District. Two stormwater ponds are also proposed within the Floodplain and the Shoreland area. These activities require separate permitting (also a conditionally permitted use). The property is located in Section 12 in the Town of Diamond Bluff and is zoned Industrial. The Industrial District is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. Access to the mine entrance site is off of 1005th St. The road will need significant upgrades if the proposed facility is approved. The applicant and the Town of Diamond Bluff have discussed a road agreement for 1005th St. No formal agreement has been made at this time. The applicant submitted a conceptual request to the WisDOT regarding the Hwy 35/1005th St. intersection. WisDOT recommends that the intersection be upgraded to the B1 class. This will widen the intersection to allow trucks to enter and exit simultaneously and create a 200' right turn lane on northbound Hwy 35. The mined sand will be conveyed to a scalp screen to remove coarse sand and water will be added creating slurry. From there the slurry will go to another scalp screen to remove more coarse material. The material will then be pumped to the wash plant through a slurry pipe. The wash plant will remove clays and fine material from the sand. The clays and fines go to thickener tanks and then to a filter press or plate press. The press will remove the water and create a block of clay and fine material which will be placed back in the mining tunnels. The wash sand is conveyed to storage bins. Trucks will be loaded inside a new load out tank building. The process, when fully implemented, has been designed so that the sand will not be exposed to the open-air. Flocculants will be used in the plate/filter process and remain in the material block which will be placed in the tunnels. Two high capacity wells will be needed for the wash plant. The WDNR permits high capacity wells. Any new high capacity well application is required to be subject to an environmental review. DNR hydrologists will evaluate proposed wells for any potential impacts. Proposals that have the potential to impact protected resources undergo an environmental assessment process by the DNR. The applicants proposed system will reuse 90-95% of the water. The proposed operation will include the need to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans will identify potential sources of stormwater pollution and spills of oil-related materials and other chemicals and establish controls to minimize any potential impacts to surface waters. WDNR regulates and monitors storm water and process water through the WPDES permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. WISC will obtain the WPDES permit if necessary. A Fugitive Dust Plan has been developed for the operation. The plan details the measures to be taken to reduce roadway dust from temporary stockpiles and roadways during periods of dry or windy conditions. The plan details the use of a watering truck and potentially a sweeper for roadways and water cannons for the stockpiles. The proposed hours of operation of the plant are 24 hours per day, seven days per week. Front end loaders, trucks, mining equipment and conveyors will be routinely operated outside of the mine. WISC is still determining what to do with the mined material prior to the wash plant being operational. A temporary wash plant may be constructed, however WISC has indicated that it is more likely that the material may go through an initial screen and then be hauled offsite for storage and brought back when the plant is

operational. The applicants can provide more detail. There may be some temporary storage of mined sand as the adits to the mine are being constructed. Once mining operations are in full production outside storage will not be needed. Site Plan Review will be scheduled for a future LMC meeting. Site Plan Review is intended to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. A request for a height exemption (WISC is proposing several structures taller than 35 feet) will also be presented. The Town of Diamond Bluff at their January 9, 2014 meeting recommended approval of this request without reference to their Comprehensive Plan. The Town suggested that similar conditions as that of the Bay City Mine be required. The conditions of the mining operation were established with review of the Bay City Mine CUP. The Bay City Mine does not have a use similar to the proposed wash plant on site. The conditions of the Bay City Mine CUP largely concern the mining operation and not the processing of materials. The conditions associated with the permitted mining operation at this site are listed in the staff report #1 - #24. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether the proposed use at the proposed location will be contrary to the public interest or will be detrimental or injurious to the public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions, as well as any additional conditionals deemed appropriate by the LMC to address concerns raised at the public hearing:

1. Activities shall be conducted consistent with the submitted plan, unless modified by another condition of this CUP.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Any unforeseen dust, erosion and/or stormwater issues that arise shall be addressed to the satisfaction of the county.
4. Applicant shall obtain all necessary permits for construction and signage for the site.
5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.
6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. The Fugitive Dust Plan shall be adhered to.
8. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
9. The applicant shall complete the WisDOT recommended upgrades to STH 35 and receive all necessary permits and approvals.
10. A formal road agreement with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance.
11. Applicant understands that any expansion or intensification of this use will require CUP modification or potentially issuance of a new Conditional Use Permit.
12. This permit shall expire in two years.
13. Applicant shall provide a status report before the Land Management Committee in one year.

Chairperson Fetzer opened the hearing to the public. James E. Larson, N3581 952nd St, Hager City, part of his farm land butts up to the site. His biggest concern is the high capacity well. Mr. Himes made a comment about them being not much different than irrigation wells, not that long ago just south of Hastings in Dakota County, they put in some irrigation wells and the neighbor's wells went dry. Not that long ago up near Spooner and Shell Lake a farmer put in irrigation wells and the neighbor's wells dried up. He has a major concern about high capacity wells going in, in that location. He hopes the DNR, State and County do their due diligence on allowing this to go in the floodplain near an existing waterway. When he looks at all the rules and regulations on this, he thinks they should deter that from happening. There is the acrylamide that is used in the process. He knows there is a concern about that getting back into the environment and contaminating the groundwater. He hopes again the County or whoever does due diligence on it to make sure it does not get into his groundwater or his neighbors. The State of Minnesota has been much slower at approving these requests for sand. There is a lot of unknown data out

there as far as the hazards. Wisconsin seems to just go, go, go. He hopes we aren't running before we walk. If there isn't going to be a problem with his well, he would hope that Fairmount Minerals and maybe Pierce County would throw a few million dollars into an escrow account, to cover the land owners if that does occur. He doesn't want to be throwing out \$20, \$30 or \$40 thousand dollars to put in a new well. Debbie McClure, Oak Grove Township, her concern is the overall scope of the WISC project. When she reads over the statements, staff report and information, it sounds like there is a lot of time and consideration put into the conditions and talking about the permits. Her concern is with the scope and two years ago they were looking at Diamond Bluff mine conditional use permit and that hasn't started yet. Now they are changing the plan and talking about a wash plant. There is no timeline that she has seen that talks about when is this going to be up and operational. Is this going to be six years, is it going to be six months? Is there going to be a temporary location until the mine is open, where is that sand coming from that they are going to be washing in that facility? Is it coming from Bay City? She is not comfortable that throughout the whole process, the timeline, the details, the scope and she is afraid very easily leads to scope creep as we're putting in one application at a time. She has the same concerns as Mr. Larson regarding the water and the polyacrylamides. What she understands is that food grade polyacrylamides are different than chemical grade and she would want to make sure that due diligence is followed so that it is not ending up in his yard. Sarah Palodichuk, Town Chair in Oak Grove, she is here because she has been in conversation with 40 – 50 citizens of Oak Grove that have concerns about the various aspects of this project. You are familiar with the application before them as well. Her concerns with the wash plant going in, is the change of scope. She received a copy of an application this week that included the Trenton Wash Plant still and it has changed quite a bit from there. In other parts of the State it looks like they have blown it up and they say once they get their foot in the door, they get everything they want and that's how it is feeling right now. She does understand the business reason for doing that and it makes sense but she feels like they were sold something else to begin with. They weren't really comfortable with the initial presentation and now to add a wash plant on to that is very disconcerting. If you pull up the map on the County website, there is a section of land in Oak Grove, called Diamond Bluff Estates, this is indicated as Planned Residential Development and in Diamond Bluff itself, there is a section that runs up to the northern section of the Town of Diamond Bluff that is indicated as Planned Residential Development. When people in her town want to purchase homes, they say that is a residential area. The part of Diamond Bluff that is Planned Residential Area, she doesn't know if that is still its intention but that is what the County website states and that is almost directly west of this proposed plant. She doesn't feel like that is a fair representation for people buying land in her town. It's not creating the right expectation for what the use of the land is there. To change it to Heavy Industrial which we were told it was for the portal, we didn't realize the rezoning was for the wash plant. It's a big concern for their residential development. If you want to talk in terms of health, safety and welfare, that particular economic welfare and lifestyle welfare, that is a big part of how we see Oak Grove as a community particularly along the western part of Hwy 35. She doesn't think these are compatible uses. She assumes you are aware of the issue the people of Diamond Bluff Estates have putting a wash plant in there and not to mention the enormous risk that come with it; the environmental risk, water was mentioned. She would be asking, specifically, if there is a well problem, is the burden on her to present an expert, to identify the condition of her well currently and any changes? Or are they going to provide their experts and they are going to determine there isn't anything wrong. She thinks the high capacity well may never be an issue but that risk is something that needs to be addressed. She would like to see that addressed for the citizens in Oak Grove as well. She knows this committee has told her in the past, Sarah, you are from Oak Grove you don't have weight when it comes to an issue in Diamond Bluff. She has heard that directly from you but a lot of her residents live a lot closer to that wash plant than the residents of Diamond Bluff. You are handling it at a County level and one of the reasons why, at least that is what we hear at the State is because it does affect more than just that one Town, it affects your neighbors. Chairperson Fetzer stated he has trouble believing that anybody on this board said that somebody's input doesn't have any weight with us. Ms Palodichuk stated the situation was August 1, 2012 when the Diamond Bluff mine was initially approved and they had a room full of people here and she was told none of those addresses were Diamond Bluff and to have

a bunch of Oak Grove people here talking about it does not carry weight. Chairperson Fetzer stated anyone that brings input here, carries weight. We do take all of this into consideration. Chairperson Fetzer asked if there is any further public comment. Ross stated he speaks for himself and he thinks that the committee at large appreciates the citizens who take their valuable time to come out here and talk with us and share their thoughts and concerns, and we do not ever take that lightly, ever. **Public hearing closed.** Mr. Himes thanked everyone for their time and comments and stated they take them very seriously as well. Going through the list of concerns; starting with Mr. Larson and the well concerns; there is a process for permitting through the State when the high capacity wells are put in making sure that the drawdown rates aren't going to cause issues with neighbor's wells. He also heard the articles on the news about the wells in Minnesota and the article was actually referencing unlicensed wells that were over pumping and pumping beyond the stated capacity and permitted capacity. The wells that they are putting in would have to be under State regulation and they would have to follow the guidelines and make sure they aren't doing a drawdown that would affect anybody else. They will be talking about the Floodplain issues and waterway issues in detail when they review the filling and grading conditional use permit application. The design of the plant and design of the excavation in their reclamation, reseeding and grading in their design control systems are going to prevent runoff from going into the river and issues that would damage the floodplain as well. There is a lot of detail in that plan. That is why they are coming back in a future date to review that. In terms of flocculants, Mark will address the issue of polyacrylamides. Mr. Krumenacher stated the water soluble polymers that are going to be used will degrade within 60 to 90 days. Those water soluble polymers, their purpose is to clean up the water and attract the clay minerals to each other so that is where the water soluble polymers are going to be tied up in that clay that gets washed out of the sand. So it's going to stay with the clay and it's going to degrade out in 60 to 90 day range. It is the same water soluble polymers that are used to treat/clarify drinking water. The concentrations that they are using at the mine are very similar to the concentrations they use to treat drinking water. The use is regulated by a permit from the State. It's very carefully managed. Chairperson Fetzer asked what their percentage is compared to drinking water. Mr. Krumenacher stated it's a very low parts per million concentration that they are putting in the water. Chairperson Fetzer stated you are saying it's very close to the amounts they use in drinking water. Mr. Krumenacher stated yes, it's not a percentage, it's dosed. The water soluble polymer is a liquid and it's dosed into the water supply system to make the water cleaner. It's also dosed meaning there is a very thin tube that meters in with a pump into the process water that has a color and consistency like chocolate milk. By having that little bit, small concentrations, in the water stirring around will cause the clay molecules to bind to each other. What they are using is part per million concentration. Sanden asked where it is stored for this 60 to 90 days? Mr. Krumenacher stated its continuous process so the same day the sand is mined and put through the wash plant, the tailings, the fine clay material is going to go back in the mine and back in the tunnels in previously mined areas and stored there. That's where it will be permanently. Sanden asked if it would be able to leach out. Mr. Krumenacher stated no, the property of the polyacrylamide is to make these molecules adhere to it so it's not going to readily leach out because it's attracted to the clay molecules. It is literally stuck in there. While it is in there, it will slowly degrade over that two to three months. Mr. Larson wanted to get clarification on the 60-90 days about it deactivating. If you are going to be running the plant 24-7 it's always going to be there. Sanden stated that was his question, if you are putting it in everyday it's going to still be there. Mr. Himes stated it's similar to what they are doing at the other two mines. The tailings are going back into the mines on a continuous basis and then they stay there. While they are there you have the degradation of the polyacrylamides to their natural elements. As Mark said, the flocculants are bond to the clays and the solids. We have tested the water and we're grabbing as much of the water and recycling as we can. We have tested the water for acrylamides associated with the tailings going back into the Bay City and Maiden Rock mine and there are no acrylamides detected in the water adjacent to the ponds. It sticks to the solids. Sanden stated he was referring to the same line as the gentleman had, if you use it every day, even if it breaks down every day you are adding more for a continuous amount but as long as it's stored in a safe way that doesn't get back into the groundwater it can probably degrade safely. Mr. Krumenacher stated the material that they use is bought in plastic totes that are typically wrapped in a metal cage so it's

a tank, 250 or 300 gallon totes. That is all kept indoors and it is protected. Mr. Himes stated condition #8 of the mining permit requires that they have a Damage Response Plan to address damage to wells or damage to anything else. So there is a process that they would have to go through if an issue did arise. That plan is in the record. In terms of the scope of the project, the scope did change. The original proposal was to set up a mine, processing plant and drying & screening plant as an independent business processing something on the order of a million or million point two tons a year. When they went through the process and started to get the push back from the Town of Oak Grove, the project got stalled and Fairmont had opportunities to take those funds and look at other opportunities which were exercised in Minnesota, Texas and a couple other plants in Wisconsin. They did a major expansion at their plant in Wedron, Illinois. This project got put on the back burner. As the market and demand continued to grow particularly for the Jordan Formation Sand which is extraordinary high quality, they revisited the Diamond Bluff project and looked at a smaller scope. It made sense in their review to put the dry & screening plant as an expansion of the Hager Facility, set up a wash plant similar to how they are structured at the Bay City Mine and have the two mines feed the dry plant in Hager City. That is what drove the change in scope and the timeline of the project. In terms of the timeline of the project, they are anticipating work to start as early as 2015. It will be a two year development from start to finish to bring it online. In terms of the residential areas on the website he can't comment on that. Sanden stated the change in scope makes him a little nervous, it gives the appearance that things are changing midstream and that is something, we always tend to think the worst in that kind of a case; was this known before the rezone petition was put in, was this actually the result of something that happened since that time. Speaking for himself, that is what he has the most problem with, the fact that it was rezoned without any illusion to this kind of use. Mr. Himes stated that when they presented their proposal, they presented all three applications to the Town of Diamond Bluff; the filling and grading, the wash plant and the rezone. When they presented the rezone request to this group, they went through their game plan of the wash plant, the Hager Plant, the whole scope. Sanden thanked him for refreshing his memory, he stands corrected. Sanden asked if any of the buildings are going to be in the floodplain? Mr. Himes stated the buildings will not be in the floodplain. Sanden asked if the DNR tests for polyacrylamides? Mr. Krumenacher stated no, the DNR does not prescribe a testing protocol or media for the wash plant at any of the mines. They regulate but don't require groundwater sampling or any kind of sampling. Mr. Himes stated they initiated the water sampling on their own. The DNR does review; they have to request approval for flocculants they will be using and the DNR reviews and then allow it. They can't change chemicals without going through a process. Ross asked about the neighbor's wells and going forward, will there be a base line established for these wells? Roy stated in the mining permit which those conditions are also going to have to follow, condition #8 says WISC shall develop a plan to respond to damage claims to wells or structures by surrounding land owners. WISC shall offer pre-blasting surveys to residents or owners of dwellings or other structures within 1500 feet (or as established by the Town of Diamond Bluff) and shall respond to claims of impacts/damage. Each land owner will have the opportunity to have that pre-blast survey done. Mr. Himes stated that condition #9 is the groundwater monitoring requirement. Mr. Larson asked who pays for that. Mr. Himes stated we do. Mr. Larson stated the baseline you would be paying for and the samples go to an independent third-party lab? Mr. Himes stated yes. **Aubart moved to approve the conditional use permit for Heavy Industrial Use for a wash plant for Wisconsin Industrial Sand Company with conditions #1 - #13, due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed with Holst not voting.**

Chairperson Fetzer stated item #8 has been struck from the agenda.

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business in the General Rural District, pursuant to Pierce County Code Chapter 240-36D, for a wood working business by Chad and Kecia Bleeker, owners on property located in the NE ¼ of the SW ¼ of Section 21, T25N, R16W, Town of Salem, Pierce County, WI. Staff Report –

Jim Kleinhans: Mr. and Mrs. Bleeker operate a millwork company out of their residential property in the Town of Salem. He contacted them indicating that they would need a Farm and Home Based Business for the scope of their project. They own 12.5 acres that is zoned General Rural located along County Road A. The company is called Complete Millwork and they were located in Hudson prior to moving their operation to their home about five years ago. They employ four additional workers and their working hours are 7:00am to 3:30pm. They provide a limited number of products, typically a wood finish door and some molding to local lumber yards so they do not have customers driving in and out of their property. It's typically just trucks, semis delivering materials and may be straight trucks picking up materials for delivery to Fullerton Lumber and places like that. They use table saws, chop saws, planers, belt sanders and dust collection devices. The building is well insulated and separated from neighboring residences by a large degree. There is a satellite toilet located behind the building for the employees to use. They use wood stains and wood finishes. Solid waste service is provided by Paul's Industrial Garage. Excess sawdust is sold for cattle bedding to surrounding farmers. Wood waste is burned in the owner's heating stove that also heats the shop which is a total of 4,728 square feet. He noticed fire extinguishers within the building. There are no outside advertising signs on the property. He has parking spaces available for his four employees to the north of the building and there is a widening in the road as you enter the manufacturing portion of his facility from his driveway. The driveway is about 14 feet wide but then it gets about twice that width for trucks to be able to negotiate getting into and out of the manufacturing area. The Town of Salem Supervisors recommended approval of this CUP request during their March 10, 2014 meeting noting that the business does not present any public nuisance issues or create other problems. No reference was made to the Town's Comprehensive Plan.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. Applicants shall work with Todd Dolan, Town of Salem Building Inspector, to determine whether or not commercial plan review and approval is required for the building from Department of Safety & Professional Services.
6. The permit may be renewed administratively in 2 years if no compliance issues are reported.
7. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), etc.).
8. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked if they gave any indication of what the truck traffic would be like? Kleinhans stated a couple times a week, just to deliver materials and pick up finished products. There was a straight job from Fullerton Lumber when he was there talking to them, reviewing the facility. It would be a lot different if he did this retail to customers but based on the volume of the raw materials coming in, the finished products coming out, there is not a lot of traffic. There is an individual in the room tonight that owns property directly across the street from Mr. Bleeker's property whose driveway coincides. Roger Nelson, stated he is a good neighbor and the only things are a couple semis coming and going. They back up his driveway. His only question with that is on a County Road, does that change the driveway from the time you need from a curve, when you do a driveway permit? Would that have to be changed to commercial, is it different for a business? Kleinhans stated if it was commercial he would need a wider driveway, right

now it's about 14 feet where he accesses County Road A. Because he isn't zoned commercial, Jim didn't make that a recommendation. If he has issues getting trucks in and out of there we could address that. Mr. Nelson stated he has no problem with him and he really doesn't know he's there. Mr. Nelson noted that he doesn't live there. He is only there on weekends and evenings. There aren't many neighbors around there but he hasn't heard of any problem. Kleinhans stated he has a pretty good buffer from surrounding properties. Roger would be the closest. Don Hines stated he shouldn't be backing off of a County Road. Sanden asked Jim if the DSPS permit covers stains and finishes on products? Kleinhans stated no, DSPS generally regulates contractors like electricians, plumbers, professionals, health industry, etc. This is something that is regulated by our committee. He brought it to the committee's attention because Mr. Bleeker has been operating out there for a couple years. He wanted to get the scope of what he was doing because he did come from a commercial area in Hudson. He downsized as he was tired of paying a lot of rent. He converted part of the buildings as ag structures into a business. Sanden asked if the production building has cement floors. Kleinhans stated yes, he heats it with in-floor heat from his boiler where he burns his scrap wood. They do put on exhaust fans when they are staining for the health of the employees. He was complaining that it pulls a lot of the heat out of the building. He does have a dust collection system, doesn't appear to be any nuisance issues there. Pichotta suggested that an additional condition may be appropriate given that access is off of County Road A: #9 Existing driveway access shall be reviewed by the Pierce County Highway Department and shall be upgraded if determined to be appropriate. Chairperson Fetzer asked if his driveway is off of County Road A. Kleinhans stated that it is all gravel but he widened it out when you come off his driveway to get into the shop. Ross asked if they had mentioned any reason why they didn't show up. Kleinhans stated he said he would be chasing walleye the night of the meeting and Jim told him his wife could show up. Kleinhans stated he told them they should be here or an agent. Aubart asked if we got a report of this business or how did we hear of it. Kleinhans stated he was aware of it because he saw the trucks going in there. **Holst moved to approve the conditional use permit for a Farm & Home Based Business for Complete Millwork for Chad & Kecia Bleeker with conditions #1 - #9 due to the fact this is not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Primary Agriculture District to General Rural District for Donald J. Hines, owner on property located in part of the NW ¼ of the NW ¼ of Section 29, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Mr. Hines forward: Mr. Hines explained his Grandpa bought the place in 1950, he was born on this place and has always had sentimental value for it. When he couldn't buy his parents farm his Uncle sold him the 20.32 acres so he could build a house eventually. He built a shed to run his farming operation out of but after a divorce, loss of a job, and some health issues, he is getting out of farming. It is his best interest is to sell the mobile home with the barn/shed and subdivide this to build another little home where the original building site was. According to his zoning map, three sides of him are already General Rural. It also shows a creek to the west of him which is a dry run.

Staff Report – Andy Pichotta: This is a request for a rezone from Primary Agriculture to General Rural District. The property is located in Section 29, Town of El Paso. Mr. Hines proposes to increase the residential density of the parcel to enable him to subdivide the property into two lots. Current Primary Agriculture zoning density equals one lot with a rezone it would make it two lots. Existing land uses are residential and forest. Adjacent land uses are agriculture, low-density residential, forested and undeveloped. Adjacent zoning districts are Primary Agriculture and General Rural. The Purpose and Intent of Primary Agriculture and General Rural Districts are listed in the staff report. The El Paso Town Board recommended approval of this rezone request on March 10, 2014. Appendix A of the Town's adopted Comprehensive Plan describes how the Town evaluates rezone requests and the form they use. Attached you can find the Rezone Evaluation Form; it utilized several factors (i.e. woodland, existing building site, rock outcrop, waterways, wetland, floodplain and slopes) and issued points and deductions

to these factors. The applicant property scored 110 points. Given that it was below the 120 point threshold, the Town Board approved the rezone request. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with the Pierce County Plan. In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." Jon Krauss, Pierce County Land Conservation Department, has indicated that the land is not in the Farmland Preservation Program. According to the NRCS Soil Survey the types of soils on the property include those listed in the staff report. The vast majority are not prime soils.

Staff Recommendation: Given that the Town of El Paso Town Board of Supervisors has determined that this proposed rezone of 20.32 acres from Primary Agriculture to General Rural is consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Dan Fisher, El Paso Plan Commission and El Paso Town Board, stated that the reason they supported this rezone is because of the aforementioned spreadsheet and point system that they use. He is guessing but suspects that at one time when this parcel was combined with a much larger parcel, it was considered prime ag but the fact is that there is now just 20 acres there, with less than half of it open. A lot of it is woodland and you can note that there is quite a slope on the western edge so hence they did not deem that to be prime ag land. Holst stated this is unique to your township and it's a good idea but your methodology, Section 1 and Section 2, how did you come up with those sections? Mr. Fisher stated it was designed to work with 40 acres at a time. They split the 40 acres into four pieces and then they work with each 10 acre parcel. This is something they developed with their plan commission and they have used it on a number of things. It works very well with bringing the applicant right to the table to show them what they are doing. They usually accept it quite well. **Public hearing closed. Holst moved to approve the rezone request for Donald J. Hines from Primary Agriculture to the General Rural District and forward a recommendation to the County Board of Supervisors given that the Town of El Paso Supervisors determined this rezone request to be consistent with their comprehensive plan/Ross seconded. All in favor. Passed.**

Discuss take action on a status report and site plan review for industrial structures for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Tim Stauffer, Kenny King and Kevin Accola forward: Tim Stauffer, CEO, Kenny King, Plant Manager and Kevin Accola, Health, Safety and Permit Specialists introduced themselves.

Staff Report – Jim Kleinhans: These gentlemen were here in January for a status review and they were instructed to come back in six months for another status review but we scheduled this earlier because they have a request to expand their facility and make some minor modifications. He has provided a list of the existing conditions in the staff report and the conditions of site plan approval. Because there are additional structures involved in this request, we could consider this request a site plan review. They provided a construction summary which you have a copy of with the staff report, indicating that they want to build two silos directly east of the existing silos. That will afford them the ability to make more marketable products and have less waste generated from their operation. A land use permit will be required if the committee approves this request for two silos; one 32 feet in diameter and the other is 12 feet in diameter and they are 87 feet and 72 feet tall which would be covered under their variance that was approved in 2011. Sand source material still comes from Pepin County and a source in St. Croix County. Temporary road arrangements were made with Pierce County Highway Department and lately they have been running on State Roads to respect road bans on side roads. Surface water drain in the immediate area of the proposed silos will be eliminated but the catch basin located to the south of the silos will remain and that will tie into a couple catch basins that are on the south side of the building and discharge directly into the stormwater pond in front of the facility. The conditional use permit associated with the facility is due for renewal in September of this year. The committee may want to know about their processes, they are

going to change some screens inside the building to do some different processes and that is why they need the two silos on the east side of the building.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed plans, considering; existing and proposed structures, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, access, traffic generation and circulation, lighting, drainage, etc. to determine whether there are modifications that would result in a site design that would better promote compatibility between lands uses, create safe and attractive site layouts, protect property values and contribute to efficient land use in Pierce County.

The two silos are shown directly east of the facility, one is larger. They would have the corresponding material transfer out of the plant. Kenny King stated they are going to keep that catch basin in there just move it south a little bit so there will be two catch basins. Kleinhans stated that is paved in that area. Mr. King stated it's just a flat gravel area. Holst stated you must be doing something right because you no longer have a lot of spectators that come. You are modifying your original plan because sometimes that's the way businesses work. He has no problem with it. Mr. Stauffer stated that one of the anticipations with this modification is to reduce their waste between 30% to 40%. **Ross moved to approve the site plan for new structures and building modifications for Muskie Proppant LLC as presented/Holst seconded. All in favor. Passed.**

Discuss take action on approval of a draft POWTS Cooperating Electrician Form for Sanitary Permit approvals per WI ACT 143 and amended Town Recommendation Form.

Staff Report – Andy Pichotta: Staff has been advised by the County's Corporation Counsel Office to periodically bring the Department's forms and applications to the LMC for review and approval. Said approval establishes the forms and applications consistency with the Pierce County Code. Recent changes to Wisconsin Statutes require that a licensed electrician now be utilized to complete electrical work associated with the installation of a private on-site wastewater treatment system (POWTS). The attached form will be required to be submitted as part of a POWTS application. Additionally, staff is proposing to amend the Town Recommendation Form. Changes include emphasizing the need for a Town Recommendation in conjunction with CUP and rezone applications and also highlighting the need for supporting comprehensive plan references in a Town level comprehensive plan for any proposed rezone.

Staff Recommendation: Staff recommends the Land Management Committee review the attached forms to determine whether changes or clarifications are warranted. If no changes are needed, staff recommends the forms be approved as written.

Holst asked if this is the form we are using now. Pichotta explained we are using the form but it is modified. There are a couple changes. The text in the middle was a single paragraph, the first paragraph deals with CUP's and Rezones and the need for a Town Recommendation. The second deals with the CUP side of things and the third highlights the need for a specific reference from the Town level Comprehensive Plan in order to recommend approval of the rezone by a given Town. Pichotta stated that he believes there is a gentleman here that would like to discuss the POWTS form. Roger Nelson stated yes, he knows this is new to everyone, all the plumbers and electricians. The first he heard about this form was when he came in to get a permit today. He didn't get a chance to talk to Jim to learn much about it. They do a lot of septic systems and a lot of the people, especially on replacement systems will wire their own. Under the new electrical code, owner occupied replacement systems, is this not needed? Can the homeowners do it themselves or is it like the septic systems where they can't. Kleinhans stated any new construction has to be done by a licensed contractor. Once the homeowner is in the home they can modify things. Mr. Nelson asked if they can wire their own. Kleinhans stated if we are permitting something under SPS approval, we have to ensure that there is a licensed contractor just like yourself doing the plumbing. Now we need a licensed electrician doing the wiring. A system with a pump in it will need an electrician. We need to know who the electrician is so if it's not right, we know who to call. Mr. Nelson asked if that is the job of the building inspector, not the County to do this. Kleinhans stated they have never done it, but they will now. He has talked to Todd Dolan and Galen Seipel and they realize it's new. Mr. Nelson asked why the plumbers have to find out all this information on the electrical. Kleinhans

stated because you are pulling the permit. Mr. Nelson stated for the sewer, the wiring is separate. It's not in the plumbing code. Kleinhans explained it's a State law that we have to have an electrician do the work for you. We don't issue a separate electrical permit for the electrician. We just want to know who is doing the work for you. It could be a matter of efficiency. It's going to take care of some problems we have seen in the past with some installations. Mr. Nelson stated it's putting additional costs per homeowners. He bets 50% – 70% of the time the homeowner doesn't know who the electrician will be yet when he pulls the permit. Is this going to hold up a sanitary permit? He wondered if a little more research should be done. Holst stated the State mandated it so we have to implement it. Kleinhans explained we picked up a form from other Counties. Every County is doing this and it would be good if the State said this is how you should do it, but they just passed the law and they are leaving it up to 72 Counties to figure it out. We took a template from another County. We're trying to be consistent. Just like contractors work within the building footprint, you are going to have to work with an electrician outside the building to do this. Figure out someone you want to work with. Mr. Nelson stated that most of the time, 75% is new construction with septic and inside plumbing. Whatever electrician is doing the wiring inside the house, wires up the septic. That is why when he is pulling the permit, he isn't going to know who the electrician is because the contractor doesn't get the contracts until he starts framing the house. Holst stated in your profession, quite a few are licensed plumbers and electricians, those guys will be doing their own. You may want to hook up with an electrician and say this guy is going to run the wire to this pump when we put the system in. Who gets hired after that isn't your problem. You can let us know this is the guy you will work with. Mr. Nelson asked on the electrical is that just the hook up at the pump? Kleinhans stated to the panel to the junction box. This has been in the works for a couple years. They postponed it last year, so it's not new. Mr. Nelson stated this is just a tiny part of it. The big thing is the house. Kleinhans stated he thinks if the owner is doing the inside wiring it still has to be signed off on by the building inspector. We just want to make sure that the POWTS are working correctly. Mr. Nelson stated it's going to be two people doing the same thing, why can't the building inspector do it? Kleinhans stated that you have to be an electrical inspector by SPS to inspect these things. Mr. Nelson stated this is the building inspector's job it isn't the plumber's job to find out who the electrician is wiring that system. Kleinhans stated he thinks the way the County sees it as we are at the beginning. We're going to find out who is doing the work before the work starts. It's a matter of trying to be efficient about it. We'll work through this. We don't have it all figured out yet. The State didn't have it figured out or they would have instructed us how to go about it. Mr. Nelson asked if the form could be brought out on the septic inspection or on the As-Built form. To have this when we get permits is going to be a real burden on a lot of plumbers who don't wire their own. Kleinhans stated that should have come up at Wiesers training when we had over 100 plumbers at the meeting. They knew it was happening on April 1st. We are just reacting to it. Mr. Nelson stated he just wanted to give input from an installer's point of view. This is new to him. Chairperson Fetzer stated this is something that can always be changed. Holst stated this is the first step in the process. We have to do this to adhere to State Statutes as they are written today. If it doesn't work, we'll throw this and correct it. This satisfies the State as of today. **Holst moved to approve the POWTS Cooperating Electrician Form and the Town Recommendation Form as written/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a conditional use permit for a campground for John Grabrick in the Town of Isabelle for Big Dog Daddy's Roadhouse.

Motion to adjourn at 7:30pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA REVISED
Wednesday, April 16, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Elect Temporary Chair	
3	Elect Committee Chair	
4	Elect Committee Vice Chair	
5	Next meeting dates: May 7 th & 21 st , June 4 th & 18 th , 2014.	Chair
6	Approve minutes of the April 2, 2014 Land Management Committee meeting.	Chair
7	Public hearing to consider and take action on a request for a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
8	Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Shoreland Area and Floodplain District pursuant to Pierce County Code Chapter 240-41E, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Kleinhans
9	Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business in the General Rural District, pursuant to Pierce County Code Chapter 240-36D, for a wood working business by Chad and Kecia Bleeker, owners on property located in the NE ¼ of the SW ¼ of Section 21, T25N, R16W, Town of Salem, Pierce County, WI.	Kleinhans
10	Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Primary Agriculture District to General Rural District for Donald J. Hines, owner on property located in part of the NW ¼ of the NW ¼ of Section 29, T26N, R16W, Town of El Paso, Pierce County, WI.	Pichotta
11	Discuss take action on a status report and site plan review for industrial structures for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
12	Discuss take action on approval of a draft POWTS Cooperating Electrician Form for Sanitary Permit approvals per WI ACT 143 and amended Town Recommendation Form.	Pichotta
13	Discuss take action on Travel/Training Requests	Pichotta
14	Future agenda items.	Pichotta
15	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(4/4/14)

*** Amended April 15, 2014 at 10:05am.**

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

Ellsworth, Wisconsin 54011

MINUTES - Pierce County Land Management Committee Meeting, April 2, 2014

Present: Joe Fetzer, Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 16th, May 7th & 21st, all in 2014.

Approve Minutes: **Sanden moved to approve the March 19, 2014 LMC minutes/Ross seconded. All in favor. Passed with Aubart abstaining because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of Heavy Industrial Use in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Specialty Sands Inc and Wisconsin Industrial Sand Company, owners on property located in the NW ¼ of the SW ¼ of Section 1; and the NE ¼ of the SE ¼ of Section 2, all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Jeff Himes, Eric McLeod and Mark Krumenacher forward.

Staff Report – Brad Roy: WISC is seeking an expansion of its mineral processing and rail load out facility in the Town of Trenton. No new activities or changes to the operation are proposed. The applicant is proposing to construct additional structures and equipment on the site, similar to what is currently there. Presently, washed sand from the Bay City mine is brought to the site by truck. The wet/washed sand is then dumped into the hopper or in the outside storage area. From the hopper the sand is conveyed to wet tanks. Conveyors then take the sand from the wet tanks to the dryer and then to the scalp screen tower. Sand is then conveyed to the dry sand tanks and then to the screen tower where it is screened in to the 7 different products and stored in the product tanks. From there it is conveyed to the load out tanks. The dried and sorted sand is then loaded onto rail cars and shipped. The facility currently operates 24 hours a day, seven days a week. WISC intends to start bringing washed sand from the recently permitted Diamond Bluff mine to the site for further processing. The plant needs to be expanded to process the additional material and maintain production levels. Expansion of the plant will include new paved areas, hoppers conveyors, dryer, scalp screen, screen house and silos to store the sorted and dried sand. The facility was originally permitted in 2006. A conditional use permit was granted by the LMC in August 2013 to authorize expanded railroad sidings for the processing facility. The property is zoned Industrial. The Industrial District is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. Trucks used on site utilize white noise backup alarms during the day and flashing lights at night. Most of the trucks entering use a continuous forward loop to eliminate the need for the alarm. The facility has a Storm Water

Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of stormwater pollution and spills of oil-related materials and other chemical and establish controls to minimize any potential impacts to surface waters. WISC is planning to have these plans updated. Various methods for dust suppression are present and proposed on the site.

- All loaded trucks are tarped on the site.
- The dryer and screening devices will be equipped with a dust collection system.
- During the rail/truck load out process each hopper, conveyor and load out spout is dust collected, and the dust is reintroduced back into the stream and loaded with the sand.
- All traveled areas are to be paved.
- A water truck is present onsite and is available during construction activities.
- Any sand stored outside is kept wet.

A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from truck traffic on paved roads and railway dust from rail traffic, during periods of dry or windy conditions.

- Any evidence that dust from truck or rail traffic is causing excessive fugitive dust emissions will trigger fugitive dust control measures to be implemented which includes the use of a watering truck or street sweeper. Any sand that is spilled on tracks will be cleaned up regularly.
- The plan states that during rainy periods or periods when roadway surfaces are wet or partially snow covered there is no need to implement fugitive dust control measures.
- Roadways are to be inspected daily during the dusty periods and the railway is to be inspected during each shift to determine need for cleanup.
- The plan does not address dust control methods for any stockpiled sand on-site or the sand transfer points through the progression of processing.
- The plan does not address additional dust control measures to be taken in instances of exceptional events, such as high winds, where stated dust control methods are not adequate.

Concerns have been raised about the health effects of silica dust. New information regarding the potential impacts of silica dust is emerging as well as methods for mitigating the dust. Air monitoring of small particulates is becoming more standard for industrial sand mining and processing.

- Studies now suggest that industrial sand processing and transport facilities should monitor the ambient air for PM₁₀, PM_{4-silica}, PM_{2.5}, and meteorological data.
- Monitoring should measure the air quality impact of the facility on surrounding areas. There are no current ambient air standards for silica emissions. Since the facility is operating and no background information for the site can be obtained, the ambient air of a comparable location may also need to be monitored more accurately determine impact of the facility.
- The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Any study should involve the WIDNR.

WISC has just recently submitted information regarding the air monitoring done by WISC, the DNR as well as the mining industry. This is a very complex issue and a future discussion as to the need of additional testing on the site may be warranted. There are no high capacity wells onsite and no future need for one as a result of the expansion. A Traffic Memo was completed for the facility to determine if improvements were needed at the Hwy 35/770th St. intersection. The analysis was reviewed by WisDOT. WisDOT agreed with the Traffic Memo that the current configuration would meet the minimum standards for this development, but recommends upgrades. WisDOT recommends adding a right turn lane off south-bound STH 35 and a right turn lane off north-bound 35 that would effectively function as a bypass lane for the left turns. Type B2 intersections would be appropriate for the turn lanes. The Traffic Memo indicates that the lowest level of service would be to vehicles trying to enter STH 35 from 770th St. If WISC finds that the level of service to be unacceptable, WisDOT recommends a short right turn lane with an island on 770th St. Site Plan Review will be scheduled for a future LMC meeting. Site Plan Review is intended to assure site designs which promote compatibility between land uses, create safe and attractive

site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. A request for a height exemption (WISC is proposing several structures taller than 35 feet) will also be presented. The Town of Trenton recommended approval of the expansion project on February 11, 2014 without any recommendations or reference to the Town Comprehensive Plan. The existing conditions are listed #1 - #7 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the information above and any comments or concerns raised at the public hearing and determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to the public health, public safety or the character of the surrounding area and if found to be not contrary to the above, grant this conditional use permit with the following conditions:

1. Activities shall be conducted consistent with the submitted plan.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the County.
4. Applicant shall obtain all necessary permits for construction and signage for the site.
5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.
6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. This permit shall expire in two years and may be renewed administratively if no compliance issues arise.
8. The Fugitive Dust Plan shall be modified to include dust suppression methods for any stockpiled materials, at sand transfer points and during instances exceptional events such as high winds. The plan shall also describe drop heights at transfer points and whether the facility uses telescoping chutes, skirting and loading spouts.
9. The applicant shall complete the WisDOT recommended upgrades to STH 35 and receive all necessary permits and approvals.
10. The applicant shall present information regarding the results of their current air monitoring efforts, including methods and standards utilized, to the LMC within 6 months. At that time a determination will be made regarding the need for and methodology of future monitoring efforts.

Chairperson Fetzer opened the hearing to the public. Andy Pichotta stated he had received two emails and was asked to read them into the record: the first from Christina Schuck: Dear LMC members: I ask that you make this part of the record: I grew up across the street from where Fairmont Minerals is located in Trenton Township. My family has lived there for nearly 40 years and I have watched Fairmont Mineral's operations steadily expand throughout the past few years and ruin the surrounding area and the neighbor's property value. My parents and many of their neighbors have spent their lives working hard, paying taxes and contributing to the community. How will they be compensated for this as they watch any equity they have built disappear? Again, Fairmont Minerals is asking to expand their operations and this time quickly after a rezone was approved. No mention was made of such an expansion during the rezone hearing. Many neighbors fiercely opposed the rezone. Now it is your duty to deny the conditional use permit because Fairmont Minerals cannot meet their burden to obtain a CUP. First, expanding operations will be contrary to the public interest. It is destabilizing the hillside and destroying the property values of the neighbors. Expansion adds more light, air and noise pollution. It greatly harms the public in the vicinity. Second, it will be detrimental and injurious to public health for similar reasons: destabilizing the hillside and increasing pollution. It will also be detrimental to public safety. Increased train and truck traffic in a residential neighborhood threatens public safety. Altering the topography of the area puts homes at risk for structural damage, which undermines public safety and health. This all injures the character of the surrounding area, which is predominantly residential. The hillside has been decimated. Expanded operations will further alter the character of the surrounding area. As a result, Fairmont Minerals cannot meet its burden and establish the criteria necessary for a CUP. Additionally, the LMC should also consider how the expanded operation will negatively impact property values, if not make

surrounding lots worthless, with no recourse from the county or the company. These operations are not similar to other uses in the surrounding residential area. It will create considerable noise, odor and dust. It will clog a narrow residential road with heavy equipment and trucks. It will certainly add surface water. Expanded operations will also adversely affect the natural beauty of the area—it replaces a hillside with industrial operations, bright lights and heavy equipment. It alters the topography and removes natural vegetation. In summary, Fairmont Minerals cannot meet its burden and I ask that the LMC uphold the law, protect the neighbors from further damage and deny the CUP. Respectfully, Christina M. Schuck.

Pichotta stated he has a second email from Roger and Sandra Krig to read: We, Roger and Sandra Krig, are 40 year residents of the El Dor Wood Heights Subdivision. We are very concerned about the proposed expansion of the WISC (Fairmont Minerals) Sand Drying facility in Hager City. This expansion will result in a railroad spur line running parallel to our homes. Some of our concerns are noise pollution and silica dust in the air. Silica is a known health hazard. Also of concern is a possible decline in property values. We want this email read into record at the 4/2/2014 meeting. Thank you. Sarah Schuck stated she is the mother of Christina Schuck from the letter you just read. I just wanted to reiterate that she feels the same way as her daughter does and she doesn't want to stand in the way of a company growing and becoming bigger and providing more jobs for the area. But she is concerned about the value of their home which they have put almost 40 years of investment in. Her husband and she have invested in their home. That is where they put their money with the idea that they would be able to live there and then retire off the investment they made in there. They see their house value going down with what is right across the railroad tracks from them. There is more noise which they weren't told of when they were visited by a representative from Fairmont. But every time a train goes by, it's horn beeps because there are more people out there by the railroad tracks and eventually there will be more trains going. We are more concerned about what they have invested for almost 40 years of their lives. Is there going to be any type of reimbursement for those that live along there that are going to see the value of their investments go down the hill. **Public hearing closed.** Ross stated he would like to draw attention to the studies now suggest, on page 2, that industrial sand processing and transport facilities should monitor the ambient air, his question would be on those studies, who conducted them, were they skewed one way or another. He would want to make sure the studies were well vetted ??? and accurate before we necessarily consider them to be accurate just because a study was done. We don't necessarily know the foundation of that study. He does have friends in the legislature in Minnesota and not all of them agreed with the study. He wants to point out that the recommendations came without any recommendations or reference to the Town Comprehensive Plan. Sanden asked about recommendations to find suitable or comparable locations to monitor to develop base line data. Do you have any intentions to do that? Pichotta stated the whole questioning of air monitoring is rather complicated and there is a lot of information out there. We're suggesting WISC, as part of this process, come back and bring additional information. They are currently monitoring in two locations; one down in Maiden Rock and also over in Shakopee at a mine they have there. His understanding is that the monitoring has been done but the analysis is being done and the report is being written. What they would like to do is bring that information to you, present it to you and that would give us an opportunity to become more, well versed in air monitoring. Then deal with that particular issue, not necessarily as part of this but within 6 months have that be a stand-alone agenda item where we have a discussion about air monitoring, what the studies suggest, what their studies suggest and have the LMC, at that point, make a determination as to whether it makes sense for them to monitor at this site or other sites. Sanden asked in response to the emails mentioned the rezone didn't include any mention of the expansion during the rezone. Has anything substantially changed because as he remembers it, you had mentioned the railroad spur and your intentions at that rezone? Mr. Himes stated yes, the rezone and the conditional use permit process that they went through this summer was all about the railroad siding. Sanden stated that is what he thought. He didn't see anything new. Ross stated he also spoke with the railroad and although there may be an inconvenience of the time of construction, it is a safety issue for those that work on the railroad and it will subside once the construction is done which might be another couple weeks. But they do take very seriously, concern for their workers and those near the railroad. Mr. Himes stated they are putting in the retaining wall and pile drivers are used for that. They

are monitoring the seismic vibration caused by that and everything has been well within the limits. There is some noise associated with it while they are working in that stage of the construction which should last until the middle of the month. The construction project will last probably until the beginning of June; the grading lane track, putting ballast down. The pile driving portion will be done shortly. While they are working in the right-of-way of the BN they are required to have a BN Flagman and the flagman is instructing the trains if people are in the right-of-way to signal. It's a requirement by the railroad and the FRA. Ross stated the Federal Railroad Administration. Ms Schuck asked even at night? Mr. Himes stated right now they are working during the day but if there are people in the right-of-way they have to signal. Sanden asked if we have any empirical data dealing with property values and their impact on this operation or is this speculative. Pichotta stated it would be speculative. Basically those are the challenges of having an industrial area near a residential area. These industrial areas are intended to accommodate the full range of industrial uses; noises, vibrations that accompany those. The expanded industrial area was done in a manner consistent with the Town of Trenton's Comprehensive Plan. All rezones have to be consistent with Town Comprehensive Plans. That is one of the challenges attempting to mitigate to the degree that it is possible with some of the impacts that spill over onto the neighborhood. Sanden asked if you have future communication with the property owners, if you could convey to them some sort of the amount of property loss would be helpful. He can't just pick numbers out of the air without seeing something from a realtor or an appraiser. Ross understands the point of condition #10, he sees so much regulation and so many things that have to be followed, from an industry point of view, it's a very heavily regulated industry and he thinks we are fortunate in this area with Fairmont and Muskie and County Concrete, when we have concerns, this goes for our wineries and several others as well, when we have concerns as a committee, they have always been respected and addressed and he doesn't want to go down the road of over-regulating ahead of necessity. He doesn't want to be so heavy handed that businesses can't function and do their job. If there is a problem, he knows and feels confident this committee would handle it. Mr. Himes stated Brad did an excellent job of covering the scope of the project. Prior to any construction they will acquire all the proper permits and follow all the regulations as it says in the conditions. They are in the process of developing the mine in Diamond Bluff and a wash plant on that location which we will be talking about in two weeks. Purpose of this project is to expand the Hager Plant to receive the wash sand from both the Bay City Mine and the Diamond Bluff Mine. The DOT's recommendations are to make some modifications to the intersection and they support that. The benefits of this project are it puts WISC & Fairmont in a good position to take advantage of a growing market and looking down the road for growth and it puts them in a real good position to supply that market. The gas market is still growing. The benefits to the community; creating jobs, construction jobs, something on the order of 25 additional employees associated with the expansion in the new mine. He noted that since Fairmont has come into the region, they have created 125 jobs. They are glad to be a part of the community. They are very proud of the donations they make in the community and volunteer time. Touching on the email comments; in terms of their impact, they are working in an industrial area and they will do everything to reduce noise in their operation. Their lighting plan will call for lights that are motion sensitive. They won't stay on indefinitely. They will be lighting specific areas that need to be lit. The hillside will be re-vegetated and replanting trees to make that more appealing. It's not going to remain in its current state. They are heavily regulated on dust and have to control it in their environment in the plant. They can't be creating a problem with that.

Sanden moved to approve the conditional use permit for Expansion of Heavy Industrial Use for Wisconsin Specialty Sands Inc and Wisconsin Industrial Sand Company with conditions #1 - #10, due to the fact this is not found to be contrary nor detrimental or injurious to public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a nonmetallic operation for CMC – Spring Valley LLC, owners on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Jim Small and Pete Krautkramer forward:

Staff Report – Brad Roy: There hasn't been any change since last year other than now there are 38 unreclaimed acres and last year there were 35. They have grown a little bit. Fugitive Dust Plan was developed and approved by the Town in 2012. He hasn't received any complaints. The only issue is to condition #4, Stormwater measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department within one month. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days. County Materials has submitted information to Land Conservation Department last week. Land Conservation staff reviewed the information and indicated that they believe the site is internally drained, however an inspection of the site can't confirm that do to the snow and in the future an inspection will be needed to verify the drainage. He talked to the Town about the renewal and Mike Jacobson basically stated things are going well. Mr. Jacobson stated he talked to Gary and Richard and they haven't had any problems. He also talked to Evelyn and she said things are going well at this time.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, public safety, the public interest and character of the area and renew this CUP for a nonmetallic mining operation with the conditions #1 - #28 with the only change being to condition #4, "Stormwater measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department within 6 weeks. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days. Failure will result in this issue being placed on the next available LMC agenda for potential suspension of the CUP". Chairperson Fetzer asked if condition #4 is all taken care of. Roy stated it's in the process. Chairperson Fetzer asked when this was last renewed. Roy stated it would have been renewed in the spring but condition #4 the timeline was established in November of last year. Chairperson Fetzer asked why it wasn't done back then. Mr. Small stated he looked back and it was originally put on in 2007. That is where his confusion came in. It was brought up in the November meeting. To read that #4 from 2007, it says within one month so that was his fault for not knowing about the one month. When Brad brought it to his attention he immediately called Land Conservation. The DNR has been out there when they were first building it and they are changing it every year. He sends an inch to a 150 foot map to Brad at the end of every year for the license renewal to show that's what is taking place. The contours are changing every year. Soon as the snow melts this spring, they will have somebody from Land Conservation walk it and check it out. Aubart asked about clarification on condition #4, should we have something more. It says within 6 weeks of what, renewal, what if we get another snowstorm. Does the 6 weeks really make any difference since the Conservation Department has been notified and they get out there as soon as practical. Pichotta stated that would be fine, you could say 6 months or as soon as practical and we could revisit it the next time we see these folks. Aubart stated he would just say "as soon as practical" instead of saying a hard date for whatever reason, something comes up or the Conservation Department can't do it and now we're going to call them back. Ross asked if that is acceptable wording. Pichotta stated if that is what the committee wishes, we are comfortable with that. Pete Krautkramer asked if the committee could make the renewal every two years. Chairperson Fetzer asked what we are on right now and Roy stated we are on a status report in the fall and renewal in the spring. Pichotta suggested the Town be asked for input. Mr. Jacobson stated based on what they have done, he feels that is reasonable, so long as there is no correspondence, that would dictate otherwise, if they are running into some issues. Chairperson Fetzer stated we'll plan on that unless something comes up. Pichotta stated condition #18 stated renewal is in one year, we could amend that to two. Condition #25 states Applicant shall provide a status report to the LMC in the fall or at the request of the Town of Spring Lake. We could just strike "in the fall or" and just say "Applicant shall provide a status report to the LMC at the request of the Town of Spring Lake. Committee agreed with that.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for CMC – Spring Valley LLC (County Materials) with conditions #1 - #28, amending condition #4 to read "as soon as practical" in place of within 6 weeks, and condition #18 to read "renewal in two years unless issues and/or complaints arise." and condition #25, to read "Applicant shall provide a status report to the LMC at the request of the Town of Spring Lake"/Ross seconded. Roy stated on

condition #18, he doesn't think we want to put if complaints are received, we can receive complaints at any time for anything, if there is compliance issues. Ross stated we would do that anyway if there were compliance issues. Roy stated we could bring them back in if there are compliance issues. **Sanden amended condition #18 to read "This CUP shall be reviewed for renewal in two years/Ross stated his second stands. All in favor. Passed.**

Discuss take action on a status report for a Utility Facility >1000 square feet in the Industrial District by William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited William F. Holst III forward:

Staff Report – Brad Roy: Last year the applicant received a CUP for a load out facility in the Town of Trenton. The proposed facility may potentially be used for structures to load materials such as sand, gravel, corn and oil. A rail spur is intended to be constructed and connect with the BNSF railroad. No finalized plans have been presented to staff. The CUP was issued for a conceptual plan and allows for nonstructural use of the rail spur and the adjacent 150'. Any future construction or structural uses will require additional approvals. Condition #3 required a status report in one year to provide an update on the status of the project. The site currently has a 130 acre sand and gravel mining operation as well as a small Ready-Mix Plant. Pierce County Finance and Personnel Committee recently approved a bid for the applicant to purchase adjoining property from the Pierce County Highway Department. The applicant has indicated that the newly acquired land will be part of the overall load out facility. The applicant has not submitted a new nonmetallic mining reclamation plan detailing a change in future use of the site. The existing conditions #1 - #5 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider information provided by the applicant to determine whether any additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and the character of the area. It may be that no formal committee action is necessary. Chairperson Fetzer invited Mr. Holst forward: Mr. Holst stated it's been a long process with the County and they are looking at closing by the end of the month. He has had to go back and get approval from the Highway Committee for an easement to enter the property and that had to get surveyed. They have been working for a couple months on a Road Maintenance Plan because they could drive a short distance on an existing road that comes into the Highway Department. He just received that draft this morning. It's been a slow process but it looks like everything is in place to close by the end of the month. Then he has to determine a route of where the rail will go, so he can't do anything until he has the other land. Pichotta asked if he has had discussions with BNSF. Mr. Holst stated if he closed this land deal, he has dealt with the utility company to get an easement across their property on the east side. He had an agreement in place to lease another mile of frontage from the railroad but that agreement was with Muskie Proppant. Now that they aren't operating there, he has to get another agreement with the railroad. It's not going to be a quick process, they had it worked out with them what they needed for switches but with WISC expanding their facility, he doesn't know if they will even give him a switch now. He's not trying to stall but nothing goes fast with the railroad. Pichotta stated we knew when this was first proposed it's a concept that would be multi-years before anything happened. Mr. Holst stated that if he can get an approval that he will get the siding then he wants to start filling and grading and compacting. He will hire an engineering firm to check his compaction to make sure that everything he puts in doesn't have to go back. He will get it all inspected and lifts just like any other commercial project. This may never happen. He is doing whatever he can and going ahead and buying the property. He thinks at some point it will. Sanden stated that in one year we will renew the CUP so we don't need another status report before that. Pichotta stated no, we don't need another status report. What the code says that in one year, action needs to have taken place to establish the use. Based on what Mr. Holst has told us thus far, action has already commenced. Chairperson Fetzer stated we don't need a motion or anything then. Pichotta stated we anticipated that no committee action would be necessary.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a CUP for Heavy Industrial Use in the Town of Diamond Bluff for WISC proposing to do a wash plant on that site

Public hearing at the same site for a CUP for Filling and Grading in the Shoreland Area and Floodplain District

Public hearing for a CUP for a Farm & Home Based Business in the Town of Salem for a wood working business

Public hearing for a Map Amendment in the Town of El Paso from Primary Agriculture to General Rural District

Status report and Site Plan Review for Heavy Industrial Use, new structures for Muskie Proppant in the Town of Union

Draft POWTS Electrical Form to reflect some changes in the DSPS Code relating to sanitary permits

Motion to adjourn at 6:50pm by Sanden/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 2, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 16 th , May 7 th & 21 st , 2014.	Chair
3	Approve minutes of the March 19, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of Heavy Industrial Use in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Specialty Sands Inc and Wisconsin Industrial Sand Company, owners, on property located in the NW ¼ of the SW ¼ of Section 1; and the NE ¼ of the SE ¼ of Section 2, all in T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on renewal of a conditional use permit for a Nonmetallic Mining Operation for CMC-Spring Valley LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.	Roy
6	Discuss take action on a status report for a Utility Facility >1000 square feet in the Industrial District by William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

ZONING OFFICE 715-273-6747

PLANNING OFFICE 715-273-6746

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, March 19, 2014

Present: Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Joe Fetzer and Jon Aubart

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 2nd & 16th, May 7th & 21st, all in 2014.

Approve Minutes: **Ross moved to approve the March 5, 2014 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a map amendment (rezone) from Primary Agriculture District to General Rural Flexible District for Sandra Falde, owner, by Brandon and Michelle Yeager, agent, on property located in the SE ¼ of the SW ¼ of Section 15, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Holst invited Ms. Falde and Ms. Yeager forward. Ms Yeager explained that her mom owns 18.1 acres and they would like to buy a small portion to build a family home on. She plans on keeping the rest as it is. They use it for camping and recreational, driving their ATVs on it. The purpose for splitting it, is so that it is her own families land if anything becomes of it or if it falls into the banks hands, the rest of the family property is preserved.

Staff Report – Brad Roy: The applicant is requesting to rezone an 18.15 acre parcel in the town of Martell. The rezone is needed to increase the density so that the property can be split for the applicant's daughter. The daughter intends to buy a small parcel from her mother and build a home for her family. The larger remaining parcel will remain unchanged and will continue to be owned by the applicant. The parcel is currently vacant. There are no agricultural or residential uses occurring at this time. The applicant does not anticipate utilizing the parcel for agricultural use in the near future. Road access will be off of County Road J. The proposed use will be to create a small residential lot along the west property line for the applicant's daughter. The remaining parcel will continue to be undeveloped and unused. Adjacent land uses are agriculture, low-density residential and undeveloped. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Town of Martell indicated that many factors were considered in recommending approval of this request. Issues taking into consideration were:

- The property is not currently in agricultural use and there is no indication from the landowner that agricultural use will be established in the future. The small development will not adversely affect the rural environment.

- The planned development on the land will create a new small lot near an existing undeveloped small lot, which would create a cluster like development which will retain natural open space and agricultural capabilities and provide a buffer to existing agriculture.
- The new development will not create a need for a new town road.

The Town of Martell recommended approval of this request on February 2, 2014, stating that the request is consistent with the Town's Comprehensive Plan –specific Goals, Objectives and Policy are cited from the Land Use section as well as for the Housing section. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts:

General Rural Flexible is established to achieve the same objectives as the General Rural (GR) District but to allow a greater density of residential development with the approval of the town board.

General Rural is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and/or are compatible with surrounding rural land.

The Value of Land for Agriculture is shown in the chart in the staff report.

Staff Recommendation: Given that the Martell Town Board has determined this proposed rezone of 18.15 acres from Primary Agriculture to General Rural Flexible to be consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked if the 18.15 acres is too small under the Primary Agriculture to accommodate a house. Roy stated they currently have one density point, it's two per 40 acres so the 18 acres would give them one density point. They wanted to retain that but allow for the split to a family member so this rezone would give them 4 density points per 40 so with the rezone on the 18.15 there would be two density points.

Sanden asked if 18.15 acres is big enough to avoid a spot zone. Pichotta stated a rezone that is consistent with a comprehensive plan would not be considered an illegal spot zone. A spot zone would be where someone is afforded the ability to do something that someone similarly situated wouldn't be able to do or in a manner not consistent with a comprehensive plan.

Sanden moved to approve the map amendment (rezone) from Primary Agriculture District to General Rural Flexible District for Sandra Falde and forward a recommendation to the County Board of Supervisors/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for expansion of a nonconforming structure in the Agriculture Residential District for John and Monica Robey, owners on property located in the NE ¼ of the SW ¼ of Section 15, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Holst invited Mr. Robey forward: Mr. Robey explained that they received the conditional use permit and simply ran out of money, they did not get the project done in twelve months and are hoping to get the permit renewed. Sanden asked if anything has substantially changed. Mr. Robey stated no.

Staff Report – Jim Kleinhans: Mr. Robey purchased the property about ten years ago. He applied for some permits; we couldn't approve the additions onto the nonconforming buildings. Both the home and barn are nonconforming. So in 2012 he obtained a conditional use permit. He came in and talked to Jim several weeks ago about renewing the permit because there was not a provision in the conditions to allow that permit to be renewed administratively. It's basically the same thing he asked for in 2012. He just wants to continue on with it. **Staff Recommendation:** Staff recommends the Land Management Committee permit it with the same conditions originally and give him twelve more months. Chairperson Holst stated we could add a condition: if you fail to get it done, we could do it administratively. Pichotta stated you could give staff the ability to renew it administratively or you could extend the timeframe. Conditional use permits are good for a year, two years or more, depending on the conditions that the committee sets. Mr. Robey stated he doesn't see a problem with the twelve months that was set the first

time. Mr. Robey stated he appreciates the committee being willing to extend the timeframe but would like it to stay the way it is.

Ross moved to approve the renewal of the conditional use permit for expansion of a nonconforming structure for 12 months for John and Monica Robey with the same conditions #1 - #3/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for WISC conditional use permit for Heavy Industrial Use in the Town of Trenton

County Materials renewal of a conditional use permit in the Town of Spring Lake

One year status report for William Holst on a Utility Facility/Loadout Facility in the Town of Trenton

Motion to adjourn at 6:12pm by Sanden/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 5, 2014

Present: Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Jon Aubart

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 19th, April 2nd & 16th, all in 2014.

Approve Minutes: **Sanden moved to approve the February 19, 2014 LMC minutes/Holst seconded.**

All in favor. Passed with Fetzer not voting due to absence at the last meeting.

Discuss take action on a request for Food and Wine Plan review for Bellevine Winery by Shannon and Angel Zimmerman on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Mr. Zimmerman forward: Mr. Zimmerman stated this request relates to the condition that food remain subordinate to wine sales. There is speculation that they are building a winery and implementing a vineyard as a facade to what is really a full scale restaurant. The information reflected in the staff report is an accurate description of a variety of different things. The ultimate tell all is sales. There are other things that can influence and provide some sense of direction in terms of where the business is going. In the staff report we shared information relating to expenses and investments and of course, people invest in certain things where they want the highest probability of return. Some other very important pieces of information relate to the number of days and weeks of operation; the wine related area of this endeavor will be open 32 weeks and potentially up to 7 days whereas the facility that can even serve any form of food will be open 22 weeks and no more than 4 days a week. There was an arbitrary sample that reflected some of the commentary that occurred during the August meeting relating to the potential menu.

Staff Report – Brad Roy: We did receive a number of letters from the public that are included in your packets. The applicant received a conditional use permit (CUP) for a winery with limited food service in August, 2013. Concerns were raised at the CUP hearing about the intention of the applicant and whether the primary focus of the business would be food rather than wine. The applicants have maintained that providing limited food service will create a better customer experience and will assist in building their wine brand. Construction of the facilities is proposed to begin in spring 2014 and the applicant plans to be open to the public by July 2014. The LMC approved the winery request with a condition stating that the applicant shall provide a plan for food service operations which demonstrates that food operations are incidental/subordinate to winery operations. This agenda item is intended to satisfy that requirement. The applicants have gathered information, public and private, regarding similar wineries with food options to determine pricing and to estimate demand and revenues. They have also reviewed their expenditures to date as well as the structure areas devoted to the wine and food portions of the business. At this point, some of the information is speculative but the applicant believes that it will confirm that the focus of the

business is the production and sales of wine. The applicants have identified six revenue streams for the business:

- Onsite wine sales in the tasting room
- Onsite wine sales in the lounge
- Off-sale wine sales
- Distribution wine sales
- Wine related gifts or goods
- Food sales of pizza and appetizers

The tasting room will be 32 weeks each year and up to seven days a week. The tasting room will sell samples of wine, bottled wine, wine by the glass and gifts. The lounge is a seating area for guests while having food service and/or wine. Food service will be available for 22 weeks with service limited to Thursday through Sunday. Food service will be limited to brick-oven pizzas and appetizers. Pizza will only be served in the lounge while appetizers will be available in the tasting room and lounge. Sample food menu has been provided. The applicants are anticipating eight wine varieties for the upcoming year, four red and four white. It is expected that by 2015 they will have 12 varieties available due to increased juice production. The main structure includes a 1,640 square foot tasting room, a 420 square foot wine production area, a 1,400 square foot lounge and 940 square foot kitchen. The site also includes 4,320 square foot production shed, approximately 4 acres planted with 1,600+ vines, and an outdoor plaza for customers. The expenses, to date, show that 78% of costs have gone to the wine portion of the business and 22% to the food. Industry research, public and private, has provided sales information for food and wine. An average wine tasting room visitor will purchase a wine flight and a minimum of one glass of wine. One in two will purchase a bottle of wine to take with them. (Public) Businesses which offer both food and wine find that the average guest has two glasses of wine and off sale estimates remain that one in two will purchase a bottle to take with them. (Private) The expected revenue of the operation for this upcoming year will be approximately 70% from the wine and 30% from food. The cost of two glasses of wine will be relatively equal to one pizza.

Staff Recommendation: Staff recommends the Land Management Committee review the information provided in this report, and by the applicant, to determine whether the business plan adequately demonstrates that food service will be subordinate to wine production and sales.

Holst asked about the 22% of costs that have gone into the food, what type of costs are you talking about?

Mr. Zimmerman stated to date there have been some investments in architectural design for anything that was even remotely related to food. That would be a very liberal number because so much of the expense has gone into the wine, wine production, wine equipment, wine juice, so wine is the dominant component.

At this point we don't have a physical structure, it's been more in the design factor working with

Architect Matt Frisbee and he also has been working with the restaurant/kitchen type people who will help lay that out for us. Holst asked if as you build will the percentage remain about that same amount?

Mr. Zimmerman stated wine is their dominating element. He would be speculating exactly but he would expect the ratio to be somewhat similar based on the level of investment. Sanden asked about the square

footage of the tasting room and the lounge, is food served in both of those areas? Mr. Zimmerman stated appetizers can technically be served in the wine tasting area; food can only be served in the lounge. The lounge can also be used to sit and enjoy a bottle of wine that has been purchased. It's not exclusively to be

considered solely for food. Sanden asked, wine can be served in both the lounge and tasting room. Mr.

Zimmerman stated yes. Sanden asked staff what kind of verification do we have on these revenue

numbers. Is it self-reporting or is it something we can verify? Roy stated he was able to verify the sources that were provided but some of the information came from talking to other wineries. We don't have the

ability to verify that. Sanden asked Mr. Zimmerman if he has plans at this time to go beyond the gourmet pizza and appetizers as shown in the staff report. Mr. Zimmerman stated no, through consultation with

Department of Land Management, we've probably been liberal on everything we've asked for so there

will be nothing beyond what you see, in any capacity. Chairperson Fetzer stated he will allow a little open discussion, even though we don't have to allow it, but he likes to hear others opinions on things. All he is

looking for is discussion on the incidental and subordinate issue. Abbie Testaberg, owner of the Dish and Spoon Cafe in River Falls, is very appreciative of the Zimmerman's business and their employees and what it has done for her business and the Town of River Falls. Her concerns are the 940 square foot kitchen usually lends itself to the desire and ability to serve more people than what currently looks like. Most experts say that your kitchen should be about 15 – 25% of your square footage. When she breaks down the numbers that could range from 3700 to 6200 square footage for seating and eating based on what is being designed in the kitchen. She is concerned with long term plans and how those numbers match. When you look at food being allowed in the tasting room, in the lounge and perhaps in the outdoor plaza, with 64 spot parking, she thinks it is looking like it potentially can serve anywhere from 100 to 175 people in one setting. That is one turn of a normal eating time. If the guidelines aren't clear and deliberate there is a lot of room for growth. She explained her theory of the expense of a table of four patron's purchases of wine versus food. She feels it gives a lot of opportunity to add to what is being served; soup, salad, dessert, pasta, etc and that starts to look like a dinner to her. Her concern with it being a dinner is, a business three miles out of town with the ability to get there without coming through downtown River Falls doesn't do a lot from an economic standpoint for Main Street River Falls. Chairperson Fetzer stated that Ms. Testaberg's line of input is not what we are looking for. Ms. Testaberg stated from a business standpoint, if a business like this was going in on Main Street, it would actually potentially help her business and draw traffic. Chairperson Fetzer stated that is not really relevant to the incidental and subordinate issue. Ms Testaberg stated the numbers she did, did not include the off-sale. She provided her guestimate of sales figures for additional wine sales and if you take the 70 – 30% on that, that can be allocated to food sales. If the definition of subordinate food sales is based on a percentage of the wine sales it is allowing for some level of full-service restaurant. She thinks if the committee truly wants to make sure it is a vineyard with wine tasting and appetizers, then those numbers need to be more clearly drawn out and the regulation needs to be defined on something different. A couple different options would be a dollar amount on food per head or another area that could be used is on the restaurant licensure that is allowed. There are low, medium and high tiered licensures with those you can provide and make certain types of food. The lower the licensure, the less you are able to develop a full menu. She appreciates the menu and what is going to be served but in many years of restaurant business, you are constantly changing the menus and she is not sure how this committee would regulate that. Ross stated the square footage of kitchens can come into play a number of ways, one if you are dealing with pizza ovens, they are larger and need more space and it depends on how they wish to create their assembly line or create their space for employees to work in, what kind of storage, how much inventory do they want to hold, freezer space takes up more space than others. He is not too concerned about the overall square footage of the kitchen. He understands the capacity of what it could create but a lot of it could do with a particular restaurateur's desire for flow within that kitchen operating procedures. It is also important to point out that 32 weeks will be based more on wine and 22 weeks will be for food four days a week. That is a determination of subordination as well. We do typically, in this type of scenario, bring back everybody every year and most of us will do site visits as well. He doesn't know if he can believe that the square footage of the kitchen will be indicative of the amount of volume they are going to do. Ms. Testaberg, the 22 week scenario doesn't change to her what kind of food can be produced. The 70 – 30% no matter what numbers you manipulate still implies that during those 22 weeks, potentially \$50 for a table of four could be sold in food and \$50 for a table of four is a dinner not an appetizer. Sanden stated that is why he asked about the food menu and if that was anticipated to change and he stated quite clearly that was not going to change. We will come back and look at that every time and he can't see a table of four ordering \$50 of pizza or \$50 in hors d'oeuvres. If anything that makes his case that it is going to be subordinate and if he does go beyond this then we can re-look at this whole issue of subordinate use. John Holck, one of the neighbors of the facility, they have heard some of the architectural costs and weighed against the cost of the grapes and wine production it is clearly weighted toward wine production. He is curious when the facility is built out with bricks and mortar, how much more has to be built to have a restaurant and a kitchen than would be necessary to just have a winery and a tasting room like we're more familiar with our County to the north, St. Croix County. It seems a wine production facility, a tasting

room with even light incidental foods is one thing and has a cost that can be calculated by the architect but now when we put in a lounge, a restaurant, another bar and a conference room on the second floor. That seems to him it should come down on the side of the food equation in terms of being subordinate. Mr. Zimmerman stated if you have visited those other wineries you have noticed that they can be quite full and he wants to elaborate on what the lounge is intended to be. It seems to be synonymous with a full restaurant or food and that's speculation. It is also where people can enjoy a full wine experience. Recently attending the Cold Climate Conference hosted at the Crown Plaza in St. Paul where a vast number of Minnesota and Wisconsin wineries all represented their businesses, they all do seem to concur that people do enjoy going onsite to a vineyard and winery to enjoy the wine and not necessarily being packed up at a wine tasting only. They can sit down, relax and socialize. The square footage of a lounge is not solely to be construed to an association of food. Yes, that is where some people can have food but it is also where people can sit down with friends and or family and enjoy a bottle of wine. Mr. Holck stated in recent emails he has seen where even Mr. Zimmerman refers to it as a restaurant. Holst stated it is his opinion that this is a work in progress. You can't take every negative scenario that perhaps may come up and regulate for that. The fact that he is going to come back here every year; he has been a really good player and has addressed a lot of the neighbor's concerns. It shows tonight with the crowd, it has become smaller and less hostile. Your concerns are valid and he appreciates the concerns because Mr. Zimmerman is in your backyard. Mr. Holst takes things at face value, Mr. Zimmerman is a member of the community as are you people. So far, to him, Mr. Zimmerman has demonstrated that he does what he says he is going to. Until he does different, he can't put him on the stake and burn him quite yet. But if he does do different, Mr. Holst stated that he is quite capable of giving him something he is not going to enjoy. This committee has reined in uses when necessary. In his mind, we will go forward with this, address concerns as they come up, hopefully there won't be any and if there are some, we'll cross that bridge when we get there. If an issue is severe enough it won't take a year for the committee to find out and we'll act on it sooner rather than later. Marcia Borgstadt asked how will financial subordination be monitored. Pichotta stated he thinks the impetus will be on the applicant when he comes in. Typically for a use like this they have been on a short leash - sometimes it's been 3 months or 6 months. As we move forward it will be incumbent for the applicant to submit materials that satisfy the committee that in fact food service is subordinate. What is a little difficult now is that it is all conceptual at this point. If we accept what is in here as his intentions and moving forward he will have to demonstrate to the committee that it's subordinate. Certainly there is a financial component, but anything that is submitted to us is subject to open record and so certainly we will be interested in some figures that demonstrate that however, he is not sure what we will expect to see as far as financials - but we are going to require something in order to demonstrate that. Ms. Borgstadt, will the financial subordination be based on sales or expenditures? Pichotta stated his opinion is that it will be sales. Carol Schoenthaler, asked if the wine portion of it has to be produced on his property. Pichotta stated there needs to be grapes produced on site, there is nothing specific that says it has to be a certain percentage. Ms Schoenthaler stated she understands that but he has a facility to convert the wine. Does all of his wine that he is selling have to come that facility? Mr. Zimmerman stated in accordance with the TTB and the State definition, they will produce wine derived from grapes from their location, in these early years that will be a smaller percentage because they are maturing. So over time that will get steadily larger and larger, but they will also procure grape juice. As reported by the Wisconsin Wine Growers Association and in Minnesota, over 50% of all wineries in both states purchase either finished wine for blending and/or grapes, grape juices from other farms and agricultural areas. They will follow that same practice as well. Yes, there will be wine produced from grapes right here in Pierce County but it will also be blended with finished wine and grape juices as consistent with nearly all other wineries. Ms Schoenthaler stated what you are saying is that every bottle that you sell at your wine tasting facility will come from your facility down the street. Mr. Zimmerman stated he will elaborate; say he purchased 1,000 gallons of finished merlot from California to blend with the northern grape, that wine will be bottled on site. Mr. Holck asked if all the wine for sale on site will be bottled on site. Mr. Zimmerman stated yes, we will not be shipping filled bottles in. Ross stated he wants to reiterate that it's very imperative that people understand the committee takes what Mr. Zimmerman

states very seriously. Also what you folks say, we take very seriously and there have been a variety of different CUP's that have been issued where the individuals or company had not followed the CUP and in one case we brought them back every 90 days until we were satisfied they were following the conditions placed. We take that very seriously, we do follow it, all of us do. It is not carte blanche. Once we issue a CUP we don't just assume. Certain factors come into play like Mr. Holst mentioned. If we find that they are not complying, we will pull the CUP and we have done that at times as well. We take the matter very seriously and the concerns very seriously. We do believe that they have an opportunity to prove themselves and that's at the stage that we're at right now. Sanden stated Mr. Zimmerman has the most to lose by not complying. He has invested a lot of money into this venture. It would not be a good business practice for him not to comply and satisfy you folks as well as the committee. He agrees with his colleagues and will let him prove himself. Ms Schoenthaler stated they certainly agreed and appreciate but what is frustrating to her is there is no consistency with the wineries in Pierce County. If you look at the wineries in St. Croix County the majority of those are closed at 6:00pm in the evening. They don't go until 9:00pm at night. This one is now allowed to be open to 9:00pm with lights out at 10:00pm. That takes up the majority of their neighborhood evenings. Then you look at the Oak Grove facility, he is only open until 6:00pm. If I were Rudy, I would be pissed because I couldn't stay open longer. Holst stated we are not talking about Rudy here we are talking about Mr. Zimmerman. Ms Schoenthaler stated she would just like to see more consistency with the winery so that another resident in Pierce County who has a neighbor that wants to open a winery, they know what to expect from it. Pichotta noted that Rudy's facility was actually permitted as a Farm and Home Based Business before the Winery category was created. Rudy's hours of operation are also what he asked for. Chairperson Fetzer stated that we have to work with neighbors and business people to come up with solutions if there are major concerns on things, we have to deal with them.

Ross moved to approve the Food and Wine Plan as presented for Bellevinez Winery, demonstrating that food sales will be subordinate to wine sales/Sanden seconded. All in favor. Passed.

Discuss take action on renewal of a conditional use permit for Riviera Airport located on property in the SE ¼ of the NW ¼ of Section 12, T27N, R20W, Town of Clifton, Pierce County, WI.

Staff Report – Jim Kleinhans: As you can see in the report, Riviera obtained a conditional use permit back in 1998. They have operated under nine conditions. Back in about 2010 we started seeing some inconsistency with the flight reporting that was required under condition #2. Since then he has written a couple letters to some of the individuals that were reporting the flights and sometimes we get better compliance and sometimes they lag again. At one time, he requested a flight log in order to renew the permit. Jim thought it was time to bring it back to this committee to review that condition to see if it is effective. He would like to state that there is time when there is no flight activity at this facility as well. So sometimes they did not record any flights for a month. There has been a compliance issue with condition #2 so he would just like to suggest that the Riviera Airport folks understand that there is a conditional use permit where all the conditions should be met and the committee should be aware of this. Chairperson Fetzer asked Jim how they are submitted. Kleinhans stated now Mr. Schmidt submits the reports monthly in an electronic format. He prints them off and then files them. Chairperson Fetzer stated just one gentleman takes care of all the flights in and out of there? There are numerous flights, not just one place? Kleinhans stated they have a form that they utilize to indicate the pilot, the direction of the flight, hours when they were flying, type of aircraft being used, if it's a guest, and each individual pilot submits that information to the reporter. Then the reporter compiles that information and presents it. As you can see from my report, there have been times when we have requested six months of previous flights. It's hard to know if we have compliance issues if something is going on that long. So the intent of the committee was to have monthly reports so we know that we are not exceeding the flight numbers, flight direction and to verify if we do receive a complaint whether there is a compliance issue. Holst asked if we have received any complaints. Kleinhans stated no. Chairperson Fetzer asked if there is someone from Riviera here. Matt Schmidt, the secretary of the Riviera Airpark Association, and he is here to say they fully understand and respect the importance of the terms of the conditional use permit. They have worked extremely hard

to honor and abide by all those terms. They keep the take-offs low and stay away from the park. He has been responsible for about a year or more for getting the monthly reports in and he is not going to belabor you with excuses. What Mr. Kleinhans is saying shouldn't have happened. It happened on his watch and he is embarrassed and ashamed to be here to tell you that he didn't get the reports in on time. They do take this very seriously. When Mr. Kleinhans prompted him on the 31st of December that they needed to get this caught up, he responded and got it caught up in two days. He has kept it in compliance for the past two months. He has kept it on track. They have put a process in place where he sends the reports to Mr. Kleinhans and gets a confirmation from him that it came through OK. Then he sends it to the President and Vice-President of the Park. They are watching him now. They are respectfully requesting a chance to show they can do it right. Chairperson Fetzer stated he would suggest to put something in here, he would like to assume everybody is going to take care of exactly what they say all the time, but we have been bit on that before. Maybe we put in the conditions with your monthly reporting, within 30 days so in June you have 30 days by the end of July for June's to get reported. Just go with that and if it's not being reported, Jim sees it and jumps on it. It gives you a timeframe. Thirty days should be plenty of time. If it's not, you tell us and let's set up a certain time. Mr. Schmidt stated that should be fine. Ross stated it sounds good. Holst stated that sounds like a viable solution to our problem. He can remember when the Riviera Airport was a major concern and it's been so long since we heard anything from you, he really appreciates it. LeRoy Peterson, Clifton Chairperson, stated he has no complaints about the airport. Sanden suggested that if they don't have any take-offs or landings then report that. So we have documentation of every month being covered. Mr. Glenna stated they haven't plowed the runway for three months. Mr. Schmidt stated they had one flight in January. Sanden asked if this is renewed administratively at this point. If there are compliance issues then we could bring it back. Kleinhans stated normally he writes a letter every two years but he has been asking for flight logs in order to renew the permit and maybe he should have brought it back sooner. We try to work with people to get things right. Ross stated it probably helps that there haven't been any complaints also. **Sanden moved to approve renewal for a conditional use permit for Riviera Airport with conditions #1 - #9, amending condition #2 to read, Airport operations are limited to 80 take-offs per month. Riviera Airport Inc. shall keep a log of all take-offs and landings, including date, time, plane pilot and direction. The log shall be submitted on a monthly basis within 30 days of the end of each month by Riviera to the Department of Land Management/Ross seconded. All in favor. Passed.**

Discuss take action on a request by the Town of Oak Grove for an extension to the 90 day timeframe that a town has to generate a recommendation for a conditional use permit application, per LMC policy (6.5.13).

Staff Report –Andy Pichotta: As you may recall, last year Land Management Committee adopted a policy relating to the timeframe associated with generating a town recommendation upon being requested to be placed on a given Town's agenda. Pursuant to the LMC Policy (6.5.13), the Town of Oak Grove is requesting an extension to the 90 day timeframe to generate a recommendation regarding Wisconsin Industrial Sand Company's (WISC) request for a conditional use permit for underground nonmetallic mining. WISC requested that the Town of Oak Grove place them on an agenda to secure a Town Recommendation on or before December 25, 2013 and said request was acknowledged by the Town Chair. Given the LMC's policy, the Town would have until March 25, 2014 to generate a recommendation before the applicant could potentially submit an application without a formal town recommendation. The Oak Grove Town Chair requested an extension on February 14, 2014 which is within 60 days of the applicants request to be placed on an agenda. The Town Recommendation Policy adopted by the LMC on June 15, 2013 is listed in the staff report.

Staff Recommendation: Staff recommends the LMC consider and act upon the Town of Oak Grove's request for an extended timeframe to generate a Town Recommendation.

There is some discussion on the back of the staff report. This is the request he received from Oak Grove's Chair, Sarah Palodichuk. She is in attendance if anyone has any questions of her. Chairperson Fetzer asked Ms Palodichuk if she has anything to add. Ms Palodichuk stated she thinks they are on the right

page as far as she has had communication with WISC and they do have a timeline that they have agreed to. She will let you know because it is a concern, and she stated Jerry Kosin is here and maybe he can speak to this as well, that the problem that they ran into was that the other two members of the Board did not know that there was an application submitted in April 2012. She found out from their clerk that he had never received a copy of the application. Her assumption was, because they had talked about it at a meeting that it was going to be on the February agenda, and they didn't put it there because they didn't have it. There was some major miscommunication that has been going on for eight months on their Board because they have been talking about the County application, the Town application and the Board was not aware that there are two separate applications that they have been discussing. They hired a new lawyer, had a Town workshop, they are all on the same page and in agreement that the communication will be done through the lawyer. Gary and she have both gone to Andy about various issues and that is still permissible but the official communication is going to be handled by their lawyer. She thinks Eric was happy to hear that we have a plan on how we are going to proceed. She knows that other people feel strongly about this application not being formally submitted to the Town back in 2012 but she thinks with the timeline that they have, it shouldn't come up as an issue speaking for herself, not the Board. Jeff Himes stated they have had a conversation and a path forward. They would disagree as they did submit an application in April 2012 both by hand and email to the Town Clerk. They have emails showing that. Andy has counseled him that they should have better documentation in the future. He thinks it is clear with all the conversations that have gone on, he stated to Sarah that he knew she had an application. Ms Palodichuk stated she did have a copy of it before she was on the Board. Mr. Himes stated the application was out, that is no longer an issue, now they are talking about the 90 day timeframe. Ms Palodichuk asked a question about it, she said they are available on March 13th and they will take public comment at the next Plan Commission meeting and then it will be on the agenda for the April 21st meeting. She cannot control the decision for the Plan Commission to move it forward to the Town Board and she cannot control the Town Board so they take a vote. She is going to make a good faith effort to make it happen. What happens if the Town Board or the Plan Commission says we need a little more time? How do we handle that, she wants to know what her responsibility is there. Chairperson Fetzter stated we have already gone through the 90 days and now allowing you the extra time, there should be plenty of time to have a decision on that. Ms Palodichuk stated she does not disagree at all; she just got the application in the mail today as did the other members. Pichotta stated you could add some time to the 21st to address that eventuality. Eric McLeod stated the Town is not limited in the number of meetings that it can hold between now and the 22nd, the day after the next Town Board meeting in April. The Planning Commission is meeting on the 13th of March. We have already confirmed we are on that agenda. We will be presenting on the 13th and he thinks that is a good start. The Plan Commission can schedule any number of special meetings if it feels it's necessary to gather additional information from us or anybody else. Chairperson Fetzter stated that is very true. Mr. McLeod stated so it does look like there is a path forward. To address Sarah's question about what happens if the Plan Commission doesn't act to move it on to the Town Board and if the Town Board doesn't take action within that period of time. Then the answer is the Town has failed to provide its recommendation to this committee and we have to move forward. That is the purpose of the 90 day rule. He thinks Sarah has outlined a very reasonable process. We've talked before and think we are on the same page and moving that forward with an extension to April 22nd. It's not worth this committee's time or our time to rehash the last two years and why it is that we are here now in front of this committee. We think that we have been very patient. We appreciate Sarah's reasonable approach to this extension through April 22nd. We have asked the committee to approve the extension through that date and we'll be at whatever meetings the Town thinks is necessary in order to gather the necessary information to make a decision. Ms Palodichuk stated she is fine with that, she just needs to let the people that are making the decisions know that this is what we are bound to. Chairperson Fetzter stated he believes we have something on our records here, the reason we put in this 90 day waiting period and you have to apply for an extension is because we didn't want people dragging this on just to hold off the process. Ms Palodichuk stated she was here the night the committee discussed it. Pichotta stated that what he was going to suggest beyond the 21st, was that, given that fact that another

town meeting could be held with 24 hour's notice, if it were needed, another day or two would give them ample time but the reality is if the Planning Commission can't generate a recommendation, they need to be aware that their failing to do so ultimately may result in a recommendation not being submitted and this committee having to interpret the towns comp plan versus the town. Holst pointed out that a Planning Commission is an advisory council. The burden lies with the Town Board. Ms Palodichuk asked if it is possible if the Board wants to discuss it so we could have a meeting before that second Planning Commission meeting for the Board to discuss it. So we could get some counsel. If we have questions on the 21st, we have no opportunity. Holst stated you control your agenda, you control your timeframe. As the Chair, you are the person with the authority to do that. You can do that. Ms Palodichuk stated she appreciates that, thank you. Ross stated he would be comfortable with, he believes April 21st is your full Board meeting, giving a couple days after that. He concurs also that the process is meant to help these things move forward. There should be some ownership on the part of your Board in understanding why those 90 day timeframes are in place. Ms Palodichuk stated that after their meeting last month, she now believes they are all on the same page. **Ross moved to extend the 90 day timeframe to generate a Town Recommendation for the Town of Oak Grove to April 23, 2014, two days following the planned Oak Grove Town Board meeting/Holst recused himself from voting due to possible conflict of interest/Sanden seconded. All in favor. Passed with Holst not voting.**

Discuss take action on Travel/Training Requests. Pichotta stated there are two travel/training requests both for Emily Lund; WCZA quarterly meeting March 13th in Chippewa Falls, there will be no overnight. The second request for Emily to attend the WCCA Spring Conference in Wausau, regarding Wetland Preserve Program, Zoning Case Law, POWTS Training, Lake Studies, NR115 and other DNR updates. This would be an overnight stay. **Ross moved to approve the Travel/Training requests for Emily Lund/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for a rezone request from Primary Agriculture to General Rural Flexible in the Town of Martell

Potential renewal of a conditional use permit for expansion of a nonconforming structure in Rock Elm Township, a gentleman was in and requested the ability to expand a number of nonconforming structures and he expanded a couple of them but didn't have the financial resources to do all of it. What the code states is you have to make substantial progress within a year, which he certainly has done, so we are thinking we would bring that back in front of the committee given that it is a CUP to see if you are willing to extend it a bit further. Pichotta suggested that the fact that he has done a number of things in furtherance of the CUP, should qualify him for that and if you are comfortable, we'll bring that back here.

Motion to adjourn at 7:00pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 5, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 19 th , April 2 nd & 16 th , 2014.	Chair
3	Approve minutes of the February 19, 2014 Land Management Committee meeting.	Chair
4	Discuss take action on a request for Food and Wine Plan review for Bellevinez Winery by Shannon and Angel Zimmerman on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on renewal of a conditional use permit for Riviera Airport located on property in the SE ¼ of the NW ¼ of Section 12, T27N, R20W, Town of Clifton, Pierce County, WI.	Kleinhans
6	Discuss take action on a request by the Town of Oak Grove for an extension to the 90 day timeframe that a town has to generate a recommendation for a conditional use permit application, per LMC policy (6.5.13).	Pichotta
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(2/21/14)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse

414 W. Main Street P.O. BOX 647

Ellsworth, Wisconsin 54011

ZONING OFFICE 715-273-6747

PLANNING OFFICE 715-273-6746

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, February 19, 2014

Present: Jeff Holst, Jim Ross, Eric Sanden and Jerry Kosin

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Jon Aubart, Joe Fetzer

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 5th & 19th, April 2nd & 16th, all in 2014.

Approve Minutes: **Holst moved to approve the February 5, 2014 LMC minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request to modify the conditional use permit for Filling and Grading associated with the Hager City Plant Rail Expansion, by Wisconsin Industrial Sand Company, on parcels located in part of the NE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Ross invited Wisconsin Industrial Sand forward: Jeff Himes stated Jesse Graham from GZA and Eric Peterson is the project manager, they are here with him tonight.

Staff Report – Brad Roy: WISC received a CUP for Filling and Grading in the Shoreland area in August 2013. Filling and Grading is necessary to complete a rail expansion of its Mineral Processing Facility in the Town of Trenton. The original plan was to construct a retaining wall which was to extend through a utility easement and under existing power lines. The utility company objected to a retaining wall being constructed through the easement. The change is shown on Figure 8 of the attached documents. WISC has modified the plan to now grade the land within the easement and construct the retaining wall on the east edge of the property. This permit is required to ensure that the applicant is taking the necessary measures to protect the waterway. A tall crane will be needed to construct the retaining wall. The height of the crane could potentially be an issue due to the proximity to the Red Wing Airport. The applicant is encouraged to coordinate their activities with the airport. The southern portion of the project will require the cutting of an existing bluff which is comprised of primarily sand and gravel. The cut material will be used as engineered fill where needed. The majority will be permanently placed, graded and seeded on the property. GZA Geotechnical Engineers have designed and implemented a geotechnical exploration program, tested soil samples and completed soil slope stability modeling and calculations necessary to design the slope re-grading and provide recommendations for earth retention systems. The final retention system designs have not been selected at this time. The applicant is working with the WDNR to obtain a General Stormwater Permit for Construction Activities. Erosion Control Best Management Practices (BMPs) will be utilized on the site. Some of the filling and grading within the Shoreland Area takes place in the BNSF rail right-of-way and is exempt from municipal regulations. The original request was approved with conditions #1- #3 listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the modified plan and determine whether the proposed activity as amended, would be contrary to the public interest, detrimental or injurious to public health, public safety or the character of the surrounding area. If found

not to be contrary to the above, staff recommends the LMC modify this conditional use permit with the following conditions:

1. Activities shall be conducted consistent with the submitted plan.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.

Jeff Himes stated Brad covered the details of the project change thoroughly. The reason for the change is Xcel would not allow a retaining wall to be built inside their right-of-way for the power line so we had to move the wall to the east. Eric Peterson will address the crane issue. Mr. Peterson stated the contractor they have hired to do this has directly contacted the Red Wing Airport and discussed this issue with them. The agreement was that the crane will be under the height limits but we still will flag it and put a light on top of it and every night the crane will be dropped down on the ground. Mr. Himes stated the specific changes they are talking about in the project, refer to figure 8 in the staff report. Where the power line easement comes through, the retaining wall was going to start west of the easement and it is now east of the power line and the area between where the retaining wall was going to start and where it starts now will be a continuation of the grading that they have already started in the project and approved prior. The wall will start on a parcel that is owned by Bill Schroeder. He is providing an easement for that. The slope will be graded to a 3:1 incline, similar to the slope that is tied in. This is consistent with the work that GZA did on drainage and stability. Throughout the project they will use the erosion control procedure that they would have originally used: seeding, silt fences, anything that is required to control the erosion. The difference in this plan from the original plan is about 500 feet less retaining wall to be installed. Drainage on the site is essentially the same plan that they had except for this area that is now going to be sloped will be a sheet flow down to a swale that exists along the track. The swale will drain into a drainage structure that is right at the toe of the beginning of the retaining wall. It's marked as proposed catch basin at the end of the ditch in the staff report. The catch basin will have a height difference between the bottom and where the pipe outflows to provide some settling and will require some maintenance over time to keep the sand out of it. The pipe runs along the toe of the retaining wall; its 31.7 inches in diameter. The whole system is designed to handle the 100 year rain event. In Figure 9 of the staff report, there is a rock road marked on the map and a concrete pad, the pipe discharges, carries a flow along the road under the concrete and discharges in a riprap armored flowage structure that is installed. The water will leave that and enter a natural swale going into the pond area to the east. That swale handled the flow coming through this area originally. It's the natural drainage for this area. The only change in the drainage plan is the additional slope bank that will be created. The wall system, a sheet pile wall, there are seven 6" pipes along the length of the wall to handle water coming into the area where the sheet pile wall is installed. Those 6" pipes drain into the pipe that is draining the whole area under the construction area. All these changes were reviewed with Jim Devlin of the WDNR. He has given verbal approval to proceed. The paperwork is forthcoming. There is no change in this plan for the track design or the operating plan that was approved. All this addresses is the change in the retaining wall and the associated grading. Sanden asked when the construction is set to begin. Mr. Himes stated the construction is set to begin as soon as they have the committee approval. They have crews in place. Sanden asked how long they anticipate this taking? Mr. Peterson stated the project end date is the end of May. Mr. Himes stated that would be the whole track project. Part of the timing is to be able to put the sheet piling in while there is still frost in the ground. That soil is pretty loose in there and dealing with it when it's frozen is a little easier.

Jeff Holst recused himself from discussion and voting because of possible conflict of interest.

Sanden asked the committee, sounds like they have everything squared away with the Red Wing Airport, are you comfortable not including that as a condition? The crane is below the height limitation. **Sanden moved to approve the request for modification to the Conditional Use Permit for Filling and Grading in the Shoreland Area for the Hager City Plant Rail Expansion by Wisconsin Industrial Sand Company with conditions #1 - #3, due to the fact the proposed activity is not contrary to the**

public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Kosin seconded. All in favor. Passed with Holst not voting.

Discuss take action on proposed language relating to regulation and permitting of Wireless Communications Service Facilities (Chapter 240-41C).

Staff Report – Brad Roy: As we recently discussed the new law created in 2013 Act 20 (Act 20) states specifically that a political subdivision may regulate cell phone towers in a zoning ordinance, but places strict limits on how it may do so. The new law will require significant changes to §240-41C and modification of the Land Management Department Fee Schedule. Last meeting we went over all the limitations that the County has. They are listed in the staff report. The current code and what that has. At that meeting the LMC directed staff to develop code language for an over-the-counter land use permit for communication towers with the potential for third party review in cases where there would be a reduced setback. Those changes are attached to the staff report. Act 20 allows for municipalities to require permits for the construction of new towers, structural modifications to an existing tower and the placement of additional antennas on an existing tower. To be consistent with current regulations staff is proposing to require a permit for the construction of new towers and “Substantial Modifications” to existing towers. A permit for Substantial Modifications is necessary since setbacks would have to be verified. Since the county has not required permits for the placement of additional antennas on existing towers in the past staff did not include it at this time. The application and procedure for permitting is consistent with the requirements of Act 20. WSCFs will continue to be required to follow FAA regulations. The owner of a newly constructed tower will continue to be required to provide the county with a surety to cover the cost of abandonment should the facility fall into disuse. Setbacks have been modified to be consistent with the requirements of Act 20. All guy wires, supports and structures accessory to the tower will need to comply with all dimensional standards of the zoning district. The towers will also have to comply with the standards of the zoning district as well as §240-29D. Staff has developed a requirement for third party review in cases where the applicant presents engineering certification for reduced setbacks. (§240-41C.2(f)). The LMC recently approved an amendment to §240-29 of the zoning code regarding the height of commercial structures. The amendment will increase the setback for commercial structures by one foot for each foot that the structure is over 35 feet in height. The first reading of the amendment will be discussed at the County Board meeting this month. Fees for new towers currently are \$1,000 + \$2 per foot of height of the tower. Act 20 limits fees for a new towers and substantial modifications to \$3,000 and there can be no reoccurring fees. Staff removed all requirements regarding appearance and location.

Discussion: Staff is requesting direction from the LMC regarding the future permitting for Communication Towers.

- Should a permit be required for the placement of antennas on an existing tower?
- Is the current fee for new towers adequate?
- What should the fee for a Substantial Modification be?

Sanden asked what is involved of the management of these facilities from a staff perspective. Do you have to go out there every year, how much of your time is taken up by processing this paperwork? Roy stated that we get a detailed annual report each year which is reviewed. Pichotta noted that towers change hands frequently and often it takes substantial time to track new owners down to get the required reports. Holst suggested charging the maximum allowed given that we are essentially being paid up front for any time spent later Roy stated there is information on the back page regarding the substantial modification definition, right out of Act 20. Holst suggested that the fee for substantial modifications should be \$500 as allowed by Act 20. Kosin asked if there is a time when too many antennas could compromise a towers integrity. Pichotta noted that those types of issues are addressed in the annual status report. Pichotta also noted that a resolution to amend the fee structure to include these things would be moved forward along with any code amendment. Holst asked if you want a motion or direction. Pichotta stated either way the committee would like to handle it. Committee consensus was to move forward with language presented and fees as discussed.

Discuss take action on proposed amendments to Pierce County Code Chapter 240 pertaining to Exclusive Agriculture District and Cluster Development. Staff Report – Brad Roy: The Working Land Initiative required an update of the Farmland Preservation Plan which was recently adopted by the County Board of Supervisors. Modifications to the Zoning Code are now necessary to ensure consistency with the plan. Most notably, the Working Lands Initiative eliminated the Exclusive Agriculture Zoning District and replaced it with the Farmland Preservation Zoning District. At this time no towns under County Zoning have Exclusive Agriculture zoning and no towns have expressed an interest in adopting the new Farmland Preservation Zoning District. Therefore, staff is proposing to remove all references to Exclusive Agriculture from Chapter §240. If a town under County Zoning were to wish to adopt Farmland Preservation Zoning, revisions would need to be made to Chapter §240 at that time. Proposed text amendments related to the Exclusive Agriculture zoning district are detailed in Attachment 1 in the staff report. The Farmland Preservation Plan established goals, policies and objectives for the County to encourage and conserve farmland. A stated goal of the plan is to identify and preserve areas suitable for agriculture. One of the associated policies states: “Investigate whether modifications to existing Cluster Development zoning provisions can promote greater agricultural preservation.” The existing code for Cluster Development authorizes a developer to decrease lot sizes, which reduces the need for infrastructure, in exchange for creating usable open space. All of this helps to lower development costs. The stated goal of the open space is to:

1. Protection of all floodplains, wetlands and steep slopes.
2. Uninterrupted scenic views.
3. Creation of upland buffers around watercourses.
4. Preservation of existing woodlands, tree lines and existing pastures.
5. Avoidance of prime agricultural soils.
6. Protection of wildlife habitat.
7. Avoidance of construction on higher topographic features.
8. Provision of contiguous open space.

An incentive is offered by increasing the density of the development beyond the limits of the zoning district, listed in §240-23. The density bonus is intended as an incentive to a property owner in exchange for the above listed public benefits. The buildings must be contiguous and have a maximum size of 2.0 acres. The allowable zoning districts, density bonuses and cluster requirements are listed in the staff report. The open space shall be restricted from further subdivision through a permanent conservation easement held by the township, land trust or conservancy and recorded with the Register of Deeds. All open space must be legally and practicably accessible to the resident of the development and may be used for individual or community septic systems or for stormwater management ponds or basins. Applications of the Cluster Development code would create a group of smaller lots which would control the adjoining open space, largely to protect natural features. To date, there are no Cluster Developments in the county. It appears that the density bonuses have not provided enough incentive for any potential developer. Staff is proposing a shift in the focus of the Cluster Development code to agricultural preservation rather than just protecting open space and natural features. The premise of the proposed change is similar to that of the existing code. Landowners would be able to cluster the density of large parcels and receive additional density beyond the limits of the zoning district and the remaining land of the parcel would need to be placed in a conservation easement. But, instead of the subdivision controlling the open space (typically through a homeowners association) the developer could retain ownership and use of the preserved agricultural lands. Again the density bonus is intended as an incentive in exchange for the benefits of preserved farmland. This would allow landowners the ability to create smaller building sites while still maintaining the agricultural capability of the land. Key components of an Agricultural Preservation density bonus would be:

- Density bonus will require a permanent conservation easement filed with the Register of Deeds.
- Density bonus will be greater than those currently offered in the Cluster Development code. The amount of density bonus could be tied to the percentage of land designated for agricultural use.

- Allow for greater flexibility in the design of rural residential developments. (Additional work will need to be done with the Towns that have larger minimum lot sizes in their subdivision codes.)
- The focus of the new code will be the amount of agricultural land preserved, rather than the number of lots created.
- Preserved farmland could be retained/controlled by the developer.

Discussion: LMC direction on the following issues/questions in necessary for staff to develop any code amendments:

- Does the LMC have any concerns about the removal of Exclusive Agriculture from the Zoning Code?
- Is the LMC in favor of amending the Cluster Development regulations?
- If so,
 - » Does the LMC want to continue to offer a traditional Cluster Development option?
 - » Should staff continue to pursue an Agricultural Preservation density incentive option?

Staff Recommendation: Staff recommends the LMC consider the above information and provide general direction to staff. Sanden stated being that the Exclusive Ag is no longer being recognized and is being replaced by the Farmland Preservation Zoning District, if sometime in the future somebody did want to pursue that, we would have to come back and amend this code. His question is what is the inconvenience of keeping it on there even if it is like a floating zone. Is there any advantage to taking it off? Pichotta stated he doesn't think it makes life any easier. The reality is, it could be left in there it would just be not used because it would no longer be applicable because that zoning designation no longer exists at the State level. We could potentially avoid amending the code twice and just do it once if sometime in the future, a Town wanted to adopt Farmland Preservation Zoning. From the interest of a clean code, we would like to remove redundant or unnecessary language. To a large degree, that is what we've got here. If we do have to add it back into the code in the future, it's going to be substantially different and it's not just a matter of changing the names. The standards associated with Farmland Preservation Zoning are different than Exclusive Ag Zoning. His recommendation is to remove it simply because it's not necessary anymore and if we do need it in the future, we will put the new version in. Holst asked about River Falls Township since they aren't in our zoning, do they have Exclusive Ag Zoning? Pichotta stated they do have Exclusive Ag Zoning. They will have to amend their existing code to reflect that change at the State level to Farmland Preservation Zoning. Because the County lends its authority to the Town of River Falls to exercise regulation of uses, this committee will need to approve that and it will also need to go through the County Board. Sanden asked if the Town of Salem has gotten rid of all their Exclusive Ag Zoning? Pichotta stated they have. Holst stated he was around when they developed the Cluster Development regulations and at that time it looked like a really good deal but we couldn't draw anybody into it and the way everything has changed today, he doesn't know if you could twist a farmer's arm far enough to get him to sell a lot for housing much less develop his whole farm. Pichotta stated it wouldn't actually be to develop the whole farm. Holst stated it would be to develop a corner of the farm and with a corner of the farm comes votes. We are starting to see that in various parts of the County today. Once your 612er's and the 651er's outnumber the 715er's, things change and we're starting to see that. He would like to think that the rationale would develop with our electorate. The way we control our own destiny is to not let somebody else outnumber us. He has nothing against Cluster Development. He thinks it's wise but he doesn't think the market is favorable to it right now. In Oak Grove, you have a three acre minimum lot size, they move to Oak Grove to have large lots. They don't move there to have six houses in three acres. They move there so they can have a nice big lot, preferably a ten acre one with seven acres of weeds and three acres of lawn. Kosin stated there are lots of five acre lots. Sanden stated if he understands the Cluster Development language it's not meant to be a requirement, it's meant to be an option if some developer decides that's the way they want to go. As long as it's keep as an option, he doesn't see a problem with keeping it in the code. He also doesn't want to force anyone not to be able to do it if they so choose, ten or twenty years down the road, who knows. Holst stated it looked like you

could have private waste water treatment plants and things like that if you went to Clusters and that was part of our thought process. Instead of having ten individual septic systems to fail, you would have one waste water treatment to service all ten of the homes in the cluster. But everything came to a screeching halt and no one went down that road anyway. Pichotta stated the part of the County where we would probably see Cluster Development would be Clifton and Oak Grove. The reality is that they have large minimum lot sizes and until those Towns are willing to deviate from those lot sizes that is probably equally why we haven't seen cluster development. Folks that were interested in cluster development ended up going through the PRD (Planned Residential Development) because that actually allowed for three times the underlying density versus a number of bonuses, one house per five, which we saw with Johnson/Reiland out at Diamond Bluff Estates. But again because you have that three acre minimum lot size in Oak Grove, what the Town of Oak Grove agreed to was as long as the overall density of the entire project didn't exceed that what it would be if you cookie cuttered it all up into three acre lots, so they did allow some deviation to their three acre minimum lot size. We had some lots down to an acre or an acre and a half. A PRD requires that 25% of the project be set aside as open space. We ended up with the same density as if you would have cookie cutter it except there were outlots to provide open space to the residents. Pichotta asked if the LMC wanted to retain the concept of traditional clusters in addition to the ag cluster option. Holst stated it will probably never be used. It's may just be busy work. Sanden stated he is in support of both ag clusters and traditional clusters. Holst stated it's cheaper to cut up in cookie cutter lots and now ag land is worth more than residential land. If and when development starts again in Pierce County it would be good to have multiple options. Sanden agreed with Holst. Pichotta stated that we can look at the code relating to traditional clusters and see if there isn't a better way to do it. It will be necessary to bring the Town's along as it really isn't an option until they are on board. Sanden asked if staff has reviewed other ordinances around the State to see if comparable to Pierce County. Pichotta stated we have as we don't like to re-create the wheel if we don't have to. Land Management Committee directed staff to move forward with Exclusive Agriculture and Agriculture Cluster Developments and look at revising existing Cluster language.

6:41pm Holst moved to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director/Sanden seconded. Roll call vote: Holst-Yes, Kosin-Yes, Ross-Yes, Sanden-Yes. All in favor. Passed.

7:20pm Holst moved to reconvene into open session and take action on closed session item/Sanden seconded. Roll call vote: Holst-Yes, Kosin-Yes, Ross-Yes, Sanden-Yes. All in favor. Passed.

Motion by Holst/seconded by Sanden to grant the Land Management Director a step increase, if eligible, based on a favorable annual performance evaluation. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel or training requests at this time.

Departmental Update and Future Agenda Items

Food and Wine Plan review for Shannon and Angel Zimmerman in the Town of Clifton

Conditional Use Permit Renewal for Riviera Airport in the Town of Clifton

Request for an extension to the 90 day timeframe for a town to generate a recommendation for a conditional use permit application by the Town of Oak Grove.

Motion to adjourn at 7:30pm by Holst/Sanden seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, February 19, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 5 th & 19 th , April 2 nd & 16 th , 2014.	Chair
3	Approve minutes of the February 5, 2014 Land Management Committee meeting.	Chair
4	Discuss take action on request to modify the conditional use permit for Filling and Grading associated with the Hager City Plant Rail Expansion, by Wisconsin Industrial Sand Company, on parcels located in part of the NE ¼ of the SE ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on proposed language relating to regulation and permitting of Wireless Communications Service Facilities (Chapter 240-41C).	Roy
6	Discuss take action on proposed amendments to Pierce County Code Chapter 240 pertaining to Exclusive Agriculture District and Cluster Development.	Roy
7	Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director.	Chair
8	Committee to reconvene into open session and take action on closed session item, if required.	Chair
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, February 5, 2014

Present: Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Jon Aubart

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 19th, March 5th & 19th, all in 2014.

Approve Minutes: **Sanden moved to approve the January 15, 2014 LMC minutes/Ross seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a map amendment (rezone) from Agriculture Residential to Industrial District by Wisconsin Industrial Sand Company, agent for Steve Burmood, owner on property located on the west 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand forward: Jeff Holst recused himself from discussion and voting because of possible conflict of interest but retained his right as a citizen to comment.

Staff Report – Brad Roy: WISC is requesting to rezone 10 acres in the town of Diamond Bluff to enable the construction of a mining wash plant. This site received a conditional use permit for nonmetallic mining in 2012 for a new underground mining operation (CUP12.20). The applicant is still planning to operate the approved underground mine, but wish to now wash the sand in a permanent wash plant outside of the mine and truck it to the existing Hager City Plant. The wash plant activity is considered a Heavy Industrial use and can only receive a Conditional Use Permit in the Industrial District. The area is part of a 25 acre parcel owned by Mr. Burmood. WISC intends to buy the 10 acres from Mr. Burmood prior to construction of the mining operation. A CSM will be needed to split off the 10 acres. Existing land uses are residential and agriculture. Activities permitted by CUP12.20 include conveyors, outdoor stockpiling of raw sand and conversion of the existing residence into an office and construction of a maintenance building. The proposed use will include a temporary wash plant, permanent wash plant building, conveyors and loadout tank building. The mine and plant will operate 24 hours a day, seven days a week. Road access is off of 1005th St. Adjacent land uses are agriculture, low-density residential and undeveloped. An adjacent undeveloped property to the mine entrance site has access from 1005th St. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Diamond Bluff Town Board recommended approval of this request on January 9, 2014, stating that the request is consistent with the Town's Comprehensive Plan – specifically Land Use Goals #1 and #2 and

Policy #2. Their land use section is attached for your information. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts are listed as well as the soil information for the site.

Staff Recommendation: Given that the Diamond Bluff Town Board has determined this proposed rezone of 10 acres from Agriculture Residential to Industrial to be consistent with their comprehensive plan, staff recommends the Land Management Committee approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Steven Schenk is here speaking for his son, Adam Schenk, who is an adjacent property owner. Mr. Schenk is concerned about noise levels and any groundwater impacts. James E. Larson, adjacent property owner to Mr. Burmood, is concerned about groundwater with the new proposed wash plant on site. It was his understanding that WISC was not installing any high capacity wells. His concern is that it will affect his well and the neighbors also. Another concern is because this area is in the Floodplain. Mr. Larson recited Floodplain code Chapter 238-3 and 238-24. He stated silica is a hazardous material and he worked in an area where they were told not to use it because of silicosis. Mr. Larson asked who is the Zoning Administrator? Jim Kleinhans stated he is. Mr. Larson asked if there has been a hydraulic analysis done on the site and cited more of the Floodplain code regarding moving and filling of materials. Mr. Schenk asked if there have been any EPA studies or impact studies. **Public hearing closed.** Pichotta noted that what we are here to consider tonight is the request to rezone. It's the first step in moving forward to enable the applicant to request a conditional use permit. A portion of the property is classified as floodplain and he doesn't believe anything other than filling and grading to move a road is proposed to occur within the floodplain. This is the first step in order for them to move forward toward securing a conditional use permit. Jeff Himes, WISC, stated the noise levels will be similar to the plants in Maiden Rock and Bay City, very low, white noise. There will be pumps in the plant and trucks going in and out. Groundwater wells are similar to what is used in fields for irrigation. They will recirculate the water and limit the fresh water they pull into the plant. They will have a monitoring system on the neighbor's wells. Concerning the dust from the processing plant; any potential dust will come from the trucks on the road. Mark Krumenacher stated the USEPA regulates clean water Acts. The State of WI regulates air permits but there are no actual studies. The mine will have to adhere to federal, state and county regulations. Mr. Himes stated they plan to construct out of the floodplain and have no equipment in the floodplain. Silica sand is not allowed in sand blasting, that application does create very fine particles. They will be washing but not crushing the sand. The plant will be moving the sand when wet to the Hager City site. At the Hager City site they aggressively address dust and cannot allow dust for their employees or getting away. Mr. Krumenacher stated floodplain obligations are regulated and they do need to do a hydraulic study taken off of the FEMA map and determine where the elevations are. They may widen a road into the floodplain. They will have two high capacity wells; one primary and the other as a backup. Originally they were going to rely on the one at the home but the wash plant will need more water than that one can supply. When the State does a review, they also look at what impact it might have on residential wells. Aquifer is prolific and WISC can go even deeper. The groundwater monitoring will provide backup information to see. Chairperson Fetzer asked how often you monitor wells. Mr. Krumenacher stated they install pressure sensors and data loggers. Chairperson Fetzer asked how deep compared to residential wells. Mr. Krumenacher stated 100 feet for residential wells and 200 to 300 feet for high capacity wells. Mr. Larson stated his well is 130 ft and the neighbors on the hill are at 300 feet. Mr. Krumenacher stated they are in the same water table. Mr. Larson stated we had a drought a couple years ago and is concerned about another, so why don't you add to the existing plant. Mr. Himes explained the Hager City Plant isn't a wash plant, it's a dry facility. They had thought about expanding on another site the other side of Hager City. Charlene Larson stated the Wind River wasn't addressed. Mr. Krumenacher, Geologist and Senior Vice President of GZA Environmental, stated the Clean Water Act, which is EPA driven is state implemented. Using that water is not going to impact the Wind River. Sanden reiterated that this will all be further detailed in the conditional use permit application. He asked the applicant to characterize the noise; would the trucks coming in be louder than the pumps? Mr. Himes stated the trucks are white noise and the pump noise would be similar to a corn dryer, very quiet. You can carry on a normal conversation.

Chairperson Fetzer stated his mother lives near the plant by Grange Hall and he farms the area and is very familiar with it. It's a wash plant and other than the trucks coming in and out, he doesn't hear it and assumes WISC's plant will be enclosed like that one. Ross stated again, we are going through the process of a rezone. There will be an opportunity to see a great deal of data further along in the process.

Sanden moved to approve the request for map amendment (rezone) from Agriculture Residential to Industrial District for Wisconsin Industrial Sand Company, agent for Steven Burmood and forward a recommendation to the County Board of Supervisors/Ross seconded. All in favor. Passed with Holst not voting.

Discuss take action on a request for Site Plan approval for a commercial structure for the City of Red Wing Airport, owner, by Wes Converse, agent in the Commercial District on property located in the NE ¼ of the SW ¼ of Section 6, T24N, R17W, Town of Isabelle, Pierce County, WI.

Chairperson Fetzer invited Curt Miers forward.

Staff Report – Jim Kleinhans: Curt Miers is here for Walters Buildings. He is the front man for Wes Converse. He is requesting site plan review for a commercial office building in the commercial zoning district within the City of Red Wing Airport property. There is an office building 36 ft x 98 ft and a hangar 100 ft x 120 ft. City of Red Wing has developed a gravel parking lot. Jim invited the City of Red Wing to come and discuss the parking lot and their 2014 Work Plan but they were unable to attend. Surface water drainage is directed to the west as designed by the City of Red Wing. The native soils in the area are very permeable. Curt Miers described the lighting; wattage and type of the building. Buildings are identical to what's at the airport. No landscape plantings are proposed for the area immediately surrounding the buildings to prevent woody debris from fouling jet turbine engines. Exposed soil will be seeded with grasses.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the County and can be addressed through modifications to the proposed site plan.

Sanden asked if the lighting is directional. Mr. Miers stated yes. Holst stated the plan is pretty straight forward.

Holst moved to approve the site plan as presented/Sanden seconded. All in favor. Passed.

Discuss take action on multimodal trail (bike, hike, ski) and skills course concept for Trimbelle Recreation Area located in the Town of Trimbelle, Pierce County, WI.

Staff Report – Jim Kleinhans: This is something that developed as a goal of his last evaluation. To get a bridge to access the 20 acres purchased in 2009. The trail system will help to qualify for a state grant to improve site amenities. We will have to amend the County recreational plan. This is a rough concept that will require a consultant to design the trails. We identified soils that may be suitable to construct an earthen privy near the base of the hill. This site currently has minimal amenities. Jim has talked to Scott Schoepp and he wants a bridge that a vehicle can travel over to maintain the east 20 acres. Holst stated it's pretty steep. Sanden asked if the soil survey gave you any pause or is it still doable. Kleinhans stated there are steep grades. Mike Riter teaches a four day course in developing trails, who could be a potential consultant. Jim has talked to DNR staff about bridge approval and a Chapter 30 permit. Scott has been through this with the snowmobile bridges. Sanden asked if this is intended to be a mountain bike trail. Kleinhans explained he would like to make it a family trail for mountain bikes, hiking and skiing, not a race trail. Pichotta stated if LMC is supportive and Parks is in support, we can come forward with a resolution and request to apply for a grant.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed multimodal trail system/bridge/skills course is appropriate at the Trimbelle Recreation Area. If determined to be appropriate, staff will present the concept to the Parks Committee for their consideration at their February 10 meeting. If supported by the Parks Committee, an unbudgeted request from the Park Development Fund to retain a consultant to assist in the planning would likely be forthcoming.

Holst moved to pursue the multimodal trail/Ross seconded. All in favor. Passed.

Discuss take action on proposed strategy to comply with 2013 Wisconsin Act 20 relating to the regulation and permitting of Mobile Service/Cell Towers.

Staff Report – Brad Roy: The new law created in 2013 Act 20 (Act 20) states specifically that a political subdivision may regulate cell phone towers in a zoning ordinance, but places strict limits on how it may do so. It creates a standardized regulatory framework for wireless telecommunications service. The new law specifies that an application is complete if it contains all the information described in Act 20; by implication, a political subdivision may not require any additional information. We've listed what the application must include. It doesn't say what the construction plan must show; our hands are tied on what we can ask an applicant. Act 20 also lists specific limitations or regulations that a political subdivision may **not** impose on the construction or modification of a tower. A municipality may not:

- Enact an ordinance prohibiting the placement of a mobile service structure in particular locations.
- Disapprove an application based solely on aesthetics.
- Disapprove an application based solely on the height.
- Charge a reoccurring fee.
- Impose a setback or fall zone requirement that is different from other types of commercial structures.
- Permit 3rd party consultants to charge the applicant for any travel expenses incurred in the consultant's review of mobile service permits or applications.
- Disapprove an application based on an assessment by the political subdivision of the suitability of other locations for conducting the activity.

Again, not a lot of ability to say no.

Communication Towers greater than 70 feet in height are currently a Conditionally Permitted Use. Pierce County Code §240-41C regulates the use. The code primarily establishes a height limitation, setbacks requirements to property lines as well as offsite residences, application requirements and permitting procedures, type of tower and other various requirements. The new law will require significant changes to §240-41C and modification of the Land Management Department Fee Schedule. Land Management staff has discussed the new regulations internally and with Corporation Counsel. As noted above, the County no longer has the ability to regulate height, location, setbacks and aesthetics. The County's ability to deny a permit is significantly limited and appears to be restricted to an inadequate application. The LMC would essentially be required to approve if an applicant submitted all required information. Staff is requesting direction from the LMC regarding the future permitting for Communication Towers.

- Should Communication Towers continue to be a Conditionally Permitted Use or is it appropriate to simply require an over-the-counter Land Use Permit?
- Due to the limited information that can be required in the application, should there be a third party review?

Sanden asked if the FCC is the body that has the say or is it the State? The FCC would play a part in regulation but looking at zoning and the placement of towers is the State and County's role. Sanden asked any idea who the third party would be. Roy stated they would contract with an engineer. Holst stated they would have to have engineered plans and when they stamp it, they are liable. Pichotta stated one area when a third party may be useful is with setbacks. County code will likely require one foot setback for every foot above 35 feet. In Act 20, if applicant can provide information showing that if a tower falls it will fall in area less than the setback. The setback requirement would be voided. For example, a 300 foot tower in a residential neighborhood, a third party could verify that it will not hit a residence. Kleinhans stated we have to determine that it's a complete application. Committee directed staff to develop an over-the-counter permit with the ability to have third party review regarding reduced setbacks.

Discuss take action on Travel/Training Requests. Pichotta stated that there are no travel or training requests at this time.

Departmental Update and Future Agenda Items

Proposed amendments to Chapter 240 relating to Exclusive Agriculture and Cluster Development
Potential Filling and Grading at the Hager City Plant in a restricted height area, maybe until that
coordination with airport is worked out.

Wireless Communication Services language.

Director's performance evaluation.

Motion to adjourn at 6:55pm by Holst/Sanden seconded. All in favor. Motion carried. Respectfully
submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, January 15, 2014

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 5th & 19th, March 5th & 19th, all in 2014.

Approve Minutes: **Ross moved to approve the December 18, 2013 LMC minutes/Aubart seconded.**

All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Floodplain and Industrial District, pursuant to Pierce County Code, Chapter 240-67A(2), 240-29D and 238-32B for Wieser Concrete Properties LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Andy Winkler forward:

Staff Report – Jim Kleinhans: Wieser Concrete Properties are requesting to expand an existing manufacturing facility that is located along Highway 10 in the Town of Salem. The expansion would allow for them to increase production of larger products that they produce elsewhere in the State. The building is nonconforming because it's located within the road right-of-way setback of Highway 10 and is also situated in the Floodplain. A consultant for Wieser Concrete is requesting a Letter of Map Amendment (LOMA) from the Federal Emergency Management Agency at this time. At this point, as you can see from the maps that were provided, their floodplain lines are a little different than what the County has adopted and there were engineering studies done on those lines but they need to be approved to have them recognized. Town Board of Supervisors in Salem recommended approval of this request during their November meeting. Nonconforming structures can be extended and approved provided they meet all the provisions of the zoning code; or a conditional use permit is issued by this committee. Setbacks from State and Federal Highways are 77 feet from the edge of the right-of-way or 110 feet from centerline. The addition would meet the centerline setback but not the right-of-way setback. The addition also meets the 75 foot setback from ordinary high water mark to the adjacent stream. The industrial building is also proposed to be 44 ½ feet high which exceeds the general height limitation in the zoning code. The committee can provide an exemption up to 60 feet of the required height provided they increase the setback by at least one foot for each foot the structure exceeds 35 feet in height. There was significant amount of fill placed on this site in 2007 and shortly thereafter there was a series of studies completed to determine what the impact of the fill was on the floodplain. The studies were never submitted to FEMA but they were reviewed by the Department of Natural Resources and we have an email from a floodplain engineer, back in 2010 saying that he recognized the study results were in order. The expansion can be authorized by a conditional use permit only if the LOMA demonstrates that no portion of an existing building or expansion is located within a floodplain. If the LOMA is not obtained, this committee would not be able to authorize the addition and it would have to go before the Board of Adjustment as a

variance. The on-site septic system was installed for this facility in 1981. Soils reports indicate that there was some sand and fill placed above the drain field area and he would recommend the committee consider that a condition be added that the existing system be reviewed for compliance for plumbing and County sanitary codes because the proposed addition will create additional manufacturing jobs. We have had recent expansions, in 2000, where there was an addition and additional people were hired for that facility. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether the proposed expansion at the proposed location is contrary to the public interest, or detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. A Letter of Map Amendment (LOMA) demonstrating the existing building and proposed areas of expansion are located outside of the Floodplain shall be submitted to the Department of Land Management prior to construction.
2. State Plan Approval for the industrial building expansion from WI DSPS shall be submitted to the Land Management Department prior to construction.
3. Construction shall not occur until such time as Site Plan Approval is granted by the Land Management Committee. The application for site plan approval shall contain a LOMA and a stormwater runoff plan in addition to other required materials.
4. The adequacy of the existing onsite wastewater treatment system shall be verified or it shall be brought into compliance with State and County sanitary codes.
5. This conditional use permit is valid for 12 months unless an extension is granted by the LMC.

Chairperson Fetzer opened the hearing to the public. Sarah Palodichuk, Oak Grove Township, asked if this is about the floodplain specifically. Chairperson Fetzer stated no, this is the floodplain as it relates to Wieser's. Mike Girdeen asked if they would be tearing down part of the old building and rebuilding it; your footprint is changing but basically it's going to be where it is? Mr. Winkler stated somewhat. Some of the old structure will come down due to structural issues and then an addition will be constructed onto the existing building. **Public hearing closed.** Sanden asked about the 50% rule, regarding nonconforming structures; if it would have to go before the Board of Adjustment, can you explain what that 50% rule entails? Kleinhans stated there would be a variety of issues and standards that they would have to meet to obtain a variance. Typically, floodplain structures aren't approved more than 50% because they are supposed to be phased out over time. In 2007 there was a significant amount of fill placed around this facility. There were a number of things that were done; additional land was purchased, land was rezoned on the east side of this facility. This is on the west side along Highway 10. If successful in obtaining a LOMA, approval can be granted by this committee. If the LOMA doesn't give them what they need, then it should be directed to the Board of Adjustment for an approval. The LOMA may take some time. He just signed a form last Friday. So not knowing if that is going to be successful and how much time FEMA takes to review the information, it may take more than 12 months to get this project completed. Pichotta stated he spoke with the applicant and applicant asked if the committee would add an additional six months to the date to bring it to 18 months for completion. He thinks what Dr. Sanden was asking; when you have a nonconforming structure in the floodplain, improvements to that structure are held to 50% of the equalized assessed value of that structure over time. Once you use up that 50%, you can't do anymore improvements; ultimately the structure is phased out. Sanden asked about the other condition that Jim asked to have added. Holst stated he thinks that condition is there already. Ross stated he read it as condition #4. **Sanden moved to approve the conditional use permit for expansion of a nonconforming structure with conditions #1 - #5 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, amending condition #5 from 12 months to 18 months/Ross seconded. All in favor. Passed.**

Discuss take action on proposed amendments to Chapter 238-20 of the Floodplain Ordinance relating to camping and camping units and to Chapter 240-29D, of the Zoning Ordinance relating to the height of Industrial buildings.

Staff Report – Jim Kleinhans: In the course of administrating the floodplain and zoning code, staff determined several ordinance modifications appear to be warranted. One involves camping outside of an established campground without a permit. We have had some issues with this. We would like to provide some definition clarification regarding a yurt type structure and look at some language that we would add regarding camping outside of the floodplain. Under public and private campgrounds, staff has proposed Section M that states: Camping in a camping unit in a floodplain outside of approved campgrounds under this section is allowed without a permit if the camping unit consists of nothing more than an easily removable tent or if the following criteria are met:

- a. The camping unit is a mobile recreational vehicle;
- b. The camping unit is on a parcel of land that has less than 4 camping sites and the parcel is not advertised, represented or used as a campground; and
- c. The camping unit may not occupy the site for a period of more than 180 consecutive days.
- d. Support services are consistent with items J and L listed above.

We did receive comments from the Department of Natural Resources on this section and because they felt it is not involved with a campground per say, that we should possibly put this into a separate section in our floodplain code. There are no other sections in the floodplain code that deal with camping either in or out of a campground. A definition for a yurt is being suggested but modified from Jim's original definition that was provided in the staff report based on some discussions with the DNR and staff. Yurt – a circular tent-like structure supported on a lattice framework with a window or windows and a hinged door and is used for overnight camping by a family or non-family group. Comments from the DNR suggested that yurts or the Western deviation of the yurt is not something that is easily removed for overnight camping. They are typically more permanent in nature. So we suggest the following language; Yurt – a circular tent-like structure supported on a lattice framework and used for human habitation by a family or nonfamily group. Then we would like to add the definition of human habitation which means; a human residence or dwelling. Sometimes yurts are defined as a dwelling if you look up Wikipedia definitions. Holst asked if we would get rid of the rest of it. Kleinhans stated yes, windows and doors because some yurts don't have hinged doors. They are more of a floating screen. He has seen a variety with variations. In a floodplain code, we have references to the Department of Commerce under several sections and several years ago the Department of Commerce was changed to the Department of Safety and Professional Services (DSPS) with a different number. Under 238-24D we talk about private sewage systems; changing Chapter COMM 83 to SPS 383 and the same under 238-27H under sewage systems, amend that to replace COMM 83 to read SPS 383. And the same with section 238-33B and 238-34D, all sections regarding on-site wastewater systems. Sanden asked if a yurt is to be considered to be for human habitation? Kleinhans stated yes, they are designed as a domicile to some respect and we are trying to get away from considering them tents: easily removable in a floodplain. We do permit them elsewhere in the County as a habitable structure. We're thinking this will just help us with the interpretation and the permitting of those types of structures. Under proposed amendments to the zoning code, several years ago the frac sand industry boom created a lot of review and permitting activity for Western Wisconsin Counties. Some of the buildings and facilities used to produce and manufacture the sand creates structures that are in excess of the 35 foot height limitations. Counties each do this differently. In our current code, we have allowed this committee to authorize buildings up to 60 feet in height and anything beyond that was sent to the Board of Adjustment for a variance. With this request we are asking the committee to support a code amendment to eliminate variance request for all structures that are in excess of the 35 foot height limitation in the zoning code. We would also like to include not only industrial but commercial structures as well. In section 240-29D we are proposing language that states Industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setbacks and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. This would be similar to what we did with the Wieser facility. It's very difficult sometimes to

approve a variance if you consider the standards that the Board of Adjustment has to work under. By increasing the yard setback by every foot the building exceeds 35 feet, it would still give us some protection from getting too close to roads and right-of-ways. This notice was sent to each Town Clerk for the public hearing and there are some clerks here that might have some comment.

Staff Recommendation: Staff recommends the LMC consider any comments received during the public hearing and, if determined to be appropriate, approve the proposed code revisions and recommend adoption by the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Sarah Palodichuk, Oak Grove Township Chairperson, stated giving yurt a definition is a good idea. The zoning code in regards to height of structures in industrial districts, she knows that she shows up a lot and talks when frac sand issues are brought up and she doesn't want to appear to be against everything that is suggested although that is how it always ends up but in her position as Chair, she is hearing the concerns all the time from people. She likes the idea of having a second body that does grant the variance, not that you can't do your jobs but it spreads out the accountability. Her particular concern at this time is, if she has a problem with the amendment and if it's discussed a little more and people understand it a little better, what she is hearing is at the State level there is a lot of push for the industrial sand mining regulation to be done at the County level through zoning processes. So when people see the County more lax on something that makes her phone ring more because people think that any ordinance in place right now won't be affective in the near future so they are really reliant on County zoning. So at this time, she doesn't feel it is a good idea. People have concerns not only in Oak Grove but in other towns which she doesn't even know if this will be applicable immediately in Oak Grove or not. Other towns have the concerns about the quality of life and tall structures going up. Her fundamental concern is with the proposed legislation at the State level, the image that it gives for the County to say they are going to remove the 60 foot restriction maximum. Chairperson Fetzer stated we are not removing any restrictions. Ms Palodichuk stated you are changing the way it is handled. Chairperson Fetzer stated yes. Ms Palodichuk stated that is a red light to people who read it and she thinks there is a lack of understanding. But she told people that she would show up and let you know that they would like you to take a little more time to discuss it with people. Holst asked if she could state how much land in Oak Grove is zoned Industrial. Ms Palodichuk stated there is a very small amount of land in Oak Grove that is zoned Industrial. It's just that there is concern moving amongst groups with people in Trenton, Maiden Rock and other places. Sanden asked if this was initiated by us or the Board of Adjustment. Pichotta stated it was initiated by the Board of Adjustment. The issue is because it requires a variance by the Board of Adjustment, the BOA is held to variance standards which are unnecessary hardship, unique property limitation and protection of the public interest. Because normally a variance is to enable building within side yard setbacks for a deck or something like that, there is a unique property limitation. In this case, it's hard for them to justify using those three standards which are required by the State Supreme Court to justify an increased height. This request was generated by the BOA because they have struggled in the past with issuing variances for these types of things and it has caused them, if they thought it was justified, to get a little creative in how they do their Findings, Facts and Conclusions. Sanden stated OK so they felt this would be the best way to address that. Pichotta, our intention is if it is set back a foot further from property lines, that stops tall structures from being located right on the property lines. Kleinhans stated that other County's that do this, it's their zoning committee that generally handles those. So this wouldn't be anything unique to this part of the State. Chairperson Fetzer asked if there is any further public comment. **Public hearing closed.** Sanden asked about the yurt issue and if counsel has looked at this and are they comfortable with this. The reason he asks is if he understands this, a yurt is considered a human habitation whereas a tent is not and the definition of yurt is a circular tent-like structure. Pichotta stated he would discuss it again with Corporation Counsel given that we just got the DNR recommendation a day or so ago. Kleinhans stated he will read what the DNR commented. In the definition we state a yurt is for overnight camping. He said a yurt is more permanent and typically not used for overnight camping. So they say the definition could be interpreted incorrectly that is why we went with that, based on the advice of the DNR staff. Because it's a floodplain amendment

we sent it to them for their comment. **Sanden moved to approve the code revisions and recommend adoption to the County Board of Supervisors/Ross seconded. All in favor. Passed.**

Discuss take action on a request for site plan approval for Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Shannon Zimmerman forward: Mr. Zimmerman stated that he brought along his civil engineer as well as his architect to provide more detail if appropriate. From the last meeting a couple of the takeaways were to complete the site design as outlined and not to exceed the square footage that was approved in the conditional use permit. They have completed the site plan civil engineering, proposed landscape design and submitted this.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for a winery on the 20 acre parcel on which they reside, in August 2013. Production of wine is to take place onsite in a 54' x 80' shed which was permitted in 2012. The applicants have submitted construction plans for the principal structure for the business which includes a tasting room, kitchen, dining area, restrooms and offices/conference rooms. The plans also provide detail regarding parking, landscaping, lighting and the outdoor plaza area. Construction of the facilities is proposed to begin in spring 2014. The applicant plans to be open to the public by July 2014. Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The applicants are proposing to construct an approximate 5,700 square foot, enclosed, 2-story structure to be used as the winery. According to submitted plans:

- The Tasting Room is 1,640 sq ft
- The lounge is 1400 sq ft
- Kitchen is 940 sq ft
- The remaining area houses restrooms, storage equipment and common space.
- The second story contains offices and conference rooms (approximately 840 sq ft).

The plans were not final at the time the CUP was requested. The applicant, as part of the conditional use permit application, submitted preliminary plans that proposed a 2,000 square foot tasting room, 2,800 square foot social space and kitchen along with mechanical and storage rooms. Those preliminary plans indicated that sizes and layout may be modified but that sizes will not exceed what had been originally proposed. The applicant suggested that the seating for food service would be in the social space which is now labeled as being the "lounge". The applicant's CUP request stated that the social area would be a three-sided structure with the open side facing the plaza and vineyard. The plans submitted show a fully enclosed structure with doors that open to the plaza and vineyard. This is potentially an issue of concern given that the applicant stated that food service would be weather dependent and would likely have to be stopped in mid-October. The conditions limit pizza and food service from mid-May to December 31st, Thursday through Sunday. The applicant indicated that the reason for enclosing the structure is to protect the structure from the weather. He has stated that this was not done to create an opportunity to remain open through the fall and winter and is open to modifying the conditions so that pizza and food service will be from mid-May to October 31st. There is also a condition requiring the applicant to develop a plan to ensure that the food service portion of the business will be incidental/subordinate to the winery. The applicant intends to present this plan to the LMC in the spring. The main structure will be placed behind an existing cluster of trees and will be setback approximately 75 feet from the right-of-way. (Pierce County Code requires structures to be setback 42 feet from a town road right-of-way.) A 2-foot berm will be constructed between the parking lot as well as a 4 to 6-foot berm along the east property line. The berms will have 6 to 7-foot tall trees planted on top along with shrubs. Trees were previously planted on the south property line where there was a void in the established tree line; the applicant has expressed a willingness to plant additional trees or install a fence at this location if the neighbor requests it. There will

be two access points off of 875th Ave, one for business and the other for customers. There are 71 total parking spaces. The customer parking lot will have 64 parking stalls with 3 being ADA compliant. The customer lot will be paved with asphalt. An employee parking area is proposed between the main structure and the existing production shed. The parking lot will be gravel and have seven parking stalls. This area will also be utilized for waste containment. A 22 square foot advertising sign is proposed to be placed at the corner of 1090th St and 875th Ave and also at the driveway of the customer parking lot. An engineer certified stormwater management plan was developed for the site. Stormwater will be contained onsite in a stormwater pond with an infiltration basin designed for a 10 year storm event. The plan details construction best management practices and post construction standards. A lighting plan has been submitted. The customer parking lot will have two 20-foot light poles near the east and west ends. The walkway from the parking lot to the structure will have three 4-foot lights. The plaza will have three 10-foot lights. The employee parking area will be lit by two lights on the west side of the structure. Also included is part of the Department Lighting Policy which this plan is compliant with. A new septic system for the business is proposed to be placed between the structure and 875th Ave. Some of the existing trees will need to be removed to accommodate the system. Numerous concerns from area residents regarding this use have been raised. Concerns included:

- Noise
- Traffic, Road Safety and Compatibility with other uses
- Wastewater
- Parking
- Light Pollution
- Environmental Issues

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the proposed plan (or the CUP) are necessary. The LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading area, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Pichotta stated that he had received some correspondence from neighbors, John and Connie Holck, which is contained in your folders. Sanden asked for clarification, in two spaces it mentions stopping food service in mid-October but there is one line that states “The conditions limit pizza and food service from mid-May to December 31st”. Mr. Zimmerman stated he thinks that is an error. He thinks the December 31st for the food service should be October if he remembers correctly. Roy stated it was December. Mr. Zimmerman stated their objective is that the tasting room would remain open through the end of the year, December 31st. Roy stated the conditions do state until December 31st but the fact that it was all going to be weather dependent the odds are it is going to be closed in October but if there is a warm weekend in November, around Thanksgiving; they would have the ability to open. That is the reason that it stated to December 31st. Holst asked about the wastewater and sewage treatment. This is one of the more thorough ones that we’ve seen. Mr. Zimmerman stated Matt Frisbie with Frisbie Architects and Kip Johnson with ACA are here with him tonight. LeRoy Janske out of Chippewa Falls designed the septic system. It’s on the north, northwest side of the building. It’s a layout that is tucked on the service side of the building. Holst asked what it is sized to. Mr. Frisbie stated for the service that is there, for the lounge, the tasting room. Holst asked what capacity? Mr. Frisbie stated he would have to look at the report from Mr. Janske. He doesn’t have it in front of him now. He stated it is designed appropriately for this and there will be an official submittal for the building permit on that item specifically. Pichotta stated he would like to note there at some point the applicant will need to bring a waste stream management plan forth which will address waste from the winery itself. Ross stated this is a well detailed plan that we appreciate and he

wants to draw some attention to and get an opinion on the drawing. He knows it is separate from your house to the vineyard but there looks to be a relatively clear path. Is the pool in your backyard fenced? Mr. Zimmerman stated it is not right now, their homeowners insurance company has indicated that it is needed and yes, they will be placing a cast iron fence around the pool area. They intend to put a couple more trees in. Once in the winery and plaza, you can't go wandering out of there. Around that perimeter edge, their intention is to also use landscaping trees and some other shrubs so as to contain not only the people but sound and those types of things. People are not left to wander through the vineyard at all or potentially to his house. Sanden stated we await the plan in the spring to show how the food service will be incidental and subordinate to the winery part of it. It's a very ambitious plan and pretty impressive but just before you start with fulfilling this plan; he would like to make the observation that we do take that very seriously as far as the food service being subordinate to the winery. In light of the letter that we have received, it seems like a lot is going to be dedicated to other things than serving wine. When he looks for that plan that you are going to come up with in the spring, we will be looking at that quite closely. There are other wineries in the County that we have had to really monitor closely, not only will staff be involved with that but you have a lot of neighbors that will look at that also. It looks like a really nice plan. Mr. Zimmerman stated that is understood and he has known from the start that the food service is to be subordinate to the wine sales. If people are coming for wine or food, they are coming and their focus and intent is wine sales. They understand very clearly that remains the prime and that is what it will be. It is their hope that the experience that people have there and the quality of the wine becomes a launch pad to sell elsewhere. They hope not to rely solely on sales onsite. Holst asked if they could walk us through the site plan. Mr. Frisbie stated looking at the approximately 5400 square foot plan, the location of the shop building that was put in this last year and Shannon and Angel's house location, there will be a gravel drive with seven parking stalls, a service on the end purposely tucked in because there is an existing tree line there and it's away from everything else that is going on. The deliveries will be on that side, the septic, the trash collection and mechanical equipment also to mitigate the noise. Then the lounge and two story area with restrooms there and the tasting room on that side. The public will enter from the parking area on the east end and approach the long walk up to the main doors and either out to the plaza or be inside for the tasting room. They are contained within that area. They have some landscape walls coming off of the facility to define that area of what's considered public or private. Then you can see the edges of where the existing vineyards are. Another area will be planted also with additional vines so that will take everything from the south into the natural vegetation of the vineyard. Then there will be a berm on the side and separate landscaping and a wet pond just to the east of the parking and the infiltration base further east of that. There will be a dry river rock landscape wandering through because all the water is sloping toward the north and they want to catch it and bring it to the ponding area. There is a small directional sign there and a small directional sign out on 1090th. There is a berm along the whole east side which will also be topped with landscaping trees. Sanden asked about the stormwater features and what the grade and maximum depth of those is. Mr. Frisbie stated there is going to be about a four foot bounce from the water level up to the top of the pond so when the storms come it will flow toward and go back down. The water level is roughly five feet deep. Then it will discharge into an infiltration basin. The effective infiltration basin is only two or three feet deep. It can potentially fill up to five feet before it leaves the site because of an existing culvert. Sanden stated he was thinking in terms of safety since it is so close to the parking lot. Mr. Frisbie stated they do have a safety bench. It's benched with a 10 foot flat area that's standard with the DNR now. It's got 4:1 side slopes so it's not steep. Chairperson Fetzer stated he would allow public comment. Gary Borgstadt and wife, Marcia, spoke to this committee in August 2013 in opposition to the application to the CUP by the Zimmerman's for their planned commercial operations. The facility would be seen and heard from their front yard, they are adjacent property owners to the east. They remain strongly opposed to the commercial operations and the planned facilities that the committee is reviewing tonight. He understands the CUP was granted despite the overwhelming opposition from the neighborhood and the conditions approved therein. A two-story expansive structure and the intended use of the interior and exterior are clearly inconsistent with the existing neighborhood, their activities and their homes. It is inconsistent also that the CUP was granted for a winery with tasting

and incidental food when we review the facilities including a large commercial kitchen, a bar, a lounge, multiple offices and a conference room. It seems twice as large even though it fits on the footprint of the original request. The food service described in the CUP as incidental and subordinate to the retail wine sales, we can't understand the scale proposed by the Zimmerman's then so we do oppose the restaurant, food, bar and lounge operations as part of the winery. Also troubling to them on the east side and the other neighbors adjacent is the noise and the visual intrusion as well. The Land Management Committee allowed the evening and night hours of operation which leads to that traffic lighting and noise, for example the sound limit established was 80 decibels and that seems to be quite permissive allowing for noise intrusion into their properties. It is just below 85 decibels which is the OSHA eight hour limit for hearing loss and health effects. In looking at the berm, they sent the committee potential engineered designs of berms that would help mitigate that noise and be put along the east property line. This is a well documented shape and size of the berm and they don't believe the trees do much of anything to help. They see in the plan that the eastern berm has been reduced in size to a 4 to 6 foot berm instead of a 10 or 12 foot berm. In closing they ask that the Land Management Committee consider the scale of what is being proposed and consider the concerns the neighbors have, John & Connie Holck's well-written document to the committee and send the plan back for a more appropriate facility design that fits the CUP which is for a winery only, blending into the surroundings more and the use of the areas in the facility more consistent with the conditions in the CUP. Mr. Zimmerman stated he understands and appreciates the concerns they have and believes they are doing everything they can to mitigate these issues and are willing to do more depending on what happens. Mr. Borgstadt indicated there is to be a reduction in berm size, first of all in the CUP there was no specification to berm size. The 80 decibel limit, part of the reason for the enclosure, because, as Mr. Roy indicated in the report, that the enclosure had to do with protection of the interior and that is true but in addition to that, we also closed it off because we are thinking about these things and if there is a way we can potentially shelter some of the noise, we're going to do it. We will still set the date as to when that lounge needs to be closed, we're good with that. Mr. Frisbie stated part of the positioning of the facility was to push it as close as they could to the shop building that was constructed this last year. They are about 500 feet off of the south property line, 610 feet off of the east property line, so they have tucked it into the existing trees letting this kind of integrate with the natural surroundings. The building is either at the same level or lower. It's all sloping down. We're not building it up or making it more prominent. With the berming there is a logarithm they have used on-line for decibels and distance. If we are 80 decibels at the front east door, going 610 feet, it is going to go down to about 25 decibels. With trees it's hard to gauge what the decibel is, but if you have a spruce or a coniferous tree, it's only going to reduce about 10 decibels. It all factors in. The berm is the most effective. So for a visual and sound barrier, it's mostly the distances that are going to help the greater amount. There are the soft surfaces around here, all the vines and the grass, some pavement and the landscaping up around the buildings. We will bring some trees in around the building to knock the noise down before it does carry. There have been a lot of things we have worked on with the mechanical systems and different things to keep that noise down and the positioning of this building to dampen it. Rob Scott, asked on the lighting he saw that there are two advertising signs and has a question as to if those signs are lit and to what degree. Mr. Frisbie stated they have the directional sign as you come into the parking lot that is designed to be ground lit with some soft landscape lighting just at the sign, it's not a flood light. Mr. Scott, soft lighting do you have a certain degree of luminance? Mr. Frisbie stated he doesn't have that right in front of him but it's something he can get. Mr. Scott asked if that is something if the committee wants it, he doesn't need it because you are distinguishing between soft lighting and flood lighting. Mr. Frisbie stated that part of the ordinance reads that they can't cross the property lines with lighting so it has to be shielded and controlled. Mr. Scott stated there would be four 20-foot lights, two on the east end and two on the west end. Mr. Frisbie stated there are two poles in the parking lot area, 20 feet high. Mr. Scott stated that when it says two 20-foot light poles near the east and west ends, it's just one light on each end. Mr. Frisbie stated correct. Mr. Scott asked if there has been any thought for ambience sake of making those more lights but lower, 8 foot lights with better ambience instead of making it look like a strip mall. Mr. Frisbie stated it sure could be, it's more of a directional down light we have to be careful not to have a light that

lights out. It's more security for the parking lot and safety for walking through that area. We can review the height of that if 20 feet is too high, maybe we can accomplish it in a 12 – 15 foot pole. Mr. Scott stated there might be the option of having a couple more lights placed. He was a prosecutor for 28 years and one of the interesting things was how you structure lighting for security. Two big lights and one goes out, then you have a security problem, so you may want to take a look at lower lights but more frequently placed and that may also give you a better ambience for walking around as you come up toward the structure. Mr. Frisbie stated they do have a series of bollard lighting about four feet high at the pedestrian level as you come up the path. Holst stated this is an on-going thing, it isn't the final approval. This is relatively preliminary approval. You have answered a lot of questions here and we have listened to the concerns of a lot of people and they are still attempting to be good neighbors. **Holst moved to approve site plan review as presented for Shannon and Angel Zimmerman/Aubart seconded.** Sanden added this will be on-going after this too, the CUP's get renewed every two years so even when it is the final version, we still have another crack at it to address any issues. **Chairperson Fetzer stated there has been a motion by Mr. Holst, a second by Mr. Aubart, any further input? Seeing none. All in favor. Passed.**

Discuss take action on a status report and potential modification of conditional use permit/site plan approval to address disposal of waste product in the Town of Isabelle for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1 CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Kenny King and Kevin Accola forward:

Staff Report – Jim Kleinhans: This is a status report and update regarding disposal of waste materials from the Highway 10 sand processing plant out in Grange Hall. A condition relating to the transport and disposal of waste sand byproduct was added on September 4, 2013. This status report provides the Land Management Committee, LMC, with that information. The CUP was modified on June 5, 2013 with 5 additional conditions and renewed in September 4, 2013 with 14 conditions including condition #14 requiring a status report within 120 days. The applicant's source material is generally obtained from a sand mine located in Pepin County. There was a moratorium in Pepin County for returning the material back to the source. The moratorium expired in June 2013. In September 2013, Mr. Bechel provided the Pepin County Land Conservation Department a revised reclamation plan and I guess they determined that plan was incomplete. So the material doesn't go back there and in the interim they have taken some of the waste product to Bill Holst's pit in the Town of Trenton and then recently Mr. Bechel purchased the Diesing pit in the Town of Isabelle which they worked out an agreement with the Town of Isabelle to move some sand into that facility using one of the Town roads. The agreement conditions are as follows:

1. The agreement would be reviewed month by month with a maximum of 3 months.
2. Fifteen loads per day are allowed into the sand pit 6 days per week, no Sunday hauling.
3. Mr. Bechel provided a \$5,000 bond to address any road damage to 150th Ave. that was videotaped prior to hauling beginning on Dec. 6, 2013.
4. Letters were sent to the neighbors prior to hauling. No complaints have been received to date.

Chad Johnson, Pierce County Highway Commissioner, responded affirmatively to a request by Muskie Proppant LLC to temporarily haul sand from Knapp, WI along County Road CC connecting State Hwy 29 and US Highway 10. The request was for testing of 2500 tons of sand over three days early in December 2013. Conditions established at the September 4, 2013 LMC meeting are as follows:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC unless modified by another condition of this CUP.
3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.

5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. The fugitive dust plan shall be adhered to.
8. Byproduct shall be utilized in a reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with the Pierce County Solid Waste Code.
9. Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.
10. The facility shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.
11. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
12. Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.
13. The conditional use permit shall expire in one year.
14. Applicant shall provide a status report before the Land Management Committee within 120 days.

Staff Recommendation: Staff recommends the LMC consider the information presented in this report concerning compliance with the permit conditions to determine if any modifications to established conditions are warranted prior to the CUP renewal.

Kleinhans stated he witnessed some of the material brought down to the Diesing pit this last week and observed that there was an encroachment into the road right-of-way and he discussed that with Mr. Bechel's staff and this is going to be addressed, similar to what we did with Mr. Diesing back in 2008. He also added that he drives by this facility on a regular basis and as we know in the last couple of weeks we have had a lot of sustained winds and he did not observe the same kind of material migration that he observed last year. He feels they are doing their homework with the fugitive dust plan. Chairperson Fetzer agreed with Mr. Kleinhans. He has seen the same thing. There were some concerns early with dust during load out but they are doing a nice job. Holst stated you are doing good. You listened to the concerns and addressed them in an appropriate manner. Chairperson Fetzer stated because of that, we brought in the 120 days, do we want to stay with that? Holst stated yes, let's leave it at 120 days. That is the way we did it with County Materials. Chairperson Fetzer asked if we need a motion. Pichotta stated what the committee could do is make a motion to accept the status report and to move forward with the same 14 conditions. **Ross moved to approve the status report for Muskie Proppant LLC with the same #1 - #14 conditions/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for approval of the location of a proposed new air shaft by Wisconsin Industrial Sand Company – Maiden Rock Facility, owner, on Agriculture Residential zoned property located in the S ½ of the SE ¼ of Section 11, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand staff forward:

Staff Report – Brad Roy: The applicants are proposing to construct a new ventilation shaft for their existing underground sand mine. The proposed shaft will be similar to those already constructed. Condition #18 of their CUP states that no ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LMC. The property that they chose is a 10 acre parcel which is zoned Agriculture Residential. The property is owned by WISC and has an existing residence. The ventilation shaft will be placed in the southeast corner of the property and setback approximately 85' from the south property line and approximately 115' from the east property line. The location was presented to, and approved by, the Town of Maiden Rock in December 2013. A 14 ft diameter culvert casing will be placed in the hole to the bedrock. The culvert will extend approximately 6 ft above the ground. A 12 ft fan will be mounted to culvert and a 8 to 10 ft tall wire mesh housing will be installed around and over the fan. Given that the culvert casing/fan/fencing will be in excess of 6 inches above pre construction grade, a Land Use Permit will be required. Condition #17 of the CUP states that emissions from the ventilation shafts shall be monitored twice annually and the

results shall be submitted to the Town of Maiden Rock and the Land Management Department. We have received those reports for last year, twice.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site and determine if any changes or modifications to the proposed location are necessary. If no changes are warranted, staff recommends the LMC approve the ventilation shaft in the proposed location.

Holst recused himself from discussion and voting due to possible conflict of interest. Sanden asked if there are any applicable setbacks that apply in this case? Roy stated no different than any other structure and the side yard setbacks are only 10 feet so this is beyond that. **Sanden moved to approve the location of the ventilation shaft as presented for Wisconsin Industrial Sand Company in the Town of Maiden Rock/Aubart seconded. All in favor. Passed with Holst not voting.**

Discuss take action on Travel/Training Requests. Pichotta stated there are two requests; one for Emily Lund to attend DSPS training at the Plaza Hotel in Eau Claire on February 5th, returning the same day, for her POWTS, Soil Testing and Continuing Education to keep her licensure and the second request is for Rand Kluegel to go to Middleton to attend the Wisconsin Land Information Association Annual Conference on February 12th & 13th. It would involve one night stay in a hotel. Pichotta noted that we get an education grant for this conference. **Ross moved to approve the travel/training requests for Emily Lund and Rand Kluegel/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Site Plan Review for a structure at the City of Red Wing Airport by Wes Converse, owner in the Commercial District.

Discuss take action on a request to amend the Pierce County Outdoor Recreation Plan and move forward with a proposed unbudgeted expenditure of Park Development Funds relating to a bike facility in the Town of Trimble. Basically we're proposing to create a mountain bike trail on 20 acres that was acquired next to the Trimble Recreation Area. It would involve putting a bridge over it and to be multimodal and potentially be used not only by bikers but horse riders or perhaps walkers. We are potentially applying for a grant and need your approval and to go to the Parks Committee as well. Ordinance Amendments to the Chapter 240-41C relating to Wireless Communication service facilities and that is relating to ACT20 which took away our ability to require a conditional use permit for cellphone towers.

Proposed amendments to Chapter 240 relating to Exclusive Agriculture and Cluster Development; none of the Towns have Exclusive Agriculture zoning anymore and Exclusive Agriculture zoning has now changed to Farmland Preservation zoning so we need to amend our code to reflect those changes and then as far as Cluster Development, we are looking at retooling that section and looking for guidance.

Also Andy's performance evaluation.

Motion to adjourn at 7:25pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 15, 2014 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 5 th & 19 th , March 5 th & 19 th , 2014.	Chair
3	Approve minutes of the December 18, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Floodplain and Industrial District, pursuant to Pierce County Code, Chapter 240-67A(2), 240-29D and 238-32B for Wieser Concrete Properties LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI.	Kleinhans
5	Public hearing to consider and take action on proposed amendments to Chapter 238-20 of the Floodplain Ordinance relating to camping and camping units and to Chapter 240-29D of the Zoning Ordinance relating to the allowable height of industrial and commercial structures.	Kleinhans
6	Discuss take action on a request for site plan approval for Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Discuss take action on status report and potential modification of conditional use permit/site plan approval to address disposal of waste product in the Town of Isabelle for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1 CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
8	Discuss take action on request for approval of the location of a proposed new air shaft by Wisconsin Industrial Sand Co – Maiden Rock Facility, owner, on Agriculture Residential zoned property located in S ½ of the SE ¼ of Section 11, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(1/3/14)

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 16, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates: January 6 th & 20 th , February 3 rd & 17 th , March 2 nd & 16 th , all in 2016.	Chair
3	Amend approved minutes of the October 21, 2015 meeting.	Chair
4	Approve minutes of the November 4, 2015 Land Management Committee meeting.	Chair
5	Discuss take action on proposed amendments to the Town of River Falls Zoning Ordinance.	Pichotta
6	Discuss take action on review and update to the Goals, Objectives and Policies of the Land Use Chapter of the Pierce County Comprehensive Plan.	Bechel
7	Discuss take action on Travel/Training Requests	Pichotta

MINUTES - Pierce County Land Management Committee Meeting, November 4, 2015

Present: Jon Aubart, Jim Ross and Eric Sanden

Absent: Joe Fetzer, Jeff Holst

Others: Andy Pichotta, Emily Lund, Ryan Bechel and Shari Hartung

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 18th, December 2nd & December 16th, if necessary, all in 2015.

Approve Minutes: **Sanden moved to approve the October 21, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure, Nauti Hawg Bar & Grill, in the Commercial District, pursuant to Pierce County Code Chapter 240-67A(2), by J & M Property Holdings LLC, owner on property located in the NW ¼ of the SE ¼ of Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Ross invited Michael Arnt forward: Mr. Arnt explained they are requesting a conditional use permit to build a storage, walk-in cooler on the outside of the bar. The one on the inside is shot. Sanden asked what the height of the structure is going to be. Mr. Arnt stated it will be about eight feet high. **Staff Report – Emily Lund:** The applicants own the Nauti Hawg Bar & Grill. The property is on a corner lot at the intersection of 290th Avenue and 295th Avenue. The existing establishment is 24.5ft wide x 61ft long. The structure is 27ft from the centerline of 290th Ave and 25ft from the centerline of 295th Ave. The applicants propose to expand the structure by constructing a new 12ft x 24ft x 8ft walk-in cooler on the northwest side of the establishment. This property is <1 acre located in Lot 9, Block E of Quimby’s Addition in Section 13, Town of Diamond Bluff. The property is zoned Commercial. As stated in Pierce County Code §240-67A(2), additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76. Pierce County Code §240-76A states “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure or expansion or intensification of a nonconforming use.” The applicant proposed to attach the cooler to the north wall and keep it 22ft from the north lot line and 64ft from 290th Ave. Pierce County Code §240-27C states “Town highways. Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 77 feet from the edge of the right-of-way, whichever is greater.” The new construction will meet setback to lot line and be out of the right-of-way. The entire structure is within the vision clearance triangle and the addition will also be within the vision clearance triangle. However, the proposed addition is away from the intersection and should not impose any increased hazard. The conventional septic system is located northeast of the structure and the proposed addition will not encroach on any setbacks to the septic system. The existing topography is very flat throughout the entire lot with a slight slope towards 290th Ave. The Town of Diamond Bluff recommended approval of this request on 10-8-2015 without specific conditions (which are attached). The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest or detrimental or injurious to public health, safety and the character of the area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
2. The applicant shall work with the local building inspector, All Croix Inspections, LLC and Department of Safety & Professional Services (DSPS) to ensure compliance with the Uniform Commercial Code (UCC) requirements.
3. The use shall be established within 12 months of CUP approval.

Chairperson Ross opened the hearing to the public. No public comment. **Chairperson Ross closed the public hearing.** Sanden wanted to make sure the eight foot height is not higher than the actual building. Lund stated that it is not.

Sanden moved to approve the conditional use permit for expansion of a nonconforming structure for J & M Property Holdings LLC with conditions #1 - #3/Aubart seconded. All in favor. Passed.

Discuss take action on site plan review for Expansion of a Nonconforming Structure in the Commercial District for Nauti Hawg Bar & Grill, J & M Property Holdings LLC, owners on property located in the NW ¼ of the SE ¼ of Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Staff Report – Emily Lund: The applicants are seeking site plan approval for the construction of a new walk-in cooler as mentioned in the previous staff report. This will allow the owners to rearrange the inside of the establishment and gain more room in the kitchen area. Pierce County Code §240-75 states that the purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportations, protect property values and contribute to efficient land use in Pierce County. The property is located in Section 13, Town of Diamond Bluff. The property is zoned Commercial. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts: Commercial: This district is established to provide for retail shopping and personal service uses to be developed either as a unit or in individual parcels to serve the needs of nearby residential neighborhoods as well as the entire county. The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage or other nuisance factors. Adjacent zoning districts are Commercial and Rural Residential 20. Access to this establishment is along both intersecting roads 290th Ave and 295th Ave. The applicant proposes to construct a 12ft x 24ft walk-in cooler that will be 8ft tall. There is no exterior lighting or signs proposed. Lighting is proposed to be installed inside the walk-in cooler. Screening potential is limited on-site. The applicant owns the neighboring property to the northwest, which is also zoned commercial. Pierce County Zoning Code §240-31B regarding landscape buffers states, “Landscape buffer requirements shall only apply to proposed uses in cases where a commercial or industrial use abuts a residential or agricultural district; where a utility use requiring a land use permit abuts any district; or such landscape buffer is required by a provision in this chapter. Commercial and industrial parcels which are developed as of the effective date of this chapter are exempt from this provision, except such parcels shall comply when the parcel is expanded in size or the use expands to an adjacent parcel which was previously undeveloped for such use. The Nauti Hawg Bar & Grill employs 2 full-time and 14 part-time employees year-round. Pierce County Code §240-54 requires 1 space per employee during peak shift as well as a minimum of 1 parking space per 200 square feet of primary floor area. The Nauti Hawg has 1,495 square feet of primary floor area and requires a minimum of 7 parking spaces with one for handicapped parking. The plans submitted show 16 parking spaces with one being handicapped parking. The applicants have submitted plans to the Department of Safety & Professional Services for their septic system to be upgraded with separate grease trap and a pre-treatment unit. All necessary state sanitary permits shall be secured prior to installation. Pierce County Zoning Code – Attachment 2 regarding Table of Dimensional Requirements show that Commercial zoning districts require a setback distance of 40 ft from

residential districts. This walk-in cooler will meet this setback. The applicant proposes to begin construction immediately after it is approved and permitted.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Sanden asked if this is subject to the Landscape Buffer Code? Lund stated that it is. Sanden asked if we need any more details, a map to scale at this point or is a hand-drawn map sufficient? Pichotta stated he thinks it is probably sufficient. It's a commercial area, applicant owns the adjacent property. The area is what it is. This is an opportunity, if you recall the last time we did site plan review, there was a situation where there was an existing drainage problem that we were able to address that we wouldn't have been able to address through the other mechanisms simply because it was a land use permit. We're looking for issues that could be improved by buffering or those sorts of things. From staff's perspective it doesn't seem like there is any opportunity for that, it's a pretty straight forward request. Chairperson Ross stated the aerial photo was taken on flood run, so it's a good thing we're not looking at noise abatement or something. Good thing we're just sticking with a freezer. Sanden stated we already imposed a time schedule on the previous item. So we don't need to. Pichotta stated yes, 12 months once they are issued the CUP. That would be pertinent if you were asking for a row of trees to buffer. Say you were expanding a commercial use next to a residential district and the nature of the expansion was such that would create potential noise issues and you wanted to see trees planted, and you could require that the applicant put up a surety, and you could also impose a schedule for planting of the trees. Sanden stated that the land use restrictions are going to cover all of that. Pichotta stated yes, it is.

Sanden moved to approve the site plan for expansion of a nonconforming structure, as presented for J & M Property Holdings LLC, Nauti Hawg Bar & Grill/Aubart seconded. All in favor. Passed.

Discuss take action on a request for site plan review for Mikael Andrews, agent for Gregory & Susan Andrews, owners on property located in Lot 5, Certified Survey Map (CSM) V10, P111 in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Emily Lund:

The applicants own a business call M.A.R. Power Sports that is located in a shed on the south side of the property. This business is a small engine repair shop and lawn equipment dealership. They are seeking site plan approval for the construction of a lean-to north of the existing building for more storage. Pierce County Code §240-75 states that the purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. This property is 1.01 acres located in Lot 5, CSM V10, P111 in Section 35, Town of Trenton. The property is zoned Commercial. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts, The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage or other nuisance factors. Adjacent zoning districts are Commercial. Access to this lot is along both intersecting roads 180th Avenue and 785th Street. The applicants propose to construct a 12ft wide x 56ft long open-sided lean-to with post frame construction that will be 10ft tall along the side of the existing shed. There are no new advertising signs proposed. The exterior lighting is an existing outdoor security light and nothing new is planned at this time. Screening potential is limited on-site. Pierce County Zoning Code §240-31B regarding landscape buffers states, Commercial and industrial parcels which are developed as of the effective date of this chapter are exempt from this provision. M.A.R. Power Sports employs 1 full-time employee year round. Pierce County Code §240-54 requires a minimum of 2 parking spaces with one for handicapped parking. M.A. R. Power Sports plans show 5 parking spaces with one being handicapped parking. The property has an existing

conventional septic system that is operational and being maintained. The applicant proposes to begin construction immediately after it is approved and permitted. They also plan to submit an application soon for a conditional use permit for Expansion of a Nonconforming Structure to add a lean-to on the east of the structure. **Staff Recommendation:** Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations. The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule. Sanden asked Mr. Andrews what his timeline is on this. Mr. Andrews stated hopefully within a month of getting permitted, a pretty short timeframe. **Aubart moved to approve the site plan for construction on a Commercial Structure, as presented for Gregory & Susan Andrews by Mikael Andrews, agent/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for renewal and possible modification of a conditional use permit for Ellsworth Baseball Association on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Ryan Bechel: The facility was deeded to the Ellsworth Baseball Association in 2007. The site contains a baseball field, volleyball courts, playground equipment and recently added two softball fields. Two soccer fields were removed to make room for the softball fields. The CUP was first renewed in November of 2011. It was modified in 2012 to address ongoing issues with neighboring properties. The CUP was renewed again in November 2013. The property is located in the Town of Trenton and zoned Rural Residential 20 and Commercial. Private Outdoor Recreational Uses are conditionally permitted in the Commercial District. Prior to 2012 Private Outdoor Recreational Uses were also conditionally permitted in the Rural Residential 20 District. In 2012, the Zoning Code was modified and made Private Outdoor Recreational Uses no longer conditionally permitted in the Rural Residential 20 District. This use is now considered a Preexisting Nonconforming Use which can continue. Any expansion of the use would require a conditional use permit. Tom Diercks is the current manager of the Ellsworth Baseball Association Inc. In 2012 the Association submitted a plan to address impacts to neighboring properties. The backstop was raised 4 feet in 2012 to help limit foul balls from leaving the site. Netting was installed above the fence on the third-base side in 2013 and along the first-base side in 2014 to help contain foul balls. The plan also addressed lighting issues. It states that the number of night games will be limited and that shrouds are to be placed on some of the fixtures to better contain the light on the site. Due to cost, shrouds have not been installed on the lights. An estimated maximum of 12 night games were played during the 2015 season. Conditions 12 and 13 were added at the modification in 2012. Staff has not received a current notice of liability insurance at this time. Hours of operation were posted on the site via a temporary sign. A permanent sign and post is being donated to the Association. Entrance gates are closed when the park is not open. Conditions 14 and 15 were added during the CUP renewal in 2013. Netting was installed and operations were conducted consistent with the January 3, 2012 letter to the Zoning Administrator. No compliance issues have occurred since the 2013 CUP renewal. Staff has not received any complaints since the modification in 2012. Staff contacted the Chairperson of the Town of Trenton regarding this renewal. He stated that he had not received any complaints and had no concerns about renewing the permit. The Association Manager has not received any complaints since the 2013 CUP renewal either. The existing conditions are listed #1 through #15 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a Private Outdoor Recreational Use with the following conditions:

1. *This permit shall be reviewed administratively every two years to verify compliance with established conditions. Renewal may be completed administratively if no compliance issues exist.*
2. A land use permit shall be issued for any buildings located or constructed on the site.

3. On-premise signs located along the public roads shall be permitted by Pierce County.
4. Adequate portable satellite waste stations shall be provided, one additional satellite for the proposed softball fields.
5. Solid waste dumpsters or waste containers be located on site and maintained.
6. Operation and maintenance plan be submitted with a contact number for a local responsible party, to the Land Management Department.
7. Hours of operation shall be 8:00am to 10:15pm, Sunday through Thursday, 8:00am to 10:45pm, Friday and Saturday.
8. Alleviate lighting overflow problems for adjacent property owners.
9. Proof of adequate liability insurance shall be maintained and submitted to the Land Management Department.
10. Post a sign with hours of operation. Facility to be vacated by closing time.
11. Netting shall be installed and operations conducted consistent with the January 3, 2012 letter to the Zoning Administrator.
12. Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).

Aubart asked about the lighting and shrouds, again we address that in condition #8. Doesn't sound like there have been any additional problems or complaints from the neighbors. Are we saying on condition #8 that we are not going to require the shrouds? Only that we leave it in if it becomes a problem. Pichotta stated that is how he would view it. He thinks if you recall, there was one specific neighbor that had a number of issues. One was with the lighting and also with balls landing in their yard. He thinks that the steps that have been taken were adequate to alleviate the issues with that person. He thinks if they leave that in, if there is someone that brings up the issue of overflow lighting, we could rely on that condition to ask these folks to address. Aubart stated it always amazes him that people complain about kids playing ball and balls in the yard, whether they would prefer that they steal from them or do something else. Dean DeGross it's been good with her, as of late, she comes and watches the games. The shrouds are really expensive and it's really hard to do. They are still trying to figure out if they can get money for it or how they are going to do it. Sanden asked about the liability insurance. Will current notice of that be forthcoming? Mr. DeGross stated Mr. Diercks was unable to leave work so he called and asked Mr. DeGross to come to the meeting tonight last minute. He stated Mr. Diercks has all that information.

Sanden moved to approve the renewal of a conditional use permit for Ellsworth Baseball Association with conditions #1 - #12/Aubart seconded. All in favor. Passed.

Agenda item #8 has been removed from this evenings agenda.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Emily Lund to attend a WCZA District meeting in Eau Claire on December 9th, 9:00am to 3:00pm. Item of interest on the agenda is a model ordinance presentation by Kay Lutz, Wisconsin DNR, relating to new shoreland rules. **Aubart moved to approve the travel/training request for Emily Lund for December 9, 2015/Sanden seconded. All in favor. Passed.** Aubart asked about Ryan Bechel and the soil test certification, did he pass? Pichotta stated yes, he did.

Departmental Update and Future Agenda Items

Pichotta stated we have no items for the next agenda, no renewals, no CUP requests so he proposes not to meet on November 18th. The next meeting will be December 2, 2015.

Motion to adjourn at 6:32pm by Aubart/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, November 4, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 18 th , December 2 nd & December 16 th , if needed, all in 2015.	Chair
3	Approve minutes of the October 21, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure, Nauti Hawg Bar & Grill, in the Commercial District, pursuant to Pierce County Code Chapter 240-67A(2), by J & M Property Holdings LLC, owner on property located in the NW ¼ of the SE ¼ of Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Lund
5	Discuss take action on site plan review for Expansion of a Nonconforming Structure in the Commercial District for Nauti Hawg Bar & Grill, J & M Property Holdings LLC, owners on property located in the NW ¼ of the SE ¼ of Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Lund
6	Discuss take action on request for Site Plan Review for Michael Andrews, agent for Gregory & Susan Andrews, on property located in Lot 5 of Certified Survey Map (CSM) V10, P111 in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
7	Discuss take action on a request for renewal and possible modification of a conditional use permit for Ellsworth Baseball Association on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Bechel
8	Discuss take action on review and update to the Goals, Objectives and Policies of the Land Use Chapter of the Pierce County Comprehensive Plan.	Bechel
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(10/23/15)

- **Revised October 27, 2015 @ 8:51am.**

MINUTES - Pierce County Land Management Committee Meeting, October 21, 2015

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 4th & 18th, December 2nd & December 16th, if necessary, all in 2015.

Approve Minutes: **Ross moved to approve the September 16, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider the adoption of an updated map of farmland preservation areas in the Town of River Falls as part of the Pierce County Farmland Preservation Plan and to amend the Pierce County Comprehensive Plan to include said map. Staff Report – Andy Pichotta: The Town of River Falls has requested that Pierce County amend its Farmland Preservation Plan to include an updated map of land within the Town that are “suitable for preservation.” This map is referred to in the Plan as the “Farmland Preservation Map for the Town of River Falls.” This map will be utilized as the basis for the formulation of Farmland Preservation Zoning by the Town of River Falls and also used to support the establishment of the proposed Agriculture Enterprise Area being referred to as the “North West Pierce County AEA.” The Land Conservation Committee (LCC) approved the proposed map revision at their September 24, 2015 meeting. Given that the County’s Farmland Preservation Plan has been adopted by ordinance as an addendum to the Comprehensive Plan, approval by the County Board of Supervisors will be necessary. Pichotta stated we do have folks in attendance from the Town of River Falls and he will let Mr. Rodewald talk a little bit about the criteria that they used to generate the map. It is his understanding that there have been no changes to it since the committee last saw it. Mr. Rodewald stated that the criteria used was land outside the sewer service boundary of the City of River Falls. By using that boundary rather than the one they used, which was the Extra Territorial Zone (ETZ), as they were working along with this, they felt that everything in the Extra Territorial Zone was planned for development. In meeting with the City of River Falls, their concept was if it’s outside the sewer service boundary, it’s not planned for development. That allowed them to include quite a bit of land that was very good quality farm land. It also gave them a chance to look at and use a more soils based system to determine land suitable for preservation. They looked at the size of the parcel and any parcel that was over 50% productive farmland using the GIS Maps provided by Mr. Pichotta’s group. So they worked hand-in-hand with them and feel they have a map that is very workable. Sanden asked what capability classes did you consider as productive farmland soil types? Mr. Rodewald stated 1, 2 & 3. Which is the one that they have used historically and one that goes back to 1985 Farmland Preservation Map. Sanden stated by historically, he would assume that was also used for the Exclusive Agriculture Zone? Mr. Rodewald stated correct. Ross asked Jerry Kosin if he is still on Land Conservation Committee and if there was anything that came out of that meeting. Mr. Kosin stated yes he is on the committee and no, nothing came out of that meeting. Mr. Rodewald explained he met with Land Conservation two months ago and it was received very favorably. **Chairperson Holst opened the hearing to the public.** No public comment. **Chairperson Holst closed the public hearing. Aubart moved to approve**

the amended Farmland Preservation Map for the Town of River Falls and forward a recommendation for adoption to the County Board of Supervisors/Sanden seconded. All in favor. Passed.

Discuss take action on Site Plan Review for Hager City Telephone Company in the Commercial District on property located in the NE ¼ of the NE ¼ of Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Holst invited Chad Whitcomb forward: Mr. Whitcomb explained that they are looking to put up a storage building next to their existing telephone company building. They provide telephone, internet and TV service within the community of Hager City, Bay City and some of the rural surrounding areas. The storage building will be used for fiber optic and copper spools which recently they have had some theft of at some of their plant facilities. Trying to protect that more and also they have acquired some more equipment for plowing in cable, to store that as well and expand their storage.

Staff Report – Brad Roy: The applicant is seeking site plan approval for the construction of a storage building. The building to be constructed will be utilized for storage of telecommunications installation equipment including cable spools, plows and trenches to prevent theft which has become an issue for some of their other shops. Due to unique site limitations, the applicant sought a variance. In September 2015, the Board of Adjustment authorized the applicant to locate the proposed structure no closer than 14 feet from the west property line, which abuts a 20 foot wide undeveloped right-of-way. The property is bordered primarily by residential housing to the east, south and west. Vieth’s Bar borders the property immediately to the north. Adjacent zoning districts include Rural Residential 20 to the east, south and west and Commercial to the north. The applicant has proposed to construct a 30ft x 40ft storage shed that is 17ft 4in in height. The shop will have a gravel floor and will not be served with water or sewer. A gravel driveway will be constructed from the shop to the existing paved driveway to the north. The Board of Adjustment imposed two conditions upon granting the variance.

Condition 1: The color of the building is to be representative of housing colors found in the neighborhood. The applicant has proposed a light gray base and roof with the remainder of the building being “snow” colored. The color scheme is similar to that of a neighboring business (Hager City Glass).

Condition 2: Vegetative screening is to be planted on the 14 feet between the right-of-way and buildings. The applicant submitted a vegetative screening plan that includes the planting of 5 evergreen trees that are projected to reach 6 to 8 feet in height within 5 years.

The proposed building will adhere to all other applicable setbacks. The driveway access for the property is located off of County Road VV. No exterior lighting is proposed for the shop as it is anticipated that existing exterior lighting will be sufficient. No signs are proposed. Staff has received concerns about the storm water runoff currently leaving the site by a property owner to the north. The proposed structure will likely increase the runoff from the site to neighboring properties. The applicant has not generated a storm water plan for the site. The proposed construction is exempt from Landscape Buffer requirements per Pierce County Code §240-31B. Upon completion of the site plan review the applicant will obtain a Land Use Permit for general retail and services as outlined in Pierce County Code §240-36. Pierce County Code §240-54 requires a minimum of one parking space and the current parking on site is sufficient.

Staff Recommendation: The Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule. Staff recommends the LMC place any condition(s) that it deems necessary, as well as the following:

1. The applicant shall submit a storm water management plan which addresses impacts to adjacent properties to the Land Management Department for review and approval prior to the issuance of a land use permit.

Sanden asked Chad if there is concern about trying to fit those trees that are going to get to be 6 – 7 feet tall in that 14 foot space, with roots interfering with the building at some point? Mr. Whitcomb stated he talked to Nesbitt's Nursery and there shouldn't be any problem.

Sanden asked if they are taking material currently being stored outside and going to put it indoors. Mr. Whitcomb stated yes. **Sanden moved to approve the site plan as presented for Hager City Telephone Company with condition #1/Ross seconded.** Aubart asked if we need to add the Board of Adjustment conditions. Roy stated what they have presented would comply with those conditions. Sanden asked if we need to delay this approval until the storm water plan is submitted and verify it is sufficient. Pichotta stated that is how the recommended condition is phrased. We wouldn't be able to issue the land use permit until such time as a plan has been submitted. **All in favor. Passed.**

Discuss take action on review and potential modification of Food and Wine Plan for Belle Vinez Winery, in the General Rural Flexible 8 District for Shannon & Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Holst invited Mr. Zimmerman forward: Mr. Zimmerman explained they were originally approved to operate between the dates of May 15th and December 31st. As a condition that was imposed, wine sales were to be dominant and food and/or all other sales to be subordinate to wine sales, therefore being a winery. The original food plan that they submitted, they submitted a bit conservative just estimating that they would want to trim back on the back half of the year in case food sales were higher. Having now operated officially as of May 16th until the 20th of this month when they submitted this, wine sales are dominating their revenue 69% to 31%. So as a part of that is they are asking two things tonight, one is that they can continue as is, until their approved date of December 31st. Then they had originally asked during the process for the ability to host a wedding and they are getting a lot of requests. They won't do it this year but potentially next year. As part of those requests, it was made clear, as part of appetizers which is a very broad definition, cupcakes or a cake for an after wedding thing is a pretty big deal to the bride. So they are asking that be allowed as well. Those are the two specific requests and because of the contentious nature early on, year-to-date they have seen just over 7,000 human beings walk through the doors. The number surprised him when he ran the report and the reason he points this out is there have been no valid complaints. With that many people coming through already, he would submit that the process and the structure that they have set up is working. It's a good flow, it's not ridiculous traffic. These are adults. This isn't a college, crazy environment. Economically speaking, which is something they all care about; they are getting a huge amount of folks from across the river that stop at their place and maybe stop at other places to spend money in this County. Their wine is now being distributed throughout River Falls and Hudson next week. It's gaining traction.

Staff Report – Brad Roy: Brad stated he isn't sure what to add, given that the explanation was good and he doesn't think there is anything that needs to be added.

Staff Recommendation: Staff recommends the Land Management Committee review the information provided in this report and by the applicant to determine whether the modified plan adequately demonstrates that food service has been and will continue to be subordinate to winery operations. If it is determined that food will remain subordinate to wine sales, staff recommends the LMC approve the amended Food and Wine Plan which would be the extended food service days to the end of the year which complies with condition #12. Then add dessert options to the menu, for weddings and special events.

Sanden asked if the 69%/31% is on-site sales or does that include the off-site sales? Mr. Zimmerman stated the numbers he has here are on-site and that does not include off-site at this point in time. We are literally a week and a half in. It's brand new. Sanden asked staff if we need to put any wording in since they are having off-site sales, that the revenue be subordinate and specify on-site revenue? For example, if the off-site sales got really high and that was dominating their revenue stream, they could still have a lot of food being served and overall it would be subordinate but on-site it may actually be less. Pichotta suggested that is probably not necessary as long as the committee recognizes that what that means is that on-site sales of food are to be subordinate versus on-site sales of wine. The next time we do a renewal, we could tweak the conditions. The way the agenda item reads at this point, we can't change the conditions because the agenda item reads to take action on the food and

wine plan. Mr. Zimmerman stated your point is taken and he can carve that out anytime they come back declaring the percentage of on-site and the ratio. Sanden stated kudos to you for making this work. We always kind of take a risk, especially when you have neighbors that are not sold on this to begin with. Mr. Zimmerman said thank you and stated that they do care about the community. Aubart stated he drove by the establishment and stated it's a very beautiful facility; it's very nice and it fits well. **Ross moved to approve the amended Food and Wine Plan as presented for Belle Vinez Winery/Aubart seconded. All in favor. Passed.**

Discuss take action on a request by the Town of Union for an extension to the 90 day timeframe that a town has to generate a recommendation for a conditional use permit application, per LMC policy (6.5.13). Staff Report – Andy Pichotta: Pursuant to the LMC Policy (6.5.13), the Town of Union is requesting a 60 day extension to the 90 day timeframe to generate a recommendation regarding Muskie Proppant's request for a conditional use permit for nonmetallic mining. Muskie Proppant requested that the Town of Union place them on an agenda to secure a Town Recommendation on August 27, 2015. Given the LMC's policy, the Town would have until November 25, 2015 to generate a recommendation before the applicant could potentially submit an application without a formal town recommendation. The Town of Union requested an extension on October 12, 2015 which is within 60 days of the applicants request to be placed on an agenda. The Town Recommendation Policy adopted by the LMC on June 15, 2013, states: "In cases where a Town is unwilling or unable to generate a Town Recommendation regarding a proposed rezone or conditionally permitted use within 90 days of a request to be placed on a town agenda, the Land Management Department may accept an application that does not contain a completed Town Recommendation Form. A town may submit a written request to the Land Management Committee (LMC) requesting that an extended timeframe beyond 90 days be authorized. Said request must explain why an extension is warranted and establish a timeframe within which formal action would be taken. Such extension must be requested within 60 days of an applicant's initial request to be placed on a town agenda. Additional extensions may be granted. If an application for a rezone or conditionally permitted use is accepted without a Town Recommendation the LMC will utilize guidance given by that town's comprehensive plan, if applicable, when considering the request." Correspondence from the Town of Union regarding their request for an extension is attached. Basically the reason they are asking for an extension is two-fold, although their correspondence details one more than the other. The proposed mine is 160 acre above-ground mine that is located within the Village of Plum City's jurisdiction if they were to exercise Extra Territorial Zoning, it would be within that boundary, so they are seeking an opportunity to hold a joint meeting with the folks from the Village of Plum City to garner their input. Pichotta feels that is a good idea given that it's in an area as our comp plan refers to a contiguous growth area of an existing municipality. So if the Town didn't solicit input from the Village, we would likely need to. He would like to note that the Town has also submitted a request to Muskie Proppant requesting additional information. He thinks they have outlined 10 or 11 different items that they would like to have additional information provided regarding the actual plan that they would utilize. The Town also stipulated that unless that information is provided, they are not going to be able to generate a recommendation. Until it is, they will continue to request extensions, so if Muskie does not bring in information for them that satisfies their request, they will in all likelihood be back in another 60 days requesting another extension until such time as that information is provided. Mr. Krings from the Town of Union is present and Andy doesn't know if he has anything to add. Mr. Krings stated no, Andy did a good job. **Staff Recommendation:** Staff recommends the LMC consider and act upon the Town of Union's request for an extended timeframe to generate a Town Recommendation, an additional 60 days is what they are requesting. Chairperson Holst stated what they are requesting from Muskie and what they are requesting from us is well within reason and he feels that it should be granted. **Aubart moved to approve the Town of Union's request for an extension to the 90 day timeframe that a town has to generate a recommendation for a conditional use permit application/Ross seconded. All in favor. Passed.**

Discuss take action on review and update to the Goals, Objectives and Policies of the Housing and Economic Development Chapters of the Pierce County Comprehensive Plan. Staff Report – Andy

Pichotta: You have in front of you an information packet and the first section is on housing. It includes a lot of statistics which he will go into as much detail as the committee wants. Housing: Being the primary developed land use in Pierce County, housing directly affects almost all other elements of the comprehensive plan. Providing an adequate supply of safe, accessible, affordable and well-designed housing for the people of Pierce County is paramount to achieving the vision of an exceptional quality of life for residents. Given the susceptibility of housing to changes in demographics, economy and market pressures it can be one of the more challenging elements to impact through county comprehensive planning. An analysis of current housing conditions will help Pierce County gain a better understanding of the changes that have occurred and provide insight into future changes that can be anticipated. The Pierce County Comprehensive Plan housing stock assessment includes the age, value and type of existing housing units; as well as occupancy characteristics such as tenure and affordability. This data is valuable in forecasting the future housing demand to plan for future development. The purpose of this element is to assess the current housing stock and identify changes that have taken place in housing conditions since the initial data collection phase was completed to determine if modifications to the Comprehensive Plan's Goals, Objectives and Policies are warranted to further the County's housing vision.

Housing Vision:

In the year 2029, Pierce County offers a variety of housing types to meet the lifestyle, demographic and economic needs and desires of its residents. Housing developments are designed in harmony with local farms and natural green spaces. Alternative housing choices (such as condominiums, apartments, townhouses and so on) buffer nearby single family residential neighborhoods from business areas and offer a housing choice for residents who want to live in a development close enough to walk to stores, restaurants, services and local employers. Additional senior housing development has also been established in Pierce County. County codes and ordinances promote attractive housing with abundant green spaces and trail access in accordance with the recommendations outlined in the Pierce County Comprehensive Plan. On the second page, you can see a map that demonstrates housing density in Pierce County in 2010 and note that the higher density is pretty much where you would anticipate it to be within existing municipalities and also within some of the areas in the Towns of Clifton and Oak Grove that are characterized by rural residential subdivisions. The next page shows the number of housing units that were constructed historically in each of the towns. The towns that you would expect a substantial amount of change especially from 2000 to 2010, Towns of Clifton and Oak Grove, a substantial amount of growth, interestingly enough the Town of Gilman also saw a 26% change in housing units. Some of the towns that didn't see much growth are a bit surprising, Ellsworth saw 1.3% growth; River Falls saw 1.5% growth which is interesting given its proximity to other high growth areas that might be attributable to limitations on the ability to build houses on 1, 2 & 3. It could be the development that did occur happened within the City of River Falls. Spring Lake was also on the low end. It saw 1% growth in that decade. On the bottom of the page is Household Projections. The projection for 2015 is another 650 housing units and 1,000 beyond that for 2020, probably a little generous. The next page is Housing Tenure, just demonstrates owner occupy versus renter occupied. Owner to renter ratios have remained fairly static at about 7:3. Estimates of occupancy, where 95% of the housing stock in Pierce County was occupied as of 2013. Year Structure Built: you can see a total of 16,000 units; 17.75 were built between 2000 and 2009. The other peak year was the mid 70's. Chairperson Holst stated there are quite a few in 1939 and older, your highest percent. Pichotta, Single family homes comprise newly 80% of all housing units. Housing values continue their rapid rise that began in the 90's and median home price increased by nearly \$70,000.00 in the last 15 years. Page 7 discusses Monthly Mortgage Costs as a Percentage of Household Income. The take away there is that 33.5% of county homeowners exceeded the affordability threshold in 2013, that being greater than 30% of household income. The same holds true for tenants that have passed the affordability threshold, it's 46%. Ross asked on page 6, the increase of nearly \$70,000.00 was that averaged out over the bad years through 2010? Do you think that affected the numbers pretty good? Pichotta stated it certainly did. Ross said if you look at that rise up until the fall, there would have been a much higher number. Pichotta stated given that it goes through 2013, you can see the sale prices on the next scale, where it topped out and then came back down.

Existing Goals, Objectives and Policies:

Goal:

- Manage housing development to insure that a full range of housing opportunities exist for Pierce County residents.

Objectives:

- Encourage at appropriate locations an affordable variety of housing types commensurate with demands created by current needs and future growth.
- Encourage the improvement of deteriorating residential areas and assure safe, healthy and attractive communities through preventive maintenance and appropriate reinvestment.
- Utilize and/or explore various programs and development concepts that encourage creative methods to preserve county character and natural resources.

Policies:

- Encourage the development of housing surrounding existing municipalities at suburban or countryside densities in a sequence that follows an orderly pattern of annexation, zoning, subdivision and the extension of public facilities. In cases where properties are contiguous to existing urban densities, similar urban densities may be extended into the contiguous growth areas.
- Encourage towns, villages and cities to plan for residential subdivision growth through comprehensive planning.
- Direct residential subdivision development to planned growth areas identified in town, city and village comprehensive plans.

Recommendations:

The LMC should consider whether changes or additions to the Comprehensive Plan's Goals, Objectives and Policies are warranted to further the county's housing vision. Given the data observed it may be warranted to include an additional policy to address issues concerning increased housing cost in Pierce County. Staff suggests the LMC consider the addition of the following policy statement:

Policy:

Encourage towns to recognize the impact that standards contained in a town subdivision ordinance may have on the cost of housing. Basically, if you are looking to provide cheaper housing options, having large minimum lot sizes don't really do that. It may be that some towns have that in an effort to ensure that a higher standard of home but it may be warranted to include a policy to ensure towns think about those sorts of things when considering adopting subdivision ordinances. Sanden stated it warrants attention as you have given it. The way you have done it is adequately hands off. Make them aware of it but not impose requirements at this point. Chairperson Holst stated it would be a drastic change in approach and he doesn't believe the towns are so naïve that they can't figure out that smaller lot sizes are more economically viable. Being on the Town Board, he wouldn't want the County to tell him what he can have in his subdivision ordinance. Chairperson Holst asked Mr. Krings if he has anything to add to that. Mr. Krings stated that some of these five acre sites and three acres of it grows up into weeds. Pichotta stated he doesn't think the approach has been to tell the towns anything. Chairperson Holst stated perception and there are 17 people as Town Chairman and some of us are going to perceive it as more than a suggestion. Pichotta suggested that the policy didn't need to be included. Chairperson Holst stated Eric said it right and not at this time, maybe at another time. Sanden stated he would encourage including it. He stated we just wouldn't want to be any more heavy-handed at this time. Chairperson Holst stated a long time ago, in the 80's, he was told what a wonderful committee this was and how us people that are here are real open to everything and we'll listen to everything. Shortly after that, they started cramming stuff down everybody's throat. Zoning got way tougher in the County, hands down. Pichotta asked if there is some way we can rephrase this that would make you more comfortable. He suggested that "encourage Town's to recognize," is about as soft a pedal as one can do. Chairperson Holst stated at one time we are telling them to have subdivision ordinances and then we're telling them how to write it. Pretty quick we'll be writing their subdivision ordinances. That's just the thought process that he has. Pichotta stated he has actually written a couple at the request of the Town's. Chairperson Holst stated his township is probably one of them. That is different when they request it. When we encourage the Town's participation in their plans, subdivision

ordinances are the Town's right, now the County is going to start suggesting what they are going to do. Ross asked what he was trying to achieve. Chairperson Holst stated he says we should have smaller lot sizes, more affordable housing. Some Townships are still at one acre minimum, two acre minimum. Pichotta noted that no Town that has a subdivision ordinance has a one acre minimum. Chairperson Holst stated then it's those of us that don't have one that are still at the one acre minimum. Pichotta stated arguably you are providing more affordable housing options or the potential for them. Chairperson Holst stated he agrees with Mr. Krings that larger lot sizes tend to just grow more weeds. But that also was, for a long period of time, what attracted people to move to the country. They wanted a five acre lot with three acres of weeds. Two acres is about all you can maintain unless you make it a full-time job. Pichotta stated that is still the case, many folks still move to the County because they want a hobby farm sort of a thing. Sanden stated he likes it. Ross stated he is OK with it; it's soft enough that he doesn't think it would be a runaway problem but he doesn't sit on a Town Board either. Chairperson Holst asked Mr. Krings and Ms Smith if they will talk about this at their Town Board meeting? Ms Smith asked Andy how they are going to get this information out to the Town's. Pichotta stated it would be through this plan or if you read "Encourage towns, villages and cities to plan for residential subdivision growth through comprehensive planning." We haven't done any specific outreach to them and said "Hey, we want you to go out and plan." This is the way that most of the plan is phrased. Ms Smith stated her question comes from the fact that they are looking at their ordinances and comprehensive plan right now. If you were to send something, they would include it. She doesn't think she sees encourage as a detriment. It would just be a heads up. She would agree with Jeff that a policy that said they have to do this, wouldn't sit well in the Town of River Falls but the fact that they are looking at those things for them to take that into consideration, doesn't seem to be an unreasonable request. Pichotta stated when we consider adoption of all of this, when we get through all of these different chapters, each Town will be provided a copy of this. Ms Smith asked if they would be sending out a letter saying this is the policy now we want you to take a look at your subdivision ordinance. Pichotta stated no. Chairperson Holst suggested that will come later. Ms Smith stated as long as you're on the committee, she is sure that won't happen. If that is the way you are proceeding, she doesn't think her Town is going to take offense at that. We would take offense at a policy that says now Pierce County has done this and we want you to do that. Pichotta said he understood. Sanden stated he doesn't think anyone on this committee is inclined to do that, if he can speak for them, but he appreciates her comments. Pichotta asked Mr. Aubart if he is comfortable with the phrasing. Mr. Aubart stated he thinks he understands what Andy is trying to accomplish which is to make them aware of the potential impact. He was just trying to think of how you could word it different and say the same thing. Pichotta stated what he would anticipate in an ideal world, when a Town was to look at their local comprehensive plan, which is the basis for their subdivision ordinance, they would consider what the County plan has to say because they kind of work in concert with one another. That is how he hoped these would be taken; to use them for guidance when they formulate their local ordinance, for a resource for the Town should they choose to use it.

Economic Development:

The primary purpose of economic development element is to promote the stabilization, retention or expansion of the economic base and to provide quality employment opportunities in the county and region. There is an important distinction to be made between economic growth and economic development. Economic growth is concerned solely with job creation, tax base growth and product output growth. True economic development, the aim of this element of the comprehensive plan, creates quality communities and work environments, increases business competitiveness and allows for entrepreneurial spirit and innovation. Economic development is about working together to maintain a strong economy by creating and retaining desirable jobs, which provide a good standard of living for individuals. This includes assisting existing businesses, encouraging business expansion, recruiting new businesses, building a culture of trust and entrepreneurship and strategically planning important capital improvements and related infrastructure expenditures. The economic development element provides important data regarding key economic health indicators such as employment and income data. These statistics are important to analyze the strengths and weaknesses of the county with respect to attracting and retaining businesses and industries. In reviewing updated data concerning economic development the county

can determine whether modifications to the existing goals, objectives and policies are needed to further the county's economic development vision.

Economic Development Vision:

In the year 2029, Pierce County offers a variety of shopping, restaurant and entertainment choices for its residents. In addition to a variety of commercial uses and residential development, industrial businesses have established near high access corridors. These businesses offer quality employment opportunities and are an important asset to the county's tax base. Many residents continue to also find a great variety of employment opportunities in nearby communities that are easily accessible via regional highway corridors. Overall, economic development in Pierce County is in harmony with the county's natural environment.

The next page is a list of the largest employers in the County. The largest employer continues to be University of WI River Falls. Notable exception is the United Natural Foods Distribution Center which was constructed in 2014. That facility employs 140 individuals with plans to double that number in the next three years according to Pierce County Herald reports. The next page illustrates employment characteristics in 2013; breaks down employment by a variety of industries. The bottom of the page has occupational characteristics from the Bureau of Census in 2010. Page 13 gets into household median income trends, illustrated over time and the percent change from 1989 – 1999 and 1999 – 2009. Income projections from 2015 to 2020 are listed at the bottom of that page. For the past twenty years the median income has increased nearly 20%. Income projections predict that the median household income will increase by 18% by 2020. Chairperson Holst asked what year dollars? Pichotta stated current dollars; that also seems generous. The next page covers wages by industry. According to the 2013 Census Bureau data public administrative jobs command the highest average wages in Pierce County. On the bottom of that page, Place of Work, state of residence versus county of residence, outside county of residence and Pierce County's proximity to the Twin Cities Metro Area. There are a number of residents, particularly on the west side of the county that work in Minnesota. The table shows a gradual shift over time of residents seeking out of state employment. Nearly two-thirds of the County's resident workforce seeks employment outside of Pierce County. 44% of all resident workers cross over into Minnesota for employment. Occupational projections for West Central Wisconsin for 2010 – 2020; health care occupations are projected to see the highest growth in terms of number of positions, adding over 5,000 jobs by the end of the decade. Unemployment rates on the next page and there is a listing of environmental clean-up and brownfield sites. It seems a little out of place but it was with the original data collection and this was where it was so we included it here too. There are eight active brownfield sites within the County.

Existing Goals, Objectives and Policies:

Goal:

- Develop a strong, diversified base of industry, commerce, agriculture and education that provides a broad range of job opportunities, a healthy tax base and improved quality of services to county residents.

Objectives:

- Encourage and increase opportunities for Pierce County residents to work within Pierce County.
- Encourage the preservation and function of existing business districts.
- Encourage the attraction, retention and expansion of industries and businesses to provide a healthy tax and employment base.
- Encourage the development of more diversity in employment opportunities in proximity to the existing work force.
- Encourage the location of commercial and industrial development in accordance with sound land use principles (i.e. transportation, utility infrastructure).
- Encourage the development of regional aviation facilities that contribute to the economic viability of employment areas.
- Maintain and support agriculture as a strong component of the county's economy.
- Promote ongoing dialogue between county planning entities and economic development groups to ensure economic development projects are consistent with plan goals and objectives.
- Promote development of tourism/agri-tourism and recreation throughout the county.

- Encourage the creation of new ventures.
- Encourage competition and further the development of communication and information technology infrastructure.

Policies:

- Encourage the development of employment concentrations in areas capable of being served by adequate infrastructure.
- Encourage the development of multi-use trail systems that link major residential areas to employment centers, public facilities and recreation areas.
- Encourage the use of land that adjoins or is in proximity to significant transportation facilities to associate with and benefit from these facilities. In this way, airport facilities, railroad corridors, highways and river shipping will lend the greatest leverage toward economic development.
- Encourage entrepreneurship (e.g. home occupations, home business, farm and home businesses).
- Encourage the promotion of appropriate recreational opportunities while maintaining the rural character of the area.
- Pursue establishment of conditional use permitting procedures that allow for site specific, multifaceted, entrepreneurial activities and allow for limited lodging and accommodations (e.g. vineyard with retail component and lodging/conference facilities).

Recommendation:

The LMC should consider whether changes or additions to the Comprehensive Plan's Goals, Objectives and Policies to further the County's Economic Development vision are warranted.

Note that the final policy listed; Pursue establishment of conditional use permitting procedures that allow for site specific, multifaceted, entrepreneurial activities, we have done that, it's in place and we can probably strike that one. Any thoughts on changes or conditions, as staff we didn't necessarily come up with anything. We thought we did a pretty decent job a few years back.

Sanden asked if we should, in the vision statement, change the date to 2035, are we looking out twenty years. He is assuming we did the 2029 because we adopted this in 2009. Pichotta stated typically the effective life is twenty years. That would make sense. We will start making the change. The approach here is to take this chapter by chapter and get some guidance. Then we will compile it all into a document that we will take action on as a whole. Ross asked about the objectives and so forth, did you talk to our economic people, Paul Schwebach. Pichotta stated, not this go round but we sure did, Bill Warner was involved in every step and he attended every meeting when the plan was drafted. Sanden asked if anyone ever came up with the idea of business incubator. Chairperson Holst stated business incubators have been talked about for twenty years in Pierce County. Pichotta suggested that the zoning code allows you to use your home as a business incubator. That's basically what a Farm and Home Business is. It enables you to run a business until you need more than eight employees or five thousand square feet in an accessory structure. The assumption, at that point, is that you would move to an appropriate district. He has always viewed that as a mechanism to encourage start up businesses. Chairperson Holst stated at one point the University talked about a business incubator. Ross stated they are building it in St Croix County, Sterling Ponds, the final approval just came through to build the incubator which will be a combination of innovative business solutions coming out of the university and also small business development along with St Croix County. The final funding just came through so they will be breaking ground, doing a winter build on that facility. Pichotta suggested that if LMC members come up with ideas after this meeting, and also when this comes forward as a package, we can continue to tweak it. Sanden stated as to your point with the last bullet, to strike it given that we have already done it, would there be any value to put in again, not to overuse the word, "encourage the establishment". In as much as the town's, for the same reason that we have the suggestion with housing, to encourage conditional use permit procedures that would allow for this. Pichotta stated we do require a Town Recommendation as part of the application for any conditional use permit. So he isn't sure what we would encourage them to do. Did you think we should strike it? Sanden stated he doesn't see any reason that it shouldn't be there. Pichotta stated certainly if one were to challenge our ordinance and wanted to know why it was we did what we did; it would provide that justification

which is the basis for comprehensive plans. Sanden stated he would leave it. Pichotta stated he would suggest they approve what was presented thus far and we'll continue to move forward with additional chapters as we meet. Sanded asked if he needs a formal motion. Pichotta stated just if committee consensus is to move forward as presented that is what staff will do.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a request for a CUP for Expansion of a Nonconforming Structure, the Nauti Hawg Bar & Grill.

Discuss take action request for Site Plan review for Mikael Andrews, agent for Gregory & Susan Andrews, in the Town of Trenton for an addition to a structure in the Commercial District.

Discuss take action on a request for renewal and potential modification of a CUP for Ellsworth Baseball Association. We still have that before the committee. Chairperson Holst asked when we can get rid of that.

Pichotta stated we can stop after this next renewal. We can go to administrative renewal unless issues arise.

Discuss take action on Goals, Objectives and Policies for the Land Use Chapter of the Pierce County Comprehensive Plan.

Motion to adjourn at 7:08pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 21, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 4 th & 18 th , December 2 nd & 16 th , if necessary, all in 2015.	Chair
3	Approve minutes of the September 16, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider the adoption of an updated map of farmland preservation areas in the Town of River Falls as part of the Pierce County Farmland Preservation Plan, and to amend the Pierce County Comprehensive Plan to include said map.	Pichotta
5	Discuss take action on Site Plan Review for Hager City Telephone Company in the Commercial District on property located in the NE ¼ of the NE ¼ of Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.	Bechel
6	Discuss take action on review and potential modification of Food and Wine Plan for Belle Vinez Winery, in the General Rural Flexible 8 District, for Shannon & Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Discuss take action on a request by the Town of Union for an extension to the 90 day timeframe that a town has to generate a recommendation for a conditional use permit application, per LMC policy (6.5.13).	Pichotta
8	Discuss take action on review and update to the Goals, Objectives and Policies of the Housing and Economic Development Chapters of the Pierce County Comprehensive Plan.	Bechel
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/9/15)

MINUTES-Pierce County Land Management Committee Meeting, Wednesday, September 16, 2015.

Present: Jon Aubart Jim Ross & Eric Sanden

Absent: Joe Fetzer & Jeff Holst

Staff: Ryan Bechel, Emily Lund, Andy Pichotta & Tracie Wold

Others: Pat Brookshaw & Connie Brookshaw, Collin Cain, Mellissa Deyo & Donald Dufek, Corrie Hamblin, Dave Sauer, Susan Wallin

Chairperson Jim Ross called the Land Management Committee meeting to order on Wednesday, September 16, 2015 at 6:00 pm at the Pierce County Courthouse in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 21st, November 4th, 18th all in 2015.

Approve Minutes: **Aubart moved to approve the September 2, 2015 Land Management Committee minutes/Sanden seconded. All in favor. Motion carried.**

Public notice is hereby given to all persons in Pierce County WI that a public hearing will be held on the 16th day of September 2015 at 6:00 pm in the County Board Room in the Courthouse in Ellsworth, WI before the Land Management Committee to consider and take action on a request for a conditional use permit for sludge disposal in the Agricultural-Residential & Rural Residential-8 districts by David Sauer, Cedar Corporation, agent for Ralston Purina & Nestle Purina Petcare Co., agent on property owned by Roger Dosedall, Amy Dosedall, Sharon Hirdler, Kemmerer FMTR, Bradley Kemmerer, Brian Kemmerer, Jean Ann Kemmerer TR, Stanley & Catherine Kemmerer TR, Troy & Amy Kemmerer, MOAP LLC, Troll King LLC, and Holst Farms Inc. On property located in the NW ¼ and the W ½ of the SW ¼ of Section 6, the SW ¼ of the SW ¼ and the SE ¼ of Section 7, the W ½ of the NW ¼ of Section 17, E ½ of Section 18, all in T25N, R18W, NE ¼, the SE ¼, the SW ¼ and part of the NW ¼ of Section 2, the N ½ of Section 11, and the E ½ of the SE ¼ of Section 12, all in T25N, R19W, all in the Town of Diamond Bluff, Pierce County, Wisconsin. All persons interested are invited to said hearing and to be heard.

Dave Sauer from Cedar Corporation stated that he is working with Nestle Purina and Collin Cain. This is an application of what some people call sludge, but they call it bio-solids. There is beneficial use of products in this material that is being land spread. This material from Nestle is a food grade product material that they send out. While making this product, flavor enhancements for dog food, cat food and other materials, there is a wash water and a waste water that is generated. The waste water is then treated on site with a waste water treatment plant; it operates 365 days a year. After it is treated, it is allowed to settle. The settled material is the bio-solids/ sludge by-products. They have been doing this every 2-4 years depending on how much production is at the plant. That material is now to the point where it is best for the company and the treatment plant to remove some of the sludge material that is built up in the two storage lagoons they have

on site. They have done testing on it and the test results are very consistent with what they have done in the past. The amount of Nitrogen that's in the product per 1,000 gallons is in the range of 15 pounds per 1,000 gallons. Phosphorus is about 12 pounds per 1,000 gallons. Chloride is about 6 pounds per 1,000 gallons, not a problem for the soil. Potassium is less than 1 pound per 1,000 gallons. All the farmers they have lined up and in the application all have a nutrient management plan and an agronomist who has looked at all the test results. They are going to take the test results into account depending on what sites they use. The farmers will now be able to adjust their fertilizer application since Nestle can give them Nitrogen and Phosphorus which will be a cost saver. In all of the sites they have listed, there is well over 1,000 acres. All they really need to use is in the range of 100 to 200 acres at the rates they are proposing to spread on. They have also sent this request onto the DNR and Dave received the approval letter. The approval was forwarded to Emily. They have gone through all the steps with the farmers and their nutrient plans. All of the sites they are using this time around are the same list of sites they used four years ago; all of those sites were approved four years ago by the DNR. The only thing that changed was the application rates because they did new test results on the sludge. There is a whole set of limits and regulations for the DNR on setbacks from private wells and inhabited residents. There is a whole list of requirements they are obligated to follow and they have followed them in the past. The whole operation is going to take a couple weeks of time once they start. They would like to start sometime this fall when the crops come off. One request Dave asked to have considered is if they don't have enough time to get all the material out, is if the approval could carry over into the spring and fall of next year. The DNR approval is pretty much written that as long as they use the same site and follow all their guidelines, they don't have to submit it a second time. It would maybe save everyone some time if it could be extended. Sanden asked what the consistency is. Dave stated the solids content is anywhere from 3-4%, so it is pretty watery. It is dirty water, it's not thick sludge. The last few years they have actually incorporated it into the ground with an aggregator; they have not just spread it on top of the soil. Most of the farmers want it tilled into the land. Collin Cain stated waste water treatment may sound like a lot of operation and work going into it. Nestle adds absolutely nothing to it. It's the cleanup at the end of the week or during the production processes when cleaning needs to take place. Once it goes out into the waste treatment system, they add air to break down micro-organisms. It is constantly stirred and moving then it's drained off and they just let it settle. There are two ponds. They will be filling one, draining the clear water off of the other one and whenever it is needed or equalized, they can switch and do the other one. It's not like manufacturing with a lot of chemicals going into it. It is a very benign operation. Sanden asked about bacteria and active sludge. Collin stated they don't add anything to it. He has worked at other Nestle facilities where they work to balance the PH, but they don't have any need to do that here, it takes care of its self very nicely. Sanden asked them to compare the odor when it's on the field to manure spreading. Collin Cain stated he grew up on a farm with hogs and turkeys, the smell was terrible. This does not begin to compare to that, it's so minimal. Sanden noted that some of the area that is open for spreading, is out of the flood plain and slope zone, except for a tiny little piece in the NW corner of the Western piece. Does the DNR regulate that you stay out of the flood plains when you apply it? Dave stated yes. Sanden questioned whether they had all their appropriate DNR permits, Dave stated they do. The WI DNR form 3400-053 had been submitted since the original CUP submittal. Sanden asked the staff about a condition stating a time table. Pichotta stated typically conditionally permitted uses need to occur or take place within 12 months, if you wanted to extend it out, you could add an additional condition, "activities authorized by this CUP shall occur within 16 months", if in fact that is something that you

wanted to add. Sanden asked if we do approve it for 16 months, we don't have to worry about you applying it to frozen ground because the WI DNR permits wouldn't allow that, Dave confirmed.

Staff Report-Emily Lund: The Diamond Bluff Town Board recommended approval of this request. Pierce County Zoning Code Ch. 240 Attachment 1:1 Table of Uses define sludge disposal as a conditionally permitted use in the Agriculture Residential zoning district. Technical information that was described was submitted and additional information that was described by Dave Sauer was submitted with DNR approval. NR 214.18(2)(f) indicated that sludge spreading sites are limited to slopes of 12% or less when the temperatures are above freezing and 2% or less when the ground is frozen or snow covered. Buffers will be recommended by WI DNR to be protected. The soils on each field that have 0-12% slopes are Seaton silt loam, Meridian silt loam, Chaseburg silt loam, and Finchford loamy sand. The remaining soils are too steep for sludge spreading. The applicant is planning to land spread this year before it freezes at a rate approved by the WI DNR. Some of the DNR setbacks are listed to wells, dwellings, dry runs, etc. It is recommended that the properties receiving sludge update their NRCS 590 Nutrient Management Plan to reflect the new fertilizer and future fertilizer needs. For example, the amount of phosphorus applied to the land from this sludge would have enough to feed plants up to four years. Staff recommends the Land Management Committee consider the above and determine whether the proposed land spreading of sludge at the proposed locations would be contrary to the public interest, or would be detrimental or injurious to public health, safety, or character of the area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions: 1) Applicant shall adhere to all conditions and recommendations of the WI DNR. 2) Applicant shall update the land spreading site maps to reflect required WI DNR setbacks and slopes. 3) Sludge shall be applied only during daylight hours. 4) Sludge application shall cease if the ground becomes frozen or too wet for land injection. 5) Field access points shall be protected to control field soils and sludge from being tracked onto public roads. 6) Sludge spreading locations need to follow all WI DNR specified slope and setback requirements (i.e. to wells, to dwellings, to surface water, to dry runs with or without vegetative buffers, to bedrock or groundwater). 7) Any damage to roads shall be the responsibility of the applicant. 8) Applicant shall contact the Land Management Department when sludge spreading begins.

Ross opened the floor to public comments. Susan Wallin asked if it had an odor. Collin stated yes, when you stir the sludge up there is an odor to it. But they put it into enclosed tankers and transport it. It is land injected. The farmers appreciate because they get their tilling done in addition to fertilizer benefits. Corrie Hamblin asked how the amount of nitrogen and potassium have changed in four years, have they gone up or down or stayed the same? Dave said some have gone up and some have gone down. But of that 15 pounds of nitrogen per 1,000 gallons it has maybe changed 1 out of the 15. Same goes for phosphorus, potassium & chloride. Dave also stated there is always going to be some variability when you do these tests, but for the most part, it doesn't really affect your application rates very much. A pound per 1,000 gallons when your only applying 10 pounds, it's less than 10% of the total rate. Corrie asked if they changed, did they all go up. Dave stated no. There were some that were a little less. Over all it was in the realm of data variability for waste water. Waste water is an odd thing, you get variability. Corrie asked if there was someone who knows the "pounds-per-thousand" looked into it and decided it was safe. Emily stated the DNR has a limit and range that Dave was mentioning and it is within that limit. They have a maximum amount of liquid they can apply per acre, and they are going to stay within that limit as well. Corrie asked if the permit wasn't extended into next

year, what would happen. Pichotta stated another meeting would be back here next fall if it was only for 12 months. Ross added that this particular CUP is brought back every so often. 1997 was the first issuance. The committee relies on the WI DNR to provide their permitting and data. Ross assured the community that if there are ever any issues or problems, the committee will convene and address issues if warranted. He feels it is an important distinction. Even though they may issue a CUP, they always have the option to revoke them or in some cases they have brought people back every three months if there is a problem. In this case, it has gone pretty well and the DNR keeps a good handle on things as well. **Sanden stated finding this proposal is not contrary to public interest, detrimental or injurious to public health, safety or character, he moves to approve the conditional use permit for land spreading of sludge with conditions 1-8, adding condition 9, "this CUP will be active for 16 months from the date of issuance"/ Aubart seconded the motion. All in favor. Motion carried.**

Discuss and take action on a status report and potential modification of conditional use permit for a retreat center in the Primary Agriculture district for Mellissa Deyo and Donald Dufek. Owners on property located on the SE ¼ of the SE ¼ of Section 33 in the Town of Martell, Pierce County, WI. Mellissa Deyo stated they are finally close to being done with everything and being officially open. They have started booking weddings for next year and have had a couple of dry runs for friends and family, so they are working out the kinks, and feel really good about how everything has gone so far. They expect the engineering architect to come tomorrow (9/17/15) to do the final-final inspection on the compliance issues for handicapped accessibility. They have done everything on the check list and are confident they will pass that without any trouble at all. **Staff Report-** Emily Lund: Status report and potential modification to the CUP for a Retreat Center. The owners purchased the property on 4-17-2012 and received CUP approval on 5-2-2012 to change the use of the agriculture barn to a retreat center for country-style weddings and receptions. Many neighbors were in opposition of the change in use, so a status review was conditioned part of the approval. The preparation for the use has taken longer to complete because a few expensive projects were not anticipated. On 9-3-2014, a status report was presented to the LMC, condition #3 amended, and conditions 10-12 were added. The spruce trees and other landscape screening were planted before the meeting. Between September 2014 and 2015, the owners made adjustments to their property as the Building Inspector directed. The stairs were widened to 48 inches, the bathroom stall dividers were installed and accommodate handicapped accessibility, emergency lighting was installed outside, the parking lot was graveled, the area for handicapped parking is designated with signs, and UCC final inspection is/was scheduled for 9-10-2015. The owners had a few family members get married at the retreat center. They have been advertising their retreat center and have 6 bookings for 2016. The owners have had personal parties and weddings at this property, but no commercial weddings have taken place at this time. The property is located in Section 33 in the Town of Martell. The property is in the Primary Agriculture zoning district. The existing conditions are listed 1-12. Staff recommends that the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends that no action be taken. Sanden asked since there has been a few events and parties, has there been any complaints received. Emily stated no, not even from Town board members. Sanden asked if the landscaping is doing well and Mellissa

stated yes. Emily added it is very pretty out there, there is a nice orchard with fruit trees, and it looks very nice. **Committee determined that no action was necessary.**

Discuss take action on site plan review for a pavilion for BHH, Inc. (DBA, The Bluffs) in a Commercial zoning District pursuant to section 240-75 on property located on Lot 1 CSM V 2 Page 114. Being part of the NW ¼ of the SE ¼ in Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.

Pat Brookshaw stated they want to obtain a permit to build a pavilion that is 24' x 30' to do some outdoor weddings and service outside.

Staff Report-Emily Lund: The Bluff's Bar & Grill employs 4 full-time and 14 part-time employees year-round and cook a variety of food for different groups, banquets, and events. The applicant is seeking site plan approval for the construction of a new pavilion to allow customers to eat outside. Different groups can reserve the new pavilion for events, like weddings, graduations, birthday parties, etc. Pierce County Code §240-75 states that the purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. This 2 acre property is located in Section 35 in the Town of Trenton. It is zoned Commercial. The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage, or other nuisance factors. The driveway access is located on a frontage road (785th St) that connects to US Hwy 63. Adjacent zoning districts are Commercial and Rural Residential-8. The applicant proposes to construct a 24' x 30' pavilion that will be 17.5' tall with a 6/12 hip roof. Lighting is proposed to be installed on the interior ceiling area with 24 Lux LED recessed can lights. The Bluffs have the area screened with some trees along the west property line, to the north, and up towards the bluff. The applicant recently installed 8 ft. tall white vinyl fencing to separate outside seating / pavilion area and the parking/septic system area. Pierce County Code § 240-54 requires a minimum of 1 parking space per 200 square feet of primary floor area. The Bluffs has 14,400 square feet primary floor area and requires a minimum of 72 parking spaces with one for handicapped parking. The plans submitted show 109 parking spaces with two for handicapped parking. In 2011, the applicant hired a plumber to up-grade the septic system from a holding tank to a mound with a pre-treatment unit. All necessary sanitary permits were secured at that time. Pierce County Zoning Code - Attachment 2 regarding Table of Dimensional Requirements show that Commercial zoning districts require a setback distance of 40 from residential districts. This pavilion meets this setback. Upon completion of the site plan review, the applicant will need to obtain a Land Use Permit to enable construction. Galen Seipel, Town of Trenton Building Inspector, stated that because the proposed building is less than 25,000 cubic feet it does not require state plan review and approval or a state inspection. The applicant proposes to begin construction immediately after it is approved and permitted. They anticipate construction being completed in the fall of 2015. Staff recommends that the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations. The LMC may impose time schedules for completion of

buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Aubart asked if they plan on finishing this fall. Pat stated they are going to try to. The pavilion shouldn't take much to put up, there is no water or anything out there. The landscaping will consist of tree planting to block off neighbors parking lot, rock, water fall, etc. Sanden asked if they don't specify a completion time, does this site plan approval time out in 12 months. Pichotta confirmed and added that a land use permit is good for one year. **Sanden made a motion to approve the site plan for commercial construction for BHH, Inc./ Aubart seconded. All in favor. Motion carried.**

Discuss take action on review and update of goals, objectives and policies of the Transportation, Utilities & Community Facilities Chapters of the Pierce County Comprehensive Plan.

Staff Report-Ryan Bechel: Transportation: A diversified, well balanced transportation system can have a significant influence on land use, development, and quality of life for county residents. The various modes of transportation in the county include highways, transit, transportation systems for persons with disabilities, bicycles, electric personal assistive mobility devices, walking, railroads, air transportation, trucking, and water transportation. Well-maintained and properly planned transportation systems aid in economic development, support a diverse array of land uses, provide links among community facilities, and facilitate the provision of various public and emergency services. The transportation infrastructure of a county must be developed in recognition of the evolving needs of its residents, local businesses, visitors, and through-traffic. The review of the Pierce County Comprehensive Plan's transportation element will focus on analyzing changes that have occurred since the initial data collection process and determining whether existing goals, objectives and policies are adequate to support the county's transportation vision. The existing Transportation vision is: In the year 2029, Pierce County has a well-connected multimodal transportation system that provides for the safe and efficient movement of people and goods. Daily commuting patterns saw a 4.7% increase in the 2000 census for people who live in Pierce County but work outside of the county, with Minnesota being the number one destination for those workers. Pierce County employers are attracting about 2,500 people into the county, or about a quarter of the Counties work force, St. Croix being the number one county coming into work here. Population growth since 2010 has been relatively stagnant, a little bit of a decline of .1%, but some of that could be in the variability you get in data year-to-year. We are projected to grow about 5.8%, adding about 2,500 people by 2020. We are half way there and haven't added any by this point, so that might be a little over shooting. Commute time has seen about a 2.2 minute increase since the 2000 census data came out. The average worker commutes about 27.3 minutes, that's an 8% increase. The number of people traveling to work in that same time frame actually decreased about 3%. Vehicle miles traveled for Pierce County saw about a 20% increase, about 75 million miles from 2009 to 2013, not a trend that is not matched state or nationwide, as vehicle miles kind of flattened out in 2004 and declined in most other places, but being we are a rural county and everybody drives to work solo for the most part, that's kind of to be expected. 78% of our commuters are solo commuters using car, van or truck. A little bit of an increase since the last census and that increase came from a decrease in car pooling and public transportation. Looking at future road infrastructure improvements, there has been about 3 new miles of public road added since 2009 in Pierce County. There is \$52 million allocated for State and Federal road improvements over the next six years, but was unable to find a budget for County roads. Existing Goals, Objectives & Policies: Goal: Develop and support a safe and well-

maintained transportation network which through its location, capacity and design, will effectively serve existing land uses and meet anticipated transportation demand generated by future development. Objectives: Coordinate transportation planning with land use development by providing a transportation framework with which the proposed land development patterns can be supported. Guide future development to roadways capable of accommodating resulting traffic. Encourage the development of opportunities for making walking and bicycling viable, convenient, and safe transportation choices within the county. Explore opportunities for multi-use trails/routes. Encourage towns to adopt uniform town road standards. Encourage the realization of the cost effectiveness of utilizing the existing road network to accommodate most future development. Policies: Encourage the use of non-automotive modes of transportation. Encourage the development of employment concentrations to areas that will support transit options. Encourage the development of multi-use trail system that links major residential areas to employment centers, public facilities, and recreation areas. When appropriate, encourage the use of utility rights-of-way and any abandoned railroad corridors as part of an open space trail system. Encourage the development of corridors, including those along high-capacity roadways, railroads, and rivers, for uses that benefit by those transportation resources. Encourage the concentration of non-agricultural employment within the high accessibility corridors and within close proximity to support services. Recommendations: The LMC should consider whether changes or additions to the Comprehensive Plan's Goals, Objectives, and Policies are warranted to further the County's Transportation vision.

Ross wanted to make a point that the county gets a number of visitors that come through from multiple different clubs and association. A lot of the reason the area is selected is our roads and scenic beauty, it really draws people in. With the Great River Road, MRT route, Ride Across America, etc., Ross will ask them about their ride through our region. There are two things that most all of them point out: 1) the shoulders are nice and they are ride able. 2) The curtesy of our drivers, including our truck drivers, they always give them room. Sanden feels the Goals, Policies & Objectives are relevant and good. Sanden understands the reality that haven't gone through a great deal of growth and budgets are anything but abundant. But as far as putting some of these objectives into action, like promoting multi-modal transportation, that is a great goal and objective. He was wondering what we would do to perhaps start building bike trails or something like that. He doesn't want to force it and since there are huge head winds against it and we don't have the budget, but just something to think of for 20 years down the road. Should we start maybe some preliminary planning for that day when the population might boom? Sanden doesn't want to push the issue or add anything to this plan, he is just thinking long term. For 20 years down the road, maybe we should be considering some type of network. An example would be Spring Valley. They have their bike trail and maybe linking that up and making that more of a continues thing. Those are just observations for the future. Aubart doesn't think we have to look too far. At the F & P meeting when they presented the Red Wing bridge project there was a lot of discussion about the trail, granted it is an extra cost. It's a trail that would be on the bridge and coming off and dumping into Pierce County. Pichotta stated a lot of the time you can apply for additional funding through the Feds and language like this that is included in the Comprehensive Plan adds credence to your application in that you have identified that as a want and a need for the County. Sanden feels we could add something to the plan that states we would like to pursue funding sources that could promote multimodal trails. Pichotta stated if we were to see a development of mixed uses, we would as staff point out some of the goals, policies and objectives and attempt to further through the approval process. If someone was going to put in an

employment center that perhaps included some residential or something, as part of that, we would want to see them consider some type of multimodal component to assure those folks who live close enough could bike. The reality of it is that some of these may never be used but should there be an opportunity to do so if it's there, we can use it. Aubart added he didn't think of the comprehensive plan during the F & P meeting regarding the Red Wing Bridge when they were discussing it the upkeep and what you want to do with a trail head, etc. The LMC agreed that the existing Goals, Objectives & Policies are adequate at this time. Utilities Community and Facilities. Often referred to as "public works," utilities and community facilities consist of the physical infrastructure that allows a community to function and grow. Utilities include sanitary sewer, storm sewer and water systems, electricity, natural gas, telecommunications, and solid waste disposal systems. Community facilities include municipal offices, parks, schools, police stations, fire stations, and libraries, among other things. The purpose of this section is to provide an updated inventory of utilities and community facilities in each town. During the data collection phase of comprehensive plan development community facilities were assessed and documented for planning purposes in the initial report. The focus of this section will be to review the components of this element that have changed since the initial data collection component was completed, and determining whether existing goals, objectives and policies continue to adequately support the county's Utilities and Community Facilities vision. Utilities & Community Facilities vision is in the year 2029, Pierce County coordinates with municipalities and towns to ensure that residents have convenient access to quality services and facilities. Many lists follow, there are really no highlights to point out. There is the Prescott School project which is a major school that is coming. There are a few small schools left. It has been pretty static with the exception of the private business with health care and clinics, a lot of name changes and that sort of thing. As far as quantity, a slight increase, maybe 1 per category, but overall everything has been maintained relatively static. Existing Goals, Objectives and Policies: Goal: Provide public facilities and services in a healthful, economical manner. Objective: Maintain a level of public utilities and facilities that ensures not only the health, safety, and welfare of the county's population, but also maintains the highest community standards obtainable within adopted budget constraints. Target the provision of public facilities as a prerequisite to urban development. Provide an equitable level of community and human services throughout the county. Ensure an appropriate amount and distribution of land for parks and open space throughout the county, placing special emphasis on preserving and enhancing the natural and scenic environment. Encourage the adequate provision of community facilities, which add to the attractiveness of the county to employers and employees. Continually recognize, identify, and when appropriate, provide for the recreational needs and priorities of residents of the county. Promote quality schools and access to educational opportunities for everyone. Policies: Encourage the establishment of growth areas served by central utility systems, with varying suburban, countryside, and urban densities. Encourage the location of public schools, parks, and libraries in locations that are central to existing and planned developed areas so that automobile driving and the need for schools bus facilities can be minimized. Encourage the development of multi-use trail systems that links major residential areas to employment centers, public facilities, and recreation areas. Coordinate planning efforts with the incorporated municipalities and towns in the provision of facilities and utilities so as to reduce undesirable environmental and fiscal impacts. Continually evaluate opportunities to increase coordination and effectiveness between law enforcement officials, local fire departments and emergency service providers, towns, and local departments on meeting the needs of county residents. Promote effective solid waste disposal and recycling service that

protect the public health, natural environment, and general appearance of land use within the county.

Recommendations: Pierce County's Utilities and Community Facilities have remained largely unchanged since the adoption of the County Comprehensive Plan 5 years ago. The LMC should consider whether changes or additions to the Comprehensive Plan's Goals, Objectives, and Policies to further the County's Utilities and Community Facilities vision are warranted.

Sanden questioned the pre-requisite of "urban development". He couldn't remember why we use that term; high density, industrial? Is it because they would be the ones to require utility infrastructure like sewer lines or high voltage power lines? Pichotta stated yes. If someone wanted to come in and put in a big box development, that may not be something we want sitting out in the hinter-land. That is something that would be more appropriately placed within the contiguous growth areas or somewhere that is served by city sewer and water. Aubart noted some names have changed and some are not listed on the Clinic & Solid Waste list. Pichotta suggested if there were corrections, we might as well do them now. The medical clinic in River Falls is now Vibrant Health. Veolia ES is now Advantage Disposal. Waste Management is not noted on the list. The committee agreed to move forward with updating the name changes/corrections, and leave the Goals, Objectives and Policies as is given that they appear to be adequate as written. No action taken.

Travel Training request for Kevin Etherton to attend a GIS conference in Duluth on October 7th & 8th. It would require travel and two nights in a hotel. Pichotta stated we do get \$1,000 training grant through the Wisconsin Land Information program so this would not be out of general funds. **Aubart made a motion to approve/Sanden second. All in favor. Motion carried.**

Pichotta noted that the only agenda item for the next meeting is the continued review of the Comprehensive Plan and suggested that the LMC not meet. Committee agreed. No meeting for October 7th, 2015.

Sanden made a motion to adjourn at 7:07pm/Aubart second. All in favor. Motion carried.

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, September 16, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 7 th & 21 st , November 4 th & 18 th , all in 2015.	Chair
3	Approve minutes of the September 2, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Sludge Disposal in the Agriculture Residential and Rural Residential 8 Districts by David Sauer, Cedar Corporation, agent for Ralston Purina & Nestle Purina Petcare Co, agent on property owned by Roger Dosdall, Amy Dosdall, Sharon Hirdler, Kemmerer FMTR, Bradley Kemmerer, Brian Kemmerer, Jean Ann Kemmerer TR, Stanley & Catherine Kemmerer TR, Troy & Amy Kemmerer, MOAP LLC, Troll King LLC, Holst Farms Inc on property located in the NW ¼ and the W ½ of the SW ¼ of Section 6, the SW ¼ of the SW ¼ and the SE ¼ of Section 7, the W ½ of the NW ¼ of Section 17, the E ½ of Section 18, the SW ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 34 , all in T25N, R18W, and located in the NE ¼, the SE ¼, the SW ¼ and part of the NW ¼ of Section 2, the N ½ of Section 11 and the E ½ of the SE ¼ of Section 12, all in T25N, R19W, all in the Town of Diamond Bluff, Pierce County, WI.	Lund
5	Discuss take action on a status report and potential modification of a conditional use permit for a Retreat Center in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners, on property located in the SE ¼ of the SE ¼ of Section 33, Town of Martell, Pierce County, WI.	Roy
6	Discuss take action on site plan review for a pavilion for BHH Inc (DBA The Bluffs) in a Commercial Zoning District pursuant to Section 240-75, on property located in Lot 1 CSM vol 2 pg 114 being part of the NW 1/4 of the SE 1/4 of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
7	Discuss take action on review and update to the Goals, Objectives and Policies of the Transportation, Utilities & Community Facilities Chapters of the Pierce County Comprehensive Plan.	Bechel
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(9/3/15)

- **Revised September 8, 2015 at 9:48am.**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS

MINUTES - Pierce County Land Management Committee Meeting, September 2, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Jim Ross

Absent: Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 16th, October 7th & 21st, all in 2015.

Approve Minutes: **Ross moved to approve the August 19, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on proposed amendments to Chapter 240 of the Zoning Code, Article VIII, Chapter 240-36, Chapter 240-74, Chapter 240-88, relating to Signs/Lighting. Staff Report – Ryan Bechel: Recent Supreme Court case rulings prompted a staff review of Pierce County’s existing sign code, exposing potential conflicts with First Amendment “free speech” rights. In an effort to conform to established legal precedent, staff has proposed amendments to remove existing “content-based” language. The proposed changes regulate sign construction and permitting requirements in a content-neutral manner based on zoning district; with differing regulations for Residential, Agricultural and Commercial/Light Industrial/Industrial districts. The proposed Sign Code amendments seek to respect the free speech rights of the public, enhance sign language clarity and protect public health and safety. A number of Supreme Court cases, including the June 2015 decision of *Reed v Town of Gilbert*, have established that sign regulation that requires a consideration of a sign’s content to determine how that sign will be regulated is “content-based” and subject to “strict scrutiny,” with the burden of proof to show a “compelling governmental interest” placed on the government unit. Pierce County has historically addressed sign regulation through the use of a content-based sign ordinance. Without the ability to regulate signs based on content, ordinance language was amended to regulate signs in a “content neutral” manner based on zoning district. The number of allowable signs and sign face area regulations in the existing code were carried over into the proposed amendment. Proposed amendments include new standards regulating message duration, transition time and display brightness based on completed government and industry research on the relationship between digital display signs and motorist safety. To improve clarity, language regarding on-premises signs was relocated allowing an unnecessary section to be removed. Temporary sign regulations contained in the existing code have been condensed into an all-encompassing section containing temporary sign requirements. Chapter 240-36 was amended to remove the existing sign regulations based on permitted use. Chapter 240-74 relating to sign permit requirements was amended to reflect relocated standards in the amended Pierce County Code. Chapter 240-88 was amended to remove “content-based” definitions and provide new definitions for digital display signs and temporary signs. **Staff Recommendation:** Staff recommends the Land Management Committee review the proposed amendments and if determined to be appropriate, approve said amendments and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption. **Chairperson Fetzer opened the hearing to the public.** No public comment. **Public hearing closed. Holst moved to approve the proposed amendments to Chapter 240 of the Zoning Code, Article VIII, Chapter 240-36, Chapter 240-74, Chapter 240-88, relating to Signs/Lighting and forward a recommendation to the**

Finance and Personnel Committee and the County Board of Supervisors for approval and adoption/Ross seconded. All in favor. Passed.

Discuss take action on approval of amended Farmland Preservation Map for the Town of River Falls.

Staff Report – Andy Pichotta: The Town of River Falls previously submitted an updated map of lands within the Town that are “suitable for preservation” for inclusion in Pierce County’s Farmland Preservation Plan. This map is referred to in the Plan as the “Farmland Preservation Map for the Town of River Falls.” That map was reviewed and approved by both the LMC and the LCC and a public hearing to consider its adoption scheduled. Prior to the holding of the public hearing, the Town made a number of changes to the proposed map. These changes necessitated that the LMC and LCC again review and approve the map proposed for inclusion in the County’s Farmland Preservation Plan. A new public hearing will also need to be scheduled to consider its adoption once review by the LMC and LCC is complete. In correspondence received from the Town (attached to staff report) it is stated that the latest revisions were necessary, primarily, to correct errors relating to ownership issues and contiguous parcels under common ownership. Criteria that the Town used to generate the proposed map include:

- Land outside the Sewer Service Boundary of the City of River Falls
- Land currently Zoned A-1 Exclusive Agriculture or having a Farmland Preservation Contract
- Parcels of land contiguous common ownership 35 acres or larger
- Land containing 50% or more Productive Farmland based on soil type

This map will be utilized as the basis for the formulation of Farmland Preservation Zoning (formerly referred to as Exclusive Agriculture Zoning) by the Town of River Falls and also used to support the establishment of the proposed Agriculture Enterprise Area being referred to as the “North West Pierce County AEA.” We have in attendance, Jerome Rodewald, Zoning Administrator for the Town of River Falls and he can give a better explanation of the changes from the previous map and the one we currently have. Mr. Rodewald, it was additional work that went into clarifying some errors on the previous map. As Mr. Pichotta stated in the background information, the Town of River Falls Zoning Map is required by State Statute, 91.381G the Town cannot zone land, or take land out of the map that is in front of you, but we cannot add land to it. They went back and compared the two maps, side by side so they knew they had as accurate a map on both sides as they could possible get. They feel this map is as close to 100% as they can see today. Holst asked if Mr. Rodewald could explain why he chose to divide his land in the manner in which you did. Mr. Rodewald stated that his land falls within the plat review area of the City of River Falls. When they went outside the ETZ into the plat review area, he wanted to separate his land so each one of his six children could have a 20 acre parcel. They set it up specifically that way so there were no contiguous parcels; his son and him owning one and his wife and son owning the adjoining parcel. It was pretty easy to pick up the same last name on all of them, even though the parcel lines were there. Holst asked if other people were afforded the same opportunity. Mr. Rodewald stated yes. Holst asked if they were afforded the same information. Mr. Rodewald stated yes. Holst asked if he could tell him the number of acres in his corrected map, the changes from the previous one that we OK’d to this one. Mr. Rodewald stated he is going to defer to Andy on this one, wasn’t it something like 600 in and 300 out or the other way around. It was both ways. Pichotta stated it was both ways. Mr. Rodewald stated this one was 15,917, the other one was 16,240, he doesn’t have it in front of him, about 300 acres difference. Pichotta stated it is 344.6 acres were previously not identified for being suitable for preservation and now are and the converse was 365 were changed from being suitable for preservation to now not being suitable for preservation. Holst stated you were just premature in bringing us this other map to OK. Mr. Rodewald stated possibly it goes back to the work that was done last spring on the AEA. It was the map that was submitted for the AEA. At that point, the Town had not been working as diligently on the zoning map. We had brought them to Andy for his review and at first we had a little confusion with the difference between the zoning map and the farmland preservation map. Andy kept telling him that you have a zoning map not a farmland preservation map. He finally got that through his head; the difference. They started working more diligently on the zoning map and then looked at State Statutes and those two things have to fit like hand in glove. Yes, we were probably premature or the

submission of the AEA was probably premature. Holst asked if they ever had changes in their previous zoning map that didn't go through the rezone process. Mr. Rodewald stated no. Holst asked if they ever did. Mr. Rodewald stated no. Ross stated he wants to be clear, Mr. Holst asked if others were communicating and afforded this same opportunity. How did word get to the other land owners to know? Mr. Rodewald stated there was public notice in the paper when the City of River Falls was considering moving out beyond the ETZ. One point they considered going out three miles which basically took almost all of the township. Then they went back in and went about three-fourths or about a mile outside of the ETZ because they wanted to freeze the subdivision of land that at some point could be annexed to the City. That is one per 35 and it's like Exclusive Ag zoning, but there was public notice and people could react to it.

Staff Recommendation: Staff recommends the Land Management Committee approve the amended map submitted by the Town of River Falls and direct staff to schedule a public hearing to consider adoption of the amended map as part of the County's Comprehensive Plan/Farmland Preservation Plan. **Aubart moved to approve the amended Farmland Preservation Map for the Town of River Falls and schedule a public hearing for adoption of amended map as part of the County's Comprehensive Plan/Holst seconded. All in favor. Passed.**

Discuss take action on a request for a rule exception from the required lot width at the building setback line established in Chapter 237-26F for a 1-Lot Minor Certified Survey Map (CSM) for Chris and Dianna Kusilek, owners on property located in the NW ¼ of the SW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Mr. Kusilek forward: Mr. Kusilek explained quite a few years ago he lot-ed it off. They didn't do the certified survey map or record it. He did a perk test and left 66 feet. He didn't even realize that it changed until he contacted S&N to do the Certified Survey Map and he said it had changed.

Staff Report – Emily Lund: The applicants are requesting a rule exception to required 100 foot lot width at the building setback line on a 1-Lot Certified Survey Map (CSM) pursuant to Chapter 237-26G (Subdivision Code). The applicants subdivided Lot 1 CSM V5 P4 (5.00 acres) in 1994 and Lot 2 CSM V5 P20 (5.91 acres) in 1995 from a 40 acre parcel. They planned to create a proposed Lot 3 for their daughter (shown on the attachment) using a strip of land between Lot 1 & 2 for access to additional land they own located to the east. In 1998 the Pierce County Subdivision Code was changed to require that newly created lots be 100 ft wide at the building setback line (per 237-26G). The applicants have proposed to access proposed Lot 3 via a 66 ft wide strip of land situated between the two existing lots. As the proposed Lot 3 would not widen to the required 100 ft at the building setback line, the applicants are requesting an exception to that subdivision requirement. The property is located in Section 3, Town of Clifton. Pierce County Code (PCC) Subdivision of Land § 237-26F states, "There shall be a building setback line on each lot of 75 feet from the road centerline unless a greater building setback is required by Pierce County Zoning Ordinance." Pierce County Code (PCC) Subdivision of Land §237-26G states, "Lot width at the building setback line and at the building construction line shall be 100 ft. Given that the proposed CSM is less than 100 ft wide at the building setback line (or 75 ft from the centerline of 1090th Street) the CSM cannot be approved and recorded unless a rule exception is granted by the LMC. Pierce County Code 237 regarding Rule Exceptions states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.

In your folders, you have a copy of the purpose and intent of the code.

- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception."

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this situation warrants a rule exception.

Chairperson Fetzner asked how many acres was the total before splitting some off, was it a full 40? Mr. Kusilek stated yes, he believes it was a full 40 acre. Holst stated your family also owns the land directly to the south of this parcel, how wide is that? Mr. Kusilek stated yes, there's 50 acres there. Holst stated the steepness of the hill and the topography is the same if whether you come in from the south or off the 66 feet. Mr. Kusilek stated from the south he couldn't get up there. He put the driveway up there 20 some years ago. Holst stated on the gradient lines, it looks about the same. You have 20 foot gradients here and they both start at about 940 and end up at 1060 roughly. Mr. Kusilek but the distance to the bottom would be too steep. The point of that hill is straight up and down. Holst asked what the slope is going to be. Mr. Kusilek stated right now it's between 11 & 12%, it varies. Holst stated. young lady, do you know that building on that hill you are going to have a hell of a time getting up and down that. Did your dad explain that to you? He isn't always going to be around to plow your road for free. There are going to be expenses along the way that you are going to incur for building up there.

Aubart moved to approve the rule exception from the required lot width at the building setback line established in Chapter 237-26F for a 1-Lot Minor Certified Survey Map (CSM) for Chris and Dianna Kusilek based on information presented and due to the fact this will not have the effect of nullifying the intent and purpose of this chapter/Holst seconded. All in favor. Passed.

Discuss take action on a request for a Height Exemption, pursuant to Chapter 240-29D, for Verizon Wireless on 2 proposed wireless communication service facilities located in the SE ¼ of the SE ¼ of Section 5, T25N, R16W, Town of Salem and the SE ¼ of the SW ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI. Staff Report – Ryan Bechel: Verizon Wireless is seeking height exemptions pursuant to Pierce County Code §240-29D to construct two new Wireless Communication Service Facilities (WCSF) exceeding 35' in height in the towns of Salem and Martell. The complete project proposals include erecting self-support wireless communication towers, constructing prefabricated equipment shelters and installing supporting equipment to improve service in the area. Newly adopted code amendments removed Conditional Use Permit requirements for Wireless Communication Service Facilities. Wireless Communication Service Facilities are now permitted administratively through a Land Use Permit. The newly adopted code requires towers to comply with the height requirements of other commercial structures per PCC §240-29. Verizon Wireless is proposing two towers greater than 35 feet. PCC §240-29A states: Height limitation: Except as provided in Subsections B and C, no building, structure or sign shall exceed 35 feet in height above the grade elevation. PCC §240-29D states: Industrial and commercial structure heights may be granted exemptions by the Land Management Committee, provided that all required setback and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. PCC §240-41C(3)(d) states, WCSF Support Structures shall comply with the height requirements of §240-29D. PCC §240-41C(3)(d)(1) states, If engineering certification reveals that the WCSF support structure or an existing structure is designed to collapse within a smaller area than the requirements of 240-29D , the certified fall zone shall be applied to the setback requirements of 240-29D. Each of the proposed towers will have engineered certification that the towers will collapse within 50% of its height. PCC §240-27A addresses state and federal highway setbacks. PCC §240-27A states: State and federal highways, Except as provided in Subsections E & F, the required setback for all structures fronting state and federal highways shall be 110 feet from the centerline of the road or 77 feet from the edge of the right-of-way, whichever is greater. PCC §240-27C addresses town road setbacks. PCC §240-27C states: Town highways, Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater. PCC §240-88 defines:
FALL ZONE – the area over which a support structure is designed to collapse.
SUPPORT STRUCTURE – an existing or new structure that supports or can support a mobile service facility, including a mobile service support structure, utility pole, water tower, building or other structure.
YARD – A required area on a lot, unoccupied by buildings and open to the sky, extending along a lot line to a specified depth or width.

YARD, REAR – A yard extending along an entire rear lot line from the rear lot line to the depth or width as specified in the yard requirements for the applicable district.

YARD, SIDE – A yard extending along an entire side lot line from the side lot line to the depth or width specified in the yard requirements for the applicable district.

The proposed Rush River WCSF is located in the Town of Salem. The property is zoned General Rural. PCC §240-23 requires 10 foot side and rear yards in this zoning district. Access to the Rush River site is off of 370th Ave. The site to be leased by Verizon Wireless is currently agricultural land owned by the David Gilles Trust. The neighboring properties to the north, east and south are agricultural land. There are two residences located on the properties west of the proposed tower location. The proposed structure is a self-support tower with an overall height of 259 feet. The applicant intends to submit engineering certifications with a proposed certified fall zone of 129.5 feet, making the right-of-way setback 136.5 feet and the side and rear yard setbacks 104.5 feet. In its proposed location, the tower is 152'2" from the 370th Ave right-of-way and 231' from the nearest side or rear property line. The proposed Martell WCSF is located in the Town of Martell. The property is zoned Primary Agriculture. PCC §240-23 requires 10 foot side and rear yards in this zoning district. The neighboring properties to the north, east and south are agricultural land. A dairy farm is located to the west. Access to the Martell site is off of 780th Ave. The site to be leased by Verizon Wireless is currently Ag land owned by Wiff Farms Inc. The proposed structure is a self-support tower with an overall height of 259 feet. The applicant intends to submit engineering certifications with a proposed certified fall zone of 129.5 feet, making the right-of-way setback 136.5 feet from the town road, 171.5 feet from State Hwy 63 and 104.5 feet from side and rear yard lines. In its proposed location, the tower is 144'7" from the 780th Ave right-of-way, 669'2" from State Hwy 63 and greater than 400 feet from the nearest side or rear property line. Staff visited both tower sites and observed no structures located within the 259 foot fall zones of either proposed tower location. If no engineering certification is submitted, both towers will be required to be setback 266 feet from town road right-of-ways, 301 feet from state or federal right-of-ways and 234 feet from side and rear yard property lines. Staff will verify appropriate setbacks prior to issuing a Land Use Permit for the structures.

Staff Recommendation: Staff recommends the LMC review the proposed WCSF height exemptions and determine, if any changes or modifications are necessary. If none, staff recommends the LMC grant approval of height exemptions.

Chairperson Fetzer asked how long before the engineering certification will be submitted. Roy stated we did receive those in the mail. Holst asked if they were for these structures. Roy stated yes. **Ross moved to approve the Height Exemption, pursuant to Chapter 240-29D, for Verizon Wireless on two proposed wireless communication service facilities/Holst seconded. All in favor. Passed.**

Discuss take action on draft Pierce County Outdoor Recreation Plan 2015 – 2019. Staff Report – Andy Pichotta: The Mississippi River Regional Planning Commission (MRRPC) has updated Pierce County's Outdoor Recreation Plan and has submitted a final draft plan for review and approval. The purpose of the plan is to provide information to help develop and improve the County's recreation resources and to make the County and other participating local governments eligible for WDNR grants. The plan lists the County's "goals and actions" to improve the recreational opportunities in the county, which are listed on pages 45 – 46. These were developed by the Parks Committee on July 24, 2014 and the Land Management Committee on September 17, 2014. The draft plan is enclosed for your review. Staff is still working with the Towns of Clifton and River Falls for inclusion in the plan. Town plans will be finalized prior to a public hearing.

Staff Recommendation: The LMC should review the plan to determine if any changes or additions are necessary and direct staff to schedule a public hearing to consider its adoption.

Pichotta stated as you look through it, you will see that it is largely the same. We have been doing these every four years since he has been there. What changes typically are the County's priorities which are listed on page 45 – 46. Also the inclusion of Town and Municipal plans as appendices and the reason a Town would submit a plan is that it enables them to access grant dollars that they wouldn't otherwise be eligible for. Holst stated it looks fine. The townships will have to tie in and we will be ready to go. Pichotta asked if it was committee consensus and staff will schedule a public hearing. Committee agreed.

Discuss take action on proposed 2016 Land Management Department Budget. Staff Report – Andy

Pichotta: You should have in your packets a number of sheets. They look a bit different than you're used to seeing. Given that they are a bit different, he is going to give a bit more information in the narrative than he typically does. He will go through the sheets and give you the cliff notes version of each budget. Basically the table on the front page summarizes the 2015 Budget and the proposed 2016 Budget. You will see there is an overall change that is proposed to be a 4.4% less than in 2015. In 2015, our budget was \$805,384.00. For 2016 it is proposed to be \$771,254.00. The Planning Budget is basically consistent from the prior year. There are some cost reductions for lower health insurance costs due to employee plan changes. He has proposed to increase the supplies line item from \$2850 to \$7850 to enable the purchase of a quality hand-held GPS. Our current equipment is not compatible with the County's current operating system and is nearing obsolescence. Basically we use the hand-held GPS to identify the locations of sanitary systems and also to identify the open acreage associated with nonmetallic mines as part of the nonmetallic mining reclamation program. The Zoning Budget: This is also largely consistent with some reduction. He has proposed an increase in the training budget for zoning personnel from \$2000 to \$3000. As you recall, we had \$25,000.00 budgeted last year to replace the Jeep which we have done. We bought the 2014 GMC Terrain. He has proposed to increase that to \$30,000.00 to enable us to purchase a pick-up truck. He believes we can purchase one for about \$28,000.00. He doesn't think we can get one for \$25,000.00.

GIS Budget: This budget saw a fairly substantial reduction in health insurance costs. A slight reduction in training funds is proposed due to an increase in training funds available through the Wisconsin Land Information Program. Basically they used to give us \$300.00 from the Land Information Program, they increased it to \$1,000.00. So he has decreased that in that line item.

Surveyor Budget: This budget is largely the same as last year with only a minor increase in personnel costs. This increase was offset by a decrease in the amount budgeted for gasoline. Unless we see a real serious spike in gas prices, he didn't anticipate that we would spend \$5,000.00 in a year on gasoline.

Land Records Modernization Fund and Grant: Each county participating in Wisconsin's Land Information Program retains a portion of the fees associated with the recording of documents in the Register of Deeds Office. These fees are placed into a Land Records Modernization Fund and are to be utilized to implement the County's Land Records Modernization Fund. Retained fees, when combined with available grant dollars typically result in \$100,000 being available each year for implementation of a county's Land Records Plan. The Land Records Fund currently has an unencumbered balance in excess of 30K. The Land Information Council met on August 19th and recommended the following expenditures in 2016:

\$41,504 Pictometry (LiDAR, 6" Orthoimagery, 9" Oblique's)

We are going to pay for that in two more payments. We paid about \$90,000.00 earlier this year. We are going to make another payment of \$41,500.00 in 2016 and a final payment of \$41,504.00 in 2017.

We are a little behind in COGOing parcels, just because of a communication error with ProWest. So we need to spend about \$32,000.00 to COGO parcels all of Oak Grove and half of Clifton.

\$32,000 COGO Parcels (All of Oak Grove, 1/2 of Clifton)

Pictometry has partnered with Houston Engineering so we need to do some value added things, digital elevation model creation and quality control report to ensure that our two foot contours are accepted by FEMA which will give us much better flood insurance rate maps.

\$ 9,370 Houston Engineering (LiDAR DEM Creation/QC Report)

\$ 3,000 Parcels Updates/Changes

\$ 3,500 GIS maintenance

\$ 2,800 LINK (ProWest) Maintenance Annual

\$ 3,600 ArcGIS Licenses

\$ 7,493 Fujitsu FI-6670 Flatbed Scanner for ROD Office

\$ 3,000 Tax Information Module on Website, this is something that the ROD office has requested.

\$ 500 Configure Receipt Printers

Revenues: Revenues include land use permit fees, public hearing fees, sanitary and soil test review fees, GIS fees, CSM and plat review fees, Wisconsin Fund, etc. Revenue is expected to remain consistent with 2015 levels. Staff has noted that, in the last few years at least, when land use permit revenue is up, a reduction in the revenue generated by public hearings is experienced and vice versa. Given this staff is anticipating revenues in 2016 to be very similar to 2015. That is the cliff notes version of the budget. The first page is the County Surveyor, the first column deals with personnel costs and the bottom of the page deals with operating totals. As you will see the operating is largely consistent with those changes that he noted early on. It should be noted that overall, out of the entire budget, about 4½ % is operating versus personnel. We are fairly tight on that. He asked if the committee would like him to go through each page. Ross asked on page 3, line 21, we show nothing for publishing legal notices. Pichotta stated over the course of the years, rather than have repetitive line items in publishing legal notices in the Planning budget and publishing legal notices in the Zoning budget. He just put them all in one. Ross stated it's a job well done. Pichotta asked if the committee was comfortable with the budget and also noted that they should review the two pages at the end of the report. They are the three-year budget and staffing summary. This is where, if we were going to pursue new staff, we would make that known. He is anticipating 8 ½ live bodies indefinitely. As far as capital improvements, he just anticipates the \$30,000.00 for a new pick-up truck in 2016, nothing in 2017 or 2018. Capital Improvements, he has listed the three vehicles that the department does have, proposing to replace the 2002 Ford F150 in 2016. We have the 2014 F150 that is the Surveyor vehicle and the 2014 GMC Terrain. He doesn't anticipate replacing those for a decade. Chairperson Fetzer asked how many miles are typically put on vehicles a year. Pichotta stated 8,000 or 9,000. It might be more than that; it depends on which one gets primarily used. For example, the Jeep which was recently sold had about a 120,000 miles on it but it was essentially the backup vehicle for the last four or five years. **Aubart moved to approve the 2016 Land Management Department Budget as presented/Ross seconded. All in favor. Passed.** Chairperson Fetzer stated it is impressive how Andy keeps coming in with his budget at or below. It doesn't always work like that.

Discuss take action on Travel/Training Requests. Pichotta stated he has two travel/training requests, for Ryan and Emily to attend the WCZA District Meeting at the Polk County Courthouse on September 10, 2015. It will be just travel costs, leaving at 8:00am and returning at 4:00pm. **Aubart moved to approve the travel/training request for Ryan Bechel and Emily Lund to the WCZA District Meeting on September 10, 2015/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing to consider a CUP for Sludge Disposal in the Town of Diamond Bluff.

Status report and potential modification for a CUP for a Retreat Center for Melissa Deyo and Donald Dufek in the Town of Martell. This is the wedding barn, coming back after the summer wedding season. Roy stated they had problems getting all their inspections passed so he doesn't know if they have yet to have a wedding out there other than their own. He talked to them on the phone and they have passed their final inspection.

Discuss take action for site plan review for BHH Inc (the Bluff's) in the Commercial Zoning District in the Town of Trenton.

Discuss take action on the review and update of the Goals, Objectives and Policies of the Transportation, Utility and Community Facilities Chapter of the Comprehensive Plan.

Motion to adjourn at 6:55pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 2, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 16 th , October 7 th & 21 st , all in 2015.	Chair
3	Approve minutes of the August 19, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on proposed amendments to Chapter 240 of the Zoning Code, Article VIII, Chapter 240-36, Chapter 240-74, Chapter 240-88, relating to Signs/Lighting.	Bechel
5	Discuss take action on approval of amended Farmland Preservation Map for the Town of River Falls.	Pichotta
6	Discuss take action on a request for a rule exception from the required lot width at the building setback line established in Chapter 237-26(F) for a 1-Lot Minor Certified Survey Map (CSM) for Chris and Dianna Kusilek, owners on property located in the NW ¼ of the SW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
7	Discuss take action on a request for a Height Exemption, pursuant to Chapter 240-29D, for Verizon Wireless on 2 proposed wireless communication service facilities located in the SE ¼ of the SE ¼ of Section 5, T25N, R16W, Town of Salem and the SE ¼ of the SW ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI.	Bechel
8	Discuss take action on draft Pierce County Outdoor Recreation Plan 2015-2019.	Roy
9	Discuss take action on proposed 2016 Land Management Department Budget.	Pichotta
10	Discuss take action on Travel/Training Requests	Pichotta
11	Future agenda items.	Pichotta
12	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/21/15)

MINUTES - Pierce County Land Management Committee Meeting, August 19, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 2nd & 16th, October 7th & 21st, all in 2015.

Approve Minutes: **Holst moved to approve the August 5, 2015 Land Management Committee minutes/Ross seconded. All in favor. Passed.**

Chairperson Fetzer stated Agenda #4, public hearing on adoption of an updated map for farmland preservation areas in the Town of River Falls has been stricken from the agenda. Pichotta stated that the Town of River Falls some time ago presented a map of land suitable for preservation within the Town on which the committee took action and directed staff to schedule a public hearing to consider its adoption. In the meantime, the Town of River Falls looked at the map and decided to make some changes to it. We will be putting the issue back on the next agenda as a discuss take action item for the committee to re-review it with the changes. At that point he anticipates we will move forward and schedule another public hearing. Chairperson Fetzer stated it will be a discuss take action, not a public hearing. Sanden asked if there will be a public hearing following that. Pichotta stated yes, once the committee is comfortable with the rational associated with its development and you direct staff to schedule another public hearing. Pichotta noted that this is a Class I public hearing notice with only one publication at least 30 days prior to the holding of the public hearing. Ross asked if it would need to go back before Land Conservation in any capacity. Pichotta stated that yes it would also need to go to Land Conservation Committee. We also took action to support the establishment of an ag enterprise area, given that that map will also change, we will have to also retake action on that. We have taken a bit of a step backwards.

Discuss take action on review and update of Goals, Objectives and Policies of the Agricultural, Natural and Cultural Resources chapter of the Comprehensive Plan. Pichotta: It's been five years since we adopted our Comprehensive Plan and we will be using the Land Management Committee as the sounding board to look at the Goals, Objectives and Policies of each of nine different elements. Trying to bite off different size chunks to do it over the course of the next 4, 5 or 6 months, it may be that 80% – 85% of this isn't going to need much tweaking because he thinks the Goals, Objectives & Policies were well thought out in the first place. A lot of the change that we will see will probably be in the implementation side of things. We will probably need to redefine our relationship with the Towns given our recent court cases and those sorts of things. Basically, defining how the County Comprehensive Plan will interact with Town Comprehensive Plans. It doesn't mean we shouldn't go through all of the other elements and review the existing Goals, Objectives and Policies and see if some things could be either worded better or perhaps there should be some additional statements that should be added.

Staff Report – Ryan Bechel: Starting with the vision for the Agricultural, Natural and Cultural Resources: In the year 2029, throughout Pierce County, natural areas, farmland and open spaces enhance recreational opportunities for residents and provide habitat for wildlife. Woodlands, wetlands, agricultural lands, rivers and

streams remain the landscape features in the county. What we did was try to dive back into the data that was collected in 2009, in the initial draft of this plan and see what we could observe for relevant changes. Looking at the data for the Agricultural Resources first, we found that USGS data showed about a .1% decrease in lands in pasture and cultivated crops from 2006 to 2011, equivalent to about 240 acres. So remaining relatively constant in the amount of ag land. One thing that was significant was the increase in land prices. We saw about a 28% increase to just below \$4500.00 an acre from 2009 to 2014. That was reflected statewide, about 22%, so a little higher in Pierce County. A trend that hasn't been seen in a couple decades that we saw from some US data was the trend of ag land prices surpassing that of development prices. Saw about a 22% increase in ag land prices from 2009 to 2013 versus just an 18% increase for lands being diverted for other uses. A reemerging issue that was recently discussed by County Officials and USDA Officials was the reemerging of soil erosion as an issue affecting prime agricultural soils in the County. We saw about a 13% increase of the topsoil lost per acre in the last 5 to 7 years. The existing Goals, Objectives and Policies for Agricultural Resources are as follows:

Goal: Maintain the operational efficiency, viability and productivity of the County's agricultural areas for current and future generations.

Objectives: To support land use practices that reduce potential conflicts between agriculture and other land uses. Strive to reduce the conversion of productive farmland to non-agricultural development.

Encourage towns to recognize their responsibility in ensuring the future viability of agriculture in their town, such as the identification of agriculture clusters and farmland preservation programs.

Preserve natural resources, including productive farmland, woodlands, open water, wetlands and other features in their natural condition, consistent with town plans.

Policies: Encourage greater use of density transfer mechanism.

Discourage residential subdivision development on agricultural land.

Encourage uses such as agri-business/agri-tourism which retain the agricultural productivity and viability of the land while allowing for nontraditional uses.

Staff Recommendation: Staff recommends the Land Management Committee consider whether changes or additions to the Comprehensive Plan's Goals, Objective and Policies to further the County's Agricultural Resources vision are warranted.

Given the data observed it may be warranted to include an additional objective and policy to address issues concerning the loss of prime agricultural soils. Staff suggests the LMC consider the addition of the following objective and policy statements:

Objective: Promote the preservation of prime agricultural lands and maintenance of the health and productivity of agricultural soils.

Policy: Encourage landowners to adopt modern crop production methods and to utilize Best Management Practices that preserve agricultural soils.

Pichotta noted if you recall that throughout the Comp Plan, they used the phrase encourage and discourage a lot. Just because the County Plan discourages a particular activity doesn't mean its not allowed, if a Town takes an action that is supported by their Comprehensive Plan that is not consistent with the county plan doesn't mean we don't allow it. It just means that it's not the preferred thing that we would like to see. One of the things we had talked about though the development of the comp plan is that we would strive to create incentives or disincentives for activities that we wanted to encourage versus those that we wanted to discourage. Some of those things might have been reduced fees for the things that we wanted to encourage and perhaps fees that reflect the full costs of providing a given service for things that we want to discourage. We had some discussion about potentially doing just that a couple years back when we took a look at our fee structure and at that point the committee wasn't comfortable, given the state of the economy, in necessarily doing anything too creative with our fee structure. One of the things we will be discussing at an upcoming meeting is how do we encourage behaviors we want to see and discourage those we don't want to see. As we go through all of this please keep that in the back of your mind; strategies that we might use; things that would be ultimately palatable to everyone. Any thoughts on the suggested objectives and policies. Does that seem like something you would like to include? Holst stated modern crop production methods seem to be what are causing erosion in the County. It's his opinion, they went from a three-crop rotation to a two-crop rotation and some of the more progressive

people, in their mind are busy rolling and some of them are just rolling soybeans. They started with small grains, went to soybeans, they liked it so well, they went to corn. They are still tilling and rolling, in his mind the custom sprayers and even the farm sprayers have forgotten what a waterway is. The soil husbandry skills have moved us back where we were in 1957. Chairperson Fetzer stated we are losing more topsoil. Sanden asked if by rolling he means cultipacking. Holst stated no, not a cultipacker, the big rollers. Sanden stated he has heard the same thing from one of his students, an intern at the NRCS and they were complaining about that very thing that the rollers are having trouble with the soil structure. It's been noticeable. Holst stated it used to be when Jon and he were kids, they got off their butts and picked rocks, now nobody picks them up, they roll them down and it works really good for that year. But they keep coming up and as a rock control method they work really well. As helping hold your soil, they don't. Chairperson Fetzer stated it basically just gets everything to an ash on top. It busts up all the lumps. Sanden asked if they should change the word modern to optimal. Pichotta suggested Encourage landowners to adopt crop production methods that promote soil conservation and utilize Best Management Practices that preserve agricultural soils. Chairperson Fetzer stated they hire all their spraying done and that seemed to be something that they really forgot. They had to start getting on them to leave the water runs. Holst said that he had GPS'd his water runs and put his chip in their machine this year and he has never seen anybody quite as pissed off at him as the custom applicators. That being said, someone will offer that service. That is the way that they have to go. I can control their sprayer from where I am off fishing someplace. Sanden asked if they are talking about grass waterways. Holst and Chairperson Fetzer stated yes. Holst stated that is the kind of thing we have to look at and how we promote that pretty much goes back to the individual farmer and what they want to do. Some of us adopted it and embraced it and other people when Land Conservation has gone out and talked to them, have pretty much run them off the place. Chairperson Fetzer stated a couple years ago they got flagged for some erosion problems in a field. It was one of those springs where you just got stuff planted and you'd get a gully washer. Some years, you can't do anything. We went from years ago doing everything no-till, now we have to inject all of our manure. So you do the best you can. We are planting rye in the fall on our chopped ground. They are chopping so much now. But you try to do everything just to maintain "T" on everything. Holst stated not everyone has that attitude. There are operations that would just as soon maximize their yield potential today and not care whatever the cost. There is no financial incentive to make them not be that way. Ross asked if there is a more prevalent problem with those that rent their land, absentee land lords? Chairperson Fetzer stated he wouldn't say that. Holst stated they will do it to their own land as quick as they will do it to someone else's. Pichotta noted that the reality is that through Land Management we are not necessarily going to have a mechanism to necessarily achieve this. It will mostly lend support to the activities of Land Conservation. Holst stated the verbiage that you have come up with sounds good. Sanden asked if wood lots are included with the umbrella of the agriculture. Pichotta stated he thinks they would be. Certainly a natural resource, the next section for sure. Sanden asked if we are treating production wood lots that are managed as production acreage, do we count that as under the agricultural section or the natural resource section? Pichotta stated he feels it could be addressed under both or either given that trees are just another crop; they just take a little longer. With that we move into Natural Resources. Bechel, data from Natural Resources, he took a look at the endangered and threatened species list for the WI DNR just to see if there was any changes; the one notable change of conditions of multiple bat species. That has happened across the country. That is mostly a fungus that is affecting the bats and not loss of habitat associated with just Pierce County. Holst asked about Wild Parsnip and stated a lot of it seems to be a lot more prevalent and expanding annually. We have to not cut the road ditches until after July 4th for nesting blackbirds. In the meantime, we have allowed this invasive species to run rampant. I know this is probably just a sounding board and there isn't anything we can do about it. Sanden stated speaking of the ditch mowing, a lot of times it is spreading that Wild Parsnip. They are mowing the ditches right after it goes to seed. Holst stated they are mowing too late, if they would mow it earlier, before it goes to seed. Then it wouldn't spread. We are promoting it. Maybe mowing isn't the answer anymore. We go back to herbicides and just kill it off or selectively kill it. Use something that will kill the broadleaf and not the grass. Bechel stated looking at water use data, we saw a 12% increase in groundwater use from 2005 to 2010, that is per USGS data. It also had a 42% increase in surface water usage. Holst asked how they arrived at that figure; it seems kind of high. Bechel stated

we dug into that to try to figure out what was going on there and it looked like that 42% increase is coming from surface water use from mining activities. Holst asked if that was recycled water. He thinks they are way off base there. Pichotta stated we have struggled with that too and couldn't figure out where that would come from because most water that is used in mining is coming out of high cap wells. Holst stated and then it is recycled. Pichotta stated so it's not surface water and you can't just divert a trout stream. We were confused by that number also. Bechel stated other things of note: there were three waters removed from the Impaired Waters list since 2008. Morgan Coulee Creek was the only named one. They were removed for no longer being impaired with sediment loads. Holst stated he grew up there and there never was a creek there anyway. It could have been removed 60 years ago. Pichotta noted that there are multiple Morgan Coulees. Holst stated yes, but which one did they take off. Pichotta stated we aren't sure. Bechel stated Lake Pepin is supposed to be put on and that would be for phosphorus load. Existing Goals, Objectives and Policies concerning Natural Resources are:

Goals: Use the County's land resources in a manner sensitive to environmental limitations.

Promote stewardship of the County's land and water resources.

Objectives: Protect natural drainage areas, flood plains and wetlands to avoid costly storm water projects.

Prevent the disruption of the natural environment by ensuring that land developments and other activities are sensitive to the character and limitations of the natural environment.

Encourage the preservation of areas of significant forested lands, wetlands, wildlife habitat corridors and areas, bluffs, springs, groundwater recharge areas, and other lands of geological or physical significance for use and enjoyment by wildlife and humans and for the balance they contribute to the Pierce County ecology.

Encourage land use practices that minimize environmental pollution.

Policy: Encourage the preservation of open space and protection of natural resources before, during and after development of land uses.

Encourage preservation of woodlands, conservation areas and open spaces close to developed areas to protect the natural environment so that the effects of urbanization and the loss of the character of the area can be minimized.

Encourage the linking of open spaces and natural resource areas of significance to increase the usefulness and accessibility of individual open spaces, (i.e. discourage fragmentation).

Plan for the reclamation of mining areas.

We don't have any additions to suggest to the existing Goals, Objectives and Policies. Pichotta stated he has come up with one suggestion as we have talked here: Discourage land use practices that spread invasive plant species. Sanden asked Pichotta if the Protect all drainage areas, does that include all surface waters, rivers and lakes. Pichotta stated yes. Sanden stated he only brings it up because whenever they do polls of the public, they are always talking about preserving the water quality. Pichotta again noted that our ability to impact some of these things is not going to be great. However, if funding opportunities should come up for Land Conservation to pursue a grant to do a certain thing and we have language in our Comprehensive Plan that supports, it adds credence to their application. So there is a value to having these things in place. Sanden stated also to the public so they know that we value what they have voiced as a concern. Pichotta stated moving onto Cultural Resources. Bechel asked if there is a noxious weed program in the County that has existed. Ross stated through the DNR. Holst stated the Town Chair has a list of Canadian Thistle, about three or four. He thinks our worst threat today is this Wild Parsnip. Jerome Rodewald noted that Japanese Knot Weed is terrible stuff. Holst stated they had a little bit of that but they mowed it and sprayed it with 2, 4-D a few times and it kind of went away. He stated usually all that stuff seems to come alongside a road. Sanden stated you have to be careful with Knot Weed because it actually spreads by moving parts of the plant so if you mow it, just make sure you aren't dragging it someplace else. That's how it spreads. Holst stated they just kept grinding in a little circle. Bechel stated the last section is Cultural Resources, not a lot of changes.

Goals: Maintain, preserve and enhance the cultural, historical and archeological resources of Pierce County.

Objectives: Increase awareness of the culture, history and archeology upon which Pierce County is built.

Foster tourism that promotes the natural resource base and the unique cultural, historical and archeological heritage of the county.

Policy: Encourage the preservation and enhancement of cultural, historical and archeological sites and structures within urbanized communities and utilize cultural, historical and archeological resources in the revitalization of the communities.

Encourage the preservation and enhancement of places of cultural, historical and archeological significance in historic or cultural preservation sites, consistent with town plans.

Encourage the development of cultural, historical and archeological sites for passive recreation, education and tourism.

Unless you came up with something, we don't have any recommendations as far as additions to those existing goals, objectives and policies. Pichotta stated he has no suggestions. Chairperson Fetzer asked if anyone has anything to offer. Pichotta asked if the committee is comfortable with this approach, working through chapter by chapter. Committee consensus was to continue with the current approach. When we have short chapters, we will take a couple at a time, moving along as quickly as we can. Some will be a bit more involved when we start talking about mechanisms for interaction with other municipalities. **Holst moved to approve the Agricultural, Natural and Cultural Resources section of the Comprehensive Plan as presented with changes/Ross seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel or training requests at this time.

Departmental Update and Future Agenda Items

Discuss take action of the approval of the amended Farmland Preservation Map for the Town of River Falls, please note the amended map that they would like you to consider is in your folders.

Discuss take action on a request for a rule exception for Chris Kusilek in the Town of Clifton

Discuss take action on another chapter of the Comp Plan; Transportation, Utilities and Community Facilities

We may have a request for a height exemption on a cellphone tower. That is now the mechanism through which we allow folks to go above 35 feet for a commercial structure.

Discuss take action on the proposed Pierce County Outdoor Recreation Plan

Discuss take action on proposed 2016 Budget

Motion to adjourn at 6:31pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 19, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 2 nd & 16 th , October 7 th & 21 st , all in 2015.	Chair
3	Approve minutes of the August 5, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider the adoption of an updated map of farmland preservation areas in the Town of River Falls as part of the Pierce County Farmland Preservation Plan and to amend the Pierce County Comprehensive Plan to include said map.	Pichotta
5	Discuss take action to review and update the Goals, Objectives and Policies of the Agricultural, Natural and Cultural Resources chapter of the Comprehensive Plan.	Bechel/Pichotta
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(8/7/15)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
715-273-6746 OR 715-273-6747
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, August 5, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 19th, September 2nd & 16th, October 7th & 21st, all in 2015.

Approve Minutes: **Holst moved to approve the July 15, 2015 Land Management Committee**

minutes/Sanden seconded. All in favor. Passed with Fetzer and Ross abstaining because of absence at the last meeting.

Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for Wisconsin Frac Sand Inc, John & Marjorie Kralewski Family Partnership, Dean & Mary Holden, Edmund & Dawn Daleiden, William & JoAnn Steele, Jeffrey & Kelly Von Holtum and Schaul's Gas Inc, owners, on property located in the S ½ of the SE ¼ of Section 3 and the N ½ of the NE ¼, the SW ¼ of the NE ¼, the E ½ of the SE ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 10, the W ½ and parts of the SE ¼ of Section 11, the W ½ of the NW ¼, the E ½ of the NE ¼, the N ½ of the SW ¼, the W ¼ of the SW ¼, the SW ¼ of the SW ¼, the SW ¼ of the NE ¼ and parts of the E ½ of the NW ¼, parts of the E ½ of the SE ¼, parts of the NW ¼ of the NE ¼, all in Section 14 and the W ½ of the SW ¼, the NE ¼ of the SW ¼, the W ½ of the SE ¼ of the SW ¼, part of the S ½ of the NW ¼, part of the NE ¼ of the NW ¼, of Section 13, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI. Holst recused himself from discussion and voting due to possible conflict of interest.

Chairperson Fetzer invited WISC forward: Al Nelson stated they are here to request renewal of the conditional use permit. To their knowledge, they have had no complaints at the site since the last renewal. He is not aware of any at the Township or County level. They are requesting removing conditions #12b, ventilation shaft air monitoring and #17. They are going on their fifth year of testing. To date they feel they have proven their case, that there are no noxious fumes emitted from the shaft. Their studies, depending on the wind speed, all fumes seem to be non-detectable at 100 – 200 feet from the shaft. They haven't heard any complaints of any odors. With the mine itself, they have had no DPM issues, no NOX issues with their blasting. They are requesting that you consider removing those conditions. They don't believe it was intended to be long term, just a study to address some concerns or questions. Mr. Nelson introduced Danielle Dohms, Line Manager and Chris Chapek, just started this year as Production Superintendent at the site.

Staff Report - Emily Lund: The WISC mining operation encompasses approximately 2,077 acres total with approximately 1,587 acres located in the Town of Maiden Rock and the remainder located in the Village of Maiden Rock. Of the 1,587 permitted acres in the Town, approximately 370 acres have been mined to date. The mine typically operates 24 hours a day, seven days a week and employs 58 people. The mine received its first CUP from the Land Management Committee (LMC) in 2004. The mining operation's CUP has been renewed every other year. In April 2012, a new loadout facility was constructed with a conveyor and railcar loading spout. This loadout facility increased efficiency, while reducing noise and dust. A fugitive dust plan was developed for the loadout facility. WISC began using a new wash plant with a water recycling system that reduced the amount of water used in their process. An updated Reclamation Plan was submitted and approved.

Working today for a better tomorrow

The LMC renewed the mining operation on January 2, 2013. Then on August 7, 2013, the LMC approved a 377 acre expansion to the underground mining operation. Most of the activity associated with the operation takes place within the Village of Maiden Rock, which houses the processing plant. The LMC approved the location and construction of a new 14 foot diameter culvert cased ventilation shaft for the underground mine on January 15, 2014. The new vent shaft has not been constructed to date. The properties are located in the Town of Maiden Rock and zoned Agriculture Residential. WISC creates tunnels by blasting and uses a room and pillar mining method. Mining activities take place underground, including blasting and washing. Surface activity is limited to the processing plant in the Village of Maiden Rock. There are two ventilation shafts in the current mining area that extend up to the surface and a new one planned to be constructed. The permitted land currently has agricultural, residential and undeveloped uses present on the surface. There are currently 4 wells located on-site. Three of the wells are high-capacity wells capable of pumping 1,000 gallons per minute, with the other being a residential capacity well. WISC is currently using one of the three high capacity wells for processing activities. The current mining activity takes place at approximately 800-830 ft MSL; the Water-Table elevation in this area is mapped at approximately 750 ft MSL. Blasting typically takes place three or four days a week; the blasts usually occur around 5:30pm. The WI DNR (and other agencies) regulate many of the activities of a mining operator. WISC is still in the process of updating their Storm Water Pollution Prevention Plan, Spill Prevention, Control and Countermeasures Plan and the Wisconsin Pollutant Discharge Elimination System Permit. They agreed to provide staff with updated copies to keep on file when complete. WISC submitted a Groundwater Response Plan for the facility. The plan addresses the source and use of groundwater within the facility as well as measures to protect the quality of the water. As part of this plan, WISC has installed two transducers and data loggers to continuously measure and record groundwater elevations in two residential water supply wells located within the permitted mining area. WISC developed a Damage Response Plan as previously requested by the LMC. Said plan was to be developed jointly with an ad hoc citizens committee. An agreement was unable to be reached regarding draft parameters. The LMC directed WISC to present the proposed Damage Response Plan to the Town of Maiden Rock for review and comment (condition #11). The Town of Maiden Rock, at their April 10, 2013 meeting, reviewed and approved the Damage Response Plan as drafted. Staff has not received any concerns or complaints about this renewal request. Staff contacted the Town of Maiden Rock Chairman regarding this renewal request; the Town did not have any concerns regarding the operation at this time. The existing 18 conditions are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends the Land Management Committee to renew this CUP with the following conditions:

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to four times per week, including Saturday.)
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
5. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
6. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
7. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.

8. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
9. This permit shall expire in two years.
10. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
11. The Damage Claim Response Plan, as approved by the Town of Maiden Rock, shall be adhered to.
12. The Town of Maiden Rock's recommendations/comments, from the January 9, 2011 public hearing, shall be adhered to.
 - a. Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
 - b. The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
 - c. The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.
13. WISC will be subject to control methods deemed adequate by the LM C for silica emissions if current or future studies suggest a significant public health threat from such emissions.
14. A fugitive dust plan shall be developed for the processing facility and submitted to the Zoning Office.
15. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
16. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
17. Emissions from the ventilation shafts shall be monitored twice annually and the results shall be submitted to the Town of Maiden Rock and the Land Management Department.
18. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LM C.

Sanden asked regarding condition #12b is this data shared with the County or is it only the DNR interested in looking at it. Mr. Nelson stated it is shared with the Township and the County. Sanden stated he is assuming they didn't see any issues with respect to the air quality. Roy stated yes he received it, for the County. Sanden asked if it's the same with the water testing, any concerns there. Roy stated no there hasn't been, occasionally you see a spike on a property here and there but there hasn't been anything ongoing. Sanden asked if condition #14, a Fugitive Dust Plan has been developed and submitted. Roy stated yes. Sanden stated so we can strike #12b. Roy suggested modifying it to say shall be implemented. Pichotta stated he understands that the testing has not shown anything, but he would be more comfortable with the removal of those conditions if staff had been able to raise this question with the Town of Maiden Rock, and suggested only removing it with the consent of the Town. Chairperson Fetzer agreed and suggested adding contingent with Town being comfortable with it, committee agreed. **Sanden moved to approve the renewal of the conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand, due to the fact it is not contrary to the public interest, nor detrimental or injurious to public health or public safety or the character of the surrounding area with conditions #1 - #18, striking #12b contingent upon approval of the Town and amending #14 to read A Fugitive Dust Plan shall be implemented and adhered to for the processing facility and striking #17 contingent on Town approval/Ross seconded. All in favor. Passed with Holst not voting.**

Discuss take action on renewal and potential modification of a conditional use permit for Nonmetallic Mining for BS Construction Inc and Steve Schoeder Properties, owners on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Jeff Schoeder forward: Mr. Schoeder stated he is here again asking for status quo renewal.

Staff Report – Brad Roy: BS Construction/Steve Schoeder Properties owns a mine which was expanded in 2006. County Materials was the previous operator of the site, but did not renew its lease. In 2006 County Materials and the Sylla's agreed to allow mining within 50 feet from the property line as long as the mining did not encroach within 400 feet from the house and peak particle velocity would not exceed .35 inches per second. On September 5, 2012 the LMC modified the condition regarding peak particle velocity for the blasts. The peak particle velocity was raised from .35 to .50. It was stated that the low peak particle velocity makes it more difficult to blast the rock as it gets closer to the Sylla's structure. The higher peak particle velocity will allow the blasters to obtain a higher frequency in the blast and utilize electronic detonators with proper timing to get better results for the operators and the Sylla's. A signature hole blast was completed on August 5, 2013. An analysis was done of the wave form to determine the optimum blast time utilizing electronic detonators. Since then, there have been two production blasts. Each blast was designed to remove the top half of the mine wall. The blast on August 22 had a peak particle velocity of .41 and the August 26 blast peak particle velocity was .25. The previous operator was instructed to report back to the LMC after the next full-face production blast with the Peak particle velocity limit of .50 to determine if any modifications to the permit are necessary. To date there has not been a full-face production blast with a peak particle velocity limit of .50. The Sylla's continue to want the peak particle velocity limit to be set at .35. They are concerned about the effects of the blasts to them as well as their structures. As the blasting gets closer to their residence they believe that higher peak particle velocity will make the blasting less tolerable to them. The property is zoned Agriculture Residential. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road S. Mining activity has been significantly less since County Materials lease expired. Previously most of the processing of materials was done at the County Material Spring Lake Quarry. With any new operator(s) more processing may have to be conducted onsite. BS Construction intends to mine one additional acre, towards Cty Rd S, and then close and reclaim the mine. The future production needs of any potential operator(s) cannot be known at this time. The LMC directed County Materials to conduct a full-face blast with a peak particle velocity of .50 and to then appear before the LMC to review impacts; this may not be acceptable for the next operator. Modification to Conditions #6 and #13 may be warranted. The Town of Rock Elm is working with the mine owner regarding a blasting agreement. The Town wants to see the impact of a full-face blast at .50 peak particle velocity before finalizing any agreement. The Town of Rock Elm Chairperson was contacted about this renewal. The Town is concerned about the Financial Assurance for the site and whether the Town would be responsible for any shortfalls. Staff informed the Chair that the County would be responsible for any shortfalls in the financial surety. The Town is also concerned about the impacts of a .50 peak particle velocity production blast. The existing conditions are listed in the staff report #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no additions or modifications are necessary, staff recommends the LMC renew this permit with the following conditions:

1. Hours of operation **shall** remain consistent with daylight hours **or** Monday through Friday, 6:00am to 9:00pm during the construction season with an occasional Saturday, 6:00am to 6:00pm, property owners within 300 ft and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits form other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibrations.
7. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.

Working today for a better tomorrow

8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. 50 foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Operator shall ensure that fly-rock does not negatively impact adjacent properties.
13. **The operator** shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions.

Chairperson Fetzer asked if there is anything coming out of the mine right now. Mr. Schoeder stated no, nobody is in there mining, the only thing that might be hauled out is some stockpiles that he periodically goes up and gets. John Eager, Rock Elm Town Chairperson, stated the Town is working on an agreement that basically ties BS Construction pit in with the CUP that the County issues to them. Which lets them be relieved of both their nonmetallic mining ordinance and their blasting ordinance. So it's not that they are making an agreement for blasting, it's all encompassed. There has not been a full-face blast done yet and how he remembers is that there was supposed to be a full-face blast done before the .50 was put in permanently but there is no reference to that in here. Holst stated condition #13 addresses that. Mr. Eager stated condition #13 vaguely addresses that. Holst stated conditions #6 and #13 tied together. They cover it quite well. Chairperson Fetzer stated we haven't had a full-face blast. Mr. Schoeder stated they would like to see it renewed at status quo. He doesn't see any reason to lower it. It used to be at a .35. He isn't a blaster but they are experts and if they feel they can do a better job of protecting structures with a higher frequency. Mr. Schoeder stated he was here when it was set at .35 and that is when County Materials started leasing with us. He was here with Jack Sonnentag and they didn't have a blaster with them. Jack Sonnentag just agreed to the .35, not knowing what he was even getting into. Since then, the blasters have very difficult times holding the .35. Now, what he is being told is that they can do a better job at .50. Chairperson Fetzer stated that is why they have raised it up. He doesn't see any reason to pull back until there is a full-face blast. Pichotta suggested it makes sense to leave conditions #6 & #13 in place and if for some reason, whoever the new operator is, if that doesn't work, they can come back in and before they do a production blast, if they want to do something different then we cross that line. He suggests leaving it as is. Mr. Eager stated the Town doesn't have any problem with the .50. They just want to see the results of it. They want everybody to be happy. Chairperson Fetzer stated for all we know they may take one more acre and there won't be anything else out of there. For now, we leave everything as is. Sanden asked does condition #13 does production blast imply .50, are those synonymous. Roy stated condition #6 would cover the .50, condition #13 would just require them to come back and we can review at that point. The problem would be if someone comes in and does a half-wall blast. We would be back at the same position we are right now. Mr. Schoeder stated if someone comes in, County started doing that. It's a softer rock on top and the harder rock is down below so that separated their two materials when they started doing that. When they get closer to the residence if they can keep the limit down doing that, it's beneficial to continue doing it that way. Holst stated they might shelf the rest of the quarry. Mr. Schoeder stated you don't know, that would make sense to him, shelving the rest of it and you might not see a full-face blast again. Chairperson Fetzer stated County Materials wanted to blend everything so they had better rock and that is why they wanted the full-face blast. **Holst moved to renew the conditional use permit for Nonmetallic Mining for BS Construction/Steve Schoeder Properties with conditions #1 - #13 /Ross seconded. All in favor. Passed.**

Discuss take action on proposed amendments to Chapter 240, Article VIII – Signs/Lighting.

Staff Report – Ryan Bechel: Changes proposed include the removal of “content-based” language in the existing sign code in an effort to conform to legal precedent set in court cases concerning 1st amendment free speech rights. The proposed changes will now regulate sign construction and permitting requirements in a “content-neutral” manner by zoning district; with differing regulations for Residential, Agricultural and Commercial/Light Industrial/Industrial districts. Regulations have been added regarding the use of digital display technology, including the addition of message duration, transition time, luminance and display standards. The temporary sign regulations contained in the existing code have been condensed into an all-encompassing section containing temporary sign requirements. Language regarding on-premise signs was

moved to remove an unnecessary section and improve clarity. Chapter 240-88 was amended to remove “content-based” definitions and provide new definitions for digital display signs and temporary signs. Chapter 240-36 was amended to remove the existing sign regulations based on permitted use. Pierce County has historically addressed sign regulation through the use of a content-based sign ordinance. A new method of “content-neutral” sign regulation was developed in order to conform to established legal precedent. Without the ability to regulate signs based on content it was necessary to develop a new method of sign regulation based on zoning district. The number of allowable signs and sign face area regulations in the existing code were carried over into the proposed amendment. It has become evident that regulations are needed for the use of digital display sign technology in order to minimize any detrimental effects to motorist safety. The proposed amendments include new standards relating to message duration, transition time and display based on completed government and industry research on the relationship between digital display signs and motorist safety. One of the key components in the regulation of digital display sign technology is the regulation of sign luminance, a measurement of the light emitted or reflected from a flat surface as it is detected by the eye. It is often used to characterize the brightness of a display. Luminance is measured in candela per square meter or “nit” which is based on the power of the light, the area of the surface and the angles between the surface and the viewing direction. Research has shown that typical floodlit billboards range anywhere from 100 to 280 nits during nighttime hours. To minimize driver distraction staff is proposing that 300 nits be utilized as a maximum value for nighttime luminance. This is proposed as a compromise between conventional floodlit signs which typically utilize a maximum of 280 nits and the most common regulatory provision utilized by other jurisdictions, that being 500 nits. To ensure adequate visibility for daytime use staff has proposed a value of 5,000 nits to allow for luminance that is approximately equal to that of a sunny daytime sky. To prevent the department from needing to purchase expensive light measuring equipment to verify a sign is meeting standards, language has been drafted requiring the applicant for an illuminated digital display sign to provide documentation demonstrating that a proposed sign can be automated to meet these proposed standards prior to issuance of a permit. In the staff report, there is an overview of the sign area standards from the code and where they can be located.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions and if determined to be appropriate, direct staff to schedule a public hearing to consider their adoption. Pichotta asked if the committee wants to go through the actual language that is proposed. Chairperson Fetzer stated we have gone through all this before. Pichotta stated since you saw it last, we have streamlined a couple things and then the actual language that we are proposing to use that puts the onus on the applicant instead of on us to measure nits - so Mr. Bechel will be brief. Bechel stated we will look at the highlighted starting on the fifth page: the first piece would be adding under the Digital Display and Illuminated Signs (7) Prior to issuance of a permit for a digital display sign, an applicant shall submit documentation demonstrating that the proposed sign can be automated to comply with the above requirements. So we don't have to buy a \$4,000 - \$5,000 light meter to regulate that ourselves. Below that we have struck language pertaining to off-premise signs in that section and moved that to the next page under Freestanding and Projecting Signs. We have combined the on/off premise signs with the freestanding and projecting signs. So the maximum size of an on-premises freestanding and projecting signs shall be as follows: a. Signs located in Commercial, Light Industrial and Industrial districts shall not exceed 32 square feet in sign face area and shall be limited to 3 per parcel. b. Signs located in the Primary Agriculture, General Rural, General Rural Flexible or Agriculture Residential zoning districts shall not exceed 24 square feet in sign face area unless a conditional use permit is issued in accordance with §240-76; in such cases, sign face area shall not exceed 32 square feet. Such signs shall be limited to two per parcel. c. Signs which are located in Rural Residential 8, Rural Residential 12 or Rural Residential 20 zoning districts shall not exceed 24 square feet in sign face area and shall be limited to 1 per parcel. 2. Off-Premises Signs shall be allowed only in the Commercial, Light Industrial and Industrial districts and shall not exceed 32 square feet in sign face area and shall be limited to 2 per parcel. The language all below that has been removed. The final piece is in the definition and that is the addition of the definition of a Parcel as it relates to off-premise signs. Also Sign, Digital Display sign definition. Pichotta asked if there are any comments, questions or concerns. Sanden asked about the justification for 500 nits with other jurisdictions, why that is the standard, did they give a rationale as to why that number is the special limit. Pichotta stated it is difficult to know as typically a rationale

isn't included in an ordinance. Holst stated so they can be irrational is what he took from that. Sanden asked if it's equivalent to headlights at 50 feet. Bechel stated the best equivalency he can give for it is an iPhone or cellphone on full brightness, white at night; that is 500 nits. Sanden stated the setbacks don't need to be addressed in this because they are addressed in the other part of the zoning ordinance.

Aubart moved to direct staff to schedule a public hearing to consider adoption of Chapter 240, Article VIII – Signs/Lighting/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel or training requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider the adoption of an updated map for Farmland Preservation Areas in the Town of River Falls as part of the Pierce County Farmland Preservation Plan and to amend the Piece County Comprehensive Plan to include said map.

Discuss take action to review and update the Goals, Objectives and Policies of the Agricultural, Natural and Cultural Resources chapter of the Comprehensive Plan.

Motion to adjourn at 6:43pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, August 5, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 19 th , September 2 nd & 16 th , October 7 th & 21 st , all in 2015.	Chair
3	Approve minutes of the July 15, 2015 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for Wisconsin Frac Sand Inc, John & Marjorie Kraleski Family Partnership, Dean & Mary Holden, Edmund & Dawn Daleiden, William & JoAnn Steele, Jeffrey & Kelly Von Holtum and Schaul's Gas Inc, owners, on property located in the S ½ of the SE ¼ of Section 3 and the N ½ of the NE ¼, the SW ¼ of the NE ¼, the E ½ of the SE ¼ of the NE ¼ and the N ½ of the SE ¼ of Section 10, the W ½ and parts of the SE ¼ of Section 11, the W ½ of the NW ¼, the E ½ of the NE ¼, the N ½ of the SW ¼, the W ¼ of the SW ¼, the SW ¼ of the SW ¼, the SW ¼ of the NE ¼ and parts of the E ½ of the NW ¼, parts of the E ½ of the SE ¼, parts of the NW ¼ of the NE ¼, all in Section 14 and the W ½ of the SW ¼, the NE ¼ of the SW ¼, the W ½ of the SE ¼ of the SW ¼, part of the S ½ of the NW ¼, part of the NE ¼ of the NW ¼, of Section 13, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Lund
5	Discuss take action on renewal and potential modification of a conditional use permit for Nonmetallic Mining for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Roy
6	Discuss take action on site plan review for a storage building for Hager City Telephone Company in the Commercial District pursuant to Chapter 240-75, on property located in the NE ¼ of the NE ¼ of Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.	Bechel
7	Discuss take action on proposed amendments to Chapter 240, Article VIII – Signs/Lighting.	Bechel
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, July 15, 2015

Present: Jon Aubart, Jeff Holst and Eric Sanden

Others: Andy Pichotta, Brad Roy, Ryan Bechel and Shari Hartung

Absent: Joe Fetzer and Jim Ross

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 5th & 19th, September 2nd & 16th, all in 2015.

Approve Minutes: **Sanden moved to approve the June 17, 2015 Land Management Co mmittee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for Belle Vinez Winery for Shannon and Angel Zimmerman on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: The applicant received a Conditional Use Permit to establish the “Belle Vinez” winery with incidental food service in August 2013. The applicants also reside on the 20 acre parcel. The operation is intended to build interest and demand for Belle Vinez brand wine, which is produced onsite. Off-sale wine along with various craft and wine related products are also sold onsite. The Land Management Committee approved the site plan of the operation on January 15, 2014 and also a Food and Wine Plan, detailing how the food operations will be incidental and subordinate to winery operations, on March 5, 2014. The first batch of wine was produced last fall. The operation opened to the public in May 2015. The commercial structure includes a tasting room, kitchen, dining area, restrooms and offices/conference rooms. The site also includes a 4,320 square foot production shed, approximately 4 acres planted with 1600+ vines and an outdoor plaza for customers. The tasting room is permitted to be open from mid-May to December 31st, seven days a week. The hours of operation are 11 am to 9pm. Off-sale wine and other various crafts are sold in this area. Only appetizers are served in the tasting room. Customers of the tasting room are welcome to use the plaza and lounge for seating. The original proposal stated that appetizers would be available seven days per week in the Tasting Room, clarification on condition #12 may be necessary if it was the LMC’s intent to allow appetizer sales in the Tasting Room as was originally proposed. Draft language to clarify this issue has been proposed in recommended conditions. The pizza service is open Thursday through Sunday with hours of operation being 11 am to 9pm with lights out by 10pm. The permit allows sales of the brick-oven pizzas from mid-May to December 31st. Concerns were raised at the CUP hearing about the intention of the applicant and whether the primary focus of the business would be food rather than wine. The LMC approved the winery request with a condition stating that the applicant shall provide a plan for food service operations which demonstrates that food operations are incidental/subordinate to winery operations. At the March 5, 2014 LMC meeting, the LMC approved the presented food and wine plan which stated that the pizza service would be available for approximately 22 weeks and end October 31st. The expected revenue of the operation for this year is approximately 70% from the wine and 30% from food. The cost of two glasses

of wine is relatively equal to one pizza. The lounge has a 120 person seating capacity for food service. Limited seating can be moved to the plaza depending on the weather. Food items will only be available to those at the dining tables. Patrons of the winery who are on the plaza would not be served food, unless seated at a table. Reservations are required for dining with the ability to serve customers who do not have reservations as long as they have seating and parking space available. The reservation system is a means to eliminate the potential for large crowds waiting onsite for available seating. Currently the website requires reservations for seating on Friday and Saturday nights, the nights of higher demand. The applicants anticipate hosting weddings or small private events. The activities will be limited to the wedding and a small reception, and not include a typical dance or other late evening activities. These events would be done within the business' regular hours of operation. No parking is allowed on 875th Ave and signs are posted in the parking lot about the need for reservations and the no street parking requirement. A sound system plays light music and all speakers are placed within structures. The berm and visual screening has been installed as detailed in the approved site plan. The required signage has been installed. Staff has not received any complaints since the winery opened to the public. The Town of Clifton Chairperson, LeRoy Peterson, was contacted for comments/concerns about this renewal. He stated that he has not received any valid complaints to date and recommended renewal of this permit. The existing conditions #1 - #26 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area. Staff proposed changes are **bolded**. If no additional changes are necessary, staff recommends the LMC renew this permit with the following conditions:

1. Activities shall be conducted consistent with the application unless modified by another condition of this approval.
2. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
3. The winery shall produce "wine" as defined by the State of Wisconsin.
4. Applicant shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulation.
5. The applicant shall obtain necessary licenses from the Town of Clifton.
6. Applicant shall obtain all other necessary permits from state and municipal agencies.
7. The parking lot shall have at least 71 parking spaces. There shall be no on-street parking.
8. Seating capacity for the pavilion and plaza shall not exceed 120.
9. Applicant shall install signs detailing the need for reservations and no parking on the street.
10. Finalized plans of the structures shall be presented to the LMC for review and approval.
11. Winery may be open from mid-May to December 31st. Hours of operation shall be 11am to 9pm.
12. **Full menu** food service (pizza and appetizers) may be provided from mid-May to December 31st, Thursday through Sunday. Hours of operation shall be 11am to 9pm with lights out by 10pm.
Limited menu food service (appetizers only) may be provided in the Tasting Room during regular hours of operation.
13. No beer or liquor shall be served in the tasting room.
14. Lighting shall comply with the Land Management Department policy.
15. Sound system shall only be within the structures.
16. No audio bird repellent shall be used onsite.
17. Weddings and special events may not exceed established business hours and must be conducted consistent with the other conditions on this permit.
18. This Conditional Use Permit shall expire in 2 years and a status report shall be presented to the LMC in one year.
19. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
20. Berm shall be established on the east perimeter of the property with adequate vegetative cover.

21. Adequate vegetative cover shall be established to visually screen the parking lot from the road.

22. **Applicant shall adhere to the approved Food and Wine Plan and shall ensure that food operations remain incidental/subordinate to winery operations.**

23. Sound shall be limited to no more than 80 decibels at the property line.

24. Food service shall remain incidental/subordinate to the primary use as a winery.

25. Promoted access route shall be along County Road M.

26. Arrangements shall be made to establish a visual screen along the southern property boundary.

Roy stated we did receive some letters from neighbors. He believes that the committee also received the Borgstadt letter. He also received a letter from Carol Schoenthaler which was put in the committees folders. Holst asked what the correct procedure to report what some people perceive as infractions to a CUP. Should they be reported to the department as they happen? Pichotta stated typically they are reported to the department as they happen. Holst stated if things are going on it would be nice to know about it in a timely fashion so they can be addressed as they happen. Mrs. Borgstadt asked how would you like them to address them, should they call you? Pichotta stated call staff or email us. Mrs. Borgstadt said at 11:00pm at night? Pichotta stated you can contact the office whenever you would like. Sanden asked if Brad could verify on the issues pertaining to the request #3, pizza service is open Thursday through Sunday with hours of operation from mid-May to December 31st, then two paragraphs down it mentions an end date of October 31st. Roy stated the CUP approval in August of 2013 established a timeframe. The food plan that was to demonstrate whether food would be incidental stated that pizza service would end in October. So to comply with the Food Plan, they have to end in October. Holst stated they can continue to serve wine and appetizers through December. Roy stated that is correct. Holst stated this is not a public hearing but we will take comments from the crowd as long as they are limited and specific. Sanden asked if anyone has been on-site to verify the vegetative plan, specifically with respect to condition #21, adequate vegetative cover shall be established to visually screen the parking lot from the road, if that has been accomplished and then condition #26, visually screen along the southern property boundary. Roy stated the site plan had basically a landscaping plan in it and everything from that plan has been installed to the best of his knowledge. So #21 is covered. Condition #26 is in reference to the neighbor to the south who, at the time of approval, had discussed with the applicants potentially wanting a fence or some trees planted but there was never any decision made on what that property owner wanted. Mr. Zimmerman stated Pat wants just trees. He told him if he wants a fence, he would happily put up a fence but he prefers not to look at a fence and let the trees grow. Sanden asked when it says "lights out at 9:00pm" you have to give them some reasonable leeway. If there is a car in the parking lot at 9:15pm does that technically violate the lights out? Pichotta stated you may recall we had this same discussion with Vino in the Valley. There was a concern about what that actually meant. What was determined that meant for Vino in the Valley was when you are done serving, 9:00pm in this case, lights out meant that everyone had basically vacated by that time. The customers had vacated by "lights out" time. It didn't necessarily mean the lights were completely out. It didn't mean that someone wasn't there cleaning. It didn't necessarily mean there weren't cars around too. It just meant that you are done serving and you try to get people off the property by that time. Sanden stated you can't shut the lights off on them when they are in the middle of finishing their dinner. Pichotta stated that is correct, given that was how it was interpreted for Vino in the Valley he is assuming, since we used the same phrasing, that it meant the same thing in this particular case. Marcia Borgstadt, neighbor, why do we have the hours of operation until 9:00pm if we don't anticipate that they will leave until 10:00pm, 10:30pm, whenever. Sanden stated the "lights out" was 10:00pm. Mrs. Borgstadt stated yes, hours of operation are from 11:00am to 9:00pm which means to her, if a store has hours of operation from 11:00am to 9:00pm, the store closes at 9:00pm. She anticipated that this means the same thing. Sanden stated within reason, 10 minutes here, 15 minutes there, to him doesn't mean a violation, personally. Mrs. Borgstadt stated cars in the parking lot at 9:30pm, 10:00pm is not reasonable. Sanden stated he didn't remember reading anything about cars in the parking lot at 10:00pm. Mrs. Borgstadt stated you had an addendum from us. Sanden asked when did we get that addendum? Holst stated it showed up in my mailbox on Monday. Gary Borgstadt stated they should have started by asking if you received the document. Holst again noted this is not the typical way to address concerns regarding

conditions. Typically, they go through the department route and he guessed that if he had a problem on May 23rd, he would have called Land Management Dept up on May 23rd. Mrs. Borgstadt stated they can start doing that. Aubart asked how you identify who these vehicles belong to, are they employees? Mrs. Borgstadt stated they have a separate employee parking lot and a customer parking lot. She would assume that employees park in the employee parking lot and customers are in the customer parking lot. That is why she stated based on vehicles parked in the customer parking lot. Mr. Borgstadt explained you might say what difference does it make to us, well, the later it gets when they tear out of the parking lot and make noise, it is just a further aggravation. Holst asked if they believe patrons are not following the letter of the law on their operation of their vehicles. Mr. & Mrs. Borgstadt stated that is not their concern, their concern is that the hours of operation are not being followed. Lights out at 10:00pm is not being followed. Mr. Zimmerman stated that his interpretation is consistent with Mr. Pichotta's in that the hours of operation conclude at 9:00pm, lights out at 10:00pm. As you have outlined, 9:00pm not a person is served one more piece of food, wine, anything. It is to wrap up and conclude. Unlike a store, however, some people, when they are in a social setting like this, they will hang around for a little bit, they will talk and visit. We have them out of all buildings, plaza facilities before 10:00pm. He can't speak as to exactly what time they exit the parking lot and he would also say that yes, in fact, Josh will park in the parking lot from time to time. So will other members of our staff. He would never want to say that it could never happen; that after they have moved everyone from the building that they don't talk for a few minutes in the parking lot. That could very well be true. His interpretation is consistent with what was shared here and we follow it strictly. Mr. Borgstadt stated he had a slight rebuff, Thursday night, 10:00pm, six people were in the parking lot, four cars, laughing, making a bunch of noise and driving out. These are customers, he watched them leave. To him, he doesn't know how this happens in bars, last call comes before 9:00pm and people are out within a reasonable time. Maybe ten minutes is reasonable but not 10:00pm, an hour later. That is the position they have taken with the information they gave the committee. Sanden asked Mr. Zimmerman if the website advertises appetizers as being available Monday through Wednesday? Mr. Zimmerman stated he doesn't recall if it advertises Monday through Wednesday. He knows they are advertised on there. Monday through Wednesday, they are typically closed unless by appointment because while they have the right to be open, it might not be busy. Most times it's not, unless someone has called to say we have a group that would like to come out and visit, we probably wouldn't be open either way. The website, he can't speak from memory right now, it may say that. Joshua Zimmerman stated he can clarify that. The website does not specifically say Monday through Wednesday, appetizers only but it does say by appointment only. So anybody coming out would make a phone call ahead. Sanden stated so it's a more general statement. Josh Zimmerman stated yes, basically no one would show up randomly on a Wednesday, their doors are always locked. The closed sign is always on. If they are out working in the field, he would not go up there unless there was a reservation made and at that point they would tell them it was for wine service only. Mrs. Borgstadt stated she can go home and print out what she has seen. Pichotta stated that in regards to that particular condition; that was one of the things where that original application stated one thing and the conditions when they were hammered out after the public hearing perhaps didn't quite as artfully reflect things as they might have and that is why we asked for some clarification on that specific condition. He would remind the committee that the applicant has just gotten the operation up and running and there is certainly going to be some hiccups with fine tuning these conditions. That is why we asked what the LMC's intent was when these conditions were placed in the first place. Sometimes the verbiage associated with the conditions doesn't artfully replicate what the committee said or meant. Sanden asked if the bolded edits are staff's attempt at verifying that. Pichotta stated yes that was assuming that was your intent. Aubart asked Brad if the berm has been established on the east perimeter of the property. Roy stated correct. Mrs. Borgstadt asked if the committee saw their concerns with the berm on the east side, photos that have been attached. Sanden asked as far as the plantings? Mr. Borgstadt stated the lack of height and planting. Mrs. Borgstadt stated probably 99.9% of the vegetative cover is weeds. The berm that they established is too steep for anyone to mow it so she is not sure how they would handle that. Holst stated it looks like prairie restoration to him. It's full of pollinators, kind of what we want to see on things today. Sanden agreed and

said he doesn't feel comfortable dictating exactly which species they plant, Kentucky Blue Grass or a nice prairie. That is at their discretion. Mrs. Borgstadt asked if thistles are OK? Holst stated thistle is a pollinator, so long as it's not a noxious weed. Canadian Thistle is a noxious weed and if that is the case, report that to your Town Board Chairperson and he has to go out and make them get rid of it. Sanden stated to Mr. Zimmerman, as you know we are in a very interesting position here trying to balance the needs of the many landowners. We definitely want to promote development and business in the County. We also need to respect the full enjoyment of people's property. So we have to always be trying to thread that needle which is a very difficult thing to do. As Andy said, we will have to be tweaking these things from time to time until we reach that proper balance where everyone can live together and be comfortable together. People are going to be inconvenienced that is just the nature of life, things happen, nothing ever stays the way they were the day you bought your property but we want to try to make reasonable accommodations whenever we can. What he is looking for is that they can negotiate in good faith and that you do your best to follow the intent of the CUP. There are going to be some glitches here and there. What he has seen when we run into problems is that the applicant has taken a long time to respond to any issues or just does not respond at all. Then things start to get pretty difficult and it doesn't seem like a good faith kind of negotiation. He would say, from his experience on this board, it looks like you (the applicant) are accommodating to what they had set out to achieve. Yes, there does seem to be a few little things that need to be tweaked here and there. He hopes you will continue to improve this process for your neighbors. He would then be comfortable with renewing it. Carol Schoenthaler asked on condition #13, just so you know, no beer or liquor is allowed with his liquor license. She would like to see that expanded to say served at all at the winery or taken out. Holst asked if they cater weddings or allow weddings. Mr. Zimmerman stated they do not cater weddings. Holst asked if they allow any carry on. Mr. Zimmerman stated no. Holst asked if they serve beer or liquor. Mr. Zimmerman stated no. Holst stated we could get rid of condition #13 and it wouldn't affect you. Pichotta stated the reason that was put into place was that the CUP was issued before the Town of Clifton issued a liquor license and they had applied for the ability to serve more than just wine. They are tempered by the license they got from the Town. Holst asked if Mr. Pichotta suggests leaving it in at this point. Pichotta stated he doesn't think it hurts to leave it in, it may be that he (the applicant) will at some point acquire an expanded liquor license. Holst stated he would hate to come back and have this argument again twenty years from now with a different group of people sitting here over one item when perhaps he has proven to the current neighbors, in a year or so that he is a good neighbor. Holst noted that he wouldn't mind having the applicant live next to him noting that he lives by the railroad tracks and a car leaving wouldn't affect him much. Mrs. Schoenthaler asked what was the status of condition #13? Holst stated that in his opinion it stays in, as long as they can't use it anyway, what difference does it make? Sanden asked Mr. Zimmerman if there was anything else he would like to tell us. Mr. Zimmerman stated yes, he again has understood the concern from the start and is very aware of the early speculation that this would be a free-for-all college kind of crazy madhouse. He is sorry that a person leaving at 10:00 pm and maybe talking as they are leaving is disturbing. He hopes it's not over 80 decibels for sure. It's probably no different than other neighbors leaving. It has always been their intent to do the right thing by this project and to find a balance. With many that can be had but with some maybe it never can be but we will still continue to try. He would make this comment, they have had the opportunity since they opened, to meet with a lot of people who heard the speculation, heard the concerns. Some of them are very close neighbors and they are now regular customers. He has no intention of having a crazy place until late at night. If this could ever be resolved, short of stopping the business entirely, he would welcome that. The thought of picking at things for the next five years is going to drive you crazy; it's going to drive us crazy. If you could think about crossing the chasm and just thinking about this, he is willing and listening. He will do what he can for the neighbors. Yes, he is going to have a winery. They have put some money into it now and intend for it to be there for his next generation. He is going to do the right thing to the best degree that he can. He can assure you that they are out of that building by 10:00pm and that was his interpretation unless that is changing. Mr. Borgstadt asked if there is a way that you can wrap language around that comment about out by 10:00 pm. We still hold the position that 9:00 pm is ceasing operations and it sounds like ceasing operations is now 10:00 pm. Holst stated to this

member of this committee, 9:00 pm meant that they quit serving. 10:00 pm meant that they were out the door. His position hasn't changed any on that and if you misinterpreted what they said or meant, he is sorry. Sanden stated that is consistent with that statement and other context.

Sanden moved to approve the renewal of the conditional use permit for Belle Vinez Winery for Shannon and Angel Zimmerman with conditions #1 - #26 with the noted edits to #12 and #22/Aubart seconded. Holst asked for discussion, some of these have been met, they were one time conditions, should they be struck? Twenty-six conditions on a conditional use permit, this is a terrible thing. Roy stated as he reads through it again, #10 could have been struck, #26 could too. Now we have run into the problem of vegetative screening. Condition #20 talks about adequate vegetative cover, when trees or plants die with the expectation that it gets replaced. So maybe having some of the vegetative information in will imply that it's maintained not just planted one time and forgotten. Pichotta also noted that if the CUP doesn't say that a Food and Wine Plan is required, say in 10 years it could be forgotten that there was one and that is the mechanism through which one might amend operations if there was something proposed that was short of an intensification or expansion. Holst asked have we seen any results from the Food and Wine Plan or do we wait until the end of the year. Pichotta stated the Food and Wine Plan was basically to demonstrate that incidental/subordinate nature of food versus wine. Holst stated at some point we need proof of that Mr. Zimmerman. Mr. Zimmerman asked to address the issue, there was a discussion around if they turn over all the financials, do we have it validated. He has the information for the committee. He can give it to them right now. It looks like in terms of what he extracted. The first dollar in was May 16th and this report runs through July 12th. Wine sales equated for 71% of all revenue in, non-wine sales were 29%. Non-wine sales are defined as soda, water, food and retail items. He is not sure how that is going to play out. He thinks it's going to move up and down a little bit. It is very clear to them that wine sales do dominate as they had hoped they would. Furthermore, distribution of Belle Vinez wine throughout the western portion of Wisconsin and the eastern Metro will begin within four weeks so it's just going to further that. Their vision and goal has not changed. They want this to be the defined wine brand in this part of the state. **All in favor. Motion passed.**

Discuss take action on renewal of the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Kenny King introduced Chris Boe, he has been working with Mr. King since January. He is the Environmental Health and Safety Manager.

Staff Report – Ryan Bechel: This facility was permitted in 2011 and began full operation in 2012. Muskie was originally processing sand from a mine located in Pepin County and then later added another mine from Dunn County. For the past year, Muskie was also processing sand from a Wieser Concrete mine located in the Town of Salem in Pierce County. Due to market conditions and low demand, Muskie shut down processing operations on June 30, 2015. They still have approximately 6,000 to 7,000 tons of sand stockpiled at the site to assist with start-up operations. At this time, they are unsure when they will start up operations again. When in operation, sand is trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The facility also has byproduct storage stockpiles, storm water ponds, a high capacity well, process water treatment facilities and elevators for the storage silos. The final product is trucked primarily to St. Paul or Chippewa Falls to be loaded on rail as well as loaded for over-the-road shipping to North Dakota and Montana. The hours of operation are generally five days per week 12 hours per day 6:00am to 6:00pm for the quad axle trucks; semi-trucks hauling are spread out over 20 hours per day. The applicant indicated their intent to expand hours of operation to 24 hours per day, seven days per week when volume dictates. Industrial uses within the Industrial District typically have not had hour restrictions due to the purpose and intent of the district. A Fugitive Dust Plan has been submitted. The plan details potential sources, control measures and daily record keeping. Staff had received multiple complaints regarding dust in the facility's first year of operation. Since the last renewal, no complaints have been received. There have been no changes to the storage of byproduct since the last renewal. The sand is currently being trucked to a mining site in the Town of Trenton for reclamation purposes. There have been no complaints about engine braking since Condition 6 was added. The

applicant has indicated that they are continuing to pursue additional product sources which may result in new travel routes. Staff has contacted the Town of Union Chairman regarding this renewal request; the Town did not have any concerns at this time. PCC §240-76(I) discusses termination of conditional use permit and states, "Termination. If an established conditional use is not conducted in conformity with the permit or this chapter, the conditional use permit may be terminated by action of the Land Management Committee. If an established use permitted as a conditional use ceases for a period of more than 12 months, the conditional use permit shall terminate and all future activity shall require a new conditional use permit." If the applicant wishes to retain "active" status, activities related to processing, even if very minor, will need to be conducted. The existing conditions are listed in the staff report #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. If no changes or additions are necessary, staff recommends that the LMC renew the CUP with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.
5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. The Fugitive Dust Plan shall be adhered to.
8. Byproduct shall be utilized in the reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code.
9. Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.
10. The facility shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.
11. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
12. Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.
13. The conditional use permit shall expire in 1 year.

Sanden asked if the reference to the Pierce County Code is suggesting that they have not been conducting operations for twelve months? Bechel stated it is not, it's just referencing should they not restart in the next year their conditional use permit will expire. Some sort of activities need to take place. Sanden asked if they will be doing something in the next 12 months. Mr. King stated correct. This evening they received an order so they will be shipping some sand out tomorrow. He will keep the office notified of when they are running and when they aren't running. Pichotta stated that when a use ceases for a full year. It loses its status. So we were trying to make the applicant aware that if they stayed shut down for an extended period of time that it would be in their interest to ensure that some activities were conducted and documented so it was clear that they hadn't lost active status and needed a new CUP. Sanden asked if they could, if they did, come back for a new CUP. Aubart asked if you receive orders, you are still operational or can operate to a certain extent. Mr. King stated basically they shut the plant down because of recent market conditions. They are going to accept orders if they are favorable for their market. They won't operate the plant in a loss. Holst asked for clarification sake, if you open your plant tomorrow and send out one load of sand, he has fulfilled the use within that one year period. Pichotta stated it resets the clock for another year. Aubart stated his other concern is that we did have a number of complaints early on. With the plant being inactive and the stockpiles being there, does the Fugitive Dust Plan still need to be maintained?

Pichotta stated yes, it does. Aubart asked is that part of the operation? Pichotta stated the primary use being the processing of sand he thinks that function would need to be continued. For example a gas station that had ceased being a gas station but someone came and mowed the lawn. That wouldn't necessarily count as fulfilling the use. Aubart asked if it was a condition of the conditional use permit would it be? **Sanden moved to approve the renewal of the conditional use permit for Heavy Industrial Use for Muskie Proppant LLC with conditions #1 through #13 due to the fact this is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.**

Discuss take action on bids received for the 1998 Jeep Cherokee SE 4WD.

Staff Report – Andy Pichotta: The Land Management Committee and the Finance and Personnel Committee declared the 1998 Jeep Cherokee formerly utilized by Department staff to be surplus equipment and authorized its sale. An advertisement soliciting sealed bids was placed in the Pierce County Herald for two weeks with a deadline for bid submittal of June 26, 2015 at 4:00pm. Three bids were received prior to the deadline: Jay Carlson, Prescott, WI, \$900, Jason Matthys, Spring Valley, WI, \$1100, and Wisconsin Victory Companies (Wayne Schulte), Ellsworth, WI, \$1717.39.

Staff Recommendation: Staff recommends that the Land Management Committee authorize staff to sell the 1998 Jeep Cherokee to the highest bidder. If that doesn't work out, authorize us to sell it to the second highest bidder.

Aubart moved to authorize the sale of the 1998 Jeep Cherokee to the highest bidder, if that doesn't work out, authorize the sale to the second highest bidder/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

CUP renewal for Wisconsin Industrial Sand Co. the mine located in the Town of Maiden Rock
Status report and potential modification of CUP for County Materials, agent for BS Construction in the Town of Rock Elm. That is going to change because it is his understanding that County Materials is no longer operating there.

Amended language for Chapter 240, Article 13, regarding signs and lighting, we are proposing some language regarding the regulation of nits.

Motion to adjourn at 6:47pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 15, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 5 th & 19 th , September 2 nd & 16 th , all in 2015.	Chair
3	Approve minutes of the June 17, 2015 Land Management Committee meeting.	Chair
4	Discuss take action on renewal of a conditional use permit for Belle Vinez Winery for Shannon and Angel Zimmerman on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on renewal of the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Lund
6	Discuss take action on bids received for the 1998 Jeep Cherokee SE 4WD.	Chair
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, June 17, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 1st & 15th, August 5th & 19th, September 2nd & 16th, all in 2015.

Approve Minutes: **Ross moved to approve the June 3, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on approval of amended Farmland Preservation Map for the Town of River Falls. Andy Pichotta noted that a number of representatives from the Town of River Falls were present and indicated that he would defer to them at this point and that he would answer any questions when they are done. Jerome Rodewald, Zoning Administrator, Town of River Falls, stated the staff report was very accurate and factual. The map that was certified by DATCP back in 2013, when they were making the map, it was their understanding that land to be developed would be the ETZ, the zone outside the City of River Falls. That has been established since 1974. After that map and further meetings with the City, they said that they consider their development plan as the sewer service boundary. The sewer service boundary on the south and east side of the City in the ETZ is much smaller and allows them to preserve some very good farmland that lies there somewhere around Mr. Aubart's house. This is land that the family has invested in Agriculture and expansion and really should be a part of the Farmland Preservation effort. There is some additional land on the east side that fits that category as well. That is the real basis for the request. To be able to include that land as a part of our Farmland Preservation and looking further down the road into the next subject is including it in an Ag Enterprise Area because it includes some of our best farmland. That area south along County E. Mr. Rodewald stated that he has worked very closely with Mr. Pichotta and the GIS Mapping Specialist, Kevin Etherton. He feels Kevin has gone the extra mile and found things that needed to be tweaked and fixed. He is very skillful and has been very accommodating.

Staff Report – Andy Pichotta: The Town of River Falls has requested that Pierce County amend its Farmland Preservation Plan to include an updated map of lands within the Town that are “suitable for preservation.” This map is referred to in the Plan as the “Farmland Preservation Map for the Town of River Falls.” Jerome touched a little bit on the issue associated with land within the ETZ and also the Town did provide some correspondence that discusses the criteria that they used to include lands or not include them. This map will be utilized as the basis for the formulation of Farmland Preservation Zoning (formerly referred to as Exclusive Agriculture Zoning) by the Town of River Falls and also used to support the establishment of the proposed Agriculture Enterprise Area being referred to as the “North West Pierce County AEA.” What we saw with other towns, when they submitted maps for our Farmland Preservation Plan, most of those Towns simply identified lands within their borders that were zoned agriculture and included that as an area suitable for preservation. That sort of an approach would not work for the Town of River Falls because they are an Exclusive Ag Town and as such their zoning map has to

be 80% consistent with the map that they use to identify lands that are suitable for preservation. When they submit a new map and a new ordinance, one of the things we will have to weigh that against is the map contained in our Farmland Preservation Plan. So this map will be used for a number of things. Given that the County's Farmland Preservation Plan has been adopted by ordinance as an addendum to the Comprehensive Plan, a public hearing will be required to adopt the amended map. What he is looking for from the committee, if you comfortable with the approach the Town has taken, is to approve the map and direct him to hold a public hearing to consider its adoption.

Staff Recommendation: Staff recommends the Land Management Committee approve the amended map submitted by the Town of River Falls and direct staff to schedule a public hearing to consider adoption of the amended map as part of the County's Comprehensive Plan/Farmland Preservation Plan. The public hearing would be a little different than our typical public hearings. Public hearings associated with comprehensive plan is a Class I versus a Class II so it goes in the paper for one insertion that is 30 days prior to the hearing instead of the two insertions with the second being at least 7 days prior to hearing. Sanden asked about the map that came with the staff report versus the one in the folder tonight, looks like the only difference he can see is that the area that was marked as Farmland Preservation Area is government property and the light blue is now Farmland Preservation Area consistent with the rest of it. Pichotta stated that is absolutely correct. The Town had sought some guidance from DATCP in regard to how they wanted that land labeled and we were told that it should be consistent with the legend contained on all of the other town maps so they didn't want us to differentiate government owned versus land suitable for preservation. Holst asked if the location of the Town Hall is where it's supposed to be. When he drives by there, it doesn't look like its suitable for preservation. Sanden asked about the process used to identify productive farmland based on soil type. Did you use Class I or II? Mr. Rodewald stated that they included Class I, II & III. Sanden asked if the town had used LESA (Land Evaluation and Site Assessment) Mr. Rodewald stated LESA uses a weighted average and they didn't want to go out and do a full site assessment. We've been at this long enough.

Sanden moved to approve the amended map submitted by the Town of River Falls and direct staff to schedule a public hearing to consider adoption of the amended map as part of the County's Comprehensive Plan/Farmland Preservation Plan/Aubart seconded. All in favor. Passed.

Discuss take action on proposed North West Pierce County Agricultural Enterprise Area (AEA) to be located in portions of the Towns of Clifton, River Falls and Martell.

Staff Report – Andy Pichotta: The Working Lands Initiative, which was signed into law in 2009, established Agricultural Enterprise Areas (AEAs). An AEA is an area of contiguous land primarily in agricultural use that has been designated by the Department of Agriculture, Trade and Consumer Protection (DATCP) in response to a locally developed petition. A handout entitled "Understanding Agricultural Enterprise Areas (AEAs) and the Petition Process" is attached for your information. An AEA must be located on lands identified in a DATCP approved Farmland Preservation Plan as being "suitable for preservation". Each town within Pierce County created such a map in conjunction with the development of the County's Farmland preservation Plan. These maps were incorporated into the County's Plan as "Farmland Preservation Maps." The Town of River Falls proposed revision to their "Farmland Preservation Map" is necessary to enable the creation of the proposed AEA. DATCP has indicated that even though the proposed amended map has not yet been formally adopted and included in the County's Farmland Preservation Plan, they will accept and process the petition associated with the proposed AEA, with final approval pending their receipt of required documentation. The Towns of Clifton, River Falls and Martell have each passed a resolution supporting the establishment of an AEA within their borders. These resolutions are attached for your information. A similar resolution is now necessary at the County level. Pierce County's adopted Farmland Preservation Plan states:

Goal #1 Identify and preserve areas suitable for agriculture.

Objective #1 Assist town in preserving productive farmland within their borders consistent with town policies and plans.

Policy #1 Support the creation of Agricultural Enterprise Areas when supported by the impacted towns.

Pichotta noted that even if we aren't able to get this AEA created until 2016 this is a necessary step. So just because DATCP has indicated that this might not go through this year, he doesn't see a reason not to move this forward and get a resolution in front of the County Board supporting this.

Staff Recommendation: Staff recommends the Land Management Committee support the creation of the North West Pierce County AEA and direct staff to work with the Corporation Counsel's Office to draft a resolution for Finance and Personnel Committee and County Board consideration.

He stated he has larger maps of the last two items if anyone wants them or if they want to take them with them. Holst stated Martell seems pretty much the whole township is in this AEA. Pichotta stated yes, Martell is one of those towns that basically anything that is zoned agriculture in their town they included it as land suitable for preservation and as such nearly the entire town was eligible for inclusion in an AEA and they have opted to include the entire town. Sanden asked if the Martell County Forest was included also. Pichotta stated from a certain perspective forests are just a different sort of a crop. Holst stated they may have trouble meeting the financial criteria. Pichotta stated we would expect that folks that own forest land probably wouldn't be entering into Farmland Preservation Agreements specifically relating to their forested land. It would only be if they were working the land. Inclusion in an AEA doesn't obligate anyone to apply for credits. It just enables the potential for it. Sanden asked about the process, wasn't there a time when it was de-funded, where the Governor said you could go ahead and use that money to buy development rights but only the money that was currently in the pot. Pichotta stated that was a different facet of this. Sanden stated was that the Working Lands Initiative. Pichotta stated that is the Working Lands Initiative and there are a number of parts to it. There is the AEA component, and also the purchase of development rights and that is what was discontinued. Mr. Rodewald stated Senator Harsdorf expanded the funds that were available in the AEA basically doubling the amount of acreage that could be considered. Going by memory, he thinks it started out at \$2 million and they funded it to the level of double that. There is good support in Madison for this program and they did back away from the transfer of development rights, the purchase of development rights as the Town of River Falls did because it was just very difficult to manage. When they did their comprehensive plan a couple years ago, they set that up as one of their goals. It seemed like a good idea to move the development out of the township into the ETZ where development should go. No one else could figure out how to make it work, which was their problem. Holst stated it has been his experience with the government, any contract you enter into with them can be changed at their will, so I wouldn't count my ten dollars until it's in my pocket and the check has cleared. Mr. Rodewald agreed with Mr. Holst, and stated that it has been a very frustrating process up to this point. It seemed like when they just about get to the finish line, they change the program. **Holst moved to support the creation of the North West Pierce County AEA and direct staff to work with Corporation Counsel's Office to draft a resolution for Finance and Personnel Committee and County Board consideration/Ross seconded.** Diana Smith, River Falls Town Chairperson, stated one of the things that is important to note, creating an AEA, creates land suitable for preservation and create the ability for the individual. Holst stated God created the land that was suitable for preservation, you didn't. Ms Smith stated the individual farmers; there is a core of them that would like to do this, but anyone else can be part of it but it is based on some criteria. They have to choose to do that, not just because we have created the areas. Holst stated you will have to grow a lot of garlic to cross that financial threshold. That was the problem with your previous stuff that you had going on. Ms Smith stated that is correct. There are a number of farmers that they don't think this will be an issue for so that is the reason that they are going forward and supporting this. Chairperson Fetzer stated there is a motion on the table, **All in favor. Passed.**

6:25pm Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director. Holst moved to convene into closed session/Ross

seconded. Chairperson Fetzer called for a roll call vote: Holst – yes, Ross – yes, Aubart – yes, Fetzer – yes, Sanden – yes.

6:55 pm Holst moved to reconvene into open session and take action on closed session item, if required/Ross seconded. Roll call vote: Holst-Yes, Aubart -Yes, Ross-Yes, Sanden-Yes, Fetzer - Yes. All in favor. Passed.

Motion by Holst/seconded by Aubart to grant the Land Management Director a step increase, if eligible, based on a favorable annual performance evaluation. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

No future agenda items besides accepting the 1998 Jeep Cherokee bid. This will be placed on the agenda of the second meeting date in July.

Motion to adjourn at 7:04pm by Ross/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, June 3, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 17th, July 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the May 20, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Fetzer not voting because of absence at the last meeting.**

Public hearing to consider and take action on proposed code amendments relating to the regulation and permitting of Wireless Communications Service Facilities (Chapter 240-41C).

Staff Report – Brad Roy: The new law created in 2013 Act 20 (Act 20) states specifically that a political subdivision may regulate cell phone towers in a zoning ordinance, but places strict limits on how it may do so. The new law will require significant changes to §240-41C and modification of the Land Management Department Fee Schedule. The new law standardizes the application and process for new structures. Act 20 also lists specific limitations or regulations that a political subdivision may **not** impose on the construction or modification of a tower. A municipality may not:

- Enact an ordinance prohibiting the placement of a mobile service structure in particular locations.
- Disprove an application based solely on aesthetics.
- Disprove an application based solely on the height.
- Charge a reoccurring fee.
- Impose a setback or fall zone requirement that is different from other types of commercial structures.
- Permit 3rd party consultants to charge the applicant for any travel expenses incurred in the consultant's review of mobile service permits or applications.
- Disprove an application based on an assessment by the political subdivision of the suitability of other locations for conducting the activity.

Currently the county requires a Land Use Permit for the construction of communication tower over 35 feet but less than 70 feet tall. A Conditional Use Permit is required for communication towers over 70 feet. The current code also establishes a height limitation, setback requirements to property lines as well as offsite residences, application requirements and permitting procedures, type of tower and other various requirements. On February 5, 2014 the LMC directed staff to develop code language for an over-the-counter Land Use Permit for Communication Towers with the potential for third-party review in cases where there would be a reduced setback. Act 20 allows for municipalities to require permits for the construction of new towers, structural modifications to an existing tower and the placement of additional antennas on an existing tower. To be consistent with current regulations staff is proposing to require permit for the construction of new towers and "Substantial Modifications: to existing towers. A permit for

Substantial Modifications is necessary since setbacks would have to be verified. The county has not required permits for the placement of additional antennas on existing towers in the past. The application and procedure for permitting is consistent with the requirements of Act 20. WCSFs will continue to be required to follow FAA regulations. The owner of a newly constructed tower will continue to be required to provide the county with a surety to cover the cost of abandonment should the facility fall into disuse, which is a current regulation. Setbacks have been modified to be consistent with the requirements of Act 20. All guy wires, supports and structures accessory to the tower will need to comply with all dimensional standards of the zoning district. The towers will also have to comply with the standards of the zoning district as well as §240-29D. Staff has developed a requirement for third party review in cases where the applicant presents engineering certification for reduced setbacks. (§240-41C2(f)) Fees for new towers currently are \$1,000 + \$2 per foot of height of the tower. Act 20 limits fees for new towers and substantial modifications to \$3,000 and there can be no reoccurring fees. Staff removed all requirements regarding appearance and location. On February 19, 2014 the LMC made the following determinations:

- No permit will be required for the placement of antennas on an existing tower.
- The fee for the construction of a new tower shall be \$3,000.
- The fee for a substantial modification shall be \$500.

Act 20 allows the County to charge up to \$3,000 for a substantial modification. At the February 19, 2014 meeting the LMC suggested charging the maximum allowed, however, a fee of \$500 for a substantial modification was suggested. The fee for a substantial modification should be clarified and established.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions and if determined to be appropriate, approve said revisions and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption. It's been awhile but the code is virtually the same as what you had seen last year. There have been a couple small tweaks on it. It is consistent with Act 20. The only item for discussion is what the fee for Substantial Modification should be. Chairperson Fetzer stated we talked about the \$500 fee last time, what kind of clarification do you need on that? Roy said, looking back at it there was talk about charging the maximum allowed that would be \$3,000. If you wanted to leave it at \$500 or go to the maximum, looking at the minutes, it wasn't real clear how we should go about that. We can stay with \$500 but if you want to discuss it, we can. Holst asked what you anticipate staff costs for issuing substantial modification permits is. Roy stated it would probably be minimal, just verifying new heights and setbacks. Holst asked if \$500 would be sufficient. Pichotta stated one thing to remember with this is we get the initial charge and we never get it again and we are still going to require periodic inspections to ensure the structural integrity of the tower. So there are some yearly costs. That is why we arrived at the \$3,000 for the initial fee. He isn't sure we need to go to the maximum just because we are going to have that fee for that tower even if it gets a substantial modification. He doesn't think there is a need to go to the maximum, \$500.00 is probably adequate. Chairperson Fetzer asked how often do you get modifications. Pichotta stated it's not that often. Typically, it's someone adding additional antennas, which we don't charge a permit for, previously we charged a fee for an accessory structure that would be an equipment shed associated with an antenna and that would require a permit. He thinks we're probably comfortable with the \$500 if the committee is. It was just that the minutes were conflicting so we weren't sure which direction and needed some clarification. Sanden stated he feels Jeff was on track and if it doesn't cost us a lot, there is no need to increase it. Dave Gilles, asked how often the fee schedules are reviewed? Pichotta stated our fee schedule was last adopted in 2004. We reviewed it a few years ago and it was right after the housing bubble burst. When we last reviewed it, the committee didn't make any changes because they felt that the timing was such that we shouldn't necessarily impose larger fees. Mr. Gilles stated that his thoughts are with the economy and the way things are going. Things could go up and down and labor costs never go down. His own personal feeling is that these should be reviewed more often for all fees in Pierce County. At least the \$500 amount seems awful low based on today's labor costs, running costs and the vehicles being used, what have you. He isn't against the fees but he is wondering if we aren't short changing ourselves on some of these fees. Chairperson Fetzer stated we should have saved that for public comment

but that's fine. Sanden stated that is the other side of the argument. Holst stated we reach kind of a break even here at seven years. After that we start digressing from where we were. Sanden asked if the costs do exceed the fees, can we at that point re-evaluate the structure. Pichotta stated we would have to re-evaluate the fee structure. Holst stated we couldn't come back on that structure. It would have to go forward from the date that we re-establish our fees. Any structure after that date would be affected, prior to that date, it wouldn't. Chairperson Fetzer asked what's the typical life on these, 20 years? Pichotta stated at least. Roy stated we have been getting calls about companies wanting to construct new ones. Since last year, he hasn't received anything about a modification other than placing a new antenna on the structure which we say you don't need anything for. He has yet to see anything be proposed or qualify as a substantial modification. Pichotta stated he can't think of a single one that would have been a "substantial modification" in his tenure here. Seems as though when somebody needs a new tower; they just go with a new tower. Chairperson Fetzer stated if you are getting so far into it and going to substantially modify it, it's probably more cost effective to just build a new one. Sanden stated that when his dish company upgrades, they don't even take back the old dish; it's obsolete. This is a little different, it's just a structure. You probably don't update the technology on just a structure. Holst stated it depends on the design of the structure whether it will carry the weight that they are putting on it. Pichotta stated there is usually substantial concrete below the ground in order to counter the height and if you increase the height, it has to still work with the amount of concrete anchoring the structure. Holst stated the FAA deals 200 feet plus, they have to light it so they always want to stay at 199 feet. Pichotta stated they don't mind lighting them. We did that. We had a limitation. We wanted them less than 200 feet so they wouldn't be lit. We didn't prohibit them from being taller, we just said they had to demonstrate why they needed to be taller and nobody ever did.

Chairperson Fetzer opened the hearing to the public. No additional public comment. **Public hearing closed.** Sanden asked just for clarification, if we find this \$500 is insufficient, we can at a later date come back and increase that, not for the past but for future modifications. Holst stated we have to remember that government is not in the business, we can't charge more than what it actually costs us. Pichotta stated there has to be a reasonable relationship between what your costs are and the fee that your charge. Sanden stated that is rough proportionality. **Holst moved to adopt the proposed revisions relating to the regulation and permitting of Wireless Communications Service Facilities (Chapter 240-41C) and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption/Sanden seconded. All in favor. Passed.**

Discuss take action on status report and review of 2015 work plan for Red Wing Airport located in Section 6, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: In 2012 the LMC approved a Conditional Use Permit to the Red Wing Airport for a runway approach lighting system. Condition #5 of that permit states, "The applicant shall provide yearly status reports on Airport issues and activities to the Land Management Committee." A status report was provided to the LMC in 2013. In 2014, the previous Zoning Administrator contacted Airport representatives to inquire about attending a meeting, however no date was finalized. Brad passed out a copy of the 2015 Action Items/Work Tentative Plan received from Red Wing Airport. Items in that plan include building improvements, complete the land use zoning process, apron & taxiway pavement strengthening, runway crack sealing and consultant selection. The Airport Land Use Zoning Ordinance has not yet been approved by the Minnesota Department of Transportation. It has been proposed that the Land Management Department administer the final ordinance. LMC and County Board approval would be required for this to occur. It would also appear that approval by the Towns of Isabelle and Trenton would also be necessary, given the zoning ordinance would apply solely to those two towns. This item will likely be brought back for discussion in the future.

Staff Recommendation: Staff recommends the Land Management Committee review the submitted plan and provide comments and/or recommendations if appropriate.

Rick Moskwa, Public Works Director of the City of Red Wing. He will go through the work plan and discuss some comments that aren't on the work plan as well. Under the Building Improvements, #1

basically some HVAC improvements to their terminal building and aircraft service center, those are just worn out. As Mr. Roy mentioned, the land use zoning process, the State of Minnesota is currently reviewing all of their airport zoning rules. They weren't able to get through the legislative session this session and asked us to be more patient than we have already been with this process and have assured him they are going to address it in 2016. They also have assured him that the commissioner all the way down to their staff is under full understanding that what was approved in our Joint Airport Zoning Board is what this committee and this county wants to see moving forward. He can't guarantee that is what is going to happen but they have made themselves pretty clear on that. Also Representative Kelly, who is our representative is the chair of the Transportation Committee so at some point in time, if we have issues, we think we will be able to have some discussion with the chair on the house side. Our major project for the year is the Apron & Taxiway Pavement Strengthening. They received funding from the State of Minnesota for general airport maintenance. Their pavement index management was rated for very poor to poor on most of the pavement on that site. Every two years they try to put together a program, they get about \$150,000 and bundle that up to get a decent size program. It moves us forward. It's a 95/5 split so that is federal money that comes to the airport based on having the airport. The bids came in at \$434,000 with Hard Drives out of Faribault getting the bid. He thinks Monarch did bid on it. They were close both of them. Monarch got the interior City streets and Hard Drives got the airport job. That is a big project for them. Their consultant does all the engineering for them. That helps them so they don't do that work, it's all bid out. Conversely when you are doing all this new paving you have to do the crack sealing. The consultant, which is SEH, right now they have to do consultant selection. They are supposed to do it every five years and they are a little behind. The airport board members and staff will review consultants and make a decision and ask for council approval. Wes Converse runs Red Wing Aeroplane Company, he put in a significant hangar and office area. That was their last conditional use permit. He is almost there. He built an office area that has the ability to put a flight simulator in it. The simulator will be here in August. They have to build this. It's for the type of planes that he flies. He has ten charter planes that fly out of the airport now. He has about 65 employees. He is a seven day a week/24 hour a day operation. He plans to build another big building to house some of his planes. Right now there is not enough room and some sit outside. He is possibly looking at a smaller one and some office space. Payable for this year, he is paying about \$15,000 in tax. That is a significant increase in the tax base because of his operation. His flight simulator will be for training of his employees and other employees. He will bring people in. He mentioned they stay at the David Motel, right now he has two people that are staying there for the next two and a half weeks. They try to use the local restaurants and stuff. He wanted the committee to be aware of that. He spends a significant amount on fuel purchasing on the airfield. He helps them out and all that fuel tax is paid to the State of Wisconsin. He has done a lot of development. Holst stated he is a good young man from Hager City. Sanden asked if the work plan will go ahead regardless of legislative limbo. Mr. Moskwa stated yes, they will not bring anything forward for zoning until the State of Minnesota gives them something. When they met last, the feeling was that no one was going to do anything until the State of Minnesota signed off on it. Chairperson Fetzer asked if this time of year works well for them to come in. Mr. Moskwa stated yes, it just depends. What works if staff sends him something and then Tammy takes care of trying to get him here.

Discuss take action to amend Resolution 04-16 relating to the fees associated with Wireless Communications Service Facilities.

Staff Report – Brad Roy: The law created in 2013 Act 20 (Act 20) states specifically that a political subdivision may regulate cell phone towers in a zoning ordinance, but places strict limits on how it may do so. The law requires modification of the Land Management Department Fee Schedule. The current fees are \$1,000 + \$2 per ft. for a new Commercial Tower along with an annual fee of \$200. The LMC determined that fee for a new Wireless Communications Service Facilities (WCSF) shall be \$3,000 and a WCSF Substantial Modification shall be \$500 up to \$3,000. 2013 Act 20 no longer allows for reoccurring fees. The Land Management Department Fee Schedule (Resolution 04-16) should be amended to reflect the required changes and determinations made by the LMC, which are:

Wireless Communications Service Facilities \$3,000
Substantial Modification \$500 or up to \$3,000

Staff Recommendation: Staff recommends the Land Management Committee direct staff to work with Corporation Council on drafting a Resolution to establish the approved fees for Wireless Communication Service Facilities and forward it to the Finance and Personnel Committee and County Board for approval.

Holst moved to approve the Resolution 04-16 relating to the fees associated with Wireless Communications Service Facilities/Ross seconded. Pichotta stated just to clarify the fee is at \$500 on the proposed resolution. Chairperson Fetzer stated yes. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Brad and Emily to attend the WCZA District meeting that will be held in Pepin on June 11th. Holst asked if that was an overnight meeting. Pichotta stated no. **Aubart moved to approve the travel/training request for Brad Roy and Emily Lund on June 11th in Pepin/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Two items for the next meeting relating to the Town of River Falls; the first is the Town is seeking approval for an amended Land Suitable for Preservation Map that would be included in our Farmland Preservation Plan which is adopted as an addendum to the Comprehensive Plan. The second issue is to discuss take action on a proposed North West Pierce County Ag Enterprise Area (AEA) located in portions of the Town of Clifton, River Falls and Martell.

Annual performance evaluation for Andy.

Motion to adjourn at 6:30pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 3, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 17 th , July 1 st & 15 th , all in 2015.	Chair
3	Approve minutes of the May 20, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on proposed code amendments relating to the regulation and permitting of Wireless Communications Service Facilities (Chapter 240-41C).	Roy
5	Discuss take action on status report and review of 2015 work plan for Red Wing Airport located in Section 6, Town of Isabelle, Pierce County, WI.	Roy
6	Discuss take action to amend Resolution 04-16 relating to the fees associated with Wireless Communications Service Facilities.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, May 20, 2015

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 3rd & 17th, July 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the May 6, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Sanden not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business for a trucking and excavating business in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-36D, by Matthew Heath, agent for Gregory S. Bechel, owner on property located in SE ¼ of the SE ¼ of Section 30, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Holst invited Mr. Heath forward: Mr. Heath explained it was brought to their attention that they needed to get their business in compliance with Pierce County Code. They are going through the motions to get the conditional use permit for the business to continue operating at that location which they have done for 10 years.

Staff Report – Emily Lund: The applicant owns a trucking and excavating business called Greg Bechel Trucking & Excavating LLC. He started his business with one truck in 1997 and in 2007 there was an expansion to the business. The applicant is seeking an after-the-fact CUP to bring their property into compliance with Pierce County Code. The applicant's home is situated on a 20 acre parcel located in Section 30, in the Town of Union. Section 240-36D allows for farm and home based businesses accessory to permitted single-family residences through issuance of a conditional use permit in agricultural zoning districts, subject to the four items listed in the staff report. Current and adjacent land uses are residential and agricultural. The business is operated out of a 43' x 110' (4,730 sq ft) shed on his property. The building is used for storage and maintenance of equipment. Bull dozers, excavators and rock trucks, etc are parked on the property between jobs. Quad-axle dump trucks and other heavy duty trucks are parked and maintained on the property daily. The trucking and excavating work is performed off-site. The applicant currently has 7-8 employees on-site. He has other employees that report to a commercially zoned property at W1455 265th Ave just outside the Village of Plum City. Pierce County Code Ch 240-54A requires 2 off-street and 1 handicapped parking spaces for contractor establishments. The property currently meets these standards. Normal business hours of operation are 6AM to 6PM, Monday through Friday and an occasional Saturday. Seasonal hours of operation are 24 hours/day and 7 days/week on an as needed basis. In the winter, they are hired by neighboring municipalities for emergency snow plowing. They also assist local fire departments and are called out to demolish a building during a firefight in order to extinguish the hot spots. The shed has a bathroom for the employees. The LM Department permitted

and inspected the installation of a holding tank to the shed in 2009. The holding tank is pumped and reported to the Department on a regular basis (at least 4 times per year). The applicant may establish one (1) on-site advertising sign with this CUP that will state the company name and telephone number. The sign face area is proposed to be 6' x 4' and shall not exceed 24 sq ft per Pierce County Code 240-60N(1)(d). Applicant has P.I.G. contracted on a weekly basis for trash pick-up. Tires are brought to the Pierce County Recycling Center and the rest of the recycling is brought to the Village of Plum City recycling. The Town Board of Union recommended approval of this request on 4-21-2015 without identifying any specific conditions. Their approval is attached to the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this after-the-fact conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. There shall be at least 2 parking spaces, with a minimum of one space for handicapped parking.
6. The advertising sign shall not exceed 24 square feet, comply with the zoning code standards and signs shall be located outside of road right-of-way.
7. Applicants shall work with Todd Dolan, Town of Union Building Inspector, to determine whether or not commercial plan review and approval is required from the Department of Safety & Professional Services.
8. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPA) etc).
9. This conditional use permit shall be renewed every two years. Permit may be renewed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Holst opened the hearing to the public. Gary Hutter, a neighbor, asked if there is containment for fuel spills and such around the fuel barrels. Mr. Heath stated the barrels are double lined. Mr. Hutter asked if there is containment and if it is necessary to have one. Chairperson Holst stated if they are a double-wall tank, they don't need to be. Mr. Hutter asked if there is a plan of action for oil spills in the yard and such? There is a lot of oil that gets spilled out there. Mr. Heath stated yes, they do have a plan of action. If there is an excessive oil spill or any sort of chemical, the employees are to contact him and then they assess it as to how to clean it up. Mr. Hutter asked if it's going to contaminate his well or such. He knows for a fact that there is a lot of oil put on the ground there. Chairperson Holst asked if the vehicles are parked on gravel. Mr. Heath stated they are parked on gravel during the summer; in the winter they are parked inside. Any oil or anything that is leaked, if it's a major spill, or anything like that, they are going to do what they need to do. If it exceeds the standards to where they would get the DNR involved, if it's something catastrophic obviously they are going to do something of that nature. Otherwise, it's disposed of, floor dry, scooped up and disposed of correctly. Sanden asked if the sheds have cement floors. Mr. Heath stated yes. Mr. Hutter asked if all the water goes into this holding tank from the washing. Mr. Heath stated no, any water that is contaminated with oil, they don't just let it go out and seep through the grass. What they do is if there is oil or antifreeze leak in the shop, they squeegee it up and put it in pails. The drain is like a trough drain all the way over to one side of the building so it all drains that direction. If there is a spill when mechanics are working on something, floor dry is used and they do squeegee it up and get it contained somehow. Mr. Hutter stated so there is a plan of action for spills. Mr. Heath stated yes but it's not a written plan. Sanden asked in a business like this is there any protocol of having any testing done or monitoring in case there is an issue out there. Pichotta stated not

necessarily. He asked Mr. Heath if he knows whether the building is built to uniform commercial code. Mr. Heath stated it was built before he was a part of this but he is sure it is. Chairperson Holst stated Mr. Dolan will find out and if it's not it will have to be upgraded. Pichotta stated often times, containment systems are a part of that approval process. Chairperson Holst stated he knows of some other trucking outfits where they run it into a little holding tank. **Public hearing closed.** Aubart stated he is a little bit confused about the floor drain, or shop area that is washed down but there is no containment tank. Mr. Heath asked as far as from the floor drain? Aubart stated correct, where does that floor drain go to? Mr. Heath stated it does go outside just like a normal pole shed drain. Like a standard garage drain. Aubart asked if there is a gray water tank or something like that. Mr. Ross asked if there no way to capture that? Mr. Heath stated that could be a possibility, it's a pipe that goes right outside so they could work that into the system pretty easily. Aubart stated another issue would be if there are spills for whatever reason, diesel fuel or oil on the gravel, what do you consider a major spill or minor one? Mr. Heath stated a major spill, for containment he is thinking it would be a gallon or above, anything like antifreeze, oil, diesel or anything of that sort. Sanden asked if he is aware that because of the dispersive nature of oil, a quart of oil can contaminate about a million gallons of water. Mr. Heath stated he was not aware of that. Sanden stated so a gallon would be 16 million gallons of water contaminated. Mr. Heath stated if the board would like to see a written plan of action as far as a spill, anything of that nature in what you classify a major spill, they can do that. They do practice that at the mine and other operations. That would not be an issue. Ross stated if antifreeze leaked you said you would squeegee it and get it into a bucket, but there is that opportunity to miss that and it gets into the drain. Mr. Heath stated currently, the way it is set up, if we had a catastrophic breakdown or something of that nature, it would eventually seep over into that drain. As far as any major amount of chemicals, would be when they are doing work on the vehicles, that is how they contain it. If they spill something, it is caught in buckets. Chairperson Holst asked if they wash vehicles inside the building. Mr. Heath stated yes, in the winter time they spray them off otherwise in the summer, they do it outside. Pichotta suggested a couple additional conditions for your consideration: #11 Spill Containment Plan shall be submitted within 60 days. #12 Containment system associated with the floor drain shall be installed within 6 months. Aubart stated that you said when you do have spills, you use floor dry and put it into buckets, who disposes of that for you? Mr. Heath stated the floor dry goes through PIG but as far as used oil, there are a couple people that have used oil burners that come and get it. Sanden asked staff about the history of this, this began in 1997 and at that point was a Farm and Home Based Business required? Lund stated she doesn't know what the previous code was. Pichotta stated he started in 2000 and he is not sure what the requirement prior to that time was. We have been trying to play catch up with these folks for a good number of years. When Kleinhans was around, the letters were sent by him. Chairperson Holst stated in 2007 when they expanded, they needed one at that time. If we, and we did, grant them a holding tank permit, we didn't do our job in a timely fashion. Sanden asked what the nature of the expansion was. Mr. Heath stated in 2007, as the report said, they started out with the one truck and then they had a contract with Fairmont Minerals at the time, Sandtrol now, to haul sand from their Bay City mine to the Hager City mine. There were four trucks added. Sanden asked if you received notification from the County or the Township that you needed a permit. Mr. Heath stated that if it happened 2007, he wouldn't know, as he wasn't around. From what he knows is when they did the holding tank and Jim Kleinhans came out to do that, he had realized that this needed to happen. Lund stated she can speak to the fact that after he inspected the tank, he did write a letter and started asking more questions about the commercial business at that time. Sanden asked what the date was. Lund stated December 8, 2009. Pichotta stated Mr. Kleinhans was not as aggressive on this particular issue as he was on some. Sanden stated that after six years it's on the onus of the operator to take care of this. Pichotta stated there were a number of letters sent, it was not just one. Chairperson Holst stated eight people on site; that is a good number, you wouldn't be stretching it. Mr. Heath stated the seven or eight right now; that is what it will continue to be. They have about four other employees that report to another commercially zoned one. Chairperson Holst stated he sees nine trucks in the dump truck row. Do you keep a spare on site? Mr. Heath stated looking at the picture, there is nine there and they have been switching them around so many times. They always like to keep one or two there for back-up. Pichotta

stated basically eight employees is the maximum one can have outside of a commercial district. In the Town of Union, the Town has not adopted a stand-alone comp plan for that Town so it falls on the County Comp Plan and basically a rezone to Commercial in this location would be hard to support. So that eight number is pretty solid and has to be adhered to.

Ross moved to approve the conditional use permit for a Farm and Home Based Business for Gregory S. Bechel with conditions #1 - #10, adding condition #11 Spill Containment Plan shall be submitted within 60 days. And condition #12 Containment system associated with floor drain shall be installed within 6 months. Due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Aubart seconded. Aubart asked for clarification on the spill containment plan, is this for the exterior or the whole site? Pichotta stated for the whole site, interior and exterior. Aubart stated the containment tank is for the interior of the shop. Chairperson Holst asked to amend condition #12, he feels 6 months is a little long for a company that is in the business of excavating. There is an outfit that supplies containment vessels in our county. He thinks 3 months gives them ample time. The neighbors have lived there for a long time, he thinks, and he has voiced some interesting concerns. It would go a long way toward being a good neighbor if you would expedite this. Mr. Heath stated they can do it in three months. **Ross accepted modification to 3 months and Aubart agreed. All in favor. Passed.** Mr. Heath asked if when they have a containment vessel should they check with Land Management before they tear everything apart? Chairperson Holst stated yes.

Discuss take action on Department use of POWTS Cooperating Electrician Form:

Staff Report – Emily Lund: The LMC approved the Department's use of the POWTS Cooperating Electrician Form on April 16, 2014 due to the State's then recent adoption of WI ACT 143. The WI Dept of Safety and Professional Services (DSPS) has taken the past year to fully interpret and administer the law. During recent continuing education classes, it was brought to staff's attention that DSPS did not technically mandate that DSPS Wastewater Specialists and County personnel enforce the inspection of the electrical components to septic systems. Instead, it has been clarified that DSPS requires a Uniform Dwelling Code (UDC) Inspector to inspect and enforce the outside plumbing electrical procedures as part of the required electrical inspection. Since it has now been clarified that this function is part of the UDC Inspector's duties, the form is no longer necessary.

Staff Recommendation: Staff recommends the Land Management Committee authorize staff to discontinue the use of the Private on-site Wastewater Treatment System (POWTS) Cooperating Electrician Form.

Aubart moved to approve the discontinued use of the POWTS Cooperating Electrician form/Ross seconded. All in favor. Passed.

Discuss take action to declare surplus and authorize the sale of 1998 Jeep Cherokee.

Staff Report – Andy Pichotta: As you are aware, a 2014 GMC Terrain was recently purchased to replace the 1998 Jeep Cherokee that was utilized by Land Management staff. It is now appropriate to declare the Jeep surplus and authorize its sale.

Staff Recommendation: Staff recommends the Land Management Committee declare the 1998 Jeep Cherokee to be surplus and authorize its sale.

Aubart moved to approve to declare the 1998 Jeep Cherokee surplus and authorize its sale/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for June 1st, Kevin Etherton, GIS Specialist to attend a meeting with Gary Brown in St. Paul, Department of Public Safety.

Ross moved to approve the travel/training request for Kevin Etherton on June 1st in St. Paul/Aubart seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Working today for a better tomorrow

Public hearing to consider proposed language relating to the regulation and permitting of wireless communication service facilities.

City of Red Wing status report.

Discuss take action to amend Resolution 04-16 relating to the fees associated with wireless communication service facilities along with the legislation that tied our hands to a large degree regarding cellphone towers, it also dictates the fees that we can charge.

Motion to adjourn at 6:30pm by Aubart/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 6, 2015

Present: Jon Aubart, Jeff Holst and Jim Ross

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Joe Fetzer and Eric Sanden

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 20th, June 3rd & 17th, July 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the April 15, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, by John Rohl, agent for John C. Rohl Jr and John C. & Alva-Jeanne Rohl Life Estate, owners on property located in NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Holst invited Mr. Rohl forward: Mr. Rohl explained he needs a conditional use permit to operate their quarry. Mathy had a contract in there and the field man always took care of it but he got let go. So he needs to get the permit.

Staff Report – Brad Roy: Nonmetallic mining had previously been permitted on this parcel. However, the conditional use permit expired and the use ceased for more than 12 months. Staff became aware that mining had again begun on the site and notified the land owner/applicant that a new conditional use permit was required. At that point mining activity was halted and the applicant began the process of applying for a new Conditional Use Permit. Milestone Minerals was issued a Conditional Use Permit for Nonmetallic Mining on the site in 2000. That permit expired and the use was ceased for more than 12 months. Staff informed the operator and the owner of the status of the permit. After no response, staff contacted Milestone informing them that the use had been terminated and that any future mining of the site would require the issuance of a new Conditional Use Permit. Milestone Materials opted to not immediately reclaim the site but to keep it “active” in regards to Pierce County Code 241 – Nonmetallic Mining Reclamation as they wanted to retain the option for future mining on the site. The lease between the applicant and Milestone then expired and the applicant subsequently leased the mining rights to Ron Johnson. The property is subject to a conservation easement with the Kinnickinnic River Land Trust (KRLT). The easement required that the mine be reclaimed at the end of the lease with Milestone Materials. The applicant and the KRLT have come to an agreement to allow mining for a limited term and then have the site reclaimed. There is a response from the Kinni River Land Trust that Brad handed out. It basically says they support the issuance of the permit. The site has a residence and an active agricultural operation. Surrounding land uses are residential, agriculture and nonmetallic mining. The mining site has approximately 4 unreclaimed acres. Access to the mine is off of County Road MM. The site is relatively flat with the relief of approximately 25 feet. No major streams are present on the site. The active mining area is and will continue to be internally drained. Sand and gravel is present under the topsoil and is

approximately 20 feet thick. The operation is for the extraction of the sand and gravel. Typical equipment on the site is bulldozer, backhoe, screener and trucks for hauling. Portable crushing equipment is brought in when needed. There will be no blasting or use of chemicals on the site. There is no washing on the site and no need for high capacity wells. The average ground water elevation, determined by area wells, is 830 feet above sea level. The pit floor is approximately 1000 feet above sea level. The operation will be mostly active in the summer months. Hours of operation will be consistent with daylight hours in the winter. Typical summer hours of operation will be 7:00am to 7:00pm, Monday through Friday and 7:00am to 4:30pm on Saturday. Mining had previously occurred within the 100 foot setback and over the property line. The Reclamation Plan depicts continued mining within the setback area; however that would require an exemption by the LMC to the setback requirements of Nonmetallic Mining Policy. The neighboring mining operation to the west has expressed an interest in joining the two mines. This would require an exemption by the LMC. The Reclamation Plan states that the post mining land use will be pasture land. The plan calls for sequential reclamation and covers approximately 8 acres. Final slopes will be no greater than 3:1. A bond in the amount of \$45,844 was submitted by Milestone Materials for reclamation. The new operator and Milestone may come to an agreement for final reclamation. The financial assurance must be kept current. This request was presented to the Town of Clifton on January 6, 2015. The Town recommended approval of the request with no specific concerns or recommended conditions identified.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if the proposed use at the proposed location will not be contrary to the public interest and will not be detrimental or injurious to public health, public safety or character of the surrounding area, grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate:

1. A 100-ft setback shall be maintained from all property lines for all mining activities, unless granted an exemption by the LMC.
2. Applicant shall comply with all requirements of Pierce County Code Chapter 241, Nonmetallic Mining Reclamation.
3. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
4. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies.
5. A fugitive Dust Plan shall be developed and implemented for the mining site and haul roads.
6. Hours of operation shall be 7:00am to 7:00pm Monday through Friday and 7:00am to 4:30pm on Saturday.
7. Any proposal to deviate from the Reclamation Plan shall be submitted to the Zoning Office.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. This CUP renewal shall expire in two years.
10. Any expansion or intensification shall require a new conditional use permit and potentially a rezone depending on the intensity of the use.
11. New financial assurance consistent with the Reclamation Plan shall be submitted by the new operator prior to any mining activities taking place and kept current.

Chairperson Holst opened the hearing to the public. No public comment. Public hearing closed.

Aubart stated we talked about the mining within the 100-ft setback and then again in the recommendations. He is confused on that. It has already occurred within that setback. Roy stated it had. Now the neighbor to the west is Rumpca and they are mining so there had been some talks, mostly driven by Rumpca, that since it had occurred over the property line, he would like to mine to that as well. Basically joining the two but that would take an exemption to each pit, granted by the LMC plus we would have to redo some reclamation plans as well to show that. Chairperson Holst asked Mr. Rohl if it is his wish to ask for that exemption tonight. Mr. Rohl stated no, that was Rumpca's idea. He had talked to

him about it but it never went any further. Because the material joins there on the property line. The reclamation would match. Chairperson Holst stated it's what you want and if you don't care about having it included it's a moot point. **Aubart moved to approve the conditional use permit for Nonmetallic Mining for John Rohl, agent for John C. Rohl Jr and John C & Alva-Jeanne Rohl Life Estate with conditions #1 - #11, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Chairperson Holst recused himself from agenda item #5 due to possible conflict of interest and turned the meeting over to Jim Ross.

Discuss take action of Screening Plan and potential modification of conditions associated with a conditional use permit for nonmetallic mining for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Acting Chairperson Ross invited Mr. William F. Holst III forward:

Staff Report – Brad Roy: The applicant received a conditional use permit for nonmetallic mining to expand an existing mining operation in September, 2014. A berm was installed at the southwestern portion of the property outside of the County Road K right-of-way, at the request of the Town of Trenton. Condition #16 of the Mining CUP states, "A screening plan for the berm shall be submitted within six months. Trees to be utilized shall consist of conifers of no less than 8 feet in height." On March 18, 2015, the applicant presented a screening plan of Colorado blue spruce trees to be planted in staggered rows on top of the berm. The applicant asked to be allowed to plant 6.5 foot spruce trees instead of 8 foot given that the berm is 10 feet tall. The LMC accepted the screening plan and allowed for 6.5 foot trees. The intent of the berm and vegetative screening is to mitigate impacts to homes located in the nearby Rural Residential 20 District. Land Management staff has received a number of phone calls from neighboring property owners concerned about the adequacy of the screening capability of 6.5 foot trees. Given these concerns and the fact that the need for 8 foot trees was referenced in the conditions associated with the CUP, this issue is being brought back before the LMC for additional discussion and action. The applicant submitted a plan to plant Colorado blue spruce trees. The trees grow approximately 12-18" per year in height and width. An eight foot tree planted in the spring of 2015 will be approximately 12' by 2020 and 17' by 2025. The approved plan stipulated that there will be two staggered rows of trees. Within each row the trees will have an approximate 20' separation. There will be approximately 10' between the rows. The staggered layout will provide a more constant barrier. The existing conditions are listed #1 - #18 in the staff report.

Staff Recommendation: Staff recommends the LMC review the above information and determine if a modification to Condition #16 and/or the screening plan is warranted. There are also some pictures of the site attached to the staff report. The first one is a view from a property with a driveway that goes up the hill so this is one of the higher points across from the site. In the front you can see the berm. In the back there is a stockpile. From the berm, that stockpile is 380 yards. The next picture is from the same point on that driveway, it shows Brad at approximately 6 ½ feet with a transit rod out there showing 8 feet. There is a picture from road level on top of the berm with the measurements. The final picture is a view from the top of the berm, looking back. Chairperson Ross invited the public to comment. Cindy Taube, Town of Trenton, stated that she was one of the people that called. That is her driveway that you are looking across the pit at. She happened to find out randomly that the CUP was going to be altered for the trees to be smaller. It made her concerned about many of the issues that were in the CUP because she doesn't attend every meeting and doesn't read the minutes. If changes are to be made, many of the neighbors do not appreciate what is happening in the pit. She appreciates staff taking the pictures. She can clearly see all the way over to Hwy 35 when she is part way down her driveway. She sees the pit, she sees the equipment and she sees the trucks in there, all of it. Recently she is concerned because late one evening as she was looking at the pit, from her driveway to the left, there was a cloud of dust that just hung over the pit where they were moving in and out and dumping. As she looked to the right the air was clear. So there

is a definite definition over the pit. She knows that we are not talking about dust and sand tonight, but there are some of these other concerns in the CUP that we need to take a look at; dust is one, the sound and the trucks, the lights, the hole is significantly larger in a very short period of time. As far as she is concerned, the berm is not high enough and she doesn't think the Town said it had to be a specific height. As she can look in and see all the equipment and the trucks and the movement of what is happening in that pit, she is really concerned about the noise and the lights. No one has approached them about testing their water. Yup, in five years, she is sure those trees will grow. She really thinks the more they can put up. Ever since that back berm was knocked down between the pit and the farm land, she hears and sees the tracks. She can see Highway 35 traffic. Yes, she may be a little bit elevated versus County Road level and she understands that. If this pit were a few feet from your mailbox and your property, you would have some concerns. Changes to the CUP, what is the status of other things, she would really like to keep up with changes in the mine, what is the best way for her to keep informed just so she knows. Sharan Wendel lives directly across where the berm is the lowest. It gets higher as it goes down the road. Her house is also elevated. As she is elevated, in the past she could never hear anything in her house. Her house is quite some distance from County Road K, she couldn't hear anything, couldn't see anything. Now every time she walks through her second story house and looks down her driveway, she too can see everything that is going on in there. When you look at the trees, while they grow quickly, an extra foot and a half makes a difference. She was quite happy when they walked out of here the last time where it was an 8 foot tree. The trees would also help with the dust too. She can't even keep up with the dust in her house and she has filtration systems and everything on her property, in her house. The trees would also be a natural filter for dust coming through. More concerning to her was that she might have been the first one who found out the plan had changed and she found out in a restaurant and happened to overhear someone talking about it. She wondered how you change a conditional use permit that is agreed upon so she started calling the neighbors and they didn't know anything about it. It was very disappointing to her that something could change where you have these criteria and we think we're home free. If those criteria can be changed at a later date when they aren't looking, that was very disappointing to her. Her two concerns were the noise and the lights and she knows that isn't an issue here but at 4:00am in the morning, those lights are going and that equipment is going because she can see it and hear it from her second story. Then her other biggest concern was the groundwater and the wells and the testing. So if you can change something when we're not looking like the trees going from 8 foot to 6.5 foot, do you then release the requirement for the groundwater testing, do you take off the operation of the noise. If any of those things can be changed at any point without it coming back, that is very disappointing to her. So she would really urge the committee to go 8 foot versus 6.5 foot. If you hear it and see it every single day, when the group was sitting here a month or two ago and they said if that were their neighborhood they would like to see big trees too, she was very happy that somebody understood that. Not only does she want to see those trees, but wants to see them kept alive. Chairperson Ross said they take all the issues very seriously. Cindy Wittenberg, N1815 Cty Rd K, directly across and just in agreement with the comments made. She has made a couple phone calls to Land Management and she does have pictures of the dust that comes. She has COPD and she has noticed that she has had a lot more problems lately with the dust in her house and her breathing issues. When she was notified that things had been changed, she felt she should be here too and say her piece. She is in agreement with her neighbors and it's not right. Mr. Holst stated he contracted over a month ago with the people that bought Johnson Pump Services in Red Wing to do all these well tests. He was given a list from the County and it was forwarded on to them. He will check with them. He was under the understanding that they were contacting people to get these tests done. He has engaged them to do it. Chairperson Ross stated that you are following up on it. Mr. Holst stated if I had planted 12 foot trees then they would have wanted 8 foot trees. Now we have lost this season for planting trees because the trees are starting to candle. So now we can wait until fall or next spring to plant the trees. Cindy Wittenberg stated that she has been contacted to have her well tested. Chairperson Ross asked how long ago that was. Ms Wittenberg asked her husband, Dale when that was; a couple weeks ago. Mr. Holst stated that they were going to try and do a bunch at one time. They have to be sent in the same day, the test and the freight on them is expensive so they were going to try and do a bunch at one

time. Ms Wittenberg stated she called up here to see if they were going to get their well tested and it wasn't too much after that when they a call from Johnson. Mr. Holst asked if they set up a meeting with them. Ms Wittenberg stated they were supposed to come the next day and they didn't have to be home. Mr. Holst stated he will check. Aubart asked on the initial berm height if there was a specified height on the berm. Roy stated no, the Town just said a berm. Aubart stated it could be a four foot berm. So it could drop them 6 feet and they could put 8 foot trees on and it would be lower than what it is now and we would be in compliance with the CUP. Roy stated correct. LeRoy Peterson stated put a little fertilizer on the trees and they will grow faster. Mr. Holst stated not when they can't be planted now. Chairperson Ross asked if we are fully out of season now, Bill. Mr. Holst stated according to his neighbor, when they start to candle, he won't guarantee them. He has to guarantee them or he won't plant them. We might be able to plant them this fall. They come back into season. Aubart stated that we approved the screening plan. We did that based on the 10 foot berm is why we did that. He is of the opinion that we honor what we said, that we approved the screening plan and that is what it is because the berm could be changed and still be within the conditional use permit and we didn't gain anything. So would we be looking to change the CUP condition #16? We have competing conditions essentially is what we have. We have an approved screening plan that we did. We created our own problem. Pichotta stated that if you are going to approve the screening plan as it has been presented, technically you would have to amend condition #16 to state "the trees to be utilized shall consist of conifers no less than 6.5 feet in height." His discussion with legal counsel is that ideally, that condition would be modified to reflect the actual height of the trees despite the fact that the height of the berm has not been identified. If you want to authorize the use of 6.5 foot trees, condition #16 should be modified to state "shall consist of conifers no less than 6.5 feet in height." Aubart asked if we want to establish the berm height also so that they fit together, you see what he is saying. Otherwise, we may not solve the problem. Pichotta stated the berm is there at this point. Mr. Holst stated that if it will make everybody feel better, why doesn't he just plant 8 foot trees. Chairperson Ross stated that would be a good alternative. Mr. Holst asked the neighbors if that would make everybody feel better. The neighbors stated a lot better. Aubart asked if we modify the screening plan. Pichotta stated what we do at this point is basically accept the screening plan, noting that 8 foot trees will be utilized versus the 6.5 foot trees that were previously proposed. Mr. Holst stated he wants to thank the board for their consideration but he wants to try, he guesses he is the worst neighbor you could possibly have so maybe if he does something it will help. **Aubart moved to modify the screening plan for William F. Holst III, to utilize 8 foot trees versus the 6.5 foot trees that were previously proposed/Peterson seconded. All in favor. Passed.**

Chairperson Ross relinquished duties back to Jeff Holst.

Discuss take action on bids received for a mid-sized, 4 wheel/all-wheel drive, Sport Utility Vehicle (SUV) to be utilized by the Land Management Department.

Staff Report – Andy Pichotta: As you are aware, we were looking at purchasing a Sport Utility vehicle to replace the 1998 Jeep Cherokee that we have. The specs were distributed mid-April to Cernohouse Chevrolet in Prescott, Ellsworth Ford, Quinn Motors and Hudson Chrysler. We got back bids from Ellsworth Ford and Quinn Motors. Ellsworth Ford bid a 2015 Ford Edge, 3.5 L V6, AWD with the price being \$26,731, a 2016 Ford Explorer with the same engine, also AWD for \$27,285, also a new vehicle. They note that the approximate delivery time for either vehicle would be 8 or 9 weeks. Both vehicles have a 36,000 mile/36 month bumper to bumper warranty and a 60,000 mile/60 month powertrain warranty. Quinn Motors bid a single, used vehicle. A 2014 GMC Terrain SLE with a 2.4 L V4, AWD used vehicle with 9750 miles for a price of \$23,895. Quinn Motors notes that this vehicle is now available, it's on the lot, the unit is GM Certified. It has a 24,000 mile/2 year scheduled maintenance plan and a 12,000 mile/12 month bumper to bumper warranty.

Staff Recommendation: Staff recommends the Land Management Committee select the lowest responsive and responsible bid and authorize the Land Management Department to purchase that vehicle from said bidder. Aubart asked who the salesman is that you are dealing with at Quinn's. Pichotta said

Greg Place. Aubart asked Andy what he is thinking. Pichotta stated he believes the GMC Terrain would be adequate. It has a little bit smaller engine; a V4 but it's all wheel drive. We aren't that tough on vehicles. It has all wheel capability, size wise it is adequate. It's certainly no smaller than the Jeep Cherokee which it would be replacing. It does come in below our budget amount which is attractive simply because it becomes a little cumbersome to seek authorization to spend addition dollars. Aubart stated it does have the maintenance included for two years or 24,000 miles. Pichotta stated yes, it does. He believes it would be adequate. Certainly a much nicer vehicle than what we have. Chairperson Holst stated he likes what we currently have. It's not often that a public entity drives a classic vehicle in day-to-day work. Pichotta suggested it would be for sale soon. **Aubart moved to approve the purchase of a 2014 GMC Terrain from Quinn Motors for \$23,895/Peterson seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a Farm & Home Based Business for Greg Bechel in the Town of Union for a trucking/excavating business.

Rick Moskwa and his crew from the Red Wing Airport who are coming to provide a status report and review of 2015 work plan.

This may or may not be a future agenda item, as you recall, early last year there was an electrical form associated with POWTS certification that we discussed and we had a couple plumbers that were present that were not in favor of it. We had been told at that point by folks in the Department of Safety and Professional Services that it was required of us and that we had to adopt it. When push comes to shove, it turns out they were telling that to us without justification. So despite the fact that you have approved that form, given that we now know in no uncertain terms that that is not a state requirement, we are going to discontinue its use. Chairperson Holst asked if we need to take any action on it. Pichotta stated he doesn't believe you do. He will double check on that, it could be a future agenda item. The reality is that the state has no authorization to require us to do that because it's actually covered under uniform dwelling code. It would be a redundant requirement.

Motion to adjourn at 6:42pm by Peterson/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 6, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 20 th , June 3 rd & 17 th , July 1 st & 15 th , all in 2015.	Chair
3	Approve minutes of the April 15, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining in the Primary Agriculture District, pursuant to Pierce County Code Chapter 240-37A, by John Rohl, agent for John C. Rohl, Jr and John C. & Alva-Jeanne Rohl Life Estate, owners on property located in the NW ¼ of the SW ¼ of Section 28, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
5	Discuss take action on Screening Plan and potential modification of conditions associated with a conditional use permit for nonmetallic mining for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on bids received for a mid-size, 4 wheel/all-wheel drive, Sport Utility Vehicle (SUV) to be utilized by the Land Management Department.	Pichotta
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(4/24/15)

MINUTES - Pierce County Land Management Committee Meeting, April 15, 2015

Present: Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Dillon Hayes and Shari Hartung

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 6th & 20th, June 3rd & 17th, all in 2015.

Approve Minutes: **Sanden moved to approve the April 1, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Ross invited Mr. Willgrubs forward: Mr. Willgrubs

explained that he has been working with Land Management staff for the past seven years on this project. The campground will be located on the Mississippi River off of Highway 63 by Mister Sippy's. He thinks everything is ironed out to have 20 sites which is all he is requesting at this point. He is looking to do this in different phases. This is the first phase which has taken seven years. The second phase will take a little while too. He has met all the requirements. He understands all the conditions that Land Management has put on the request and he is totally OK with all that. Sanden stated P.I.G. is going to take care of the solid waste and you are going to have a holding tank for the liquid waste? Mr. Willgrubs stated yes. Sanden asked how does that get taken care of. Mr. Willgrubs stated it will be Johnson's Sanitation or Marko, then either P.I.G. or Waste Management that will have the dumpster down there.

Staff Report – Dillon Hayes: The applicant is seeking a conditional use permit for the establishment of a campground. This campground will allow for seasonal camping to be utilized by individuals with campers, travel trailers and recreational vehicles. Existing improvements on the site include a well and electrical services. The number of campsites for this request has been reduced from the number initially proposed in 2008 and all development currently proposed (20 sites) will take place outside of the floodplain area of the nearby Mississippi River. The current request is anticipated to be the first of several phases of campground development. The proposed scope of the complete campground will be similar to the request brought forward to the Town of Trenton Supervisors in 2008, which included approximately 120 campsites, most of which are to be located in the floodplain and shoreland areas of the property. This property is located on 11.6 acres in the Town of Trenton. The property is zoned General Rural Flexible. In 2013 this parcel and an additional adjacent parcel, were rezoned from Rural Residential 20 to General Rural Flexible (GRF). Campgrounds are a conditionally permitted use in the General Rural Flexible zoning district, subject to the conditions set forth in Pierce County Code §240-39A:

1. Each campsite shall be plainly marked and surfaces with gravel, asphalt or other surface to free the site of mud.
2. The maximum number of campsites shall be 15 per acre.
3. Minimum lot size shall be 5 acres.
4. Each campsite shall be a minimum of 1,000 square feet.
5. There shall be two off-street parking spaces for each campsite.
6. All sites shall meet the required setbacks from roads and from the ordinary high-water mark and shall be located at least 50 feet from all exterior lot lines.
7. Each campground shall be screened by means of vegetative screening, as described in §240-31D, along all lot lines. Such requirements may be waived by the Zoning Administrator if existing woody vegetation is such that the screening objective is or will be achieved.
8. No more than one mobile recreational vehicle shall be allowed on any individual campsite.
9. A camping unit shall not be occupied for more than eight months in a calendar year, although a camping unit may remain on an individual campsite for an entire calendar year. The wheels and tires shall remain in an in-transit position.
10. No porches, lean-to's or additions shall be constructed outdoor immediately adjacent to a camping unit. Canvas screen rooms or awnings shall be allowed.
11. A wooden deck may be provided adjacent to a camping unit subject to the following:
 - a. The deck shall not exceed 256 square feet in area.
 - b. The deck may be enclosed by open railings but shall not have built-in benches or tables.
 - c. The deck shall not have a permanent foundation in the ground.
12. A camping unit and deck may only be skirted with lattice; however, solid skirting may be installed immediately adjacent to the tires.
13. One storage shed may be allowed per campsite. Said shed shall not exceed 80 square feet in floor area.
14. A shelter unit may be located on an individual campsite, provided it is designed only to protect occupants from the elements and does not have a permanent water supply, a sewage system, electricity or heating and cooking facilities. A shelter unit shall not exceed 300 square feet in total floor area.
15. One dwelling unit to be occupied by the owner and not more than one additional dwelling unit to be occupied by the manager may be permitted in a campground.
16. Camping shall be permitted in approved campgrounds without issuance of a regular land use permit.

At this time, 16 of the 20 camping sites have been delineated and all sites meet the minimum sizing and parking requirements. The 16 sites delineated to date range in size from 1600 to 1800 square feet and the applicant will be utilizing pea gravel for the surface of each campsite. Screening requirements are described in §240-31C & D. §240-31(C)(7) states: “ Existing woody plants which meet the requirements of Subsection D may be used to meet the landscape buffer requirements.” The Zoning Administrator has determined that existing woody plants and vegetation will effectively screen the site from adjacent uses and waived screening requirements. On April 7, 2015, staff has determined that 1600+/- square feet of filling and grading had taken place to date. If additional filling and grading activities bring the total disturbed area to more than 2,000 square feet a conditional use permit will be required. The applicant has proposed to install a holding tank for the collection of waste from recreational vehicles camping on-site. A sanitary permit for this installation will be required in accordance with Pierce County Code Chapter 191 and Wisconsin Administrative Code SPS 383. This 11.6 acre parcel is an “outlot” as shown on the CSM approved in 2008. §240-88 defines “outlot” as “a parcel of land not to be used for building purposes, so designated on the plat.” As such, structures cannot currently be constructed on the parcel. The applicant has proposed to construct an office on the site at a later date; in order to do so the applicant will be required to convert the outlot to a buildable lot. P.I.G. will be providing solid waste disposal services and Johnson Sanitation will provide sewer pumping services. The applicant will furnish all

campers utilizing the campground with contact information for the owners and managers of the property. The owners live within four miles of the proposed campground. The Town of Trenton Supervisors stated that they see no changes since the initial approval of this request in 2008 and recommended approval on March 10, 2015. The Wisconsin Department of Transportation's Regional Access Coordinator has indicated that an expansion of the number of sites beyond that which is currently proposed (20) may require a modification to the intersection of 810th and Hwy 63 and requested that a Traffic Impact Analysis (TIA) be conducted if an expansion is proposed.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a campground with the following conditions:

1. Total number of campsites present shall not exceed 20 individual sites. If additional campsites beyond the 16 currently delineated are to be established, the layout shall be presented to Land Management staff to verify side yard setbacks, minimum campsite dimension requirements and the location of campsites in relation to the floodplain, prior to use.
2. Internal roads, camping pads and sanitary improvements shall be completed prior to the operation of the campground. Staff shall be contacted to verify improvements prior to commercial use.
3. Any campground advertising signage shall comply with Pierce County zoning standards.
4. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Pierce County Subdivision Code, Department of Safety & Professional Services (DSPS), Department of Health-DHS standards etc.).
5. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
6. The campground shall comply with all items listed under Section 240-39 of the Pierce County Code.
7. Any additional filling and grading shall be verified by staff to determine if a conditional use permit is needed.
8. Owner and manager contact information shall be prominently posted on site.
9. This conditional use permit shall expire in two years. A status review shall be presented to the LMC within 1 year.

Pichotta noted that he had a visit this afternoon from Mike Miller, who is on the Town of Trenton's Planning Commission and that he had raised a number of concerns. What he had indicated was that when this was originally discussed in 2008, the Planning Commission had recommended a number of conditions and it was his assertion that those conditions were somehow left out of the recommendation that we received from the Town this time. The seven conditions were 1. That a TIA be conducted. 2. Lower the number of campsites (300 is too large to start out with) - now we are down to 20. Pichotta noted that given the number of sites now proposed that is probably not an issue. 3. Establish quiet time hours, 10pm to 7am, Sunday through Thursday and 11pm to 7am, Friday and Saturday, holidays 11pm to 7am. 4. Camping season is 180 days, May 1st after 180 days, all campers shall be removed from the campground. Pichotta noted that 180 days is actually a requirement for mobile recreational vehicles parked in a floodplain. The reason for the 180 day timeframe is in case you do get notice that the water is coming up, you don't go to pull it out and find that you have all flat tires and the axle is seized up. He is not necessarily sure that applies well to a non-floodplain situation. 5. No ATV's or dirt bikes allowed for visitors. 6. Infrastructure needs to be upgraded at the owner's expense and 7. Developers shall comply with all County and State regulations. Pichotta indicated that he told Mr. Miller that he would bring these concerns to your attention and he also made Mr. Miller aware that if there are impacts from this that are unanticipated or negative impacts that need to be mitigated, that there is the ability with any CUP to bring those folks back in rather quickly and address those things. That did seem to make him a bit more

comfortable. It also should be noted that there is possibly some archeological artifacts on this site. It is part of a historic site called PL0095, an Oneota and Woodland Village site. This is from an email that was sent to Mr. Miller and the Town from the State Archeologist Office stating that there is no hindrance to development provided it doesn't require State or Federal funding or Wisconsin DNR permits. If DNR permits are required or public money is used to fund the project, the project would have to be reviewed by the Wisconsin Historical Society and an archeologist hired. So the applicant should be aware that once development is proposed to occur on the peninsula, that it may trigger some sort of archeological review. Given that, he is recommending the addition of two conditions:

10. Applicant understands that if archeological artifacts are encountered that any land disturbance shall cease and the State Archeologist's Office shall be immediately contacted.
11. Traffic control measures shall be installed prior to the commencement of the authorized use.

Basically, we need to see a stop sign at the end of the road where it goes onto the Town road. Chairperson Ross asked if Mr. Miller had provided a copy of the minutes. Pichotta stated that he had not. Pichotta noted that the meeting Mr. Miller had referenced was two Town Chairs ago so we probably would want to go with the recommendation that was generated most recently. Chairperson Ross stated that was his point, without specific documentation, he would be a little apprehensive. Pichotta stated that would be his sense too, he just wanted to make the committee aware of those initial concerns and given the reduction in scope of the proposed campground he thinks many of the concerns would be lessened. Sanden asked about the TIA, is it triggered only after more than 20 sites? Pichotta stated yes, what the concern is the connection with the Town Road and the State Highway doesn't have any turn lanes. So if you were to have a number of large campers out there trying to get in or out, you could disrupt traffic, whereas if you go up and around to the top there is turn lanes and folks wouldn't generally have an issue. But the reality too is that the way the driveway comes out, it kind of lends itself for folks to go that way. If they came the other way it would be pretty difficult to get in there. So he thinks it's probably not going to be an issue. Sanden asked about staff's reaction to the "Quiet Time". Pichotta stated that the area is characterized by other campgrounds. It is also heavily wooded. Sanden stated there are no residences nearby. Pichotta stated there is not really, they are up higher near the road. That might be something that if there is an issue worth having a discussion about, we will have the 1 year status report. What we are hoping is that instead of one year, not in April, but maybe come back in January or February and discuss how it went the last summer. Chairperson Ross noted that there are two major rail lines and barge traffic and so on in the area. Mr. Willgrubs noted that there is also a bar right across the street. Aubart stated it seems to him that the nine conditions are not applicable. It was 300 campsites versus 20. If we have issues we can deal with them.

Chairperson Ross opened the hearing to the public. No public comment. Public hearing closed.

Chairperson Ross asked about clarification on a couple things, a porch would be covered, a deck is not, condition #11 No porches or lean-to's but we can have the wooden decks provided adjacent to the campground. Just to be clear, a structure with a roof versus an open deck. Is there any clear cutting that you have to do down there? Mr. Willgrubs stated no, they are good.

Sanden moved to approve the conditional use permit for a campground for Chris Willgrubs, agent for Jeffery Kessler, finding that the proposed use is not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #9, adding condition #10 Applicant understands that if archeological artifacts are encountered that any land disturbance shall cease and the State Archeologist's Office shall be immediately contacted, and #11 Traffic control measures shall be installed prior to the commencement of the authorized use, /Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a CUP for a nonmetallic mining operation in the Town of Clifton for John Rohl. This is one that had been on our agendas previously but there was a conservation easement issue with the Kinni River Land Trust that needed to be resolved.

Discuss take action on screening plan and potential modifications of conditions associated with CUP for nonmetallic mining for William F Holst III, this is the screening plan that the committee took action on a couple of meetings ago. Staff has received a variety of phone calls from folks who are located on the other side of Cty Rd K who are unhappy with the reduction in tree size. Upon review, technically we would have worded the agenda item a little different because the eight foot trees were actually a condition of the CUP and the screening plan was to be presented. So we are just going to clean that up. It will give folks the opportunity to raise the concerns they may have.

Red Wing Airport will be coming in to give you a status report and their work plan for 2015. Chairperson Ross asked if there are any complaints on the strobe lights. Pichotta stated not in a couple years.

Discuss take action on bids received for mid-size 4 wheel/all-wheel drive sport utility vehicle (SUV) to be utilized by Land Management Department. Pichotta distributed bids two days ago to four dealerships looking for a mid-size sport utility to replace the Jeep as we had alluded to at the last meeting.

Pichotta also noted that Mr. Hayes has secured a very similar job to the one he has here in his home town and County. Aubart asked where that is. Dillon stated Milaca County. Pichotta stated his last day will be next Friday. We will be starting the process to refill that position.

Motion to adjourn at 6:27pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 15, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 6 th & 20 th , June 3 rd & 17 th , all in 2015.	Chair
3	Approve minutes of the April 1, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Campground in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-39A, by Chris Willgrubs, agent for Jeffery Kessler, owner on property located in Outlot 2 being a part of Gov't Lot 4, Certified Survey Map (CSM) V12, P58, in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.	Hayes
5	Discuss take action on Travel/Training Requests	Pichotta
6	Future agenda items.	Pichotta
7	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, April 1, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 15th, May 6th & 20th, June 3rd & 17th, all in 2015.

Approve Minutes: **Ross moved to approve the March 18, 2015 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Fetzer not voting due to absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for an Accessory Residence in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-40A, for Jason Pitts and Brett King, owners on property located in SE ¼ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Pitts and Mr. King forward: Mr. King explained they would like to build a storage shed with additional living quarters on one end of it. Sanden asked what the square footage of the principal house is. Mr. Pitts stated he thinks its 1700 square feet. Apparently all the paperwork they turned into the Township never made it to the County. Mr. Pitts stated it's a three-bedroom, two bath modular home.

Staff Report – Emily Lund: The applicants co-own an existing 3 bedroom house with a detached garage, well and septic which they utilize as a vacation home. They are interested in tearing down the existing detached garage and building a new accessory structure that would contain an additional residence. The property is located in Section 33 in the Town of Trenton. The property is in the Rural Residential 20 zoning district. Pierce County Code §240-40A allows accessory residences, which are accessory to single family homes in the Rural Residential 20 District with the issuance of a CUP. Pierce County Code Chapter 240-88 Definitions for Accessory Residences and Accessory Buildings are listed in the staff report. The applicants own 2.4 acres and have an existing 3 bedroom house, detached garage, well and septic. This request is to replace the existing detached garage with a 40' x 60' shed, of which 40' x 40' will be used for storage and 20' x 40' will be finished with 2 bedrooms and living space. Two families own the property and would like for one family to utilize the house and for the other family to utilize the proposed living space in the new shed. The principal residence has a conventional septic system that was replaced in 2009 and sized for the 3 bedroom home. The applicants' proposal to add two bedrooms in the shed would require that a Sanitary Permit be issued prior to any modifications or installation of a separate septic system. The applicants have indicated that they do not plan to rent out either residence, but have requested that a separate address be assigned for the proposed living space in the shed. The Trenton Town Board of Supervisors recommended approval of this CUP on 2-11-2015. The Town Board stipulated that the septic system must be large enough for the additional bedrooms. No renewal of this request will be necessary provided the use is established within 12 months of approval.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall contract with a Wisconsin Licensed Master Plumber to obtain a sanitary permit prior to construction of the accessory structure/residence.
2. If both the principal and accessory residences are to be connected to the same septic system, the applicant shall record an 'Affidavit Regarding Common Private Sewage System' on their deed prior to issuance of a sanitary permit.
3. The applicant shall work with the Town's Building Inspector, Galen Seipel, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
4. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
5. Applicant shall obtain a separate Uniform Address Number (UAN) for the accessory residence.
6. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked staff, given that the majority of the building is used for storage and only 20' x 40' is used as a dwelling. Can we use that 20' x 40' to calculate if it is subordinate to and incidental to the primary use? Pichotta stated that would be one way to do it, another way would be that it is located in a structure that is clearly accessory to the principal use; that being the home. The pole shed would be accessory to that use. It's contained within that customarily accessory structure. When you consider it either way, it is subordinate and incidental to the principal use.

Sanden moved to approve the conditional use permit for an accessory residence with conditions #1 - #6, due to the fact this is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. All in favor.

Passed. Mr. Pitts stated they didn't request a separate mailing address sign, if that is something they need they will certainly do that. Holst stated yes, that is something you need.

Discuss take action on a request for renewal of a conditional use permit for a Utility Facility >1000 square feet in the General Rural Flexible and Industrial Districts by William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited William F. Holst III forward. Jeff Holst recused himself from discussion due to possible conflict of interest.

Staff Report – Brad Roy: In 2013, the applicant received a conditional use permit for a Loadout Facility in the Town of Trenton. The proposed facility may potentially be used to load such materials as sand, gravel, corn and oil and may eventually require structural improvements. A rail spur is intended to be constructed and connect with the BNSF railroad. No finalized plans have been presented to staff. The CUP was issued for a conceptual plan and allows for nonstructural use of the rail spur and the adjacent 150'. Any future construction, structural uses or use of additional land area will require the issuance of a new Conditional Use Permit. A status report for this permit was presented to the LMC in April, 2014 and it was determined that the applicant had commenced action on the project with 12 months as required by code. This site currently has a 130 acre, sand and gravel mining operation as well as a small Ready-Mix plant. A CUP was also issued to Wisconsin Industrial Sand for a Sand Processing and Rail Loadout Facility. The property is zoned Industrial. Last year the Pierce County Finance and Personnel Committee approved a bid for the applicant to purchase an adjoining 25 acres from the Pierce County Highway Department. The applicant has indicated that the acquired land was necessary for the development of a loadout facility. The applicant submitted a new nonmetallic mining reclamation plan detailing that the future use of the site will be industrial uses. Site work has recently begun including the removal of

topsoil; however no agreements with the BNSF railroad have been finalized. Staff contacted the Chair of the Town of Trenton Board of Supervisors regarding the renewal of this permit. No specific concerns were identified. The Town recommendation was generated under the tenure of the previous Town Chairperson. The current Chairperson is not familiar with this project and intends to be present at the meeting. The existing conditions are listed #1 - #5 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area and renew this Conditional Use Permit with the following conditions (proposed changes in **bold**):

1. The applicant is authorized to utilize an area adjacent to the proposed rail spur (150' on each side) for nonstructural use as a loadout facility. Any substantial change to the alignment of the rail spur shall require LMC review and approval. Any expansion of the use or the site shall be subject to issuance of a Conditional Use Permit.
2. This CUP shall expire in 2 years with a 1 year status report to the LMC.
3. Applicant shall secure all necessary permits and approval from other agencies such as the WDNR, WisDOT, etc.
4. Prior to any nonstructural use of the site as a loadout facility, applicant shall submit for LMC review **and approval** information relating to type and quantity of materials to be shipped, frequency and type of traffic, a traffic impact analysis, a site plan and any other information deemed necessary by the Zoning Administrator.

Chairperson Fetzer asked Mr. William Holst how talks were going with BNSF. Mr. Holst stated they had two conversations last week. He thinks all of you are familiar with the plan Wisconsin Industrial Sand submitted with the rail right along the track with the ladder tracks adjoining it. Now Burlington Northern thinks they might require a loop track. He has enough property to do it. Right now someone is negotiating with WISC to possibly take over their lease with Mr. Holst. Everything is up in the air again. He has constructed the berm on the property at a cost of \$60,000. He has 18,000 ton of crushed rock base in a pile for the rail spur that is already made. They are just trying to get some kind of agreement with Burlington Northern and where it can go. It took about a year longer to acquire the property from the County than they thought it would. Chairperson Fetzer asked Mr. Holst if they are looking at definitely doing something? Mr. Holst stated he has two people interested in putting the track in, two different companies. One has an exclusive offer with him in that he can't even negotiate with anyone else. Chairperson Fetzer asked the Trenton Town Chair if he has any input. Daniel Meixner stated he spoke with one of the supervisors that was on the board at the time he stated there weren't any issues with the Town.

Sanden moved to renew the conditional use permit for a Utility Facility >1000 square feet (Railroad Spur) for William F. Holst III with conditions #1 - #4, adding the change to condition #4/Aubart seconded. All in favor. Passed with Jeff Holst not voting.

Discuss take action on Public Participation Plan for 5 year Comprehensive Plan update. Staff Report – Andy Pichotta: As discussed at the March 18th Land Management Committee meeting, staff has commenced work on the review and update of the Pierce County Comprehensive Plan. It will be important to allow for transparency in the review process and to continue to solicit public input relating to the updating of goals, objectives and policies. The update process will not be as intensive or in-depth as the undertakings executed during the development of the Pierce County “Smart Growth” Comprehensive Plan, which occurred from 2005 to 2009. As a result of the minimalistic nature of this revision it may not be prudent to carry out the extensive public participation process that accompanied the adoption of the original comprehensive plan. While this simplified process may not necessitate the methods previously utilized, it is still important that the public has an opportunity to voice their opinions and provide input during this process. Changes in technology and website development have allowed municipalities to explore new means of soliciting public input. This new technology, along with more traditional methods, will allow staff to keep the public informed of the review and revision process and also solicit public input. Throughout the comprehensive plan update and revision process meeting agendas and relevant

materials will be distributed to the Chair and Clerk of each Town. This will ensure that each Town will be able to review materials and articulate any comments or concerns. This one is basically in recognition that the plan largely dictates the relationship between the County, the Town and the processes through which we will seek Town input. It's very important that all of the Towns are aware. Next is to propose two open house meetings will be held at a central location to provide a forum for residents to review proposed changes and submit comments. The time and date of these meetings will be staggered to allow ample opportunity for residents with varying schedules to attend. The thought there was that we will hold it here in the County Board Room. It would be an open house and one would probably be in the early afternoon and then have an evening type meeting on a different day. To try to ensure that folks with varying schedules have an opportunity to attend those if they are so inclined. Utilize the existing Pierce county website to provide an opportunity for gathering public input and sharing data and materials. The creation of a dedicated page for the 2015 update and revision process will allow staff to share data and materials with the public. Through the use of a shared email address residents will be able to submit comments and concerns regarding current issues and implementation of the existing plan. Basically like the jail project on the website, have a prominent link on the first page so that if someone is interested they can easily access the materials that the committee has seen, as well as the results of each of the meetings where we will discuss each of the elements. An online survey accessed by a link of the County website will be utilized to solicit public input. The methodology, timing and content of the survey instrument will be discussed at a later date. Basically what we would do there is use something like Survey Monkey where we give folks the opportunity to comment on a variety of things. What he doesn't want to do is turn it into a forum on land use issues. He is more interested in comments on process, relationships between County and Towns, those sorts of things. What he doesn't want is for it to become somewhere where folks flood it with land use concerns or uses they don't like. But we would bring that back to the committee and get your blessing on some sort of a survey. Holst stated that we need to get out to the public that Towns still have their plans. This is just the County's overall plan. Pichotta stated what his intent would be once we get a little ways into this to do a press release that discusses exactly what Mr. Holst is describing as well as identifies the fact that there is a link to the County website. Chairperson Fetzer stated hopefully, it will encourage the Towns to review their own and update things periodically. Sanden stated he isn't sure how much influence we should have on the Townships but if it's appropriate to urge them to have an internal public process of their own to get input from their citizens as well. This is a great opportunity for that. Pichotta stated that is why providing the information and material to the Towns should be helpful, he is hopeful that some of them might even ship it in front of their planning commission and have some discussions about changes we are proposing at the Town level to do exactly as you are suggesting. Sanden stated he was surprised that when he works with the Townships through his classes – he sometimes asks the chair if have you surveyed your citizens and the answer was always no. It was basically by virtue of the fact that he is on the board that he therefore knows what everyone in his Township thinks and that is unfortunate because it is such a good opportunity for everyone to reach out and get that input. Holst stated the Townships utilize the County's survey the last time. All that information was available and traceable back to where it originated from.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed public participation plan and, if appropriate, approve for implementation. **Holst moved to approve a Public Participation Plan for review and update of the Pierce County Comprehensive Plan/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a CUP for a campground for Chris Willgrubs in the Town of Trenton.

Discuss take action on Chapter 240 relating to Principal Structures and Accessory Structures. There are some tweaks that we are going to propose regarding the definitions and some other things relating to what we consider principal or accessory.

Pichotta also noted that he is attempting to utilize the Sheriff's Dept bids for a sport utility vehicle purchase for the department to replace the Jeep. He may need to put an agenda item on for the purchase of that vehicle.

Motion to adjourn at 6:26pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 18, 2015

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Dillon Hayes and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 1st & 15th, May 6th & 20th, June 3rd & 17th, all in 2015.

Approve Minutes: **Sanden moved to approve the March 4, 2015 Land Management Committee minutes/Ross seconded. All in favor. Passed.**

Discuss take action on Site Plan Review for Pro's Touch Landscaping in the Light Industrial District, pursuant to Pierce County Code Chapter 240-75, for John McNamara, agent on property located in Lot 5, Certified Survey Map (CSM) V12, P107, in the SW ¼ of the SW ¼ of Section 36, T27N, R20W, Town of Clifton, Pierce County, WI. Chairperson Holst invited Mr. McNamara forward: Mr. McNamara explained he has a fifteen year old landscaping company that installs landscaping and hardscaping, patios, retaining walls, etc. They have been renting in Prescott, in George Jacques old buildings on Canton Street, for over ten years. They bought this land from George about five years ago and have been intending to build out there. They are at that stage now.

Staff Report – Dillon Hayes: The applicant is seeking site plan approval for the construction of new buildings to be utilized for a Light Industrial use. Pierce County Code §240-75 states that the purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The applicant operates Pro's Touch Landscaping, currently located at 720 Saint Croix Street in the City of Prescott. Pro's Touch Landscaping maintains approximately six to eight employees year-round and provides landscaping, hardscaping and snow removal services in Western Wisconsin and the Eastern Twin Cities Metro area. The buildings proposed will be utilized for the storage and maintenance of trucks and equipment in addition to an office space and bathroom. Construction is anticipated to start this spring. This property is located on 3.86 acres in the Town of Clifton and is zoned Light Industrial. The driveway access for the property is located off of the cul-de-sac on 655th Avenue; the south side of the property fronts State Highway 29. Adjacent zoning districts include Light Industrial and General Rural Flexible 8. The applicant has proposed to construct a 40ft by 51ft heated shop with attached 16ft by 30ft office/restroom space. An additional 60ft by 60ft post frame building with a class-5 aggregate floor will be constructed and utilized for cold storage. Lighting is proposed to be installed on the inside face of each building, facing out into the yard parking area. The applicant has proposed to construct a sign at the south end of the property near Highway 29. In accordance with Pierce County Code §240-60, this sign will be limited to a maximum sign face area of 32 square feet and must meet all applicable requirements outlined in Article VIII of the Pierce County Code. Upon completion of the site plan review the applicant will obtain a Land Use Permit for a Light Industrial

use as outlined in Pierce County Code §240-37(1)A which states that all operations take place within buildings and screening with natural vegetation or fencing shall be provided along property lines bordering agricultural, rural and residential districts. Light industry is defined in Pierce County Code §240-88 as a non-nuisance, low-impact industrial use compatible with surrounding commercial, residential or public uses which have a minimal impact on traffic, conducted indoors and without significant noise, odor, dust and glare which do not contribute to the degradation of land, water and air. Under the regulations outlined in Pierce County Code §240-54 a minimum of ten total parking spaces will be required for this facility. The plans submitted show ample parking spaces to fulfill this requirement. One handicapped parking space will be established. The applicant will be required to obtain a Sanitary Permit for the office restroom prior to the issuance of a Land Use Permit for construction of the proposed structures. The applicant has proposed to install floor drains in the heated 40ft by 51ft shop area that will outlet to a holding tank. This holding tank will require Department of Natural Resources approval in accordance with SPS 383.32.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations. The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Ross asked the applicant and the committee to think about possibly removing the spruce plantings on either side of his sign. He would hate for him to lose the advertising ability. You spend a lot of money on a sign and no one will be able to see it until you are right on top of it. In this particular case, we don't necessarily need to have anything there. Sanden noted that it was said that they would be using this to store equipment and trucks, Sanden asked if they are going to be storing any materials on-site. Mr. McNamara stated some but not much that would be outside of that post-frame building. Sanden asked what kind of lighting he is planning on. Mr. McNamara stated just a yard light off the back of the heated shop and then potentially off the back of the post-frame cold-storage building basically facing the yard for security purposes. Sanden stated you may want to consider a cowling to make it more directional. You have a neighbor to the east, keep that in mind.

Sanden moved to approve the Site Plan as presented including removing the spruce trees on the south end of the property if desired, for Pro's Touch Landscaping Inc for John McNamara/Ross seconded. All in favor. Passed.

Chairperson Holst recused himself and asked Jon Aubart to act as Chairperson for agenda item #5.

Discuss take action on proposed Screening Plan for a Nonmetallic Mining Site for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Acting Chairperson Aubart invited William F. Holst III forward. Mr. William F. Holst III explained one of the conditions for his permit was that he bring in a planting plan for the berm on the property. The berm has been constructed and he hired Nesbitt's Nursery to plant some trees for him. There is a sketch on it. The only thing he is asking is to plant 6ft trees instead of 8ft. There was no height requirement on his berm and he built it 10ft high. Even without the trees, no one can see the site. You want to know when he would plant it, Nesbitt's have told him they would dig the trees before they candle this spring and they will get to him after their good customers are taken care of; probably sometime in May.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for nonmetallic mining to enable the expansion of an existing mining operation in September, 2014. A berm was installed in the southwestern portion of the property just outside of County Road K right-of-way, as requested by the Town of Trenton. The CUP also required that a screening plan for the berm be submitted for LMC review

within 6 months. The intent of the berm and vegetative screening requirement is to screen residences in the nearby Rural Residential-20 district from mining activities. The property is zoned Industrial and General Rural Flexible. Access to the site is off of 830th St. Condition #16 of the Mining CUP states, “A screening plan for the berm shall be submitted within six months. Trees to be utilized shall consist of conifers of no less than 8 feet in height.” The applicant has submitted a plan to plant Colorado Blue spruce trees. The trees will grow approximately 12-18” per year in height and width. An eight foot tree planted in the spring of 2015 will be approximately 12ft by 2020 and 17ft by 2025. There will be two staggered rows of trees. Within each row the trees will have an approximate 20ft separation. There will be approximately 10ft between the rows. The staggered layout will provide a more constant barrier. The plan did not detail a timeline for the planting of trees but the applicant just did. The applicant would like the LMC to consider allowing the planting of 6ft tall trees.

Staff Recommendation: Staff recommends the LMC review the submitted plan to determine whether any changes or modifications are necessary. A time frame for tree planting should also be established. Sanden asked from an erosion standpoint, what kind of vegetation is on the berm right now. Mr. William Holst stated they just finished in the fall. They have to mulch and seed. They did get one small area then it froze up on them. Aubart asked about the berm height and what we are trying to achieve. Roy stated the berm was a requirement by the Town in a previous rezone. Aubart asked if they indicated a height. Roy stated they did not indicate a height. He can verify the berm is 10ft high. Aubart stated he doesn’t have a problem with 6ft trees. Roy stated there was not a requirement on the berm height from the Town or from this committee.

Sanden moved to accept the screening plan for a nonmetallic site for William F. Holst III as presented stipulating the trees may be spruce trees 6ft in height/Aubart seconded. All in favor. Passed with Holst not voting.

Discuss process and timeframe for a review and update of Pierce County’s Comprehensive Plan.

Staff Report – Andy Pichotta: As you are aware, Pierce County adopted a Comprehensive Plan in August of 2009. Given that five years have passed since the plan’s adoption, it is now appropriate to conduct a review and update of the plan. Staff has begun updating the demographic and background information associated with each of the 9 elements contained in the plan. What we are proposing to do, is bring to the LMC each of the elements for review and discussion over the course of the next 8 or 9 months as available agenda space dictates. Once each element has been reviewed and updated an implementation/action plan for the next 5 years will be developed by the LMC. At that point, we would hold a public hearing to consider adoption of the updated plan. Basically, he is proposing to not create a steering committee of sorts or an ad hoc committee. He is proposing to use this committee as the sounding board, since you are the implementation arm of the plan anyway. Sanden stated we don’t need to re-visit the entire document. He thinks they did a good job the first time. He would look forward to Andy’s expert opinion on what he thinks and staff believes would be appropriate updates. Pichotta noted that we have gotten some clarity in relationships with the Towns. So we will certainly modify the portions that discuss that given that due to court cases and things we have learned simply using the plan for the last five years. Sanden asked if he could also provide some updated demographics to see where the County has been going over the last five years. Pichotta stated that is exactly what we are going to do: updated demographics, updated background information and it may be that some of it is attributable to steps that we have already taken. It would be interesting to see what those sorts of things are. It might also give us a sense of some additional things we might do to steer things one way or another if that is determined to be advantageous. Sanden asked if we will use this opportunity to bring in public opinion. Let them tell us what they envision over the next twenty years. He doesn’t know if we should do a full opinion survey, we probably spent \$10,000 or \$20,000 getting that information the first time around. He doesn’t think we should invest in that kind of spending. Is there any way we can get some feedback? Pichotta stated as far as the community attitudes survey, it was a lot more than \$10,000 or \$20,000. We surely could solicit public input. Once we have gone through all the elements and addressed all the goals, objectives and policies that we are going too, and put together an implementation plan, we could do a couple of different

things. We could hold open houses in a couple different parts of the county where we invite the Towns or we could distribute to the Towns and request that they discuss those documents at their meetings and provide input. Maybe one of the first things we should look at is a public participation plan as to how we will do that. You don't normally do a full-blown community attitude survey every time you look at your comp plan. You would do that when you redo the whole thing. Sanden stated it's an opportunity to get in connection with the public at large. It provides good transparency and when the City of River Falls did this, they had a number of these activities and they invited people. Not many people showed up, then they developed a plan and they put it forward and then it was in the papers, "do you see what River Falls is trying to do?" So they had to scrap it and start all over. Pichotta suggested that you have to either feed people or make them angry to get them to show up. Sanden stated these will all be public hearings. Pichotta stated they will be public hearings. We could, once we get through the elements, hold an open house or two. The committee could participate to the degree that you are willing too. Holst stated there will be one public hearing when we adopt it and the rest will be open meetings and they will be run more like a regular meeting where we can take input from the crowd. If the crowd gets volatile, we'll shut it down. Pichotta stated his recommendation is if you believe the proposed methodology and timeframe are reasonable, he is looking for some guidance and to make you aware this was coming down the pipe and to use the committee as the principle sounding board. Holst stated the first time we did this twenty some years ago, we went around the County with fifteen meetings, ten for sure. We would have 500 people show up screaming, yelling, swearing, threatening and then the last time we didn't have anybody. Pichotta stated he thinks the comfort level with the concept of planning has increased substantially since the 90's. Holst stated that the whole acceptance of the Land Management Department has improved greatly in the last decade and a half. It might be a coincidence that it coincides with Mr. Pichotta's arrival but he thinks it's just that. Committee consensus to move forward as proposed.

Discuss take action to declare surplus and authorize the sale of 2001 Chevy Silverado 1500.

Staff Report – Andy Pichotta: As you are aware, a 2014 Ford F150 was recently purchased to replace the 2001 Chevy Silverado 1500 that was utilized by the County Surveyor. It is now appropriate to declare the Chevy truck surplus and authorize its sale. Staff has been informed that the County Clerk's Office will be seeking Finance and Personnel Committee approval to solicit bids to sell another county (fleet) vehicle. The Clerk's Office has agreed to include the Land Management vehicle in their request and sale process if so authorized.

Staff Recommendation: Staff recommends the Land Management Committee declare the 2001 Chevy Silverado 1500 as being surplus and authorize its sale.

Aubart asked what you are going to do with all the money you get from the sale. Pichotta stated it goes in the general fund.

Ross moved to declare surplus and authorize the sale of the 2001 Chevy Silverado 1500/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated at the last meeting the committee authorized Mr. Roy and him to attend the meeting with the DOT to discuss signage requirements. We now have a date, Monday, March 30th from 9:00am to 12:00pm in Eau Claire.

Departmental Update and Future Agenda Items

Public hearing for an accessory residence in the Town of Trenton for Jason Pitts and Brett King for a piece right above Barbs Dam Resort.

Request for a conditional use permit renewal for a utility facility for a rail spur in the Industrial District for William F. Holst III in the Town of Trenton.

Possibly first piece of the Comprehensive Plan regarding public participation.

Motion to adjourn at 6:25pm by Aubart/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA REVISED
Wednesday, March 18, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 1 st & 15 th , May 6 th & 20 th , June 3 rd & 17 th , all in 2015.	Chair
3	Approve minutes of the March 4, 2015 Land Management Committee meeting.	Chair
4	Discuss take action on Site Plan Review for Pro's Touch Landscaping in the Light Industrial District pursuant to Pierce County Code Chapter 240-75, for John McNamara, agent on property located in Lot 5, Certified Survey Map (CSM) V12, P107, in the SW ¼ of the SW ¼ of Section 36, T27N, R20W, Town of Clifton, Pierce County, WI.	Hayes
5	Discuss take action on proposed Screening Plan for a Nonmetallic Mining Site for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss process and timeframe for a review and update of Pierce County's Comprehensive Plan.	Pichotta
7	Discuss take action to declare surplus and authorize the sale of 2001 Chevy Silverado 1500.	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(3/6/15)

- **Revised March 17, 2015 @ 2:27pm.**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, March 4, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Brad Roy, Emily Lund, Dillon Hayes and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 18th, April 1st & 15th, all in 2015.

Approve Minutes: **Holst moved to approve the February 18, 2015 Land Management Committee minutes/Ross seconded. All in favor. Passed.**

Ross moved to amend the agenda by moving item #8 for Wisconsin Industrial Sand to the #5 position, since agenda item #5 for John Rohl will be stricken from the agenda for this meeting/Sanden seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Farm & Home Based Business in the General Rural District, pursuant to Pierce County Code Chapter 240-36D, by William & Karen Fesenmaier, owners on property located in Lot 3, Certified Survey Map (CSM) V13, P164, in the NE ¼ of the NW ¼ of Section 11, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Fesenmaier forward: Mr. Fesenmaier explained that he operates a dairy farm supply business, Bill's IBA. He runs routes to dairy farms mostly to sell dairy sanitation, some animal health and some dairy farm equipment. Pretty much everything they do is run on truck routes with very little on-site retail business. Occasionally, a farmer may come to visit, maybe once a month. The operation is Monday through Friday with the truck routes, occasionally he has to run routes on Saturdays. He takes a delivery by semi once a week and occasionally a second truck will deliver, once every month or two. He parks his truck at his house for the most part and operates an office out of the house and warehouse space is rented in Baldwin. He wants to build to eliminate the renting of the warehouse space. The building is used for storage of his supplies and his truck.

Staff Report – Emily Lund: The property is located in Section 11 in the Town of Gilman. Section 240-36D allows farm and home based businesses to permitted single-family residences shall be permitted by a conditional use permit in the Agricultural districts, subject to the four conditions listed in the staff report. The applicants live in the home on this 14.66 acre property. This parcel is in the General Rural zoning district. Current land uses are residential and woodland. Adjacent land uses are agricultural, residential and woodland. The applicants own a dairy farm supply business called Bill's IBA Inc. The company was established in 2006. They currently operate out of a rented warehouse in Baldwin and have an 8ft x 10ft office in the basement of their home. The applicants are seeking this CUP to allow them to construct a 50ft x 102ft heated shed that will be located on the same parcel as their home. The business portion of the shed is to be 50ft x 90ft (4,500 sq ft) and the remainder is to be used for personal storage. They will keep the 8ft x 10ft (80 sq ft) office in the basement of the house. The building will be used to store a route truck and supplies. There will be no outside storage of any products or materials. The work is primarily

performed off-site. There will be no retail business transactions or customer visits to the site. The main activities on-site will be the loading and unloading of trucks with supplies. The applicants currently have one part-time employee. Equipment utilized for this business includes a truck and a forklift. Pierce County Code 240-54A Parking Requirements requires 2 off-street parking spaces for contractor establishments and the property currently has more than 2 parking spots available. Hours of operation are proposed to be 7AM to 5PM, Monday thru Saturday, Closed on Sunday. Shipment delivery is once a week that is usually between 8AM and 5PM, Monday through Friday. A bathroom is located in the basement of the house next to the office. The residential septic system is supported by a 3 bedroom mound septic system. The applicant may add a bathroom in the shed in the future, which would require a Sanitary Permit prior to the installation. The applicant proposes to construct one on-site advertising sign with this CUP that will state the company name and telephone number. The sign face area shall not exceed 24 sq ft per Pierce County Code 240-60N(1)(d). Applicants have P.I.G. contracted on a weekly basis for trash pick-up. Consolidated Container picks up larger plastic containers. Murtha Sanitation picks up recycling. The Gilman Town Board recommended approval of this request on 9-10-2014. The Town justified their approval by stating, "Gilman Town Board approves this proposed Conditional Use Permit as it is determined to be consistent with the Gilman Comprehensive Plan, which encourages agricultural related businesses in suitable locations." PCC 240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends that the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. There shall be at least 2 parking spaces, with a minimum of one space for handicapped parking.
6. The advertising sign shall not exceed 24 square feet, comply with the zoning code standards and signs shall be located outside of road right-of-way.
7. Applicants shall work with Todd Dolan, Gilman Building Inspector, to determine whether or not commercial plan review and approval is required from the Department of Safety & Professional Services.
8. A sanitary permit shall be obtained for any changes to the septic system.
9. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), etc.).
10. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
11. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opens the hearing to the public. No public comment. **Public hearing closed.** Holst asked if the applicant understands the conditions. Mr. Fesenmaier stated yes. **Holst moved to approve the conditional use permit for a Farm & Home Based Business for a Dairy Farm Supply Business for William & Karen Fesenmaier due to the fact this is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #11/Ross seconded. All in favor. Passed.**

Discuss take action on proposed location of a ventilation shaft in the General Rural District for Wisconsin Industrial Sand Company, agent for Lynn S. Brown, owner on property located in the NW ¼ of the NW ¼ of Section 3, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited WISC, Jeff Himes and Loren Merchen forward.

Staff Report – Brad Roy: The applicants are proposing to construct a new ventilation shaft for the existing underground mine. The shaft is needed for air quality within the mine. Condition #27 of the applicants CUP states that no ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC. The property is owned by Lynn Brown and is currently used for agriculture. The neighboring parcel to the east has the closest residence and is also owned by Ms. Brown. The ventilation shaft will be placed in the northwest corner of the property and setback approximately 100ft from each property line depending on topography and drilling conditions. A 12ft diameter culvert casing will be placed in the hole to the bedrock. The culvert will extend approximately 20ft above ground. A fan will be mounted within the mine and wire mesh will be installed over top of the culvert. A chain-link fence will be installed around the culvert. Extending the culvert 20ft above grade will improve circulation of the exhaust. Given that the culvert will extend more than 6 inches above preconstruction grade a Land Use Permit will be required. The existing field road will be extended to access the vent. The location was presented to the Town of Isabelle on February 16, 2015 and approved.

Staff Recommendation: Staff recommends the LMC review the proposed site and determine if any changes or modifications are necessary. If no changes or modifications are necessary staff further recommends that the LMC authorize the establishment of the proposed air shaft, subject to securing a Land Use Permit.

Sanden asked if 20ft above grade is that a typical height for an air shaft? Mr. Merchen doesn't know if that is typical that is what Charlie had asked them to do. The one in Maiden Rock is probably 10ft or 15ft. Holst asked about the one on King Hill, isn't that one about 6 ft above grade? Mr. Merchen stated it's maybe 3 or 4ft. Holst stated he doesn't think there is a typical height. Mr. Merchen stated right now they are 6,000 feet from the exhaust shaft to their working faces and it's getting a little hard to ventilate the mine. They usually have five hours of down-time after a blast. This will speed things up.

Sanden moved to authorize the establishment of the air shaft for Wisconsin Industrial Sand Company subject to securing a Land Use Permit/Ross seconded. Holst recused himself from voting due to possible conflict of interest. All in favor. Passed with Holst not voting.

Discuss take action on a request for renewal of a conditional use permit for an Asphalt Plant in the Industrial District for Monarch Paving, owner on property located in the NW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Brent Schulze forward. Staff Report – Dillon Hayes: This operation was originally permitted in 2001 for a nonmetallic mining operation. In 2008, the zoning office inspected the site and determined that the portion used for mining had been reclaimed in accordance with the approved reclamation plan. Final reclamation within the approved plan designates the site as a permanent asphalt plant and the bond associated with reclamation was released. Pierce County Code provides the opportunity for the LMC to require a bond for asphalt plants. On March 4, 2009, the LMC determined that no bond should be required since this is an Industrial Use in the Industrial District. If Monarch were to resume mining operations at this site in the future a new conditional use permit would need to be obtained. The property is located in Section 34, Town of Trenton. The property on which the asphalt plant is located is zoned Industrial. Asphalt plants are a conditionally permitted use in this district. As required by the conditions of the original permit a vegetative berm has been established around the facility and is being maintained in order to screen the operation from residential properties nearby. At a previous renewal a haul route was designated for projects taking place in Minnesota. The conditions in place require that trucks traveling to Red Wing be routed from 830th Avenue to Hwy 35 and from Hwy 35 to Hwy 63. This route was established to limit the impact on town roads. A Storm Water Pollution Prevention Plan is on file in the Zoning Office for this site. There are currently two storm water ponds on this site; one temporary holding

pond and one infiltration pond. The Chairman of the Town of Trenton was reached for comment regarding this operation; he saw no issues with the renewal of this conditional use permit. The county has received no complaints about this operation since the last renewal. The existing conditions are listed in the staff report, #1 - #6. Note the hours of operation are from 6am to 8pm Monday through Saturday. The aforementioned haul route and applicant agrees any unforeseen erosion issues shall be addressed to the satisfaction of the county.

Staff Recommendations: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no other additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Reclamation shall be according to submitted plans.
2. The hours of operation are from 6am to 8pm, Monday through Saturday.
3. The haul route for trucks traveling to Minnesota projects via Red Wing shall be routed from 830th Avenue to Hwy 35 to Hwy 63.
4. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
5. Height of stockpiles shall be limited to 35 feet.
6. This CUP shall be reviewed for renewal in two years unless compliance issues arise.

Sanden stated he can see the trees coming in on the map, are they doing well? Mr. Schulze stated they are doing alright. **Holst moved to approve the renewal of the conditional use permit for a Hot Mix Asphalt Plant for Monarch Paving with conditions #1 - #6/Ross seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Dillon Hayes: This operation was originally permitted for nonmetallic mining in 2001 and is currently the storage site for dredge materials taken from Corps Island on the Mississippi River, near Diamond Bluff. There is no longer active deposition of dredged materials taking place at the site. The dredge material was originally used for “interim reclamation” and was later utilized by the operator in other projects. The dredge material previously deposited at the site continues to be utilized by the operator in other projects as needed. This property is in Section 28, Town of Trenton. The property on which the nonmetallic mining operations take place is zoned Industrial. Nonmetallic mining is a conditionally permitted use in this district. This site is internally drained. The floor of the pit is at 690 feet above mean sea level. Surface water is directed to the northwest, near the pit entrance. Permitted hours of operation are 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season. The haul route for commercial trucks travels from the pit entrance on County Road K to Hwy 35 towards the Monarch Paving Asphalt Plant. The haul road was paved to address airborne dust concerns. A groundwater response plan was prepared and presented to the LMC on May 19, 2010 and approved. Groundwater and surface water monitoring was completed at the site, and at nearby residential wells, in 2012. The county has received no complaints about this operation since the last renewal. The Chairman of the Town of Trenton was reached for comment regarding this operation; he saw no issues with the renewal of this conditional use permit. On March 6, 2013 the conditional use permit was renewed with the twelve conditions listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no other additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. Hours of operation are from 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season.
3. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35.

4. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
5. A 50 ft setback shall be maintained from all property lines for all mining activities.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
8. Reclamation shall be according to submitted plans.
9. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
10. The approved Groundwater Response Plan shall be adhered to.
11. This CUP shall be reviewed for renewal in two years.
12. Any future use of this site for hydraulic dredge material placement shall not be allowed until such time as information is presented that demonstrates, to the satisfaction of the LMC, that the impacts of said placement will not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area.

Aubart moved to renew the conditional use permit for Nonmetallic Mining for Monarch Paving with conditions #1 - #12/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Roy stated there are three requests. There is a POWTS training in Hudson on March 30th for Brad, Emily and Dillon. There is also the WCZA District meeting in Chippewa Falls on March 12th for Emily and Dillon. We received notice of a meeting with the DOT in Eau Claire to discuss their regulations and how it works with the County. No date has been set on that. They are looking at the end of March. **Holst moved to approve all the travel/training requests/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Discuss take action on site plan review for Pro's Touch Landscaping in the Town of Clifton.

We are on year five of the Comprehensive Plan so we would like to discuss a process and timeframe for review and any update that may be needed on that.

Motion to adjourn at 6:25pm by Aubart/Holst seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 4, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 18 th , April 1 st & 15 th , all in 2015.	Chair

MINUTES - Pierce County Land Management Committee Meeting, February 18, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Dillon Hayes and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 4th & 18th, April 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the February 4, 2015 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67(2), for Jane A. Schwalbe, owner on property located in the SE ¼ of the NE ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Jane Schwalbe forward:

Ms Schwalbe explained she would like to expand the property toward the Town of Martell, away from Highway 63. She will be adding septic, water and upgrading the electric as well.

Staff Report – Emily Lund: There is a conditional use permit request for expansion of a nonconforming structure. The applicant is requesting to expand the existing residence. The property is at the corner of the intersection of US Hwy 63 and 535th Street. Lot access is off of 535th Street. The existing structure is 18ft x 24ft residence with an attached 17ft x 6.5ft enclosed porch. The existing porch is 32ft from the center line of 535th St. in the right-of-way, and will be removed. The west wall is 38.5ft from the center line of 535th Street. The applicant intends to expand the 1st floor and basement by adding 23ft x 24ft to the south of the structure and a 17ft x 5.5ft attached unenclosed porch to the west that is toward 535th Street. The applicant proposes to keep the structure in line with existing west wall that is 38.5ft from the center line and the new porch to be 33ft to the centerline and out of the right-of-way. A privy and garage have been removed from the site. The applicant intends to upgrade the electrical, install a well and install a new holding tank septic system. The property is less than an acre is located in Lot 8, Block 1, of Tollof Rollofson’s Addition which is in Section 14 in the Town of Martell. The property is zoned Rural Residential 20. Pierce County Code §240-27A states, “State and federal highways. Except as provided in Subsection E and F, the required setback for all structures fronting on state and federal highways shall be 110 feet from the center line of the road or 77 feet from the edge of the right-of-way, whichever is greater.” Pierce County Code §240-27C states “Town highways. Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 77 feet from the edge of the right-of-way, whichever is greater.” As stated in Pierce County Code §240-67A(2), additions to or extensions of nonconforming structures are permitted, provided that such additions or extension comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76. Pierce County Code §240-76A states “Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming

use.” Setback averaging was investigated per §240-27E but did not provide an adequate reduction for the proposed construction. No permit renewal is needed for this request. The holding tank septic system will be located towards the back lot lines and meet all setbacks. The existing topography is very flat throughout the entire lot with a slight 3% slope towards the east. The Town of Martell recommended approval of this request on January 16, 2015 without specific conditions (attached). The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions:

1. The applicants shall follow Pierce County Solid Waste Code Chapter 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
2. The applicant shall work with the local building inspector, All Croix Inspections, LLC, to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opens the hearing to the public. Pichotta reads a letter received from Alan E. Thompson, Clinton, IA. Dear Mr. Roy, Thank you for the Notice of Public Hearing in regards to the request of Jane A. Schwalbe for a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67(2). This is to advise that I will not be able to attend the public hearing scheduled for February 18th, 2015 due to scheduling difficulties. As I understand the situation, the Schwalbe property is already in noncompliance with current set-back requirements, we would simply be allowing her to improve and enjoy her property, while setting aside the continued set-back requirements that would otherwise preclude her from doing so. As an immediately adjacent neighbor I will not stand in opposition to her wishes, with a single request being granted: The Martell, Wisconsin community in question is quite old and records for various properties are either incomplete or absent. There appears to be some question as to various property lines in the community, which makes the issue of establishing proper property lines prior to the construction of permanent structures an important issue. Since our family purchased our property in Martell (30+years?), immediately adjacent to the property in question, we have maintained what we believed was our property. No one has ever questioned the maintenance or utilization of this property within the time we’ve maintained it. After receiving notice of this public hearing I attempted to establish property lines through county records available through the Internet and could not confirm either the Schwalbe or Thompson property lines, although it does appear that the Schwalbe property has a slightly larger acreage than ours. With this having been said, I believe the Schwalbe property may be larger than those which have been historically recognized. I would respectfully request that all parties consider the wisdom of establishing legally recognized property lines prior to building a permanent structure. Respectfully, Alan E.

Thompson. Beverly Lueth stated she has no objections to what Jane has planned. **Public hearing closed.** Sanden asked if the planned improvements were shown on this schematics here. Lund stated the picture is the first floor and north is toward the top of the page where Hwy 63 would be. 535th Street is on the left side of the page, going north and south. Sanden asked what is going to be changed. Lund stated the bottom portion on the right 23ft will be added to the south. The house will be doubled, like a mirror image but the portion toward the top, that enclosed porch, will be removed. Sanden indicated an area on the drawing and asked if that would be added. Lund stated yes, it will be added but it will be an open entry porch. It will be out of right-of-way. Sanden asked if the encroachment is to 535th Street. Lund stated yes. The neighbor that wrote the letter, Alan, was worried about her encroachment of this house expansion toward his property line and she will still be more than 40 feet from his property line. **Sanden moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Jane A. Schwalbe due to the fact this is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Holst seconded. All in favor. Passed.**

Discuss take action on proposed revisions to Chapter 240, Article VIII - Signs.

Staff Report – Dillon Hayes: As discussed at recent Land Management Committee meetings evaluation of Article VIII of the Pierce County Code resulted in the determination that several modifications are necessary to conform to legal precedent established for sign regulation by the federal government and Wisconsin State Statutes. Changes proposed include the removal of “content-based” language in the existing sign code. The proposed changes will now regulate sign construction and permitting requirements by zoning district; with differing regulations for Residential, Agricultural and Commercial/Light Industrial/Industrial districts in accordance with guidance given to staff at the January 21st meeting. Additional changes proposed include the regulation of digital display signs. The addition of message duration, transition time and display standards have been made in accordance with the direction given at the February 4th LMC meeting. In addition to the aforementioned revisions it is also important to address digital display sign luminance in order to minimize driver distraction. Multiple studies regarding luminance standards in existing sign regulation have shown that a number of different methods and criteria have been utilized to establish light output standards. A survey completed in 2010 shows that the most common regulatory provisions regarding luminance have a daylight limit of 5,000 nits and a nighttime limit of 500 nits. The daylight limit of 5,000 nits is supported by luminance research; however the nighttime limit of 500 nits is well above limits recommended by studies on driver distraction and digital display signs. The Illuminating Engineering Society of North America (IESNA) has recommended that luminance standards should be no greater than 10 to 40 times the ambient light level (leading to a maximum luminance output of 10 to 40 nits during nighttime hours); however, the recommendations for signage luminance put forth by the IESNA recommend limits between 125 and 250 nits. The Outdoor Advertising Association of America (OAAA) recommends 300 to 350 nits for nighttime luminance standards based on the use of established light trespass standards by the IESNA and typical ambient light levels. Research has shown that typical floodlit billboards range anywhere from 100 to 280 nits during nighttime hours. To minimize driver distraction it may be prudent to utilize a luminance standard that regulates digital display signs to similar standards. Based on the research referenced above, staff is proposing that 300 nits be utilized as a maximum value for nighttime luminance. This is proposed as a compromise between conventional floodlit billboard signs which typically utilize a maximum of 280 nits and the most common regulatory provision utilized by other jurisdictions, that being 500 nits. To ensure adequate visibility for day time use staff has proposed a value of 5,000 nits to allow for luminance that is approximately equal to that of a sunny daytime sky.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed code revisions and if determined to be appropriate, direct staff to schedule a public hearing to consider its adoption.

Hayes explained the revisions made in the code; all the content referencing language had to be removed, therefore all the sign requirements in the Commercial Uses section was removed. In the Article itself, added the aforementioned exclusion of the temporary signs regulated under Wisconsin Statutes Chapter 12.04, which is relating to political signs. Under General Sign Requirements, did some rearranging and added the aforementioned digital display and illumination section. Move to Chapter 240-61, most of this is rearranged. Made changes to free-standing and projecting sign size in accordance with the January meeting and the same with the on-premises sign numbers. Added in a section on the temporary sign requirements that we did not have before, those limitations were made in accordance with the direction given at the January meeting. A definition of a digital display sign and a temporary sign, which were not in there before, were added. Pichotta asked if anyone has any questions. Holst asked if we need a definition for nits? Hayes stated he didn't think so. It's a pretty standard light measurement output. Pichotta stated if the committee is comfortable with the language as presented, it doesn't mean we can't tweak it in the future, but the next step would be to forward it to legal counsel for review. Once that has taken place, we would schedule a public hearing and distribute the language to all of the Towns and get their input. Once we hold the public hearing, that is where we would get input from the Towns as well as any industry folks who might want to share their concerns and if determined necessary at that point we could tweak it again. Otherwise it would move forward on to the County Board to consider its adoption.

Sanden asked where the luminance reference is showing up. Hayes stated 240-60 under H, digital display and illuminated signs. The brightness standard is #5. Chairperson Fetzer stated the biggest thing is to not distract drivers as they go by the signs. Pichotta stated a lot of counties, villages, and other municipalities continue to have language based on content, what your sign is for. If it's an advertising sign, it's held to a different standard. Basically that is contrary to law at this point so we have to redo it so we regulate them based on district versus based on the type of use that they are advertising. Sanden stated they can have content based material on their sign, it's just that we don't regulate on that basis. Chairperson Fetzer asked if we need a motion on this. Pichotta stated if you are comfortable, you could approve the language as proposed and direct staff to move it forward. **Holst moved to approve the Article VIII – Sign language as presented and forward on to Corporation Counsel for review/Ross seconded. All in favor.** Holst asked if Hayes is going to be able to come to the County Board and explain nits so seventeen people can understand it. He feels it would be a good idea to throw a definition of a nit in there and that would clear up a lot of things. Aubart asked if there is an actual meter that measures that. Hayes stated yes and he thinks he mentioned at the January meeting that the definition of a nit is one candela per square meter, which again doesn't mean much to a lot of people. Your headlight puts out, at night on the road, about one nit. Your cellphone is between 300 – 400 nits on its maximum brightness showing a white screen. Pichotta stated when we do go to public hearing with this we will put together a very comprehensive information package regarding this issue. **Chairperson Fetzer stated All in favor of amendments and forwarding on to Corporation Counsel. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated a couple staff members will likely be meeting in Baldwin next week with the DNR regarding mining issues. **Holst moved to approve the travel/training request to meet with the DNR/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing for a request for a CUP for a Farm & Home Based Business for a Dairy Farm Supply Business in the Town of Gilman.

Public hearing for a CUP for Nonmetallic Mining in the Town of Clifton for John Rohl.

Renewal of a CUP for Monarch's Asphalt Plant in the Town of Trenton. And a request for renewal of a CUP for Nonmetallic Mining in the Industrial District for Monarch Paving in the Town of Trenton.

Discuss take action on the proposed location of a ventilation shaft for WISC in the Town of Isabelle.

Motion to adjourn at 6:26pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA REVISED
Wednesday, February 18, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: March 4 th & 18 th , April 1 st & 15 th , all in 2015.	Chair
3	Approve minutes of the February 4, 2015 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67(2), for Jane A. Schwalbe, owner on property located in the SE ¼ of the NE ¼ of Section 14, T27N, R17W, Town of Martell, Pierce County, WI.	Lund
5	Discuss potential code revisions to Planned Residential Development (PRD), Article VI, Chapter 240-47 through 240-52.	Hayes
6	Discuss take action on proposed revisions to Chapter 240, Article VIII – Signs.	Hayes
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(2/6/15)

- **Revised February 12, 2015 @ 8:17AM.**

MINUTES - Pierce County Land Management Committee Meeting, February 4, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Dillon Hayes and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 18th, March 4th & 18th, April 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the January 21, 2015 Land Management Committee minutes/Sanden seconded. All in favor with Fetzer not voting due to absence at the last meeting. Passed.**

Discuss take action on potential modification or revocation of a conditional use permit for Valley Vineyard, Rudy Jungwirth, owner of Lots 6, 7 & 8, of the Crossroads Land Division, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Andy Pichotta: The applicants operate Valley Vineyard Ltd, which first received a Conditional Use Permit for a Farm and Home Based Business in 2008. Grapes are grown and the wine is produced onsite. Guests can sample the wine and purchase bottles in a tasting room. In 2013 the LMC suspended the Conditional Use Permit (CUP) due to noncompliance with the condition requiring the development and implementation of a Waste Stream Management Plan. The permit was renewed by the LMC after the Waste Stream Management Plan was finalized and implemented. The permit was last renewed on November 5, 2014. There were no operational changes discussed at that renewal. Staff has become aware of several apparent violations of the CUP; events have been held outside of established hours of operation, and in at least one instance, customers have been encouraged to bring their own snacks/food. The LMC was recently provided with a letter, dated January 4, 2015, that was submitted by Valley Vineyard's neighbors discussing a number of these issues. A copy of the January 4 letter, as well as copies of several emails regarding this issue, is attached for your information. The property is zoned General Rural Flexible 8 and is located in Section 23, Town of Oak Grove. Staff has learned of multiple events which were held outside of the established hours of operation. Events included "painting parties" facilitated by Brush Strokes, a company which holds events at a variety of locations. Party participants attended an event held at Valley Vineyard to paint in a gathering/party setting and received instruction from Brush Strokes staff. Attendees pay a fee to participate in "painting parties" that are facilitated by Brush Strokes. One of these events was held on Tuesday, October 21, 2014. Another event was held on Friday, November 21, 2014 from 6:30pm-8:30pm. Another event was held on Friday, December 19, 2014 from 6:30pm-8:30pm. The established hours of operation are Wednesday through Sunday, 10am to 6pm (Condition #6). Staff has been informed that food was brought in and wine was available for purchase at these events. Condition #7 does not allow for "carry in" food. Two painting events were advertised by Prescott Community Education and were to be held on February 20, 2015 and March 20, 2015, the time of each is to be 6:30pm -8:30pm. These events are open to the public and require a fee to participate. The advertisement for the events notes that crackers and pretzels will be provided and encourages participants

to bring their own snacks, it is also noted that wine will be available for purchase. Mr. Jungwirth, on January 19, 2015, requested the ability to deviate from the conditions of the CUP to enable the hosting of these events, consistent with condition #8; however, the Oak Grove Town Board denied that request. Neighbors have brought forth concerns about recent activities and are concerned that the facility is being used as an “event center” for activities outside of the scope of the CUP. Staff has received additional complaints from neighbors regarding unlicensed servers. The Town of Oak Grove has also expressed a concern about unlicensed servers. This issue will likely be considered by the Town of Oak Grove when contemplating renewal of the applicants’ liquor license. It should be noted that condition #5 states: if the liquor license is not renewed annually, sales of wine need to cease. The existing conditions are listed:

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking with one space delineated for handicap parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The hours of operation shall be Wednesday through Sunday, 10am to 6pm.
7. Food served shall be incidental to wine tasting and must not require a food license, no “carry in” foods shall be allowed.
8. Activities outside the scope of this CUP (including catered food service) may be authorized by the Oak Grove Town Board consistent with the Town’s Special Event Ordinance.
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. Applicant shall discontinue the use of the audio bird repellent.
11. This permit shall expire in two years and shall be renewed by the Land Management Committee unless compliance issues arise.
12. Winery waste water and by-products shall be disposed of in a manner consistent with the DNR/DSPS approved Waste Stream Management Plan. Full implementation of Waste Stream Management Plan (including installation of winery holding tank) shall be completed prior to December 16, 2013.
13. If a new owner wishes to continue the business with the established conditions prior to the permit expiration, a proposed business/operations plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.
14. Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).

Staff Recommendation: Staff recommends the Land Management Committee consider the information discussed above, as well as any additional information provided by the applicant or neighbors and determine whether a modification to established conditions or revocation of the CUP is warranted.

Chairperson Fetzer invited Mr. Jungwirth forward. Mr. Jungwirth stated he talked to the Chairman of Oak Grove on several occasions over the last year and a half to get a permit allowing them to do things on specific days. He was told, all that time, at least three to four of those times that the current plan does not fit him as far as events. Because that was designed for rodeos and they had to shut down at dark. He only wanted to operate during the winter so it didn’t fit. Nothing was ever set up. Back in October, he was told by the chairman that they would get it on the next planning or next meeting for Oak Grove. It didn’t hit in December, then we got into January and it finally did take effect where they met and they denied us these events. This all started out very simple. He was contacted by Cyndi Cashman from the beauty shop in town. She is on the board for the Community Education. She wanted to know if we could put on an event out there or have some place to do paintings. He said we’re closed in the winter except for Saturday’s. He is only open four hours a week unless it’s appointments. So they wanted to know if they could come out. They came out along with Kayleen Jakes, who runs the painting company. They met and they said they

think this could work out really well. They said can we try it? He said, well, you certainly can but he needs to get a permit to do these things. So they came out and did a trial actually in October. They expected five people and they wound up with twenty-two so it was a great success for these folks. As far as the wine goes, it's kind of a two-way thing there. Kayleen buys everyone a glass of wine for their entry fee. He doesn't charge a fee, she does. So she takes care of that by credit card around 4:00pm in the afternoon. She pays for all of that. But there are folks that did want to purchase wine when they left and there he is probably negative because he probably shouldn't have sold it to them after hours. Even though they do process wine seven days a week at their facility, from emails, phone calls, they take it, ship it, or they come and pick it up. That's all part of their State license. Other than that it was a huge success so the Community Education wanted to continue it. He just said whenever you guys want to use the place it's there because they don't use it all winter. They (applicants) only use it on Saturday's and you can't use it then. So that is how that all started. Had he been able to get permits a year and a half ago, or something set up, in talking with the Town Chair three or four months ago, she said she would have no problem getting us an OK to do these events. But nothing was ever done. It was never put on the agenda so they kept getting pushed back. They were getting antsy at the school to do something. He didn't think it would be a problem doing a trial. That is his fault. He shouldn't have let them do a trial. He should have just said "Can't do anything until we get the permits." But he let them do it and it just - they had one after another. That's how it all happened. It was all very innocent but it turned out being pretty rotten. As the current event thing doesn't work for him, he only wanted to be open in the winter for these events, not in the summer. He likes his summers. He doesn't want to work in the summer. There is another issue where supposedly they were open without a server's license. He was there the whole night and so was his wife. His sister-in-law handled that program but he was there the whole night and so was his wife. So it's not that there wasn't a licensed server. There were both of them there. These things get carried away. Chairperson Fetzer stated having the first deal schedule... Mr. Jungwirth interrupted stating that we should have stopped there because we knew it was going to be a success. Chairperson Fetzer stated you shouldn't have even had it because you didn't have the permit. Mr. Jungwirth stated I know, I agree to that. I do completely. Chairperson Fetzer stated things get rolling from there. You have to stay on top of things. Mr. Jungwirth stated they didn't know it would be that kind of a success. Sanden asked if Mr. Jungwirth could answer the advertisements to bring in snacks, crackers, pretzels and so on and wine will be available to purchase, how that gets advertised when condition #7 specifically states do not bring in "carry in" food and hours of operation are to cease at 6. How is it advertised that those very things are going to be done. Mr. Jungwirth stated Kayleen Jakes handled that because she was working with Community Ed to put on some programs. He just told them the place was theirs if they wanted to use it. They put an ad out he wasn't even aware of until he got it in the mail, because he didn't care, because he simply wanted to make a place available for Community Education. Sanden asked if he understands that he is ultimately responsible for this and that his CUP hangs in the balance as a result of that? Mr. Jungwirth stated that is correct. Yup. He was hoping they would have had something set up back last year as far as these events but it never got put on the agenda. He doesn't know why it didn't. He talked to the chairman back last fall and she was going to get it on the agenda. It just didn't happen for two months or two and a half months. Sanden stated that's irrelevant. Mr. Jungwirth stated yeah, I know it's still irrelevant. Sanden asked so why are you saying it? Mr. Jungwirth stated it should have been there so he wouldn't have had these issues. Sanden stated he didn't care. Mr. Jungwirth stated I know, I'm just saying. Aubart stated so it wasn't done and you don't have the permit so you just said, to hell with it, I'll just have it anyway? Mr. Jungwirth stated no, they had it scheduled and he couldn't stop it. Sanden stated you did it multiple times. Mr. Jungwirth stated yes, three times. Sanden asked him why should we allow you to keep your permit? Mr. Jungwirth stated I guess that's up to you. Sanden stated should we trust your word? Is that what we should go by? Mr. Jungwirth stated if you were willing to sit down and talk about these things it would be great. Sanden stated we are listening. Mr. Jungwirth stated it all has to do with so many factors and when he tries to... He doesn't like to solidify something unless he knows it's going to work. He has been in business for over 50 years and before he would ever turn something into a company as to whether or not it would work. He would make sure it worked. That's how it started. That's

how he let these people come in and it turned out. The second event actually was his daughter's and yeah, that's beside the fact, I suppose. It's family but it's just one of those things it's completely his fault but he did not realize he couldn't operate after hours because he can sell wine every day of the week and ship it. He just can't do tastings after 6:00pm. Sanden stated you were unaware of that? Mr. Jungwirth stated he knew he couldn't do tastings after 6:00pm but he can sell wine seven days a week. He just can't operate after 9:00pm at night until after 6:00am in the morning by state law and they do that because they ship wine all the time. So it was conflicting issues. Sanden stated so if there is confusion then perhaps we should be very literal in adding conditions for your benefit because you are obviously getting confused about these. Mr. Jungwirth stated yes. Ross stated maybe he missed something, when you were approached and talking about these events at no time was there a discussion that they couldn't bring food? You didn't have dialogue with these people and you didn't share with them the conditions that you know were there so they knew what to print, what not to print, that discussion never took place? Mr. Jungwirth stated they knew that, yes. Ross stated they went ahead and did it, is that what you are saying? Mr. Jungwirth stated Cyndi Cashman did, he said he could pick it up and she said well, I'm going to be at Ellsworth Cheese Factory tomorrow anyway. Do you want me to pick it up? Granted, he should have picked it up and then it would have been part of his program. But he wasn't charging for the event. He is allowed to have cheese and crackers and breads and pretzels, those kinds of things for wine. She paid me or I didn't have to pay her for it that way. If I had picked it up, she would have had to pay me. It's not like it's an illegal product, it's just that I should have bought it rather than her buying it. That's the only difference. Holst, so who is at fault: Cyndi, your daughter, this Brush Strokes girl, Town of Oak Grove, and Rudy didn't understand, is that correct? Mr. Jungwirth stated he understood, it all should have been happening, nothing got put together once we started it. Holst asked whose responsibility is it to follow through? He stated he has had dealings with your township too and they have sometimes gone on for years. Mr. Jungwirth stated he should have been on top of the board to get this thing on and he didn't, that's his fault. Holst stated he appreciated that and he accepts that. One other time you mentioned that something was your fault. Did you understand condition #6? Mr. Jungwirth stated yes. Holst asked if he understood condition #7. Mr. Jungwirth asked which one was that? Holst stated that was "no carry in food shall be allowed." Did you understand that? Mr. Jungwirth stated yes. Holst asked if he did anything to stop Community Ed's ad in the paper when they put that in? Mr. Jungwirth said he called them and said the deals were off, they cancelled them all. Holst said OK. Prior to you getting denied by the town? Mr. Jungwirth stated no, it was before that. Holst said very good. From your prior explanations, you said that you understood condition #8 too, because you talked to the town and their Special Events Ordinance doesn't fit. Mr. Jungwirth it doesn't fit what he needs to do because it has a sunset thing and the winter events wouldn't start until it's dark. Holst asked if he asked for a variance in their wording? Or something different from what they had? Mr. Jungwirth stated originally he was told that there would not be an issue doing that but. Holst asked if that was by the town board or an individual on the town board, because an individual cannot act for the town. You have to go through the permitting process. It has to be an action of the town. Sarah Palodichuk also asked if he could clarify what "doing that" is. Holst asked if the town granted approval, according to their ordinance, or does the town chair have the capability to grant that or does it have to go in front of the town board? Mr. Jungwirth stated he would say it has to be town board. And that is why he was disappointed last fall when they didn't get on and he wanted to get on. And he wanted to get on last summer and he didn't get on. So it's really his fault as he should have stayed on it. Aubart said you started to say something about they weren't supposed to publish. Mr. Jungwirth stated they didn't tell him. They asked him if they could put on some programs in the Community Ed pamphlet and he said what are you looking at? They told him February and March. He told them he thought that could work but this was early last November. Well, all of a sudden the pamphlet comes out and he said that's not going to work. He doesn't have permission yet. Aubart stated but you didn't have permission for the other three. Mr. Jungwirth stated no, that's because they popped one after another. He should have turned them all off. One was his daughter's. That was the second one. It's still his fault. Ross stated 2013, we revoked and you got it back November 5th, if his memory is correct. It would just seem to him that you would be more diligent in understanding your CUP and respecting what is in it and maybe go that extra

mile to insure that these conditions are met. Because it would seem to him that anything beyond that is almost making an assumption that we are not serious about conditions and we are. Mr. Jungwirth stated it's all his fault. He is too generous helping people and that is what gets him in trouble. Ross asked generous or defiant? Mr. Jungwirth stated generous, he has helped everybody in this room, everybody. Ross stated he is apprehensive about that answer. Mr. Jungwirth stated it's one of those things. He shouldn't be so willing to help people. All he was trying to do was help that committee from the school. It wasn't supposed to get out of control. He was supposed to be able to get the permit by that time. So they could operate on that Friday and he only wanted it for the winter cause he doesn't want to work Fridays in the summer. It just never happened. Ross stated all that is kind of neither here nor there in the same fashion that shipping of the wine is really irrelevant for this discussion. Sanden stated Ross is being a bit generous the first revocation of this permit was due to noncompliance and to say that this is an oops moment or that it's not due diligence in looking at the conditions, in his mind and maybe he is being cynical, but it seems to go beyond that to establish a pattern of noncompliance. Ross concurred with Dr. Sanden. Mr. Jungwirth asked if he could comment on that. Sanden stated no. He asked staff if there is again, to clarify for Mr. Jungwirth the parameters of these conditions, there seems to be some confusion in his mind of when he can serve wine, when he can sell bottles of wine. Can you clarify that for him and Mr. Jungwirth as far as that issue and the hours that he can sell bottles of wine versus serving wine. Pichotta stated the conditions that state hours of operation shall be Wednesday through Sunday 10am to 6pm, actually applies to the entire facility. If you are not operating the winery, it doesn't mean that someone else coming in and holding an event, it's still your winery and those conditions apply regardless. As far as internet sales, yes, that clearly can happen at any point. As far as if someone shows up and wants to buy wine at midnight, he doesn't believe the condition means that 10am to 6pm is when wine tasting can take place, 10am to 6pm are the hours that he is able to be open – that is what that condition means. For example, if you are a store and your hours are 10am to 6pm and people show up at midnight, you are closed. You can't buy anything and that is what 10am to 6pm means. Pichotta noted that he had drafted up a potential modification to the hours of operation condition to add some clarity if in fact that was what was needed. His suggestion is: #6 Hours of operation shall be Wednesday through Sunday 10am to 6pm unless a deviation is authorized by the Town of Oak Grove Board. Applicants personal use of the winery facility (including use by family and personal friends) is not subject to hour restrictions. Sales of wine to visitors or hosting of events shall not occur outside of established, or Town authorized, hours of operation. Sanden stated so bottles of wine cannot be sold after 6:00pm. Pichotta stated unless it is something being shipped out. Sanden asked from a legal counsel stand point are you confident enough that condition is inclusive enough to hold up to legal scrutiny if he were to continue to sell a bottle of wine after 6:00pm. Pichotta stated yes, he believed it would. Although he thought hours of operation being 10am to 6pm was pretty clear too. Sanden stated he is just trying to ensure that it is noted on the record. Chairperson Fetzer asked Sarah if she would like to speak for the township. Sarah Palodichuk, Town Chair, Town of Oak Grove, speaking for herself, she is a little blindsided right now and she will try not to get into he said, she said kind of thing and go with a couple points. First of all, she doesn't recall speaking with Rudy in October, let alone having any requests made. She got an email from Brad Roy in the Land Management Department on October 28th asking her if they had issues with Valley Vineyard or any reports. She stated there were no complaints this summer. She told him that Joy Ptacek had called her early in the season and said what should we anticipate? But it wasn't a complaint it was just saying hey, is there anything going on that our neighborhood should know about. She said no and she didn't have any complaints. That was her only October dealings that she recalls. If there was indeed a request that she was denying, she would assume he would have brought that up to the Land Management Committee when he was here. Or one of the other four board members if she wasn't getting something on the agenda. The conversation that she recalls having with Rudy was initiated by her when she had received reports that there was a shindig, Friday night event at the winery that included town's people, friends of hers. It struck her as odd that there was an evening event going on there. She doesn't know if this is the one that he described as being his daughter's event. He had told her initially it was his daughter's then he told her it was his sister-in-laws in their second conversation. There was one other time where Rudy had requested

of her, he had said Amber, one of his employees, had a brides/grooms dinner the night before and he asked if that would need a special permit or something like that and there was no sale of wine. It was just an employee using the facility. She talked to Land Management and she brought it up at the town meeting to the other board members and said if we feel this needs to be addressed. They would need to address it. The board decided it was not something that required a permit. That was something that happened over the summer. As far as the other things go, she had called Rudy confronting him about the Friday evening event that happened the weekend before Thanksgiving would be a good guess. Then she was made aware that there was another event happening in the first week of December. So they discussed that. She did indeed tell him that she thought the Brush Strokes kind of parties are a good fit. That's her personal opinion. He had let him know that Community Ed had talked to him about things. She said if you want to do that go ahead and request a permit from the board. Her assumption was that the board would consider it part of the four that he is allotted in the year as the board has agreed on previously. Whether he contacted Community Ed or not about the publication of inviting food, she is not sure, but at the Intergovernmental meeting the people representing the Community Ed Board did not know anything about it. In general, Rudy and she have exchanged emails and in April they exchanged emails and she did say to him that she would be happy to sit down and talk to him if he wanted to discuss it further. The last time they spoke, she encouraged him to communicate the changes he would like to see happen to the board. That is the email she sent to him. She has said she thinks there are events he can do and ways you can make money but you have to bring them before the board. If he is saying he made a phone call to her and she was rejecting putting him on the agenda, there isn't much she can do except show her phone records. Really she has heard a lot of complaints but haven't ever seen anything formally, a suggestion in writing or any formal suggestion of what they could do to make this work. As far as the upcoming events in February and March that had been planned. There was no request for those to be put on the agenda. After the conversation with him, where he mentioned them, she said we have to take care of these two events where one had happened and one had not happened yet and they need to talk about these future events, if you want to have them, that has to get discussed. So she put it on the agenda and told him she was. There was no formal request for the events that had already been published and planned. There was no request. Then the last thing worth mentioning, he started out talking about the events plan and how that doesn't fit. Personally, she is in agreement with him that the events plan does not fit his business which is why they very specifically with this group said that the conditional use permit would require specific permission from their board that is consistent with the special events ordinance. Regardless of whether the special events ordinance applies or not, he still needed to come before our board to get permission. That is a requirement that you put on his CUP. This is exactly why we put that requirement in there in that language so that he couldn't say their ordinance doesn't work. We are saying aside from that, you still need to get permission. If you have any questions, she said she didn't want to go back and forth, he said, she said. Ross asked - from your perspective as Chair, what constitutes a formal request? Is it a simple phone call, is it a written request? Ms Palodichuk stated a formal request would be made to the clerk and to herself. Ross said thank you. Sanden makes a comment to the committee. He would just like to be on the record. He has been proud to serve on this committee because they try to do a very difficult job and they volunteer to do it. Sanden stated but it's many times a thankless position and he thinks an important one. We try to strike a balance and especially in situations where you have nonresidential uses in residential areas. He has been proud to serve on this committee with you folks and he thinks no one could accuse the committee of trying to squelch business and a person trying to make a living. He would say even at the risk of being criticized by some of their neighbors, he thinks they try their best to grant that with conditions to protect those very neighbors. In the time that he has served on here, he has seen much more intensive land uses near residential areas and CUP's that had dozens of conditions. They were all met in good faith, they had some ups and downs with people they had to bring back every so often but in general he has seen much more difficult situations cause much less recurrent problems. He is concerned that this particular operation is being viewed by other townships as to why not to allow wineries. You know, we don't want that to happen to us. That is squelching business and developing in Pierce County. He just wanted to go on record saying that. We try our very hardest to thread that needle and

accommodate people to use their land as they want, be profitable, better themselves and at the same time protect their neighbors. It's a difficult thing to do and operating in good faith is a large part of that. He has seen much more intensive operations work in good faith under much more conditions to meet and they have met them without having to come back time and time again with this reoccurring issue. Aubart stated he is kind of a rules oriented person and doesn't appreciate things being blatantly just cast aside. The conditions that they put on, like Dr. Sanden said, are there for a reason. The world that he operates in is more black and white and he is less tolerant of those that don't follow the rules. He thinks we do bend over backwards to try and make things work. To him, Mr. Jungwirth intentionally went outside the CUP and violated these rules and he has a problem with that. Ross stated he appreciates what both committee members have said and striking that balance that was talked about is the most difficult part as a business owner, he gets that. He won't go as far as to say you are making a mockery of us, but he can make a good case for it. Holst stated Rudy has always struck him as a pretty intelligent guy. He would like to think that he wasn't playing us. Maybe he didn't understand the terms and conditions. Maybe he didn't understand the repercussions that could come by losing his CUP. Maybe he didn't understand that he invested too much money on something to not get the return out of it that he'd like. He wants to get a few more hours. We've seen other people that started small and worked their way into things and they did it by following the rules. Then pretty quick the neighbors aren't so up in arms about things. When that happens maybe we can give him another day or another hour or whatever. It's like Dr. Sanden said, we've got much more invasive things in different parts of the county and we have worked our way through them. He would like to think we could work our way through this. What you have should be a perfect fit for the western part of Pierce County. Mr. Jungwirth agreed. Holst suggested that the applicant make his point and make it good. Chairperson Fetzer stated before Rudy does, he wants to comment. He sees both ways. Being the mediator between neighbors and you, that's by far the most difficult thing. If we just keep looking past all the things that happen, it gives us absolutely no standing with neighbors. That is the toughest thing for the committee. He agrees with Jeff on things and with the others on things. He doesn't like seeing him coming in here all the time. It's tough on Rudy, it's hard on the neighbors and it upsets him. He asked Andy on the #6 condition, his concern is that he can say anybody is friends. Pichotta stated you still couldn't sell them wine, you simply could not. For example if we had a permit for someone that was doing car repairs in their garage. They can be in their garage after hours, if they are operating their business it can't be after hours. It doesn't mean they can't bring their buddy in there. The way he phrased that was "sales of wine to visitors or hosting of events shall not occur outside of established, or Town authorized, hours of operation." So even if he did have somebody that was merely an acquaintance there after hours, he can't sell them wine. Aubart it is just to that point but what Rudy said is that the lady from Community Ed bought the wine and paid for it at 4:00pm and then gives it away between 6:30pm and 8:30pm. That's playing the game and that is not correct. We put language like friends and then that's what will be, we'll sell it at 4:00pm or 5:00pm and then we'll just give it away between 6:30pm and 8:00pm or whatever the timeframe. Pichotta suggested adding "sales or distribution of wine to visitors or hosting of events shall not occur outside of hours of operation," to try to avoid it. Although, no matter how you word it, someone could come up with some strategy to try and circumvent it. Aubart stated that is his whole point that we have a strategy and that is what's been utilized to circumvent the conditions. Aubart stated he has a different solution but he will get to that. Mr. Jungwirth stated he didn't go out after the school system, it just happened to be his barber who is on the board for Community Ed, contacted him. Holst stated it doesn't matter, Rudy, you are the responsible party. You hold the CUP that is on your property. If I ask you if I could shoot birds out of your grapevines and I hit Ben Huppert's house, guess who is responsible, you and me both. He pulled the trigger and Rudy let him do it. Mr. Jungwirth stated that is how it all got started. He didn't go out after it. They came to him. It was like a runaway horse. Chairperson Fetzer asked if he was going to have the balls to shut it down if that kind of stuff happens again? Mr. Jungwirth said yeah, he called them right away. He doesn't know why, Sarah, in the meeting they had, didn't say something. He contacted Cindy Cashman, who happens to be on the board and told her that it has to get taken off. So they did remove it. It's probably still in their book because they don't send out another book. Ross stated you just called there, you didn't draft a letter? Or any kind of paper

trail. Mr. Jungwirth stated she didn't send him a letter letting him know that they had it on the schedule. But unfortunately, he told them if they want to do something, go ahead but he has to go to the board and get permits for this. Chairperson Fetzer stated before we vote, if this is granted, if we get complaints, it will be like a two minute deal and it's going to get pulled. It upsets me already. If there is blatant disregard or trying to skirt around things, it's done. Ross stated he has said this at many of these meetings; people often wonder if business and politics are difficult. They have Harvard business studies; they have all kinds of things we can learn from. Is that not true? But it all comes down to a simple word. This stuff isn't complicated. It comes down to the word of trust. You break that and it makes it really hard to take things seriously. **Sanden moved to approve modification of the conditional use permit for Valley Vineyard modifying condition #6 to read "Hours of operations shall be Wednesday through Sunday, 10am to 6pm unless a deviation is authorized by the Oak Grove Town Board. The applicants' use of the winery facility (including use by family and personal friends) is not subject to hour restrictions. Sales or distribution of wine to visitors or hosting of events shall not occur outside of established, or Town authorized, hours of operation. Modify condition #8. Activities outside the scope of this CUP (being open beyond established hours or allowing catered food service) may be authorized by the Town of Oak Grove. Adding condition #15. Applicant shall appear before the LMC in 6 months to provide a status report (July/August 2015)/Holst seconded. He added a friendly amendment, #15 change from 6 months to 3 months and have Mr. Jungwirth back here in May 2015 and every 3 months thereafter. Sanden agreed.** Chairperson Fetzer stated his concern with a 3 month deal is there isn't much happening until summer. Sanden stated the 3 months would stand. Ms Palodichuk asked for clarification, how will enforcement take place? She makes a phone call or puts it on their agenda but that is the one explanation that she hears most frequently from the neighbors; he has a CUP, who is taking care of it? Holst stated you can take care of it at your own level by not renewing his liquor license if you feel there is a problem at that level. Pichotta said as far as adherence to conditions, he gets his emails on his phone. We've got a staff member that lives in the area now. Get something to him and we'll get someone out there as quickly as we can. The reality is that for us to have actual evidence, staff would witness it firsthand. Time is of the essence. Pichotta noted that given what he has heard tonight it appears that the tolerance level for stepping outside the line is going to be pretty swift and he doesn't think there will be a lot of tolerance for deviation. He doesn't know how we can make the conditions any more clear than they are. Ross asked Andy to clarify also in his words because we are putting a 3 month return, if it's stepped outside we don't have to wait until May. Pichotta stated we have the ability to convene with this board in 24 hours if we needed too and we could revoke a permit if that was something that was appropriate. Aubart stated for Dr. Sanden and Mr. Holst's benefit that he is not going to support the motion - not because he doesn't believe that they are good modifications to the CUP. He just doesn't think Mr. Jungwirth has been able to demonstrate to him that he can follow the rules that we have put forward. Ross asked Mr. Jungwirth if he gets this? Mr. Jungwirth stated he understands completely. Ross noted that he is in Mr. Aubart's camp. **Chairperson Fetzer called for a roll call vote: Holst – yes, Ross – no, Aubart – no, Sanden – yes, Fetzer – no. Aubart moved to revoke the conditional use permit for Valley Vineyard due to failure to adhere to conditions/Ross seconded. Chairperson Fetzer called for a roll call vote: Holst – no, Ross – yes, Aubart – yes, Sanden – no, Fetzer – yes. Motion carried. CUP has been revoked.**

Discuss take action on proposed revisions to Chapter 240, Article VIII Signs.

Staff Report – Dillon Hayes: At the previous meeting of the Land Management Committee, staff was directed to provide additional information regarding regulatory standards and the use of electronic variable message signs and LED display signs. Multiple studies have shown that the use of these signs may lead to increased driver distraction and therefore create a greater risk for vehicular crashes. An investigation into sign regulation employed by adjacent municipalities has shown that the methods utilized vary widely. Proper regulation of this technology should allow for the effective utilization of this means of advertisement while providing protection for motorists. The majority of nearby counties do not address electronic display signs or digital LED displays in their sign ordinances. Some surrounding

counties have established regulation for electronic display signs such as a brightness limitation (e.g. 5000 nits during daylight and 500 nits from dusk to dawn), limitations on electronic display size, and a limitation on display duration (e.g. static display for five to eight seconds between transitions). One county has completely banned the use of electronic display signs with the lone exception of numerical hour-and-minute, date or temperature information, such as you would see at a bank. A study was published in 1994 by the Wisconsin DOT that sought to investigate the effect of these signs. The subject of this study was one of the variable signs with the three faces that turn to display three different messages, not an LED display sign but the data is relevant. Over the course of six years traffic crash data was compiled for the eastbound and westbound lanes. The data gathered in this study showed that in the three years after sign installation the crash rate in the eastbound segment alone increased by 36 percent. The Wisconsin DOT enforces Chapter Trans 201 of the Wisconsin Administrative Code, which regulates outdoor advertising visible from highways on the interstate and it states that variable message signs must display images for no less than one-half second, no segmented message may last longer than 10 seconds, and no variable message sign may be illuminated to a degree of brightness that is greater than necessary for adequate visibility. In a 2007 document entitled “Guidance on Off-Premise Changeable Message Signs” the Federal Highway Administration established the following standards for state transportation departments:

Duration of Message: Duration of each display is generally between 4 and 10 seconds – 8 seconds is recommended. Most of the sign ordinances use between 5 and 8 seconds.

Transition Time: Transition between messages is generally between 1 and 4 seconds - 1 – 2 seconds is recommended. Majority use 0 seconds with no fading, just go from one to the other.

Brightness: Adjust brightness in response to changes in light levels so that the signs are not unreasonably bright for the safety of the motoring public. Most municipalities use aforementioned 5000 nits and 500 nits.

Spacing: Spacing between such signs not less than minimum spacing requirements for signs under the FSA, or greater if determined appropriate to ensure the safety of the motoring public.

Locations: Locations where allowed for signs under the FSA except such locations where determined inappropriate to ensure safety of the motoring public. Other standards that the States have found helpful to ensure driver safety include a default designed to freeze a display in one still position if a malfunction occurs; a process for modifying displays and lighting levels where directed by the State DOT to assure safety of the motoring public; and requirements that a display contain static messages without movement such as animation, flashing, scrolling, intermittent or full-motion video.

Staff Recommendation: Staff recommends the Land Management Committee review the above information and provide staff with direction regarding the regulation of electronic variable message signs and LED sign technology.

Aubart asked what a nit is. Hayes stated he has an explanation but it may not really serve to help, one nit is equal to one candela per square meter. One study he found stated that one nit is equal to the output of one automobile headlight at night. Sanden stated they are saying 500 nits. That is a lot of light. Hayes, Another study he found stated that the recommended output of a display sign is generally between 10 to 40 times the ambient light output meaning they recommend 10 – 40 times the light output of your headlight at night 10-40 nits. Again most municipalities use the 500 nit as their maximum night putout. Sanden stated that is quite a discrepancy, recommended as 40 and actual is 500. Hayes stated that was only one study. Ross stated it’s probably hard to find studies. Hayes stated yes. Sanden asked if he knew what the nits are of a headlight on bright. Hayes said they just said the one automobile head light was mentioned. Holst asked when the study was commissioned. Hayes stated he believes it was the early 2000’s. Holst stated how much have headlights changed since the early 2000’s. Hayes stated it was in 2010. Holst said 2010, headlights have changed a lot since then too. Ross asked about the brightness statement; adjust brightness in response to changes in light levels so that signs are not unreasonably bright. How do we determine that? Aubart, it is so subjective. Hayes stated that may go back to that recommendation in the FHWA memo that stated a process for modifying displays and lighting levels were directed by State DOT to assure the safety of the motoring public. Holst stated lets go back to the

church sign that Dr. Sanden wants to shut down. He is just using it as an example. Ross stated it's a reference. Pichotta stated maybe we could run through these four or five items: Chairperson Fetzer asked about Duration, Ross stated 5 – 8 seconds looks good to him. Chairperson Fetzer asked about Transition Time' Ross stated 1 – 2 seconds. Chairperson Fetzer asked about Brightness, how many nits, Sanden stated he wished there was a measure to tell what headlights were with their brights on. If the signs are further back they could be a little brighter. Holst stated if they are 40 times that bright. Pichotta suggested, why don't we see if we can bring something back and make a recommendation of what appears to be reasonable and give an explanation of how we arrived at that. Aubart asked if there is a way of crafting that to say, "signs are not unreasonably bright for the safety of the motoring public", have to quantify that somehow, if we don't we leave it like that and somebody crashes and they say they met with the County and they file a lawsuit and we get on board because we approved the light and it was too bright. It's problematic to quantify. Ross asked if we could use as a gauge, these strobes that we signed off on for the airport. Aubart stated he voted against those. Holst stated he wouldn't support that. Pichotta asked if Dillon had an opportunity to look at other ordinances and how do other folks quantify it. Hayes stated typically it's that 5000 and 500 nits. Some say that the sign simply must adjust to ambient light levels. Again that doesn't show a set, definite, concrete number. Pichotta stated we will do some digging. Chairperson Fetzer stated Spacing. Hayes stated we do currently have spacing regulations in the code. Chairperson Fetzer stated Locations, he asked if we had regulation regarding locations in the code. Hayes stated at the last meeting it was suggested that these signs should only be allowed in the Commercial and Industrial Districts and kept out of the Residential and Agricultural Districts. Is that still the feeling of the committee? Pichotta stated that last paragraph, there are a couple things in there that might be pertinent information, for example freezing a display in one still position if a malfunction occurs. He thinks that makes good sense, prohibition against animation, flashing, scrolling, intermittent or full-motion video. That makes sense too. Hayes stated we do currently have no flashing, fluttering or otherwise animated sign messages shall be permitted. That is already in the code. The only addition may be the intermittent or full-motion video. Pichotta stated if you are comfortable with that we will draft some new language and bring it back for your consideration at the next meeting. Committee agreed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a request for expansion of a nonconforming structure in the Rural Residential 20 District in the Town of Martell.

Proposed code revision dealing with the Planned Residential Development (PRD) section. We have a cluster section to our ordinance as well as PRD. One of the things that came out through the Comprehensive Planning process was folks wanted more ability to do mixed uses within the PRD so it wouldn't be so much a residential kind of a thing but a planned unit type of thing where you could allow mixed uses in conjunction with a land division of sorts. In PRD, currently, it allows for deviation of minimum lot sizes, minimum lot frontage; those sorts of things you identify a building envelope and a septic area. We are going to propose some changes to that consistent with what was discussed in the Comprehensive Plan and we're going to get some initial guidance on how to proceed with that as well as the sign issue.

Pichotta noted that it used to be that his Performance Evaluation would have been at the next meeting but apparently there has been a change and now it will be done closer to his anniversary date, in June or early July.

Motion to adjourn at 7:18pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, February 4, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 18 th , March 4 th & 18 th , April 1 st & 15 th , all in 2015.	Chair
3	Approve minutes of the January 21, 2015 Land Management Committee meeting.	Chair
4	Discuss take action on potential modification or revocation of a conditional use permit for Valley Vineyard, Rudy Jungwirth, owner of Lots 6, 7 & 8, of the Crossroads Land Division, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
5	Discuss take action on proposed revisions to Chapter 240, Article VIII - Signs.	Hayes
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, January 21, 2015

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Dillon Hayes and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 4th & 18th, March 4th & 18th, April 1st & 15th, all in 2015.

Approve Minutes: **Ross moved to approve the January 7, 2015 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand Company, agent for Gordon, Kathleen & John Thayer, My Course LLC, Cynthia Hanson and MOAP LLC/Troll King LLC, on property located in part of Sections 33, 34 & 35, all in T25N, R17W, Town of Hartland, Pierce County, WI and for Wisconsin Specialty Sands Inc, owner and agent for Lloyd & Nellie Anderson, My Course, Charles & Lynn Brown, Lynn Brown, Dennis Potts and Margaret Chesley, on property located in part of Sections 2, 3, 4 and 10, all in T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Holst recused himself from discussion and voting on agenda item #4 due to possible conflict of interest.

Chairperson Holst stated Jon Aubart will be the Acting Chairperson for agenda item #4.

Acting Chairperson Aubart invited WISC forward: Mr. Himes stated Mr. Roy has done an excellent job of writing up a summary and recommend that we go to the staff report.

Staff Report – Brad Roy: This underground mining operation was permitted and began operations in 2006; in 2008 the hours of operation were expanded to 24 hours a day. In 2013, the LMC approved an expansion of the mining area into the Town of Hartland. Activities on the site include blasting, screening, washing and sizing underground in the mining tunnels. Washing is done in clay-lined ponds within the tunnels. The washed sand is then trucked to the processing facility in the Town of Trenton. Trucks enter and exit the site directly onto STH 35. The LMC recently approved an expansion of the Trenton facility to include a new wash plant. When the wash plant becomes operational the wash ponds in the mine will be removed. The properties are zoned General Rural, General Rural Flexible and Primary Agriculture. The permitted mining area encompasses approximately 1300 acres. The primary use of the land is either agriculture or forested and undeveloped. Other area uses include low-density residential. The entire mining process takes place underground using room and pillar mining. The sandstone is mined in parallel tunnels approximately 30-feet wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The tunnels allow for the internal washing, sizing and storage of the sand. The blasted sand is screened and taken to an underground classifying area where the sand is sized and dewatered. Approximately 90% of the water is recycled. Water is supplied by two 1000 GPM fresh water wells, typically only one is used. High capacity wells are permitted by the WDNR. Groundwater elevation is mapped at approximately 720 to 740 feet mean sea level. The lower level of the

mined sand is approximately 800 feet mean sea level or about 60-80 feet above the groundwater table. The use of flocculants in the dewatering process has caused concerns from the general public regarding the possible contamination of groundwater. The use of flocculants is permitted by the WI DNR which monitors the types and limits the amounts used. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The facility has a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of storm water pollution and spills of oil-related materials and other chemicals and establish controls to minimize any potential impacts to surface waters. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce dust from roadways during periods of dry or windy conditions. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. Concerns have been raised about the health effects of crystalline silica dust. The DNR regulates dust emissions but does not regulate crystalline silica dust. WISC recently completed a study of PM4-silica at the Maiden Rock facility. The results of the study were presented to the LMC. The study found that the levels of crystalline silica in the ambient air near the facility was not a health concern and was consistent with good air quality. Wisconsin Department of Safety and Professional Services (DSPS) establishes uniform limits on permissible levels of blasting to reasonably assure that blasting does not cause injury, damage or unreasonable annoyance to persons or property outside any controlled blasting site area. A ventilation shaft may be needed in the future to provide clean air to the underground mine. The exact location of any potential shafts cannot be determined at this time. They are typically located on flat, easily accessible, leased property with access paths for maintenance and monitoring. Staff has not received any complaints about the operation since the expansion in 2013. At a town meeting on February 18, 2013, the Town of Isabelle voted to have Condition #17 removed from the CUP since 590th St has been abandoned. Condition #17 currently states, "590th St shall be restored to the satisfaction of the Town of Isabelle." Staff contacted the Towns of Isabelle and Hartland regarding this renewal request. No response was received prior to this report being distributed. Roy did hear this week from the Town of Isabelle. They discussed this at their last town meeting and they had no concerns for this renewal and the chair from the Town of Hartland is here and could have some input on it. The existing conditions are listed in the staff report #1 - #28.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to not be contrary to the above, staff recommends this conditional use permit be granted with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Commerce, Mine Safety and Health Administration and other agencies if required.
2. Applicant shall submit written verification from all real property owners granting access to the abandoned tunnels of which WSS will be accessing pursuant to this CUP.
3. Applicant shall submit verification of lease agreements before mining is conducted and before mining is conducted within the 100 foot setback to parcels of which WSS does not hold the mineral rights, subject to condition number 5.
4. Applicant shall comply with the conditions recommended by the Town of Isabelle. The Town of Isabelle recommended approval of this request on March 22, 2006, subject to the following conditions:
 1. A map of the facility and underground tunnels shall be posted conspicuously at the site.
 - a. This same map shall be provided to the Town Clerk of the Town of Isabelle and emergency officials.
 - b. This map shall be updated semi-annually.
 2. A site stability study shall be completed by a professional engineer qualified for such work.

- a. The stability of the site shall be monitored by a qualified professional engineer annually.
 - b. A copy of the engineer's report shall be made available to the Town of Isabelle.
3. The groundwater shall be monitored by professionals qualified to perform such work.
 - a. Check all wells within 1,000 feet of company wells. This is the same as county requirements.
 - b. The groundwater shall be monitored annually as well as any time the Town of Isabelle deems appropriate.
 - c. A copy of this report shall be made available to the Town of Isabelle.
4. A reclamation plan shall be prepared-
 - a. In compliance with the requirements of the County of Pierce.
 - b. Including a performance bond to insure that reclamation work can be completed after operations cease or the operating entity ceases to exist.
5. Hours during which blasting operations can be performed will be unrestricted unless official complaints are registered with the Town of Isabelle-
 - a. Upon receipt of an official complaint to the Town of Isabelle, the Town of Isabelle will advise the operators of the facility of the hours of blasting restrictions.
 - b. Within 24 hours of notification, the operators of the facility shall not perform blasting between the hours of 9:00pm to 5:00am.
6. Town of Isabelle does not control driveway permits onto a State of Wisconsin highway and therefore cannot approve or deny any such driveway. However, the Town of Isabelle is very concerned about trees on either side of the driveway blocking the view of the drivers on the driveway and the State Highway. The Town of Isabelle strongly recommends that sufficient trees be removed to promote safe vehicular traffic.
5. A 100-ft setback shall be maintained from all property lines for which Wisconsin Specialty Sand does not hold the mineral rights, except for any areas which were granted an exception to this requirement. An exception was granted on the west property boundary of the parcel subject to this CUP. Mining is permitted 57 feet from this boundary.
6. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
7. Real property owners located within 1000 feet of the parcel subject to this CUP shall be given 48 hour notice of any planned blasting. Blasting shall be restricted to six days a week.
8. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells located within 1000 feet of the parcels subject to this CUP.
9. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
10. After the asphalt and road gravel is removed, following mine closure, the road bed shall be graded so storm water will run laterally off the old road bed and not longitudinally down the old profile grade of the road bed.
11. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences and kept current.
12. Applicant agrees that any unforeseen erosion issues that arise during or after construction shall be addressed to the satisfaction of the county.
13. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
14. This CUP shall be renewed every two years.
15. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.

16. The applicant shall submit written verification from the Department of Natural Resources that a binding agreement between the DNR and WSS is in place to preserve the conservation values of the existing DNR State Natural Area and associated tunnels. Such agreement shall also address access.
17. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
18. Outdoor storage of any equipment and/or mining materials shall only occur on the parcel with the mine entrance.
19. Mining shall not encroach within 200 feet of any existing residence.
20. All loaded trucks shall be tarped.
21. A fugitive dust plan that utilizes industry standards and best management practices shall be developed and adhered to.
22. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
23. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
24. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
25. A groundwater response plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
26. A map of the facility and underground tunnels shall be submitted to the Town of Hartland semi-annually.
27. No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.

Acting Chairperson Aubart asked the Town of Hartland Chairperson Dave Esterby if there was anything he wanted to add. Mr. Esterby stated they have been doing a good job there. They haven't had any complaints from anybody. They are doing it right. Sanden asked if there has ever been any noncompliance issues that have had to be addressed with the 28 conditions. Roy stated no. Mr. Himes stated in the background section, the wash plant will be decommissioned. The ponds won't be removed but the plant will be decommissioned. The ponds are part of the structure of the mine. They will be dewatered and the ones that are done now are dewatered. On the ventilation shaft, they are in the process of putting a shaft in this year, working with the land owner to finish identifying a location. It will be on the My Course property in Isabelle Township and they will be bringing that forward for review when they get all their ducks in a row. Condition #19 states mining shall not encroach within 200 feet of an existing residence. They would like to request that condition be modified that mining be allowed under a residence as long as that residence is owned by the lessor/land owner and they agree that they can mine underneath their property. The pillar left in a 200 foot radius circle is about 46000 ton of minable material that would be lost to the lessor and to their operation. So if the owner of the house is the lessor and they agree to mining underneath their house they would like to have that allowed. Ross stated is that condition #20. Mr. Himes stated #19 on the new conditions. Condition #26 the groundwater response, Michele Maxson is going to speak on this. They have been working on setting up well monitoring and they have struggled with that. Michele Maxson stated they were working with the land owners to see if they could monitor the wells. They had a few home owners that were happy to participate but the wells are over 300 feet and to drop a monitor, their biggest concern was that it would get wrapped up in the equipment. They looked at some other options to see if they could do a transducer and go through that way. What they do is place a little hole on top of the well cap and a transducer goes in there and helps monitor the groundwater. The difficult part is that not everybody wants to have a transducer placed on their well. They do have one at their Bay City site right now. They are still looking at other options. Any other wells or properties out there, they may have to drill a couple new wells in order to make it happen. They do not have that completed yet. The data was downloaded when they did the last round of samples and when the company took the data back, somebody accidentally dumped the data and erased it. Today she received the piece of equipment

and was able to download the data so they don't have it quite yet but they did capture the 1600 data points. She did collect the ones at the other facilities as well. Mr. Himes stated they have a couple locations they are looking at right now to set up two wells to monitor; one new well and one that is existing. Water quality; they have been sampling all along and have reports on that. They are working to get this elevation monitoring established. They have one gap. Sanden stated he doesn't see any time designation on condition #25 so doesn't look like you need to extend anything. It just says shall be provided. Mr. Himes stated they will get this done as soon as they can. They don't feel like they have fulfilled the obligation and should have had this done. Sanded asked staff with modifying condition #19, is that setting a dangerous precedence. Is it going against our policy as far as other mining operations? As far as allowing them to waive that encroachment limits as long as the land owner approves? Roy stated no, it wouldn't. That policy is generally set up for neighboring properties typically with above-ground mines. This case being that they are leasing all these properties that is a different situation. Just like with the Wieser mining operation. The nearest house is the Wieser house. We don't have them test their well because they know what's going on. Similar to this, he doesn't think it will establish a precedent. Aubart asked if we would want to change the verbage on that: Mining shall not encroach within 200 feet of any existing residence without owner authorization or something to that affect. Pichotta stated lets modify it to include the phrase at the end, "unless owner authorization has been obtained." **Sanden moved to approve the renewal of the conditional use permit for nonmetallic mining for Wisconsin Industrial Sand Company/Wisconsin Specialty Sands Inc with conditions #1 - #27, correcting the typo on condition #17 and modifying condition #19 to add "unless owner authorization has been obtained."/**Ross seconded. All in favor. Passed with Holst not voting.

Chairperson Holst resumes duties.

Discuss proposed revisions to Chapter 240, Article VIII Signs.

Staff Report – Dillon Hayes: Recent evaluation of Article VIII of the Pierce County Code, relating to sign regulation, resulted in the determination that modifications are necessary to conform with legal precedent established for sign regulation by the federal government. Proposed changes are intended to address language in the current code that regulates sign construction based upon content of the sign. While sign regulation in this manner has been common practice, not just here in Wisconsin but across the nation, recent legal precedent has established the need for "content-neutral" sign regulation. The current sign regulations in the Pierce County Code are content-based and may open the county to liability if the current regulations were to be challenged. Multiple states have recently seen sign ordinances struck down by district courts upon judicial review that found the ordinances to be "content-based." It has also become apparent that the code should address the LED and digital display technology that has become popular in sign construction. This technology has tremendous potential for businesses, however, it may also present a hazard to motorists. In many other counties and municipalities these signs are being regulated to ensure safety of the motoring public and minimize distractions. The control of these signs is not currently addressed in Pierce County Code. A number of municipalities have established standards for light output, light measurement at the adjoining property line, limits on scrolling or flashing messages and limits on the day and night light output. Due to the somewhat restrictive nature of the current code, Pierce County is devoid of the billboards and large advertising signs that are widespread in other counties. With the existing code there are maximum sign face area and sign number restrictions in place to allow for businesses to advertise while preserving un-cluttered roadways. The restrictions on sign content have also served to limit the length of temporary sign placement. It is apparent that the limitations in off premise signage in particular have resulted in a generally uncluttered landscape along our roadways. Changes to Pierce County Code sign regulation have the potential to result in a very visible change in the landscape throughout the county. Any changes should take into consideration the current nature of signage and advertisement throughout the county. Some of the issues pertaining to this request include the current method of sign regulation through the use of a content-based sign ordinance. A new method of content-neutral sign regulation should be developed that will conform to current legal standards. With the content-

based language removed, new standards will need to be developed for sign size and number based upon zoning district. Under the current code there are some standards in place for maximum sign face area based on zoning district. These standards should be evaluated to ensure that they are in line with current goals and objectives for each zoning district. The current code language regarding permit requirements would no longer be applicable with a change to content-neutral sign regulation. A new definition of what constitutes a permitted sign would need to be developed. Currently there is no definition of “temporary sign” in Pierce County Code. In order to exclude temporary signs from permit requirements they would need to be defined in a manner that differentiates them from permanent signs. The requirements for temporary signs should address a time limit for placement in addition to a maximum sign face area. Currently Pierce County Code does not fully address the new electronic display signs. Most municipalities have adopted new regulation for these signs to minimize distraction of the motoring public. The regulation of electronic display signs should be evaluated and standards should be established to minimize any danger to public health and safety.

Staff Recommendation: Staff recommends the Land Management Committee consider the issues discussed above and provide direction by answering the questions contained in the attached document regarding the update and revision of Pierce County Code §240-59 through §240-62.

Sanden asked Dillon to define content-neutral. Hayes said a good example from the current code would be that we define permitted signs based on what the sign is for. So if you are advertising something, it would require a permit. However, if you are displaying your opinion, regardless of the fact if it is the same size sign, same type of sign, it would not require a permit. So we are regulating it based on what the individual or business has to say. Sanden said if he understands it right, we are looking at one code that regulates signs irrespective of what is on the sign; whether it is someone’s personal opinion, whether it’s someone trying to make something look pretty or if it is an actual advertisement for a business. Hayes stated yes. Sanden asked if we are going to address anything about the sign itself other than the size and what constitutes a temporary sign and how long it’s displayed? Hayes stated that is under #6, talking about which way we should define temporary signs. Currently there isn’t anything in the code that has a time limit or construction standard or anything like that regarding the difference between temporary or permanent. Sanden when digital signs came out probably ten years ago, he thought that was a great advancement. Not more than six months afterwards, you started hearing in the planning things about how to now regulate them. He has mixed opinions. Way back in the sixties, they used to have regulation on signage because they had all these spinning things on them and things that would turn three ways. They regulated them because people were getting into accidents. They were looking at the signs so it was a safety issue. On one hand, he doesn’t want to see more regulation. If someone has a nice digital sign, more power to them. He thinks it’s a great advancement. But driving back from here on Hwy 10, that church has a big digital sign and they had a New Year’s thing flashing and it was brighter than the on-coming traffic with brights on. There is a sign right next to it for the auto place but it wasn’t as bright, it was orangish, bluish and this was bright white. Pichotta stated what you don’t want is flashing or strobe like. One example is, driving by the grocery store, they change their message quite quickly and frequently. He will go by and then look in the rearview mirror and actually be turning around to see what it says. That is the type of thing we are trying to avoid. So if the message only changed every five seconds, it would be there long enough so people could see it. That is how places regulate. They will limit the frequency with which you can switch the message. Holst asked if there is a limit to the lumens or something. Pichotta stated many places do that so you don’t end up with a situation like Dr. Sanden referenced. You limit the output. Hayes stated a lot of them have standards talking about the lumens or foot-candles output of the sign, some just at the face, some at the adjacent property line while others have said this sign should adjust for ambient light levels, meaning brighter in the day and dim it down at night. Ross stated the one in Prescott, the blue is so bright. He is with Dr. Sanden, somewhere in there lies an answer. The brightness is very distracting and the changing of the signs, he agrees. Sanden stated on a philosophical basis, the signage came out, the new technology, then within six months it was how do we regulate this. He was thinking why do we always have to regulate everything once it comes out? If we do put any limitations on it, make sure that it’s reasonable. Signs provide a very important service. They

make or break a business often times. He doesn't want to stop that. If it's brighter than the lights of the car coming toward him, maybe it does need to be addressed. Aubart asked if the DOT has any safety data. He has to believe that they have studied the frequency of changing and the color. Hayes stated he hasn't seen anything specifically from the DOT. Most of what they regulate is signs in the right-of-way and election signs. Aubart asked who is the guy from the traffic safety committee? That might be a good resource. Ross stated even if it's not regulated they might have some basic data on it. Chairperson Holst asked if Dillon is going to lead the committee through the discussion of questions in the staff report. Hayes stated the current restrictions on individual sign size state a maximum sign size in the Commercial, Light Industrial and Industrial districts of 32 square feet. He asked for input on the new maximum sign size. Hayes stated we see 24 sq ft in some of the residential and agricultural districts; 32 sq ft in the commercial and industrial. He just wanted to give a range of what it could look like if we increased or decreased from current regulations. Sanden asked if we have a setback requirement? If we require it to be setback 300 feet that 32 sq ft isn't going to be big enough. If we allow them to put it within five feet of the right-of-way, 32 sq ft might be just fine. Roy stated signs are exempt from setbacks. They have to be out of the right-of-way. Holst stated he was around when they first implemented this code and everybody was up in arms about it but they have adapted well to the 32 sq ft signage. You don't hear a lot of people complaining. Pichotta stated the signs that are existing are grandfathered. They can change some things about them including the sign face. Holst stated they can't go from an old stick on billboard type to a new digital one. Then they have to fall back under the 32 sq ft. Roy stated they just have to be smaller than what they have. Holst asked if they could go from 105 sq ft to 104.9 sq ft. Roy stated that came up with the Red Barn recently. Pichotta stated he talked to Joe about this and he stated he is in support of the existing sign size, recognized that we have to do some things but thought the sizes were appropriate. Sanden stated question 4 does give the option to go bigger, have we had many requests? Pichotta stated not really, a sign in a commercial or industrial district located on a state highway has a different set of perimeters. We could see billboards there because they are regulated through the DOT. Pichotta stated we are just looking for a general sense and it sounds like if we go with the same size that we are currently allowing that would be appropriate. If that is the case, that direction we probably have. Then going to #2, what seems to be out there is working and perhaps continue with that, then think about numbers of signs in existing districts. Say Vino in the Valley wanted to put up a sign, under a content based system, a neighbor could put up one that says Vino in the Valley stinks, if they were so inclined. We could end up with more signs. Holst stated we listen to people go on about the character of the land and he thinks we've done a relatively good job. Part of the character of the land is not seeing advertising all over. He understands it does play an important part and he feels we allow a fairly important part but do we want to become a Wisconsin Dells, signage wise. Sanden stated the more an area depends on tourism, from a fiscal standpoint, the more important it is to look at that. Aubart asked about the opinion signs, one option is none. Can you even do that or do we get into constitutional issues? Pichotta stated the question isn't whether or not we should allow opinion signs the question is how many signs should be allowed in these districts regardless of the use. Aubart stated so then nobody could have a sign. Pichotta said "right." Aubart stated if we allow two signs then they could have two opinion signs. Pichotta stated or two advertising signs. Aubart stated hypothetically if you have a sign that says Fetzer Farms then they could put up two opinion signs also. Pichotta said "yes." Sanden stated he would like no regulations on signs but the committee has the authority on a case by case basis to tell them to take down a sign. They do that in some cases, every sign would have to get a CUP. He's only being facetious. Aubart said on the Agriculture and Residential districts he doesn't know how we could say zero signs. Pichotta stated with a farm & home based business, certainly they need some signage so folks can find it. Aubart stated generally they are going to have one. Holst said so one is a number that we feel OK with. Hayes asked if we are sticking with the current regulations in that Agriculture and Residential district, 24 sq ft with an option of 32 sq ft with a CUP? Holst stated keep it the way it was. Aubart agreed. Ross also. Holst stated #2a. leave the same, 3 on premise and two off-premise. Pichotta asked if #2b. to leave it at one? Ross stated he is OK with that. Hayes read #3 Current restrictions, as listed above, regulate total allowed signage by number of signs. Some municipalities regulate in this manner, while others utilize a maximum total square footage,

allowing the property owner to do as they see fit with their allotted square footage. Some municipalities utilize a combination of these methods. Which method should we utilize? We could continue with what we have or we could say instead of 3 – 32 sq ft signs, you could have 96 sq ft divided as you wish. Sanden asked what we have right now. Hayes stated we have in the Commercial and Industrial districts a maximum size of 32 sq ft with three signs. Pichotta asked if they want to continue with #1, continue as is. Sanden stated he would. Hayes continued with #4, under the current sign code Agricultural and Residential zoning districts are treated equally. Would we like to continue that practice or allow more signage in one district than the other. Sanden stated for farm & home based businesses to allow one sign for agricultural. Pichotta stated it currently is one and one for each district. We do have in a number of the Rural Residential Districts, we allow home occupation and home businesses so you wouldn't have a farm & home based business but someone that cuts hair or an accountant. So there is a need for some signage there too. He doesn't think going to zero is reasonable either. Sanden asked when we say signs, we're talking about stand-alone signs not paintings on a building. Pichotta said "right." Sanden asked someone's business name on their store frontage, that doesn't apply? Holst said he thought that the letters were considered a sign. Pichotta stated you can have a wall sign. Holst stated it still has to fall within the perimeters or something. Roy stated that wall signs permitted wouldn't count toward that number for example Nesbitt's. They have their wall sign with the big display of Nesbitt's Nursery and then they have their three free-standing signs along the roadway. Since the wall sign is exempt, they get their three free-standing signs. Pichotta stated don't we have a maximum size on wall signs. Hayes stated it is 15% and then if you are in a scenic easement area it goes to 20%. Roy stated there are some regulations on it but it wouldn't count. Sanden stated what we are talking about is the freestanding. Hayes stated that additionally under that Agriculture or Residential district that could be a difference in number of signs or difference in maximum square footage, 32 sq ft ag, 24 residential or whichever. Pichotta stated currently its 24 sq ft. Hayes stated 32 sq ft with a CUP in both districts. Holst stated that is quite a bit of sign. Pichotta stated perhaps it would be reasonable to limit the size to 24 sq ft in residential. They still have their sign but don't have the potential to go up to the larger size of a CUP and given that the whole purpose of Residential districts is to provide large lot residential development and compactable uses. Limit the signs in residential and take away the CUP option to go to 32 sq ft. Hayes read #5, under the current regulations all freestanding and projecting signs, utilized for advertisement, require permits. Without the ability to regulate based on content permitted signs will have to be defined by other means. How should these signs be defined? Sanden asked him to define projecting signs. Hayes stated for example, typically you see them in cities, you would have a building and maybe two feet out from the building you'll have a large sign with a name or flashing lights. Pichotta asked Dillon if the easiest way to do that is still by zoning district. Hayes stated if you are still looking to utilize the advertisement signs regulated that would probably be the easiest way, require permitting in Commercial and Industrial. Pichotta stated that seems cleanest. Committee agreed. Hayes read #6, Existing regulations list temporary signs by sign content, no general definitions are given regarding what constitutes a temporary sign. How should these signs be defined? Sanden stated construction standards, the ones that are easily transportable as a temporary sign. Pichotta stated if it's permanently there, it's permanent. Sanden stated those plastic ones that are on wheels that are moved from job site to job site. Pichotta stated we do want to regulate those too. Hayes read #6b., current standards generally list a maximum temporary sign size of 24 sq ft (with exclusion of election signs in accordance with Wis. Stats 12.04). What maximum sign size would be appropriate for temporary signs? Holst stated he doesn't think we should deviate from where we are at. Sanden asked if there is a sandwich sign, does that square footage get divided between two sides or does each side get that amount. Roy stated each side gets that amount. Holst stated he would consider that two signs. Roy stated we consider it one. The issue is with a V-shaped sign that people would say it's 4 x 6 which is 24 sq ft but when you stand right in front of it, you can see 48 sq ft. A sandwich type sign, you are only seeing one side at a time. The V-shaped ones are the tricky ones. Hayes stated the current definition of the sign face area states that when a sign has more than one display face, the combined surface area of all the display faces that can be viewed simultaneously shall be considered the sign face area. Holst stated so we want to stay at 24 sq ft there. Committee agreed. Hayes read #7, existing sign

regulations in place do not make any mention to LED displays and digital message boards. In which zoning districts should these displays and digital message boards be permitted? Pichotta stated we currently have under requirements for all permitted signs, it says the following shall apply to all permitted signs unless exempted, except for flashing, fluttering, time or temperature sign messages, no flashing, fluttering or otherwise animated sign messages shall be permitted. Holst asked how many illegal signs do we have in the county. Pichotta stated there is a number of grandfathered ones; those monument ones that swing around. This church one that Eric wants to get rid of is new. Pichotta stated ETZ area. Holst stated we have no control. Holst asked about the Woodshed? Pichotta stated we do. We have taken the position that if it changes slowly, it's not fluttering or flashing. Aubart asked what is slowly. They can program it to whatever they want. Pichotta stated it would make sense for us to formalize that in some way, rather than us to make a value judgment as to whether it's flashing or fluttering. Ross stated be specific. Sanden asked about 7a. if we were to allow it in all areas, could we by zone, have different regulations, like digital signs in residential areas could we apply a more strict regulation. Pichotta stated we could because it wouldn't be content based. It would be based on the district. Pichotta stated you could also consider just allowing an LED type sign in a Commercial, Light Industrial or Industrial district versus a residential area. Sanden stated as the technology changes, maybe in five or ten years that would be something that people in residential areas would like. Holst stated we can address that in five or ten years then. Aubart stated he doesn't know if they need to be in residential areas. Holst stated he thinks we should keep them in Commercial, Light Industrial and Industrial. Hayes read 7b., how should light output of these signs be regulated? Pichotta stated we can do a little research on that particular one and see if the DOT has some guidelines and bring those back. The goal is, now that we have some guidelines, to bring this back to you at the next meeting, hopefully, have some additional information regarding that particular type of signage. Ross stated maybe if we could use it as a gauge, not to pick on anybody but Holiday, that brightness is distracting compared to Nilssen's, maybe the changing is distracting but not the brightness. Pichotta stated he thinks we have the guidance that we need. We will bring it back. Ross stated that we gauged with VINO, the decibels that are put out. Is there such a monitoring or gauge for lighting. Hayes stated some use nits, foot candles, lumens in the different ordinances he has seen. Pichotta asked if the committee wants something written or do you want something to view. Ross stated something written, we should be able to get a pretty good sense. Sanden suggested looking at situations similar to Pierce County, about the same size, growing the way we are. See how those other comparable counties deal with it. Pichotta reminded the committee that because this would be a change to our code, we would distribute it to all the towns and if one more than half the towns didn't like what we were doing, we couldn't adopt it.

Discuss take action on Travel/Training Requests. Pichotta stated he has a request for tomorrow for Brad Roy and Dillon Hayes to meet with Charlie Braetz, DSPS, regarding POWTS training. Brad and Dillon will be taking the POWTS test in a couple weeks which is a requirement of Brad's job and Dillon has the credential in Minnesota so it makes sense for us to have another live body able to do that. The other is for Brad and Dillon to attend testing for that in Eau Claire on February 4, 2015. **Aubart moved to approve the travel/training requests for Brad Roy and Dillon Hayes/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Valley Vineyard, Rudy Jungwirth will be back on, Andy included an email that he received regarding the Town of Oak Grove's action a couple days ago.

Proposed changes to the Signage.

Motion to adjourn at 6:59pm by Ross/Sanden seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 21, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 4 th & 18 th , March 4 th & 18 th , April 1 st & 15 th , all in 2015.	Chair
3	Approve minutes of the January 7, 2015 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand Company, agent for Gordon, Kathleen & John Thayer, My Course LLC, Cynthia Hanson and MOAP LLC/Troll King LLC, on property located in part of Sections 33, 34 & 35, All in T25N, R17W, Town of Hartland, Pierce County, WI and for Wisconsin Specialty Sands Inc, owner and agent for Lloyd & Nellie Anderson, My Course, Charles & Lynn Brown, Lynn Brown, Dennis Potts and Margaret Chesley, on property located in part of Sections 2, 3, 4 and 10, All in T24N, R17W, Town of Isabelle, Pierce County WI.	Roy
5	Discuss proposed revisions to Chapter 240, Article VIII - Signs.	Hayes
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(1/9/15)

MINUTES - Pierce County Land Management Committee Meeting, January 7, 2015

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Dillon Hayes and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 21st, February 4th & 18th, all in 2015.

Approve Minutes: **Ross moved to approve the December 17, 2014 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Jeff Holst recused himself from discussion and voting on agenda items #4 and #5 due to a possible conflict of interest.

Public hearing to consider and take action on a request for a conditional use permit for Heavy Industrial Uses pursuant to Pierce County Code Chapter 240-37E for Wisconsin Industrial Sand Company LLC and Wisconsin Specialty Sands Inc, owners and agents for Knudsen Courier LLC and Trinity Meyer Utility Structures LLC on property located in part of the W ½ of the SW ¼ of Section 1 and part of the W ½ of the NE ¼, part of the SE ¼ of the NE ¼ and part of the NE ¼ of the SE ¼ of Section 2, all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited WISC forward: Mr. Himes stated the staff report is pretty thorough and asked if Brad could just go ahead and read it.

Staff Report – Brad Roy: WISC is seeking an expansion of its mineral processing and rail load out facility in the Town of Trenton. The applicants are seeking to construct a wash plant as well as a sand coating plant on the site. The facility was originally permitted in 2006. A conditional use permit was granted by the LMC in August, 2013 to authorize expanded railroad sidings for the processing facility. In April, 2014 the LMC approved a request to expand the dry plant on the site that included the construction of new hoppers, conveyors, dryer, scalp screen, screen house and silos. Presently, washed sand from the Bay City mine is brought to the site by truck. The sand is subsequently dried and screened into different particle sizes. The dried and sorted sand is then loaded onto rail cars and shipped. The proposed expansion will allow for raw sand to be transported from the Bay City mine and/or the recently permitted Diamond Bluff mine to the Hager City Plant. The sand will be washed, then dried and sorted and either loaded onto rail cars along the BNSF railroad, loaded onto trucks, or conveyed to a coating plant. Coated sand would be shipped from the proposed plant by rail or truck. The applicant has indicated that the proposed plant expansion will result in the hiring of 74 additional employees. Construction is proposed to take place on the previously permitted parcels as well as on only the north neighboring parcel. Staff was notified that attempts to purchase the other parcels fell through so they will be using what they currently own. All the property is zoned industrial.

Pierce County Code §240-15K. states: the Industrial District is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The

purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. Adjacent properties includes BNSF railroad to the southwest and agricultural, forested, and undeveloped uses to the west and east. Lower density residential development is present beyond the adjacent properties to the north, south and east. Higher density residential (RR-20 District) is located to the south and east. Existing uses will remain unchanged. The new structures will closely resemble those already utilized on the property. New construction will include a wash plant building, coating building, new office/shop, conveyors, load out tank building, hopper and paved areas with parking. Rail sidings will be constructed to the northwest of the existing plant. The coating plant will include two Resin Coated Proppant (RCP) lines and a Self-Suspending Proppant (SSP) line. The coating process consists of a sand feed system, a sand heater, a mixing system that will apply the coating to the sand, screens to remove over size, storage and loading system. The RCP process heats the sand, adds an agent to improve adhesion, mixes the sand with a polymer resin coating, a coreactant, an anti-static agent and a surfactant. The SSP process mixes the sand with an adhesion promoter, a polymer coating, and a coreactant to cure the polymer. The finished products are dry and flow-able. The coating operation will use a variety of materials to coat dried sand, the majority are not considered hazardous. The coating process and material storage will be completely enclosed within the coating building. Hazardous materials to be utilized include: QP1023-Polymer (Anionic water-soluble polymer inn emulsion), QP1040-Polymer diphenylmethane diisocyanate), QP1050 Coreactant (Bis(3-dimethylaminopropyl)-n,n-dimethylpropanediamine), Coreactant (hexamethylemetetramine), Antistatic additive (silica and quaternary ammonium), Surfactant (ethoxylated nonylphenol). The wash plant will remove clays and fine material from the sand. The clays and fines go to thickener tanks and then to a filter press or plate press. The press will remove the water and create a block of clay and fine material, polyacrylamide flocculants will be used in the plate/filter process and remain in the material block which will trucked back to the Bay City and Diamond Bluff mines. Volumes are anticipated to range from 0.2 to 0.5 million tons per year. The proposed construction will also include a transloading site. Trucks would bring processed sand from other facilities; the sand is dumped and conveyed onto rail cars. Construction is anticipated to start the first quarter of 2015 and last up to two years. The existing maintenance building will be demolished before the coating plant is built. The wash ponds in the Bay City mine will continue to be utilized only until construction is complete. The applicant is working with the WDNR to obtain a General Stormwater Permit for Construction Activities. Erosion control Best Management Practices will be utilized and will follow the Conservation Practice Standards provided by WDNR. The endangered resources review determined that there are State and Federally listed mussels and fish in the Mississippi River and that the Bald Eagle could be potentially impacted by the project. The WDNR made the following recommendations:

- The rail spur construction project must use erosion control measures to mitigate impacts to state or federally listed mussels and fish associated with the Mississippi River.
- Avoid human activity between March 15 and August 1. If abiding by this timing restriction is not feasible, perform a survey of the site and within 660 feet of the site for nest Bald Eagles. If they are present in the area contact WDNR for guidance in mitigating impacts.

Hours of operation would be 24 hours per day, seven days per week. Raw or dried sand may be trucked to the proposed plant to be washed, dried, coated or loaded into rail cars from WISC's operations in Maiden Rock and Menomonie; Shakopee Sand in Shakopee, MN; or other sand sources. The facility has a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of stormwater pollution and spills of oil-related materials and other chemical, and establish controls to minimize any potential impacts to surface waters. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The proposed construction will not change the stormwater flow direction at the site, but will direct it further to the northwest in the expansion area. Silt fence will be installed along the

southeastern and northwestern portions of the proposed construction area. Various methods for dust suppression are present and proposed on the site. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from truck traffic on paved roads and railway dust from rail traffic, during periods of dry or windy conditions. The Fugitive Dust Plan will need to be updated for the new facilities. There will be no change to the outside storage at the facility. There are no archeological sites or wetlands in the project area. A water truck is available and will continue to be utilized during construction activities. Dust control will follow the DNR's technical standards for construction sites. Concerns have been raised about the health effects of crystalline silica dust. The DNR regulates dust emissions, but does not regulate crystalline silica dust. WISC recently completed a study of PM4-silica at the Maiden Rock facility. The results of the study were presented to the LMC. The study found that the levels of crystalline silica present in the ambient air near that facility was not a health concern and was consistent with good air quality. The wash plant will require two high capacity wells onsite; currently there are no high capacity wells on the site. The WDNR permits high capacity wells. Any new high capacity well application is required to be subject to an environmental review. DNR hydrologists will evaluate proposed wells for any potential impacts. Proposals that have the potential to impact protected resources undergo an environmental assessment process by the DNR. The anticipated groundwater needs at the proposed facility are estimated to be 0.4 to 0.8 million gallons per day. The water to be pumped will be used to wash the sand and remove fines. The washwater will be recycled using a closed-loop system. Some water will be lost through retention of the fines, drying of the sand and cooling sand in the coating plant. Transportation to the plant will primarily be along Hwy. 35. Other sand shipped to and from other locations will also travel state and county trucking routes. Volumes to be trucked to the proposed facility are expected to range from one to two million tons per year. A Traffic Memo was completed for the facility for the dry plant expansion to determine if improvements were needed at the Hwy. 35/770th St. intersection. WisDOT recommended adding a right turn lane off south-bound STH 35 and a right turn lane off north-bound 35 that would effectively function as a bypass lane for the left turns. Type B2 intersections would be appropriate for the turn lanes. WISC presented updated information regarding the proposed plant expansions to WisDOT to determine if any additional upgrades would be necessary. WisDOT determined that the previously recommended improvements would continue to be appropriate. The Traffic Memo indicates that the lowest level of service would be to vehicles trying to enter STH 35 from 770th St. If WISC finds that the level of service to be unacceptable, WisDOT recommends a short right turn lane with an island on 770th St. Site Plan Review is required prior to construction and will be scheduled for a future LMC meeting. Site Plan Review is intended to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. A request for a height exemption (WISC is proposing several structures taller than 35 feet) will also be presented. The Town of Trenton recommended approval of the expansion project on December 9, 2014, stating "Expansion of industrial facilities within the industrial zoning corridor is supported by the Town's Comprehensive Plan. With 2 days of backup storage at 6,000 ton per day = 12,000 tons total." The backup storage referenced by the Town of Trenton is regarding the outside stockpiles on the site. The existing conditions are listed in the staff report #1 - #10.

Staff Recommendation: Staff recommends the Land Management Committee consider the information above and any comments or concerns raised at the public hearing and determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area and if found to be not contrary to the above, grant this conditional use permit with the following conditions:

1. Activities shall be conducted consistent with the submitted plans.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
4. Applicant shall obtain all necessary permits for construction and signage for the site.

5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.
6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. This permit shall expire in two years and may be renewed administratively if no compliance issues arise.
8. The Fugitive Dust Plan shall be modified to include dust suppression methods for any stockpiled materials at sand transfer points and during instances exceptional events such as high winds. The plan shall also describe drop heights at transfer points and whether the facility uses telescoping chutes, skirting and loading spouts.
9. The applicant shall complete the WisDOT recommended upgrades to STH 35 and receive all necessary permits and approvals.
10. The Storm Water Pollution Prevention Plan and Spill Pollution Control and Countermeasures Plan shall be updated.
11. The sanitary system shall be inspected by a certified plumber to ensure adequate sizing.
12. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements
13. The outdoor stockpiles shall not exceed 12,000 tons.

Chairperson Fetzer opened the hearing to the public. Ann Marie Rose, Hager City, wanted to make sure everybody that talks here tonight feels comfortable about speaking out. She feels that if you are really opposed to this, which she is for environmental reasons, all kinds of reasons, she doesn't need to hear anything from them because she has heard the same mantra meeting after meeting after meeting that they will not get letters in the mail threatening them about what they are doing in their homes like they received. She is hoping that is not going to be receiving negative letters that they might be breaking zoning laws. She is assuming that is not going to happen tonight. She stated they are all looking at her like she is talking weird. Chairperson Fetzer stated that he is not familiar with what she is talking about. Ann Marie Rose stated that she received a letter that states she might be conducting an illegal business out of her home. She and her husband are artists. Mr. Husom spoke up and said they weren't the only ones. There were other people who also got the same letter. Ms. Rose stated it was by Mr. Kleinhans because they spoke up. They were very verbal about disagreeing with this going on. Pichotta stated that when staff becomes aware that folks are conducting businesses out of their home that are regulated by the zoning code we send out a letter to them indicating that they should seek a permit. If he understands correctly, that is the letter that you received. Ms Rose stated yes. It was insinuating that they were doing something illegal though. Do people that sell on ebay have to get a permit from you? Selling Avon, do they have to get a permit from you? Pichotta stated Avon probably yes. Chairperson Fetzer asked what this has to do with the issue. Ms Rose stated it has a whole lot to do with it because people are afraid to talk. He just answered her question. She has been here now for fourteen years and she does not comprehend how people do not speak up about what happens around here. Look at what happened to Red Wing with sand. They are very verbal and have real public meetings. They bring experts in and they hear all kinds of sides, hasn't happened here. She could not figure out why. So everyone is afraid to speak out but she does not understand after having read the mission statement that they are actually looking out for best for this community when only a handful of people are really going to get a lot. People that drive truck and move sand, Mr. Ross, she doesn't understand how you think this is going to help your ice cream business. Mr. Fetzer, you are a farmer, correct? Chairperson Fetzer answered yes. Ms Rose stated she doesn't understand how that is going to help him and not hurt all the other hundreds of people that live in Trenton Township. Dr. Sanden, is that what you teach your students about land management. Dr. Sanden asked if she has a point to make. Chairperson Fetzer stated we have a lot of people that want to speak. Ms Rose stated that she just wants everyone to know that if you speak out there is a likelihood that they will send out letters threatening you. Dr. Sanden stated that Ms. Rose is totally out of line. Attacks on this committee, you haven't been here at these meetings. He has been here a long time. You are coming out of left field and throwing stuff against the wall hoping that something sticks. Ms Rose stated she has been to the first five meetings these guys were here. And the last one was here and that is when they got their letter. Dr. Sanden stated that you are impugning the integrity of everyone on this committee and we don't

appreciate it. David Husom, Hager City, the Star Tribune has raised questions about three counties in western Wisconsin in terms of sand. A couple points, the Adams site that is quite close to this was first dug by Professor Johnson, University of Minnesota in 1969-70. It may not be exactly on their property but nearby. The majority (or chemicals used) are considered not hazardous. Sandtrol's own materials safety data sheets point out that there are some possible hazards. Right now we are looking at \$48 a barrel for oil today. According to Reuters News Service the average price of oil, World War II to today in today's dollars is \$30 a barrel. If we take fracking out of the picture, the current oil price should be \$30 a barrel, even doubling that it would be \$60. According to a recent article in Bloomberg News, the breakeven point of oil for fracking is \$73.72 per barrel. His question is why now when other counties, other states, Minnesota, have looked at thinking about this for another year or two, since we've got time. Those of us that live in Trenton have had a fear if this all falls apart, WISC will walk away. His father worked for the steel industry. Pittsburg Steel abandoned a mill in Ohio. It's still standing. Those of you who went to the North Shore, for many years there was a Steel Plant abandoned there. This could end up being more abandoned industrial garbage if indeed it is built. Why now when oil is down. Everyone says it will stay down for at least another year and even at \$60 - \$70 a barrel, drilling is not going to continue in North Dakota. There are already companies going out of business. He does realize that Sandtrol is International. I assume a lot of this will go to China. Is that what we want to do is help China? Let's postpone this for a year or two, give everyone some time. Even they admitted, in #5 silica emissions, if current or future studies suggest a significant public health threat exists through such studies. Shirley Newhart, lives right by Thomas & Betts, she questions the sound, when you live in that area, you do hear this noise going on. They hear it from Thomas & Betts and the sand mine. There are some other people that have really complained about the noise so if you add another plant on, how much noise are we going to be having? You said it's going to be running 24 hours a day. Highway 35 coming from Bay City is a terrible road. Are they going to keep up all these roads for us because those trucks are really doing something to that road? It's a washboard. She lives on 150th St, you turn into Thomas & Betts, that's the road and that used to go to Bay City, which goes right by that plant. Is there some reason in the future when we rezone this to this that they will expand bigger and start traveling down our road? Thomas & Betts trucks have been told to stay off it but there have been a couple times we have caught them doing it. Is it just rezoning that little area or is it the whole valley. Roy stated the rezone is the next agenda item and that is dealing with a small two-acre parcel right above their existing plant; nothing down toward 150th. Ms Newhart stated her concern is that they will start using their road. Roy stated they don't have access to 150th. Ms Newhart stated that in there it talks about Thomas & Betts, is that on the next agenda? Roy stated when they brought the application in they were trying to purchase Thomas & Betts property that lies north of the railroad; so none of the area around their existing plant. That fell through. Now this plan is only going to be on property that WISC already owns. Ms Newhart asked who Knudsencourier LLC is? Chairperson Fetzer stated let's wait until the end of public comment and they (WISC) will go through and answer those questions. Bill Newhart, lives on 150th Ave, Hager City, his concern is some substances that might be considered hazardous and what is going with the water system and numerous wells, one of which is his and he has already had problems industrial wise with this. He would like that addressed. Ms Newhart, when they dig these wells, is that going to lower the groundwater or the water table? She thinks they had problems with that in the area, not them so much but other people up the railroad tracks. Tom Breen, Oak Grove, at the Trenton meeting last month, one of the board members asked a simple question of having someone from the mining company delineate all the chemicals that would be used in mining and the processing process. They were told as a public citizenry they didn't need to know what those chemicals were. He would appreciate it if one of the committee members would ask for that list. Bill Emery, 150th, concerned about the traffic thing and that the statement was made that you don't have a right-of-way past the railroad tracks. That doesn't mean that can't change and once you get this through that you wouldn't. You are going to need parking space and more area. Just a railroad track isn't going to stop that. If you bring traffic down from Diamond Bluff area, it seems suitable to him that you would want to come down his road because it would be closer than Hwy 35. But he would want to be assured that that won't happen because right now they have a small little community that has a 35 mph speed limit. Some people go 45.

It's something that needs to be addressed and he wants to be assured we are making all the considerations before we go ahead with this. Kathy Breen, Town of Oak Grove, feels like she is a broken record because she has asked this question several times but has never really gotten an answer for it. Besides the people that are selling rights to their property and getting pretty generous checks from the mining company, what else is a positive for this area? Pierce County has the lowest unemployment rate in the whole state of Wisconsin. To say we need the jobs isn't a valid point. The kind of jobs that, we understand that we are going to be getting, are not going to be very high paying jobs, some unskilled labor, truck drivers or something like that. You drive around in this area and there are all kinds of jobs available for truck drivers. We look at the risk to our water, the risk to our property values, the risk to the beauty of this area and she just would like someone to say why they need this because and really give a convincing argument. Bill Schroeder, Trenton Township, Hager City, lives right next to it. His business is right next to it. In regard to jobs, you don't start out at Walmart levels or McDonald levels with these people. It's probably three times that much or maybe four. They pay 100% of the employee's health insurance with not a very big deductible. It's a good place to work. They don't have much job turnover because it is such a good place to work. Seventy-four jobs in Hager City, there are a lot of places that would really give away the tax breaks and everything else to get those kind of jobs in their communities. Also it's a \$30 million project which goes on our tax rolls which is a good thing. People worry about the schools and school budgets and stuff. If you figure out your percentage for your schools that they get on our local taxes and what they are going to be paying our schools. It pays many teachers' salaries in one year, what they will pay in additional taxes. Those people that are concerned about their property values, people that have Walmart jobs, they cannot buy a house. He has 32 truck drivers that do not work for the sand mine. Most of them own their own houses. He takes offense when you categorize truck drivers as having low skilled jobs. It just really irritates him. This is a good project for the community. He has been around Hager City all his life, he is not a newby and he has been involved with Pierce County Economic Development since they started in the late 80's. He has spent a lot of volunteer time trying to get some good things going in this community and all over Pierce County. Trenton Township has the biggest or most land mass of industrial land. We also have the railroad tracks. It's the main rail line from Chicago to Seattle. We have good roads and as far as he is concerned, he has been next to that place all the time. You can see his buildings on these aerial photos. They are good neighbors, never had any issues and as far as dust coming from there, it doesn't happen. He has equipment sitting outside and it's been out there for many years and there is not sand dust on it. Mr. Newhart again stated that he would like someone to speak on the issue of chemicals in the water, it's critical. Chairperson Fetzer stated yes, we will go through that.

Public hearing closed. Mr. Himes thanked the committee for hearing their application. He stated you are familiar with Mr. McLeod and Mr. Krumenacher, and Mike Melton has also joined them. He is their Manager of Environmental Affairs from the Illinois facility. He manages that across the company. He will help explain some of the issues with the coating plant and some of the chemicals and what goes on in the plant. Mr. Husom asked about the MSDS sheet on the silica. Indeed there is a MSDS sheet on silica and it is listed as having hazardous qualities but it's in an industrial environment with high exposure levels something like sand blasting, exposure to processes that liberate a lot of fines from the silica. Their sand is washed and the fines are removed. The process is dust collected. Everything is enclosed. All the air that goes through the process goes through dust collection systems. They have to maintain a work environment in their facilities where their employees are not exposed to hazardous levels of silica dust. That is a requirement by MSHA and MSHA maintains a standard exposure level. They manage at 50% of that level. Exposure to silica dust outside of the plant is not going to be an issue. We can't have it in the environment of the plant. It's not going to be an issue outside of the plant. They did do a study and presented that to the LMC and what they found on perimeter studies at their facilities in Maiden Rock and what they have seen at facilities in Wisconsin that these plants are not generating dust. The process removes the dust from the sand and the air quality in the State is excellent. Dust sources are not the sand plants, a lot of them are actually global sources, not sources from these facilities. The questions about noise, even though they are doubling the size of the plant, it's not going to double the level of the noise. It's like two people, one person talking and another person talking. They don't have higher decibels. The

level of noise that they will experience with the new facility will be essentially what it is with the existing facility. Road maintenance on Highway 35 is paid for through the taxes that are charged to people to buy fuel. The state maintains the road based on that. Traffic levels on Highway 35 right now the estimated traffic levels are about 4,000 vehicles a day. In and out of their facility they will be looking at something above 700 vehicles a day emptying loads coming in; that is split north and south. Going to the north will be about 416 vehicles a day and south will be 320 vehicles a day. That represents in those two directions 8% and 11% of the load on Highway 35. The capacity of Highway 35 is 8,000 vehicles per day. So they are well below that in the carrying load on the highway. Addressing a couple questions, this project in no way considers using 150th St. south of the railroad. All this activity is north of the railroad. Getting a crossing across the BN would be a monumental task regardless. All this work is entirely on the north side of the railroad. This project is in the industrial zone, the corridor of Highway 35 and the railroad. The Town of Trenton has identified this is where they want this activity. So it's not intermixed with residential or other uses. It is in the zone that is earmarked for industrial use. The Knudsen's are the people that own the land adjacent to Thomas & Betts north of the railroad. But as Mr. Roy stated, our negotiations with Thomas & Betts fell through so they will not be using either of those parcels in this project. Mike Melton will address the questions regarding hazardous materials. Before he goes into that, in terms of listing all the chemicals, some of the chemicals they use are proprietary. All the hazardous chemicals are listed in the staff report. Other industries are not required to list all the chemicals. The list would be very long. The design of the facility is such that all the chemicals will be stored in the building for the coating plant. Basically it is a containment facility. All the chemicals are in that containment. They use best practices to keep spills from getting out of their facility and controlling them by all the best practices that are at their disposal. Mike Melton stated as a truck delivers the chemicals involved, it will back into an off-loading station that is within the building that has concrete floor that is sloped and has like a concrete bathtub that all the tanks are contained in. If there was to be a spill, and they don't anticipate it, but they also anticipate possible human error, any spills will be contained within the secondary containment. They will have a spill plan for the facility. They will have spill training for the workers. That is the standard that they will have. That is how they are going to safely receive those chemicals. If there is any shipment away of chemicals, it will be in the same bay. As those chemicals are used, as Jeff indicated, the dust from the operations, from the sand processing is controlled through dust collectors. Any surplus vapors from the coating operation will go through a thermal oxidizer. It will go through a chamber that is at 1400 degrees plus which will destroy the organics of any of the surplus vapors from the coating process. They want the coating chemicals to stick to the sand. And the surplus will be controlled so it won't be going up a stack and causing an adverse emission and all that both particulates and vapors will be permitted through the State of Wisconsin. Mr. Himes stated the next question was about the water table, high cap wells, Mr. Krumenacher will answer those questions, he just wants to point out this facility doesn't have tailings ponds on site. The tailings will be dewatered, the water will be recycled inside the system and the tailings will be transported back to the mines. They will be recycling essentially 95% of their water. The water that is lost will either be the moisture kept in the tailings going back to the mine or what is evaporated from the sand in the dryer. Mark Krumenacher stated there is going to be two high capacity wells. The application has already been submitted to the State. They really only need one but they are applying for two so one can serve as a backup although the water is going to be recycled. The loss from drying and what is in the sand and what is in the tailings, the loss will amount to something less than 400 gals per minute. So the wells are going to have a capacity of maybe 300 – 500 gallons per minute so they can charge the system when they need to charge the system. The amount of water that is going to be used is relatively low from a hydro-geologic perspective. The DNR, as they review the high capacity well permit application, will evaluate at the wells maximum pumping rate assuming both are pumping at the maximum pumping rate to determine whether or not pumping at the maximum rate will have any impact on neighboring wells. Their responsibility is to evaluate whether it is going to have an impact on municipal water supply wells or other high capacity wells. In their review they also evaluate whether it's going to impact residential water supply wells. If pumping both wells at the maximum rate will theoretically have an impact on neighboring residential water supply wells, then they won't permit that

amount. They will run the model to evaluate what flow rate will be acceptable and that is what they will put in their permit for Wisconsin Industrial Sand. That is actually the permitting process. As Mike mentioned, the chemicals will be managed inside the building, no different than any other chemical use anywhere else. State laws require certain procedures for spills. Their own best management practices will have procedures for spills. There is no perceived risk to groundwater here anymore than there is anywhere else where there are chemicals being used as long as everything is properly managed and best management practices are considered. The amount of flow of 400 gallons per minute is relatively low for this aquifer. That is because the groundwater, the USGS did a groundwater model for Pierce, Polk and St. Croix Counties back in 2009. Based on their model, they modeled all of the groundwater input and the groundwater outputs basically for these three county areas. This site is very close to the Mississippi River so the groundwater that is flowing in Pierce County or this part of the Township is very close to discharging at the river. When we look at the width of this property and the length of about 2500 feet of this property where the groundwater is flowing through and at 500 foot thick aquifer that is primarily all sand and assume an average porosity of about 20%, we estimate that there is about 1.7 billion gallons of water just beneath this property. The flow through the property, given conservative estimates is somewhere between 350 and 400 gallons a minute flowing through this property as we speak. That water will discharge to the Mississippi River which is flowing, as we speak, on the order of 10 million gallons a minute. It could be 8 – 15 million gallons a minute. Sometimes there are concerns raised that we are going to draw down the water so much that we are going to impact the river, that is very impossible. The amount of water that is available here is very high. The amount of water that they are going to use is relatively low. They are pretty confident that when the DNR reviews the high capacity well permit application that they are going to come to the same conclusion and it shouldn't be an issue. Mr. Himes stated the high cap wells are drilled at a much deeper level than the residential wells in the area as well. Ruth Wood asked about the study from 2009 and the drought years since. Mr. Krumenacher stated the USGS groundwater model takes that into consideration. It may have been a drought year but it's not a drought of biblical proportions that is going to dramatically impact things. Regionally and understanding hydrogeology and groundwater flow models, he does understand that you are not seeing rivers and lakes dramatically changing here. When you look at a river and a lake the water you see is effectively groundwater. It is a surface expression of the groundwater table. Where the groundwater is not exposed its groundwater, where it is exposed, it's called surface water. It's all the same. So if you are not seeing dramatic changes in surface water and ponds that are connected directly to the groundwater table, lakes and rivers and water supply wells. People don't need to lower their pumps or get deeper wells because of excessive drought then those are indicators that it's not having a regional affect. Mr. Himes stated a question was asked, what are the positive impacts of this facility? When this facility is completed and they are up to full production at their facilities, their total employment for the two mines, the expanded plant will be approaching 146 employees. They also have the additional jobs for construction workers, truckers and other service contractors. Yes, unemployment in the area right now with the recovery in full swing is quite low but it hasn't always been that way. These jobs are base industry jobs that provide additional benefits in the community. Direct impacts and induced impacts associated with their employment add up to about 24.9 million dollars injected into the community. In addition to that is all the purchases the company makes for parts, supplies and materials and all the contractors they hire directly. Fairmont has been very aggressive with donations and volunteer time into the community. The Hager Bay Facility as it exists right now donated in 2014, \$86,000 to nonprofits in the region. All of the facilities in the northern region donated over \$400,000.00 last year. The Hager City Facility alone had over a 1,000 hours of volunteer time supporting organizations like Trout Unlimited, community projects and so forth. The Northern Region, our plants were 3900 hours donated. He thinks they bring a good industry and very good jobs as Mr. Schroeder pointed out. These aren't minimum wage or low skilled jobs. They hire people and don't require a college education. They can have a high school education. They teach them how to operate equipment and operate the plant and they are making a living wage with very good benefits so it is a very positive contribution from their point of view into the community. Chairperson Fetzer asked about the concern brought up about sticking the money in, the lowering price of oil, walk-

away and the plant sitting there. Mr. Himes stated the oil industry cycles, all industries cycle and we're still seeing a fairly high demand, even with the downturn, for the product. The sand that is used in hydraulic fracturing, the sand that is in this region is very attractive for that. The use is not going to disappear. We will see cycles, ups and downs in demand. The current situation is not going to result in the sand industry collapsing; this is still a very healthy industry. Fairmont is an extraordinarily healthy company. They take their obligations seriously. They have plans at the end of their operations for reclamation to bring the property back to its highest and best use, both the plants and the mines. Those plans are in place, they are filed with the County. There is bonding in place to make sure there is funding available to implement these plans should an operator fail and leave. Resources are available to make sure that doesn't happen but Fairmont is a company that takes this responsibility as a critical one and a value for us. They want to leave the community in a better position than it was when they started. That is why they are so active with their sustainable development process. Why they donate so much money and why they put so many hours of volunteer time into the communities. They are not going to walk away and just leave a rusting whole. Ms Newhart asked about the water and the chemicals, after you do your washing and your chemicals you put it into this clay stuff and take it back to the mine? Mr. Himes stated there are two issues here; the washing process where they will be bring raw sand from their mines and other sources. The sand will be processed. The process is washing the clays and fines out of the sand. Part of the chemicals that they use in that are flocculants and coagulants; one of which is polyacrylamide which has received a lot of attention. Polyacrylamide is also used in water treatment to remove the materials to make our water clean. There is a lot of regulations regarding that. The fines they wash out are referred to as tailings. Those fines and the chemicals will be bound in that product will be dewatered and that will be trucked back to the mines and used as backfill in the mines. The second issue is the coating facility itself. There are three outcomes for the chemicals that are used in the coating process. One is it will be the coating on the sand as it is sold and shipped. The other is the chemicals that come off as volatiles and go up the stack. As Mr. Melton indicated, on the stack will be a thermal oxidizer which will burn off everything. The exhaust coming out the stack; the chemicals will be burnt to elemental oxygen, carbon, and nitrogen. So they won't have hazardous chemicals leaving the stack. The third option, if they have waste, is generated in the plant. Those will be handled under tightly controlled processes either going to landfills, if that is allowed or another disposal system that is setup and regulated for that use. Ms Newhart is concerned about what goes back into the mine. It can't get back into the water system? Mr. Himes stated the chemicals that are bound with the tailings as they go into the tailings ponds in the mines. They have a very short life, they break down into the nitrogen oxygen carbon elemental products very quickly. They don't get back into the groundwater. They stay with the tailings until they break down into basic elements. What is the half life? Mr. Krumenacher stated it's less than 90 days. Mr. Husom asked how many employees live in Pierce County? Mr. Himes stated the vast majority of the employees are in Pierce County. Ms Wood asked about the review of the fish and mussels. Avoid human activity during March 15th through August 1st. Nothing about that recommendation in the conditions. Sanden asked if you are referring to just the construction time, because this isn't site plan review. Pichotta suggested that compliance with DNR recommendations is contained in recommendation #2 Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required. That would include their recommendations in regard to how to deal with State and Federally listed muscles and fish. As it is noted, if abiding by this time and restriction is not feasible, performance survey within 660 feet of the site for bald eagles and contact the DNR for guidance and mitigated impacts. That is required by condition #2. Sanden asked what is the timing for construction. Would it fall between those dates? Mr. Himes stated their intention is to start very quickly after the permitting process. That was the last guidance he was given. They may have some stutter steps because of economic conditions with the oil price and sales affecting the company right now. Specific to that condition, they had the same condition for the rail expansion. The construction phase would take one to one and one half years. They would be doing construction those dates the same as with the rail expansion. They did the survey in conjunction with the rail expansion and there were no eagle nests within that distance of the site so that satisfied the condition for the DNR. That is specific to eagles,

the dates are their nesting period. Sanden asked about toxic chemicals, are you required to list those with toxic release inventory through RCRA (Resource Conservation & Recovery Act)? Is that something that the quantity involved requires that? Mr. Melton stated he doesn't believe that any of them are reportable through TSCA (Toxic Substance Control Act). They are not toxic chemicals or hazardous. These are chemicals that have hazardous characteristics if you are exposed to a concentration of them. That is why they are listed as such and that is why they have control for them. Not so much for the emissions control but for worker protection. We have to have a safe and healthful environment for our workers for particulate emissions or for vapors from the processing. Sanden stated you mentioned this area is no more prone to chemicals than any other area. His understanding is that sandy areas tend to be more of the aquifer recharge areas. Just by definition, this would seem to be a sandy area. Would that not give it a bit more heightened issue in this particular location? Mr. Krumenacher stated this is the Hager City Plant, not mining. It is sand. The Mississippi River Valley is estimated to have about 500 feet of sand beneath the plant area, beneath that sandstone. It's not really a groundwater recharge area. This is a groundwater discharge area. This is the edge of the aquifer basically. The water that flows beneath this property needs to travel 800 feet or so and it's going to discharge into the Mississippi River. It's not going to go under it into Minnesota. The same thing is happening in Minnesota. That water is coming to the Mississippi River. It's sand so anything that spills onto the ground can migrate vertically and once it reaches the water table can migrate horizontally and that is always a concern in sand. But the geology doesn't dictate how the chemicals are managed anywhere. Whether it is 100 feet of clay over granite or 500 feet of sand over more sandstone; it's going to be managed the exact same way. Everything that they use (chemicals) is extremely expensive. They can't afford to spill a drop. If they spill a drop, they have to clean it up and that is a cost and if they spill and have to go through the effort of cleaning it, there is always that risk that they won't get it all. They don't want the spill to happen in the first place. You have to have very strict best management practices. For this particular plant, they are keeping all the chemicals inside a building and designing the building not to be a slab on grade, similar to outside the building. It's going to be a slab below grade so it's built to contain any spill of any chemical that ultimately might spill inside. It has no place to go. No world is perfect, but it's got to be managed. Sanden asked about water quantity, 400 gallons per minute through evaporative loss and he did some quick calculations. He came out to about 57,000 gallons a day yet the pumping is going to be on an order of magnitude above that, about 500,000 gallons a day. Can you describe the discrepancy? Mr. Himes stated in the report, they show water use at about 400,000 to 800,000 gallons per day. They are very aggressive about water recycling and their intention is to drive that number down. They recycle 3 million gallons a day through the process and will lose, in the report it says 400,000 to 800,000. They intend to drive that down to 150,000 gallons a day is what they are seeing in Bay City right now. That works out to be about 5% of the total water that cycles through the system. Sanden asked why they would require to pump 500,000 gallons a day if you are only using 150,000. Mr. Himes stated 150,000 is their objective but in terms of setting a benchmark in this report they didn't want to understate it. The coating plant will use about 58,000 gallons a day for quenching. Mr. Krumenacher clarified that when you apply for a high capacity well permit, the DNR looks at the capacity of the well; so meaning its ability. If that well has a pump that can pump 500,000 gallons a minute. It's always good to reach high and it might not be that much but at least you have the capacity. Mr. Himes stated another measuring point is the Maiden Rock facility uses 360,000 gallons a day but the Maiden Rock facility is still pumping tailings to ponds in the mines and they won't have that in this facility. Sanden stated at one point a comment was made that these wells would be deeper than the other wells of the neighbors. Does that mean you are accessing a different aquifer? Mr. Krumenacher stated yes, a deeper part of the aquifer. It's one aquifer here at least 500 feet thick and most of the residential water supply wells down in the valley are less than 200 feet deep. Those up on the bluffs are deeper than that because they need to go through the limestone unless they are further away from the bluff. Then the groundwater goes up, the further away you get. They are going to draw the water from the bottom portion of the aquifer which will have less opportunity for impact on the shallow groundwater. Sanden asked about the sound. You pointed out this will be like two people talking versus one. Can you put that into accessible numbers, decibel wise? Mr. Himes stated when you are standing in the middle of

the plant, you are able to carry on a conversation without raising your voice. Mr. Krumenacher, stated when you increase it, it doesn't double the decibels. If they existing dryer that is operating at 30 decibels and you add a mirror image double plant just like it, the noise is going to be about 30 decibels because it's the same equipment that is generating the noise. Mr. Himes stated the equipment, the screens, the dryer, the burner; things that generate noise are in buildings. When you are outside the buildings, the noise is much reduced and controlled by that. Sanden made a comment to LMC members stating that he works with hydrologists and geologists every day. He always double checks on what these folks tell them and they have always been on the up and up. He has never found where they have told us something different than what the experts have told him. He interacts with these people every day so he has some confidence in what they do tell him. He has never found them to be telling us anything out of the ordinary. Ross stated he did tour the Wedron facility and can attest to the noise. They were able to hold a conversation inside the plant at full operation. He was able to hear the people talking to him right there. The noise levels were not excessive in anyway. He thought that was good. To address a couple other quick points, he wants people to be mindful at all businesses, whether it's Home Depot in Cottage Grove and they are wrestling with their closures up there and so forth. If businesses close, it's not their choice necessarily. Businesses don't operate with the intent to no longer operate. They want to stick around so efforts are made to do that. He doesn't think we can ever guarantee any business model to be that of a successful one for eternity. We have to be mindful of that. As you pointed out, he does have a business on the Great River Road. He also monitors tourism in the area. He works very closely with the Department of Tourism to impact studies and revenue generational studies and so forth of the area. The Great River Road has experienced growth every year except in 2009 or 2010 related primarily to the overall economy as opposed to necessarily any direct affect to the road or those that may travel it. We have not seen a decrease of tourist traffic as a result of our industrial areas; whether it be the mine or farming equipment or trucking. We have not seen a drop in tourist numbers. The decisions he makes on this committee have nothing to do with his self-interest. They have only to do with the merits of the request. If he were to sit here and say he wants one industry or he doesn't want industry based on his personal business interest, he doesn't think that would be very prudent. His decisions are made on the merits. His only question is, compare water usage for him, if he can get some kind of perspective; water usage at this facility maybe compared to an irrigation system. Mr. Krumenacher stated irrigation systems will vary and are commonly in the hundreds of gallons per minute range or even over 1000 gallons per minute. Residential use is on the order of a hundred gallons a day per person, on average. Residential use in reality is viewed as having very little impact on the water table. The high capacity wells for irrigation is part of a study that the State is doing, it is on-going right now and is showing that it actually has quite a substantial impact on the water table in certain parts of the State. It can be several hundred to over 1000 gallons per minute. Mr. Himes wants to make sure these two points are clear; the bulk of the business that they are looking to build here is going to be supplied in the near term by the Bay City Mine and the Diamond Bluff Mine. As stated in the report, they may take sand from other sources. He wants to make sure that people are aware. If they find a market for the tailings, they would sell them as opposed to putting them back in the mine. Pichotta stated he would like to recommend an additional condition based on several concerns that have been raised about the use of Town or County roads. He would recommend a 14th condition that would be: Road use agreement shall be secured with applicable Pierce County municipalities (Town and/or County) for hauling industrial and prior to use. Copies of any agreements shall be provided to the Land Management Department. Ross asked if condition #5 could be amended to strike the last three words of that sentence. It seems a little too open-ended. It still gets the point across. Sanden stated it's a bit redundant. **Aubart moved to approve the conditional use permit expansion for Heavy Industrial Use for Wisconsin Industrial Sand Company and Wisconsin Specialty Sands Inc due to the fact this is not found to be contrary to public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. Sanden added an amendment with conditions #1 through #13, amending condition #5 by striking the last three words and adding condition #14 road maintenance agreement as stated by Mr. Pichotta. Aubart and Ross agreed. All in favor. Passed with Holst not voting.**

Public hearing to consider and take action on a request for a map amendment (rezone) from Rural Residential 20 District to Industrial District for Wisconsin Industrial Sand Company LLC, owner on property located in Lot 1, Certified Survey Map (CSM) V6, P168, in the NW ¼ of the SW ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited WISC forward:

Staff Recommendation – Dillon Hayes: As was stated the Wisconsin Industrial Sand Company is seeking a map amendment or rezone of a 2.11 acre parcel from Rural Residential 20 to Industrial in the Town of Trenton. This property is located in Section 1, Town of Trenton and current land use on the parcel is residential with an existing dwelling and accessory structure present on the site. The proposed use will be an office for the nonmetallic mineral processing plant located on adjacent property also owned by the applicant. Adjacent land uses are industrial, residential and undeveloped. Adjacent zoning districts are Industrial and Rural Residential 20. The Wisconsin Industrial Sand Company owns three of the four adjacent parcels. The value of land for agricultural use is shown on a table in the staff report. No Prime Farmland classified in the area.

Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts:

Rural Residential 20 zoning is established to provide for the densest residential development in the unincorporated areas of the county. The district is intended to be used where residential development is encouraged on lots without public sewer and water and in locations where such density of development is compatible with surrounding uses. The district is intended to enhance residential areas by restricting nonresidential development.

Industrial zoning is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Trenton Town Board recommended approval of this request on December 4, 2014, stating that "[the] area to be rezoned is in the industrial corridor. We feel this makes sense to rezone all property to industrial." The Town's Comprehensive Plan, on the "Future Land Use" map, identifies the area located riverward of State Highway 35 as being appropriate for "Mixed Uses". Their plan (page 109) further states:

Mixed Use

Purpose: Development continues to be a key focus for Trenton's economy. By providing basic employment, industry serves as the foundation for further expansion in the retail and service sectors. Located near STH 63 and STH 35, there is a need for additional planned acreage to serve the industrial potential of Trenton. There are a number of business uses in the Town that are reliant on a highway arterial or collector road location. The Town wishes to reduce the potential for conflicting traffic movement, congestion, and hazardous conditions along these highways. This plan attempts to balance the benefits to the Town's tax base that this type of development will bring with the impacts associated with highway business development. Design standards should be established for all development along the highway. Such standards may include both site design criteria such as landscaping and building design criteria such as construction materials. The design standards are intended to ensure high-quality development that is aesthetically pleasing and that reinforces the desired character of Trenton. Mixed Use Area Standards are also discussed. Criteria the Town is to consider are listed in the staff report. It should be noted that the establishment, expansion or intensification of an industrial use in an Industrial District requires the issuance of a conditional use permit by the Land Management Committee. As such, a Town

Recommendation is required at the time of application and will provide the Town the opportunity to apply the above criteria to any proposed industrial uses.

Staff Recommendation: Given that the Trenton Town Board has determined this proposed rezone of 2.11 acres from Rural Residential 20 to Industrial to be consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Mr. Himes stated that there is a shop facility on the property as well as the house and they would intend to use that for storage and maintenance. The shop itself is inside the scenic easement on Highway 35 so they would make sure their activity is not inconsistent with that. The short term use of the house, the plan is to use it as office space. Sanden asked if the purpose of the rezone is for office space? Mr. Himes stated and for the shop. Sanden asked if there is any space on the current site for either of those? Mr. Himes stated they are pre-existing structures. Sanden asked if they are being used as such right now. Mr. Himes stated the house has a family living in it and the prior owner use the shop facility. Sanden asked if you are going to purchase it and have it rezoned. Mr. Himes they have already purchased it. Sanden asked if there is any intention to develop beyond what they have just stated. Mr. Himes stated there is nothing in the plans as they are today. In the future they may want to develop parts of the property consistent with the rest of the property. Sanden stated you would have to come back before this committee because that would be intensification. Mr. Himes stated yes.

Sanden moved to approve this rezone request for Wisconsin Industrial Sand Company and forward a recommendation to the County Board of Supervisors/Aubart seconded. All in favor. Passed with Holst not voting.

Discuss take action on renewal of a conditional use permit for Wieser Concrete Products Inc, et al., owners on property located in Sections 4, 9, & 10, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Andy Wieser forward:

Staff Report – Brad Roy: This request is for renewal of four (4) nonmetallic mines located on Wieser property in the Town of Salem. Pierce County issued the original CUP in 1992. Reclamation plans and fees have been submitted to Pierce County for Pits 1 and 2 since 2001. It had been previously understood that, given the proximity of Pit 3 and 4 to navigable waters of the State, the DNR had issued Chapter 30 permits - which cover reclamation. It was recently determined that there are no such permits on file with the DNR. The process of securing Chapter 30 permits was apparently initiated, but no permits were ultimately issued. It was recently agreed by the DNR, Pierce County, and the applicant that reclamation plans for these two quarries would be filed with Pierce County consistent with Code Chapter 241. The applicant is currently developing said reclamation plans. In the past, the mined product was primarily used in the production of concrete products. At the last renewal there were no major changes planned and volumes of material were dependent on market needs. Recently the material in Quarry 4 was identified as being appropriate for use as industrial “frac” sand. The applicant began mining the frac sand and trucking it to the Muskie Proppant processing facility located in the Town of Union as well as to Winona, MN to be loaded on rail cars. The applicant has been in discussions with the Town of Salem regarding the use of Town roads and an agreement has apparently been reached. There are currently plans being developed to construct a bridge over the Rush River from the mine to Hwy. 10 which would eliminate the need to utilize Town roads. Although the use of the site has technically not changed, the intensity of the mining conducted at the site has increased dramatically. Given this, it is appropriate for the LMC to consider establishing hours of operation consistent with other similar uses. If the applicant wishes to utilize the site at an intensity beyond that which is typical for a “gravel pit” in Pierce County (i.e. 24 hours a day) a rezone of the property to an Industrial zoning district should be considered. The mining location occurs in the E ½ of the NE ¼, NW ¼ of the NE ¼, and the NE ¼ of the SE ¼ in Section 9, the W ½ of the NW ¼ in Section 10, plus acreage along the river in the middle of Section 4, all in Salem Township. The property on which the mines are located is zoned General Rural and Primary Agriculture. Mining is a conditionally permitted use in each district. Mining has continued on a very limited basis in mines 1, 2

and 3 and acreage has remained similar since the previous renewal. Mine #4 has expanded and the use intensified. Mines 1 and 2 are largely used for concrete production. Mine #1 is located on a hilltop and is located in Sections 9 & 10 and is a limestone source. The operation plan identifies normal workdays as being Monday through Friday, 7a.m. to 6p.m. and notes that in rare cases material may be needed at other times due to project requirements or emergencies and may need to operate 24 hours per day. Blasting operations are conducted from 8 a.m. to 5p.m. several days per year. After blasting, the limestone is crushed and transported to the bottom quarry via conveyor for washing and stockpiling. Mine #2 is behind the pre-cast plant is mined for sand and gravel. Material is removed through the use of a front end loader or backhoe and dump trucks. The operation plan identifies normal workdays as being Monday through Friday, 6a.m. to 8p.m. and also notes that in rare cases material may be needed at other times due to project requirements or emergencies and may need to operate 24 hours per day. Mine #3 is a small sand and gravel source located near Hwy 10. At this time the mine does not appear to be active and the area is currently a pond. Hours of operation were not identified for this site in the operations plan. Mine #4 operations consist of mining as well as washing and load out of the sand and gravel from all the mines. The applicant has begun extracting industrial sand from this mine which has greatly increased the intensity of activity at the site. Equipment used for the mining includes front end loaders, screener, excavator and dump trucks. Currently, the hauling of industrial sand is generating approximately 50-60 truck trips per day from this site. The industrial sand is hauled to the Muskie Processing Plant on Highway 10 and also Winona via County Road A. Typical hours of operation are from 6a.m. to 6p.m. When the industrial sand mining first began the operation was active 24 hours a day to build stockpiles. The applicant wishes to continue to have the flexibility for 24 hour operation. Wash water for the sand and gravel is supplied from the existing pond on site adjacent to mine #4. No supplemental water is necessary for washing operations. Crushing at the site is conducted as necessary and has been conducted up to 24 hours a day. Total hauling for all of the Wieser operations is approximately 100 to 180 loads per day and goes to other various private parties and locations from the Twin Cities to Eau Claire. Review fee calculation is \$200 plus \$20/acre, which totals $\$200 + (\$20/\text{ac} \times 40.3\text{-ac}) = \$1,006$. The Chairman of the Town of Salem was contacted about this renewal and he expressed concerns regarding the Town road (390th Ave) used access to Hwy 10. He requested that there be a condition to limit hours of operation in the winter months to the plow trucks can get out prior to Wieser using the roads. He recommended that operations not start until 6 a.m. from December to April, at a minimum. Staff has not received any complaints about the mining operations. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no other additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Renewal fee in the amount of \$1,006 shall be submitted to the Land Management Department.
2. All required permits shall be kept current with the DNR.
3. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
4. A 100-ft setback shall be maintained from all property lines for all mining activities.
5. The applicant shall notify the Zoning Office if groundwater is encountered.
6. Blasting shall be conducted by a state licensed blaster.
7. Blasting shall take place between the hours of 8am and 5pm. Hours of operation, including crushing operations, shall be from 6am to 9pm. Temporary deviation from these hours may be authorized by the Town of Salem. The Department of Land Management shall be notified of any authorized deviations.
8. Reclamation shall be completed consistent with the submitted plans. Reclamation plans for Pits 3 and 4 shall be submitted within 6 months.
9. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of any mine where blasting takes place. All results shall be provided to the Zoning Office.

10. Any unforeseen erosion issues shall be addressed to the satisfaction of the County.
11. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
12. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
13. Road use agreements shall be secured from applicable Pierce County municipalities (Town and/or County) for hauling industrial sand prior to such use. Copies of any agreements shall be provided to the Land Management Department.
14. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures Plan shall be submitted to the Zoning Office.
15. A Fugitive Dust Plan shall be developed and implemented.
16. A Traffic Impact Analysis (TIA) shall be completed for any potential access points onto Hwy 10.
17. The applicant shall appear before the LMC in 6 months (June/July) to provide a status report.
18. This conditional use permit shall expire in 2 years.

Mr. Wieser stated he has a couple corrections in the staff report, on page 2, first paragraph, where it states "After blasting the limestone is crushed and transported to the bottom quarry via conveyor" - it is transported via dump truck not conveyor. And only a small portion is transferred to the bottom for washing of that material. That is the quarry on top of the hill. Just a comment, he didn't realize they are using Cty Rd A. They are in the process of talking to the trucking company not to use Cty Rd A. There is no reason to be using Cty Rd A or any County roads for that matter. Pichotta stated he did receive a call yesterday from the Highway Commissioner stating that one of his plow drivers had nearly been bumped into by a sand truck on Cty Rd A. He did say that if you are interested in using County Roads, potentially CC or D could be used but he would need to be contacted about that. Mr. Wieser stated there is no reason. They can go to Winona on Hwy 10 to Durand and down Hwy 25 and they are hauling some to the cities now. They have talked to them and they will get that stopped. Mike Graham, Salem Planning Commission Chairman, the Town's primary concern is with regard to the operation is the road or the haul trucks are using as a Town road and the second thing is the hours of operation. On the road side, we have an agreement in place with Wieser's. They are hoping that there will be an alternative method of getting the material to Hwy 10 sometime this spring. For now they have an agreement in place that is working for both parties. Wiesers have been a good neighbor and a good cooperative relationship with the Town for many years. In terms of the hours of operation, they are happy to see that the recommended conditions here on the 6am to 9pm have been put forward here by staff. That is consistent with what Paul Shingledecker, Town Chairman, has been discussing with Brad. They are happy with what is being put forward as far as proposed new conditions for the CUP. Paul Shingledecker, Chairperson of Town of Salem, just wanted to state they have had good relations with Wiesers. Any issues that have come up, they have met with Wiesers and whoever is involved and they have gotten it settled. They have to realize that we've only got one employee in the Township and he can't run 24 hours a day. So in case of snow, the roads they are using are basically the worst roads in the township as far as hill and stability. Andy has agreed to keep up the road and he has a bond set aside for that. They are OK with that and haven't had any complaints - until they do, everything is a go. Sanden asked if there has been any increase in sediment to the river given the proximity of pit #4, since the increase in operations. Mr. Shingledecker stated they are far enough away from the river they aren't going to bother it. Mr. Wieser stated if he understands correctly the main concern with the hours is the trucking and the road use. For instance, right now they have a company in there doing some crushing and they like to run 24 hours, not seven days a week but during the week. He doesn't think anybody knows they are in there other than a glow of light they might see from their light plant. They would like to be able to continue to do that, especially in the summer and some of this sand washing. They would like to be able to wash 24 hours a day and there again it's not the trucking or the traffic, it's down in the plant. Nobody even knows they are doing it. They are back off the road. They would like to be able to continue. Right now they are running 6am to 6pm. Holst stated it would be hard to wash right now. Mr. Wieser stated they are still washing. They have a building set up and are able to wash. As is needed, they would like to be able to wash especially in the summer time. Holst stated he believes the way condition #7 is worded, it gives you the latitude to strike an agreement

with the Township and then the Township and you have to inform us what you are doing. That protects us as a County because it's consistent with the way we handle other pits that aren't in an industrial district. Mr. Shingledecker stated they as a Township, they are primarily interested in the roads. They don't want the roads to get garage on them. As far as how long Andy runs in the pit, it doesn't matter to him. They haven't had any complaints whatsoever. Aubart asked Pichotta, in regards to Brad's referral to a possible rezone and you talked about the 24 hour operation. At what point or what is the catalyst for rezoning, because this seems to pretty much be an intensification of the process in that particular pit. Pichotta stated if the applicant was interested in running 24/7 that is what an industrial district is for, those sorts of intensities of uses. What we are attempting to do is to ensure that he is treated the same as the rest of our gravel pits that are located in agricultural districts. What they try to do is rely on the applicants relationship with the Town, similar to what they have done with Vino in the Valley and its ability to go to the Town of El Paso and request additional hours. We have done similar things with other towns, including County Materials, in the Town of Spring Lake. We are seeking to treat them all the same but yet allow them the flexibility to deviate from that by going to the town. If they want to formalize it and have it so they simply could operate 24/7, that would require the need for an industrial district. Aubart stated which may get triggered if somebody decides to complain or whatever and it's not an industrial zone that forces our reaction basically. Pichotta stated if there were complaints; that surely would. Pichotta stated what is a bit unique about this site is that Wieser owns basically all of the surrounding property. He is his own neighbor. Mr. Shingledecker asked if this area is rezoned industrial, does that take away the conditional use permit. Pichotta stated no it wouldn't and noted that the rezone would fall entirely on the Town and its comprehensive plan. You would be in the driver's seat in regard to any requested rezone. Mr. Graham stated in regard to the 24 hour operation, it would be easier for the Town to stomach that if the Town road isn't being used anymore. Chairperson Fetzer asked how that (new direct access to Highway 10) is coming. Mr. Wieser stated pretty good, they are getting close doing soil borings. They will get a design. It has to make financial sense. They can build the bridge themselves, the structure out of precast and now that the new building is going real well. That helps a lot. The footings were a big deal and if they get pilings figured out in the next week or so. They are real close to being able to submit a plan. They were able to get through all the wetlands issues and find a spot to put it, now it's just a structural thing for the footings which looks like that is going to go initially. They are hoping they can build a bridge in April. Holst stated Pierce County enforces the State wetland/shoreland zoning districts. We don't write the rules and don't always agree with them but unfortunately have to enforce them. Mr. Wieser stated they found a spot where they could fit it in and they won't be impacted. It was a challenge but they were able to do that. He stated they have submitted a reclamation plan for pit 4 recently. Roy said he got drawings and talked to the consultant about additional materials needed. Mr. Wieser stated pit 3 is basically at idle and has been for several years, as far as a reclamation plan there he will talk to Matt. Roy stated he will talk to the DNR. Maybe they will say just let it be as is. Mr. Wieser stated they don't intend to increase pit 3 anyways. **Holst moved to approve the request for renewal of a conditional use permit for Wieser Concrete Products Inc, et al. due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area with conditions #1 - #18/Ross seconded. All in favor. Passed.** Mr. Wieser thanked the Town for working with them and cooperating with them as they worked through all this.

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Louie Filkins, County Surveyor, to attend the WI Society of Land Surveyors annual seminar for 3 days of vendor displays and continuing education for professional land surveyors at the Kalahari Resort on January 21st through the 23rd. The fee is \$240.00 plus hotel. **Aubart moved to approve the travel/training requests for Louie Filkins/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Request to renew a conditional use permit for mining for WISC on their Bay City Mine.

Proposing revisions for Chapter 240, Article VIII-Signs. We will need to have a philosophical discussion with you about signage regulations.

Pichotta noted that the committee should have a letter in their folders from the neighbors of Valley Vineyard, regarding Rudy Jungwirth. It appears as though there may be a future agenda item.

Motion to adjourn at 8:08pm by Holst/Ross seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 7, 2015 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: January 21st, February 4 th & 18 th , all in 2015.	Chair
3	Approve minutes of the December 17, 2014 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Heavy Industrial Uses pursuant to Pierce County Code Chapter 240-37E for Wisconsin Industrial Sand Company LLC and Wisconsin Specialty Sands Inc, owners and agents for Knudsencourier LLC and Trinity Meyer Utility Structures LLC on property located in part of the W ½ of the SW ¼ of Section 1 and part of the W ½ of the NE ¼, part of the SE ¼ of the NE ¼ and part of the NE ¼ of the SE ¼ of Section 2, all in T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Public hearing to consider and take action on a request for a map amendment (rezone) from Rural Residential 20 to Industrial District for Wisconsin Industrial Sand Company LLC, owner on property located in Lot 1, Certified Survey Map (CSM) V6, P168 in the NW ¼ of the SW ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI.	Hayes
6	Discuss take action on renewal of a conditional use permit for Wieser Concrete Products Inc, et al., owners on property located in Sections 4, 9 and 10, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(12/23/14)

MINUTES - Pierce County Land Management Committee Meeting, December 7, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 21st, if necessary, all in 2016.

Approve Minutes: **Sanden moved to approve the November 16, 2016 Land Management Committee minutes/Snow seconded. All in favor. Passed with Fetzer not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for an on-line sporting goods business in the General Rural Flexible 8 District pursuant to Pierce County Code Chapter 240-36D, for Willis Hoade Jr & Lona Hoade, owners on property located on Lot 3, Certified Survey Map (CSM) V6, P111, in part of the SW ¼ of the NE ¼ of Section 18, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Lona Hoade forward: Ms. Hoade explained they are requesting the conditional use permit for an on-line sporting goods business. It is on-line only. This is their residence. It's not a store front and there will be no signage. They have gone through the Town of Clifton through two meetings and she went around to all the neighbors within 200 feet. All her connecting properties and all signed and said they had no problem with it. The next meeting they were called to attend to discuss it, ask questions and no one even showed up. Chairperson Fetzer asked if this is a new business. Ms Hoade stated no, they have done this for 12 years. They started in Osh Kosh and moved to North Carolina and they have lived in River Falls for two years but they just built a house so now they have to get another one for the Town of Clifton. Chairperson Fetzer stated so you have been doing this the whole time. Ms Hoade stated yes, for 12 years and never had a complaint. Sanden asked about the 1 – 10 shipments/deliveries, pickups per month, is it UPS not semi's? Ms Hoade stated yes, UPS, no semi's just the local, normal UPS and FedEx.

Staff Report – Ryan Bechel: The applicant is seeking a CUP to operate an online sporting goods business at his residence. Proposed merchandise includes bows, electronics, optics, lights, clothing, survival supplies, holsters, cases, safes, firearms and various other sporting goods related items. The applicant anticipates items being purchased via online auction marketplaces or in person at the residence. The applicant holds a type 1 Federal Firearms License (FFL) which enables him to engage in commercial dealing of firearms. Per federal regulations, firearms being transferred must be shipped amongst dealers holding an active FFL dealer's license to fulfill tracking and back grounding requirements prior to delivery to the customer. Retail activities involving the sale of consumer goods produced off-site and not accessory to any on-site produced goods require a CUP for a Farm & Home Based Business in Pierce County's agricultural zoning districts. The ten-acre property is located in the Town of Clifton and is zoned General Rural Flexible 8. Pierce County Code 240-36(D) permits farm and home based businesses accessory to permitted single-family residences upon issuance of a CUP in agricultural districts, subject to the following:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.

2. If located in the dwelling unit, the farm and home business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be 5 acres.
4. Such other conditions as specified by the Land Management Committee pursuant to Sec 240-76 shall apply.

The property is the applicant's primary residence. The applicant intends to utilize a 12ft x 11ft (132sq ft) office located within the primary residence and is proposing no new structures. The applicant does not anticipate any new employees. Adjacent zoning districts are General Rural Flexible 8 to the north and west; Primary Agriculture to the east and Rural Residential 8 to the south. Adjacent land uses include agriculture and low density residential. Lot access is located off of CTH FF on the south side of the property. Equipment utilized for this business includes a gun safe, personal computer, filing cabinets and general office supplies. Primary on-site activities include retail sale of firearms and sporting goods items and product shipping and distribution. One to ten shipment deliveries/pickups are anticipated per month. The applicant utilizes a gun safe for storage of retail firearms. Hours of operation are proposed to be year-round from 8:00AM – 4:00PM, Monday through Friday; Saturday 10:00AM – 2:00PM. Sales are conducted over the phone, on-line or in-person. Pierce County Code §240-54 establishes parking requirements for retail establishments and requires a minimum of 1 off-street parking space per 200 feet of primary floor area which one must be ADA compliant. Ample room exists on the premises to fulfill parking requirements. A restroom is available for customers within the existing residence. Waste Management provides solid waste disposal services for the business. There is no signage associated with the business on the property and no further signage is being proposed. No additional exterior lighting is proposed. The Clifton Town Board recommended approval of this request on 11-01-2016. The Town recommendation stated "This business is consistent with zoning and the neighbors have offered no objections." The applicants submitted 2 supporting letters of recommendation (attached to staff report). PCC §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed Farm & Home Based Business with the following conditions:

1. Activities shall be conducted as presented in the application unless modified by a condition of this CUP.
2. The business shall be conducted by the owner of the dwelling unit.
3. There shall be at least 1 off-street customer parking space. A minimum of one parking stall shall be ADA compliant.
4. The applicant shall maintain all necessary federal and state firearm dealers' licenses.
5. Hours of operation shall be year-round from 8:00AM – 4:00PM, Monday through Friday; Saturday 10:00AM – 2:00PM.
6. Applicant understands that expansion or intensification of this use require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
7. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden stated on the aerial photo he doesn't see the house, was it recently built? Ms Hoade stated it just got finished and they just moved in a couple weeks ago and she also wanted to mention that they own the 20 acres of woods back there too. It is located about 700 feet back toward the west. Sanden also mentioned the 100% on-line but it also says or in-person at the residence. Ms Hoade stated occasionally if someone is local they can do the transfer or selling something. That is very rare. They go through a gun broker or other sites to sell. **Snow moved to approve the Farm and Home Based Business for an On-line Sporting Goods Business for Willis**

Hoade Jr & Lona Hoade with conditions #1 - #7 due to the fact this is not found to be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area/Sanden seconded. All in favor. Passed.

Public hearing to consider and take action on a request for reclassification of an existing conditional use permit from a Farm & Home Based Business to a Nature Based Operation for Vino in the Valley by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Larry Brenner forward: Mr. Brenner stated it's hard to believe it's been ten years. He explained he is asking to reclassify the two conditional use permits that were Farm and Home Based, which is, his understanding, really the only classification that fit when he brought this before this board ten years ago. Since then a new classification has come up called Nature Based Operation which he has been told might be a better fit. He doesn't have any plans to change the business model as it sits right now. The number of days is great, the number of days overall is great, the hours are fine. We found that that works just right and he doesn't have any will or desire to expand on that at all. As Mr. Holst once called it, "The Pizza Palace", is doing just fine as it is. He went in front of the El Paso Planning Commission and got approval from them and then went in front of the El Paso Town Board and it was approved by them as well. They did want to come up with a number of total employees that he might have on-site at any given time and the concern might have been parking. Employees always park to the north of the building not where the public does. So they just kind of picked a number of 50. He doesn't ever see them going to that number. But they wanted to put a number on it. The only time that might come into play is once a year they have the Taste of Tuscany event for the Ellsworth School District and they staff up for that. The whole reason for doing this is to be in compliance with staffing. Because as they've grown, it's hard to exist and do business with the number of people that they were required to keep it under. That is the reason they would like to change the classification.

Staff Report – Brad Roy: The applicant is requesting to reclassify two existing Farm and Home Based Businesses that are located on a single parcel into a single "Nature-Based Operation". The two businesses include Vino in the Valley, which is an event operation where patrons are served wine, bread, cheese, pasta and pizza. Other events include pumpkin sales along with a petting zoo in the month of October as well as Christmas events. The other business is a farmer's market and gift shop. The LMC originally granted approval for the businesses in March 2007. Modifications to the permits occurred in 2007, 2008, 2010 and 2012. In 2007 the Farm and Home Based Business was the only option for permitting this type of operation. Farm and Home Based Businesses have predetermined restrictions on business size and number of employees. In 2012 Pierce County amended the zoning code to include new use classifications for uses which are dependent on agriculture or on the surrounding natural area and the environment, which included the Nature-Based Operation classification. The Farm and Home Based Business classification is essentially intended to allow one to use their home as a business incubator and once a business reaches a certain size/intensity it is expected to move to a more appropriate location. Given this, staff encouraged the applicant to pursue a reclassification to a more applicable use category. The requested reclassification will allow the applicant more flexibility in the operation, particularly with the number of employees staffed for events. The applicant is not proposing any changes to the business model or the conditions of the existing CUPs. Nature-Based Operation is defined as – A site-specific operation reliant on the property's natural environment and characteristics and may include multiple related uses managed as one operation. A proposed Nature-Based Operation requires that the LMC make a determination as to whether the proposed use is, in fact, reliant on the natural environment, as well as impose conditions to limit the scale and intensity of the use to an appropriate level. The primary event for the operation is "Vino in the Valley" which provides outdoor dining experience on a site with views of a vineyard and the Rush River Valley from May through the fall. The operation also has Christmas events with sleigh rides, cookie decorating and Christmas tree sales. Limitations on the seating, days of operation and hours were imposed on the CUP as a way to limit the scope of the business. The primary structures for the business are: a 24ft x 108ft pavilion, a 14ft x 18ft bathroom and a 20ft x 24ft kitchen. The Town of El Paso recommended approval of this request on November 14, 2016, with the following statement "No change in business plan except in the number

of employees to 50.” The existing conditions for “Vino in the Valley” are listed in the staff report #1 - #13. The existing conditions for the Farmers Market/Gift Shop are listed in the staff report #1 - #8.

Staff Recommendation: Staff recommends the LMC consider this request and first make a determination as to whether the proposed use is reliant on the site’s natural environment and character. If it is determined that the operation is reliant on the site’s natural environment and character, staff recommends the LMC determine whether the proposed use at the proposed location would be detrimental or injurious to public health and safety or the character of the surrounding area. If determined to be site dependent and not detrimental to the above, staff recommends approval with the following conditions:

1. Any proposed advertising signs or new construction shall receive all necessary permits.
2. Access shall comply with §240-57.
3. All lighting shall comply with departmental policy.
4. All traffic shall be directed to use Hwy 10 to 400th St to 450th Ave or Hwy 72 to Cty Rd CC to 450th Ave.
5. Applicant shall receive all necessary permits from other state and local agencies (ie restaurant and liquor licenses).
6. A minimum of 43 parking spaces shall be designated for this use and there shall be no on street parking.
7. Seating capacity shall not exceed 120 people.
8. Applicant shall not exceed 88 days of operation per year.
9. Hours of operation from May through September shall be Thursday and Fridays 5pm to 10pm, Saturday Noon to 10pm and Sundays Noon to 6pm. From October through December the hours shall be Saturday and Sunday 12pm to 6pm. Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved.
10. Amplified sound shall not exceed 80 decibels at any location. All sound outputs, except monitor speakers, shall be located in the service pavilion.
11. No more than 50 employees per shift.
12. This conditional use permit shall be reviewed for renewal every two years or if compliance issues arise. Renewal may be completed administratively if no compliance issues are identified.
13. Applicant understands that intensification or expansion of use will require the issuance of a new conditional use permit.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked based on what was stated he is assuming there were no complaints. Roy stated no. Sanden, and that staff agrees with this being a better fit. Roy stated yes. **Holst moved to approve the reclassification of Vino in the Valley and the Farmer’s Market/Gift Shop for Larry Brenner to a Nature-Based Operation finding the operation is reliant on the site’s natural environment and character, with conditions #1 - #13 due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded. All in favor. Passed.**

Discuss take action on a request for Site Plan Review for a new Highway Shop to be located in the Primary Agriculture District for the Pierce County Highway Department, owner on property located in Lot 1, Certified Survey Map (CSM) V14, P58 in part of the SE ¼ of the SE ¼ of Section 25, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Chad Johnson forward: Mr. Johnson, Pierce County Highway Commissioner introduced Matt Gundry with Fleming, Andre & Associates, they did the site design.

Staff Report – Emily Lund: The Highway Dept is interested in site plan review for construction of a highway shop and salt shed and it’s classified as a Public Institutional Use in our code. In February 2016, the 6 acre parcel was created and the applicant purchased the land. Today the applicant is seeking site plan approval for the construction of what was just mentioned. Pierce County Code §240-75 states the purpose of site plan review is to assure site designs promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient

land use in Pierce County. The property is located in Section 25, Town of El Paso and is zoned Primary Agriculture. Adjacent zoning districts are Primary Agriculture. Surrounding land use is agricultural and residential. Pierce County Zoning Code Chapter 240 Attachment 1:1 Table of Uses defines public institutional uses as a permitted use in the Primary Agriculture zoning district. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts is listed in the staff report. The Highway Department has received their address already. The applicant proposes to construct a 24'x132'x22' salt shed and a 48'x142'x26' shop. The shop is proposed to have 6-bays to house 4 patrol trucks, a loader, a grader in the winter and a mowing tractor in the summer. Outdoor lighting is proposed to be wall pack commercial security lighting. Pierce County Code §240-54A does not list a required number of off-street parking spaces for institutional uses. This code section does require one space per employee during the peak shift and 1 parking stall shall be ADA compliant. The Highway Department proposes 4 employees utilizing the site and the plans show 5 parking spaces with one being ADA compliant. A soil test was submitted recommending a mound septic system. The applicant will need to obtain Dept. of Safety & Professional Services (DSPA) mound plan approval and a State Sanitary Permit prior to other permits. The proposed site plan shows a line of pine trees to be planted near the west property line, the septic drainfield to the north. A stormwater catch basin is proposed to be located on the east side of the property. The applicant proposes to submit stormwater plans to the WI DNR for review after site plan approval has been granted. Some of the site plan can show that. The proposed salt shed and shop plans, actually the salt shed has been submitted to the state and received state approval and they are interested in getting their land use permit probably Friday. Their plans for the shop are still being finalized and will need to be submitted to the state for building plan approval and once they have that plan approval they will obtain a land use permit from our department prior to construction. The applicant shall work with the state inspector to ensure compliance with the Uniform Commercial Code. The applicant proposes to begin construction after the LUP is issued probably immediately. Due to cost sharing with the state the salt shed increased in size to 132 feet.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

Staff recommends the LMC approve the proposed public institutional use (highway shop) with the following conditions:

1. The applicant shall obtain DSPS mound plan approval and a State Sanitary Permit prior to other permits.
2. Applicants shall follow all conditions and receive all necessary permits from WI DNR, DSPS and other agencies as required.
3. Applicants shall obtain a Land Use Permit for any future structures.
4. Applicants shall have the site inspected by a commercial DSPS inspector to follow the uniform commercial code and state plan approval requirements.

Holst asked Ron Foley, Town of El Paso Supervisor, how good is that road. Mr. Foley stated they just reworked that road. Holst asked if the Town is OK with the Highway Department driving their trucks on it. Mr. Foley stated Yes. Mr. Johnson stated he thinks what they will end up doing is post construction, doing an overlay from their driveway to the Cty Rd CC intersection. Holst stated you are actually going to do something for a Township for once? Are you going to do it or not? Mr. Johnson stated if the road breaks up they will do it. Sanden asked what the reasoning for the pine trees on the west side, it seems like the south and east side, given ag-residential across the road and the roads themselves. Mr. Johnson stated a windbreak. We could always add more pine trees too. Chairperson Fetzer stated it's just a field beside there. Mr. Johnson stated from the east it's actually a very large back slope from the highway. He thinks when you are on the highway, at least in a car maybe not a semi-truck, you might not even see the shop. Chairperson Fetzer asked if this is going to give them improved roads on Cty Rd CC? Mr. Johnson stated the plow is going to hit the ground as soon as it comes off the El Paso stop sign. So you are the right guy to have on this committee. Chairperson Fetzer stated today they went through with two sand trucks, that road was an ice skating rink yesterday and this morning. Holst stated if

you lived in a better part of the county you'd get better service. His roads were in excellent condition. Holst stated you guys have more inclement weather over that way. Chairperson Fetzer stated today when they went by with two sanding trucks and a truck in between them, he's guessing he was packing it down, the roads drastically improved today. He is sure you have heard plenty over the years. Mr. Johnson stated this was one of the reasons for siting, someone is going to be first and someone is going to be last. **Sanden moved to approve the Site Plan for a Public Institutional Use (highway shop) for Pierce County Highway Department with conditions #1 - #4/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for Site Plan Review for a new dining hall structure associated with a conditionally permitted wedding barn located in the Primary Agriculture District for Mellissa Deyo and Donald Dufek, owners on property located in the SE ¼ of the SE ¼ of Section 33, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Mellissa Deyo and Donald Dufek forward: Ms Deyo stated they have to build a dining hall because they are not allowed to serve food in the barn. You can't eat in the barn even though they don't cook or anything. It's all brought in already made. They won't let us eat in the barn. It's going to simply be an open-sided pavilion to serve dinner in and then the party moves up into the barn. Holst asked if you can drink in the barn? Oh you can't drink in the barn, guess I'd get rid of the barn.

Staff Report – Emily Lund: Site Plan Review for constructing a new dining hall structure associated with a conditionally permitted wedding barn (retreat center). The applicants received a conditional use permit from the LMC in May 2012 to enable them to utilize their barn as a retreat center for country-style weddings and receptions. Their original plan was to locate the dining hall in the existing barn, but it was found that in order to do so the Dept of Safety & Professional Services (DSPS) would require significant modifications to the barn. The applicants considered establishing the dining hall in another existing building on-site but it was determined that renovation was cost prohibitive. The applicants are now proposing to build a new structure for the dining hall. Since the serving of food has always been intended for the operation and was included in the original plans, the construction of a dining hall is not considered an expansion or intensification of the use. The CUP limits the guest count to 150 people. Pierce County Code §240-75 states the purpose of site plan review is to assure site designs promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The property is located in Section 33, Town of Martell. The property is in the Primary Agriculture zoning district. Adjacent zoning districts are Primary Agriculture and General Rural Flexible. Surrounding land use is agricultural and residential. The Table of Uses lists retreat centers as a commercial use and is permitted with a conditional use permit in the Primary Agriculture District. The intent of Primary Agriculture is listed in the staff report. Access to the site is near the intersection of 610th Street and County Road N. The uniform address number (W6124 Cty Rd N) was in existence prior to the applicants owning the property. The applicant proposes to construct a 24'x80'x12.7' (or 24,236 cubic feet) vaulted dining hall. Staff discussed the project with Todd Dolan, Town of Martell Building Inspector. He stated the dining hall would be considered A-2 Occupancy and would be exempt from state review per Table 361.30-1 if less than 25,000 cubic feet. Once they receive site plan approval, the applicants will need to obtain a Land Use Permit from the Department prior to construction. The applicants will also need to work with the Town of Martell Building Inspector to obtain Town Building permits, if necessary. Lighting is proposed to be installed on the interior ceiling area and on the outside of the dining hall. Pierce County Code §240-54A requires off-street parking spaces for commercial uses and are adequately met and regulated with the issuance of the existing CUP. The applicants designed a landscaping plan to screen the parking area in September 2013 and planted seven 5+ feet tall spruce trees prior to September 2014. The applicant proposes to begin purchasing materials after permits are issued, begin construction by April 2017 and for the project to be completed by May or June 2017 before the wedding season begins.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway

location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

Staff recommends the LMC approve the proposed dining hall associated with a conditionally permitted wedding barn (retreat center) with the following conditions:

1. Applicants shall follow all conditions and receive all necessary permits from WI DNR, DSPS and other agencies as required.
2. Applicants shall obtain a Land Use Permit for this and any future structures.
3. Applicants shall work with Todd Dolan, Martell Building Inspector to follow applicable codes and obtain a Town building permit, if necessary.

Holst moved to approve the Site Plan for constructing a dining hall for Mellissa Deyo and Donald Dufek w/conditions #1 - #3/Aubart seconded. Holst stated he would like to apologize for the run that the State has put you through. You worked in good faith and he thinks what you had was sufficient and he thinks you got bent over a barrel. Ms Deyo Thanked him and stated everybody else thinks so too. Sanden stated you are really close to that 25,000 cubic feet so hopefully the As Built dimensions will be exact. Holst stated make sure your cement guy does a good job. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Roy stated there are two requests at this time. Ryan Bechel and Emily Lund in Chippewa for a POWTS training on December 21st, one day training, no overnight and Emily Lund in Eau Claire tomorrow for a WCZA conference, most of the day, no overnight. **Snow moved to approve the travel/training requests for Ryan Bechel and Emily Lund/Aubart seconded. All in favor. Passed.**

Roy stated we need to set dates for next year's meetings, do we want to continue with the 1st & 3rd Wednesdays of each month. Holst asked why should we change something that's working? Do we need any action? Aubart stated it's not on the agenda. Committee consensus.

Departmental Update and Future Agenda Items

Roy, We have nothing for the December 21st agenda. The next meeting will be Jan 4, 2017. In January, WISC has two renewals, the Hager City Plant and the Bay City Mine.

Motion to adjourn at 6:44 pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 7, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: December 21 st if necessary, all in 2016.	Chair
3	Approve minutes of the November 16, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for an on-line sporting goods business in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-36D, for Willis Hoade Jr & Lona Hoade, owners on property located on Lot 3, Certified Survey Map (CSM) V6 P111, in part of the SW ¼ of the NE ¼ of Section 18, T27N, R19W, Town of Clifton, Pierce County, WI.	Bechel
5	Public hearing to consider and take action on a request for reclassification of an existing conditional use permit from a Farm & Home Based Business to a Nature Based Operation for Vino in the Valley, by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI.	Roy
6	Discuss take action on a request for Site Plan Review for a new Highway Shop to be located in the Primary Agriculture District for the Pierce County Highway Department, owner on property located in Lot 1, Certified Survey Map (CSM) V14, P58 in part of the SE ¼ of the SE ¼ of Section 25, T26N, R16W, Town of El Paso, Pierce County, WI.	Lund
7	Discuss take action on a request for Site Plan Review for a new dining hall structure associated with a conditionally permitted wedding barn located in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners on property located in the SE ¼ of the SE ¼ of Section 33, T27N, R17W, Town of Martell, Pierce County, WI.	Lund
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, November 16, 2016

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Ryan Bechel and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 7th & December 21st, if necessary, all in 2016.

Approve Minutes: **Sanden moved to approve the November 2, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Holst not voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Rural Residential 12 District to General Rural Flexible 8 by Bailey Webster, owner on property located in part of the NE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Chairperson Holst invited Bailey Webster forward: Ms Webster explained she bought the land two and a half years ago. She also owns two 5-acre lots adjacent to it where she grows organic vegetables. She put up a greenhouse about a year after she bought the property on the 1-acre lot that she wants to have rezoned where she grows vegetables in the spring out of the field on her other property. She has a small chicken coop that she put up there with chickens and a small 3ft x 6ft shed with a cooler in that she sells vegetables out of in the summer. Sanden asked what your plans are for the 1-acre that is going to be rezoned, what exactly are you going to be doing on that 1-acre. Ms Webster explained she just wants to continue doing what she is doing there. Pichotta explained that basically we have an enforcement issue in the sense that it's a Rural Residential District where structural ag is not allowed. Ms Bailey stated she doesn't have any additional plans for the property.

Staff Report – Ryan Bechel: The applicant is requesting to rezone a total of 1.00 acre in Section 19 in the Town of Oak Grove. The applicant is requesting the rezone in order to obtain appropriate permits to sustain operation of a Direct Market Agriculture business on the premises. The parcel is currently a single family residence. Direct Market Agricultural operations are currently occurring on the parcel. Access is off of 1180th St on the eastern edge of the parcel. The proposed future use of the parcel is to maintain the existing single-family residence and the business. Adjacent land uses are agriculture, low-density residential and undeveloped land. Adjacent zoning districts include Rural Residential 12 to the east and south, General Rural Flexible 8 to the north and west. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts: General Rural Flexible is established to achieve the same objectives as the General Rural District but to allow a greater density of residential development with the approval of the Town Board. The General Rural District is established to maintain and enhance agricultural operations in the County. The district also provides for low density residential development, which is consistent with the generally rural environment and allows for non-residential uses which require relatively large land areas and/or are compatible with the surrounding rural land. The site consists of 100% Forkhorn Sandy Loam which is considered a Prime Farmland Soil type. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. The Town of Oak Grove

recommended approval of this request on July 18, 2016. The Town referenced the following supporting objective under “Economic Development Goal #1” of their adopted town comprehensive plan: *Objective 1: “Promote ag-based businesses.”* The Town listed the following concerns/suggested conditions regarding the approval recommendation: 1. “Combine 1 acre lot with adjacent 5 acre General Rural Flexible-8 lot.” The applicant owns two 5 acre (approximate) lots zoned General Rural Flexible-8 directly south of the subject property. The lots currently consist of a mix of undeveloped land and agricultural fields. Although conditional zoning is a legal mechanism because the applicant voluntarily implements the identified condition, and there is no guarantee of government approval, Pierce County has not utilized this mechanism. The Town of Oak Grove, which has an adopted comprehensive plan, has veto authority over rezones proposed within its borders. Given the towns ability to veto the proposed rezone and the limited rationale provided by the town for recommending the condition, it may be that the town is better situated to further define the concern that prompted the need for the condition and to see it implemented. Staff reached out to the Town of Oak Grove regarding the recommended condition. However, it remains unclear what specifically the proposed condition is intended to accomplish and further clarification would be helpful.

Staff Recommendation: Staff recommends the LMC consider referring the rezone request back to the Town of Oak Grove for further consideration and clarification of the recommended condition.

Chairperson Holst opened the hearing to the public. Debra McClure, Town of Oak Grove Supervisor, the Town would at this point would understand that we don’t want to have conditions on a rezone and so they would be supportive if the County wants to send that back to us to review it. Chairperson Holst stated he believes this committee appreciates that position and he believes the applicants do also. **Public hearing closed.** Sanden asked if they are urging consolidation because of minimum lot size, is that the problem. Pichotta stated it wasn’t the rationale. In fact what was presented was something to do with parking. Typically when there is a condition associated with a proposed rezone it’s to limit types of uses that are allowable versus something like this. Also there is typically a clear correlation between the condition and whatever it’s intended to accomplish. Chairperson Holst stated this is a learning process between the planning commissions, town boards and this committee and we realize that and this is just another step in the process of learning how to do it correctly.

Snow moved to refer the request for a Map Amendment (Rezone) from Rural Residential 12 to General Rural Flexible 8 for Bailey Webster, back to the Town of Oak Grove for further consideration and clarification of the recommended condition/Aubart seconded. All in favor. Passed.

Discuss take action on a request for Site Plan Review for two structures to be located in the Commercial District for the City of Red Wing, owner, by Wes Converse and Walters Buildings, agents on property located in part of the NE ¼ of the SW ¼ of Section 6, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Holst invited Curt Miers forward: Mr. Miers explained they are requesting to expand Wes Converse’s office and flight training business and if he understands it correctly, he will have to come back again when they build a hangar in the spring. Looking at building a 36ft x 98ft office, the same as what’s there with a breezeway between the two and then a 100ft x 120ft hangar in the spring.

Staff Report – Emily Lund: The applicants obtained a CUP to expand the airport taxiway in 2007. A portion of the property around the new taxiway was rezoned in October 2013 from General Rural to Commercial in order to serve a new aviation community with public aircraft storage, maintenance, office spaces, pilot training and education. The applicants obtained a Land Use Permit in October 2013 to build an office building and hanger and also site plan approval from the LMC in February 2014 for the commercial construction. Applicants are seeking site plan approval for construction of another hanger and office building. Pierce County Code §240-75 states the purpose of site plan review is to assure site designs promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. This property is located in Section 6, Town of Isabelle and is zoned Commercial. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts: Commercial: The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage or other nuisance factors. Adjacent zoning districts are General Rural and

Commercial. Surrounding land use is the airport. The applicant proposes to construct a 36ft x 98ft x 19.75ft office building with a 7ft x 20ft x 19.75ft connection to the existing office building and a 100ft x 1120ft x 34.75ft hanger. Lighting is proposed to be installed on the interior ceiling area. Outdoor mounted lighting is proposed to be wall pack commercial security lighting. Pierce County Code §240-54 requires a minimum of 1 parking space per 250 square feet of primary floor area for office use and a minimum of 1 parking stall shall be ADA compliant. This requires a minimum of 28 parking spaces with 1 ADA compliant. The plans submitted demonstrate ample parking area to fulfill this requirement. The new building construction is proposed over the existing conventional drainfield. TL Sinz Plumbing Inc, from Menomonie area was hired and has an approved sanitary permit (#472032016) to move the drainfield north of all the buildings and increase the septic system to accommodate all four buildings and it was installed last week. There are existing stormwater catch-basins on site and there is an existing parking area. The proposed office building received Dept of Safety and Professional Services (DSPS) building plan approval on 10-24-2016 with Transaction ID#2776116. The applicants shall work with the Town or State Inspector to ensure compliance with the Uniform Commercial Code (UCC). The proposed hanger plans are being finalized and need to be submitted to DSPS for plan approval this spring and they will obtain a land use permit prior to construction. The applicant proposes to begin construction immediately. They want to get their land use permit tomorrow and then they plan to have everything wrapped up in the spring of 2017.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations. Staff recommends the LMC approve the proposed site plan as presented with the following conditions:

1. Applicants shall follow all conditions and receive all necessary permits from WI DNR, Department of Safety and Professional Services and other agencies as required.
2. Applicants shall have the site inspected by a commercial DSPS inspector to follow the uniform commercial code and state plan approval requirements.
3. Applicants shall obtain a Land Use Permit for any future structures.

Sanden asked if it would be prudent to put a one year time limit on it just in case something blows up. Pichotta stated there is a time limit on the issuance of land use permits, they do expire. Chairperson Holst stated he feels that would cover it. Pichotta explained this is one of those cases, often times when commercial buildings are proposed, their relation to existing residential neighborhoods and there is a need for screening but given this is an airport setting, a lot of our typical considerations don't come into play. Chairperson Holst stated we have that fine string of cedars along the highway anyway. You hardly see these structures. Mr. Miers stated they try to limit that as much as possible because the leaves blow and suck into a motor. There are a whole lot of things we can't do there that we would typically do. Chairperson Holst stated you are very straight forward with what you have presented here. What you have done there already is topnotch and I assume it will continue to be. He has known Wes for a long time.

Sanden moved to approve the Site Plan for City of Red Wing, Wes Converse and Walters Buildings as presented with conditions #1 - #3/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Conditional use permit application for Farm & Home Based Business for On-line Sporting Goods Outlet in the Town of Clifton

Conditional use permit application where Vino in the Valley is requesting to change from a Farm & Home Based Business to a Nature Based Business

We have Site Plan Review for a Wedding Barn in the Town of Martell, if you recall, they are going to be putting in a dining hall that isn't an intensification or expansion because it was something they had always

proposed to do but they can't because their building doesn't meet DSPS standards so they want to create a new structure which will require Site Plan Approval.

Site Plan Review for Pierce County Highway Shop out on County Rd CC.

Motion to adjourn at 6:21 pm by Sanden/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 2, 2016

Present: Jon Aubart, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund and Tracie Albrightson

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Aubart called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 16th, December 7th and 21st, all in 2016.

Approve Minutes: **Sanden moved to approve the September 21, 2016 Land Management Committee minutes/Snow seconded. All in favor. Passed.**

Discuss take action on a request to amend the conditional use permit for a Private Outdoor Recreation Use (commercial paintball playing field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W, Town of Clifton, Pierce County, WI.

Vintage Paintball Park would like to add three more shipping containers to their current two to make it a total of five. They need more storage for the park; it's not going to have an effect on the field expansion in any kind of way or any more noise coming from their area at all. When they initially started looking at the expansion they went to the township of Clifton and initially it was a lot bigger deal and then the numbers just didn't add up. They were talking about potentially putting in a garage type structure where it was going to be a permanent structure with electricity, a well, etc. Right now they are piping water from Tim Jennings well and keeping the big compressors in his barn and they are lining the air for the air pressure tanks back from that. So instead of putting the electricity and moving all that stuff back, that is going to stay the same. The committee received an email showing the proposed placement of the shipping containers. It really is just storage and potentially a little bit of work shop space where they can get in out of the weather a little bit. The boundaries of the area are not moving it is just some more shipping containers. With the initial CUP, they were allowed two. It went from being kind of a big deal to more of they can't afford to do that, so this will help make it run smoothly for these guys.

Staff Report – Emily Lund: The applicants obtained a CUP for a Private Outdoor Recreational Use (Commercial Paintball Playing Field) from the LMC on 8-4-2010. The commercial paintball playing field, called Vintage Paintball Park, began full operations in 2010 and continues to date. Renewal of the CUP has been conducted administratively given that there have not been any complaints regarding the operation. The applicants are requesting to amend condition #2 of the CUP. They currently utilize 2 storage/shipping containers on the property for storage and are requesting the ability to place 3 additional containers. The additional storage would enable them to store paintball equipment, a lawn mower, outdoor tools, a skid loader, ladders, and more out of the elements. They also propose to disassemble most of the existing obstacle course enable its placement in the containers over the winter. The property is located in Section 5, Town of Clifton. Given that the proposed additional storage capacity (additional shipping containers) would not intensify or expand the existing permitted use, issuance of a new conditional use permit is not necessary to accommodate this request (§240-76A). The commercial paintball playing field is located ± 400 feet west of 1160th Street. The attached maps illustrate where the course has typically been placed. The land owner previously indicated that the paintball playing field is located on land that is not best suited for agriculture. The paintball course utilizes

inflatable bunkers, recycled electrical spools, and collapsible / movable buildings as obstacles. Safety netting is put up for games and later taken down. Equipment is put away before winter in storage containers. With the original CUP approval, a lean-to shelter and 3 on-premise advertising signs were permitted. The portion of the Pierce County Code relating to signage was recently amended and now limits the number of signs in the Primary Agriculture District to 2. Given the prior approval, the use of 3 signs may continue as a preexisting nonconformity. The owner indicated that no permanent structures will be built on the playing field. The Clifton Town Board recommended approval of the original request on 7-6-2010. The Town's approval stated, "Be sure the parties follow the Pierce County guidelines." The Town Chairman was contacted regarding this requested modification and expressed no specific concerns. A neighboring property owner has recently expressed concerns regarding the operation. Specific concerns relate primarily to the noise level associated with the permitted use and the potential for expansion. The neighbor has been made aware of this agenda item. The existing conditions for this CUP are listed as follows: 1) A Uniform Address Number shall be assigned and located at the driveway entrance off of 1160th Street. 2) Applicants shall be limited to two (2) – 8 ft x 8 ft x 40 ft proposed shipping containers on the property. 3) Adequate portable satellite waste stations (1 to 50 people) shall be provided. 4) Solid waste dumpsters or waste containers shall be located on-site and maintained. 5) Hours of operation shall be daily 9 AM to 9 PM, or as otherwise established by the LMC. 6) The applicant shall be limited to 10 employees. 7) A copy of any changes or additional liability insurance shall be submitted to the Land Management Department. 8) The CUP shall be renewed every two years. Renewal may be completed administratively if no complaints or compliance issues arise. 9) Applicant understands that expansion of intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

Staff Recommendation: Staff recommends that the Land Management Committee consider whether the proposed amendment to condition #2 would be detrimental or injurious to the public interest, public health and safety, or the character of the surrounding area. If the proposed amendment is determined to be appropriate, staff recommends the following: 2) Applicant shall be limited to five (5) - 8 ft x 8 ft x 40 ft shipping containers on the site. Containers shall be shielded from public view to the extent practical. Shielding shall be accomplished through placement and/or vegetative screening.

Aubart clarified that this does not intensify the current use; making this change to the additional containers? Lund stated no. She stated the neighbor is present. Reed Sponsler, Town of Clifton, stated they moved there in December of 2010 and this permit was approved in August 2010. They thought it had been there forever; he had no idea a conditional use permit was there. Since he has moved there, he had counted it earlier that day, there are about 60ish structures that are there all year. He provided an aerial from Google Maps. He also provided a picture of what it used to be when he moved there, and you can see the land is and was farmed at one point; round bales in a field. Recently he has been researching this; he would argue that the buildings are not taken down in the winter and stored in sheds. According to the definitions in article 240; a structure that is built/erected and intended to be there in place for more than nine months is considered to be a permanent structure. So all year long, he showed a view of the structures, off his porch, that was not there when he moved there and a view from his bedroom window, some of those were there when he moved there. He is in opposition to any expansion of the paintball park. He argues that storage allows them to have more ability to serve more people, have more equipment therefore possibly build more buildings eventually. He doesn't think he should have to look at that, he thinks it should be screened from his view. Sanded asked Reed's directional position to the park and Reed stated, south. Lund showed a map from the original conditional use permit to show where his house is. Reed stated there was no real site plan ever put together for this. He was under the assumption that all the buildings would be on skids, collapsible or inflatable, but that is just not the case. The house has been there since 1920 and it is up on top of a hill and he is basically looking down at the paintball park. When there is corn on the field it's not so bad, but 8 months out of the year there isn't corn on the field and every other year it is soy beans. Snow clarified we are not addressing the buildings on this site tonight, we are only addressing whether they can add these three storage containers? Pichotta stated correct. Snow asked if that was a see-through fence all the way around the park. Jennings stated it is safety netting to contain the paintballs from injuring bystanders or getting outside of the field. The structures that are there have no roof, there is no

foundation. They do run an occasional game in the winter where he plows the snow out for it and they have collage/university/high school teams that come out on a nice winter day. That is why those structures stay up. Because they are not on skids, the 4 x 4 posts are put in the ground about a foot to a foot and a half because the wind comes up through that valley and peels them right out of there. If they were not anchored down by cables, it would be safety hazard for the players. So they stuck the posts in the ground; if they had to, they could be lifted out but it just isn't practical to do that. When the wind comes out of the north and if they weren't anchored, then there would be sheet metal all over the place and plywood. The nets get ripped down two or three times a year. So that is why they are not on skids and why they technically don't come down every season. They do have the ability to do some winter games when conditions permit. The inflatable are what they are talking about. The inflatables come up for tournament courses and those all get put into containers for the winter to try and keep the mice out of them; that's why the buildings stay there or why they look like they are building that stay there. Aubart stated Snow is correct in stated this is for condition number 2 and the modification of that; if someone has issues regarding different portions of the code or whatever that you could drive that back to the department. Pichotta stated as far as the structures needing a permit, a conditional use permit is basically a land use permit that is issued by the committee typically with conditions. In the application it was stated that there would be these structures placed and so the reality is that each specific structure doesn't need a permit because the concept of multiple structures was endorsed by the committee and authorized with through issuance of a CUP; so that's not really an issue. The difficulty with this is your proximity is kind of up above looking down. Typically we would screen uses; it is often times from public view verses a view from someone like yourself. So he is not sure if there is a good solution to screening at this point. But the point of us being at the meeting to consider condition number two and weather it is appropriate to allow three additional storage containers. It seems likely that based on this discussion here tonight that the next renewal will be in front of the committee. The concerns of the neighbor are not violations so he doesn't know if that will trigger it to bring it back in front of the committee more quickly but certainly, they next renewal will be brought back to the committee. Sanded asked when the last renewal was. Roy stated a couple of months ago. Sanded stated he thought about the noise concerns and wondered if that has to be addressed. Reed stated noise isn't his major concern; it's the buildings being there all year; they paintball in them for four months out of a year. They are in the ground according to your definition is article 240, they are permanent; he is not saying they have to have permits, he is just saying none of that was there when he moved there. He offered to possibly buy some land from Tim and put some trees on it right next to his house. His house is pretty much on the property line so if he puts trees up they are going to be trimmed up on Tim's field and pushing up on his side. He feels that what needs to be met in the CUP; adversely affected the neighborhood, not harmonious with the surrounding area things of that nature. He doesn't want to have it expand anymore and he doesn't want to have to look at it. It wasn't there when he moved there; he thought a conditional use permit had to be talked to about with neighbors if they were expanding, etc. There was no site plan or anything like that, they just put up buildings. Lund stated in the original plan though it started from nothing. The original plan was to go where it is now. They just happened to finally get there. Reed stated he had no idea there was going to be buildings built on that side of the hill. Pichotta stated timing of it was just very poor from Reed's perspective. Pichotta suggested Reed engage in some discussion with the park owners and see if there is some sort of something that can be done to somehow accommodate his concerns. The next renewal will be brought in front of the committee. Pichotta stated that if there is an expansion of the playing field onto adjacent properties that would trigger the need for a new CUP as would an intensification of the use if they were to start to provide some sort of a service that they are not currently doing. He encourages communication between the parties. Reed stated he offered to buy some land from them that is right there and plant some trees but that was a no go. He has talked and explained his concern to the land owner and the owner of the paintball park before we even got here. But they are driving ahead with more containers which to him means more people and eventually more buildings. He realizes the foot print hasn't got any bigger, but there are things in the zoning ordinance that they have to meet; you can't have just random buildings that look like calf sheds. Pichotta stated our recommendation is that you consider whether or not it would be appropriate to allow three additional storage containers. If so, the department recommended a condition. Sanded doesn't know the nuances of the discussions but it would seem that buying the piece of land

and planting trees would be a great solution. He is sorry that that hasn't happened and hopefully you can come up with a solution.

Sanden moved to approve the amendment of condition number two to read: Applicant shall be limited to five (5) – 8 ft x 8 ft x 40 ft shipping containers on the site. /Snow seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural Flexible 8 District for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.

Staff Report – Brad Roy: Rumpca Excavating owns and operates a nonmetallic mine on 80 acres which was expanded in 2002 requiring the issuance of a conditional use permit. The materials mined are gravel and limestone. The operation plan states that the 60 of the 80 acres will be mined and extraction will extend to the elevation of approximately 900 feet. Current mining activity is at an approximate elevation of 1000 feet. The property is located in Section 29, Town of Clifton, zoned General Rural Flexible 8. The legal description for this property is in the E ½ of the SE ¼ in Section 29, T27N, R19W in the Town of Clifton. The property is zoned General Rural Flexible-8. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road MM. Portable crushing equipment is brought in to make C/5 Gravel, Recycled C/5 and Screened Hard Rock and trucks are used to haul the product. Blasting is conducted by a bonded professional explosive company. Blasting infrequently takes place on this site. No explosives are stored onsite. Hours of operation are 7:00 am to 6:00 pm Monday through Friday and 7:00 am to 4:30 pm on Saturday. Blasting is between the hours of 8:00 am to 4:00 pm Monday through Friday. Crushing is done between the hours of 7:00 am to 4:30 pm Monday through Friday. A 100 foot setback has been maintained for all extraction. A scale and scale house are located on the site. The neighboring property to the east had been previously mined to near the property line. If prior excavation is determined to have occurred across the property line, the applicant would like the ability to mine within the 100 foot setback to connect the two neighboring extraction areas. That would require a future policy exception as its own agenda item. No complaints have been received about this operation. Staff has contacted the Town of Clifton Chairperson regarding this renewal and no complaints or concerns were reported. The current conditions are listed as follows: 1) Applicant shall follow all recommendations and received all necessary permits from other agencies. 2) A 100-ft setback shall be maintained from all property lines for all mining activities. 3) Applicant shall comply with DNR NR 135 Annual Reclamation Permits. 4) Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting, and all blasting shall be done by a certified state licensed blaster. 5) Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of the proposed mining operation. 6) The applicant shall notify the Zoning Office if groundwater is encountered. 7) Dust control measures shall be implemented along haul roads. 8) Hours of operation are 7:00 am to 6:00 pm Monday through Friday and 7:00 am to 4:30 pm on Saturday. 9) Recycling of concrete, asphalt and bricks into Class give materials is allowed. 10) Reclamation shall be according to submitted plans. 11) Applicant agrees that any unforeseen erosion issued shall be addressed to the satisfaction of the county. 12) This CUP renewal shall expire in two years. 13) A new reclamation plan shall be completed if extraction differs from the approved plan on file. 14) Any expansion or intensification shall require a new conditional use permit and potentially a rezone depending on the intensity of the use.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether existing conditions remain adequate to protect public health, safety and the character of the area. If determined to be adequate, staff recommends the LMC renew this conditional use permit with the conditions 1-14, no changes recommended.

Snow moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Rumpca Excavating/Sanden seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District for Bechel Sand & Gravel LLC, owner on property located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.

Staff Report – Brad Roy: Bechel Sand and Gravel acquired this property several years ago and continued the existing mining operation. Diesing Trucking obtained the original CUP for this site in 2006. Mining had previously taken place on this site, but was discontinued prior to 2001. Because the use was discontinued before 2001, no reclamation had taken place. Sand is mined from the site and waste industrial sand has been deposited in the mine. Portable processing equipment is utilized when necessary. The mine, prior to 2001, was considered to be “grandfathered.” Due to this, mining activities that took place prior to that time were not consistent with many of the mining regulations currently in place. All new mining activity has been consistent with the current rules and requirements. The property is in Section 5 in the Town of Isabelle and is zoned General Rural. The mining site has approximately 3.5 unreclaimed acres; the total extent of the mine will be approximately 6.5 acres. Access to the mine is off of 150th Avenue. Sand screening and sizing equipment is placed on the site when necessary. There is no blasting on this site; sand is extracted with excavating equipment and trucks. There are numerous residences located within close proximity to the site; staff has not received any complaints about this operation. A 100 foot setback will be maintained from property lines for all new extractions. Staff has contacted the Town of Isabelle Chairperson regarding this renewal but did not receive a response so he took that as there were no issues or concerns. Current conditions are listed as follows: 1) Hours of operation remain consistent with daylight hours Monday through Friday, Saturday hours will be 8:00 am to 4:00 pm. 2) Applicant shall receive all necessary permits from other agencies. 3) Applicant shall comply with DNR NR 135 Annual Reclamation permits. 4) A 100-ft setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement. 5) Applicant agrees that any unforeseen erosion issues that arise shall be address to the satisfaction of the county. 6) Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations. 7) This CUP renewal shall expire in two years.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if it is found that no changes or modifications are necessary to protect the public interest, public health, safety or character of the area, renew this conditional use permit with conditions 1 through 7, no changes recommended.

Aubart asked if this was an active site; is it currently being utilized. Matthew Health stated yes, it is pretty frequent; right now this is the main pit they get their bedding sand out of. So it is fairly active. Sanded asked what does it mean by; “mining had previously taken place on this site but was discontinued prior to 2001”? Roy stated there was a mine there; he doesn’t know when it started, as there was no permit on the file so it’s a grandfathered use. In 2001 with the State reclamation requirements, basically every mine was given the opportunity to just discontinue and you would not have to reclaim it. It was discontinued before that. Sanded stated when he read it, he felt it implied that it had been dormant since 2001. Roy stated it has been active since 2006.

Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Bechel Sand & Gravel LLC with conditions 1 through 7/Snow seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta state he has no travel/training requests for their consideration tonight.

Departmental Update and Future Agenda Items

Public hearing to consider a request for a rezone form RR-12 to General Rural Flex for Bailey Webster in the Town of Oak Grove. Request for Site Plan Review for two Commercial structures at the Red Wing Airport proposed by Wes Converse and Walters Buildings.

Motion to adjourn at 6:29 pm by Snow/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by T. Albrightson

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, November 2, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 16 th , December 7 th & December 21 st if necessary, all in 2016.	Chair
3	Approve minutes of the September 21, 2016 Land Management Committee meeting.	Chair
4	Discuss take action on a request to amend the conditional use permit for a Private Outdoor Recreation Use (commercial paintball playing field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural Flexible 8 District for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District for Bechel Sand & Gravel LLC, owner on property located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/21/16)

MINUTES - Pierce County Land Management Committee Meeting, September 21, 2016

Present: Jon Aubart, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Ryan Bechel and Shari Hartung

Absent: Joe Fetzer and Jeff Holst

Acting Chairperson Aubart called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 5th & 19th, November 2nd & 16th, all in 2016.

Approve Minutes: **Sanden moved to approve the September 7, 2016 Land Management Committee minutes/Snow seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining by the Pierce County Highway Department, agent for Gregory Bisel, on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Aubart invited Chad Johnson forward:

Staff Report – Brad Roy: Mr. Bisel owns a nonmetallic mining operation along Hwy 10. The Pierce County Highway Department is the current operator of the site. The mining site is approximately 17 acres and active mining area is approximately 6.5 acres. Mineral extraction has extended into the 100 foot setback on the north end of the property line, however this activity had taken place before 1998 and there has been no mineral extraction within the setback since that time. A mining road encircles the outside edge of the mine and crosses the north property line. Last we heard, the Highway Department is working with the property owners about a potential lease. The existing highwalls are approximately 100 feet in height. The original plan states that the highwalls will be benched to limit the heights to 35 to 50 feet. That plan also states that the mine will be restored to slopes of 3:1. A dry run is present on the property. The mining area has not disturbed the dry run at this point, but future expansion may become an issue. The rock is removed by drilling and blasting. Crushing and processing of the rock takes place onsite. Storage of the product is in the active mine as well as on an adjacent property across Hwy 10. Activity on the adjacent property is considered to be a pre-existing nonconforming use, so a permit is not required on that site. There are no wells on the property; therefore no washing takes place onsite. The operation typically removes 30,000 to 40,000 tons of material each year. Blasting takes place dependent upon when material is needed. Hours of operation are 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm. There have been no erosion issues on the south wall facing Hwy 10. A groundwater response plan has not been submitted at this time. The applicant is developing a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. It is anticipated that these plans will be completed in the near future and will satisfy condition #3. The water table elevation is approximately 20 feet below the mine floor. Staff contacted the Town of Salem Chairperson regarding this renewal. No concerns were reported. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this conditional use permit be renewed with the following conditions:

1. Hours of operation shall be 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm.
2. A 100 foot setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur.
3. A groundwater response plan detailing resources used to protect the quality of groundwater beneath and adjacent to the extraction operation and proposed response to encountering groundwater shall be submitted to the Zoning Office. The Zoning Office shall be notified if groundwater is encountered and further operations shall cease until the response plan is implemented.
4. Reclamation of the mine shall adhere to the original plan which states that slopes shall be restored to 3:1. Due to the location of the northern highwall and the potential for land development on the northern adjacent parcel highwalls or steep slopes would create unsafe conditions.
5. The owner shall notify the Zoning Office when the operator of the mine is no longer a public entity. Modifications to the permit may be required at that time.
6. Applicant shall comply with NR 135 Annual Reclamation Permits.
7. All blasting shall be done by a certified state licensed blaster.
8. Residential property owners located within 1000 feet of mining operations shall be given a two day notice of any planned blasting.
9. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation annually.
10. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
11. Applicant shall receive all necessary permits from other agencies.
12. This CUP is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
13. A renewal fee of \$200.00 plus \$20 per acre of expansion shall be paid.

Sanden asked about the benching when is that anticipated to be done or is that continued upon when material is needed. Chad Johnson state they have improved the benching since the last time we were here as far as reducing the amount of face that's at the 100 feet. The 100 foot face is right up against the north property line. So we have to finalize plans with the property owner to the north. **Sanden moved to approve the renewal of the conditional use permit for Nonmetallic mining for Pierce County Highway Department with conditions #1 - #13/Snow seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for Nonmetallic Mining (Gilles Quarry) by American Materials, agent for Muskie Proppant LLC, owner on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.

Staff Report – Brad Roy: This nonmetallic mining operation was originally permitted in 1978. American Materials received an updated permit in 1998. All permits have been kept current since that time. The operation involves mining dolomite/limestone and subsequent crushing and sizing. Muskie Proppant recently purchased this property and secured the mineral rights on adjoining properties with the intent of opening a new frac sand mine. This change in ownership has not impacted the American Materials operation. The mining site is approximately 9 unreclaimed acres. Access is off of Hwy 10. The surrounding uses are farmland and woodland. Overburden is stripped and stored onsite. Extraction is completed with drilling and blasting. All blasting is done by a certified blaster. Portable equipment is brought to the site for processing. The highwalls on the site are currently approximately 40 feet in height. There has been no blasting on the site since 2007, so no well samples have been collected since that time. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday. Renewal fees for this mine are \$200 + \$20 per acre of expansion. No complaints have been received about the operation. The Town of Union Chairperson was contacted regarding this renewal. No concerns were reported. The existing conditions are listed #1 - #10 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions remain adequate to protect the public interest, public health and safety and the character of the area.

If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions #1 - #10 with no changes recommended:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-ft setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells within 1000 feet of the mining operation before blasting commences and annually thereafter. Applicant shall not be required to test wells on properties where owners have not granted access.
6. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday.
7. Reclamation shall be according to submitted plans.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. Applicant shall pay renewal fees.
10. This CUP shall expire in two years.

Sanden stated he assumes with the new property and mineral rights that were purchased, when they start that operation they will have to come back. Roy stated he believes it would be two separate permits. The operations would remain separate. Until Muskie gets a final plan, what their plan would even impact this mine. There is a ravine in between the two. Pichotta stated additional mining on this existing parcel wouldn't require a new CUP it would be covered under this one. But he thinks Muskie intends to begin mining on the adjacent pieces. Roy stated for clarity, we would prefer to keep them as two separate CUP's. The mining would be completely different operations. **Snow moved to approve the renewal of the conditional use permit for Nonmetallic Mining for American Materials, agent for Muskie Proppant LLC with conditions #1 - #10/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for a Height Exemption, pursuant to Chapter 240-29D, by New Cingular Wireless PCS LLC (AT&T), agent for 3 proposed Wireless Communication Service Facilities to be located in; the NE ¼ of the SW ¼ of Section 7, T27N, R19W, Town of Clifton, Boni Lavelle-Bjerke, owner, the SW ¼ of the SW ¼ of Section 8, T27N, R17W, Town of Martell, Ernest Koukal, owner, and the NE ¼ of the SE ¼ of Section 23, T26N, R17W, Town of Ellsworth, Richard Holm, owner, Pierce County, WI.

Staff Report – Ryan Bechel: AT&T is seeking height exemptions to construct three new Wireless Communication Service Facilities (WCSF) exceeding 35' in height in the towns of Ellsworth, Clifton and Martell. The complete project proposals include erecting self-support wireless communication towers, constructing prefabricated equipment shelters and installing supporting equipment to improve broadband and wireless services in the county. Newly adopted code amendments removed conditional use permit requirements for Wireless Communication Service Facilities. AT&T is proposing three new towers. PCC §240-29D states, Industrial and commercial structure heights may be granted height exemptions by the Land Management Committee, provided that all required setback and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. PCC §240-41C(3)(d)1 states, "If engineering certification reveals that the WCSF support structure, or an existing structure, is designed to collapse within a smaller area than the requirements of §240-29D, the certified fall zone shall be applied to the setback requirements of §240-29D. PCC §240-27B addresses county highway setbacks and states county highways shall be 100 feet from the centerline of the road or 67 feet from the edge of the right-of-way, whichever is greater. PCC §240-27C addresses setbacks and states town highways shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater. PCC §240-88 Relevant definitions are listed in the staff report. Staff visited all 3 tower sites and observed no structures located within the 150 foot fall zones of the proposed tower locations. The Ellsworth tower is located on property zoned General Rural Flexible. Access to the Ellsworth site is off of 530th Street. The site, to be leased by AT&T, is currently agricultural land owned by Richard Holm. Neighboring land uses are agriculture to the north, east and south. There is a residence located on the property south of the proposed tower location. The tower is a 150 foot monopole. Right-of-way setback is 157 feet from 530th St; side

and rear yard setbacks are 125 feet. The applicant is proposing the tower to be 159'11" from the 530th St right-of-way and 197'7" from the nearest side or rear property line. No certified fall zone engineering is proposed for this site. The proposed Martell tower is located on property that is zoned Primary Agriculture. Access to the Martell site is off of 690th Street. The site, to be leased by AT&T, is currently Ag land owned by Ernest Koukal. Neighboring land uses are agriculture to the north, south and west; undeveloped land to the east. Two residences exist south and west of the proposed tower location. This is also a 150 foot monopole. Right-of-way setback is 157 feet to 690th Street; side and rear yard setbacks are 125 feet. In the proposed location, the tower is 165 feet from the 690th Street right-of-way and 165 feet from the nearest side or rear property line. Certified fall zone engineering certifications are not proposed for this tower. The Clifton tower is located on property zoned Rural Residential8. Access to the Clifton site is off of CTH F. The site will also be leased by and is currently pasture land owned by Boni LaVelle-Bjerke. Neighboring land uses are agriculture to the north and east, undeveloped land to the south. There is a residence located on the property west of the proposed tower location. This is also a 150 foot monopole. Required right-of-way setbacks are 182 feet to CTH F; 157 feet to 820th Ave. Side and rear yard setbacks are 125 feet. The applicant has submitted engineering certifications with a proposed certified fall zone of 75 feet, reducing right-of-way setbacks to 107 feet from CTH F and 82 feet from 820th Ave. Side and rear yard line setbacks are 50 feet. Applicant is proposing the tower to be 160'11" from the CTH F right-of-way, 347 feet from the 820th Ave right-of-way and 169'4" from the nearest side or rear property line. Staff will verify appropriate setbacks prior to issuing a Land Use Permit for the structures.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed WCSF height exemptions and determine, if any changes or modifications are necessary. If none, staff recommends the LMC grant approval of the height exemptions.

Sanden asked if there have been any violations. **Sanden moved to approve the height exemptions for New Cingular Wireless PCS LLC (AT&T) for 3 Wireless Communication Service Facilities to be located in the Towns of Clifton, Martell and Ellsworth for owners, LaVelle-Bjerke, Koukal and Holm/Snow seconded. All in favor. Passed.**

Discuss take action on draft Pierce County Outdoor Recreation Plan 2016 - 2020. Staff Report – Brad Roy: The Mississippi River Regional Planning Commission (MRRPC) has updated Pierce County's Outdoor Recreation Plan and has submitted a final draft plan for review and approval. The purpose of the plan is to provide information to help develop and improve the county's recreation resources and to make the County and other participating local governments eligible for WDNR grants. A draft of this plan was presented to the LMC on September 2, 2015. However, we did not receive a final copy from the MRRPC until recently. Staff wanted to present the plan again prior to public hearing due to the amount of time since last presented. The plan lists the County's "goals and actions" to improve the recreational opportunities in the county, which are listed on pages 45-46. These were developed by the Parks Committee on July 24, 2014 and the Land Management Committee on September 17, 2014. The draft plan is enclosed for your review.

Roy stated members from the Town of River Falls are here. They have their own plan which they would like submitted with that and will work with Mississippi River Regional Planning Commission as to the best approach to include their plan within ours. It should be pretty simple he just doesn't know what the best format for them is. Pichotta stated it will probably get stuck as an appendage under community plans. Roy stated we will work with them and then he will let the committee know what the best approach is.

Staff Recommendation: The LMC should review the plan to determine if any changes or additions are necessary and direct staff to schedule a public hearing to consider its adoption.

Sanden asked if staff has seen the River Falls Plan yet. Roy stated he has not. Sanden asked if you anticipate any conflict or inconsistencies between the two. Pichotta stated he doesn't imagine there would be any inconsistencies. Basically what this plan does is it enables projects that are discussed in here whether it be in the individual community plans or in this plan itself to be eligible for some funding sources that they wouldn't otherwise be. It lends credence to grant applications if it's included in this plan. Sanden asked on page 45 & 46, how do we read those that don't have a priority listing. Is that to be considered low priority or no priority? Roy stated he would consider it low, probably one of those that if the opportunity came up for a specific grant, we could pursue it but we aren't actively pursuing it. Sanden so this should be judged like a guideline not like a

Capital Improvements Program (CIP) or something. Pichotta no, we are not held to anything that is in here. It's not a roadmap that we must follow. It is projects that the county feels are worth pursuing. Sanden asked if he could characterize any substantial changes that have been made. Pichotta stated there have been no changes. He isn't sure what happened at Mississippi River Regional Planning but despite occasional phone calls to them to ask what the status was; we simply heard nothing back. Eventually we were provided with a draft which we had been waiting for. Sanden stated best case scenario, they had some ideas in mind for changes and that never made it through the process. Pichotta stated he thinks it became a low priority for them and they had more pressing projects. Snow stated some of these recreation goals have been completed; construction of the bridge to access the trails at the Trimbelle Recreation Area, we have constructed a new boat ramp at Trenton Island. He knows they are working on some grants right now for a new snowmobile bridge down by Vino. Chairperson Aubart asked for clarification, the River Falls Township addendum, all we are doing is just moving it forward to a public hearing. That could be added at any time. Pichotta stated that could be added at any time before or after the public hearing. The public hearing is an opportunity to hear whether folks think things should be changed or added. If a need is identified at the public hearing it would certainly be appropriate after that point to add it. Roy stated every Village and City submit something as part of this plan. He has no idea where they are on those processes, or if they are still gathering that information. That is typically left to the regional planning commission. Pichotta asked so we haven't gotten that information from Mississippi River Regional Planning? Is that our responsibility to collect those plans or does Dave Bonifas typically do it? Roy stated they've always collected it and handled it on their end. Snow asked if we need a motion to adopt this recreation plan. Pichotta stated no, just direct staff to schedule a public hearing. We didn't want to schedule a public hearing in front of the committee without you seeing it in the last year. Roy asked the River Falls folks if they had any questions. Katie Pata stated no, it sounds great.

Sanden moved to direct staff to schedule a public hearing to consider adoption of the Pierce County Outdoor Recreation Plan/Snow seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has two requests for your consideration; the first is for Kevin Etherton, our GIS guy, to attend the GIS/LIS conference in the Duluth Conference Center, October 26th – 28th. The cost is \$275.00 and he would need to stay in a hotel for a couple days. Pichotta reminded the committee that we get a grant for this sort of thing through the Land Records Program. So there will be no impact on our budget. The other request is for Shari Hartung to attend a Skillpath Seminar on Coaching and Teambuilding Skills for Managers and Supervisors. Training would be a daytime thing, with no hotel required and the cost being \$199.00. We have that available in our training budget. Sanden asked where the training is taking place. Pichotta stated in the City of Bloomington. **Snow moved to approve the two travel/training requests/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated at this point, we have no agenda items, no public hearings or renewals for the next meeting. He could come up with a house cleaning item or two but rather than do that he would suggest we take that evening off. Chairperson Aubart stated that sounds like a plan. So October 19th will be the next meeting.

Motion to adjourn at 6:25 pm by Sanden/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 21, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 5 th & 19 th , November 2 nd & 16 th , all in 2016.	Chair
3	Approve minutes of the September 7, 2016 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining by the Pierce County Highway Department, agent for Gregory Bisel, on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
5	Discuss take action on renewal of a conditional use permit for Nonmetallic Mining (Gilles Quarry) by American Materials, agent for Muskie Proppant LLC, owner on property located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.	Roy
6	Discuss take action on a request for a Height Exemption, pursuant to Chapter 240-29D, by New Cingular Wireless PCS LLC (AT&T), agent, for 3 proposed Wireless Communication Service Facilities to be located in; the NE ¼ of the SW ¼ of Section 7, T27N, R19W, Town of Clifton, Boni Lavelle-Bjerke, owner, the SW ¼ of the SW ¼ of Section 8, T27N, R17W, Town of Martell, Ernest Koukal, owner, and the NE ¼ of the SE ¼ of Section 23, T26N, R17W, Town of Ellsworth, Richard Holm, owner, Pierce County, WI.	Bechel
7	Discuss take action on draft Pierce County Outdoor Recreation Plan 2016-2020	Roy
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(9/9/16)

MINUTES - Pierce County Land Management Committee Meeting, September 7, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 21st, October 5th & 19th, all in 2016.

Approve Minutes: **Snow moved to approve the August 17, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) of 30 acres from Light Industrial to General Rural Flexible 8 by Lee Nesbitt, agent for Leon & Donna Nesbitt, owners on property located in part of the SE ¼ of the NE ¼ of Section 35, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Andy Pichotta: In 2008, the LMC and County Board of Supervisors approved the rezone of 38.39 acres from GRF8 to LI. That rezone was done to permit a commercial nursery and retail shop. The applicants are now requesting to rezone 33 acres back to GRF8 because the use has been agricultural (crops, tree production, apple orchard, garden and berry patch). The 5.39 acres with Nesbitt Nursery retail, shop and storage buildings will remain in the LI district. Commercial uses are conditionally permitted in Light Industrial zoning district. The parcel is located in Section 35, Town of Oak Grove. Adjacent land uses are agriculture, residential and forest. The entire property is surrounded by General Rural Flexible8. Pierce County’s adopted Comprehensive Plan states: “The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone.” The Town of Oak Grove recommended approval of this request on 3-21-2016 and stated, “Surrounding property is GRF8, so the change would not create a problem with the surrounding uses.” The Town cited Goal #2 of the Land Use chapter – promote and encourage growth and development in appropriate areas within the Town of Oak Grove. The Town noted the need to protect existing agricultural lands (Objective 2) and also stated that the rezone “fit in appropriately” with neighboring uses. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts are included in the staff report as is the value of the land that is proposed to be rezoned. You will see that about 30% is prime farmland, 35% is farmland of statewide importance.

Staff Recommendation: Given that the Oak Grove Town Board of Supervisors has determined this proposed rezone of 33 acres from Light Industrial to General Rural Flexible 8 is consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked if by peeling off the majority of the property and having five acres left over, do we run the risk of spot zoning? Pichotta stated that he would say no. A spot zone is when someone who is similarly situated couldn’t expect the same treatment or a land use decision that is not consistent with one’s comprehensive plan. Because it’s consistent with their comp plan and they have determined it to be so, he would suggest that takes it out of

that realm. Sanden asked about the size of five acres and that it's not adjacent to Light Industrial Zoning does that come into play? Pichotta suggested that you could have an issue only if it wasn't consistent with a comp plan – for example if you had a situation where you had light rail coming through and you determined that it was appropriate for a small area where the light rail was going to stop to be zoned commercial/industrial, or something like that. Even if it was a very small piece it could be reasonably considered to be a stand-alone district as long as it was consistent with the comp plan. Chairperson Fetzer asked the applicant if he had anything to add. Mr. Nesbitt stated not at this time. **Holst moved to approve the request for a Map Amendment (Rezone) from LI to GRF8 and forward a recommendation to the Board of Supervisors/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for farm machinery and parts sales in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-36D, for Scott & Gayle Knight, owners on property located in the NW ¼ of the NW ¼ and the SW ¼ of the NW ¼ of Section 11, T26N, R17W, Town of Ellsworth, Pierce County, WI. Chairperson Fetzer invited Scott forward:

Staff Report-Ryan Bechel: Mr. Knight operates Knight's Tractor, a used farm machinery sales and machinery parts business. The business has apparently been in operation since the applicant purchased the subject property in 2003. Staff became aware of the operation following an anonymous complaint. In addition to the business, the applicant farms the surrounding agricultural land. The applicant sources farm machinery and parts from the surrounding area to display them for sale at the property. Equipment is also advertised on the business's website which is the primary avenue through which customers view and purchase his items. The 37.81 acre property is located in the Town of Ellsworth. The property is zoned General Rural Flexible. Pierce County Code 240-36D permits farm and home based businesses subject to the following four perimeters:

1. The farm and home based business shall be conducted by the owner of the dwelling unit. No more than eight persons not residing on the site may be employed in the business.
2. If located in the dwelling unit, the farm and home business shall occupy no more than 50% of the dwelling unit. If located in an accessory building, the farm and home business shall not occupy an area greater than 5,000 square feet.
3. Minimum lot size shall be 5 acres.
4. Such other conditions as specified by the Land Management Committee pursuant to Chapter 240-76 shall apply.

The property is the applicant's primary residence. The applicant utilizes a 32ft x 40ft (1280 sq ft) existing shed for the business. No new structures are proposed with this request. The applicant employs one part-time employee. Adjacent zoning districts are Primary Agriculture to the north and west; General Rural Flexible to the east and south. Adjacent land uses are agricultural and low density residential. Lot access is located off of US Hwy 63 on the west side of the property. Equipment utilized for this business includes a tractor-loader and a front-end loader. The equipment is also used in the applicant's farming operation. The main activities on-site are the loading and unloading of trucks with machinery and equipment. Machinery is trucked to the site via semi-trailers and offloaded at an off-street location near the applicant's storage buildings. Shipment delivery is anticipated at once per week during peak periods. The business currently occupies approximately 6.5 acres. The majority of the equipment is situated approximately 500 feet from the centerline of US Hwy 63 near the center of the property and towards the eastern property line. The applicant stated that he displays some machinery in the south western portion of the property parallel to US Hwy 63 after fall harvest. Pierce County Code does not specify a limit for exterior operational space for a Farm and Home Based Business. The applicant indicated he does not desire to expand operational space at this time. Hours of operation are proposed to be from civil daylight to civil sunset, 7-days per week. The lot is typically not open to customer's at-will. Sales are primarily conducted over the phone, on-line, or in-person by appointment only. Pierce County Code §240-54 establishes parking requirements and stipulates in cases where a uses parking requirements are not specifically listed, the minimum number of parking spots shall be determined by the Zoning Administrator based upon the requirements for similar uses. A minimum of 3 parking spots shall be provided, plus one for each employee on site at a given time. A minimum of one parking stall shall be ADA compliant. Ample room exists on the

premises to fulfill parking requirements. A restroom is available for customers within the existing residence. P.I.G. of Hager City, WI provides solid waste disposal bins and removal services for the business. There is no signage associated with the business on the property. The applicant is not proposing a sign at this time. An existing “dusk to dawn” light pole provides exterior lighting for the property. No additional exterior lighting is proposed. The Ellsworth Town Board recommended approval of this request on 8-1-2016. The Town recommendation stated “chapter 7 of the Town Comprehensive Plan addresses agriculture and supports economic activity and development that does not detract from the rural way of life in the town. Mr. Knight, in an agricultural community and his home based Ag business of selling farm equipment and machinery conforms to the objectives of supporting agriculture. The Town promotes maintaining the aesthetic qualities of the town and to protect the natural resources in the town.” The Town Board also cited the following concern’ “The Town is concerned about the amount of equipment Mr. Knight has on display and does not want his whole 38 acres filled with equipment.” PCC 240-76G discusses expiration of Conditional Use Permits and states, “All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed Farm & Home Based Business with the following conditions:

1. Activities shall be conducted as presented in the application.
2. The business shall be conducted by the owner of the dwelling unit.
3. There shall be at least three customer parking spaces plus one for each employee; a minimum of one parking stall shall be ADA compliant.
4. Machinery shall not be loaded or off-loaded in the US Hwy 63 R-O-W.
5. No machinery shall be located in the US Hwy 63 R-O-W.
6. Exterior operational space for storing and displaying equipment shall be limited to 10 acres.
7. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
8. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. Barry Barringer, Trenton Township, asked if he could ask a few questions after the committee has made their decision. He is just wondering about Farm & Home Based Businesses and how that figures into the Pierce County Comprehensive Plan and other Township Comprehensive Plans? Is there a definition for rural businesses at this time where you don’t have to have a residence involved? Where are we on that? Pichotta stated yes, we do allow rural businesses. We have three major classifications for rural businesses: Home Occupation which is allowable even in the residential districts, Home Business which has a two acre minimum lot size, also limits on the size you can use in an accessory structure. Then you have the Farm & Home Based Business. All of those categories are essentially intended to allow one to pursue entrepreneurial activities and to basically use their home as a business incubator to grow their business and if it gets to a certain size, where they require more than the 5,000 square feet in an accessory structure or eight employees at any one time, the expectation is that they would either limit it to that size or they would move it to an appropriate district whether it be Commercial, Industrial or Light Industrial. After our last comp plan update, we created a number of different business categories, mostly relating to agri-business, agri-tourism, nature based operations. So if one wants to do something of that nature, there is not necessarily the requirement that there have to be a residence present on the property. Those are also permitted through the conditional use permitting process. As far as the plans of the Town and the County, basically what the County has said in their comprehensive plan is that they will seek to further the goals and objectives of the town’s adopted comprehensive plan. If a Town wanted to have an impact on a particular use that was conditionally permitted, what they would do, would be to cite the goals, objectives and/or policy that are applicable in their town’s comprehensive plan and describe how their recommendation would further their comprehensive plan. If it was a reasonable interpretation of their plan there would be the expectation that this committee would follow

that recommendation. Pichotta stated that he is not sure if that answers your questions, but hope it does. Mr. Barringer stated he thinks it does, thanks. Chairperson Fetzer asked if there is any further public comment. No more public input. **Public hearing closed. Holst moved to approve the Farm & Home Based Business for machinery and parts sales for Scott Knight with conditions #1 - #8/Snow seconded.** Holst stated Scott provides a service to not only the ag community in the area but the ag community throughout the United States. He does a good job doing what he does, it's relatively attractive for what he does and if he tries to expand it much more than from where he is, he's going to get in that wet whole he will lose his inventory. He's kind of limited as to what he can do. **All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Bill Holst forward: Jeff Holst recused himself from discussion and voting on this issue due to possible conflict of interest.

Staff Report – Brad Roy: The applicant received a conditional use permit (CUP) for nonmetallic mining to expand an existing mining operation on September 3, 2014. A screening plan was presented and approved by the LMC in March, 2015. The screening plan and operation were again discussed in May 2015 and a modification was made to the screening plan relating to tree height. The expanded area is approximately 22 acres and the area to be mined is approximately 20 acres. The applicant anticipates that new area will take many years, up to 50, to extract all of the material. The adjoining pre-existing nonconforming mine has 110 open acres. A small Ready-Mix plant is also located on the adjoining site. The LMC approved an application for a sand processing and rail load out facility on a portion of the adjoining property. The property is zoned Industrial and General Rural Flexible. Access to the site is off 830th St. The site is currently used for agriculture. Surrounding uses include mining, agriculture, industrial uses and higher-density residential. The required berm has been constructed and required trees planted. The applicant owns a farm site on the property. The structures will be demolished when the rental agreement expires. There will be no blasting or chemicals used, extraction will be done with frontend-loaders. The mined materials will be hauled north to the pre-existing nonconforming mine for processing. Processing will include crushing, screening, sorting, grading and blending with use of conveyors, screeners, stackers and other equipment. All washing of the sand will take place in the pre-existing nonconforming mine. The washing will be needed to remove fines and will use an existing high capacity well. Servicing and fueling of equipment will take place in the pre-existing nonconforming mine. Extractions will go approximately 40 feet below the existing grade. This will result in the floor of the pit elevation of 712 and only a few feet above the water table. Ground water has been encountered in the adjoining mine. When most of the mineral deposit above the water table has been removed, the applicant will explore the possibility of mining below the water table. This decision will need to be made at a future time. The applicant cannot determine if mining below the water table will be economically feasible many years into the future. The entire site, new and existing mining areas, will be internally drained. The applicant intends to operate 24 hours per day, seven days per week. The application states that mining will not occur within 100 feet of the property lines, which is consistent with the Mining Policy. The Mining Policy also requires that no mining may occur within 200 feet of existing residences. The reclamation plan states that the proposed post-mining land use will be industrial uses, which is consistent with the current zoning district. A portion of the site is cataloged as an archeological site. The applicant is working with the State Archeologist on this issue. It was recently verified that a Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan are not required for this site by the DNR. Those plans are typically the major component of a Ground Water Response Plan which is required by Condition #4. Due to questions about whether the plans were required, the Ground Water Response Plan has yet to be completed. Well tests were completed in 2015 and submitted to the Department. Staff has yet to receive tests for 2016. The Town of Trenton Chairperson was contacted regarding this renewal. At this time, staff has not received any comments or concerns. The existing conditions #1 - #18 are listed in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether the current conditions remain adequate to protect the public health, safety and character of the surrounding area. If determined to be appropriate, staff recommends the LMC renew this conditional use permit with the following

conditions, as well as any additional conditions deemed appropriate: (Conditions 3, 12, 16, 17 and 18 have been removed due to completion of requirement).

1. Activities shall be conducted consistent with the application unless modified by another condition of approval.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. A ground water response plan which details resources to be used to protect the quality of ground water beneath and adjacent to the extraction operation, and a proposed response to encountering ground water, shall be provided **within 6 months**.
4. Prior to extraction of any material from below the water table the applicant shall present proposed plans to the LMC for review and approval.
5. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
6. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to any material extraction from the site.
7. A 100-foot buffer shall be maintained from the active mining to the property boundaries. A 200-foot buffer shall be maintained around existing offsite residences.
8. Hours of operation within areas zoned General Rural Flexible (GRF) shall be limited to 6am to 7pm Monday through Friday.
9. Testing of the wells on properties within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, annually. Base line data shall be obtained prior to mineral extraction. Test results and the base line data tests shall be provided to the Department of Land Management.
10. Applicant shall obtain all necessary permits for structures, signs or activities not discussed in this plan from the Zoning Office.
11. Any lighting shall comply with the Land Management Department Policy.
12. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.
13. This permit shall expire in two years.

Bill Holst stated he ordered another round of tests for the wells for this year. After this year, he doesn't see that he should be required to do that every year because we will have completed a baseline and he is not doing any mining on this property below the water table. He thought the purpose was to establish the baseline and that he feels will have been completed. Chairperson Fetzer asked how many years he has done this. Mr. Holst stated this is the second year. Chairperson Fetzer asked how many years do we typically require? Pichotta stated with WISC we have them testing every year. Pichotta stated really the baseline is established to enable one to use the results of the yearly test to determine whether or not something has changed. He would be hesitant to do away with the requirement in its entirety because the proximity to homes. We don't require this for all nonmetallic mines, it's only mines that are operating in close proximity to the water table, like WISC who is underground but are in close proximity to the water table. He would be hesitant especially when we hold others to that standard, to just do away with it. The other thing that makes this site particularly unique is the proximity to residential - you have the industrial area and then there is the ring of houses around it. The reality is this protects Mr. Holst too, if someone has concerns about their water, he can point to the well test results. He thinks it may be appropriate to have a discussion at some point; perhaps there could be a limiting of the number of wells tested, but enough to ensure that the sampling is adequate. Chairperson Fetzer asked how many houses are within the 1,000 feet? Mr. Holst stated there's only 11 that would let us do the tests, the others wouldn't let the guys in to test their water. It's about \$2500.00 and it goes up every year. Pichotta stated the concern isn't necessarily that they are mining in the ground water, it is a concern if there was a spill of some sort. Testing is how one would figure out if that occurred. Sanden asked if the residences are "down river" as far as the ground water flowage? Pichotta indicated that they are. Sanden asked what if we look at these well test for several years and we didn't see any change then we could revisit and do it every two or three years. Pichotta indicated that discussion would be appropriate. Mr. Holst thanked the committee for their consideration. Chairperson Fetzer asked Dr. Sanden what he would think. Sanden stated after three years if there was no change, significantly,

then maybe go to every two years. Maybe we could consult a hydrologist and see what the wisdom is, if they would agree with that. Roy stated, if this held, it will be renewed in 2018, so you would have 2016, 2017 tests possibly 2018 test before the next renewal. That would give you three or four, we can compare numbers. Sanden asked if you would have to wait for a renewal to make changes. Roy stated we couldn't do it administratively. It would have to come to the committee for modification. Sanden asked if he can direct staff to talk to a hydrologist to see what they would recommend, he would be open to it if things were stable. Pichotta stated absolutely. He thinks as long as there is a methodology that can be followed and can reasonably address concerns, it's certainly worthwhile to discuss. Chairperson Fetzer would be comfortable with that also. Mr. Holst asked if Pierce County Highway Dept does that every year. Roy stated the adjoining property there is a grandfathered mine. Pichotta, pre-existing, nonconformity, we don't have the ability to regulate pre-existing, nonconformities. Town of Trenton didn't come into County Zoning until the late 80's, anything existing prior to that time, especially when it comes to gravel pits, we've got no ability to regulate. **Sanden moved to approve the renewal of the conditional use permit for Nonmetallic mining for William F. Holst III, due to the fact this is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #13/Aubart seconded. All in favor. Passed with Jeff Holst not voting.**

Discuss take action on Pierce County Comprehensive Plan survey results and proposed implementation of plan. Staff Report – Ryan Bechel: In an effort to collect as much input from the public as possible, the Pierce County Land Management Department and Committee developed an online citizen survey to gather opinions and identify attitudes of the various county stakeholders. The survey was made available to the public for response over a 6 week period from June 20th through July 31st 2016. As anticipated, the number of survey participants was substantially lower than that of the survey conducted in 2009 with a total of 117 citizens participating in the survey. The goal of the survey was to gather as much information as possible to develop an understanding of how community attitudes may have evolved since the plan's initial adoption by capturing a snapshot of community attitudes concerning planning, development and citizen-government interactions. The information gathered through the survey will be used to help evaluate the Comprehensive Plan's goals, objectives and policies. Additionally; staff reviewed survey data to help identify and prioritize implementation strategies for the implementation element of the comprehensive plan update.

Survey Methodology

An efficient, economical, user-targeted questionnaire delivered via an online format was developed by Land Management staff and approved by the Land Management Committee. The "targeted" survey format divided participants into 3 main cohorts (Residents, Non-resident Landowners, Small Business Owners) based on respondents most prominent role (self-identified) in the Pierce County Community. This method was selected as it allowed questions to be tailored to each specific cohort, in addition to general questions provided to all participants. Knowing the "role" a participant plays in the Pierce County community allowed staff to foster a deeper understanding of community attitudes from responses, while operating on a lower volume of survey respondents. The "Survey Matrix" graphic provided on the next page, illustrates this survey format. Participants were asked approximately 12-16 questions depending on their selected cohort, with an estimated 5 to 10 minutes required to complete the survey. Public access to the survey was made available through the Pierce County Website's main page and via a link on the Pierce County Land Management Department's main web page. Notices of the survey were published in the Pierce County Herald and provided on the Pierce County web page. Additionally, notices were mailed to towns and municipalities with instructions for accessing and completing the survey and encouraging participation. There is the survey matrix in the staff report. Basically everybody got asked a common question set of general questions and those that identified themselves as elected officials got another specific question set and there were three other question sets tailored for the non-resident land owners and the small business owners.

Introductory Question

Diving into the results, the first big question looking at what respondents identified as a role in the community; 89% identified as residents, 9% as small business owners and only 2 respondents say they were non-resident land owners.

Next question looked at whether they were an Elected Official.

83% did not hold an elected office; 19% did. Of those, that would be a total of about 19 respondents and 5 of those were in the city or village which we didn't direct them to the Elected Officials question set. Chairperson stated he found it interesting that no County Board members responded to the survey. Holst suggested some of them might have taken them under a different guise.

Common Question Set

Bechel stated the results for the common question set asked of everybody first looking at whether the respondents were in the unincorporated or incorporated areas, about a 60%/40% in favor of the unincorporated. The next question asked them to rate the current efforts of Pierce County to regulate and guide development. It is fairly equal distribution there, 36% being the greatest for About the right amount of planning and regulation; same question asked of respondents regarding the Town. About 50% said it was the right amount of planning and regulation and then it was split between too much and not enough. Sanden asked what is 17 out of a total of how many for Pierce County? Bechel stated 41,019. Sanden stated a fraction of 1%. Holst stated he doesn't think it's real accurate. Pichotta stated certainly not statistically valid. Bechel stating moving on, what type of additional land use regulation would you support? About half the respondents said ground water protection, larger minimum lot sizes came in the lowest at 13%. What is your opinion of expanding/developing additional areas for community/industrial/retail use? Half of the respondents said Focus development to existing business districts or Develop commercial/retail areas in cities and villages. Very few respondents said they were against any expansion or development, only 3%. Sanden asked, they were allowed to select more than one? Bechel said correct. The next table is asking if respondent's felt there was a need for any more of the following: a 50/40% split with everything a yes with the exception of major discount retailers, the majority of them said no. Dining establishments probably had the highest yes rate at 65%. Have you interacted with the Land Management Department within the last two years and if so, which of the following would most improve your experiences with Pierce County Land Management. Over half the people hadn't had any interaction with our department and of those people that had, the highest number said no changes and services are satisfactory at 16%. Pierce County Comprehensive Plan is a long-term guidance document designed to capture the "vision" for the future held by the Pierce County community. Which of the following statements do you feel shares your "vision" of Pierce County's future? The top three answers there would be protection of streams, rivers, natural areas, maintaining Pierce County's rural character and investment and development are focused in existing communities to ensure they remain functional and desirable. Sanden stated even though it's a small sample it does reflect what we saw in the bigger samples. Due to strong community support identified through the 2009 comprehensive plan development process, Pierce County adopted new regulations broadening opportunities to establish businesses in agricultural districts (e.g. agri-business, agri-tourism, nature-based operations). Do you feel there is a need for additional regulatory flexibility in agricultural districts to accommodate entrepreneurs and small business owners? Basically a split between no change and didn't know or have no opinion. Same thing for regulations should be either tightened or relaxed. They weren't leaning either one way or another on that one.

Resident Specific Question Set - about 104 people for this one.

What characteristics about Pierce County do you find most desirable: rural atmosphere stuck out and so did natural beauty. This kind of falls in line with what we saw in the last survey. Same question but least desirable: lack of retail options, half the respondents selected that one as the least desirable characteristic.

Non-Resident Landowners Specific Question Set

Nothing much to look at here, there were only two people and they both chose different sides of the road.

Small Business Owners Specific Question Set – 11 respondents for these questions.

Characterizing their business, about five said services industry, five said ag production and one in manufacturing. Which of the following statements most characterizes your opinion of the Pierce County business climate; about half said unwelcoming, not business friendly and a tie between don't know and no opinion of welcoming; business friendly. The note on the side, when you break down the data a little more, about half the small business owners, five were in the municipalities so breaking these back on how they feel about Pierce County specific. Rules and regulations may not be a close relationship as the data shows on here. Next question In your experience, how do Pierce County's land use procedures (permitting fees, timelines,

inspections, and other requirements) compare to other levels of jurisdiction your business is subject to, such as federal, state, municipal and town land use procedures? Over half said Pierce County's procedures are similar to those of other jurisdictions. Pierce County has sought to involve towns in conditionally permitted uses by requiring conditional use permit applicants to solicit a town recommendation concerning a proposed use. In your experience, how has this requirement shaped your view of the conditional use permitting process? 36% thought it was positive and provided an opportunity to diffuse conflicts and address complaints and the other half thought it was prohibitive. With respect to your business, what characteristics about Pierce County do you find most desirable. Rural atmosphere, Natural beauty, Ag community those same kind of themes were the top responses there. The flip side of that, which do you find least desirable? None of the above was by far the number one, with maybe a third saying lack of available workforce.

Elected Officials General Question Set

Which of the following best describes your level of familiarity with Pierce County's Comprehensive Plan? All over the board with somewhat familiar and not very familiar. Which of the following best describes your level of familiarity with your town's comprehensive plan? 67% or two thirds said they were very familiar with their town's comprehensive plan. Chairperson Fetzer stated that doesn't seem surprising to you? I guess with the 100 people that came on maybe they're the ones that read their town's comp plan. Pichotta noted that we did send a notice to the town boards asking folks to participate in the survey. Bechel stated this sample size is actually fifteen people that participated and we excluded those that were elected officials and part of the city and villages. Pierce County, through its comp plan, establish a process through which a town can further the goals and objective of their adopted comprehensive plan when considering the establishment of conditionally permitted uses. How would you characterize your understanding of how this mechanism functions? Pretty scattered responses, once again, fully understand the legal concept had the highest at 33% and pretty close was somewhat familiar and completely unfamiliar with the mechanism. As a town elected official, how often do you estimate your town consults the adopted comprehensive plan when considering Conditional Use Permits and/or Rezone applications? 40% said usually, Never received 6%. To the best of your knowledge, has your town adopted any of the following? A general spattering through there, about two-thirds has the ones that we would expect, subdivision/land division ordinances, mining ordinances, those sorts of things. The last one, just asking if they recognize any opportunities for any governmental cooperation amongst state, county, municipal and town governments. They had an opportunity to fill in and there we got three responses as well. Any thoughts or questions? Holst stated he believes that whoever mentioned the poor internet service is right on the nuts here because in 2007 we mailed out 25,000 surveys and we had a response of 44%, now today we did it over the internet the median of choice and what did we get 117. So he thinks maybe the mail worked. Pichotta stated you have to remember we spend a whole bunch of money on that last one. This one was just a kind of testing the winds. Sanden asked if staff saw any significant changes or difference from what we saw last time? Pichotta stated not really. He thought that was encouraging, especially given that a lot of the respondents were from the town level and the results that we got are relatively positive. Holst stated he thought that when we did it the way we did it that we could have gotten a skewed response if we would have had an organized group that wanted to screw the thing up they could have. We didn't see that. Sanden stated that means that probably they felt it was open and fair. Bechel stated moving on into Implementation.

Introduction

The comprehensive plan is the primary instrument the county will utilize to plan for and guide the growth and development of Pierce County over the next twenty years. To be effective, this plan should be actively used as a tool to guide decisions concerning the included elements such as land use, planning, management, public health and services, transportation, housing and economic development. The plan has been prepared to present a vision for the county in terms of population growth, land development and infrastructure development. This vision simply identifies an intention – a statement of what the county would like to achieve. However, this statement says very little about how it can be achieved. This element is intended to provide a link between the vision, goals, objectives, policies and reality through the various proposed implementation actions that can be used to translate the plan into action. Having the appropriate tools to implement the action steps in this comprehensive plan is critical. There are several regulatory tools and administrative mechanisms/techniques that can be utilized to implement the policies. This chapter summarizes many of the action steps the county could take to implement

the policies. This chapter also identifies actions that can be cooperatively taken by the county and individual communities and by the communities themselves, to implement the policies in the county comprehensive plan. It has been said that a plan is only as good as its implementation. Ultimately, in the case of Pierce County, local governmental bodies (elected and appointed) will make decisions that determine whether or not the plan can be realized. All of this affects how the plan relates to the future development of Pierce County. Over the twenty-year life of the plan, hundreds of decisions will be made that will impact its success. Therefore, it is important that each of these decision-making bodies understand the basic tenets of the plan and make decisions and recommendations with it in mind.

Amendments

The comprehensive plan is considered to be a flexible guide to decision making rather than an inflexible blueprint for development. Decisions regarding the location of different land uses are based on prevailing knowledge of the characteristics and expressed priorities of Pierce County leaders and its residents, as well as anticipated growth and development patterns. As this knowledge or comprehension of these and other factors expands and makes existing proposals undesirable, the plan may require amendments. Amendments should be made only after a realistic evaluation of existing conditions and the potential impact of such a change is made. Amendments should not be made merely to accommodate the daily pressures of development and/or government. It is important to recognize that planning is a process that should occur on a continuing basis if the county is to take advantage of new opportunities as conditions change. An effective planning program should be continually reviewed and updated to reflect the processes of actual development and the changing attitudes and priorities of the County's residents and landowners. Resource information should be gathered and studied to determine trends and reevaluate projections, forecasts and the plan. In five years (ten years at a maximum), the comprehensive plan should be again reviewed to make any necessary policy and recommendation changes in relation to the direction and character of community development at that time.

2009 Implementation Plan – this highlights a few of the accomplishments we've had since 2009.

Agricultural, Natural and Cultural Resources – working with towns to ensure their comp plans recognize a responsibility in ensuring continuance of ag and protection of cultural and natural resources. Sixteen of the seventeen towns now have comp plans since Pierce County adopted theirs in 2009. Under Economic Development the ag business operation zoning code amendments which Andy recited tonight. Those are a part of that as well as some code amendments; wireless communication service facilities. Looking at Land Use, Emily worked on a map depicting county wide plat development locations. Under Planning we created the form and updated the Town Recommendation Form that's used for all CUP's & Rezones. Parts and Rec Plan was completed and plan adoption is this year yet. On the back page, mostly dealing with technology and electronics; all of our minutes, staff reports are now available on-line. Sanitary info is now all on-line and some of our permitting procedures and brochures are all on-line, as well as our interactive GIS. Various internal data bases have been created to house all that information as well. That was the existing Implementation Plan, the new one pretty much mirrors that. A lot of it has stayed in and When Action Completed has been changed from a specific date to On-going for the most part. A few of the new proposed ones under Ag, Natural and Cultural Resources support the establishment of Ag Enterprise areas within the county. Something we have been doing as they have arisen. The same case when considering impacts to known cultural resources when reviewing development plans and/or permits. Another thing that we have been doing, including it now as an implementation step in our comprehensive plan. Under Land Use, economic development did not change anything in there unless the committee can think of anything in these steps as we go through them. Land Use: proposing to add review in non-structural lot uses and standards in our open-space uses, particularly looking at clarify some of our language. Looking at camping, along those lines. Housing, nothing has been added or removed from there. Transportation, added work with towns and the DOT to ensure safe and efficient truck routes during CUP's as appropriate. Something that we regularly do, mostly looking at those with our commercial, industrial and light industrial uses for heavy trucks. Community Facilities, Planning, Regulatory Techniques, Finance and Budgeting; nothing has been changed in there aside from changing some of the dates to becoming an On-going program. Under Intergovernmental Relations the last point there, continue to explore opportunities to enhance awareness and understanding of Pierce County planning & zoning department policies and procedures. Through the comprehensive plan process we have received a couple of suggestions that points

for more planning or more informational opportunities. So maybe looking at something along those lines in the future, implementation action stuff. Information, about the same as well. Pichotta stated jumping back under Finance and Budgeting, evaluate the land management fee schedule to ensure adequate recapture of costs of providing services. If you recall we touched on that a few years ago and ended up not really doing too much of anything with it, we will broach that subject again and just see where we are at with that and see if there is any desire to do anything in regard to that. As far as the opportunities to enhance awareness and understanding, actually he is thinking we have been approached from some folks in the Town of Trenton who are interested in having staff put together an informational sessions relating to some of the concepts in land management and zoning that being density transfers, subdivision review, floodplain, those sorts of things. So we are thinking we will put together a series of workshops, that we will hold over the course of this winter and we will invite anybody from Town Planning Commissions or Town Boards who are interested in getting some additional information or additional understanding, to come in and attend those. It's our intention to actually act on a couple of these things relatively quickly. A lot of this is on-going and as we worked our way through the entire plan he was happy to see that we did a good job in the first place so it didn't require too much, seemed like our direction was good and the folks that are subject to county zoning seem to be working well within it and recognizing that it is a kind of partnership between the county and the towns. All in all he is happy with how this has gone. Should the committee approve this tonight, our next step is to schedule a public hearing. It's a different kind of public hearing. It's a Class I so you have to advertise it a month out. In the meantime, once that is scheduled, we would send out copies of this on disk to all the municipalities located within the county as well as those touching it, Goodhue, Red Wing, Dunn, Pepin, those sorts of folks and give them an opportunity to provide comment and hold the public hearing. Once the public hearing is held, it would be moved on to the county board of supervisor and F & P as an ordinance that requires two readings prior to adoption. Sanden asked if he found this process helpful kind of like internal review and see where you want to go. Pichotta stated yes, he thinks so, he thinks it was some validation that the committee did the right thing as far as kicking the door open as far as Agri-Business, Agri-Tourism. He thinks that was good and well accepted. Holst stated our vineyards and some of that stuff sometimes the establishments after a while become accepted but initially there is some feedback. Chairperson Fetzer stated there was some trepidation early. Pichotta stated he doesn't disagree but anytime you are proposing a change from what is there now, many of the people in proximity will be instinctively against it. Holst stated not all of them run as smoothly as others. Sanden stated you put a lot of time into it, he was hoping you would get a nice benefit out of the process. Pichotta stated it's good too, to reassess the demographic data and see if anything has substantially changed in the county and see if that in of itself warrants some changes. There is definitely value in it. **Snow moved to accept the Pierce County Comprehensive Plan as presented and proposed implementation of plan/Sanden seconded.** Aubart asked if this goes through 2035, what it says on here. Pichotta stated the timeframe is usually out twenty years but you revisit it, typically in five or ten. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Renewal of a conditional use permit for nonmetallic mining for the Bisel pit in the Town of Salem
Renewal of a conditional use permit for nonmetallic mining for the Gilles Quarry by American Materials, agent for Muskie Proppant in the Town of Union

Chairperson Fetzer asked if there has been anything happening with Muskie Proppant

Request by Verizon Wireless for Height Exemption on 3 proposed towers, one is located in the Town of Clifton, one in the Town of Martell & the other is in the Town of Ellsworth.

Final draft of the Rec Plan back from the Mississippi River Regional Planning Commission, we're going to bring it to the committee prior to holding a public hearing.

Motion to adjourn at 7:08 pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 7, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 21 st , October 5 th & 19 th , all in 2016.	Chair
3	Approve minutes of the August 17, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a Map Amendment (Rezone) of 30 acres from Light Industrial to General Rural Flexible 8 by Lee Nesbitt, agent for Leon & Donna Nesbitt, owners on property located in part of the SE ¼ of the NE ¼ of Section 35, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for farm machinery and parts sales in the General Rural Flexible District, pursuant to Pierce County Code Chapter 240-36D, for Scott & Gayle Knight, owners on property located in the NW ¼ of the NW ¼ and the SW ¼ of the NW ¼ of Section 11, T26N, R17W, Town of Ellsworth, Pierce County, WI.	Bechel
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
7	Discuss take action on Pierce County Comprehensive Plan survey results and proposed implementation of plan.	Bechel
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(8/26/16)

MINUTES - Pierce County Land Management Committee Meeting, August 17, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 7th & 21st, October 5th & 19th, all in 2016.

Approve Minutes: **Snow moved to approve the August 3, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on proposed amendments to Chapter 240 of the Zoning Ordinance relating to the removal of Shoreland regulations and to create Ordinance Chapter 242- Shoreland Zoning (NR115).

Staff Report – Emily Lund: Wisconsin lawmakers passed 2015 WI ACT 55 making shoreland rules uniform and mandated that all Counties have the minimum state standards adopted by October 1, 2016. Lawmakers continued changing the shoreland rules and adopted 2015 WI Act 167 on 2-29-16 and 2015 WI Act 391/2015 AB 582 on 4-27-16. The shoreland code will apply to all unincorporated areas, including the Town of River Falls. Shoreland standards apply to the use of property within 1,000 feet of a lake, pond or flowage and 300 feet of a stream or river. Shoreland zoning ordinances do not apply to lands adjacent to artificially constructed drainage ditches, ponds or stormwater retention basins that are not hydrologically connected to a natural navigable water body. The DNR may not issue an opinion as to whether or not a variance should be granted or denied without the request of the Board of Adjustment (by letter or spoken in the minutes). The DNR also cannot appeal a BOA shoreland decision. Mandates: As discussed at the April 20, 2016 LMC meeting, the mandated changes include the following:

- Counties are prevented from adopting more restrictive regulations than state standards.
- Counties are prohibited from requiring previously developed land to establish a vegetative buffer or expansion of an existing vegetative buffer.
- Counties are required to allow viewing access corridors 35' for every 100' and allowed to run contiguously rather than separated by a certain distance.
- Counties are required to implement Impervious Surface standards. Pierce County's standard is, "Construction, reconstruction, expansion, replacement, relocation of any impervious surface on parcels located entirely within 300 ft of OHWM; 0-15% allowed; 15-30% allowed with Mitigation; >30% not allowed."
- Impervious surface standards shall take into consideration systems or discharges that allow infiltration into the soil.
- Counties are required to develop mitigation standards for certain types of new development.
- Provide a reduced setback requirement for principal structures by setback averaging.
- Cannot prohibit or regulate outdoor lighting.
- Cannot prohibit or regulate, or impose fees for maintenance, repair or replacement of nonconforming structures that do not increase the size of the footprint.
- Cannot prohibit lateral expansions up to 200 square feet of nonconforming principal structures that are at least 35' from the OHWM, over the lifetime of the structure.

- Cannot prohibit or regulate or impose fees for vertical expansion of a nonconforming structure, unless vertical expansion is above 35 feet above grade.
- Cannot prohibit the relocation of nonconforming principal structures if certain standards are met.
- Cannot require inspections or improvements at the time of selling a property.
- Provide a rezoning process for land inaccurately mapped as a wetland in the Shoreland-Wetland District.

At the April 20, 2016 meeting, the LMC gave staff direction on numerous options within the shoreland code, including the following:

- Vegetation. The regulation area remains within the first 35 ft from the OHWM.
- Filling & Grading. Depending on slope and the amount of disturbance, a Land Use Permit is required for filling and grading in the shoreland area.
 - A Conditional Use Permit (CUP) will no longer be required given that a technical plan review is more appropriate for this type of activity. Staff will utilize the Land Conservation Department (LCD) to assist in the review.
 - Land Conservation Department projects (e.g. rip-rap projects, swales, detention ponds, etc.) built to NRCS Technical Standards will be exempted from permitting requirements.
- Impervious Surfaces. Where runoff is collected and appropriately discharged, the impervious surface standards are exempted.
- Mitigation. Mitigation is required for the impervious surface standards, when exempted structures are added to the site and for nonconforming structure modifications. This is a point based system that is proportional to the impervious surface created. Total project points are applied against mitigation options that are also assigned points based on their effectiveness. The mitigation plan shall be enforceable obligations of the property owner that adequately offset the impacts of the permitted expansion.

DNR Comments:

Staff submitted the draft Ch 242 Shoreland Zoning ordinance to the DNR on 6-22-2016. DNR review comments were received on 8-2-2016. DNR comments were minimal and issues identified include: the inadvertent omission of verbiage regarding the ability to work with a surveyor to determine the OHWM; to list a standard description of an exempt structure; to add a descriptive word (non-navigable) to an allowed exemption for maintenance of agricultural drainage ditches; to remove a redundant code reference; and to add a CUP section to comply with minimum standards even though it will not be utilized. Staff called the DNR to discuss their review comments, staff made suggested changes and the DNR has indicated that they are satisfied with the revisions and that the ordinance will be certified when adopted by Pierce County. DNR staff asked the Department to consider adding language for relaxation of standards for persons with disabilities (ADA). DNR staff noted that variances are not the appropriate route for addressing these sorts of circumstances. To address this, staff included PCC §242-46B(12).

Staff Recommendation: Staff recommends the Land Management Committee review the proposed amendment and, if determined to be appropriate, approve said amendments and forward a recommendation to the Finance and Personnel Committee and to the County Board of Supervisors for approval. Staff further recommends that adoption on the first reading by the County Board of Supervisors be considered to enable compliance with the October 1, 2016 deadline.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Pichotta stated that this ordinance is based on the DNR’s model Shoreland Ordinance with some options that were identified by the committee. Given this he suggested that it probably wasn’t necessary to go through it line by line or even page by page but we certainly can if the committee would like to. Are there any questions, comments or concerns, perhaps about any of the mandated areas or some of the options that we had discussed earlier? Holst stated he noticed this included the Town of River Falls, is that in the State or just for our information? Lund stated it was for their information. Pichotta noted that the inclusion of shoreland regulations in Chapter 240 could be confusing because general zoning didn’t apply for the Town of River Falls, but yet certain provisions that were contained within it did. Sanden asked if staff ended up putting in the CUP section even though it won’t be used. Pichotta stated yes. Pichotta also noted that the ADA provision enables the Zoning Administrator to allow for relaxation of the standards in order to accommodate an ADA disability.

Sanden asked if the DNR is saying the ADA should be addressed this way and not through variances. Is that just for expediency? Pichotta stated it's because a variance is supposed to be based on limitations of the property, not the property owner. Sanden stated let's say the property did not contain a ramp and because of the person's disability wanted to include it but it would have infringed on that setback, would that not been a classic variance type of issue? Lund stated that there is an exemption in the code for that situation. **Sanden moved to approve the amendments to Chapter 240 Zoning of the Zoning Ordinance relating to the Removal of Shoreland regulations and to create Ordinance Chapter 242 – Shoreland Zoning (NR115) and forward a recommendation to the Finance and Personnel Committee and to the County Board of Supervisors further recommending adoption on the first reading by the County Board of Supervisors to comply with the October 1, 2016 deadline/Snow seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Jeff Holst recused himself from discussion and voting due to the fact there may be a conflict of interest.

Staff Report-Brad Roy: The applicant has a mining permit that will expire on September 3. However, he was unable to attend the meeting tonight so we are requesting a renewal for 30 days and this item has been scheduled for the September 7th meeting. A 30 day renewal will make sure it doesn't expire, with the existing conditions.

Snow moved to renew the conditional use permit for Nonmetallic Mining for 30 days, for William F. Holst III, with the existing 18 conditions/Sanden seconded. All in favor. Passed with Jeff Holst not voting.

Status report on a conditional use permit for a Private Outdoor Recreation/Dual Sport Event that was held on July 16th pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, by Scott Freier, agent on properties located in the Towns of El Paso, Hartland, Isabelle, Salem, Trenton and Trimbelle, all in Pierce County, WI. Chairperson Fetzer invited Scott Freier forward: Mr. Freier explained everything went well and they had no complaints. He noted that the Sheriff's Department did patrol it. The recreational officer rode the entire event. He had a car blow a stop sign and pull out in front of him so he got a chance to pull someone over with his new dual sport bike. Holst stated now they will be wanting one of them. Mr. Freier stated the County already has one. He was told it was acquired through a grant and that Burlington Northern had sponsored the motorcycle.

Staff Report – Emily Lund: The Dual-Sport Ride event was held on July 16, 2016. The Department did not receive any complaints regarding this event. This status report is required per condition #9. The Club proposes to hold an event next year with expanded properties; given this they will likely be submitting a new CUP application in the near future. The LMC approved this CUP for a Private Outdoor Recreational Use on June 15, 2016 with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
2. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Dept. SPS, Department of Public Health).
3. The dual-sport event may be held annually. The event shall not exceed two (2)-days in duration. Staff shall be contacted regarding any modifications to approved plans or any change in properties to be utilized for off road activities, to determine if a new CUP is necessary.
4. Hours of operation shall be 8am to 6pm or as otherwise established by the LMC.
5. Emergency services (Sheriff's Dept and EMS) shall be given adequate notice of event and route.
6. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
7. A copy of the insurance and any changes to the insurance shall be submitted to the Land Management Department.
8. Camping shall be limited to the Gas-Lite property, contingent on owner approval.

9. The CUP shall expire in 2 years, with a status report given to the LMC prior to any additional events.

10. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

11. Applicant shall notify towns and the Land Management Department of future events.

Scott is here tonight to provide a status report consistent with condition #9. Mr. Freier stated they did hold it at the Gas Lite and everything went good there. The week before the event, the storm took out a lot of the land that they were able to go on. They couldn't get the trails all cleared because of the massive amount of trees that were down so they ended up running the event for the first half and then went back across the same land so they could get their event in anyway. The storm took out most of the Wieser property that they were going to ride on. So the night before they were remarking their whole route so they could run it backwards at a certain point and map it. It worked out fine. Some of the landowners, when they were picking up signs, were wondering when the event was. They told them it happened already. They had one gal that was curious with her horses right along the road but Jeremy took care of that. They had 42 riders that signed up to ride and then with the club people that were policing it or watching the event, they had about 50 bikes go through. Some of the property got hit twice. As far as that, everything went good. Mr. Freier stated that he would like to submit a request for blanket approval for the County. First he would like to take it to the Townships for a blanket and if he gets their approval for a blanket, because of what happened this year with the land taken away because of the storm, they rerouted it and still down the same roads but they would like the option of using whatever roads are in the County or the Township. Holst stated it's a public road. Mr. Freier stated some of the loopholes were to map out the actual map of the roads they were going to use. He is asking to use any of the roads so he can adjust his route as needed. With that, if he gets that through the Townships, which he doesn't see any reason why they won't accept that, if the County would accept that as a blanket through the County. He will also submit, with the CUP, the new land owners and minus the ones out that they won't be using anymore. So you will still have all the information on property owners. They can comply with all that, so he doesn't have to go to every Township, every year and get this all approved. It's quite a task. Chairperson Fetzer asked if he is still going to be sending information to the Townships. Mr. Freier stated all they really wanted was the information that the County had. It gets to them anyway. After he has this whole process done once and they understand what it is and we've had the event, he feels it will be easy to go there and explain. To have to do this process every year and all these Township meetings and get it approved. He would get a blanket from them and have a form for them to sign. Pichotta stated certainly there are some ways to streamline the process but he isn't sure that blanket approval can be granted. The roads are public so it's not actually the roads that are being authorized to use, it's the private property. He doesn't see a Town being willing to just give carte blanche permission to use any property within the Town. Holst stated they don't have that authority. That's private property. Mr. Freier stated he isn't looking for the Township to give him approval. He will have the property owner's sign through the CUP and the same format. He will have their letters saying he can use it. All he is asking for is that right now he has to have an approved route on the roads. Holst stated you will need an approved route anyway even if you do, which you do have a blanket because it's public roads. Mr. Freier stated that's his point. Holst stated you are still going to have to have an approved route. Mr. Freier stated so why is that if he has the availability to use all the roads, why does he have to have an actual map of the roads he is going to use. Holst stated you would want it for the Sheriff's Dept and the EMS insure safety. Holst stated we would need one within 24 hours of the event. Mr. Freier asked why is that? Holst stated for health and public safety. It's the only thing we are concerned about. Let's say you are running in River Falls Township and you are supposed to be on Road A but the new one said you are on Road B. Well they had the directions to Road A, just things like that. Mr. Freier stated he really can't control where they go. If he says there is a gas stop over here. They may take four other roads to get to that gas stop. He really has no control over that nor does he want control. He has motorcycles that say this gas station doesn't have 91 octane so they went clear to Plum City or they go to Pepin. His issue is that he can't control that, nor does he really want to. The idea is to have an organized event on the roads and go off-road. He understands the idea of having the property owners signed up so you know it's approved but the actual roads that he is taking, he doesn't see why that is such a big issue. Pichotta asked if his concern is providing the route map or that he has to go to each Town twice? He thought you wanted to streamline this process in order to ensure that you do not have to go to a Town Planning Commission and then the Town

Board and just to get them to sign off on the activities within their Town. Mr. Freier that is part of it, yes, the idea is, he had to reroute the route a little bit. He had to go on roads that he wasn't planning on to keep it safe so he didn't have people meeting on the road. There were only 40 bikes and not like there aren't cars meeting every day. To do that he had to use roads that weren't on his map, he didn't feel bad about, but it's in the ordinances that he give you the actual map and the roads. If he does that, then you have a reason to not give him a permit because he's not going on his route. Lund stated the start of the route map came about when she was working with Sue and she said this is where they are going to go. Then for us, on the zoning map, we definitely need to know who is giving you approval to cross their property. Mr. Freier, all my land owners, we would still do that process. He has to do that anyway, the paper gives him something if something does happen. He just doesn't know why he has to give an actual map because when things do change, there is no way he can have a County meeting when the storm hit a week before the ride. Sanden asked if there couldn't be a map with a disclaimer. Mr. Freier stated he can give us a proposed map that he gives his riders and that is fine. He just doesn't want it as one of his conditions and then have to stick with that. Pichotta asked which condition are you referring to? Holst stated it's not listed. Mr. Freier stated it was part of the CUP, it was a requirement to get the CUP was to get the map. Lund stated it was a requirement to get the CUP and then Sue added to it. Mr. Freier stated so I don't need to put my roads on necessarily? Pichotta stated no, it's based on properties. Our notification is not based on the roads that go by but on properties that you have permission to go on. Chairperson Fetzer stated, off-roading on. Mr. Freier asked so I don't have to give you all the roads? Pichotta stated the only thing that will require you to know your route is condition #5: Emergency services (Sheriff's Dept and EMS) shall be given adequate notice of event and route. Mr. Freier asked if he could provide that at any time? Basically it's just an email he can send his route to. Pichotta stated as long as it's adequate in the eyes of the Sheriff's Dept. Mr. Freier asked what is adequate? Pichotta stated he is not the Sheriff's Dept so he can't answer that. Mr. Freier stated he had heard the comment that the County didn't know we were doing this event. You brought that to my attention. The Sheriff's Dept knew about it, one of their people were on my route so I'm not sure. Pichotta agreed stating that is why that issue was not brought up in the staff report. Mr. Freier stated he has a GPS map and that is what he is giving all of his riders. He is asking if that is acceptable to the committee. Pichotta stated to talk to the Sheriff's Dept. Holst stated get it in writing. Lund stated she thinks the route got created because Sue asked if we could help. Mr. Freier stated the Townships were curious but when he got down to that level they stated he could go where ever he wanted. Mr. Freier asked if there is a possibility of getting a blanket like the snowmobile association runs their trails. Can we treat this like that? Pichotta suggested to the applicant that this is a discussion we wouldn't necessarily have to have in front of the Land Management Committee. If you were to have the same properties year after year we could even do renewals administratively. Once you have a CUP, if you use those same properties again, we could simply renew the CUP and you could use them again the next time but his understanding is that you want to change those properties and it's those changes in properties that lead to the need for another public hearing because you are actually expanding the use onto additional properties. If you had a laundry list of properties and you had permission from all of those land owners and that was what was acted on by this committee, you could use that year after year as those properties did not change. Mr. Freier stated that won't happen for a couple years because he is growing. Pichotta stated once everybody is comfortable with what you are doing, you will probably get to that point. Mr. Freier stated he will probably proceed to the Townships and try to get everything OK'd again for this season. So basically I have to have all those landowners in again. Lund stated you can stop by the office and we can get you a new application. Mr. Freier stated once we get the AMA to grab one of the dates that he has submitted; that is when he will pursue the CUP. Pichotta stated the way he reads condition #9: The CUP shall expire in 2 years, with a status report given to the LMC prior to any additional events. If you were to use the same properties next year or some subset of the approved properties, you don't even need to go to the Towns or come back to us. You can hold another event next year. Mr. Freier stated he has a number of people that want to see me go through their property. Pichotta stated it will only be those Towns that you have new property in that you have to visit, so not as difficult as the first time. Mr. Freier stated that's a two year deal so after next year does he have to do this all again. Pichotta stated only if you add properties otherwise this could be renewed by this committee. Mr. Freier stated that process is done now it's only at the County level unless I add properties, thanks for clarifying that for me. Chairperson Fetzer stated he is glad everything worked out well. Mr. Freier stated it was nothing but

positive from the riders, they were pretty amazed that we didn't have more people. But no one saw a route before, now that it's here and we will have more time, we only had 30 days to get it out there for people to come. So hopefully next year, they will have a full event.

Discuss take action on Proposed 2017 Land Management Department Budget. Pichotta: you should have materials that were mailed out and a couple of things were put in your folders. He will go through each item but the memo basically outlines the changes between '16 and '17 which is minimal and primarily due to health insurance and personnel costs. The fact that we purchased a pick-up truck in 2016 basically enabled us to come in at very close to zero. The overall proposed budget is about \$400.00 different than this year. As far as Planning, Zoning, GIS & Surveyor, there is information provided on each one, basically, each one went up \$4 or \$5 thousand. The Land Records Modernization Fund and Grant, as you recall, the Land Information Program; we retain fees associated with the recording of documents from the Register of Deeds Office. They are placed in the Land Records Modernization Fund and utilized to implement the Land Records Modernization Plan. The Land Information Council was created to help update the Land Records Modernization Plan and also to identify priorities for the upcoming year and recommend expenditures out of the Land Records Modernization Fund and Grant Program. If you recall, the changes to this program a couple years ago resulted in a guaranteed \$100,000.00 per County per year. You get what you retain and whatever it takes to make that to \$100,000.00 the State gives you through a grant. The Land Information Council has recommended:

\$41,504	Pictometry – it will be our last payment
\$10,000	For the last part to COGO the Town of Clifton
\$5,000	For parcel updates and changes
\$2,411	For County Highway printing (2000 maps) we are proposing to create a nice highway map with insets of the County. That we would give out to the Departments as well as sell.
\$4,500	GIS Maintenance
\$4,000	ArcGIS Licenses (Annual)
\$4,950	Upgrade to ESRI Standard License (One Time Fee)
\$2,250	Spatial Analysis – ESRI Extension (One Time Fee)
\$13,500	40" Scanner/44" Printer Combo (Surveyor/GIS Room) this would replace existing equipment that is 13 or 14 years old which is getting pretty antiquated in the technology realm.
\$2,800	LINK (ProWest) Maintenance Annual
\$880	ArcGIS for Server Upgrade 10.4.1 (ProWest LINK)
\$91,795	Total Potential Expenditure (Grant and Land Records Fund)

Revenues: he will go through page by page. He had been optimistic and thought we were going to generate more in revenues this year than we had last. We were on track to do so and then it just really slowed down. He is comfortable saying we are going to probably be at the same level we are this year. He has over time become more pessimistic about revenues. You have about 10 pages in front of you; a Department Proposed Budget Worksheet. It goes through with the various line items and then the final column is the percent change. There is not much change proposed in the County Planner budget. Health Insurance just goes up, never goes down. The Zoning budget, we are proposing to increase travel by \$400. One of the reasons for increasing travel in the Zoning budget is because we have replaced our Zoning Specialist with Ryan who is also POWTS Certified so we now have another body that is able to go out and do septic inspections. In order for him to maintain his credentials he needs to attend some of these meetings also. So there is a little more travel that will take place. Not proposing to buy any more vehicles. The Surveyor budget: Nothing substantial going on there. We should be able to go another 10 years with the new equipment purchased. GIS: Nothing substantial here. The next sheets are revenue sheets what is anticipated to come in in fees. Zoning permits in 2015 the actual was \$70,345. He had anticipated \$65,000. I'm anticipating \$65,000 for 2017 also. Holst asked where about is the Department right now. Pichotta stated probably at about \$40,000. We were on track. Holst stated you still may have a rush this fall. Pichotta stated he thinks we will hit \$65,000 but he doesn't think that we will exceed \$70,000. At one point this year, he had thought we would exceed \$80,000. Just based on what we were seeing on a monthly basis. Surveyor revenue, the actual was \$8,550 in 2015, not quite that level of activity this year. Next page is 7a

which is another revenue account. That is Zoning Aids; that is the Wisconsin Fund to help folks replace septic systems. It has averaged about \$15,000 historically. In 2015 it was \$36,000 that was a bit of an anomaly. He is pretty sure we'll see about \$15,000 next year. 7b is the expense account associated with that revenue account. It's essentially pass through funds. So that of course is also \$15,000. Next we have State Aid Land Information Grant; 2015 actual was \$49,152 which means that through the Register of Deeds Office we have retained \$51,000 and change. It's the combination in numbers that adds up to that \$100,000. GIS Revenue; Selling maps and digital data and lastly Land Information Grant. In your folders you should have two sheets which are the 3-Year Budget & Staffing Summary as well as the Capital Improvements Plan. As you will see, he is anticipating the operating budget to remain the same, staffing levels to remain the same and he is not requesting any capital improvements in the next three years. Specific Capital Improvements which is our existing equipment. We have the three vehicles and the surveyor equipment: he isn't anticipating replacing that anytime between now and 2021. Holst stated you did a very good job. Chairperson Fetzer stated his only comment is the front page where you are only \$400 different, he is very impressed going through it. Aubart asked why the retirement dollars percentage varies? Some are at 5%, some at 7%. Pichotta stated it does seem like it would be a constant. Holst stated it should be a constant. Pichotta stated he doesn't know that he is able to answer that because those are numbers provided by Administration. Pichotta stated that he will look into it. **Snow moved to approve the proposed 2017 Land Management Department Budget/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Rezone, 30 acres, in the Town of Oak Grove for Nesbitt Nursery from Light Industrial to General Rural Flexible.

Public hearing for a Farm & Home Based Business for Scott Knight for the sale of farm equipment in the Town of Ellsworth.

Renewal of a CUP for William F. Holst III in the Town of Trenton

Discuss take action on Pierce County Comprehensive Plan survey results and proposed implementation of plan.

Motion to adjourn at 6:54 pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 17, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 7 th & 21 st , October 5 th & 19 th , all in 2016.	Chair
3	Approve minutes of the August 3, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on proposed amendments to Chapter 240 of the Zoning Ordinance relating to the removal of Shoreland regulations and to create Ordinance Chapter 242 -Shoreland Zoning (NR115).	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, pursuant to Pierce County Code Chapter 240-37A, for William F. Holst III, owner on property located in the N ½ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Status report on a conditional use permit for a Private Outdoor Recreation / Dual Sport Event that was held on July 16 th pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, by Scott Freier, agent on properties located in the Towns of El Paso, Hartland, Isabelle, Salem, Trenton, and Trimbelle, all in Pierce County, WI.	Lund
7	Discuss take action on Proposed 2017 Land Management Department Budget.	Pichotta
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(8/5/16)

MINUTES - Pierce County Land Management Committee Meeting, August 3, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 17th, September 7th & 21st, all in 2016.

Approve Minutes: **Aubart moved to approve the July 20, 2016 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a Map Amendment (Rezone) from Rural Residential 20 to General Rural Flexible District for Daniel & Jean Ryan, owners on property located in the SE ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Ryan forward:

Staff Report – Ryan Bechel: The applicant is requesting to rezone a total of 3.09 acres consisting of a 2.28 acre parcel and an adjacent 0.81 acre parcel located in Section 34 in the town of Trenton. The applicant is requesting the rezone in order to obtain a permit to construct an agricultural structure on the eastern parcel. Pierce County Code does not permit the construction of agricultural structures in non-agricultural zoning districts. The property is located in the Town of Trenton. The western parcel is currently utilized for row crop agriculture. The eastern parcel is currently vacant land being utilized for agricultural equipment storage. There are no residential uses occurring on either parcel at this time. The applicant does not anticipate utilizing the parcels for residential use in the near future. The parcels are accessed off 815th St which runs north to south between the 2 parcels. The proposed future use of the eastern parcel is to obtain a permit to construct a principal agricultural structure to accommodate the applicant's agricultural equipment storage needs. The western parcel will continue to be utilized for row crop agriculture. Adjacent land uses are agriculture, higher-density residential and industrial. Adjacent zoning districts include Rural Residential 20 to the east, south and west; Industrial to the north. Pierce County's adopted Comprehensive Plan states: "The County will approve rezonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Town of Trenton recommended approval of this request on May 10th 2016, stating that approval was "recommended by the town planning commission and that the plan is consistent with the Town's Comprehensive Plan." The Town attached a copy of the Agricultural, Natural and Cultural Resources chapter of their adopted comprehensive plan and cited the following goals and objectives Cultural Resources Goal #1 and Agricultural Resource Objectives #1. Pierce County Zoning Code §240-15 lists the Purpose and Intent of Zoning Districts: The purpose and intent of the Rural Residential 20 District is established to provide for the densest residential development in the unincorporated areas of the county. The district is intended to be used where residential development is encouraged on lots without public sewer and water and in locations where such a density of development is compatible with surrounding uses. The district is intended to enhance residential areas by restricting nonresidential development.

General Rural Flexible is established to achieve the same objectives as the General Rural (GR) District but to allow a greater density of residential development with the approval of the town board.

General Rural is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and/or are compatible with surrounding rural land. The Value of Land for Agriculture is listed in the staff report with 71% not defined as a prime agricultural soil.

Staff Recommendation: Given that the Trenton Town Board of Supervisors has determined this proposed rezone of 3.09 acres from Rural Residential 20 to General Rural Flexible is consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden stated due to it being adjacent to Industrial area any down zone would be a good thing, by reducing any further conflict between residential and Industrial and given that the Town supports this.

Sanden moved to approve the map amendment (rezone) from Rural Residential 20 to General Rural Flexible for Daniel & Jean Ryan and forward a recommendation to the County Board of Supervisors/Holst seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit to allow the Expansion of a Nonconforming Structure in the General Rural District, pursuant to Pierce County Code Chapter 240-67A(2), for Joseph Dohmen, owner on property located in the SE ¼ of the SW ¼ of Section 33, T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Mr. Dohmen forward:

Staff Report – Emily Lund: Conditional Use Permit for the Expansion of a Nonconforming Structure. The applicant's property is located at W1560 County Road G, near Elmwood. The existing house has an open porch that is 56 ft from the center line of County Rd G and the outside house wall is 60 ft from the centerline of County Rd G. The applicant proposes to construct a 2-car attached garage that is 26 ft x 28 ft east of the existing house. They propose to maintain a 66.5 ft setback from the centerline of County Rd G. This parcel is located in Section 33, Town of Spring Lake. The property is zoned General Rural. Pierce County Code (PCC) states all structures fronting on county highways shall be 100 feet from the center line of the road or 67 feet from the edge of the right-of-way, whichever is greater. PCC §240-67A(2) also states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76." PCC 240-76A states "Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure or expansion or intensification of a nonconforming use." Permit renewal is not required for this request. The Town of Spring Lake recommended approval of this request on July 12, 2016. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The Town recommendation is attached.

6:10pm Ken Snow arrives at the meeting.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to the public interest, or detrimental or injurious to public health, safety or the character of the area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC. If plans are modified, the applicant shall go back to the Town for review and back to the LMC for reconsideration.
2. The applicants shall maintain the 66.5 ft setback from the centerline of County Rd G.
3. The applicants shall follow Piece County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Holst stated this looks pretty straight forward and he has a good set of drawings. **Holst moved to approve the conditional use permit for Expansion of a Nonconforming Structure for Joseph Dohmen with conditions #1 - #4 due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit to allow the Expansion of a Nonconforming Structure in the Rural Residential 20 District, pursuant to Pierce County Code Chapter 240-67A(2), for Larry J. Gerdes Irrevocable Family Trust, owner on property located in the NE ¼ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI.

Staff Report-Ryan Bechel: The applicant owns a corner lot at the intersection of 230th Ave and County Road EE located in the unincorporated Village of Esdaile. The applicant is requesting to expand an existing nonconforming structure located 26 ft from the centerline of 230th Ave. The proposed expansion is a 20 ft x 20 ft open-sided addition attached to the south end of the existing garage encroaching no further into the 230th Ave right-of-way setback than the existing garage. The proposed expansion would be utilized by the applicant to accommodate vehicle and general storage needs. The third acre property is located in the Town of Harland and is zoned Rural Residential 20. Pierce County Code (PCC) §240-27C addresses town road setbacks and states; “except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the centerline of the road or 42 feet from the edge of the right-of-way, whichever is greater.” PCC §240-67A(2) addresses nonconforming structures and states “Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted. PCC §240-76A details applicability. “A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use.” Lot access is located off of 230th Ave in the southeast corner of the property. The proposed addition would meet the required 100 ft minimum setback to County Road EE. Permit renewal is not required for this request. The existing topography is level throughout the property. A portion of the existing garage and the entirety of the proposed addition would be within the Vision Clearance Triangle area of County Road EE and 230th Ave. The adopted policy regarding Vision Clearance Triangles states: “For corner lots you are required to keep the intersection corner clear of buildings, dense vegetation or other obstructions to maintain clear sight-lines for motorists. The clear area is a triangle measured back along the road centerlines from where the centerlines of the roads intersect. The distance to measure depends upon the class of road; Town/private roads = 150 feet, County Roads = 200 feet and State/Federal Roads = 300.” As noted above, the placement of structures within the Vision Clearance Triangle area is typically prohibited. However, a review of the existing development pattern in Esdaile reveals numerous instances of structures located within the vision clearance area. These structures were constructed prior to the enactment of current restrictions. The LMC should take into consideration the existing development pattern and the speed limit when considering the merits of this request and its potential impact on public health and safety. The Town of Hartland recommended approval of this request on July 12, 2016, listing no recommended conditions. The Town did not reference its Comprehensive Plan. It is assumed that the plan is silent on this request. The Town recommendation is attached.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve the proposed expansion of a non-conforming structure with the following conditions:

1. The applicant shall maintain a minimum setback of 26 ft from the centerline of 230th Avenue.
2. The proposed expansion shall not be located within the 230th Avenue Right-of-Way.
3. The proposed expansion shall be completed within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Holst asked what the speed limit in the Village of Esdaile? Bechel stated its 25 mph at that particular location.

Chairperson Fetzer asked from both of those roads? Bechel stated on County Rd EE. The posted speed limit is quite a ways back on 230th Ave. Chairperson Fetzer stated so everything is going pretty slow through there. Pichotta stated we did receive one phone call from someone who expressed a concern about the existing trailer sitting there creates a little bit of a hazard when you are trying to get on EE. Typically we wouldn't be comfortable with something like this but given the existing development pattern and existing speed limit, it seems like the typical concerns may not apply, but if they were going 55 mph that would be serious issue and would likely create a public safety hazard. Chairperson Fetzer asked if the trailer is there year-round. Mr. Gerdes stated no, it's gone now. **Holst moved to approve the conditional use permit for expansion of a nonconforming structure for Larry J. Gerdes Irrevocable Family Trust with conditions #1 - #3 due to the fact this is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Snow seconded.** Mr. Gerdes stated he gave the committee a plan for a wooden structure and he found out that a metal structure that is the same snow load, would that make any difference? The posts will be smaller. Bechel asked if the dimensions will remain the same. Mr. Gerdes stated actually it will be a little bit shorter because the posts are back in a little ways. A metal roof and the snow load is the same. It's less expensive and it will be quicker to put up. Chairperson Fetzer stated it shouldn't pose any problems as long as it's the same size. **All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider proposed amendments to Chapter 240 relating to the removal of Shoreland regulations and the creation of Chapter 242 which will be a Shoreland Zoning Ordinance

Renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for William Holst III in the Town of Trenton.

Status report on the CUP for the Dual Sport Event held a couple weeks ago for Scott Freier.

2017 Land Management Department Budget

Motion to adjourn at 6:27 pm by Aubart/Snow seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, July 20, 2016

Present: Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Absent: Joe Fetzer

Others: Andy Pichotta, Emily Lund and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 3rd & 17th, September 7th & 21st, all in 2016.

Approve Minutes: **Aubart moved to approve the July 6, 2016 Land Management Committee minutes/Snow seconded. All in favor. Passed with Eric Sanden abstaining from voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for Sludge Disposal in the General Rural Flexible District by David Sauer, Cedar Corporation, agent for Ralston Purina & Nestle Purina Petcare Co., agent on property owned by William E. Schroeder, located in the N ½ of the SW ¼ and all of the SE ¼ of Section 29 and the N ½ of the NE ¼ of Section 32, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Holst invited Colin Cain forward: Mr. Cain stated that we were here a year ago asking for permission. We had some land approved. That land is still approved but the last two times that we went through this process, it ended up getting so late in the year, that we rushed and didn't do a complete job like we would have liked too. So this year he tried to find someone, Mr. Schroeder and he had conversation and he offered to make land available and said that he would be putting soybeans on and we would have a little more time to perform the operation before the ground freezes in the fall. That is why they are requesting this additional land to be approved for the process. He is hoping that it does provide them with a little more time this way. Again they certainly intend to follow all the restrictions/guidelines that the DNR puts out. Sanden asked if there is anything different from the 2015 request? It seems like it went pretty smoothly, which is what he likes to hear that there were no issues. Has anything changed substantially? Mr. Cain stated nothing has changed as far as the process. Sanden asked about the quantity. Mr. Cain stated it will be less than what they had hoped to do last year but they weren't able to get as much moved as they expected last year.

Staff Report-Emily Lund: There are two wastewater settling basins at their Ralston Nestle Purina Petcare Co that needs occasional sludge removal. The request today is to have a new site called Field 14 located in Section 29 & 32 of Hartland, owned by William Schroeder. They want to land apply after soybeans are harvested this fall. The applicants have also submitted this request to the WI DNR. The property is zoned General Rural Flexible. The Hartland Town Board recommended approval of this request on 6-14-2016 with the following statement (attached), "Conditional approval based on letter of credit from Bank or Security Deposit to cover potential road damage, \$60,000 value." The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. Lots of technical information was submitted. NR214.18(2)(f) indicated that sludge spreading sites are limited to slopes of 12% or less when the temperatures are above freezing and 2% or less when the ground is frozen or snow covered. Sludge spreading needs to follow these and possibly other WI DNR setbacks distances which are listed in the staff report. It is recommended that the properties receiving sludge update their NRCS 590 Nutrient Management Plan after this spreading takes place.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed land spreading of sludge at the proposed locations would be contrary to the

public interest, or would be detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Applicant shall adhere to all conditions and recommendations of the WI DNR.
2. Applicant shall update the land spreading site maps to reflect required WI DNR setbacks and slopes.
3. Sludge shall be applied only during daylight hours.
4. Sludge application shall cease if the ground becomes frozen or too wet for land injection.
5. Field access points shall be protected to control field soils and sludge from being tracked onto public roads.
6. Sludge spreading locations need to follow all WI DNR specified slope and setback requirements (i.e. to wells, to dwellings, to surface water, to dry runs with or without vegetative buffers, to bedrock or groundwater).
7. Any damage to roads shall be the responsibility of the applicant. A financial surety to address potential road damage shall be provided consistent with the Town of Hartland's request.
8. Applicant shall contact the Land Management Department when sludge spreading begins.
9. This conditional use permit will be active for 16 months from the date of issuance.

Chairperson Holst opened the hearing to the public. No public comment. Public hearing closed.

Snow moved to approve the conditional use permit for Sludge Disposal for Ralston Purina & Nestle Purina Petcare Co. with conditions #1 - #9, due to the fact this is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.

Discuss take action on a deferred renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Holst invited Chris Boe forward:

Mr. Boe introduced himself as the HSE Manager for Muskie and Taylor Frac, and stated they would just like to renew the conditional use permit from where they were last year.

Staff Report – Emily Lund: This facility was permitted in 2011 and began full operation in 2012. Muskie was originally processing sand from a mine located in Pepin County and then later secured material from a mine located in Dunn County. Muskie, for a time, also processed sand acquired from a Wieser Concrete mine that is located in the Town of Salem. Due to market conditions and low demand, Muskie shut down processing operations on June 30th, 2015. They have sand stockpiled at the site to assist with start-up operations. They continue to water the stockpiles, maintain roadways and mow the property as needed, typically weekly. Chris Boe, the Health, Safety & Environmental Manager, visits the facility once a month. At this time, they are unsure when they will start-up operations again. If the market condition continues, no production is planned for 2016 and 2017. However, they plan restart production in 2018. When in operation, sand is trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The facility also has byproduct storage stockpiles, storm water ponds, a high capacity well, process water treatment facilities and elevators for the storage silos. The final product is trucked primarily to St Paul or Chippewa Falls to be loaded on rail as well as loaded for over-the-road shipping to North Dakota and Montana. The property is in Section 7, Town of Union and zoned Industrial. The hours of operation are generally five days a week 12 hours per day 6:00am to 6:00pm for the quad axle trucks; semi-trucks hauling are spread out over 20 hours per day. A Fugitive Dust Plan has been submitted. The plan details potential sources, control measures and daily record keeping. No complaints have been received recently. Staff has contacted the Town of Union Chairman regarding this renewal request; the Town did not have any concerns at this time. There has been no processing of material since the facility shutdown on June 30, 2015. Staff consulted with the Pierce County Corporation Counsel's Office regarding the status of this use. It was determined that the activities taking place onsite are, although minimal, enough for the use to be considered "active." Given this, review for renewal is appropriate. The existing conditions are listed in the staff report #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of

the area and determine if any modifications are necessary. If no changes are necessary, staff recommends the LMC renew the CUP with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies, if required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.
5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. The Fugitive Dust Plan shall be adhered to.
8. Byproduct shall be utilized in the reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code.
9. Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.
10. The facility shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.
11. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
12. Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.
13. The conditional use permit shall expire in 1 year.

Pichotta stated he received a phone call regarding this issue. There were two concerns or questions that were brought up. One was, it was noted that the lights are off at night. Mr. Boe stated yes, they are. Pichotta asked if they have any security concerns. Mr. Boe stated monthly they go there, more frequently than that especially in the spring to fall they are maintaining the lawns. They are there every week to 14 days. They are making their presence known at the facility. To address the concern, yes they are looking into a security system. Pichotta stated the other concern is about watering of the stockpiles and whether it was blowing off the site. He did get another call from Union Town Chairperson, Bill Bechel, who spoke to the neighboring land owner who had stated that they didn't have any issues nor had he noticed any sand leaving the site. Sanden asked about this expiring in one year, given that they are not expecting to start up until 2018 would it be prudent to expend that to the typical two-year. Pichotta stated they are recommending it be a year, given the uncertainty of it, in a year they may have a sense of what is going on and it's almost more of a status report. Mr. Boe stated he is comfortable with that. Obviously, it would be great to get two years but he understands the committee's position. Pichotta stated also the applicant has a pending app for a 160 acre open-pit mine in the Town of Union. Sanden stated it would be nice to hear an update on the security system also. Mr. Boe stated he can send updates to the committee through Emily and let you know. **Sanden moved to approve the renewal of the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Muskie Proppant LLC with conditions #1 - #13/Aubart seconded. All in favor. Passed.**

Discuss take action on proposed new design of Uniform Address Number (UAN) signs.

Staff Report-Andy Pichotta: As part of recent discussions with county law enforcement, it was noted that our existing address signs can be difficult to see. Basically as you know when you drive by, the sign is facing the road. Many Counties have moved to a sign that is perpendicular to the road and it's got letters/numbers on both sides so it is more readily visible. The cost associated with a two sided sign is approximately \$4.95 more than that of the current signage utilized. The single sided UAN signs currently used cost \$13.35 each and the proposed two sided sign costs \$18.30. LM staff would continue to affix the actual address numbers to the signs. The costs associated with a new sign would continue to be \$50 and \$25 for a replacement sign. We could revisit that when we take a look at our fee structure which we will need to do in the next year or two. Chairperson Holst asked how come the new signs are twice what a replacement sign is. Pichotta stated because we have to actually do measurements and create the address number, and then enter it into the system. There are more steps

involved. Chairperson Holst stated it's not just for the sign, it's for the process. Pichotta stated that he had been thinking that we would use up our existing supply. He has second guessed that and is now thinking that what we ought to do is draw a line in the sand and move forward with new signs. We have some towns, like the Town of Rock Elm – for which we have eleven signs on hand. It could be five or eight years before we create eleven new addresses in the Town of Rock Elm. We don't want to have it where some of the Towns where we are permitting houses more quickly and we are using one style of sign versus another. It would require that we eat the cost on about 125 signs that we have on hand which is roughly \$1700 - \$1800. Although, if a change to the new signs results in emergency services finding one person quicker, it's probably worth it.

Staff Recommendation: Staff recommends the LMC consider the above information and determine whether a change to a two sided UAN sign is appropriate. Aubart asked if there is going to be some kind of program for replacing existing signs. Pichotta stated there is not, we will just move forward. All the new ones will be the new style. However, if one has an existing sign and wants to replace it with the new style, they can do so for \$25. Aubart stated at their individual request. Pichotta stated yes. Otherwise it would become quite expensive for us to systematically go out and replace all of the existing signs. He has noticed when he was driving through Barron County the other day; you can see a mix of the old signs. That is clearly how they are doing it also. Aubart noted that it's pretty much impossible to monitor the age of the old signs, some, depending on if they are maintained, get damaged, some are really faded at this point. There is no standard. Pichotta, usually when those signs get faded like that, that's when folks come in and ask what they need to do to get a new sign. Aubart stated he has been on the other side of this and sometimes they are hard to find. If it's an emergency, you want to get there and he is whole-heartedly in support if it's more visible - that is what we should do. Chairperson Holst stated some are faded and some people just don't maintain them or stuff cut away from them. Snow stated he is frequently, in his job, out in rural America meeting with folks and often drive by driveways because you can't see the signs. The smart phone is telling you that you have arrived and where is it? For my job, it would be much easier and he does understand from a safety standpoint when you can see it from both directions and you are looking forward instead of looking off in one direction or the other. Pichotta stated perhaps we could pursue a strategy to make folks aware of the new signs. Sanden asked if these are two-sided signs or two signs back-to-back? What kind of post would they require because his is on a T-Post. Pichotta stated it is a two sided sign on a U-Post. Some counties do a brochure on how to place and affix them. We will look into doing that. Chairperson Holst stated he saw some while driving out east this weekend and they look considerably better than the ones we have. Snow asked if the question is whether we are going to eat the cost on the signs we have. Sanden stated he thinks we have to.

Snow moved to approve the two-sided UAN sign and scrap the existing inventory/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no requests at this time.

Departmental Update and Future Agenda Items

Rezone request in the Town of Trenton for Dan Ryan from Rural Residential 20 to General Rural Flexible in Section 34.

Public hearing request for Expansion of a Nonconforming Structure in Spring Lake Township for Joe Dohmen.

Public hearing request for Expansion of a Nonconforming Structure in Hartland Township for Larry Gerdes Irrevocable Family Trust.

Motion to adjourn at 6:26 pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, July 6, 2016

Present: Joe Fetzer, Jon Aubart, Jeff Holst and Ken Snow

Absent: Eric Sanden

Others: Andy Pichotta, Ryan Bechel, Brad Roy and Tracie Wold

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 20th, August 3rd & 17th, all in 2016.

Approve Minutes: **Holst moved to approve the June 15, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI.

Jeff Holst recused himself from this agenda item.

Staff Report-Brad Roy: In 2012, WISC obtained a permit for a Mineral Processing and Rail Load-Out Facility in the Town of Trenton. The permit was valid for two years and could be administratively renewed. In 2014, WISC presented staff with information which demonstrated that they had taken action to establish the use without actually constructing the facility. Staff renewed the permit administratively for another two years. The permit is set to expire on July 18, 2016 and there has yet to be any construction of the facility. WISC no longer has any intention of constructing a processing and rail load-out facility on the site. WISC has also indicated that they do not have any record of activity occurring on the site since the last renewal. The original proposal detailed operations for sand to be received, washed, dried, screened and shipped either by rail car or truck. The materials would have come from the WISC mining operation nearby in the Town of Diamond Bluff. Height exemptions and Variances were granted for structures greater than 35 feet. The property owner, William F. Holst III, is now proposing to establish a new mineral processing and rail load-out facility on the site. Mr. Holst has been working with Total Excavating to construct a facility to process sand from the Weiser mine in the Town of Salem and claims that he has taken action on the site to further the use each year since 2013. The property is located in Sections 28, 33, and 34, T25N, R18W in the Town of Trenton. The property is zoned Industrial. Adjacent land uses are nonmetallic mining to the east and west, residential to the north across Hwy. 35 and agriculture to the south. High density residential, Rural Residential 20 District, is located near the proposed site approximately one-half mile to the south. No structures have been built. The permit was renewed administratively in 2014. At that time, WISC submitted information requesting a renewal and a list of actions taken onsite, which was largely securing state permits and meeting survey requirements. The renewal request also revealed that the delay in site activity was due to a mining moratorium by the Town of Oak Grove. The material for this facility was to come from the Diamond Bluff/Oak Grove mine. On April 26, 2016, Wisconsin Industrial Sand notified staff that they did not intend to renew the permit and that they have no record of activity occurring at the site since the previous renewal. The owner (now applicant) now wishes to renew the permit and construct a different sand processing and rail load-out facility. He claims that he began filling and grading on the site in 2013 and that work has been ongoing and continues today. Aerial photos confirm a large amount of fill has been deposited on the site since 2012. In 2014, Mr. Holst installed a berm along County Road K. The

establishment of the berm was a condition of the original permit (as requested by the Town of Trenton). Staff has sought a legal determination from the Pierce County Corporation Counsel's Office as to whether or not the "use" had ceased for 12 months and would thus be terminated pursuant to §240-76(I). Which states, "If an established conditional use is not conducted in conformity with the permit or this chapter, the conditional use permit may be terminated by action of the Land Management Committee. If an established use permitted as a conditional use ceases for a period of more than 12 months, the conditional use permit shall terminate, and all future activity shall require a new conditional use permit." The approved and proposed facilities have many similarities, but are not identical. Each facility would receive, wash, dry, screen silica sand for shipment. Each facility proposed to operate 24 hours a day, seven days a week. The originally permitted use and the proposed use are essentially the same. However differences in processing techniques could create different impacts. The original WISC plan was for the sand to be handled primarily inside structures and protected from the elements. It is unclear at this point as to what likely impacts the Holst processing facility would have on the area. Raw sand will be transported to the site by truck from Hwy. 35 and entering the site from 830th St. In the original plan the sand would come from the north on Hwy. 35, the proposed plan has trucks coming from the south on Hwy. 35. A new Traffic Impact Analysis (TIA) would be needed to determine if any road improvements are required. The new proposal states that outbound rail shipments will average 200 cars per week. Loading trucks for shipment will consist of a conveyor and a hopper. Truck shipments are secondary and will be predominantly local. In both plans unsalable product would be used for mine reclamation. Both plans call for the construction of six rail sidings to the BNSF Railroad. The sidings will be used for storage and in the loading process. Both plans need two high-capacity wells. The water will be used to wash the sand and remove the clay and silt-sized particles. The wash water will be recycled using a closed-loop sand dewatering system, ponds, pumps and pipes. The WDNR permits high capacity wells. Any new high capacity well application is required to face an environmental review. The aquifer used for the high capacity wells will not be the same one used for the existing residential and agricultural wells in the area. One potable water supply well will also be needed on the site. The proposed plan has identified stormwater collection areas. WDNR regulates and monitors storm water and process water through the WPDES Permits. The applicant will work with the DNR to determine the need for a WPDES Permit. Operation of the proposed plant will necessitate the development and implementation of a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans will identify potential sources of stormwater pollution and spills of oil-related materials and other chemical, and establish controls to minimize any potential impacts to surface waters. A Fugitive Dust Plan will need to be developed for the facility. The submitted plan outlines various methods for dust suppression on the site. All loaded trucks will be tarped on the site. The drying, screening and load-out process will be equipped with a dust collection system. Pavement and recycled asphalt for high traffic areas with the use of a watering truck or settling product. Stock piles will be watered as needed. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. The applicant is proposing various practices to limit the noise onsite. Loaded trucks entering the site will unload in a continuous forward path to eliminate backup alarms. All equipment will utilize a "hissing" backup alarm instead of a "beep." Per MSHA regulations the backup alarms must be louder than other ambient noise. The site will have a trackmobile which will reduce the noise from moving the rail cars. A maintenance building and office will be built with potable water and septic system for employees and visitors. Staff has received several concerns from nearby residents about the original proposed facility. To date, they haven't received anything since there isn't a facility. The Town of Trenton recommended approval of the original proposal on May 9, 2012 without reference to the Town Comprehensive Plan and with the following recommendations: Extend berm on Hwy 35 and include trees on top. Lights shall be adjusted away from residences. Noise controls shall be implemented. Berm shall be constructed along County Road K to block view of the railroad. All rail cars shall be behind the berm on Hwy 35. Trucks shall have a drive-through unload to avoid back-up alarms. The existing conditions are: 1) Activities shall be conducted consistent with the submitted plan. 2) Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required. 3) Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office. 4)

Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county. 5) WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies. 6) Any polyacrylamide flocculants must be used consistent with WI DNR permits. 7) The Fugitive Dust Plan shall be modified to include dust suppression methods for any stockpiled materials, at sand transfer points, and during instances exceptional events such as high winds. 8) The operator shall provide notice to the County of any orders to cease and desist from MSHA. 9) This permit shall expire in two years and may be renewed administratively if no compliance issues arise. 10) The Town of Trenton's recommendations/comments shall be adhered to. If the Pierce County Corporation Counsel determines that the established use has ceased for a period of more than 12 months, the use shall be considered to have terminated and any future use must be authorized by issuance of a new conditional use permit. Pichotta stated that staff has had numerous discussions with Corporation Counsel's office regarding this particular proposal. It was recognized that while activity had occurred on the site, the Corporation Counsel didn't feel that he had enough information to make a definitive determination as to whether the use had ceased for any 12 months period of time. He suggested that the committee ask the applicant to either provide or describe the activities that had taken place to their satisfaction. The committee could do that one of two ways: 1) If Mr. Holst was able to describe his activities to satisfaction of the committee that he had in fact conducted activities every 12 months or 2) The committee should defer action on this item to a future meeting to give Mr. Holst an opportunity to provide the necessary information.

Recommendation: If the use is determined to have not ceased, staff recommends that the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area and determine if any modifications are necessary. If no changes or additions are necessary, staff recommends that the LMC renew the CUP with the following conditions: 1) Activities shall be conducted consistent with the submitted plan. 2) Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required. 3) Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office. 4) Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county. 5) Applicant shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies. 6) Any polyacrylamide flocculants must be used consistent with WI DNR permits. 7) The Fugitive Dust Plan shall include dust suppression methods for any stockpiled materials, at sand transfer points, and during instances exceptional events such as high winds. 8) The operator shall provide notice to the County of any orders to cease and desist from MSHA. 9) This permit shall expire in two years. A status report shall be made to the LMC in one year. 10) The Town of Trenton's recommendations/comments shall be adhered to. 11) Site plan approval and any potential height exemptions shall be obtained prior to any construction. 12) Applicant shall present proposed plans to the Town of Trenton. Concerns raised by the Town can be addressed through site plan approval or as a modification to this permit. 13) The applicant shall submit a Traffic Impact Analysis, or similar document, to the WisDOT and make any suggested road improvements. 14) Any unforeseen impacts shall be addressed to the satisfaction of the County.

Bill Holst had his Attorney, Adam Jarchow from Bakke Norman, address the LMC. This permit was originally issued to Wisconsin Industrial Sands, which chose as a down turn in the market, not to renew their lease earlier this year, so Mr. Holst has been working with Total Excavating, which is a local company. They have a long operational history in this area, as does Mr. Holst. Jarchow stated they think this permit should be renewed for a number of reasons. In the current CUP it provides that it may be renewed administratively if no compliance issues arise. He thinks it is important to point out that, to his knowledge, there have not been any compliance issues in the last four years, and the Zoning Administrator mentioned there hasn't been any complaints from anybody in the public, of course that would make some sense because they are not operating a facility there. But they are doing significant work and have been doing significant work on the property and bringing significant amount of material onto the property and have been for the past three or four years. Mr. Holst and Wisconsin Industrial Sand have spent hundreds of thousands of dollars or hundreds of man hours preparing the site and obtaining permit. That would be sort of diversion where Mr. Holst has done a lot of the site work. Jarchow

stated he heard the Zoning Administrator state Wisconsin Industrial Sand didn't do any work, but Mr. Holst has done a significant amount of work and you'll see photos that have been taken over time, via the amount of work that has been done. But in addition to that site work, Wisconsin Industrial Sand and Mr. Holst have spent a fair amount of time and money obtaining permits. Mr. Dustmen is a geologist who showed over the last three years, about 300,000 tons of fill had been brought in to that site. In 2013-300,000 tons, 2014-300,000 tons, 2015-about 300,000 tons and about the same this year, pro-rated, they are at 150,000. In 2014, as required by the CUP, a significant berm was built along County Road K, about 10 feet in height. The fall of 2015, trees were planted at the top of the berm at a cost of about \$23,000. That is the site work that has been done and Mr. Dustmen will walk through very specific detail. In addition to that, there has been significant amount of time and effort, not on site, of planning work. This is acquisition work of equipment, negotiating and discussion with other parties and working with the railroad. All of those investments come at a significant cost. There really have not been any citizen issues. All of the conditions that are laid out in the CUP have been complied with. Specifically the berms that were required to be built have been built and none of that is inexpensive. If you look at the Pierce County Zoning ordinance and Wisconsin law, they see no reason why this would not be renewed. The point of the Zoning Ordinance is to place various uses into various zones to reduce conflict, and they can't see any better place for an Industrial site than this site on the rail road. It is the exact location that both common sense and the Pierce County ordinance would have this sort of operation placed. In order to comply with the CUP, and in reliance with continuation of the CUP, a significant amount of work has been done, a significant amount of expense has been had and they hope the board will consider this and renew the CUP. Bill Holst added that the berm along 35 is not completely done. Some of it is done, but they have to fill it to grade before they can build the berm or there is nothing to build the berm on. Most of the berm has been done for years, but that will be finished as we bring it to grade. Mr. Dustmen went through the process on a computer program/projection. He pulled up a geographic information system that showed the exact parcel. He showed pictures of the berm he took the day before the meeting. It is a very long linear berm right on County Road K. He showed a photo that was taken before the fall of 2013. Pichotta asked where that berm is in relation to this site to the proposed facility. Dustman stated right to the south-west. Holst stated it was required from the township for WISC. Roy stated the berm was required, but the trees were required as part of Mr. Holst's mine expansion in 2014. Fetzer asked where the rail would be placed at. Dustman displayed mapping images/drawings showing the existing rail right-of-way, the proposed berm that is started and the proposed siding. He took some historic photos and geo-referenced them through time. In 2012 there was open water and not a lot of fill. 2013 to 2016: about 1 million ton of material, about 700,000 yards of material. Between April and September of 2015, there was a quite a bit of work that was done. He noted the elevation difference between the amount of material; he is working on getting the area up to grade to the rail can be put in. In 2013 there was about 20,000 yards of crushed dolomite prepared for the ballast and grade for the rail facility. Dustman presented a visual site tour showing the proposed buildings and locations; wash plant, drier, elevator, over flow, silos and rail. Fetzer asked how much longer we are waiting for oil prices to come back up before silica is going to-be again. Holst stated there is a meeting with the railroad next week and they are bringing up four representatives from around the country. The lead time with the rail road is a big hold up. It is about 18 months after you get them the final plan before you get approved. They are going to continue with the site work to get it up to grade and get the bed ready. Fetzer asked how much more fill is going to be brought in. Holst stated about one million ton. Fetzer stated he has been busy doing that over time. Holst stated they work on it every day of the year unless it is twenty below zero or something. They pre-screen it and take all the screened sand and put in; he never put any in there before because WISC was going to do the building and he wanted them to have to buy the sand from him. But when they did their other rail expansion at their other site, he knew that they were never going to build a rail on his site, so he started then filling it in. Fetzer stated it has just been a long process. Holst stated his hands were tied, they were just notified two months ago and he couldn't do anything until then. Holst found it peculiar that WISC was trying to sell those permits to another company; how could they sell something that they would say is not in compliance, that makes no sense to him. They don't want another competitor in the area. Barry Barringer, Town of Trenton, asked Holst what the fill consists of. Holst stated they screen the gravel and take the finer gravel and put that in for the fill. So it is clean granular fill. Barringer asked if it will support the rail

road and all of that. Holst stated and any building that they want to do. You can't put mud or trees or anything like that if you want to build on it. Barringer also inquired about the CUP being traded off or given to someone else by WISC. Holst stated they were trying to sell it to another sand company, but that guy took his investment to Texas instead of here, so that is not on the table. When that fell through, they cancelled their lease with him. He is not trying to explain the process, which is for the board to do when someone backs out; permits go back to the property owner. Mike Miller, Town of Trenton, commented that given the long period of time this has taken and it appears there will be some significant changes, does the Town of Trenton gets a chance to review this again? Pichotta stated that was addressed in condition 12 which requires the applicant to present plan to the Town for comment. Pichotta suggested to the Chair that if Mr. Holst has demonstrated to the LMC's satisfaction that in fact activities did not, within the last two years, cease for any 12 months period, they move forward with renewal with the suggested conditions. If they are not comfortable with that, he suggested they request additional information and they defer renewal to the next meeting. **Aubart stated that Mr. Holst has demonstrated that activity on the site has been continuous and that he continues to improve it and moved to renew the conditional use permit with conditions 1-14/Seconded by Snow. All in favor. Motion passed.**

Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.

This agenda item was deferred until the next meeting.

Discuss take action on a proposed modification to the approved Site Plan for a Heavy Industrial Use (Nonmetallic Mining Wash Plant & Processing Facility) for Mathy Construction Company, owner on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report-Ryan Bechel: On January 06, 2016 Monarch Paving Company received a conditional use permit and site plan approval to develop a non-metallic mining wash plant and processing facility in the Town of Trenton. The site, referred to as the "Plant 46 expansion," receives, washes, dries, screens and stockpiles aggregates primarily used in road construction. No mining takes place on the property. Upon receiving CUP and site plan approval, Monarch Paving Company commenced work on site preparation activities according to the approved site plan. This included establishing a 15' high berm constructed of soil and overburden materials along the east, south, and west boundaries of the processing area. Upon completion of the required berm, the applicants felt changes to the vegetative screening plan were warranted given natural vegetative screening on the property, communications with neighboring property owners, and consultations with their contracted nursery (Nesbitt's Nursery & Orchard). The mandated berms and vegetative screening are intended to mitigate visual and noise nuisances generated on the site by plant equipment and machinery. The proposed modifications to the vegetative screening plan are the sole changes being requested by the applicant for this site plan modification. All other previous presented facets of the approved site plan and conditional use permit must continue to be followed. The property is located in the Town of Trenton and is zoned Industrial. *PCC § 240-75* requires site plan approval for new construction or additions to existing structures and buildings for industrial uses. The purpose of site plan review is assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to street and transportation, protect property values and contribute to efficient land use in Pierce County. LMC site plan approval mandated the following 2 conditions: 1) Berms and vegetative screening shall be established and maintained in accordance with the Town of Trenton's recommendations. 2) Two rows of trees, a minimum of six feet tall, planted 20 feet apart with the second row staggered ten feet away. The applicant is proposing to limit the area of required double row; six foot tall staggered trees atop the berm, to two locations identified by the applicant to pose the largest gaps in the visual barrier. A double row of 6' – 7' Spruce and Colorado trees staggered every 30 feet for approximately 270' is proposed atop the west side of the berm along 830th ST. Stands of existing mature trees to the north and south of this proposed vegetative buffer would complete the visual barrier along 830th ST. A double row of 6' – 7' Spruce and Colorado trees staggered every 30 feet for approximately 240' is proposed

atop the berm along State HWY 63 in the northeast corner of the property. The applicant is proposing to plant a single row of 3' – 4' Spruce and Colorado trees every 30 feet for approximately 1,990' atop the remainder of the berm following the southern edge of the processing area. Trees and shrubs are also proposed between the berm and the residential properties located in the southeastern corner of the property. A single row of 6' – 7' Spruce and Colorado trees planted every 30 feet for approximately 150' is proposed along a northwesterly bearing south of the berm. A single row of 3' – 4' Summer Wine Ninebark shrubs planted every 15' – 20' for approximately 100' is proposed along the south property line. The applicant is proposing a mixture of trees and shrubs in this location to prevent creating a vegetative barrier that would inhibit views of the bluffs to the north, which was a concern of residential properties owners in the area. Staff has not received any complaints regarding this operation since issuance of the CUP and site plan approval. The Town of Trenton recommended approval of the CUP request on December 8, 2015 with the following recommendations which are also relevant to Site Plan Review: 15 foot or higher berms. Trees put in for buffer beyond berm. Combination of trees on berm and south of berm. Staff contacted the Town of Trenton chair regarding the proposed site plan modifications. The chair stated he did not have any concerns with the proposed changes.

Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the proposed plan are necessary. The LMC should consider existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations. The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule. Staff recommends the Land Management Committee consider the following condition as part of this site plan approval: 1) Berms and vegetative screening shall be established and maintained in accordance with the submitted plan.

Candy Anderson stated they are asking to modify the tree planting plan that was approved with the original permit. The reason behind it is they got the site built and the fifteen foot tall berm and after it was built, they looked and there really isn't a big screening issue to the south with the residents that have the biggest view. But there are two areas where there is a screening issue that they need to address. They have contracted with Nesbitt Nursery. Lee Nesbitt was present to address any specific question about the trees. They are asking for a little bit wider spacing to allow the trees to grow a little bit better and have room to spread out; a wider spacing helps the root ball spread out a little bit better once you get it in the berm. They went with the three to four foot tall trees on the south edge in a single row, again because the berm does provide good screening with the height they built it at. But they wanted to keep in with the town's recommendations to have the trees and also with the committee's. They met with the Truttmann's and their concern with putting six foot tall trees right in front of their property was that someday those trees could block their view of the bluff. She stated they would like to put something there so they talked to Lee who suggested maybe a five to six foot shrub, at maturity. It's a change, but the only change that they are proposing to anything, most of the site is built and completed and vegetated, it is just the trees that they want to change. If it is approved, they thought they could do a fall planting. Fetzer commended them for going and talking to the neighbors and trying to keep everyone happy because too many people don't do that kind of thing. Anderson stated the Truttmann's do have the most impacted view as far as they could see and they had stated they didn't care if they hadn't planted anything, but she wanted to keep in line with the recommendations. **Snow made a motion to approve the modified site plan for the Heavy Industrial Use with the condition that the berm and vegetative screening shall be established and maintained in accordance with the submitted plan/second by Aubart.** Fetzer asked if anyone had any concern with a time line. Holst stated that Mr. Nesbitt has always done a pretty good job of meeting what he said he was going to, unless there was a freak act of nature that he couldn't get them in. **All in favor. Motion passed.**

Discuss take action on Travel/Training Requests. Pichotta has two requests. First- Roy and Bechel to attend a floodplain management workshop in St. Croix County in Hudson on August 2, an afternoon meeting. Second-

Lund to attend the same training being held in Eau Claire on September 7, an afternoon meeting. **Holst made a motion to approve/ seconded by Snow. All in favor. Motion passed.**

Departmental Update and Future Agenda Items

Public Hearing to consider a request for a CUP for sludge disposal by Ralston/Nestle Purina on property owned by Bill Schroeder on property in the Town of Hartland.

Discuss take action on deferred conditional use permit renewal for Muskie Proppant LLC, Sand Processing Facility in Union.

Discuss take action on new design for Uniform Address Number signs.

Motion to adjourn at 7:44 pm by Holst/seconded by Snow. All in favor. Motion carried.

Respectfully submitted by T. Wold

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 6, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 20 th , August 3 rd & 17 th , all in 2016.	Chair
3	Approve minutes of the June 15, 2016 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on a request for renewal of a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) located in an Industrial District for Muskie Proppant LLC, owner on property located in the South half of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Lund
6	Discuss take action on proposed modification to the approved Site Plan for a Heavy Industrial Use (Nonmetallic Mining Wash Plant & Processing Facility) for Mathy Construction Company, owner, on property located in the SW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI.	Bechel
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(6/24/16)

MINUTES - Pierce County Land Management Committee Meeting, June 15, 2016

Present: Joe Fetzer, Jon Aubart, Jeff Holst and Eric Sanden

Absent: Ken Snow

Others: Andy Pichotta, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 6th & 20th, August 3rd & 17th, all in 2016.

Approve Minutes: **Aubart moved to approve the June 1, 2016 Land Management Committee minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for a Dual Sport Event in the Agriculture Residential, Commercial, General Rural, General Rural Flexible and Primary Agriculture Districts, pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, Scott Freier, agent on properties located in Section 34 of El Paso Township, Sections 9, 10, 14, 15, 16, 21, 28, 29 & 33 of Hartland Township, Sections 4 & 5 of Isabelle Township, Sections 3, 4, 6, 9, 10, 16 & 21 of Salem Township, Sections 2 & 3 of Trenton Township and Sections 20, 21, 22, 27 & 28 of Trimbelle Township, Pierce County, WI. A map is available for viewing in the Land Management Department. Chairperson Fetzer invited Scott Freier forward: Mr. Freier stated he is here to answer anyone's questions. Holst stated it would be advantageous for everyone if you would explain what you are proposing. Mr. Freier explained the dual sport is basically what the staff report says except they use light weight bikes that are road legal, licensed motorcycles that are licensed to ride on the road. They are not a full-fledged motocross dirt bike or anything like that. This group likes to have a joy ride. They put together a dual sport event where they can ride trails they have set up. They lined up a bunch of landowners and are using the snowmobile trails. The goal is to start in one spot and have a loop for them to ride. They want anywhere from 80 to 140 miles and we want to take up the day. They have on and off road because the on-road gets them to and from the land. It's a one-way direction so when they leave in the morning they are staged out so they don't get a flood of bikes. Not saying they can't group up down the road. But their goal is to have a steady flow going through so they can manage it. They will start at the Gas Lite, go through some property, on-road, off-road and stop for lunch somewhere along the line. Right now it is proposed to be at the Roger Nelson pavilion. They have three different locations right now that are trying to do it. They would like to get the Veterans involved and have it down at the Maiden Rock American Legion. That is their goal because that was one of the people that they are fundraising for, the Veterans, Food Shelf, their club and the Lion's are going to put on their meal for them. That's their fundraiser. They go through the whole route and back to the Gas Lite and they serve them lunch somewhere and serve them a meal. They pay the organization \$75 to ride the route. A lot of the land owners that have OK'd this, we have a route through their property. We sign it. We have a person at the start of their property and at the end of their property. The goal is not to have them come out the same gate that they go in. They start at the one end of the property and they might go through two or three other properties to get out to another road. The route is all staged out and they have to be back by 6:00pm. They have trucks and trailers set up if someone breaks down or there is a catastrophe on the road from one of the bikes, chain falls off or something, they can pick them up and bring them back to the Gas Lite. When the race is over, their people at

each location, goes through the site and clears it for us. It's not a race, it's a ride. There is getting less and less places for people to ride and do stuff off-road. Most people don't like motocross/dirt bikes rodding around. He wanted to get into this group. It's getting to be a larger growing thing in the whole country. Some of their riders are going to come from all over to ride this. They have limited the number of riders to 200 bikes. They want to make sure everything is good. They are hoping to have a two-day event in the future so they would ride one area one day and another area the second day. That is how they are set up all across the country. He, himself, being a motorcycle guy, thought this would be a great way to bring people into the community. Use some of the resources that they already have in place and do that. They are set up with all the home owners. Some are set up and they might not get used because they are going to have a one-day event this year. It got a little larger. They got more land than they thought they would. If they have a torrential down pour some of the places won't be available because it will get too slippery and it's all in the woods. So they will reroute that day if that happens. The event is insured with American Motorcycle Association (AMA sanctioned). If you have done any of the hill climb events that they put on, they are all insured. They are sanctioned with the AMA. So they get a lot of support from the American Motorcycle Association and their people there.

Staff Report – Emily Lund: Valley Springs Motorcycle Club Inc is proposing to sponsor and hold a new event called a dual sport ride. They want a mixture of public roads, paved and unpaved roads, as well as off-road trails located on private property. The event is proposed to begin and end at the Gas-Lite. There are many connecting points to stop for gas, snacks and restrooms. This year the ride will take place on one day (July 16th) this year. Commercial or club use of trails on private property triggers the need for a CUP. All property owners with off-road trails proposed for use in this event have signed waivers authorizing Scott Freier and Valley Springs Motorcycle Club to act as their agent through this CUP process and to allow event participants to drive off-road through their property. Valley Springs Motorcycle Club Inc. currently hosts an annual hill climb event in the Town of Hartland. They are sanctioned and insured by the American Motorcyclist Association (AMA). The club's mission is to positively impact Pierce County by having participants utilize local hotels, campgrounds, gas stations, restaurants and more. If they reach full participation, registration will be donated to local non-profits. The private property utilized for this event is located in the Town of El Paso, Hartland, Isabelle, Salem, Trenton and Trimbelle. The properties are in the Agriculture Residential, Commercial, General Rural, General Rural Flexible and Primary Agriculture zoning districts. The number of participants will be limited and will not exceed 200. The event is proposed to begin and end at the Gas-Lite. The event hours are 8am to 6pm. The riders will be released in groups of ~10 with 15 minute intervals. The route will be 100-200 miles within Pierce County that will be provided a route map and GPS. Since a variety of road surfaces are desired, the trail route will be on- and off-road at the proposed locations. However, the off-road sections are optional for the rider. Applicants will not hire any employees. Everyone working at the event will be volunteers. Volunteers will be stationed at all off-road sections to assure safety and accountability. In case a dual-sport dirt bike breaks down, the club will have two truck and trailers available for pick-up and transportation back to the Gas Lite. Participants will be able to use Gas Lite restrooms. No additional portable restrooms are proposed to be provided. Participants will have the ability to stop for food at many locations along the trail. The club is also trying to set up a lunch meeting location that is tentatively scheduled at Roger Nelson's pavilion on County Rd A or a location to be determined in the Village of Bay City. Participants will be able to camp on the Gas Lite property. When camping is allowed by the owner, camping is limited to day prior and day after the event. The Gas Lite property has dual zoning. The commercial establishment is zoned Commercial. The surrounding property is zoned Primary Agriculture. Camping on the property zoned Primary Agriculture has occurred for various events as part of the commercial operation dating back many years. An admission fee will be charged \$75 per participant. If they reach full participation, the club members voted to donate proceeds to these local non-profits: Veteran's Club, Lion's Club and Food Shelf. Although the 2016 event is proposed to take place within 1 day (on July 16th), the applicants are requesting this outdoor recreational use be authorized to take place annually over a 2-day timeframe. Applicants should contact the Department of Public Health to comply with their regulations, licenses and/or permits regarding any temporary event food service or any special event camping that is proposed for this event. The applicants do not plan to have any advertising signs. The off-road trails will be marked for riders. They do have advertising on their club website. Insurance coverage is through K

& K Insurance Group, Inc. and continues through 12/30/2016. Each individual participating in the event will be required to sign a "Release and waiver of liability, assumption of risk and indemnity agreement." The sheriff's department and the area ambulance services will be notified and requested to be on stand-by. The Towns of Hartland (March 8, 2016), Martell (April 4, 2016), Salem (April 19, 2016), Isabelle (April 19, 2016) and El Paso (May 9, 2016) recommended approval of this request without any specific comments or concerns. The Town of Trimbelle recommended approval on March 8, 2016 stating, "Event should have a positive impact on the Town of Trimbelle." The Town of Maiden Rock recommended approval on April 20, 2016 stating: "The club must provide signs on route. 20th Ave to 197th St will be signed 1-way. Riders must follow posted speed limit. Club must also provide personnel at beginning and end of route." The Town of Trenton recommended approval on May 10, 2016 citing the Town Plan Commission comment, which states "The Town of Trenton has a copy of Insurance, contact person name and number if there is a problem and final route map is received."

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed use at the proposed location(s) would be contrary to public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions:

1. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
2. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services, Department of Public Health).
3. The dual-sport event may be held annually. The event shall not exceed two (2) days in duration. Staff shall be contacted regarding any modifications to approved plans or any change in properties to be utilized for off road activities, to determine if a new CUP is necessary.
4. Hours of operation shall be 8am to 6pm, or as otherwise established by the LMC.
5. Emergency services (Sheriff's Dept and EMS) shall be given adequate notice of event and route.
6. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
7. A copy of the insurance and any changes to the insurance shall be submitted to the Land Management Department.
8. Camping shall be limited to the Gas-Lite property, contingent on owner approval.
9. The CUP shall expire in 2 years, with a status report given to the LMC prior to any additional events.
10. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.
11. Applicant shall notify towns and the Land Management Department of future events.

Chairperson Fetzer opened the hearing to the public. Mark Sandstrom, Salem Township, personally, he opposes this having had a bad experience with a motocross type event next to his property. Last year he had a person next to his property with about 20 motocross bikes on it and scared his cattle so bad they were foaming at the mouth and running around the pasture. They broke fences and he wants to know who takes responsibility if something like this happens again. Last year, the person doing this did not take any responsibility. Luckily no cattle died. Some were cut up, fences were broke and he doesn't want to see this happen again and that was just 20 bikes. Chairperson Fetzer stated we will take all the public comments and then have Scott answer after that. Bill Schweiger, Trimbelle Township, he wondered why any of us would be in favor of this. It's an altruistic thing, why would we want to put up with this. We pay property tax and you are going to ride on trails. Who is going to make these trails? What's the route? But you are asking people for this? Mr. Freier stated that he can answer while we go along. The people that have signed up have already signed up for us to go on their property and they already have trails that they already use. Some of them they haven't used for a while and to be honest they were kind of happy that he was going to clean the trail back up so we could use it and then they could use it again. These people that are on this map have already agreed and signed up to be part of the CUP. Mr. Schweiger asked if you have done this elsewhere? Do you have some examples of this being done? Mr. Freier

stated he personally hasn't done it, this is his first event that he is putting on but AMA has about 40 events a year that they do around the country. It's really big in northern Wisconsin. They have a National's Event and have been having that for 15 years. Mr. Schweiger asked if they have positive feedback from this sort of activity. Mr. Freier stated he has had an overwhelming response. He thought he would be fighting for land to get to do this on and he has a list of people that he couldn't get to that have found out about it and called him and said if they want to zip through their property, go ahead. He is hoping to have this a two-day event, so they can have one route one day and another route another day. Mr. Schweiger stated that if there is any money left over, where does that go? So the money goes to some sort of charity or something? Mr. Freier stated they are a nonprofit organization, the motorcycle club. What they are doing to make a long story short, the Lion's have lost a few of their fundraisers for the Lion's Organization. They came to us and asked if they could be part of this group. So we have allowed them to provide our meal in lieu of profits from the event. Our goal, when we originally contacted them, was to know what they do in the community, if they give them funds: The Funster's and Lion's do Santa Claus and the Easter Bunny. They wanted to be part of us because they are losing some of their fundraising at the Cheese Curd Festival and the Polka Fest. The Club wanted to have it at the fairgrounds but they didn't book their date soon enough and the date was full. Their plan is to start from the fairgrounds in the future. Todd Cipala, Trimble Township, he is in favor of it and the bikes are going to go through his land. He wants to make sure everyone is aware that these bikes are street legal which means they do meet the decibel rating that is allowable for the street which most Harley's don't as we all know. This is not a race, it's a trail ride and these are bikes that are perfectly legal to be on the street. The people that ride, average age is probably closer to his age and older. It's just kind of to tour the country. He thinks it's a very good thing. It's positive and helps the community out. Holst stated since you changed your format, why don't you answer Mr. Sandstrom's question regarding to damage to property and cattle. Mr. Freier stated our club does. It's kind of like the snowmobile club. Anything that happens, someone from out of state could come and go off land and the snowmobile club is responsible to come and take care of that. Mr. Sandstrom stated they are not going to be on my land, they are going to be next to it making noise. Mr. Freier stated you could still have an issue. He stated he doesn't know what happened on that other event. He's sorry he doesn't know where your land is. This is an organized event and they have people at the front and the end of it for that reason. Their goal is to not get the people off their trail. They are all sent GPS coordinates. A lot of the bikes have it mounted right on there and we send it to them and they download it and follow that route. Even though they will have it marked in the woods, their goal is to not get them on someone else's property. Mr. Sandstrom asked if every single bike on this is going to be decibel rated for street. Mr. Freier stated for AMA sanctioning they have to have the guy right there with the decibel reader, yes. Which you probably didn't get if the neighbor has motocross bikes, they are a total different machine. He's not saying that something like that couldn't happen and if it does, he wants to know about it. It's important to him that this event keeps going and if they have to reroute a route from not using your neighbor's property or something we are wide open. That's why we are all here to know our oppositions. Rayne Farrell, lives in Esdaile, Hartland Township, first she wants to clarify the Lion's Club is losing some of their financing but not all of their fundraising from the Cheese Curd Fest. Mr. Freier stated it's a big chunk that they are. Ms Farrell stated yes it is. She would just like to know if individuals have to provide insurance for their vehicles. They sign a waiver for yours but do they have to be insured on their own? Mr. Freier stated the State of Wisconsin requires it, yes. Ms Farrell asked if they are checking to make sure they are insured? Mr. Freier stated that is not in their scope. He asked this at the County level and they said he can't legally do it. They can't unless an officer, an officer can check their stuff but he can't. Ms Farrell asked if something happens on someone's property and they have signed a waiver saying they are not going to sue the person, do they have some type of coverage that they can provide. Mr. Freier stated they are supposed to be licensed motorcycles and legally supposed to be insured from the State but we can't enforce an insurance policy on them. Ms Farrell stated she knows the snowmobile trails, has that been cleared with all the snowmobile trails? Mr. Freier stated only on the property owners lands that have signed up. Ms Farrell stated she knows the snowmobile clubs have a big phobia. Mr. Freier stated the only trails they would be using are snowmobile trails that are on the people's property that have allowed us to be there. We're not just randomly picking a chunk of snowmobile trail and riding it. Ms Farrell asked where Town of Trenton said something about providing a copy of insurance and the

contact person and a name; that probably would be good for all the Townships to have. Mr. Freier stated we provided it to the County conditional use permit and they can get it all from there. Ken Johanson representing his family that lives in Salem Township, he asked earlier for a detailed map, is there a detailed map available and will there be new trails created possibly, cutting trees or how does that work? Mr. Freier stated as of right now they are going on trails that are all existing or have been existing in the past but haven't been used in the past ten or fifteen years. To his knowledge, right now, they are not cutting any new trails. Mr. Johanson asked if there is a map that shows where the paths are. Mr. Freier stated the County has requested that they give them the property description. We don't really have to do the actual map. We will eventually because we want to download that to the riders. Mr. Johanson asked if there are going to be designated parking locations for spectators or people helping out. Mr. Freier stated this is not for spectators. It's just for riders. Mr. Johanson asked about the on-road portion, will there be riding off on Hwy 10? Will people be allowed to ride in the ditches both to avoid traffic and because it's more fun to ride in the ditches. Mr. Freier stated no, this will be on the Hwy or County Road. No there won't be any ditch riding. Mr. Johanson stated where it shows on Hwy 10, it has to stay on the highway? Mr. Freier stated yes, where we go off are in people's driveways, field roads or places like that. Not like a snowmobile that will go down the ditch for three miles or so that isn't our scope at all. Gary Fryer, Trenton Township but owns property in El Paso, he assumes they are going to be going up Lost Creek as part of that if you are going over to the Rod & Gun Club. Who is going to monitor the speeds of these bikes up the side roads up Lost Creek or 450th or around? Mr. Freier said he guess the same law that are out there for the rest of the year. They sign their agreement saying they will follow the posted limits. We actually have one of our County Patrolmen riding it with us. Mr. Fryer asked what is the average size of the machines; CC's. Mr. Freier stated probably 250 to 450. There are some adventure bikes that will come to this event and they will be 1200 to 1400 CC's. Those will be the ones that will bypass all of the off-road stuff. They want a route to ride through the country but they will bypass our off-road or "hero" areas. Mr. Fryer stated his concern on the curvy road was that they would be driving way over the speed limit. Mr. Freier stated we can't control any of that. Mr. Schweiger asked where these people come from, if we introduce them to the area and they will say "hey, I know this really cool place to ride." Mr. Freier stated they are from anywhere. Anyone that has a licensed motorcycle can come. They can be from Canada or any other state. Chairperson Fetzter stated these trails aren't going to be open continuously. You can come ride on the roads anytime. Mr. Freier stated the group of people that come to this event, they know that this is a one-day event that it's posted and sanctioned. It's an AMA sponsored event. It's kind of like the hill climb down there. Nobody gets to ride that hill or can be on that hill any other day than a race day. That is what separates that. He did have that concern with some of their other people, he said I don't want these guys coming back six months later saying I get to ride here because I know where it's at. We are posting on some property some signage where we are going in and out to state just exactly what you said. Todd Merkins, owns property both in Trenton and Salem, each one of these squares on the map, are they 40 acres plotted out. Mr. Freier stated, Emily can help me out with this, if we went on their property we mapped out anything, we might not be touching some of the property but if we are going on their property, we mapped out that persons whole property. Mr. Merkins stated all volunteers are working it, how many will there be at this event. Mr. Freier stated between 30 & 40. Mr. Merkins asked about the area in Salem that is close to his renter and he wants to keep him happy. He doesn't want to disrupt the quality & serenity of country life. What kind of assurances could you give him that would say that there may be somebody to keep people off his land, because his land looks like it would be great land to ride on. Mr. Freier stated if you can get ahold of my afterward, he would like to map that out so he knows where that is or where the concern might be. Mr. Merkins asked if some of the volunteers are going to be placed strategically throughout this route? Mr. Freier stated a lot of the volunteers are the land owners that want to be part of it. Some of them aren't but they will have other people that know that route. That is why he is asking you to do that. Then they know there is a hot zone that they need to keep tabs on. Pichotta stated he has a couple letters here, comments from folks who called in but couldn't be here tonight. The first is from Ronald and Kay Peterson, Town of Trenton; we received a notice about this since our residence is in Section 2 of Trenton Township, directly across the road from off-road property which would be used in this event. Most of our concerns have been addressed in the Staff Report; including: Number of participants will be limited to 200.

Event hours are 8am to 6pm on July 16, 2016.

There will be no overnight camping on the private properties used for the off-road portion.

Concerns not addressed include: We would want to know that no alcohol will be allowed on the private properties used in the off-road portion. This would apply to the event of 7-16-16 as well as any future events. We request that if the permit is issued for 7-16-16 with the conditions in the staff report, that it be a one-time permit for that event only. And that future permits being granted would be contingent on compliance, lack of disturbances, lack of safety concerns, being proven at this initial event. And that future events would also limit the number of participants, event hours of 8am to 6pm and no overnight camping or parking on the private properties. We are unable to attend the hearing of 6-15-16, but request your consideration of our concerns. Respectfully submitted, Ronald & Kay Peterson, W8026 390th Ave, Ellsworth, WI 54011. Mr. Freier stated there will not be overnight camping on any of the private properties. We don't serve any alcohol until after the meal at 6:00pm at the Gas Lite. We can't stop them from drinking and driving. Typically this group is not that, it's more seeing the country and seeing what this area has to provide. The next was a phone call received yesterday from Wayne Dodge, Trimble Township, he called saying he is in favor of the Dual Sport Event. He feels it is recreational and not paid for by tax dollars. He belongs to a snowmobile club that also isn't paid for by tax dollars. He is not able to attend the meeting tonight but wanted it known that he is in favor of it. The next one was an email that we received from Vernon Martin; The Valley Springs Motorcycle Club Inc has my support for their proposed activity. This is a good and constructive activity that many of our citizens can enjoy and being property owners it makes no unreasonable burden on residents or owners of Pierce County. Further it will bring some economic benefit to the area as the participants spend for ancillary services. We hope you give this a green light, Thank you, Vern and Wanda Martin. Lastly, we also heard from Paul Shingledecker, Chair of the Town of Salem, who stated that when the applicant appeared before their Town Board only a limited number of parcels in the Town were proposed for off-road use and now it appears that several more parcels are included. He stated that he has no issues moving forward with approval but requested that only this event be authorized and that the applicant be required to appear before their board prior to any further events. Mr. Freier stated yes, there were properties that were expanded on from when they did the event and all of them are assured that they will get this map that we have with all the properties and the routes. That was the big concern with most of the Townships. That they knew what was going on in case something happened. They knew where we were supposed to be. **Public hearing closed.** Sanden asked Mr. Freier if they present any written notice of acceptable behavior or what is expected of these participants such as no racing or no alcohol consumption; abide by the rules of the road. Is there anything you provide up front that is proper rules of behavior? Mr. Freier stated that is what the AMA sanctioned event does. They have all those rules. Everything that you have said is in those rules. That is why we go to an AMA. They have the sanctioning and when people sign up for a card and get a certificate that they are an AMA Member, they agree to all those terms when they come to an event. Sanden stated that with any more than one person, two people it could potentially become a race. So is it pretty clearly stated that this is not a race, not to be competitive in this. It's just meant to be a joy ride. Mr. Freier stated the whole event is that and there are no prizes for getting done early or getting through an area. Sanden stated for future reference it would be nice to have that document to see what they recommend and what you recommend. Mr. Freier asked the AMA sanctioning? He thought he had it or Emily does. He might not have the actual when they sign up to become an AMA member, that material. Sanden stated he assumed they would be reinforcing this before the event begins. Mr. Freier stated "Trust me, I don't want problems." Most of his people have spent many hours finding the hot spots so he can avoid them. Lund stated she has a section on this from the news on the dual sport riding. It talks about recommendations for new riders. They do say the dual sport ride. The dual ride sport is not a race, have fun, ride in a group, be with at least one experienced rider, knobby tires are mandatory. Do not skip the ride, comradery, one-time event. It doesn't talk about everything that you are mentioning. Mr. Freier stated some of that is covered when they sign up to become an AMA Member. They have to be an AMA Member of the organization to enter into one of these events, whether it be a hill climb or dual sport or actually there are a lot of road riders that are AMA Members. Sanden asked if staff has had any experience with the other 40 some odd events that have occurred around the country? Have you had a chance to look into some of those and see if they have had any issues in the past? Sanden asked Mr. Freier,

you may or may not have had a lot of experience with people making claims against this particular insurance, but the gentlemen mentioned the cattle breaking his fence because they were spooked by these bikes, it wasn't anything the bikes did directly. Would that be something that he could submit to that insurance company and get compensation for? Mr. Freier stated honestly he can't answer that. They have had things in previous events that have been taken care of. A club member took care of something but he doesn't think they have had anything go to a law suit or anything. Holst suggested to move the event as far from Mr. Sandstrom's cattle as you can possibly get them. Work that out prior to the event rather than having trouble with your neighbor. If you want to have this event again, you don't want to have any trouble when you come back. You want to be as clean as you can be. This event differs from the old trials where they used to have a stop watch and you had X amount of time and you got over it, you got penalized, if you got under it, you got penalized. Mr. Freier's stated trials are a whole different event. It's a race and it's timed and a lot tougher riders. It's for a lot better riders. Our riders are typically 50 and up. Holst stated some of us guys that are 50 can get around pretty good. Mr. Freier stated there are some good riders. There are some hill climbers that are 60 – 70 years old. Holst said if he wanted to sound really good, not to be offensive to a hill climber but I wouldn't compare myself to hill climbers because their reputation is a little different. That's probably why some of the people are here. This is probably more like an everyday, old codger's event to go out, ride around and have a good time and not cause trouble. Mr. Freier stated there are a lot of us that used to race and can't anymore and this is the next kind of thing to still get out and ride. Holst stated that during public comment, Bill mentioned why would anyone be in favor of this or want to do this? What he assumes this group of people will be like, it won't be as offensive, this isn't going to be the second coming of the flood run. It's a totally different group of people, a totally different mindset, totally different everything. They have to come back here again. The last thing they want is to come back with a couple marks against them. Sanden stated he has to preface by saying this is a legal activity. They are doing things, riding on the road which they have every right to do. With 200 bikes going by anyone that lives along this circuitous route, having 200 bikes go by from 8:00am to 6:00pm. I think that is a very logical question of what is the benefit that we would see. You mention that you don't make your money from the spectators you make it from the actual participants. This isn't necessarily a charity ride. A portion of it may go to these charities but that doesn't sound like that is the main purpose of it. You are doing a legal activity and you are doing it on the road. That is something that he is very appreciative of but for someone that is living along one of these routes what would you tell them. Mr. Freier stated he had a land owner down on Loss Creek, he said 200 bikes is no big deal. He gets 200 Harley's that go by in half an hour by his house. Most of his opposition has been only 200. My bikes aren't Harley's they are actually decibel so they are going to be within the noise restraints. Sanden stated to the audience, they are going to be coming back next year and the future CUP's will be dependent on how this goes. We can't be everywhere at all times but you are kind of our eyes and ears out there, so if you do have any issues that come up we want to know about it for next year. Mr. Freier wants his phone number to get out so if there is anybody that has a concern he would like to know about it before the event so that they can retrofit whatever it is to make that happen. Holst stated to Mr. Freier that you mentioned these will be 250 – 400 CC's, are those 2 or 4 stroke. Mr. Freier stated most are 4 stroke. Holst stated to relate to people that a 4 stroke is a less annoying sound. Mr. Freier stated the RPM's of a 4 stroke are lower. A 2 stroke might rev out to 10,000 RPM's, a 4 stroke gets their power at about 2,000 RPM's. The bikes aren't high revving motorcycles at all. They are more the low end torque motorcycles. Mr. Cipala stated that you had mentioned other areas that have had these events. He thinks it would be really easy to contact some other clubs like Wabeno in Northern Wisconsin and get their feelings on it. Mr. Freier stated Wabeno is the big one. Sanden stated unfortunately we have to make our vote in a few minutes. You would characterize it as being positive up there? Mr. Cipala stated they absolutely love it up there. **Sanden moved to approve the Private Outdoor Recreation for a Dual Sport Event in the Agriculture Residential, Commercial, General Rural, General Rural Flexible and Primary Agriculture Districts for Valley Springs Motorcycle Club Inc, Scott Freier, agent, on properties located in El Paso, Hartland, Isabelle, Salem, Trenton and Trimbelle Townships, due to the fact this is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #11/Aubart seconded.** It was asked if this is a life-time CUP. Sanden stated this is a one-time event, it's only for this one event. Pichotta stated the

way it is written up is that the CUP would expire in two years with a status report before the Land Management Committee prior to any additional events. The committee could certainly modify it to just this single event and then if they want to hold a future event they would have to jump through the same hoops again. Sanden stated technically, it is good for two years and we will have another crack at it next year. We could revoke it or modify it if need be. Pichotta stated if you want to specify that it is a one year or simply authorizes the event in July, you certainly have the ability to do that. Holst stated and the applicant can come back in August if everything went really well and apply for his next year's event. Mr. Freier stated that is what he would prefer. Chairperson Fetzer stated there is a motion on the table, Dr. Sanden would you like to rescind your motion. Sanden asked if someone could add another condition to it. Holst moved to amend the motion and add a condition that states that this is for this event only and the applicant can reapply after this event at no cost. Chairperson Fetzer asked about coming in after this for a status report. Holst stated status report at the August meeting. Mr. Freier stated he would be more than happy to do that and then asked when the August meeting is. Pichotta stated 1st & 3rd Wednesday's, August 3rd & 17th. Mr. Freier asked what is the September dates because he thinks he is gone both those dates in August. Hartung stated September 7th & 21st. Sue Gerdes stated when they did their first hill climb conditional use permit, they made the second year contingent upon favorable review of the first year. So they did get a two-year permit with a contingency on it. Holst stated we understood what a hill climb was, this thing we are kind of shooting in the dark. He appreciates your comments. You need to modify your schedule to meet ours, Scott. Mr. Freier asked how about September, can we just do it then. Aubart stated it's built in for a status report prior to any additional events so we can limit it at that point the way it is written now. Holst withdrew his amendment. Chairperson Fetzer stated we have a motion by Dr. Sanden and a second by Mr. Aubart, is there any further input or comment? **All in favor. Passed.**

Discuss take action on site plan review for proposed Interstate Truck Driving School, in the Commercial District, pursuant to Pierce County Code Chapter 240-75 for Daniel and Cheryl Ross, owners on property located in the SE ¼ of the SE ¼ of Section 12, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer invited Cheryl Ross and Darrell Peterson forward: Mr. Peterson from Interstate Truck Driving School introduced himself. The main office is located in South St Paul. They have been training commercial drivers for going on 20 years now. They work with all the major carriers; 38 major companies. They trained 750 drivers out of their South St Paul office last year. As they are training drivers to get to work, they work with all the workforce centers throughout the State of Minnesota and Wisconsin. They wanted to move into Wisconsin. He is working with the workforce centers in River Falls and the Baldwin area. They see a need for training drivers in this part of the country. They have a lot of drivers from Midwestern Wisconsin that want to become drivers and train. They work with Schneider Transportation out of Green Bay. They place a lot of driver's with them. The thing that they can do right now is they are looking for a place that we can remotely send to a flat screen TV, like they did in their St Cloud location before they closed that down, so we can have people come there and listen to a class. They are going to have one instructor there that can leave and go out and train drivers on the road. They generally go out in two hour increments to go drive. We will have one vehicle there to drive. The only thing that was missing from the staff report and he wants to bring it to everybody's attentions right now because they don't want to hide anything; is that they want to have one area to back behind the building. So they just have one backing truck that will be a single-axle tractor with a 30 foot trailer just to practice straight line back, the alley dock and the offset. So offset, straight line and alley dock. **Staff Report – Ryan Bechel:** The applicant is seeking site plan approval to utilize an existing building to provide operational space for the Interstate Truck Driving School (prospective tenant). The Interstate Truck Driving School provides professional Tractor Trailer driving courses based out of South St Paul, MN. The company has held a license to train in the State of Minnesota for more than 18 years. One training course is proposed to be held at the property, which includes both classroom instruction and on the road training for participants. The company has obtained a State of Wisconsin Educational Approval Board certificate, authorizing their business in Wisconsin. Additionally, Wisconsin Department of Transportation licensing approval was completed in May 2016. Pierce County Code §240-75 requires site plan review for the establishment of a Commercial Use, the purpose of which is to assure site designs that promote compatibility

between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The 19.8 acre property is located in the Town of Martell and is zoned Commercial. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts:

Commercial: This district is established to provide for retail shopping and personal service uses to be developed either as a unit or in individual parcels to serve the needs of nearby residential neighborhoods as well as the entire county. The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive noise, traffic, drainage or other nuisance factors. General Retail and Services is defined in Pierce County Code §240-88 as “establishments that provide goods and/or services to the consumer.” The property is bordered primarily by agricultural land. A commercial establishment (The Red Barn Bar & Grill) is located directly east of the subject property. Adjacent zoning districts include Primary Agriculture to the north, south and west; Commercial and General Rural to the east. No new buildings are proposed. Courses will be taught within the existing facility. The existing structure meets all applicable setbacks. The applicant anticipates 2 semi tractors with 30’ trailers will be stationed on the site. The vehicles will be used for on-road training; an outdoor practice course was not previously proposed but that has since changed with Darrell stating the backing up. No additional exterior storage is proposed. Driveway access to the property is located off of State Hwy 63 on the eastern edge of the property. Traffic generated due to the proposed operation is anticipated to be minimal. The site is near the intersection of a state and county highway. No additional exterior lighting is proposed. The applicant is not proposing any additional signage. An existing sign is proposed to be refaced to advertise the proposed business. A restroom is present within the existing building. A 3000 gallon holding tank provides sanitary facilities for the site. No solid waste is anticipated to be generated by the operation. A screening plan is not proposed. Proposed hours of operation are 7:00am to 5:00pm weekdays, with some specially scheduled training possible on Saturdays between 9:00am and 3:00pm. Saturday trainings would be on a per case basis as necessary. One Interstate Truck Driving School instructor will be on site to provide the training for each course. The applicant anticipates 3 to 5 students per session held. Pierce County Code §240-54 establishes parking requirements and stipulates in cases where a uses parking requirements are not specifically listed, the minimum number of parking spots shall be determined by the Zoning Administrator based upon the requirements for similar uses. A minimum of 1 parking spot per anticipated number of class participants, plus one for each instructor present on site at a given time shall be provided. A minimum of one parking stall shall be ADA compliant. The site plans submitted demonstrate ample parking area to fulfill this requirement. Upon completion of the site plan review the applicant will be required to obtain a Land Use Permit as outlined in Pierce County Code §240-73(1)B.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

Staff recommends the LMC place any condition(s) that it deems necessary, as well as the following:

1. The applicant shall obtain a Land Use Permit from the Land Management Department prior to establishing the use.

Holst asked about having a little bit of on-site for practice backing up, where would you propose doing that?

Mr. Peterson stated what they are thinking of doing is just on the north, right behind the building. Holst stated it would remain on Lot 1. Mr. Peterson stated yes, everything is on Lot 1.

Holst moved to approve the Site Plan Review for Interstate Truck Driving School in the Commercial District for Daniel & Cheryl Ross with condition #1/Aubart seconded. Holst stated he feels this is a good use of the property and something that would be advantageous to the County of Pierce to have within our

borders. Sanden stated he thinks it's a good location too. Mr. Peterson stated the thing that is really gratifying to them is since 2010, when the economy turned, it really changed a lot of people's lives. The difference they have made in training drivers to get them to work is incredible. He sees moving stories every single day. Where he has people coming in that lost a house, couldn't keep the bills paid, had been out of work for years. He can get a guy to a \$50,000/year job in about 6 – 7 weeks. The companies will reimburse their tuition, they have healthcare benefits. The companies are more user friendly than ever. The requirements for licensing have become so much better than what it was. The major carriers are really looking to develop relationships with new drivers and keep them in the fold and not use them and spit them out. There is more home time. He has 14 companies right now in the metro area that have a brand new rookie driver home every night. Companies offering \$5500 sign on bonuses just for a student out of their school to show up and go to work plus tuition reimbursement. It really does change lives. Sanden stated he understands Veterans often times get jobs. Mr. Peterson stated he is a Veteran, himself and Bill, the owner of the company is as well. We do all the Veteran job fairs; T it up for the Truckers, T it up for the Troops, Yellow Ribbon Programs, they have about 25 Vets they are training right now, post 911, two are starting on Monday. The big thing that is going on in Wisconsin is that they can do third party testing in Wisconsin. They are looking forward to training more people here too. They can do road tests in Hudson on Saturdays. A truck may be leaving the location to go to the Hudson site on a Saturday to road test. They have a third party tester that can do that. That can't happen in Minnesota. They are doing 4 – 5 road tests every single day in Minnesota and that's not enough. He is fighting with the State Capital to get more road tests sponsors. It's been a big problem. Sanden stated we are fortunate to have you here. **All in favor. Passed.**

7:19pm Holst moved to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director/Aubart seconded. Roll call vote. Holst – yes, Aubart – yes, Fetzer – yes, Sanden – yes.

7:38pm Holst moved to reconvene into open session and take action on closed session item/Aubart seconded. Roll call vote, Holst – yes, Aubart – yes, Fetzer – yes, Sanden – yes.

Aubart moved to grant a favorable performance evaluation for Land Management Director, Andy Pichotta and give a step increase if eligible/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Discuss take action on conditional use permit renewal for William Holst for a Sand Processing Facility in Trenton.

Discuss take action on conditional use permit renewal for Muskie Proppant LLC Sand Processing Facility in Union.

Potential for Mathy Construction Site Plan Modification.

Motion to adjourn at 7:42pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 15, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 6 th & 20 th , August 3 rd & 17 th , all in 2016.	Chair
3	Approve minutes of the June 1, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Private Outdoor Recreation for a Dual Sport Event in the Agriculture Residential, Commercial, General Rural, General Rural Flexible and Primary Agriculture Districts, pursuant to Pierce County Code Chapter 240-39E, for Valley Springs Motorcycle Club Inc, Scott Freier, agent on properties located in Section 34 of El Paso Township, Sections 9, 10, 14, 15, 16, 21, 28, 29 & 33 of Hartland Township, Sections 4 & 5 of Isabelle Township, Sections 3, 4, 6, 9, 10, 16 & 21 of Salem Township, Sections 2 & 3 of Trenton Township and Sections 20, 21, 22, 27 & 28 of Trimbelle Township, Pierce County, WI. A map is available for viewing in the Land Management Department.	Lund
5	Discuss take action on site plan review for proposed Interstate Truck Driving School, in the Commercial District, pursuant to Pierce County Code Chapter 240-75 for Daniel and Cheryl Ross, owners on property located in the SE ¼ of the SE ¼ of Section 12, T27N, R17W, Town of Martell, Pierce County, WI.	Bechel
6	Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director.	Chair
7	Committee to reconvene into open session and take action on closed session item, if required.	Chair
8	Discuss take action on Travel/Training Requests.	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, June 1, 2016

Present: Joe Fetzer, Jon Aubart, Jeff Holst, Eric Sanden and Ken Snow

Others: Andy Pichotta, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 15th, July 6th & 20th, all in 2016.

Approve Minutes: **Holst moved to approve the May 4, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed with Eric Sanden and Ken Snow abstaining from voting because of absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for an Expansion of a Nonconforming Structure in the General Rural District, pursuant to Pierce County Code Chapter 240-67A(2), for Anthony and Trudy Huppert, owners, by Eric Huppert, agent on property located in the NE ¼ of the NE ¼ of Section 6, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Tony Huppert forward: Mr. Huppert stated his wife has had two knee surgeries and two shoulder surgeries and he has had two heart attacks and she wants this garage.

Staff Report – Emily Lund: The applicant's property is a corner lot at the intersection of 890th Ave and 450th St. Lot access is from 890th Ave. The applicants are requesting to expand their existing garage. The existing garage is a nonconforming structure located 27.5ft from the center line of 890th Ave and is partially located within the Town Road right-of-way. The applicants propose to expand to the east of the existing garage by adding 24ft x 32ft. The applicants intend to maintain the 33 ft setback from the centerline of 890th Avenue so the expansion area is out of the road right-of-way. This 0.58 acres is located in Section 6, Town of Gilman. The property is zoned General Rural. Pierce County Code (PCC)§240-27C states, "Town highways. Except as provided in Subsection E, the required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 42 feet from the edge of the right-of-way, whichever is greater." PCC §240-67A(2) stated, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in §240-76." PCC §240-76A states "Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use." Permit renewal is not required for this request. The existing topography is level throughout the property. The Town of Gilman recommended approval of this request on May 11, 2016 with the suggested condition that they remove the access to the existing garage. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The Town recommendation is attached.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and determine whether the proposed expansion would be contrary to public interest, or detrimental or injurious to public health, safety or character of the area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions:

1. The applicant shall maintain the 33 ft setback from the centerline of 890th Avenue so the garage expansion is located out of the road right-of-way.

2. The existing garage driveway shall be removed, per the Town of Gilman's recommendation.
3. The applicants shall follow Pierce County Solid Waste code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
4. The proposed expansion shall be completed within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the Expansion of the Nonconforming Structure for Anthony & Trudy Huppert, due to the fact that it is not contrary to the public interest, not detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #4/Snow seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Light Industrial Uses for a transfer station in the Commercial District, pursuant to Pierce County Code Chapter 240-37.1A, for Redeye Express LLC, Bruce Williams and Debi Johnson, owners by David Daleiden, agent on property located in Lot 2, Certified Survey Map (CSM), V14, P28, in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Bruce Williams forward: Mr. Williams stated he just received a call from David Daleiden and he should be here soon.

Staff Report – Emily Lund: Redeye Express LLC, a freight shipping company, has submitted a proposal to construct a transfer station in the Town of Trenton. They would use flatbed trailers to pick up and deliver products (e.g. electrical poles) from Thomas & Betts. The proposed development includes a truck transfer station that has an office, storage area, enclosed truck wash, bathroom and outside parking lot. If the CUP is approved, the transfer station will require the Land Management Committee site plan review per PCC §240-75. An agenda item for the site plan review for this facility follows this item, in anticipation that the CUP is approved by the LMC. The property is located in Section 35, Town of Trenton. The 3.004 acres is zoned Commercial. PCC §240-88 defines Light Industry as “non-nuisance, low-impact industrial uses compatible with surrounding commercial, residential or public uses which have a minimal impact on traffic, conducted indoors and without significant noise, odor, dust and glare which do not contribute to the degradation of the land, water and air.” Pierce County Code Table of Uses allows Light Industrial Uses in the Commercial zoning district with the issuance of a CUP and provisions in §240-37.1A:

- (1) All operations take place within buildings.
- (2) Screening with natural vegetation or fencing shall be provided along property lines bordering agricultural, rural or residential districts.

Surrounding Zoning Districts include Industrial to the east and Commercial to the south, west and north. Surrounding land uses include agriculture to the north, east and south and commercial uses to the southwest and west. A 56ft x 89ft building that is 19ft 4in tall is proposed to be constructed on-site and would be used for storage and as a wash area. That building is proposed to have an attached entry that would be 30ft x 18ft and be 9ft 4in tall and would be used as an office, break room, kitchenette, restrooms and mechanical room. The building would have a concrete walkway to access the entrance area and concrete apron by the truck entrance and exits. A covered porch that is 10ft x 24ft x 9.75ft tall is proposed to be constructed over the outside utility door. The applicants do not intend for customers or for the general public to visit or utilize the facility. Days of operation are proposed to be Monday through Saturday, with hours as needed. Hours of operation are estimated to be approximately 32 hours/week. Applicants anticipate 9 employees with 8 semi-truck drivers and 1 office manager utilizing this facility. Access to the site is north of 170th Avenue through a shared driveway easement. Applicants received their Uniform Address Number (W7852 170th Ave) on 10-15-2015. The truck wash will be collected by a Holding Tank below the floor of the building. The bathrooms will have a separate conventional septic system that was permitted on 4-26-2016 with sanitary permit #471102016. The Town of Trenton recommended approval of this request on 5-10-2016 with the suggested conditions that the applicants return to the Town Plan Commission in 2 years for renewal and that the Town be provided with a certificate for proof of insurance for the wash water holding tank in case it would run over. The Town indicated that the use fits their Comprehensive Plan. The Town recommendation is attached for your information. Land Management staff, as a matter of routine, contacts the Town Chair when determining whether CUP renewal will be conducted

administratively or by the LMC. If concerns regarding a conditionally permitted use are identified by the Town the renewal is by the LMC. It would be unprecedented for an applicant to be required to appear before a Town Planning Commission and/or Town Board for renewal when no outstanding issues or concerns are present. The LMC should consider whether a condition requiring the applicant to again appear before the Town is appropriate.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area. If found to not be contrary to the above, staff recommends the LMC approve the proposed light industrial use with the following conditions:

1. Applicant shall follow all conditions and receive all necessary permits from WI DNR, Dept of Safety and Professional Services and other agencies as required.
2. Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.
3. The days of operation shall be Monday through Saturday.
4. The applicant shall provide proof of insurance (dec page).
5. Applicant understands that expansion or intensification of this use will require modification to this permit or potentially, issuance of a new conditional use permit.
6. This CUP is valid for two years and may be renewed administratively unless compliance issues exist. The owner/operator is responsible for requesting renewal.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.**

Holst stated that this is a conditionally permitted use in a correct district, why would we want to send it back to the town. If they (the applicants) screw up, we pull the permit. Pichotta noted that when a Town makes a recommendation regarding a conditionally permitted use. We don't want to, as staff, simply discount their suggestions as far as their recommended conditions. That is why we present whatever is recommended to you. He noted that it would be unprecedented for the LMC to require a renewal be considered by a town board or planning commission. We have never had a CUP where we sent somebody back to the Town unless there were outstanding issues with that Town that required the Town's input. He suggests that the LMC not place that condition but given the fact that the Town recommended the addition of that condition, staff felt it appropriate to present it to you. Sanden asked if the area is adjacent to an Industrial zone to the south. Lund stated yes, it's a Light Industrial Use in a Commercial District next to an Industrial District. Holst stated he is quite familiar with the area, it's not a high impact use and across the street they have another trucking company. There are similar uses right there. **Sanden moved to approve the conditional use permit for Light Industrial Uses, a Transfer Station for Redeye Express LLC, due to the fact this is not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Holst seconded. All in favor. Passed.**

Discuss take action on Site Plan Review for a proposed Light Industrial Use, a transfer station, in the Commercial District, pursuant to Pierce County Code Chapter 240-75 for Redeye Express LLC, Bruce Williams and Debi Johnson, owners, by David Daleiden, agent, on property located in Lot 2, Certified Survey Map (CSM) V14, P28, in the SW ¼ of the SE ¼ of Section 35, T25N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Emily Lund: The prior CUP was approved so Pierce County Code §240-75 states that the purpose of site plan review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The property is located in Section 35 in the Town of Trenton and is zoned Commercial. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts: Commercial: This district is established to provide for retail shopping and personal service uses to be developed either as a unit or in individual parcels to serve the needs of nearby residential neighborhoods as well as the entire county. The purpose of the district is to provide sufficient space in appropriate locations for certain commercial and other nonresidential uses while affording protection to surrounding properties from excessive

noise, traffic, drainage or other nuisance factors. The surrounding zoning districts, uses and the building size were previously mentioned. The applicants received Dept of Safety & Professional Services (DSPS) building plan approval on 4-21-16 with Transaction ID#2686531. The applicants shall work with the Town or State Inspector to ensure compliance with the Uniform Commercial Code (UCC). Information on access to the site and the holding tank were previously stated. The remaining portion of the lot, besides the building area, will have recycled asphalt for parking and a grassed area. PCC does not identify a maximum percentage of impervious surface area for this zoning district. Pierce County Code §240-54 establishes parking requirements and stipulates that in cases where parking requirements for a use are not specifically listed, the minimum number of parking spots shall be determined by the Zoning Administrator based upon the requirements for similar uses. A minimum of 1 parking spot per employee present on site at a given time shall be provided. A minimum of one parking stall shall be ADA compliant. The plans submitted demonstrate ample parking area to fulfill this requirement. The applicants will have several parking areas. PCC §240-23 Minimum Requirements. Developments shall meet the minimum requirements for the applicable district shown in the Table of Dimensional Requirements. PCC 240 Attachment 2, Table of Dimensional Requirements states. Side yard (feet) and rear yard (feet) setback in commercial zones is 10ft; 40ft from residential districts. Proposed building plans conform to required setbacks. The applicants have security and office lighting planned for this building. It has already been stated that they do not intend for customers or the general public to visit the facility and the hours of operation. Applicants anticipate 9 employees with 8 semi-truck drivers and 1 office manager utilizing this facility. No advertising or wall signs are proposed at this time. Applicants shall obtain a Land Use Permit prior to construction if they choose to have advertising signs in the future. The applicant proposes to begin construction immediately after the plans are approved and permitted. They anticipate construction of the building shell to be completed in June 2016, with the interior electrical and plumbing to be completed in July 2016 and the business to be operational by August 2016.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine, if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule. Staff recommends the LMC approve the proposed light industrial use in the commercial zoning district with the following conditions:

1. Applicants shall follow all conditions and receive all necessary permits from WI DNR, Department of Safety and Professional Services and other agencies as required.
2. Applicants shall have the site inspected by a commercial DSPS inspector to follow the uniform commercial code and state plan approval requirements.
3. Lighting shall conform to the Lighting Standards contained in the Departmental Policy regarding Minimum Landscaping Requirements.
4. Applicants shall obtain a Land Use Permit for any future advertising signs.

Aubart moved to approve the Site Plan Review for Light Industrial Use for a Transfer Station construction for Redeye Express LLC with conditions #1 - #4/Snow seconded. All in favor. Passed.

Discuss take action on site plan review for proposed Interstate Truck Driving School, in the Commercial District, pursuant to Pierce County Code Chapter 240-75 for Daniel and Cheryl Ross, owners on property located in the SE ¼ of the SE ¼ of Section 12, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Fetzer asked if applicant is present. Applicant is not present. Holst moved to defer action until applicant is present/Sanden seconded. All in favor. Passed.

Discuss take action on proposed Town of River Falls zoning code changes. Staff Report – Pichotta: The Town of River Falls has been authorized by the County Board to exercise zoning authority within its borders.

Any amendment to the Town's Zoning Ordinance requires approval by the County Board of Supervisors to be valid. The Town has amended their ordinance primarily to conform with changes to State Statutes relating to Farmland Preservation zoning and to cell phone transmission tower regulation. Numerous formatting changes and multiple name changes are also proposed (e.g. special exception to conditional use). Other changes that were previously approved by the County are presented in the proposed ordinance in a manner that makes them appear new. This includes language outlining the "right to farm" in the Town. The Town's Farmland Preservation Zoning Ordinance was certified by the Department of Agriculture, Trade and Consumer Protection (DATCP) on February 19, 2016. Certification by DATCP confirms that the zoning ordinance complies with minimum standards established by the State for participation in the Farmland Preservation Program and is effective for a 10 year period. The Town has historically limited the construction of new residential structures on Class I, II or III soils, as identified on the Natural Resource Conservation Service (NRCS) Soil Survey Maps for the Town. The Town has now adopted a process through which a landowner can submit additional information generated by a Certified Soil Scientist to establish the presence of Class IV soils and thus qualify for a building site. This new process has been established in the Farmland Preservation Zoning District (A-1) as well as the Agriculture Residential District (A-2). Additional amendments are proposed to bring the Town's Ordinance into compliance with recent legislation which greatly limited a municipality's ability to regulate cell phone towers. The language proposed is modeled after Pierce County's Ordinance and is the result of concerns raised by the Corporation Counsel's Office regarding language that was previously submitted. The section of the Code dealing with Erosion Control (17.12) has been deleted and moved to another chapter (Storm Water Management). Staff also noted that the portion of the Code dealing with Sign Regulations (17.13) appears to be content based which does not meet current legal standards. The Town is encouraged to review and amend this section to conform to current legal precedents. It is his thought that they would do that at a future time and that we not slow this down. Rather than attach the entire text of Chapter 17, which is 87 pages, staff has attached the pages which comprise the bulk of the substantive changes proposed. If a full copy of the ordinance text is desired, staff can provide the document in paper or digital format.

Staff Recommendation: Staff recommends the LMC review the proposed amendments and forward a recommendation to the Pierce County Board of Supervisors regarding proposed changes to the Town of River Falls Zoning Ordinance.

Jerome Rodewald stated the item on the signs came as a surprise because it's something that they use so seldom. It's not a big issue. As Mr. Pichotta suggested that we model after the County's Ordinance on Signs and we will automatically do that. His request would be that the Land Management Committee approve and pass on to the County Board with the requirements that the Town confer with Mr. Pichotta to make the necessary changes to 17.13 Signs.

Holst moved to approve the proposed amendments to the Town or River Falls Zoning Code and forward to the County Board of Supervisors for consideration/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

We will probably have Interstate Truck Driving School back.

Public hearing request for a conditional use permit for Private Outdoor Recreational Use, Dual Sports Event which is going to occur at a bunch of different locations across the County. Holst asked if this was the race.

Lund stated it's not a race but an on/off road trail ride.

Pichotta's Performance Evaluation.

Motion to adjourn at 6:35pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES-Pierce County Land Management Meeting, Wednesday, May 4, 2016

Present: Jon Aubart, Joe Fetzer and Jeff Holst

Others: Ryan Bechel, Emily Lund, Andy Pichotta and Tracie Wold

Absent: Eric Sanden and Ken Snow

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: May 18th, June 1st & 15th, July 6th & 20th all in 2016.

Approved Minutes: Aubart moved to approve the April 20, 2016 Land Management Committee minutes/Fetzer seconded. All in favor with Holst recusing himself because of absence at the last meeting. Passed.

Public hearing to consider and take action on a request for a conditional use permit for the Expansion of a Dog Kennel in the General Rural District, pursuant to Pierce County Code Chapter 240-36I, for Kevin and Valerie Anderson, owners on property located in the NW ¼ of the SW ¼ of Section 1, T27N, R16W, Town of Gilman, Pierce County, WI.

Staff Report-Emily Lund: Conditional use permit for the expansion of a dog kennel. On 5-3-2006, the applicants obtained a CUP for a Farm & Home Business for a Dog Training Facility from the LMC that was renewed on 5-1-2008. The business is called "Overdale Kennel, LLC." Training activities included agility, obedience, house manners, and dog socialization. Training classes are held indoors and agility classes are conducted in an outdoor fenced area. They built a 42' x 64' training facility. On 5-20-2009, the applicants received a CUP for a dog kennel and to expand the business to include dog, cat, and small animal boarding, grooming, and daycare. A small retail store was also approved for selling dog food, toys, and grooming product. Their approval included building a 32' x 48' boarding facility. Since there were no compliance issues, the permit was renewed administratively in January 2012, 2014, and 2016. The applicants now propose to expand their operation by building an addition for increased boarding, more outside dog runs, and hire additional staff. The property is located in Section 1, Town of Gilman. The applicants own 195.83-acres in the General Rural zoning district. Pierce County Code (PCC) § 240-88 defines 'Kennel' as, "any establishment wherein or whereon eight or more dogs over the age of five months are kept." PCC Table of Uses allows 'kennels' in the General Rural zoning district with the issuance of a CUP and provisions that are listed 1-4. PCC § 240-36 D addresses Farm & Home Based Businesses that are listed 1-4. The applicants propose to build a 30' x 80' addition for boarding plus an 8' x 24' lean-to. The proposed addition to the boarding facility is proposed to be located 265' from Co Rd B and over 200' from side and rear yards. Some kennels have an outside run that can be closed at night or at times when dogs are barking. They currently have 16 existing runs that hold up to 2 dogs per run. They propose to expand up to 40 total runs. There are other outdoor fenced areas where the dogs can be exercised while under supervision. Boarding, grooming, and daycare are open for customers from 7 a.m. to 10 p.m. In 2010, a mound septic system was installed to collect wastewater from washing dogs, facility clean-up, and a public bathroom that is available to all customers. Driveway access is off of County Road B. Pierce County Code § 240-54 does not specify parking requirements for this type of

operation. There are several off-street parking spaces available. They employ 3 people and plan to hire additional help. The Gilman Town Board recommended approval of this request on 4-13-2016 without identifying any specific conditions. The existing conditions for the Farm & Home Business & Kennel are listed 1-8.

Staff Recommendation: Staff recommends that the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest and whether it would be detrimental or injurious to public health, public safety, or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an expansion of a dog kennel with the following conditions:

1. Any buildings or advertising signs shall comply with the zoning code standards and obtain any necessary permits.
2. One off street parking space shall be provided per dog that is being trained each session.
3. This conditional use permit shall be renewed again in 2 years. Permit may be renewed administratively if no compliance issues exist.
4. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
5. Classes shall be conducted during the hours of 5 PM – 9 PM Monday through Friday, 8 AM – 9 PM Saturdays, Noon – 9 PM Sundays. Boarding, grooming, daycare, and sales shall be open to customers from 6 AM – 9 PM, seven days a week.
6. There shall be no more than 8 employees who do not reside onsite.
7. There shall be no more than 2 dogs per enclosure unit. 8) All dogs shall be housed indoors during the hours 9 PM to 6 AM.

Chairperson Fetzer asked Ms Anderson for any comments. Valerie Anderson stated she just hopes the committee approves it. She feels it is pretty comprehensive. Things are going well. She noted that neighbor, Marie Cabulla, came over to the Andersons' and stated that she could not make the meeting but wanted the committee to know she has no problem with it and they have been good neighbors. They work really hard at keeping the dogs quiet. **Chairperson Fetzer opened the hearing to the public.** No public comment. **Public hearing closed.** Holst stated that is probably the most comprehensive drawing of any CUP application they have ever had that hasn't come from an engineer. Fetzer stated he has housed his dog with them a few times and he feels they keep a very nice place and clean. He has housed his dog other places and she comes home very happy from here. She is happy when she arrives there, not so much at the other places. So obviously you guys do a nice job. **Finding that this request is not detrimental or injurious to public health, public safety or the character of the surrounding area, Holst moves to approve the request with conditions 1-8/Aubart Second. All in favor. Passed.**

Discuss take action on proposed survey/questionnaire for use in comprehensive planning process.

Staff Report-Ryan Bechel: The public Participation Plan for the Comprehensive plan update was discussed at the April 1, 2015 Land Management Committee meeting. The LMC directed staff to develop an online survey instrument accessed by a link on the County web site, with the details of the survey to be brought before the committee for discussion and approval prior to launch. Staff has commenced development of the survey. The goal is to gather as much information as possible to develop an understanding of how community attitudes have changed since the initial plan's adoption. This survey is designed to capture a snapshot of community attitudes concerning planning, development, and citizen-government interactions. Additionally, staff hopes survey data will help to identify and prioritize implementation strategies to be used in the final element of the comprehensive plan update. For the plan update, staff is proposing an efficient, economical, user-targeted questionnaire delivered via an online format versus a mailed paper survey. Information Services (IS) has an online survey instrument that can be used on the website. Staff is proposing to implement a "targeted"

survey format that divides participants into 3 main cohorts (Residents, Non-resident Landowners, and Small Business Owners). This method allows survey questions to be tailored to each specific cohort, in addition to a general question set that would be provided to all participants. The attached "Survey Matrix" provides an illustration of the proposed survey format. Survey responses will be electronically catalogued according to each cohort. Completed surveys will be submitted to the online database anonymously. No personal data (name, address, etc.) will be requested within the questionnaire. Participants will be asked approximately 12-16 questions depending on their selected cohort, with an estimated 5 to 10 minutes required to complete the survey. Questions for elected officials will be developed to gain insight on process concerns and relationships between the County and Towns. Staff is anticipating a lower survey response rate in comparison with the extensive survey conducted in 2009. Public access to the survey will be available through a website address. The web address will also be provided as a link on the Pierce County Land Management's main web page. Notice of the survey will be provided in the Pierce County Herald and on the Pierce County Land Management web page. Notices will also be mailed to towns and municipalities with instructions for accessing and completing the survey. The survey is proposed to be active for a period of 6 weeks to allow ample time for public participation. Staff does not want the survey to be used as a forum on land use issues where respondents can inundate the survey with specific land use issues that concern them. Another option for dissemination is for a more targeted survey. Postcards could be sent to a certain number of residents in each town or census tract with information which would provide the individuals access to the online survey. This option would require additional time and costs but may provide a better result. Staff has had discussions with Information Services about this option. They are looking into it to determine its feasibility.

Pichotta stated that the committee has a draft of the survey questions in their folders. Some of them are a replication of questions that were asked in the original community attitude survey that was done in 2006-2007, but a few of them are not. The ones that are redundant, we probably don't need to go through a lot of discussion but, we will work our way through them and if you have any thoughts or comments, please just speak up. Bechel read through each question. Q: What is their most prominent roll; it either being resident, non-resident land owner or small business owner? Pichotta stated depending on how you answer that, it will kick you into different questions. Not everybody will get the same exact questions. If you identify as a resident and not an elected official, you won't get some of the questions that you would have gotten if you were an official whether it be County Board, Town Board, etc. Bechel stated the second question is asking you whether you are an elected official. Your answer there will prompt you into a set of questions for elected officials at the end as well. The common question set is what everybody, regardless of what role in the community they play, will see. The first one is looking at where your residence is located. The next two ask about how you would rate the current efforts by the Town or Pierce County as it relates to regulation and guidance for development. Q: What type of additional land use regulations would you support? They can choose from a list. Q: What is your opinion of expanding developing additional areas for commercial, industrial and retail use? That is also replication from the 2009 survey. Q: Do you feel there is need for more types of listed establishments? Q: Have you interacted with Pierce County Land Management Department in the last two years? Q: Which of the following would you feel would most improve your experience with Pierce County Land Management? They have a couple of different options; things they feel that may or may not improve their experience with the Department. Q: The Pierce County Comprehensive Plan is a long term (20 year) guidance document designed to capture the vision for the future held by the Pierce County community. Q: Which of the following statements do you feel share your vision for Pierce Counties future? There are a couple different options that are based off of the current county wide vision that has been gone over earlier for the Comprehensive Plan. Q: Looking at broadening the regulations in the Ag. district concerning agri-business, agri-tourism and nature based operations and whether they should be relaxed further. They are currently adequate or they should be reeled in a bit, so to speak. The next section would look at Residents and Residents/Public Officials. The question set is just asking what they think is most desirable about Pierce County and what is least desirable.

The next section is the question set for Non-resident Landowners & Non-Resident Public Officials asking what the principle use of their land is currently followed by what their long term intentions are for that land. The next question set is for Small Business owners asking them what their business is categorized as and looking at what their opinion is of the current business climate in Pierce County. Whether they think it is favorable or unfavorable or otherwise. Q: What do you think of the permitting fees, time lines, inspections proceeds in comparison with maybe state or federal or town/municipality procedures and whether you think they are more burdensome, less burdensome or about the same. Q: Pierce County has sought in both towns in conditionally permitted uses by requiring conditional use permit applicants to solicit a Town Recommendation concerning a proposed use. In your experience, how has this requirement shaped your view of the conditional use permitting process? We are hoping to get a feel from their responses there whether or not they find that process to be helpful, hindrance or maybe no effect. Q: What do you find most and least desirable about having a business in Pierce County. Elected Official General Question set: Q: Are you familiar with the County Comprehensive Plan and your Town's Comprehensive Plan, if they have one. Q: Through the Comprehensive Plan, Pierce County has established a process through which a town can further the goals and objectives of their adoptive comprehensive plan. When considering the establishment of conditionally permitted uses, how would you characterize your understanding of how this mechanism functions? There are a range of options detailing their understanding of the legal concept associated with that mechanism. Q: As a town elected official, how often do they consult their comprehensive plan when looking at conditional use permits and rezones. Q: Has your town adopted a subdivision ordinances, mining ordinances, animal control ordinances, etc.? The final question is just a write in response opportunity looking for ideas about future intergovernmental cooperation opportunities.

Fetzer asked if this was just kind of a re-do? Pichotta stated in a sense yes, some of the questions are redundant in that they were asked almost a decade ago. We will see if there has been a change in those and tell folks what they would like to see as far as business and other opportunities in the county. The other goal is to hopefully gain some insight into allow us to better identify implementation steps for the next five years of the comp. plan. We have tweaked the rules and regulations relating to entrepreneurial activates out in the agricultural districts. Do we need to do more? We hope to get a sense of that. Also, questions about comp. plans, we are trying to figure out if we need to do some focused educational opportunities with some of these towns, because the reality is no body has really used that mechanism as of yet, and he is not sure that many folks understand it. So if we find that most of the elected officials don't quite understand that, that will make it quite clear that we need to do something. Fetzer asked how much use has this gotten on there before/how many people will go in and actually fill out this whole thing. Pichotta stated that will remain to be seen. The last time they did a survey where basically every household in the unincorporated area of the County got a copy of it - had a response of 43%. Rudd and Associates, who we worked with on the comp plan, said the previous survey was the highest response rate he had seen for a survey that he had been involved in. We have no illusions, this isn't going to be a statistically valid sort of a thing, we are just hoping to get a sense of where folks are at now and what we can do better or what changes we should be pursuing in the next five years. Aubart asked how we are going to advertise/promote it. Pichotta stated we are going to do a press release and put it in the Herald and we will also send out post cards or something to the Towns to encourage them and their members to fill it out. It will also be on the website. There will be something prominent out there so if someone just happens upon it, they can fill it out. If the committee is comfortable with the approach, that is what we will do. We will use these questions; they may get tweaked a little bit more, but probably not much. If you are comfortable with what is proposed, we will move ahead with it. **Aubart made a motion to approve and move ahead with the Comprehensive Plan update process/survey/Holst second. All in favor. Passed. Discuss take action on Travel/Training requests.** Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items:

Pichotta stated there are no CUP renewals and no pending applications. Given this we will not have a May 18, 2016 meeting.

Motion to adjourn at 6:27pm by Holst/Aubart second. All in favor. Motion carried.

Respectfully submitted by T. Wold

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 4, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 18 th , June 1 st & 15 th , July 6 th & 20 th , all in 2016.	Chair
3	Approve minutes of the April 20, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for the Expansion of a Dog Kennel in the General Rural District, pursuant to Pierce County Code Chapter 240-36I, for Kevin and Valerie Anderson, owners on property located in the NW ¼ of the SW ¼ of Section 1, T27N, R16W, Town of Gilman, Pierce County, WI.	Lund
5	Discuss take action on proposed survey/questionnaire for use in comprehensive planning process.	Pichotta
6	Discuss take action on Travel/Training Requests.	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/22/16)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647

MINUTES - Pierce County Land Management Committee Meeting, April 20, 2016

Present: Joe Fetzer, Jon Aubart, Eric Sanden and Ken Snow

Absent: Jeff Holst

Others: Andy Pichotta, Brad Roy, Emily Lund, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Chairperson Fetzer stated the first order of business is to elect a Temporary Chair: Aubart nominated Joe Fetzer for Temporary Chair, Chairperson Fetzer asked for any other nominations. Snow moved to close nominations and cast a unanimous ballot/Chairperson Fetzer stated so moved.

Temporary Chairperson Fetzer opened the floor for nominations for election of Committee Chairperson. Aubart nominated Joe Fetzer. Temporary Chairperson Fetzer asked for any other nominations. Aubart moved to close nominations and cast a unanimous ballot/Snow seconded. All in favor. Passed.

Chairperson Fetzer opened the floor for nominations for election of Committee Vice Chairperson. Aubart nominated Jeff Holst for Vice Chairperson. Chairperson Fetzer asked for any other nominations. Aubart moved to close nominations and cast a unanimous ballot/Snow seconded. All in favor. Passed.

Next meeting dates: May 4th & 18th, June 1st & 15th, all in 2016.

Approve Minutes: **Aubart moved to approve the April 6, 2016 Land Management Committee minutes/Sanden seconded. All in favor. Passed with Ken Snow abstaining from voting because of absence at the last meeting.**

Discuss take action on a status report for a conditional use permit for a Utility Facility >1000 Square Feet (Load-Out Facility) in the Industrial District, pursuant to Pierce County Code Chapter 240-41F for William F Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited William Holst forward: William Holst stated he didn't have anything to add at this time.

Staff Report – Brad Roy: In 2013, the applicant received a Conditional Use Permit for a Load-out Facility in the Town of Trenton. The proposed facility may potentially be used to load such materials as sand, gravel, corn and oil and may eventually require structural improvements. A rail spur is intended to be constructed and connect with the BNSF railroad. No finalized plans have been presented to staff. The CUP was issued for a conceptual plan and allows for nonstructural use of the rail spur and the adjacent 150'. Any future construction, structural uses, or use of additional land area will require the issuance of a new Conditional Use Permit. A status report for this permit was presented to the LMC in April 2014 and it was determined that the applicant had commenced action on the project within 12 months as required by code. The CUP was renewed in April, 2015. This site currently has a 130 acre sand and gravel mining operation as well as a small Ready-Mix plant. A CUP was also issued to Wisconsin Industrial Sand for a Sand Processing and Rail Load-out Facility. All the property is zoned Industrial. In 2014 the applicant purchased an adjoining 25 acres from the Pierce County Highway Dept that was necessary for the development of a load-out facility. The applicant submitted a new nonmetallic mining reclamation plan detailing that the future use of the site will be industrial uses. Within the last year site work has begun including the removal of topsoil, filling and grading for the rail line, tree removal

and construction of a new road. Anticipated work includes stockpile removal, continued filling and grading and continuing work with the BNSF railroad. Pursuant to 240-76I Demonstrable progress must continue to be made to establish the authorized use. If these actions cease for 12 months the permit shall terminate. The applicant is encouraged to document efforts and to provide details annually to the Zoning Office. The existing conditions are:

1. The applicant is authorized to utilize an area adjacent to the proposed rail spur (150' on each side) for nonstructural use as a load out facility. Any substantial change to the alignment of the rail spur shall require LMC review and approval. Any expansion of the use or the site shall be subject to issuance of a Conditional Use Permit.
2. This CUP shall expire in 2 years with a 1 year status report to the LMC.
3. Applicant shall secure all necessary permits and approval from other agencies such as the WDNR, WisDOT, etc.
4. Prior to any nonstructural use of the site as a load-out facility, applicant shall submit for LMC review and approval information relating to type quantity of materials to be shipped, frequency and type of traffic, a traffic impact analysis, a site plan and any other information deemed necessary by the Zoning Administrator.

Staff Recommendation: Staff recommends the Land Management Committee consider the information and determine if any modification will be necessary at a future meeting.

Mr. Holst explained they put a lot of fill back in the area that was low. They bought 28 acres from the County. Also, one of the conditions was to build that berm on the other highway. We spent about \$80,000 building that berm and then we spent another \$30,000 putting trees in down there. Pichotta stated it was actually a condition of a different CUP. Mr. Holst, it was all brought up at the same time but that has been done. There has been some overgrowth of small trees. They have taken them out and piled for burning after they dry. They are currently filling and packing areas there. They have had probably six meetings with BNSF but they move really slow. Pichotta noted that we have a couple of representatives from the Town of Trenton here. Perhaps they would like to comment. Brian Berg, Trenton Town Chairperson, stated he thought a conditional use permit renewal would have to come before the Township. Pichotta noted that this isn't a CUP renewal. The agenda item is a status report. With a status report the applicant comes in front of the committee describes the activities that have taken place to establish this use. This is basically for a conceptual use. CUP renewals don't come through your Planning Commission and your Town Board as they do when a CUP is actually considered for issuance where a Town recommendation is requested and required at the time of application. For renewal the Town Chair is contacted and asked if there are any issues or concerns that the Town has. That is how we solicit input. It doesn't require that it go through the process that was required to establish the CUP in the first place. Barry Barringer, asked on a conditional use permit what period of time is it issued for. Pichotta stated condition #2 states that this CUP shall expire in two years with a one year status report to the LMC. Mr. Barringer asked from this day forward? Roy stated expiration is in one year, this is the one year status report. Pichotta noted that the previous Town Chairperson was contacted regarding the CUP and the renewal took place in early April and that Mr. Berg had taken office in late April. Mr. Berg stated he understands and just wanted some clarification. Sanden asked if this requires a motion. Pichotta stated it's a status report so doesn't require formal approval.

Discuss take action on Site Plan Review for proposed addition to an existing building in the Industrial District, pursuant to Pierce County Code Chapter 240-75 for William F Holst III, (River City Metal), owner, by Tom Geistfeld, Sunnyside Erecting, agent, on property located in Lot 1, Certified Survey Map (CSM) V12, P118, being a part of the SW ¼ of the NE ¼ of Section 2, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.

Staff Report – Ryan Bechel: The applicant is seeking site plan approval to construct an addition to an existing building to be utilized for industrial use. River City Metal is a salvage yard that has operated at its current location since 1965. Site operations include the purchase and sale of equipment, auto parts, vehicles and all types of used metal and recycled appliances as well as crushing, baling and smelting of recycled materials associated with the scrap and recycling business. The proposed building addition is requested to provide space

for the applicant to locate their on-site smelting equipment indoors to improve operational efficiency. On November 5th, 2008, a conditional use permit (CUP) was obtained to allow for the expansion of this preexisting non-conforming use. The CUP stipulated that future building expansions receive site plan approval by the Pierce County Land Management Committee. Pierce County Code 240-75 requires site plan review for industrial structures, the purpose of which is to assure site designs that promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. The “proposed” addition discussed in this staff report has already been constructed without benefit of a Land Use Permit or Site Plan Review. The Land Management Department’s Fee Schedule establishes a penalty of 4 times the original permit fee for the issuance of after-the-fact permits. Staff will apply this penalty when issuing the Land Use Permit. The 14.5 acre property consists of two parcels located in the Town of Diamond Bluff. The entire property is in an Industrial Zoning District. Pierce County Code §240-15 Purpose and Intent of Zoning Districts: Industrial: This district is established for the purpose of allowing those industrial uses that are more intensive than those allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses.

Salvage Yard is defined in Pierce County Code §240-88 as “any land where waste or scrap materials, including, but not limited to scrap iron and other metals, paper, rags, glass and inoperable vehicles or appliances, are either bought, sold, exchanged, baled, packed, disassembled or hauled for compensation.”

The property is bordered primarily by agricultural land. Two residences exist nearby to the east and south of the property. Adjacent zoning districts include Industrial to the north and west; Agriculture Residential to the east and south. The applicant has proposed to construct a 15’ x 60’ addition to the west end of an existing 60’ x 80’ building utilized for parts storage. The proposed addition measures 20’5” in height. The existing 60’ x 80’ structure received LMC site plan approval on April 21, 2010. The addition will have concrete floors, steel siding and finishings that mirror those of the existing structure. Overhead doors will be located on each of the 3 exterior sides of the addition to provide access. Department of Safety and Professional Services (DSPS) approval is required for this structure. The Land Management Department has not yet received approval documentation from DSPS for this addition. The proposed addition will adhere to all applicable setbacks including; setback to State Highway 35 (110 feet), existing buildings (10 feet), front/rear yard line (10 feet), septic tank (5 feet) and well (8 feet). Driveway access to the property is located off of State Hwy 35 on the eastern edge of the property. No additional exterior lighting is proposed for the addition as it is anticipated that existing exterior lighting will be sufficient. The applicant is not proposing any additional signage. No additional traffic is anticipated as a result of this building addition. No additional water or sewer provisions have been proposed. No additional solid waste is anticipated to be generated with this addition. A screening plan was approved for the site as a condition of the CUP approval in 2008. The proposed addition is in the rear of the lot behind existing buildings; therefore, visual impacts to the surrounding properties are anticipated to be minimal. River City Metal employs approximately 25 full-time employees year-round. Pierce County Code §240-54 requires a minimum of one parking space per employee plus one handicap space and two customer spaces for a minimum of 28 parking spaces required for the facility. The plans submitted demonstrate a parking area which fulfills this requirement. Upon completion of the site plan review the applicant will obtain a Land Use Permit as outlined in Pierce County Code §240-73(1)A. Given that the structure was constructed prior to a Land Use Permit being issued, the after-the-fact permit fee will be imposed.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications are necessary. The LMC should consider proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems, as well as proposed operations.

The LMC may impose time schedules for completion of buildings, parking areas, open space uses, drainage and erosion control systems and landscaping and may require appropriate sureties to guarantee that requirements will be completed on schedule.

1. The applicant shall obtain DSPS approval for the addition and provide documentation to the Land Management Department for review and approval prior to the issuance of a land use permit.
2. The applicant shall obtain a land use permit from the Land Management Department. The after-the-fact fee shall apply.

Sanden asked about the recommendation, the first line of the second paragraph. Is that a standard consideration? Completion of buildings, parking areas, open space uses, drainage and so on, as far as he can tell that has all been done. Pichotta stated that is standard language for site plan review. Chairperson Fetzer asked Bill if he will have any more employees. Mr. Holst stated no. Tom Geistfeld, Sunnyside Erecting, stated he was the contractor involved with this project. When they first got it designed by their engineer and stamped, there was a communication gap there that anything over 25,000 cubic feet had to be sent down to Dept of Commerce for review. Because this was not over 25,000 cubic feet, we only had these engineered plans drawn up. He came to the County to pick up the land use permit for that building and also an agriculture building that is on another piece of property, at the same time. When he was there to pick up the permits he was told that the ruling is you take the initial cubic footage of the original building and factor that in to the extension of the 800 square foot building. Therefore it had to get sent down to the Department of Commerce. He called his engineers at that time and had it sent down there and it is set for review on May 8th. May 8th they will be receiving a letter back. He is taking full responsibility for this. His son's crew started working on the wrong building, they thought they had the permit for the River City Metal and not the ag building which he had pulled a permit for. By the time they realized it, the building isn't completely done. So he apologizes for this and he doesn't normally put buildings up without permits. They are looking to get the CUP tonight, contingent upon the letter from the State and they will hold off completely finishing the building until that time. Mr. Holst stated he thought they had a permit. The cement slab was already there. He had a 53 foot trailer sitting on it so they took the trailer out and was going to put a roof on over it to make it look better. Didn't realize it was such a big deal as it's turning out to be. Sanden asked what would be the timeline for completion once you get that. Mr. Geistfeld stated May 8th, he doesn't want to pursue finishing the building until they get the letter on May 8th. At that time Bill Holst will get a letter, he will get a letter and they will also send one to the zoning administration that it has been approved by the Department of Commerce. Sanden asked how much long it will take before the building is completed. Mr. Geistfeld stated three, four days, maybe a week. **Sanden moved to approve the site plan review for a proposed addition to an existing building in the Industrial District for William F. Holst III (River City Metal) with conditions #1 - #2/Aubart seconded.** Sanden asked if the after the fact fee was mandatory. Pichotta stated the committee could waive it if you were so inclined. Mr. Holst explained they weren't trying to pull anything over on anybody. Sanden stated he can't recall them ever not getting proper permitting in the past. Is this the first time you can recall this being an issue? Pichotta stated that this was the first time it has been an issue. **Sanden moved to waive the extra fee/Snow seconded.** Aubart asked if we are amending the original motion? Chairperson Fetzer asked if we should throw that in with the original motion. Aubart stated we have two motions on the floor otherwise. Pichotta suggested amending the original motion. **Sanden restated his original motion; Sanden moved to approve the Site Plan Review for William F Holst III (River City Metal) with conditions #1 - #2, waiving the after-the-fact fee/Snow seconded. All in favor. Passed.**

Discuss take action on proposed amendments to the Shoreland Zoning Code, NR115. Staff Report – Emily Lund: In 1968, Wisconsin lawmakers created minimum shoreland standards that required counties to regulate the use of property within 1,000 feet of a lake, pond or flowage and 300 feet of a stream or river. In 2010, the rule was amended allowing counties to be more restrictive than state standards regarding impervious surface standards, vegetation removal and nonconforming structure maintenance and improvements. In 2013, Act 170 was passed because the 2010 changes were said to be overly restrictive, different from County to County and created hardships for new development. In 2015, Wisconsin lawmakers passed Act 55 making shoreland rules uniform throughout the state and mandated all counties to have the minimum standards adopted

by 10-1-2016. Lawmakers continue to make more changes to the shoreland rules. The State recently adopted Act 167 on 2-29-16. Assembly Bill 582 has been enrolled for adoption (i.e. sent to the Governor but not signed yet). With the rule being in a constant state of change since 2010, the counties adoption deadline of 10-1-2016 did not change. Department staff is trying to stay ahead of the rule changes, so we do not make multiple trips before the County Board. But with the continued modifications, there may not be any other option. Shoreland standards still apply to the use of property within 1,000 feet of a lake, pond flowage and 300 feet of a stream or river. Shoreland zoning ordinances do not apply to lands adjacent to artificially constructed drainage ditches, ponds or stormwater retention basins that are not hydrologically connected to a natural navigable water body. DNR may not issue an opinion on whether or not a variance should be granted or denied without the request of the Board of Adjustment (by letter or spoken in the minutes). The DNR also cannot appeal a BOA shoreland decision.

Mandates:

- The required shoreland regulation include the following categories:
 - General Provisions / Areas Regulated.
 - Shoreland-Wetland District.
 - Land Division Review & Sanitary Regulation.
 - Minimum Lot Size
 - Building Setbacks
 - Vegetation
- Filling, Grading, Lagooning, Dredging, Ditching & Excavating
- Impervious Surfaces
- Height
- Nonconforming Uses & Structures
- Mitigation
- Administrative Provisions
- Definitions

- The mandated changes include the following:
 - Counties are prevented from adopting more restrictive regulations than state standards.
 - Counties are prohibited from requiring previously developed land to establish a vegetative buffer or expansion of an existing vegetative buffer.
 - Counties are required to allow viewing access corridors 35' for every 100' and allowed to run contiguously rather than separated by a certain distance.
 - Counties are required to implement Impervious Surfaces standards. The standard for Pierce County is, "Construction, reconstruction, expansion, replacement, relocation of any impervious surface on parcels located entirely within 300 ft of OHWM; 0-15% allowed; 15-30% allowed with Mitigation; >30% not allowed."
 - Impervious surface standards shall take into consideration systems or discharges that allow infiltration into the soil.
 - Counties are required to develop mitigation standards for certain types of new development.
 - Provide a reduced setback requirement for principal structures by setback averaging.
 - Cannot prohibit or regulate outdoor lighting.
 - Cannot prohibit or regulate, or impose fees for maintenance, repair, or replacement of nonconforming structures that do not increase the size of the footprint.
 - Cannot prohibit lateral expansions up to 200 square feet of nonconforming principal structures that are at least 35' from the OHWM, over the lifetime of the structure.
 - Cannot prohibit or regulate, or impose fees for vertical expansion of a nonconforming structure, unless vertical expansion is above 35 feet above grade.

- Cannot prohibit the relocation of nonconforming principal structures if certain standards are met.
- Cannot require inspections or improvements at the time of selling a property.
 - Provide a rezoning process for lands inaccurately mapped as a wetland in the Shoreland-Wetland District.

Wisconsin DNR drafted a model ordinance that contains the minimum regulations that the County may adopt. Staff is reviewing that document and its consistency with NR 115. Staff's goal is to create a document that meets the minimum standards of NR 115 but is practical for shoreland property owners in Pierce County. Pierce County does not have lakes with highly developed shorelines. The shoreland area is limited to 300' from navigable streams and rivers. Typical lot sizes and densities of properties in the shoreland area within Pierce County do not create the potential for impacts on water resources that other counties generally may have. The WI DNR has provided some policy options not restricted by NR 115 that counties can choose to adopt and implement. For example the DNR provided additional regulation options for vegetation, filling & grading, impervious surfaces and mitigation. Staff believes that the requirements of NR 115, in most cases provide suitable regulations for Pierce County.

Options for the LMC consideration

- Vegetation. Vegetation removal is restricted within the first 35' from the OHWM. NR 115 does not limit vegetation removal beyond this initial 35'. The DNR has provided an option for Counties to require standards for vegetation removal beyond the initial 35'. Should staff pursue this option?
- Filling & Grading. Currently, Filling and Grading in the Shoreland Area may require a CUP based on slopes and the amount of disturbance.

Staff believes that it would be beneficial to maintain the permit requirements currently utilized but suggests that approval through issuance of a Land Use Permit versus a Conditional Use Permit may be more appropriate given that the feasibility of a proposed activity would typically be determined through a review of detailed plans. Staff would utilize the Land Conservation Department to aid in the review. Additional language will be included to guide staff and the property owner as to what is expected in the application and review process, and when it is required. Staff is also proposing to exempt Land Conservation Department projects that were approved by the WI DNR (e.g. rip-rap projects, swales, detention ponds, etc.) from permitting requirements. This approach is different from the options presented by the DNR, but staff believes it would comply with NR 115 and would like to further explore the option.

Pichotta suggested that the committee tackle a couple of these issues before we get to the end of the document. As far as vegetation, we are going to have regulations regarding that 35 feet from the edge of the water. The DNR has given us the option to regulate clearing beyond that 35 feet which is something that we don't currently do. It is staff's assessment that we probably want to limit our review to that 35 feet buffer strip along the shoreland. Does the committee agree with that perspective or do you think there would be some benefit to regulating vegetation and vegetation removal in that area beyond 35 feet from the edge of the water. Sanden said it seems like there is limited area 300 feet that would be affected by that. Can you give me the nature of what the terrain of that 300 feet; are we talking about very steep areas that go directly into the water or is it relatively flat? Pichotta stated it's going to vary. Some of our navigable water is creeks running through coulees where it's very steep and you can't get anywhere close to the water. We have some situations even along the Trimble or the Rush where there are some flat areas and some houses in proximity to those and in other cases we've got the backwaters of the Mississippi River where the development pattern is a little different there. We don't really have, when folks think of shoreland areas, you think of some of the lakes country where you've got very small lots with cabins but we don't really have that. Historically, the way this committee has thought about things, is probably limit our review and our regulation of that area, basically the strip that provides protection to the navigable water. Sanden asked what Andy's professional opinion if we were to grant ourselves extended jurisdiction beyond that 35 feet, discipline ourselves to only use it in times where we have extreme coulee situations. Would you be comfortable with that or do you think that would be too onerous or the land owner wouldn't know if you were going to apply it or not. Pichotta stated in cases where you disturb steep slopes, arguably we already have some regulations that kick in when you are in excess of 20% slopes. Sanden asked if he could describe the mechanisms. Pichotta deferred to Brad Roy. Roy stated this is looking at the vegetation

removal. If someone were to construct on steep slopes there are many mechanisms in place to work with that. If someone were trying to extend their yard down a steep slope, he didn't know what we would have but you would also have common sense. If it's really steep, no one is going to be clearing too much and trying to get grass to grow. Pichotta stated the vegetation removal requirement is largely when you think of folks trying to create view sheds for themselves so they can see to the water. In most cases, we see this kind of thing along the St Croix River where folks want to increase their ability to see the river because that's actually worth money. In a shoreland setting, folks have cabins and there is a strip of woods between them and the water. In some cases, someone will purchase a cabin and decide they want to have a much better view and they will seek to clear that out and that's what this vegetation removal requirement has mostly to do with. Sanden asked if the County or the DNR have any after-the-fact mechanism whereas if something does go wrong and excessive erosion is determined where we can go in after-the-fact and say now you have to put in some kind of control device because it's causing degradation of the water. Pichotta said we are kind of delving in on filling and grading now too because those are the situations that are going to be more likely to create erosion issues. When we're talking vegetation removal, typically you are talking tree cutting, often Buckthorn, that sort of thing. Snow asked about the situation of pasture land. A lot of streams are running right through pastures and you have all of that vegetation is removed. Let's say a farmer wants to create a pasture on his property where the Rush River runs through. Roy stated there would be the vegetation removal within the 35 if we want to do more, he isn't aware of any exemption that a farmer would have for that. Snow stated what little he knows about this, he believes the 35 feet is sufficient. It's primarily for erosion and wild fish habitat basically. Lund stated being a farmer, you probably own more than 100 feet of land. If it has to be right along the river, you can have it going contiguously. If you own 200 feet, you can have 70 feet together if you want that access to the water. Snow stated he knows currently there are a lot of farms in Pierce County where the river runs right through their pasture. Lund stated we are talking about vegetation removal, viewing corridor and access along the rivers and streams. Before we had 30 feet to 100 feet and now they have opened it up to 35 feet view corridor for every 100 feet. Sanden asked what that means, up to 35 feet for every 100 feet they can remove the vegetation. Lund stated yes, perpendicular to the shoreline. Pichotta stated it used to be that you had to do 35 feet then leave some, now you can do 35 feet, 35 feet and then leave it, creating a 70 foot viewing corridor. Sanden asked if we've had any experience with 35 foot buffers not being adequate? Pichotta said when you see that it's typically because there is no buffer at all. Usually a 35 foot buffer is plenty adequate. Lund stated the good thing in Pierce County is that we don't have a lot of lakes so we don't have to worry about that 1,000 foot but then our rivers are more protected with the Floodplain. If you picture the way our code is set up, the zoning code is the base, then the shoreland is an overlay and so is floodplain. Floodplain is more restrictive and there is less you can do in the floodplain so you are kind of being pushed back a bit. Right now we are just talking about if you have property within 300 feet of that stream, can you cut some trees down to see it or walk down to the river. That is what this one is about and then building on slopes that are access, that is kind of under the filling and grading like Andy mentioned. Sanden stated so there are other mechanisms. Pichotta noted that the committee will get a couple kicks at this. What we are seeking right now is some general guidance on how we should approach it. He thinks what he is hearing is 35 feet is probably adequate. Snow stated we don't have any developed lakes in our County and rivers are a whole new set of rules with the floodplain. Sanden stated the one lake, Nugget Lake, has a park around it. Snow stated but it is fully undeveloped. That would be the lake where you talk about coming straight down. Lund stated we are just asking for guidelines on the options because the DNR wrote the minimum and said here, if you want to add more options like increasing from 35 to 300 feet. Sanden stated he would want to if it were an extreme situation but not as a general rule. He doesn't know if we can put that kind of nuance in there and discipline ourselves in the future not to try to use the full 300 feet buffer. Pichotta stated a lot of this isn't going to be committee action in most cases so the standard will apply to all. Chairperson Fetzer said he is good on the 35 foot and if you are getting into the rivers and the floodplain everything pushing out, we should have that covered. Sanden agreed. Pichotta stated it seems as if the committee wants to move forward with the 35 feet and also keep in mind Dr. Sanden's concerns. Then as far as filling and grading, there were a couple of pieces to this. Currently when someone conducts filling and grading in the shoreland area, it requires a CUP by you folks. The reality is conditional use permits are issued for uses

that are unique enough where the impacts of them can't really be gauged because they are site specific and because of that it requires consideration by the committee as to what specific conditions are necessary to mitigate potential negative impacts to adjoining properties. The issuance of a CUP for filling and grading gives the committee the ability to require something additional or modify plans but typically when we present requests for filling and grading to the committee it's an engineered plan and it's done with best management practices and typically if someone is going to sign and stamp it, there's not really a lot of need to second guess. What we are proposing is to pursue allowing those sorts of activities through a land use permit given that the review is largely technical versus a judgment call by the part of the committee as to what sorts of conditions are necessary to address concerns from neighboring property owners. In most cases there aren't those sorts of concerns. So it seems more reasonable to permit those sorts of things than over-the-counter land use permit and solicit input from the Land Conservation Department to ensure that what is being proposed is appropriate. Snow stated that, belonging to all the sportsman's clubs that he does, they are always stream rehab projects going on where they are riprapping banks, they are putting in fish structures. Is that going to be something that we would have to come to the County and get a conditional use permit? Pichotta stated if it's below the OHWM it's already out of our jurisdiction. In cases where riprap extends above the OHWM, technically that is supposed to get a conditional use permit. That is the current regulations and what we are proposing is to not require a CUP, to make it an administrative function. Snow stated as long as there is DNR approval, engineered plans. Pichotta stated exactly and then for projects that are being done under the tutelage of Land Conservation folks, we proposing to not require a permit at all. Sanden stated definitely less work for us. Will it be more work for the Land Conservation Department? Pichotta explained it will be the same but what we will be doing is relying on their expertise, if they are comfortable with it, then we're comfortable with it. Snow said they are the experts. Lund stated usually the DNR checks their work too so it's another layer on it. Snow asked if the DNR has the enforcement power over that if there was a violation. If somebody goes and ripraps a public stream, isn't that a DNR issue. Pichotta stated typically, below the OHWM for sure. Snow stated he remembers years ago down at Everett's Resort there was someone who pushed sand out into the river, making some new land. He thinks he was taken away in handcuffs. Pichotta explained on the last piece that our proposals are a bit different than the options presented by the DNR, but we think it would comply with NR 115 and we would like to pursue that approach with filling and grading that is to allow it through a land use permit and to exempt certain things that Land Conservation is involved in. Sanden stated it makes sense to him.

□ Impervious Surfaces. Impervious surfaces where runoff is collected and appropriately discharged are exempted from the impervious surface standards. The DNR has provided an option to qualify for an exemption which would require the land owner to calculate runoff, document treatment and require maintenance of the treatment (discharge) system. This policy option also calls for the document to be recorded with the Register of Deeds. Staff sees value in the burden being placed on the homeowner to calculate runoff and document the treatment system to demonstrate their qualifying for the exemption. Should staff pursue any of these potential options? Pichotta asked Brad to explain this. Roy stated we have impervious surface thresholds. Say somebody has 12% of their property is impervious surface and they want to put an addition on their house and it will go over the 15% that is allowed. That would require some additional mitigation which we will get to on next bullet point. But say they had a little rain garden off to the side of the house and they say even though we had 12%, this rain garden is collecting this much water so even with our addition we should be under the 15% because that rain garden is doing more than typical. What we are proposing here is the property owner that is going to make that claim would be responsible for providing documentation. We will say you need to show us how much rain that garden is collecting and how much of that percentage should be removed. It takes the burden off of us as staff. What he can see is someone will say they have a rain garden that is collecting all this water and we look at it and say its pretty small, not collecting that much and then it's just going to turn into an argument. We want the land owner to put it on paper, figure it out and give us the numbers. If that is the case, absolutely we will exempt it. The other approach would be for staff to do all that. If someone isn't happy with our numbers, we would have to build in some sort of appeals process for that, and it would probably have to come to the committee. What we are looking for is how is this process going to play out? We do have to exempt those areas, now it's just a matter of who figures it out. Pichotta stated it's not that we would not give them assistance, we

would help walk them through the process but it would put the onus on them to demonstrate versus us to prove it. Sanden stated the spirit is great but could you put together a flyer or brochure that spells out how to calculate because the average home owner probably doesn't and you don't want to make them hire a consultant. Pichotta stated we would certainly create some guidance documents. Does the committee agree with this approach? Committee consensus to pursue this approach.

□ Mitigation is required for the impervious surface standards, when exempted structures are added to the site, and for nonconforming structure modifications. Mitigation is a flexible policy option. The mitigation plan shall be enforceable obligations of the property owner that are adequate to offset the impacts of the permitted expansion. The mitigation measures shall be proportional to the amount and impacts of the development.

After researching what other counties are pursuing for mitigation requirements, it appears that having a point system that is proportional to the impervious surface created is the most common method. With the point system, certain activities are given points based on likely impacts. Total project points are applied against mitigation options which also are assigned points based on effectiveness. A project which has impacts resulting in a 5 point score would require mitigation activities which total 5 points.

Other approaches are available, but this seems to be practical and transparent. Sanden asked if it has ever been tested in court as to whether that would hold up. Lund stated yes, there was this issue going from 2010 going from more restrictive to less restrictive and this seems to be an OK option. It hasn't been negatively challenged and the engineering of say you are going to put in a French drain of 500 sq ft in dispersal area and then you are going to put in 500 sq ft shed, they cancel each other out. You are going to put that runoff from the shed into the ground and there is no runoff so that is a mitigation strategy. So far there hasn't been any. Pichotta stated the reason they liked the point system is because certain activities will be assigned points based on square footage. Then if you are going to do activities that result in a certain number of points, then you have to go over to the mitigation options side and choose options that result in the same number of points. If we don't do the point type system, what we end up with is where staff essentially has to make judgment call as to what is proportional. So if we can create a system where someone can look at the ordinance or look at a brochure and say here's what I was thinking about doing to my property, then just be able to correlate that to some mitigation options versus having to have somebody come out. It would give them a much better ability to understand what sorts of mitigation they might be required to do for whatever they are thinking about doing. We are thinking this is the most straight forward and reasonable way for folks to have a realistic expectation of what is going to be required. Roy stated there should be no surprises with the point system. Sanden stated the fact that other counties are doing it, gives it some validity too. Roy stated it is new, so he's not sure it has been formally tested.

□ Staff is proposing to create a separate shoreland zoning chapter and remove all language regarding shoreland from Chapter 240 – Zoning.

The shoreland code will continue apply to all unincorporated area, including the Town of River Falls. Having a standalone ordinance will be clearer when working in a town that has its own zoning ordinance. Also regulations of certain structures (decks) are different in the new shoreland regulations than in Chapter 240. Lund stated staff wanted to get the committees input, if it was alright with you. Sanden stated it seems cleaner. Pichotta stated he thinks it will be a lot cleaner. Right now our shoreland provisions are scattered throughout Chapter 240 and it's almost difficult to understand that there is a coherent shoreland regulation when it is separated like that. Sanden stated especially since NR 115 may again change. Pichotta stated he was hoping that whatever they got in front of the committee and then in front of the County Board by October, we would be done with it but his hunch is we will probably be tweaking it within a few months. Aubart stated it will be a lot easier to do it within its own code. Pichotta agreed.

Staff Recommendation: Staff recommends that the Land Management Committee review the above information and provide staff with direction regarding the proposed amendments to the Shoreland Zoning Code. If the committee is comfortable with what we have discussed, we don't need a motion, we just needed some guidance and if the approach seems sound that is what we will do. Aubart asked if staff would be bringing this all back in its own ordinance. Pichotta stated yes. We are working off the DNR's model and we are going to insert these concepts that we have discussed tonight. The DNR may or may not agree with the CUP to land use

permit and exempting Land Conservation projects, those sorts of things. So we will get those things built into the ordinance and send it to the DNR for comment. Then when we get their comments back we will bring it back to the committee. We are pursuing a little bit of an accelerated schedule on this thing given the fact we've got until October 1st. Even if we had it completely done, it still takes two and a half months to get it approved by the County Board. Committee consensus on moving forward consistent with staff suggestions.

Discuss take action on bids received for half ton, extended cab, 4 wheel drive pick-up truck to be utilized by the Land Management Department. Staff Report – Andy Pichotta: As your recall, the 2016 budget included \$30,000 for the purchase of a new half ton pick-up truck to replace the 2002 Ford. We sent out bid specs to Cernohous Chevrolet, Ellsworth Ford, Quinn Motors, Hudson Chrysler and Ewald Motors. We only received one reply back, despite Mr. Bechel's repeated attempts, he stopped into places that were close enough and repeated phone calls to those that weren't. Snow asked if staff touched base with River Valley Ford. Bechel stated no, we did not. Snow stated to remember those guys in the future for vehicles. Pichotta asked where they are out of. Snow stated Baldwin. Pichotta stated we did get one dealer that submitted a bid for two different vehicles. Ellsworth Ford submitted a bid on the Supercab XL and a Supercab XLT. There is a little bit of a price differential but both are under the budgeted amount. Bidding documents specified the power seats, only the XLT meets that particular specification. Both vehicles have a 36,000 mile/36 month bumper to bumper warranty and a 60,000 mile/60 month powertrain warranty.

Staff Recommendation: Staff recommends the Land Management Committee select the lowest responsive and responsible bid and authorize the Land Management Department to purchase that vehicle from said bidder. We did ask for power seats in the bid specs. We got one option that has it, one option that doesn't. They are about two grand different. Sanden asked what was the need for the power seats. Was there a practical reason for it? Pichotta stated ease of use and the reality is that if we hang on to this one as long as we hung on to the last one, we will be replacing it in 2030, which sounds like a really long time. Bechel stated that option was also in the surveyor's truck when we bid that one out. That was in 2014 since they changed that. Ford has moved that out of their base package and into the upper level packages. Chairperson Fetzer asked what else comes with the package? Bechel stated power pedals, heated mirrors, several other luxury options that they lump all in now. Sanden stated I would have gone for the seat warmer rather than the power seats. Is that including tax and title? Pichotta stated he believed it did and that would be the total price. Both of them would come in under our budgeted amount. **Aubart moved to approve the purchase of the 2016 Ford F150 Supercab XLT for \$29,172/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Public hearing request for a conditional use permit for expansion of a Dog Kennel in the Town of Gilman for Kevin & Valerie Anderson

Proposed survey/instrument on the website for implementation strategies for the next five years for comp plan concepts.

It's possible there may be some CUP renewals.

Motion to adjourn at 7:07pm by Snow/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, April 20, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Elect Temporary Chairperson	Acting Chair
3	Elect Committee Chairperson	Acting Chair
4	Elect Committee Vice-Chairperson	Chair
5	Next meeting dates: May 4 th & 18 th , June 1 st & 15 th , all in 2016.	Chair
6	Approve minutes of the April 6, 2016 Land Management Committee meeting.	Chair
7	Discuss take action on a status report for a conditional use permit for a Utility Facility >1000 Square Feet (Load-Out Facility) in the Industrial District, pursuant to Pierce County Code Chapter 240-41F, for William F. Holst III, owner on property located in most of the NE ¼ of Section 33 and part of the NW ¼ of Section 34 and part of the SE ¼ of Section 28, All in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
8	Discuss take action on Site Plan Review for proposed addition to an existing building in the Industrial District, pursuant to Pierce County Code Chapter 240-75 for William F. Holst III, (River City Metal), owner, by Tom Geistfeld, Sunnyside Erecting, agent, on property located in Lot 1, Certified Survey Map (CSM) V12, P118, being a part of the SW ¼ of the NE ¼ of Section 2, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Bechel
9	Discuss take action on proposed amendments to the Shoreland Zoning Code, NR115.	Lund
10	Discuss take action on bids received for a half ton, extended cab, 4 wheel drive pick-up truck to be utilized by the Land Management Department.	Pichotta
11	Discuss take action on Travel/Training Requests.	Pichotta
12	Future agenda items.	Pichotta
13	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(4/08/16)

- **Revised April 12, 2016 @ 11:26am.**

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
PLANNING, ZONING, SURVEYING & GIS
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, April 6, 2016

Present: Joe Fetzer, Jon Aubart, Jim Ross and Eric Sanden

Absent: Jeff Holst

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 20th, May 4th & 18th, all in 2016.

Approve Minutes: **Ross moved to approve the March 16, 2016 Land Management Committee minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for John T. Huffaker and Charlene M. Torchia, owners on property located in the SW ¼ of the NW ¼ and the NW ¼ of the NW ¼ of Section 34, T27N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Mr. Huffaker and Ms Torchia forward: John Huffaker explained that they are requesting to run a Retreat. They were a Bed & Breakfast and are changing it over to a Retreat. Sanden asked how much of an increase in occupancy will there be between the Bed & Breakfast and a Retreat. Mr. Huffaker stated there won't be a change. They have been running it as a B & B but they also have a cottage rental on the property which was a separate rental. Nothing will change as far as the accommodation part of the business. Ms Torchia stated one of the changes is that one of the guest rooms that they have they want to convert into a gift shop. Sanden stated if anything it could go down. Ms Torchia stated the occupancy could. Very rarely were they completely full, every single room, all the time.

Staff Report – Emily Lund: John & Charlene obtained a CUP for a Bed & Breakfast from the LMC on 5-7-2003. The Bed & Breakfast, named the “Journey Inn”, began full operation in 2006 and has been active ever since. Staff has completed administrative renewals given there has not been any complaints. The applicants are now seeking a new CUP to convert the use to a Retreat Center. The applicants propose an eco-retreat called “EarthSky BodyMind Center” for participants to find new perspectives, renewal and healing. They propose to offer massage therapy, energy therapy, life direction coaching, and other themed retreats as listed. The property is located in Section 34, Town of Salem. The applicants own 66 acres in the General Rural zoning district. PCC 240-88 defines Retreat Center as a facility or facilities used for professional, educational, organizational or religious meetings, conferences or seminars and which may provide meals, housing and recreation for participants and may include multiple related uses managed as one operation. PCC Table of Uses allows Retreat Centers in the General Rural zoning district with the issuance of a CUP and provisions in 240-36M:

- (1) Facilities may not be utilized by the nonparticipating public for meals or overnight accommodations.
- (2) Housing may be in lodges, cabins or dormitories and other residential structures.
- (3) Each housing structure may have one cooking facility.
- (4) Minimum lot size for the parcel shall be 2-acres.
- (5) There shall be one off-street parking space provided for each sleeping room provided.
- (6) Retail activities outside the commercial district shall be limited to those specifically identified in the CUP.

(7) Adequate, code-compliant, on-site wastewater facilities shall be provided.

The applicants propose to utilize 3 bedrooms and 1 gift shop located in the “Journey Inn” building and a 2 bedroom “Cottage” for the Retreat Center. The gift shop would be primarily available to guests and is proposed to sell body care products, books, sheets, candles, local art and yoga supplies. The rooms at Journey Inn are typically available on the weekends and the Cottage is available seven days per week. However, the applicants are flexible to accommodate guest needs. The applicants do have a facility on-site to provide meals for participants when needed in the “Journey Inn” building. There are 7 marked off-street parking spaces available for guests and applicants. The Inn and Cottage have a shared conventional septic system sized for 5 bedrooms that was replaced and inspected in 2004. Licenses have been obtained and verified with the Pierce County Dept of Health. The Salem Town Board of Supervisors recommended approval of this request on 2-9-2016. The Town Board justified their approval on the attached Town Recommendation Form.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a retreat center with the following conditions:

1. The applicant shall work with the Town of Salem Building Inspector, Todd Dolan, to determine whether a permit from the Town or State is needed and to ensure compliance with the Uniform Commercial Code (UCC) requirements.
2. The use shall be established within 12 months.
3. Sale of retail items shall be limited to body care products, books, sheets, candles, local art and yoga supplies.
4. The permit shall expire in 2 years. Renewals shall be completed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment Chairperson Fetzer closed the public hearing.

Sanden moved to approve the conditional use permit for a Retreat Center for John Huffaker and Charlene Torchia with conditions #1 - #4, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F Holst III and William F Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and agent for Big Acres Inc, William F Holst III, Nancy J Beeler and Leon W and Donna L Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Jeff Himes and Scott Passe forward: Jeff Himes asked if they could go right to the staff report.

Staff Report – Brad Roy: In 2012 WISC obtained a CUP for a new underground mining operation in the Town of Diamond Bluff. On May 21, 2014, a conditional use permit was obtained to expand the mine into the Town of Oak Grove. The mining process will be consistent to those at Maiden Rock and Bay City. The mined materials will be screened, trucked and conveyed in the tunnels. The sand will either be washed at a new proposed plant at the mine entrance in Diamond Bluff or in the proposed plant expansion at the existing Hager City processing plant. The washed sand will be dried and further processed in Hager City. The mining permit encompasses 59 parcels totaling 1,867 acres in Diamond Bluff and 27 parcels totaling approximately 985 acres in Oak Grove. Activities on the site will include blasting and screening underground as well as stockpiling and loading on the surface. The LMC, at the required 1 year status report on August 7, 2013 by WISC found that “action” had commenced at the Diamond Bluff site within 12 months and that the “use” had been established.

Access to the mine entrance site is off of 1005th ST, WisDOT recommends that the intersection be upgraded to the B1 class. 1005th St will need significant upgrades. A road agreement was reached with the Town of Diamond Bluff. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. A CUP for Filling and Grading in the Shoreland area was received on May 21, 2014. This permit has expired and a new permit will need to be obtained. The entire mining process takes place underground using room and pillar mining. The sandstone will be mined in parallel tunnels approximately 30-foot wide separated by 70-foot wide sandstone pillars. The mining is accomplished by drilling and blasting. The applicant is proposing to operate the facility 24 hours a day, seven days a week with up to 22 employees. WDNR regulates and monitors discharge water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. The mining operation is required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. Waste materials will be placed back in the mining tunnels. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. Wisconsin Department of Safety and Professional Services (DSPS) establish uniform limits on permissible levels of blasting to reasonable annoyance to persons or property outside any controlled blasting site area. A Fugitive Dust Plan has been developed for the operation. The plan details the measures to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. There has been limited activity on the site since the expansion permit was received. The applicants submitted their activities and they are listed in the staff report. The Mine Development and Operation Plan has been completed. High Capacity Well Application and permit was filed. Exploratory pits were dug on the slope of the mine, they did some logging on-site. There was the Road Agreement with the Town, there is engineering and design that is on-going and a Damage Response Plan has been completed. The existing conditions are listed in the staff report #1 - #30. Condition #11 is missing the word "production", it should state: A formal road agreement for 1005th St with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance. Road agreements shall be established with the appropriate municipality prior to any "production" use of the Town or County roads. A one year status report was not presented last year, which was required by condition #24. Staff has noted that it has become increasingly common for the timeframe associated with the actual establishment and operation of conditionally permitted uses to extend beyond the typical initial CUP approval timeframe (2 years). While it is recognized that complex uses requiring a variety of approvals from a number of different agencies will often necessitate longer timeframes, staff is of the position that reasonable benchmarks and timeframes should be considered as part of the established conditions. These benchmarks and timeframes would not be intended to create hurdles to the establishment of a given use but to ensure that CUPs that the permit activities that are no longer viable or were part of a prior business/development plan that is no longer being implemented, do not remain active indefinitely. Staff suggests that one or more of the bench marks identified in the WISC's development plan be mutually agreed upon and a timeframe for their completion established in the conditions. This benchmark would be intended to demonstrate WISC's commitment to the project and their intention to move forward in a reasonable time frame. Staff suggested benchmarks and timeframes are included in the Recommendation.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area and renew the permit with the following conditions:

1. Applicant shall submit verification of lease agreements before mining is conducted.
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.

3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties. Mining under a leased property shall be a minimum of 100' from any well. A 200-foot buffer shall be maintained around structures.
4. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
5. A map of mining activity and areas of future expansion shall be provided to the Zoning Office annually.
6. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
7. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
8. WISC shall develop a plan to respond to damage claims to wells or structures by surrounding land owners. WISC shall offer pre-blasting surveys to residents or owners of dwellings or other structures within 1500 feet (or as established by the applicable Town) and shall respond to claims of impacts/damage.
9. A ground water response plan, including accurate determinations of the ground water level and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation, and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
10. Engineering analysis shall be conducted to demonstrate slope stability for the reclamation of the mine entrance area. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
11. A formal road agreement for 1005th St with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance. Road agreements shall be established with the appropriate municipality prior to any production use of Town or County roads.
12. Applicant shall obtain all necessary permits for the proposed development within the Floodplain and Shoreland area.
13. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to site disturbance.
14. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences.
15. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
16. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
17. All loaded trucks shall be tarped in a manner acceptable with the Town of Diamond Bluff.
18. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
19. Applicant shall implement Fugitive Dust Plan as presented. Modifications to the Fugitive Dust Plan may be required by the LMC if warranted.
20. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster. Notification to all surrounding landowners within 1500 feet shall be given notice of the blasting schedule. Blasting shall be restricted to six days a week.
21. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, WisDOT, MSHA and other agencies if required.
22. Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office.
23. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
- 24. This permit shall expire in one year.**
25. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.

26. Any polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
27. Prior to beginning any mining activity within the Town of Oak Grove the applicant shall request to be placed on the agenda of the Oak Grove Town Board to review uses occurring in proximity to parcels authorized for mining. Concerns raised by the Town shall be presented to LMC for review and potential CUP modification.
28. No ventilation shafts shall be developed until after such time as the proposed location is reviewed by the applicable Town and approved by the LMC.
29. Any secondary access portal shall require issuance of a conditional use permit for an expansion of this use.
30. Mining shall not occur on/under property zoned Light Industrial.
31. **STH 35/1005th Street Improvements shall be completed.**
32. **Clearing and benching of portal sites shall be completed.**

Mr. Himes introduced Scott Passe as the Bay City Mine Manager. He apologized for not completing the status report, they missed that. In terms of the renewal and the request for a one year renewal and the benchmarks for construction, he would like to cover a little bit of the history and discuss why they are at the stage that they are at with this project. In 2012 they applied for a conditional use permit for the mine in Diamond Bluff and Oak Grove. The original CUP for Diamond Bluff was issued in 2012. But Oak Grove put a moratorium on mining and began a two year debate on nonmetallic mining ordinance. That delayed the issuance of the combined project until 2014. Oak Grove Township sued the County and that was not settled until 2015. All these things created uncertainty for their project. They didn't have a clean total project CUP until just about a year ago. Even though they have been at this for a while, things have been delayed until 2015. The market for frac sand has dropped dramatically since 2014. We are in a severe downturn in our market at this time. Fairmont did begin working on the project in 2012. They did permitting, engineering, geologic study and environmental surveys and permitting work. This project is connected to their expansion at Hager City and the wash plant. We view that as entirely one project. They are all tied together. That work has cost over \$943,000.00, which is a significant investment. But this is the basis you have to establish for a mining project. You have to go through the permitting process, you have to go through the reviews, you have to go through the analysis before you can begin. They have two high cap well permits that are pending. They have been applied for over a year ago and the DNR has not approved those permits. They have an air permit for the Hager facility which has been out for over a year. This is the timeframe they are looking at for permit approvals and no construction can start at Hager City until that air permit is approved. They can't put a foundation in or dig a hole in the ground until that is done. These activities were what they used to establish the use in 2013. They have continued these activities and this use since then with no 12 month period of inactivity. They started all that process in 2012 despite the uncertainty. They believe for this project, which is a complex project, this is an appropriate level of activity and it is the basis and foundation for starting up a mining operation. Based on that, they request that the permit be renewed for two years. Addressing the suggestion that they should begin construction on 1005th and the earthwork for the portals and the wash plant, given the economic situation that they are in, in the downturn, their company is in a mode of conserving cash and they are not going to be able to spend money on a capital project that doesn't deliver revenue in return in short order. They believe the use is established and once the market responds and returns this project is likely to move forward. Construction would begin within that timeline. They would like a renewal in two years and Mr. Himes doesn't feel the construction benchmarks are appropriate for them at this time. Sanden asked staff about the 12 month abandonment and what that means; would that be an automatic revocation of the CUP? Would that be at the committee's discretion, if the twelve month inactivity was due to external issues not of their own making such as legal and economic issues? Pichotta stated basically what the code says is that the use permitted as a conditionally permitted use is abandoned for a year that that use shall extinguish and any new activity shall require a new conditional use permit. We did have substantial discussion with our legal counsel regarding the information that was submitted and whether it constituted a use of the property. It was suggested by our legal counsel that while there wasn't much activity it did suffice as far as activity to keep the conditional use permit in place. So he doesn't think we have an issue with abandonment. Our suggestion as far as benchmarks was to ensure that this CUP is in place indefinitely

with minimal activity taking place which could create uncertainty for adjoining neighbors. We would like WISC to demonstrate their commitment to the project so that we understand if this project is moving forward or it's not. What additional hardship would there be on WISC if they were to have to start with a new CUP versus a renewal? Is that something that is going to be more time consuming, more costly? Pichotta stated it would basically be they would have to start back at the beginning and go back to the Town's and start that process again. Sanden stated that could delay the operations until all those pieces were back in place. That is the real significance if we didn't renew and they had to start over. Ross asked if staff could walk through one more time the reason for recommending that the permit to expire in one year. Pichotta stated again we are looking for some sort of signal from WISC that this is a project that is going to move forward and what we don't want to be is in a position where in several years, we are at the same place and that is minimal activity on the site and are asked to renew it based on their continuing to pursue permits. Our recommendation as far as a one-year timeframe is simply staff's suggestion. Certainly the committee could go two years, or could split the difference, a year and a half. As far as the benchmarks, that is something we would like to see. Neighboring property owners would perhaps also to know if this is going to move forward or if it's not. This is not unique to this particular project. We have some similar language in the next CUP also. You can anticipate seeing similar language in relation to other uses as they come down the pipe too. Occasionally we will see CUP's where there is not much activity and there is uncertainty as to whether that use is going to be established. Sanden asked by not having dates associated with the benchmarks, it is implied that it would be at the end of the year. So if we were to extend it to two years and leave the language the way it was that would then imply that they would have to have the benchmarks done in two years. Pichotta stated yes, it would and it is required by our code that all nonmetallic mining operations be renewed every two years in front of the committee. Aubart asked how we decided on the benchmarks. What were the criteria to decide that? Pichotta stated that was staff's suggestion as far as benchmarks. Aubart asked what we used to make that decision, was it just an arbitrary decision or was there something specific indicating that we want to see the street improvements completed. Pichotta stated if you note right before the recommendation staff suggested benchmarks be mutually agreed upon and so the expectation was not that we would just unilaterally declare. The reason for the road, it seems the road is one of the first things that needs to be done in order for them to begin to work the site so it is suitable. As far as prepping site for the portals or the adits would also be something that seems to make sense and not too onerous. It's not build a wash plant in a year, that sort of thing. We brought them up as the beginnings of a discussion. It wasn't anticipated that the committee would just blindly accept those, we thought there would be some dialogue with WISC as to what an appropriate bench mark would be if they felt that those weren't appropriate. Aubart asked Mr. Himes about the benchmarks. Mr. Himes explained it is appropriate for them to continue to work on the project and continue the permitting and the prep work. It would be appropriate for them to report that to the LMC. This level of construction would be several million dollars as an investment. That is a problem for them because of the timeline. Spending that kind of money without the market turning and without knowing when they are going to see that. Their view of this, as the projects ongoing use is established it would be similar to any other business in a downturn where activity slowed but activity didn't go away. May he suggest that they look at the continued process of getting permits in place, getting assessments done; that is real work, \$900,000.00 it is substantial. Get a level of permitting in place so once the market does turn they are ready to go. Once the market turns and this project turns on, the earthwork, construction and establishing the portals will happen relatively quickly. Development of the mine overall, to get it to a productive level is a two year project but activity could start very quickly once the market turns. We have no control or forecast on when the market is going to turn. Chairperson Fetzer asked if they have any idea of timeframe for air quality and high capacity well permits. Mr. Himes stated the DNR, specifically to the Diamond Bluff well, the DNR came back and said they had to make a modification to their plan and had to put more casing. They believe that permit should be approved shortly. They didn't anticipate that it would be over a year for the initial review and approval to commence. Chairperson Fetzer stated you applied back in 2014 and it took that long. Mr. Himes stated a high cap well permit right now is over a year. Sanden stated he assumes they have put in the additional casing. Mr. Himes stated yes, they committed to the additional casing. Sanden asked any other types of physical types of activities preferably construction oriented that would also be doable in these uncertain times over the next year

or two that would establish benchmarks. Getting permits and assessments as you stated is a very expensive proposition so you are doing things but just in light of the two that were suggested it seems they are a bit more physical on the ground construction related activities. Is there anything along those lines that you would naturally do over the course of the next year or two. Mr. Himes stated they discussed that and it wouldn't take a major investment to take a bulldozer on top of the hill and flatten out an area on top of the hill but that would create an erosion opportunity and an environmental liability. We felt it's better to leave that ground stable until they are ready to go and they can build the settling ponds and start that whole process. They are right on the edge of the Wind River. Really before they disturb anything there they need to have that catchment there that will prevent any kind of erosion from getting into the river. It's almost in for a penny in for a pound once you start moving dirt. Pichotta asked what their timeframe is for seeking a new Filling and Grading permit. Mr. Himes stated they would do that immediately preceding the activity. Then they would have the final plan. Right now the plan they have is for the wash plant located on that site. There is a question on that. It will come up in the next review. The decision on whether the wash plant goes to Diamond Bluff or to Hager City will be evaluated based on capital expenditure, operating costs and how the market is coming back up. We will look at which location makes the most sense. Right now it's leaning toward it being at Diamond Bluff. Once they know that, then they know what the Filling and Grading Plan needs to be to support that. Then they would submit the Filling and Grading application based on that plan. Pichotta noted that process itself will take at least a month or two. Mr. Himes stated they do have that plan completed for that scenario. That is actually what the original Filling and Grading Plan was based on. At this stage, there was no point in bringing it forward until we are absolutely certain that is the Filling and Grading Plan that we are going with. We could have done something relatively cosmetic which would have created a reduction in the anxiety but it would have created the erosion and the liability problems. The major expense on this Filling and Grading Plan is the ponds to catch anything between the site and the river. Sanden asked in addition to the monies already spent in permitting, over the next year or two, what additional monies do you anticipate outlaying for permits and assessments. He asks that only as a measure of your commitment to carry through with this. Mr. Himes stated in 2015 they spent \$125,000. The air permit alone was \$40,000. The permits that are coming at them, he would suspect would be in the order of tens of thousands of dollars, not that level of spending but there would be some spending. The big chunk of the spending was the work that they have done already; \$125,000 of it in the last 14 months. Pichotta asked what they anticipate doing in the next year or two. Mr. Himes stated they have to do the SPCC Plan, they have to get the construction site Stormwater Runoff permit, Erosion Control permit, WPDES Stormwater permit, Water Resources application, the Archeological Survey, the Wetland Survey, Wetland/Shoreland permit, Wetland Mitigation permit, and the Chapter 30 permit construction on your floodplain. Then we get to the building permits. It is just permitting but it's a lot of work and expense. That would be before construction, before operation there is another list. Sanden asked what the comfort level from staff if permitting and assessment would be, in your eyes, activity. Pichotta stated from a technical perspective, it is activity. That would suffice but it's not doing much on site. It has less to do with our comfort level than your comfort level. Sanden stated that is what he was asking originally about the 12 month abandonment and the parameters around that. If they were held up because of legal issues and couldn't get out there and move some earth around, was that considered abandonment? There are some gray areas there. Ross stated a lot of the CUP's and items that the committee looks at, the permitting process outside the scope of what we do here and in this office is much grander with the mine and more expensive. I am comfortable with the two year versus one year. If it was something more simple and we talk about market changes and different things. The one advantage he has always relied on in this committee is that just because we issue a two year permit doesn't mean we don't get to talk to them before two years. If there are issues or things that come up, they can come back in here and take a seat. We have proven that with County and others. All he can think of on his side is if he was in that position and someone was asking him to make, from a business perspective, major road changes or certain things like that and going to large expense - when you are in a downturn on the economic cycle and there is an enormous amount of uncertainty in the industry, as a whole, he is uncomfortable asking companies to lay out additional cash when the market uncertainty is there. If there was a safety issue right now on that roadway, if they were coming and going, it would be a no-brainer regarding fixing it. Once activity begins they would have to get

these things done. What would be that criteria, if the minute you know you are putting up that wash plant, if that is it, that's when that road gets fixed. Investing capital in a down market, it's a hard thing to do. Pichotta stated he has an analogy; we were presented with a similar situation relating to market conditions awhile back. If you recall, we reacted to a concept and preliminary plat for a land division called Whispering Pines down in the Town of Trenton. It was a joint project between a number of different folks, they sought and received concept approval as well as preliminary plat approval but given the market, the housing market had fallen out, they didn't want to construct the roads and actually finish the project. They appeared before the committee a number of times and we gave them extensions. We gave them multiple years on more than one occasion. Part of our discussion at that point was, how long is it appropriate to keep kicking that can down the road especially since we first approved concept and prelim, the Town of Trenton had not only adopted Comprehensive Plan, they had adopted a Subdivision Ordinance, none of which had been applied to that particular situation. He thinks it makes sense to be sympathetic to market conditions but it can't be the determining factor because there are other forces at play. It's not really apples to apples but it's kind of a similar situation where you try to accommodate but it can't just be based on market conditions. If it was, we would still be kicking that can down the road and at the last time that we reacted to that we said two more years and that is it. Mr. Himes stated we are not saying it's just market conditions. Because of all the activity related to Oak Grove's moratorium and the ordinance, we didn't get a clean permit until last year. It's been a year that we have had a clean permit and we have invested close to \$950,000 in this project. Doing the things that they are, they are material to the project going forward. That is a significant amount of money. If the permit were to terminate, that would be a loss of some cost for them. It would be spending that they incurred that the benefit they would no longer have access to. The activity they have done, establish the use and they continue the activity and continue the use, they would all like to see this project further along. They would all have liked to have a mine operating there already. Due to conditions beyond their control, that weren't market related, they were delayed. Now they find themselves having the established project, the project is underway now and they are seeing a dip just as you see with any other business that was established. Ross stated to clarify, his concern is as a business when you do have to lay out cash in a downturn it is a difficult situation and being mindful of that is prudent as well. Chairperson Fetzer stated coming from a business that deals with markets all the time, right now the farming industry is in a very tight time, it's a tighten your belt kind of situation. He understands all that. There is business that always goes on, and WISC is working with permits and working through things so you are ready when everything comes back on-line too. It's not like everything has been hung on the rack and set aside here. If things turn around, himself, the way he looks at it, the number one thing that would need to be done is that street. If you are going to be in and out of there, it's a safety deal. He doesn't have any problem with a two year extension on this and hopefully everything turns around and we can go from there. Sanden asked if staff is wanting to keep condition #31 & #32 but push back the due date to two years instead of one year or would you be more comfortable with putting those as before operations began and then putting in something like applicable permits and assessments will continue to be pursued during this time period. Aubart stated he personally doesn't care for the benchmarks. He thinks the road is covered under condition #11 because we talk about the formal agreement with Diamond Bluff established prior to any production use of the Town Road. That is going to happen. Pichotta stated that has actually already happened. They have reached an agreement with the Town and we have been provided a copy of that agreement. Aubart stated at the time of production or before it can go in that road needs to be upgraded to that standard or whatever that agreement is. Pichotta suggested if the committee is comfortable with a two-year renewal timeframe and removal of the benchmarks that is fine from staff's perspective. If you are going with 24, you can say the permit will expire in two years and he would also like to see a one year status report so they can come in and tell us what they have been up too. Aubart asked about the status report; why wasn't that caught. Mr. Himes stated they missed it. Aubart asked if we typically watch those things from the staff standpoint. Pichotta stated we do, but typically the onus is on the applicant. Aubart stated it's their responsibility because it's their CUP but he didn't know what the standard procedure was. Pichotta stated had we realized it was coming up, we would probably have called and reminded them. Roy stated our system for tracking is based on expiration. We know when the permits are going to expire. Sanden stated we have had extensive dealings with WISC and he personally has been satisfied with the majority of the

associations and they have been sitting here understanding our anxiousness about it so you are aware that we aren't going to make this a "Whispering Pines" issue and kick it down the road many times. But we are sensitive to the issues, economic and otherwise at this time but there is a limited patience. Sarah Palodichuk, Town of Oak Grove, she is only speaking for herself, not for her board. They didn't know this was coming up before their last board meeting so they have not spoken about it as a board. She thanked Andy and Brad for looking at this thoroughly. She knows they don't always agree on how this is handled. She does appreciate them looking at the important aspects because it wasn't a light decision for the Town to challenge the last ruling, administratively. She appreciates that they showed an effort about what some of their concerns were. Not particularly Oak Grove but just generally how it is handled. The challenge that Oak Grove brought was based on action wasn't going to commence within a year in the Town of Oak Grove, but in reality, it's a general concern about having a reasonable expectation about what is going to be happening. Even though the 2014 decision and the following court decision in 2015, did affect Oak Grove, it did not affect their activities in Diamond Bluff whatsoever. Two-thirds of the land is in the Town of Diamond Bluff and their rate of mining over this number is from two years ago, that they have been showing about 20 acres per year, which means that they had 80 years, 90 years worth of potential mining in the Town of Diamond Bluff. So as far as action not commencing, because of the law suit, she thinks it's worthwhile to look at they have had a CUP in the Town of Diamond Bluff since 2012 that action hasn't been taken on. It's a little bit disturbing to see action in quotes and use in quotes in the first section because she thinks it's really important that the Land Management Committee for the sake of protecting the Town's that you are acting in place of the Town's here in the zoning decisions. That you consider their legal standing as well because saying they have had activity, they have certainly had activity, they are applying for permits and whatnot. But to say that the use has been established, is a serious legal concept that they aren't using it. They aren't doing production right now. They can't even drill a hole. There are certain things that can't be taken yet because it's not permitted. By that, she would argue that the use hasn't necessarily been established. Although she doesn't have a lawyer saying that, she would have to talk to their Town lawyer about that. Hearing Jeff say that this project, after these things happen, this project is likely to move forward, hearing that a little bit disconcerting. Andy mentioned neighbors and people want to know what is going on. Just like the market is bad for WISC right now and it's reasonable that things have slowed down right now, the neighbors, who have homes, their market is slowed down until WISC decides what they are doing too. She appreciated the recommendation of having the permit expire in one year. They had asked for that last time. Really, the one year requirement is built into their comprehensive plan and it shows up a lot of places because you should be able to have some sort of planning. They have put a ton of money into it and have shown activity. There is no dispute about that whatsoever. As far as the actual use goes, from her perspective it looks like they have very carefully and brilliantly set up the legal structure to be able to secure that land without doing anything. That is a hard place to sit on a Town Board. Back in 2013 to say that use has been established from that time, well that is going to show up in every lawsuit we ever have with them but in reality they're saying we couldn't do anything in 2013. We couldn't do anything until this got resolved in 2015. She would like it if the committee would consider that part of it moving forward. She feels the conditional use permit should expire because they are not working on it right now. But if you choose to renew it, renewing it for one year is a much more reasonable. It creates a better idea for the Town to be able to come in every year. She would like it in the future too, if they would know about it more than a week ahead of time. For the Town it would be nice so all the board members would be able to have some input. Ross asked Sarah if she thought the working relationship between this company and Oak Grove would improve dramatically with a one year versus two year CUP. Do you think the debate and the dialog would improve based on that? Ms Palodichuk stated from what she has heard from home owners in the area, even today someone called her and stated it would be nice to know what's going on, that's where the one year situation would be beneficial for us. That people do care about having a heads up. As far as the relationship with them, she thinks she has gotten along quite cordially. She doesn't think she has talked to Jeff in the past year. She thinks they have gotten along and they know where they differ and that's not a huge issue. She also thinks that the Town Board in Oak Grove has become much better at handling more serious and complex issues in a more efficient manner. She thinks they might not all agree but they have learned how to get on the same page and utilize their lawyer better. Sanden

asked Sarah if a one year status report would keep them informed on what's going on? Ms Palodichuk stated in the Town of Oak Grove, everyone assumes that since there wasn't a status report they aren't doing anything. The CUP is just going to disappear. She knows better than things just disappearing. But that was the gut feeling amongst people that had concerns about it was that because they weren't following through with their status report and weren't showing activity that activity had ceased. Sanden stated to his point if the main issue is uncertainty and not knowing what they are up to on the piece of property, would a one year status report be sufficient to answer that part of it? Ms Palodichuk stated she does not think it would be because if the one year status report is, hey the market still sucks, then she thinks the appropriate response is that the permit would expire due to inactivity. Chairperson Fetzer stated he has gone through a high cap well permitting and it is substantial and long. Just going through some of these processes doesn't mean nothing is happening. It doesn't mean that you aren't going through processes to get where you want to be. Ms Palodichuk stated she can completely agree with that and that can be seen as activity. You can make that part of your benchmark. Chairperson Fetzer stated the issue is they want to see something going out there. Ms Palodichuk said if you are giving them a permit under the premise that use has been established, then she thinks there needs to be a legal opinion that use has indeed been established. Not simply that there has been activity, because if they established use back in 2013 that means they could drill a hole. That means they could have their stuff. Chairperson Fetzer stated you have to have permits before you can do any of this stuff. Ms Palodichuk doesn't disagree, she is just saying at the 2013 status report, the committee said they established use. Now you are saying they can't use it. Ross stated we established use. We see it as use. Mr. Himes stated absolutely the activity of Oak Grove created uncertainty for Fairmont. He doesn't know where her calculations are coming from. The action created uncertainty to the point where Fairmont looked elsewhere for investment and they bought the operation in Minnesota. They bought the operation in Texas and Missouri. They made the investment in places where it was more sure. It did prompt a change and a move in capital. This did create uncertainty to the point where we aren't going to start the project until we had the full project under permit and that didn't get established until 2015. County Counsel and Eric McLeod have both said that the activity we have done is recognized as use in 2013 and continues to be recognized as use. We are glad to do a one year update. That is entirely appropriate. He thinks the way they covered the information prior is fairly accurate. Ms Palodichuk stated if she can clarify where the 90 year number came from, it came from a discussion that she and Mr. Himes had with Eric and Joe about the mines in Maiden Rock and Bay City and over the time since you had acquired those two mines that your production there was about 20 acres per year. So she took that number and figured out the 90 year from that. That's why she was saying if you have an increase in production from that amount then certainly it would be less. If you were doing 60 acres a year there, like Rich said, then that would be 30 years. She can understand that. Based on what you had been doing in Bay City and Maiden Rock, that's what it came down to. Mr. Budinger stated that its 40 acres per year and not all the acres in a permit are minable. There is the bluff and the percentage that isn't minable. Ms Palodichuk says that makes perfect sense. Mr. Budinger continued, It's a 30 year mine plan is what it amounted to; two thirds in Diamond Bluff and one third in Oak Grove. Tom Breen congratulated Debbie on her re-election to the board in Oak Grove. He also wanted to say Thank You to Mr. Ross to the service he has provided. He has a kinship with small business entrepreneur and grocery business. You may know that we have registered our hesitancy about this onslaught of mining in the area. His only request of one of the committee would be a token nay vote on one of these or both of these permit renewals so they can at least have the group of the population that is opposed to this registered in the official record even though we assume a renewal by unanimous vote is forthcoming. Just having that on the record would be appreciated. **Sanden moved to approve the renewal for a conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand Company with conditions as presented but amending condition #11 to read Road agreements shall be established with the appropriate municipality prior to any production use of Town or County roads. Amend condition #24, This permit shall expire in two years with a one year status report. Amend condition #31 to read, Street improvements shall be completed before operations begin. Amend condition #32, Clearing and benching of portal sites shall be completed before operations begin. And adding condition #33, Applicable permits and assessments must continue to be pursued/Ross seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E for Wisconsin Industrial Sand Company, owner on property located in the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.

Staff Report – Brad Roy: In 2012, WISC obtained a conditional use permit for a new underground mining operation in the Town of Diamond Bluff. The mining application stated that no washing would be done on site. In 2014, the applicant modified the plan and obtained a CUP to construct a wash plant to wash the sand from the mine. The washed sand will be trucked to the WISC dry plant in Hager City. The proposal included the construction of a wash plant building, conveyors and a new load out tank building. The application also stated that a temporary wash plant may be constructed for use during the construction of the permanent wash plant or the material may be trucked offsite and brought back for processing after the plant is operational. The mining application detailed the conversion of the existing residence into an office and construction of a maintenance building. The proposed hours of operation of the plant are 24 hours per day, seven days per week. Front end loaders, trucks, mining equipment and conveyors will be routinely operated outside of the mine. The site plan for the plant was approved by the LMC on June 18, 2014. The Wind River runs through the mine entrance site and the eastern edge of the site is in the General Floodplain District. A CUP for Filling and Grading in the Shoreland area was received on May 21, 2014. This permit has expired and a new permit will need to be obtained. On January 7, 2015, the LMC approved an expansion of the existing WISC processing facility in Hager City, which, it was stated at that time, would remove the need for the proposed wash plant in Diamond Bluff. The LMC may want to request further explanation regarding WISC's future plans as there are currently multiple permits issued to fulfill what would appear to be the same processing need. Ideally, conditional use permits that will not be utilized within a reasonable timeframe would be rescinded and reconsidered should the need again arise. The property is in the Industrial District. The Intent of the Industrial District is stated in the staff report. The mined sand will be conveyed to a scalp screen to remove coarse sand and water will be added creating slurry. The material will then be pumped to the wash plant through a slurry pipe. The wash plant will remove clays and fine material from the sand. Flocculants will be used to remove the clays and fines and will remain in the material which will be placed in the tunnels. The wash sand is conveyed to storage bins. Trucks will be loaded inside a new load out tank building. The process, when fully implemented, has been designed so that the sand will not be exposed to the open-air. There will be two high capacity wells. A Fugitive Dust Plan has been developed for the operation. Same with the permits and the plans that are required from the previous staff report. The existing conditions #1 - #13 are listed in the staff report. Staff has the same concerns about the permits that may not be in current plans for the company. Staff suggests that one or more of the benchmarks identified in the WISC's development plan be mutually agreed upon and a timeframe for their completion established in the conditions. This benchmark would be intended to demonstrate WISC's commitment to the project and their intention to move forward in a reasonable timeframe. Staff suggested benchmarks and timeframes are included in the Recommendation.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends that Land Management Committee to renew this CUP with the following conditions:

1. Activities shall be conducted consistent with the submitted plan, unless modified by another condition of this CUP.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies as required.
3. Any unforeseen dust, erosion and/or stormwater issues that arise shall be addressed to the satisfaction of the county.
4. Applicant shall obtain all necessary permits for construction and signage for the site.
5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.

6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. The Fugitive Dust Plan shall be adhered to.
8. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
9. The applicant shall complete the WisDOT recommended upgrades to STH 35 and receive all necessary permits and approvals.
10. Applicant understands that any expansion or intensification of this use will require CUP modification or potentially issuance of a new Conditional Use Permit.
11. **This permit shall expire in one year.**
12. **Appropriate permits to enable work within the Shoreland area shall be secured.**
13. **Wash plant site preparation and grading shall be completed.**
14. **STH 35/1005th Street Improvements shall be completed.**

Pichotta stated he has a suggestion based on the committee's prior decision, he would suggest that condition #11 be amended to read: This permit shall expire in two years with a one year status report. And conditions #12, #13 & #14 be struck. **Sanden moved to approve the renewal of the conditional use permit for Heavy Industrial Use for a wash plant for Wisconsin Industrial Sand Company with conditions #1 - #11, modifying condition #11 to read, This permit shall expire in two years with a one year status report. Eliminating conditions #12, #13 & #14/Ross seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items

Election of Officers

Status report on a Utility Facility, the loadout facility that Bill Holst has proposed in the Town of Trenton in the Industrial Area.

Site Plan for an Industrial structure for River City Metals.

Discuss take action on required changes to our Shoreland Code.

Chairperson Fetzer thanked Jim Ross for being on the committee. He believes we have had one of the strongest committees of the LMC since Joe has been on it. It's a great committee and he appreciates Jim being on it. He likes Jim's input for talking to the public, very good rapport and put it in good perspective for people. Ross stated out of his eight years on the board, he doesn't remember how many years on LMC, at least four, he sat on just about every committee on the county, barring some exceptions of course, but he has learned the most from this one. One of the things he has always appreciated about LMC is that it requires the most out of us as committee members than all the committees that he has sat on. Mostly because of the legal aspect, the amount of thought and concern and public hearings where you have a lot of in depth discussion and we are more prone to lawsuits on this committee than any of the others that he has sat on. But above all, the staff here is phenomenal. This committee is amazingly intellectual. We really had a nice bond. A lot of times, you come in, get it done and off you go. This required us to really dive deep and he certainly appreciates all the committee members very much.

Motion to adjourn at 7:19pm by Ross/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 6, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 20 th , May 4 th & 18 th , all in 2016.	Chair
3	Approve minutes of the March 16, 2016 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Retreat Center in the General Rural District, pursuant to Pierce County Code Chapter 240-36M, for John T. Huffaker & Charlene M. Torchia, owners on property located in the SW ¼ of the NW ¼ and the NW ¼ of the NW ¼ of Section 34, T25N, R16W, Town of Salem, Pierce County, WI.	Lund
5	Discuss take action on a request for renewal of a conditional use permit for a Nonmetallic Mining Operation in the General Rural Flexible 8, Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for William McCusker, MOAP LLC, Troll King LLC, WTW Properties, Helen Holst Revocable Living Trust, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff and agent for Big Acres Inc, William F. Holst III, Nancy J. Beeler and Leon W. & Donna L. Nesbitt, owners on property located in Sections 25, 33, 34, 35 and 36, all in T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Heavy Industrial Use for a proposed wash plant in the Industrial District pursuant to Pierce County Code Chapter 240-37E, for Wisconsin Industrial Sand Company, owner on property located on the West 10 acres of the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(3/25/16)

MINUTES-Pierce County Land Management Meeting, Wednesday, March 16, 2016

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Ryan Bechel, Andy Pichotta, Brad Roy, and Tracie Wold

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Set next meeting dates: April 6th & 20th, May 4th & 18th, all in 2016.

Approved Minutes: Ross moved to approved the March 2, 2016 Land Management Committee minutes/Sanden seconded. All in favor with Aubart abstaining because of absence at the last meeting. Passed.

Discuss take action on a request for renewal of a conditional use permit for CMC-Spring Valley, LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.

Jim Small from County Materials gave a quick summary of events of the last two years. A year and a half ago they had an issue at the end of the season where there was some dust; it was frozen so they weren't running the water. They got a call from a neighbor who also called Land Management. Jim was in the bottom of the pit when the neighbor called him so he shut the operation down and they were done for the season. That situation was taken care of and handled right away. They did then haul out most of that last winter. In the late winter/early spring they moved the dry end of the plant down in the floor of the quarry like they promised they would. The wash plant is still up top, but the ag lime, the finer materials, are all down at the bottom of the pit. Jim thinks that has helped tremendously for noise and dust. This past summer they hired Ted Peterson. He is the Western Region Aggregate Supervisor. He will be right on site most of the time during production season. Jim is starting to transition out and hand things over to Ted. Last May Jim stopped and saw the Town of Spring Lake and he knows Ted has met with them also, and they want to keep that up at least twice a year (to stop in and see them).

Staff Report – Brad Roy: County Materials received a Conditional Use Permit for Nonmetallic Mining in April, 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. The operation has remained mostly on the surface which has contributed to issues of noise, dust and appearance. The applicants still intend to move the operation to the quarry floor below the surface elevation. Timing of the move is dependent on product demand. A status report conducted in November, 2013 modified the CUP to allow nonproduction hours from 6pm to 8pm Monday through Friday for maintenance and preparation. At that time Condition #4 was also modified to require County Materials to work with the Land Conservation Department to ensure that the site is internally drained. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. County Materials intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. The dry screening plant has been moved to the quarry floor. The original operation plan states that excavation would

create a floor elevation of 1050', where all activity would be conducted. The average current floor elevation is 1100' and the processing area has an approximate elevation of 1160'. The average floor elevation of the quarry is 1100'. County Materials has begun to lower the floor to 1070'. There are 40 unreclaimed acres on the site. A Fugitive Dust Plan was developed and approved by the Town of Spring and the LMC in June of 2012. Condition #4 states, Stormwater measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department as soon as practical. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days. Failure will result in this issue being placed on the next available LMC agenda for potential suspension of the CUP. The Land Conservation Department inspected the site soon after the previous renewal. It was determined that the mining area is internally drained. A small portion of the processing area (~ 2,500 square feet west of the scale) drains to the north and not into the quarry. The water runs to small sediment basin. Land Conservation believed that the measures in place are adequate with proper maintenance of the basin and limiting the contributing area. Staff recently inspected the area. The west edge of the basin needs to be reinforced from erosion along the overburden stockpile. County Materials is aware of the issue and has plans for the area which they will discuss at the meeting. This operation has received numerous complaints when it began operation about noise, dust and appearance. Staff has not received any complaints since the last renewal. Staff spoke with the Town of Spring Lake Chairperson, Richard Johnson, regarding the renewal of this conditional use permit. He stated that he was not aware of any issues and that he would be present at the meeting and could provide further comments if needed. The existing conditions are listed 1-28. Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions listed 1-28. The only change is to #4 which now states, "Stormwater measures shall be implemented and maintained consistent with Land Conservation Department recommendations."

Mike Jacobson stated he does not have any concerns. Jim has been there from the get-go. Pete Krautkramer did a great job mitigating that transition and Ted has come in and done the same. At this point, they have been a good neighbor. Fetzer stated that's what they like to hear. He knows they had issues early on and when Pete came in, he really straightened things out. It's great for the Committee, land owners and the community and the Committee appreciates that. Holst commends Richard Johnson & Tim Anderson for their interest in governing their township. **Holst moved to amend condition #4 to read, "Stormwater measures shall be implemented and maintained consistent with Land Conservation Department recommendations." Along with conditions 1-28/Aubart seconded.** Ross asked about the complaint with the dust, was it a neighbor from very nearby? Jim stated it was a year and a half ago; it was a gusty day when a front was moving through so he didn't ask where the neighbor lived and didn't want to know. He just happened to be right on the site telling the guys that they need to shut down for the year. Holst stated the process that they went through with this conditional use permit shows why conditional use permits work when both sides are willing to negotiate and work on it and why townships can live within the conditional use permit process because they can achieve the goals that are needed. Sanden added that it's no small part to Jim's attention, report with the neighbors, etc. This was one of the more complicated ones that he has certainly seen. He stated Jim is passing the baton onto Ted and he has big shoes to fill because Jim did a really good job in settling a lot of these issues and again the personal connection he has with the neighbors made all the different. Jim stated he is still around. Ted is going to be on site pretty much every day as he is a manager. Now he can shut everyone down if they need to. It's not like they run until they hear a complaint or something like that. So it's going to be a big improvement having Ted there. Mike Jacobson thanked Brad Roy for being on top of it and it's good to have him here in Ellsworth. Richard Johnson added that was a big change made in the community. Jeff knows that Richard used to work for a contractor and they would haul hundreds of thousands of tons of lime out of the Elmwood quarry, and never was a truck ever covered. They blasted right

in part of the city limits, but they are so used to it since it has been there for 75 years. The proposal for the Town of Spring Lake was to start a new quarry on this nice farm land. There were a lot of complaints that he felt were very trivial. If you're going to have a quarry, you're going to have noise; if you're going to raise pigs, you're going to have a stink. There was a lot of stuff that went on that should not have, but everyone has a right to their opinion and they handled it with help from the County and Jim Small. It's been going good and he hasn't had a call at all. **All in favor. Passed.**

Discuss take action on a "revised" North West Pierce County Agriculture Enterprise Area (AEA) to be located in portions of the Towns of Clifton, River Falls and Martell.

Staff Report – Andy Pichotta: The Working Lands Initiative, which was signed into law in 2009, established Agricultural Enterprise Areas (AEAs). An AEA is an area of contiguous land primarily in agricultural use that has been designated by the Department of Agriculture, Trade and Consumer Protection (DATCP) in response to a locally developed petition. An AEA must be located on lands identified in a DATCP approved Farmland Preservation Plan as being "suitable for preservation". Each town within Pierce County created such a map in conjunction with the development of the County's Farmland Preservation Plan. These maps were incorporated into the County's Plan as "Farmland Preservation Maps." An amended map of land within the Town of River Falls that is "suitable for preservation" was adopted in 2015. The Towns of Clifton, River Falls, and Martell have each passed a resolution supporting the establishment of an AEA within their borders. These resolutions are attached for your information. A similar resolution is now necessary at the County level. The Land Conservation Committee (LCC) took action to support the establishment of the AEA at their January 28, 2016 meeting. Pierce County's adopted Farmland Preservation Plan states: Goal #1: Identify and preserve areas suitable for agriculture. Objective #1: Assist town in preserving productive farmland within their borders consistent with town policies and plans. Policy # 1: Support the creation of Agricultural Enterprise Areas when supported by the impacted towns. There are three resolutions that were passed by the towns as well as a couple of maps. Pichotta noted that the attached map states that there are 11,142 acres owned by petition signers, but stated that he has been told that some of the acreage located in the Town of Clifton was likely double counted, apparently because they used attribute tables provided by assessors but it looks like it's more along the lines of 10,500 acres. Staff recommends the Land Management Committee support the creation of the North West Pierce County AEA and direct staff to work with the Corporation Counsel's Office to draft a resolution for Finance and Personnel Committee and County Board consideration.

Sanden moved to support the creation of the North West Pierce County AEA and direct staff to work with the Corporation Counsel office to draft a resolution for Finance and Personnel Committee and County Board consideration/Holst seconded. All in favor. Passed.

Discuss take action on review and update of the Goals, Objectives and Policies of the County Wide Policies, Goals Overview and the Context section of the Pierce County Comprehensive Plan.

Staff Report – Ryan Bechel: Some of the policies governing both the planning and management of "growth and change" within the county are not specific to individual management areas listed in the "Management Goals, Objectives, and Policies" element. To refrain from repeating the broad county-wide policies that intersect each subsection of the "Management Goals, Objectives, and Policies," those overarching policies have been grouped together here. Planning Policies: Encourage that residential development be accommodated within the urbanized communities, contiguous growth areas, rural communities, and high accessibility corridors so that pressures for the conversion of agricultural land to residential uses is limited. Support the construction of dwelling units that meet the needs of every economic segment of the market in appropriate locations throughout the county. Especially within urbanized communities and contiguous growth areas of the county by providing for a range of densities and building types. Protect flood plains and natural

drainage ways from development or development practices that reduce the capacity to store water or increase the potential flooding of other property. Support the location of public facilities that maximize the practicality of non-automotive modes of transportation, including walking and the use of bicycles and buses. Encourage commercial development within existing central business districts. Discourage unplanned large scale commercial activity outside existing municipalities. Encourage the growth of the tourism industry by reinforcing the viability of the county's historic, open space, and recreation resources. Encourage the preservation and enhancement of places of county-wide cultural or historic significance in historic or cultural preservation districts or sites, whether within municipal boundaries or in unincorporated lands. Encourage energy efficiency and the use of alternative/renewable energy systems.

Management Policies: The county planning staff will work with municipalities and towns, when appropriate, to adopt joint or compatible comprehensive plans. The county will, when appropriate, assist in the mediation of problems and disputes between municipalities and towns regarding boundaries and land use development. The county will encourage land use regulations that allow for the widest possible mixture of housing types, with particular attention paid to providing housing opportunities that meet the needs of the elderly, the low and moderate income households, and the handicapped. The county will seek to minimize direct residential access to county roads and require the use of shared access where practical. The county will direct, and encourage municipalities and towns to also direct, special attention to the siting and development of new uses in proximity to historic or cultural sites, to increase the attractiveness of those areas for recreation and tourism purposes. The county will provide, when appropriate, support to municipalities and towns in their application to, or communications with, other agencies or governments when said applications or communications further overall county goals. Ross suggested we change the word "handicapped" to "physically challenged".

Goals Overview: *IN THE YEAR 2035*, Pierce County will continue to offer an exceptional quality of life through thoughtfully planned and designed development, a transportation system emphasizing roadway system maintenance, vigorous business and job growth, and preservation of treasured natural resources. Existing communities will be preserved and new investment and redevelopment will continue to ensure that these communities remain both functional and desirable. Most new homes in the cities and villages will be within walking or biking distance of parks, shops, and schools. Neighborhoods will contain a mix of housing types to reflect the needs of a diverse population. Scattered rural non-farm development will be moderated as efforts to preserve agricultural lands and the county's rural character are successful. Nevertheless, new rural housing will remain available to ensure that a full range of housing choices is available in the county. Future investments in the transportation system will emphasize the maintenance and improvement of existing roadway facilities over expansion of the roadway system. Even though auto travel will become more costly, it will remain the preferred mode of travel for many residents. Thus, roadway improvements that correspond with careful, planned growth will continue to be necessary. Economic development will occur mainly in business centers along major transportation corridors. Additional businesses will be promoted in cities and villages to facilitate a "jobs-housing balance" in those communities. River Falls will continue to maintain its vitality as the county's dominant civic, cultural, educational, and employment center. Pierce County's high quality of life will continue to be a principal factor in the retention and attraction of new business development. The quality of Pierce County's many streams, rivers, natural areas, and environmental corridors will be preserved and improved. The county's farmlands will continue to produce food for both nearby and faraway markets. Preservation of these resources will remain an overriding consideration as the county continues to grow. Pichotta stated the vision statement is fair game also; do you feel that is still a reasonable vision for the county, are there any portions of that should be tweaked? Holst asked if River Falls is the Counties dominant cultural, educational and employment center? Holst stated it gives us enough grey area that things can be switched without being tied down. For the Goals Overview, there are three main planning goals that are driving the comprehensive plan. 1) Encourage growth in areas near villages and cities supported by adequate infrastructure. 2) Retain rural character and ensure the continuation of traditional rural activities.

3) Promote stewardship of land and water resources. The goals and objectives for management are aimed at implementing the following management concept: Encourage a development pattern that is compact and efficient while maintaining the rural and agricultural character of the county. This development pattern should have a close, functional relationship to infrastructure and transportation, individual town comprehensive plans, and a concern for environmental quality and natural processes. Additionally, it is recognized that certain development does not require municipal utility infrastructure and is not incompatible with the rural character of Pierce County.

Andy Pichotta: Effective January 1, 2010 many land use decisions made by a Town, Village, City, or County must be consistent with its Comprehensive Plan. The following information is intended to help define Pierce County's approach to land use and to provide guidance as to how this plan frames interaction with the units of government located within it. Goal, Objective, and Policy Language: Throughout the comprehensive plan the terms "encourage" and "discourage" are utilized frequently. The meaning will vary depending upon context. The County will consider goal, objective and policy statements that "discourage" a given condition or use – as not prohibiting the specific action - but as a statement that the condition or use is not the preferred outcome, except when relating to rezones (map amendments). In cases of rezones (map amendments), language discouraging the establishment of a use (or type of use) at a given location shall be interpreted as not supporting the establishment of that district at that location – if the town in which the rezone is proposed does not have a comprehensive plan. In cases where a town does have a comprehensive plan, the appropriateness of a proposed rezone shall be determined based on its consistency with that town's plan. The county will, when appropriate, seek to create processes and a fee structure that provides incentives to produce the activities or outcomes that the County wants to "encourage" and disincentives for activities or outcomes that the County wants to "discourage." If you recall some time ago we had a discussion about potentially utilizing some of the concepts in a retooling of the fee structure. It was determined that, at that point in time, there probably wasn't a lot of support for doing anything too creative with our fee structure given that simply doing that might discourage development activity; the things we want to encourage. To elaborate, in cases where the county plan "discourages" an activity - that activity should not be viewed as prohibited, but recognized as something that Pierce County wants to discourage county wide and for which a strategy to discourage that activity may be pursued. For example, the objective; "Discourage residential subdivision development on productive agriculture land" doesn't mean that residential subdivision development is prohibited on productive agriculture land – but that Pierce County will, when appropriate, consider strategies intended to discourage the subdivision of productive agriculture land throughout the county through the establishment of a process and/or fee intended to make initiating that activity less attractive (i.e. fee could reflect full cost of service). Conversely, an activity that is to be "encouraged" might be subject to a simplified process with lesser fees. It is Pichotta stated that it was his sense that they may not do anything with this section in the foreseeable future, however, if they were to see some sort of activity like they saw in 2004-2006, this would give us the basis for investigating those sorts of strategies and for the support for implementing those at that point and wouldn't require an amendment to the comp. plan, it could be something that was just brought forth. Sanden asked if there was any opening for litigation. Pichotta stated that the concept had been reviewed by legal counsel. Goals, Objectives, and Policies Relating to Cities and Villages: Pierce County generally has no jurisdiction over land use decisions within Villages and Cities. In theory, if a Village or City does not adopt a comprehensive plan the document guiding land use decisions would be, by default, the County Plan. It is for this reason that "urban" goals, objectives, and policies are identified. The county acknowledges that the primary responsibility for achieving plan objectives within urbanized communities remains with the municipalities. The county further acknowledges that it shares responsibility with the municipalities for achieving the plan objectives within the one and one-half to three mile area of shared jurisdiction (ETZ or platting and subdivision review boundaries.) Role of Town Plans in Pierce County Zoning Decisions: Pichotta stated this section is largely tempered by our experience with the

Town of Oak Grove. We're not necessarily changing the relationship between the County and the Towns under county zoning; but he is proposing to amend it to give a clearer picture of how it actually works and has to work. Most of the towns in Pierce County (16 out of 17) have adopted comprehensive plans. The following text describes how town plans will provide guidance to land use decisions occurring within that town's borders. Ensure that towns subject to county zoning understand the role of town plans and ordinances in county land use processes, including implications of statutory authority and land use case law (i.e. responsibility for decisions regarding conditional use permits, lack of town plan authority over permitted uses, etc.) (*Intergovernmental Cooperation*). Zoning decisions involving Towns that HAVE NOT adopted a comprehensive plan: This is only one town, Town of Union. In cases where a town has not adopted a comprehensive plan, the county will continue to solicit a town recommendation regarding the proposed use. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a town recommendation regarding the proposed rezone. They still do want to know what the town thinks and in fact they may choose to cite in their recommendation a portion of the county's comprehensive plan that perhaps they may not have considered so it still gives them the ability to steer-their-own-ship but they have to do it using our plan. The County will consider goal, objective and policy statements that "discourage" a given condition or use – as not prohibiting the specific action - but as a statement that the condition or use is not the preferred outcome, except when relating to rezones (map amendments). (*Management Policies for the Entire County*). The relationship between towns without a comprehensive plan and Pierce County will remain much the same as it has been in the past. The main difference being that these towns will, after January 1, 2010, no longer have veto authority over rezones within their borders and a determination of the appropriateness of a proposed rezone will be based on consistency with the Pierce County Plan. The submission of a Town Recommendation regarding a proposed rezone or conditional use permit will continue to be required at the time of application. The Town Recommendations will be advisory. Zoning decisions involving Towns that HAVE adopted a comprehensive plan: The County acknowledges that the responsibility for accomplishing planning objectives set forth in plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The county further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. The county will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. Pierce County will consider adherence to the goals and objectives, of an adopted or amended comprehensive plan to be consistent with the "public interest" for decisions relating to that governmental unit or municipality. Conditional Use Permits: A Town Recommendation regarding a proposed conditional use permit will continue to be required at the time of application. If a proposed conditionally permitted use is determined to be not consistent with a given Town's comprehensive plan, the code/plan provision with which it is incompatible must be specifically referenced. Pierce County will not approve conditionally permitted uses that are demonstrably inconsistent with an adopted town plan. It should be noted that consistency with a town plan does not guarantee Pierce County approval of a proposed conditional use if the Land Management Committee determines that the proposed use at the proposed location will be detrimental or injurious to the public health or to public safety. In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall continue to be advisory. When a town cites goals, objectives, and/or policies in their recommendation regarding a proposed conditionally permitted use, the Land Management Committee will seek to ensure that any decision made, or condition placed, will not be contrary to the long term or intermediate end that the goal and/or objective cited is intended to accomplish. A policy, if one is cited, will be viewed as the town's recommendation as to how that particular goal or objective could or should be accomplished. It may be that a variety of strategies or required conditions could be employed to accomplish the cited goal or objective and it is the Land Management Committee's responsibility to ensure that any condition placed is reasonable and meets a legitimate regulatory purpose. It must be noted

that the Land Management Committee is ultimately responsible for decisions regarding the issuance of a conditional use permit and said decisions are appealable by any aggrieved party. Pierce County, in creating a mechanism through which a town is able to further the goals and objectives of their comprehensive plan, did not relinquish its authority or responsibility in making discretionary decisions regarding the issuance of conditional use permits. Pichotta stated when they had the proposed expansion of the WISC mine into the Town of Oak Grove; he did a memo to the Committee that talked about the public interest. This is some of the pieces of the memo that he thought were pertinent that kind of flesh out the concept of "public interest."

Rezoning: Applications for rezoning will not be approved by Pierce County unless the request is consistent with that town's comprehensive plan. The submission of a Town Recommendation regarding a proposed rezoning will continue to be required at the time of application. Reference to the pertinent section of the Town's plan supporting the proposed rezoning or text amendment must be provided to demonstrate consistency with the Town's plan. It should be noted that permitted uses, uses which are allowable by right in a given district by the Pierce County Zoning Code (Chapter 240), are not impacted or restricted by a Town's Comprehensive Plan. Pichotta stated a town can't outlaw uses in their comp. plan, they can just provide direction. Sanden asked who the ultimate determiner of consistency is if the town says, "Well this is consistent with our comp. plan" and the committee says, "Well no it isn't". Pichotta stated the committee would have the final word. The Land Management committee would make that decision and then it would be if the town wanted to challenge that they would request a certiorari review by circuit court and then the court would decide. That's essentially what they did with Oak Grove. Pichotta thinks this describes much better the relationship than it had previously. We simply can't be tied to town plans because the County is responsible for those decisions and if we tie ourselves to something that is arguably arbitrary and capricious we are going to expose ourselves to liability and we certainly don't want to do that. In some cases, town boards are just made up of a couple of folks and it just takes one strong personality to push a particular perspective through. Pichotta stated those are the proposed changes and if the committee is comfortable with what staff has proposed tonight, they will move forward with that. In the next steps the committee will get a break from this for a while and the office is going to put together a survey instrument that will be placed on the website and folks will be encouraged to fill it out. It will be a link on the website. We are looking for input on the plan itself as well as some specific input from the towns that are under county zoning, if there are things they would like to see us focus on. He would like to glean some guidance from them and, though it may be difficult, we will try. So once we come up with a survey instrument we will bring it for the committee's consideration and then we'll take another break, we'll come back, and using the input that we gleaned from the survey, we will propose an implementation plan which will basically be a series of tasks for staff to complete over the course of the next 5 years, until we do this again. Holst asked if the survey will be weighted. Pichotta stated no, it would be difficult to do it in a statistically valid sort of way. So this will just be an opportunity for folks and elected officials to provide input into how the Land Management Department conducts business. To do a county wide survey like they have before, its cost was about \$35,000 and Pichotta doesn't think there is a need to do that. Holst stated that if we have a hand full of people that are quite zealous over land use issues and they keep pumping the survey all the time, they would still be able to look at it and say, "In the committee's mind this is valid or this isn't" and move on from there. Pichotta sees his point and stated you could have some folks who are of an interest group of some sort and make sure all their likeminded friends submit surveys often and repeatedly and in a sense, skew it. Pichotta thinks we will be able to gauge that and any time you do a survey like this, unless you do it kind of like last time, you're not going to have confidence within three or four percentage points that that is how your populous feels. This is going to be comments from a hand full of folks. Sanden added this seems to be a generally valuable thing about this whole planning process, it does give us a chance to connect with the people. We tend to get in our own bubble and think that we know what is best for them, and hopefully we do, but it is always good to kind of check ourselves, "is that what they really feel" rather than what I feel they feel. Pichotta stated that in a month or so we will have a survey instrument for the committee's consideration.

Sanden feels this piece was very well done. It was kept at the general level but you also got specific enough by using these examples to really clarify all the steps, so it was very well done. **Committee consensus to approve proposed text as presented and to move forward.**

Discuss take action on Travel/Training requests. Pichotta stated he has no travel/training requests for consideration tonight.

Departmental Update and Future Agenda Items:

There are three items on the April 6th agenda. Public hearing to consider and take action on a request for a retreat center in the Town of Salem. There will be a request for renewal of CUP for mining by Wisconsin Industrial Sand Company in the Towns of Oak Grove and Diamond Bluff. The last item is a request for renewal of CUP for the wash plant that is permitted in the Town of Diamond Bluff.

Motion to adjourn at 6:50pm by Holst/Sanden second. All in favor. Motion carried.

Respectfully submitted by T. Wold

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, March 16, 2016 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 6 th & 20 th , May 4 th & 18 th , all in 2016.	Chair
3	Approve minutes of the March 2, 2016 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for CMC-Spring Valley LLC (County Materials) owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.	Roy
5	Discuss take action on review and update of the Goals, Objectives and Policies of the County Wide Policies, Goals Overview and the Context section of the Pierce County Comprehensive Plan.	Bechel
6	Discuss take action on the “revised” North West Pierce County Agricultural Enterprise Area (AEA) to be located in portions of the Towns of Clifton, River Falls and Martell.	Pichotta
7	Discuss take action on Travel/Training Requests.	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(3/4/16)

- **Revised March 8, 2016 at 2:08pm.**

MINUTES - Pierce County Land Management Committee Meeting, March 2, 2016

Present: Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Absent: Jon Aubart

Others: Andy Pichotta, Brad Roy, Ryan Bechel and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 16th, April 6th & 20th, all in 2016.

Approve Minutes: **Ross moved to approve the February 17, 2016 Land Management Committee minutes/Holst seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion/Intensification of Belle Vinez Winery, a conditionally permitted use, in the General Rural Flexible 8 District, pursuant to Pierce County Code Chapter 240-76A, for Shannon and Angel Zimmerman, owners on property located in the SW ¼ of the NW ¼ of Section 3, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Shannon Zimmerman forward: Shannon

Zimmerman explained that they have a fairly simple request. The original request was based on a business plan that they thought aligned with market demand. That being the market demand for a winery and type of business they have would align probably more for the warmer months. As they would later learn, and this is a great problem to have, that demand was greater than that. There is demand for the months of January, February and the winter months. Demand is lower. He would not expect it to be the same but these are, for example, corporate events or belated holiday party and they want to come out and they want to do a wine tasting and have some brick-oven pizza or something along those lines. There is also an economic element that motivated them to come before the committee and request this modification. The second thing they didn't take into consideration when they opened the business and he didn't take it into consideration until he was on one of his township visits on his way here tonight that they have seven UWRP students working at the winery. One of the young ladies talked about the fact that for every 90 days she works there, she can pay a semester of college off. He thought that was fantastic. If they can be open in the winter months, they are anticipating that it is going to be special events or just Friday and Saturday. For them, no change to the conditions previously approved. No change to how they operate, days they operate, times during the day that they operate, just a request for a calendar expansion. So rather than mid-May to the 31st, it would be at their leisure, year round. Sanden asked in the time of operation, have there been any complaints to the Township or the County. Mr. Zimmerman stated he wasn't made aware of it to the township, however, LeRoy Peterson said no "valid" complaints. He has never been notified from the township that there were any complaints at all. Sanden asked if the Sheriff's Department has ever been called. Mr. Zimmerman stated they have never been called.

Staff Report – Brad Roy: The applicants received a Condition Use Permit (CUP) to establish the "Belle Vinez" winery with incidental food service in August 2013. Off-sale wine along with various craft and wine related products are also sold on site. The winery is currently permitted to be open mid-May to December 31st. The applicants are requesting to expand/intensify the use by enabling year-round operation. The Land Management Committee approved the Site Plan for the operation on January 15, 2014 and a Food and Wine Plan detailing how the food operations will be incidental and subordinate to winery operations was approved on
