

MINUTES - Pierce County Land Management Committee Meeting, December 15, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the East Courtroom, Pierce County Courthouse, Ellsworth, Wisconsin.

Next meeting dates: January 5th & 19th, February 2nd & 16th and March 2nd & 16th, all in 2011.

Approve Minutes: **Rohl moved to approve the November 17, 2010 LMC minutes/Sanden seconded. All in favor. Passed.**

Holst moved to amend the agenda moving item #7 to the top of the agenda/Fetzer seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Rickey Diesing, owner of a parcel located in the SW ¼ of the SE ¼ in Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI. Staff Report – Brad Roy: Diesing Trucking received the original CUP for this site in 2006. Mining had previously taken place on this site, but it was discontinued prior to 2001. Because of that, no reclamation had taken place. The mine was originally “grandfathered” so there are no prior mining permits on the parcel. Because of the “grandfathered” status many of the mining regulations that are now in place had not been followed in the past. All new mining has been consistent with the regulations. The property was a part of a recent land division. There is no longer a residence on the property. The mining site has approximately 3.5 unreclaimed acres; the total extent of the mine will be approximately 6.5 acres. Sand screening and sizing equipment is placed on the site when necessary. There is no blasting on this site; sand is extracted with excavating equipment and trucks. There are numerous residences located within close proximity to the site; staff has not received any complaints about this operation. A 100 foot setback will be maintained from property lines for all new extractions. Mining is not permitted in the Commercial District sections of the property. Due to the land division there is no longer a Uniform Address Number for this property. The current conditions are listed in the staff report #1 - #9. The berm has been removed from the 150th Ave right-of-way. The 100 foot setback eliminates the potential to mine on the portions of the property zoned Commercial.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if it is determined that no additional conditions are necessary to protect the public interest, health, safety or character of the area, renew this conditional use permit with the following conditions:

1. Hours of operation remain consistent with daylight hours Monday through Friday, Saturday hours will be 8:00am – 4:00pm.
2. Applicant shall receive all necessary permits from other agencies.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. A 100-ft setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement.
5. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.
6. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
7. This CUP renewal shall expire in two years.
8. A Uniform Address Number shall be obtained for this property.

Condition #8 is a new condition and the previous #4 and #5 have been removed because the applicant has taken care of those problems. Chairperson Barkla asked Mr. Diesing if he had anything to state in

support of his request. Mr. Diesing stated no. Sanden asked about the mining being stopped in 2001; it was discontinued for 12 months or more? So the “grandfathered” status wouldn’t pertain anymore? Roy stated yes. Sanden asked if there were any complaints. Roy stated no. **Sanden moved to approve the renewal of the conditional use permit for Nonmetallic Mining for Rickey Diesing due to the fact it is determined not to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #8/Holst seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit to expand a Nonmetallic Mining operation located in the Agriculture Residential District for Wisconsin Industrial Sand Co., agent on property owned by Edmund & Dawn Daleiden, Jeffrey Von Holtum and Lost Creek Farms, on property located in Sections 10, 11, 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Barkla invited Rich Budinger forward: Mr. Budinger, Regional Manager, introduced other employees and consultants with him, Mark Krumenacher, Hydro geologist from GZA Environmental, Mike Lesar, Neo Solutions, Dan Gerber, General Manager of Industrial Sands operations, Michele Maxson, Environmental and Safety Coordinator, Al Nelson, Plant Manager of the WI – Maiden Rock Facility, Matt Hennick, Quality Control Manager, Kurt Oakes, Olson Explosives, Eric Mcleod, legal counsel. Our request is for the properties described; Lost Creek Farms, Von Holtum and Daleiden parcels. The request is an amendment to our current conditional use permit for the nonmetallic mining purpose. The property additions are purely for reserve replacement. One of the things we’ve identified at the Village and Town level is the need for more communication. We’ve developed a community outreach program we’re calling Citizen Advisory Council. We had a meeting last week and invited the residents of the Town and Village to bring forth concerns and to answer any questions. Mr. Budinger felt the meeting went well and he has submitted the minutes of the meeting as well as the sign-in sheet. They talked about a number of concerns; water clarity, blasting, noise, trucks, essentially everything associated with the operation. Cheyianne George asked if Mr. Budinger would discuss her well water issue. Mr. Budinger explained Cheyianne came to visit last week and brought up the concern about the water clarity in her well. They are working with her and any complaint or concern that is brought to their attention whether it’s blasting noise, water clarity, anything; they’re working with the community. Right now they’re looking at investigating the well, contacting a local well driller to pull the head and see what is causing the problems. Holst stated that you felt the Citizen Advisory Committee meeting went well; do you have another meeting scheduled? Mr. Budinger stated not an exact date but we will be holding them monthly so mid January, tentatively. We’re working with Judy Daleiden in the Village and Jerry Duden for the Township as far as proceeding with the format of the meetings. Sanden stated he wanted to commend WISC for their efforts with the Citizens Advisory Committee. He stated Mr. Budinger was here at the last meeting and may have noted that County Materials had a similar approach. It was very contentious at the beginning and you could see how well it went at the last meeting. This will make all the difference to keep the communication open, be responsive. He commended him on that. Rohl asked how long the additional reserves would keep the mine in business. Mr. Budinger stated it depends on the market levels. Their goal is to achieve a 25 year reserve base ahead of the current mining operation.

Staff Report – Brad Roy: WISC is requesting to add 538 adjoining acres to its current underground mining operation (Lost Creek Farms-318 acres/Daleiden-102 acres/Von Holtum-118 acres). They have agreements to lease or purchase properties. This request is not to change the mining process or activities, but rather to allow the existing mine to continue onto new property. The mine operates 24 hours a day, seven days a week and employs 45 people. Most of the activity associated with the operation takes place within the Village of Maiden Rock, which houses the processing plant. The mine received its first conditional use permit from the Land Management Committee in 2004. The Land Management Committee recently discussed this operation and received concerns from area residents. The focus of the comments were blasting times and frequency and the potential damage to wells and structures caused by blasting. Staff was directed to consider the comments and determine if new

conditions are needed to mitigate any negative impacts. Tunnels are created by blasting; WISC uses a room and pillar method. The entire mining process will take place underground; mining activities will include underground blasting and washing. Surface activity is largely limited to the processing plant in the Village of Maiden Rock. There are two ventilation shafts in the current mining area that extend up to the surface. New shafts will most likely be required, if the expansion is granted, to provide clean air to the underground mine. The exact location of any potential new shafts cannot be determined at this time. The potential new ventilation shafts should be the only change to the current surface activity on the proposed expansion site. The land is currently used for agriculture. The proposed expansion will not prevent future agricultural uses. No new wells are needed for the expansion. There are currently 4 wells onsite. Three of the wells are high capacity wells capable of pumping 1,000 gallons per minute. WISC is currently using two of the three high capacity wells and its goal is to create a water recycling system which will reduce the need so only one well is used. Groundwater is mapped at approximately 750 ft. MSL; mining activity takes place at 800-830 ft MSL. No new exits are planned on the expansion properties. Blasting typically takes place three or four days a week; the blasts usually occur around 5:30pm. WISC has agreed to provide staff with updated copies of the operation's Storm Water Pollution Prevention Plan, Spill Prevention, Control and Countermeasures Plan and the Discharge Elimination System Permit to keep on file. The Town of Maiden Rock recommended approval of this request on November 10, 2010, without reference to the Town Comprehensive Plan, with the following comments:

- Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
- The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
- The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.

Staff has received concerns from citizens regarding the proposed expansion including potential ground water contamination/depletion and environmental impacts. (Along with the concerns expressed at the previous LMC meeting – blasting times and frequency and damage to structures and wells.)

- Complaints about the activity at the processing plant were also received. These issues are in the Village and are not within the jurisdiction of the Land Management Committee.

The Land Management Department Nonmetallic Mining Policy states that setbacks to property lines shall be 100 feet to property lines, and no less than 200 feet from a residence. There were established to prevent highwalls being left on a property line or close to a residence which would increase the possibility of an accident. Staff is unaware of any damage to any structure due to blasting with these setbacks in place. The WDNR (and other agencies) regulate many of the activities of a mining operator. This regulatory authority originates not only in the mining laws, but in different environmental statutes. For example, primary authority for the regulation of storm water runoff, impacts to navigable waterways and high capacity wells rest with the WDNR and other State agencies, but are not included in the mining laws. The current conditions of the existing permit are listed #1 - #11 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if determined to be not contrary to the public interest, health, safety or the character of the area, grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate or as suggested by the Town of Maiden Rock or area residents:

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated at the

discretion of the Land Management Committee. (Blasting shall occur no earlier than 5am up to four times per week, including Saturday.)

2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 500' of mining activity shall be comprehensively tested, including for suspended solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Reclamation of disturbed areas shall be done consistent with NR 135 and the submitted plan.
5. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
6. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
7. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
8. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
9. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
10. This permit shall expire in two years.
11. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.

Chairperson Barkla opened the hearing to the public. Pichotta reads 13 letters that the Land Management Department received regarding this request, most opposed but some in favor of Wisconsin Industrial Sand Co. John Huffaker and Charlene Torchia expressed concern with use of wells in sand production, silica sand released in the air and the impacts on the infrastructure and costs to the public, Carol Inderieden and James Schiller expressed concerns about the general public, wildlife, environment, Lake Pepin and diminishing property values. Justin Blum, Hydro geologist from Excelsior, MN, expressed concern with the location of the Village of Maiden Rock well and the mine water supply well, Dr. C. Lane stated her concerns are water quantity and quality, air quality and the sonic landscape. She feels the mines current reclamation plan is outdated, Dr. and Mrs. Richard Dart stated the aquifer is our most important resource, George Kraft questioned the volume of water pumped and it's impact on groundwater and stream flows, Corrine Young expressed concern about the aquifers in the area being at risk and property values diminishing, Wallace Zick, Jr stated his main concern is the re-injection of used groundwater back into the aquifer, John Wickham, retired realtor, expressed concern with depressed property values, effects on area businesses and radon gas, Tracy Miller expressed appreciation for Wisconsin Sand Mine and their contributions to the Village with snow removal, the ambulance service, Maiden Rock Community Association and Summerfest besides requiring employees to contribute community service, Maiden Rock Business Association is in support of Fairmont Minerals for all their support and contributions, they feel to lose a business of this size would be devastating to the businesses and Village. The letters will be made a part of the record. Chairperson Barkla asked everyone to limit their comments to 4 – 5 minutes. Cheyenne George, N771 300th St, owns 2 acres and stated her concern is one tunnel is on the property line. Her well is less than 200 ft from the property line. She showed water samples from her well and stated it doesn't always run dirty. She stated her well was drilled in 1993 and is 285 ft deep. Rich Budinger stated as they become aware of issues, they're committed to anyone that approaches them with issues of this nature. They're looking into the water and as far as the structural issues, they're willing to have a structural engineer come in and assess the problem. They have contacted a local well driller. Carol Jennings, wanted to add to the Citizens Advisory Committee minutes. Mr. Budinger stated there is a need for approval of

the minutes and they haven't sent them to everybody yet. Pat Laughlin, the tunnel is right off his property line. They have monitors in his yard but not for every blast. How do they know what the blasts are when the monitors aren't there? Another issue is radon. The bluffs are loaded with it. He has had his basement tested for radon and he has amounts of it. He doesn't have any baseline testing as to whether this has increased. The other issue is the water, the mine tests for suspended solids and chlorides. He feels the water needs to be tested for minerals and heavy metals when he is right by the mine. Property values are also an issue. Mike Michaud, speaking on behalf of the Maiden Rock Citizens Group, they have all their concerns on 19 pages, he will summarize eight areas of concern. One key issue is the new legal framework, beginning January 2010 the committees decisions have to be based on the Town's Comprehensive Plan. The Village does not have a Comprehensive Plan in place. He discussed quotes listed from the Town's Plan and the County's Comp Plan Vision statement. Mr. Michaud stated there is a recommendation and he encourages the committee to sort out what framework they need, to make this decision. He stated this is more than just trying to increase their inventory. This expansion would allow for mining to continue for twenty-five years or more into the future. There is an existing permit that has 789 acres and they are asking for 907 acres more. They haven't mined all 789 acres. Approximately 300 acres are still available. They stated they can mine 40 acres a year. If you add the 907 acres they could possibly mine for 30 years, presuming they maintain the same production rate. The third issue is water; current water demands are not sustainable. The Village well is within 2800 ft of the mine. Polymers are used in the settling ponds. A localized groundwater study needs to be done. The fourth issue is air pollution impacts; silica dust does cause cancer. Monitors need to be put in the community to grab samples. Blasting has been discussed. It is not the only way the sand can be removed from the earth. Comm 7 indicates the regulation of blasting should be based on an annoyance standard not a damage standard. This committee needs to come up with what is a reasonable amount of annoyance. Maiden Rock is on a National Scenic Byway. Tourism is our primary source of economic development. An Industrial Development like the sand mine is inconsistent with the National Scenic Byway. There is a \$100,000 letter of credit deposit to cover future mitigation, how do we know that is adequate. There appears to be no incremental economic development benefit to this expansion; no new employees hired, no additional taxes paid, no benefits to the County, Village or Township. Doug Lansing, Village of Maiden Rock, one comment was about truck traffic, the last study done by Pierce County Highway Dept in 2006 showed 2300 vehicles pass through Maiden Rock. That's a large number that are not all sand mine vehicles. It's a state highway heavily used on the weekends and weekdays. He asked the Village of Maiden Rock Engineer about the well and he stated it is stable and doesn't fluctuate. The dust was mentioned, he was raised on a gravel road, we breathe dust everyday. Just about everyone around here has gravel in their driveways. The smart growth plan for Maiden Rock deals with agriculture. The mine is underground so it doesn't affect the agriculture in the Town of Maiden Rock or in the Village. He feels the sand mine is an open company, they've always given him an answer. He feels it's a very important company because they are producing a product that is needed all over the country. It's a relatively safe environment and he's glad to have industrial commerce right in the Village of Maiden Rock.

8:20pm Chairperson Barkla stated we will recess for 5 minutes.

8:25pm Chairperson Barkla resumes the meeting.

Rich Budinger asks to address some concerns raised tonight. Erik Mcleod, legal counsel for Industrial Sand, stated the issues we're hearing tonight were largely addressed at the Citizens Advisory Council meeting last Thursday. On some legal issues Mr. Michaud suggested that you are somehow constrained by the Comprehensive Plan. A Comprehensive Plan is not zoning it's a guideline for ongoing land use development. The sand mine has been in operation for decades; it isn't a new use. The impacts of that use are well known. The speculative concerns and impacts are things that if there was a lot of foundation for those concerns we would have seen them by now. The nature of this

operation is not going to change. It's still going to be operating in the same manner. The impacts are consistent as in the past. The Town's Comprehensive Plan is silent as to whether to encourage or discourage mine uses. It seeks to preserve agricultural uses. The mine is all underground so it preserves all agricultural uses above ground. The Town recommended approval with certain recommendations forwarded to the Land Management Committee. As to the legal issues, you are looking at the continuation and addition of land to an existing CUP. We need to come back every two years for renewal. If there are concerns, additional conditions can be considered and they can be addressed. Mark Krumenacher, Geologist, works all over the US. The majority of his work is in mining. Hydrogeology groundwater and environmental groundwater is his background. Water quantity and quality issues and the request for an environmental impact study is common and has already been done. There are 80 years of study done. Any impacts on structures, aquifers, environmental health and safety, the river, etc would have manifested themselves already not just in Maiden Rock but also in Bay City where the mining is even older there. None of the concerns that were brought up tonight have been substantiated. The mine has been operating since the 30's. The Village well has been working just fine. The water samples that we saw tonight could be iron bacteria in the water. Why it's getting in there he doesn't know. With the respect to hydrogeology, there are concerns with groundwater quality. The easiest way to explain is there is sandstone and there are aquitards, layers where the water doesn't migrate vertically very fast. The sand mines the sand above the water table. So the mining itself has no impact on the aquifer. They have four wells on the property, one is for the office, three are considered high capacity wells licensed with the state. They only use two of the wells. They are pumping 1,000,000 gallons a day. That volume of water flows past Lock & Dam 3 every couple of seconds. Most of the water goes back into the sandstone, some evaporates. High capacity wells are permitted by the State. The State did an analysis of the potential impact that the high capacity wells would have on the Village well. They concluded that the wells that Wisconsin Industrial Sand has will not have a negative impact on the Village well. Their objective is to pump less water. They use the water to wash the sand, and the sediment that they wash out of the sand are the tailings that go in the ponds. The tailings ponds are former mined out tunnels. They import clay, pile and compact the clay, therefore isolating sections of the mine tunnels. The water that they use to wash the sand is pumped into the tunnels and the sediment that is washed out of the sand settles out. The water gets re-pumped to wash more sand. Sand is very permeable. So they lose water but it's going back into the ground. The sediment left behind is the fine particles that were in the sandstone to begin with. They are using polymers in the mine. Polymers are complex organic compounds. The use of polymers is permitted by the WI DNR. The State gave them restrictions on their use and they are using them according to the restrictions. There will be no negative impacts by these polymers. They use these same polymers in treating drinking water. With time they will degrade to carbon, oxygen and nitrogen elements. For an industrial operation of this size, they have very low chemical use so it has very low potential impact to affect the environment. This is silica sand they are mining. There is a disease called silicosis which people might get. Just because there is silica sand doesn't mean it's a hazard. Many air and water borne materials such as silica sand are indigenous, natural, and they are essential to the proper function of the ecosystem. The silica sand is everywhere. Regulatory safeguards have been established through a systematic approach of evaluation, potential impact assessment and regulation. So at the Federal and State level, these materials have been researched for many years, specifically in Wisconsin, it has been looked at since 1946. Crystal and silica particulate matter VOC's are all included in the regulatory process and the mine is regulated and required to monitor these things. They have permits that have allowable emission limits. They are monitoring and the date it goes to the state shows consistently that they are between 1 and 8 % of their allowable limits. Buying more property to expand the life of the mine will not change that. Any potential toxic affect that people hear about is related to the dose. There is no greater potential exposure than at the mine. The employees are there 8 to 10 hours a day. Every employee over the course of a two-year period will be monitored with a little pump, for at least one day, to see how much dust they breathe in. We have OSHA, the Mine Safety Health Administration and the State of Wisconsin watching to see that they are not a risk to their workers. At no time have

these personal monitors shown even 50% of allowable exposure concentration. Chairperson Barkla stated that although you thought all the questions that could have been answered were after the meeting the other night, but seeing the look on people's faces and with so many people showing up tonight, to me that indicates there are still a lot of questions to answer. Kurt Oakes, General Manager with Olson Explosives, addresses Mr. Michaud's statement about the meeting a month ago, the results they get over an extended period of time being acceptable and within the legal limits of the State of Wisconsin. In Comm 7 it does address annoyance standards. When the State of Wisconsin comes in to review a blast complaint, they have three gentlemen that come out to do it. The determination looks at whether someone is exceeding those limits on the Z-curve the Siskin curve. Based upon those numbers, the standard practice the mine uses, the likely hood of any damage utilizing current practice, is slim to none. Fetzer asked about the gentleman who had the instrument at his home during the blast, do you take readings on every blast? Mr. Oakes stated that the State of Wisconsin requires that you take a reading with a seismograph at the nearest non-owned residential structure to where those headings are being blasted that day. That information is noted on the shot reports. Fetzer stated then for every shot, you are taking readings somewhere. Mr. Oakes stated yes. Sanden asked Mr. Oakes to readdress the Z-curve and annoyance. Mr. Oakes, When the Department of Commerce comes out to do a complaint investigation; the first thing they look at are the seismic reports. Based upon the information in the seismic reports, as far as the amplitude and frequency, they will not go against anything that is not outside or exceeding the Z-curve throughout history. Sanden stated he understood the Z-curve to have to do with structural damage. Mr. Oakes stated it is potential for structural damage. Sanden asked if it was correct to say that this mine has been investigated from a standpoint of complaints or annoyance. Mr. Oakes stated to the best of his knowledge, he knows of no time that the State has been out to set up a seismograph or investigate. Ms George asked how long they have been monitoring. Mr. Oakes stated he personally does not do the monitoring. The mine has their own seismographs and they do the monitoring. That has been the standard of the State since 2005. Mr. Mcleod stated they will set up another Citizens Advisory meeting next month. They want to be as transparent as possible to minimize any impacts to the greatest extent possible, realizing they have to work in this community as a business and it doesn't do them any good not to work these issues out in a productive manner. Mr. Michaud, back in the 1950's the nuclear power industry was telling everyone that no one understands this like they do. Just leave it alone and they would take care of it. We don't know if we can just leave this to the industry. He wanted to readdress the water issue; extracting water from 700 ft down and discharging at the surface. The whole flow patterns are disrupted. As far as the air, dose response relationships are true, cancer risk is a dose response that is dependant on time. What about an exposure of 24 hours a day, seven days a week for 30 years that the residents have to put up with? Chemicals, the polymers, one of the MSDS sheets says the State of California has determined that this agent can cause cancer. The siskin curve, annoyance, what is the proper standard? Jan Eckhart, Maiden Rock Township, my understanding of aquifers is water contained in the rock, rock is permeable. When rock is removed is that going to make the water less pure? Mr. Krumenacher stated the aquifer is huge. The groundwater basin is as big as the surface water basin. They are only mining a few hundred acres out of ten's of square miles. They are only taking a 25 ft high section of rock (40%) of rock in that area. The rest remains. The impact wouldn't even add up. Nan Michaud, Maiden Rock, addresses again the aquifer. The United States Geological Survey doesn't even have accurate information on our wells. They are from 1989. We need to get a better understanding of the entire State. Fred Harding, new resident of Maiden Rock, appreciates all the sand mine has done for the community and in the Village of Maiden Rock and does not wish to shut the mine down. He wants to come up with a consensus to come up with a solution. We are looking at the mine for another 25 years, what's the impact on the water. The mine is talking about not extending their portals in which they extract their products. What is the assurance of this. The mine assures me that silica dust is not a concern. Blasting, the curves are below, however, there are issues, energy is dissipated. When they hit air that is when damage occurs. The Z-curve doesn't measure long-term impact. The waves are also hitting water, both frozen and solid. That water does not compress and that's also going to put hydraulic pressure on things. Go out

and get little glue-on meters. Put them on a variety of places and measure it over and over again. The mine is asking to blast only seven days a week, 24 hours a day. He would like to see an environmental impact study. Jerry Duden, Chairperson of Maiden Rock, stated this is his first term. He has not heard these complaints until recently. He contacted Mr. Roy and asked if he had any complaints at the County level and there hadn't been. If they would bring the complaints to him, he will follow up on them. The mine has been good at answering his questions. Evie Johnson, closest neighbor to the mine and a retired teacher, stated the mine has always been in touch. They do tours of the mine during Summerfest and then give the proceeds to the community so it can be spent on the kids. They also give to the 4-H. They have a good record for safety. There is a sign-in sheet by the entrance. She feels it's a good company, great neighbor and they are lucky to have them provide employment. Michelle Meyer, property owner in Pepin, questioned why Cheyanne's water is brown.

Public hearing closed. Holst asked Mr. Budinger about the two people that the tunnels encroach on property lines. Were those tunnels old or new? Mr. Budinger stated that Cheyanne's was done back in 2004, prior to the current conditional use permit which had some detailed offsets to property lines. Mr. Laughlin stated the tunnels are probably not on his property. Holst suggested that he had misled the committee into believing they were on the property line and apparently they are outside of setbacks. Sanden asked Mr. Krumenacher what is the recharge rate on the aquifer? Mr. Krumenacher stated that it is about 1/3 precipitation; if you get 36" of rain about 12" goes back into the aquifer. Sanden asked about the Town's recommendation regarding air monitoring of the shafts. Mr. Krumenacher explained the State permitting process doesn't address ventilation shafts or exhaust shaft, air in the mine being moved out. A concern during blasting is that while no one is in the mine is breathing the air for about two hours after the blast – what is the risk to a neighbor near the shaft? A sampling on the air from the shaft was done. They set up a weather station with wind speed around 6 -7 mph with air monitors for oxygen, carbon monoxide and hydrogen. They were up wind from the vent, in the vent and at 50 ft, 200 ft and 500 ft down wind during the blast, after the blast and 90 minutes after the blast. It was determined there were no detrimental impacts. Sanden asked about testing for heavy metals and radon. Mr. Krumenacher stated before a sample is collected it has to be determined; what is the potential for a contaminate? They have to understand why they're testing and what they are testing for. Mr. Budinger stated the MSHA comes in every two years and monitors. Sanden asked if there was any damage to the aquifers, the conditional use permit doesn't shield from a legal suit. Mr. Mcleod stated no the conditional use permit isn't a shield. Mr. Budinger stated they could do a pre-blast survey; go into homes and look at the areas of concern. As the mine grows, more people are affected.

Holst moved to defer action on the conditional use permit request to expand a Nonmetallic Mining operation in the Agriculture Residential District for Wisconsin Industrial Sand Co, agent on property owned by Edmund & Dawn Daleiden, Jeffrey Von Holtum and Lost Creek Farms until the January 19, 2011 LMC meeting/ Rohl seconded. All in favor. Passed. The next agenda item will also be deferred until January 19, 2011.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI. Brad Roy presented background information and noted that no complaints had been received regarding this mining operation.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and, if it is determined that additional conditions are not necessary to protect the public interest, health, safety or character of the area, renew this conditional use permit with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-ft setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.

4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting, and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted annually for all wells within 1000 feet of the proposed mining operation.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Dust control measures shall be implemented along haul roads.
8. Hours of operation are 7:00am to 6:00pm Monday through Friday and 7:00am to 4:30pm on Saturday.
9. Recycling of concrete, asphalt, and bricks into Class five materials is allowed.
10. Reclamation shall be according to submitted plans.
11. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
12. This CUP renewal shall expire in two years.

Sanden asked Mr. Roy if there have been any complaints. Roy stated no.

Holst moved to approve the conditional use permit renewal for Nonmetallic Mining for Rumpca Excavating due to the fact it is determined conditions are adequate to protect the public interest, health, safety and the character of the area, with conditions #1 - #12/Fetzer seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Andy Pichotta reports: There was recently a change in policy by the County that any travel/training requests need to be approved by the standing committee or committee chairperson. This will be an item that will always be on the agenda, though there will not always be something to take action on. We had a couple of classes for continuing education credits that Jim and Emily need to be sent to that Chairman Barkla had already signed off on.

Departmental Update and Future Agenda Items

- Public hearing for a Utility Facility (Substation) in Town of Hartland.
- Approval of a 2-Lot major CSM in Town of Ellsworth
- Brekken Heliport conditional use permit renewal
- Proposed Code Amendments relating to Agritourism

Motion to adjourn at 09:40pm by Holst/Rohl seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, December 15, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates: January 5 th & 19 th , February 2 nd & 19 th , March 2 nd & 16 th , all in 2011.	Chair
3	Approve minutes of the November 17, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit to expand a Nonmetallic Mining operation located in the Agriculture Residential District for Wisconsin Industrial Sand Co, agent on property owned by Edmund & Dawn Daleiden, Jeffrey Von Holtum and Lost Creek Farms, on property located in Sections 10, 11, 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
5	Discuss take action on review and potential modification of a Conditional Use Permit for Nonmetallic Mining for Wisconsin Industrial Sand - Maiden Rock Facility on properties in the Agriculture Residential District, owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa and William & JoAnn Steele, all in Sections 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining for Rickey Diesing, owner of a parcel located in the SW ¼ of the SE ¼, in Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items and departmental update.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(12/03/10)

*** Revised December 8, 2010 at 2:07pm.**

MINUTES - Pierce County Land Management Committee Meeting, November 17, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 1st & 15th, all in 2010.

Approve Minutes: **Fetzer moved to approve the November 3, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for Filling and Grading in the Shoreland/Wetland District for a snowmobile crossing for Dale & Suzanne Gilles, owners by Alan Clare, agent on property located in the NE ¼ of the NW ¼ of Section 15, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Barkla invited Mr. Clare forward: Mr. Clare explained that the Plum City Ridge Runners would like to request the conditional use permit to cross a dry run located along side the road that goes past the Herbison Farm. They would like to fill in part of the ditch and make a crossing from County Road CC to Plum City.

Staff Report – Jim Kleinhans: The Plum City Snowmobile Club is requesting a conditional use permit for filling and grading in the Shoreland/Floodplain District. The design was put together by Rod Webb from the Land Conservation Office. The project crosses a drainage that drains approximately 1600 acres so at times it sees a lot of surface water flow. The club originally had a bridge that crossed this channel and recent floods washed it out. They're looking for a better option to make that connection to Mr. Gilles' field. The Dept of Natural Resources was notified on this request and their response was if it's considered a navigable stream, a general or individual permit would be required for a fjord crossing. Because of the time of year, the design shows use of dormant seeding. They propose using bromegrass, creeping red fescue and rye. Kleinhans suggested that geotextile fabric be used to stabilize the side slopes that are graded in order to get the slope into the channel. The crossing is of a 16 ft wide channel. Some of the slopes are near vertical so it needs a little cutting and filling in order to accommodate machines going in and out of the ditch. The Shoreland section of the zoning code requires a conditional use permit for filling and grading on slopes of a certain degree. So any filling and grading within 300 ft of navigable water would require a permit. The Town of Union approved this proposal on their October 20, 2010 meeting without any concerns and without any reference to a land use plan. The Pierce County Land Use Plan promotes the use of non-automotive modes of transportation while protecting the natural resources before, during and after the development of land use.

Staff Recommendation: Staff recommends the Land Management Committee consider if this conditional use permit request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the LMC consider approval of this request with the following conditions:

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.
2. The Land Management Dept shall be notified at the project initiation.
3. Dormant seeding and mulch secured with erosion control fabric shall be installed immediately upon final grades that are not covered or protected with rock.
4. The dormant seeding shall be fenced this season to keep machines off until the vegetation is established.
5. The conditional use permit shall extend for 12 months to allow for final site restoration.

Chairperson Barkla opened the hearing to the public. No public input. Public hearing closed.

Sanden asked Jim if this will change the capacity of this tributary to carry water. Kleinhans stated no, it was designed as a fjord so any excavation they take out for the rock they will just refill back to the original grade. With the cuts and fills to make a more gentle slope, there's no net loss in the capacity of the channel. Holst stated Rod thought it would actually increase the carrying capacity of the channel. Rohl asked if it doesn't have to have a culvert. Kleinhans stated the whole idea was to keep the channel open. **Holst moved to approve the conditional use permit for Filling and Grading in the Shoreland/Wetland District for a snowmobile crossing for Dale & Suzanne Gilles, owners by Alan Clare, agent, due to the fact this request is not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for a Farm & Home Based Business in the General Rural Flexible 8 District by Rudy & Cathy Jungwirth for Valley Vineyard, owners on lots 6, 7 & 8, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Mr. Jungwirth stated he has a winery and a tasting room in his residence. He received a conditional use permit a year ago and business has been more than they expected this year.

Staff Report – Brad Roy: The applicants received a conditional use permit on November 18, 2009. They grow grapes and produce wine and also offer wine tastings, tours and sales of cheese, maple syrup, cookbooks and art work. The operations take place in an accessory structure. There is one part-time employee. Hours of operation are 10am to 6pm, Wednesday through Sunday. A sanitary permit was issued on September 15, 2010 for the building sewer connection from the business to the onsite sewer system. Staff has received complaints about this operation, which include increased traffic, not enough parking, and concerns about signage. At the time the CUP was issued an unpermitted advertisement sign was located on County Road E and 521st Street. That sign has been removed and the applicant now has permitted Tourist Oriented Directional Signs from the DOT and the Pierce County Highway Department located along Hwy 10, Hwy 35 and County Road E. Staff has been to the site and there is adequate space for 12 vehicles to park. The Town of Oak Grove was contacted for comments or concerns regarding the renewal of this conditional use permit. No concerns were conveyed. The existing conditions #1 - #9 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any additions or modifications to the established conditions are necessary to mitigate any impacts on the public health, safety, the public interest and character of the area and renew this conditional use permit with the following conditions:

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The CUP shall expire in 2 years or if compliance issues arise. Renewal may be completed administratively if no compliance issues arise.
7. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.

The two conditions that were omitted were the old #4 regarding the advertisement sign and #6 regarding the sanitary permit. Staff is recommending a change of condition #6 to state "The CUP shall expire in 2 years or if compliance issues arise. Renewal may be completed administratively if no compliance issues arise." Chairperson Barkla asked how many complaints there have been. Roy stated that he has received about 3 to 5 complaints. The last one was approximately three months ago. Sanden

asked about the complaint regarding signage. Roy stated that there may have been confusion regarding this issue. There was a condition stating that an unpermitted sign located out on County Road E needed to be removed. The applicant did go out and received permitted signs from the DOT and the Highway Dept in the same location. Sanden asked Brad to explain the complaint about the parking. Roy stated there wasn't a complaint about parking but some people felt there wasn't adequate parking on site. Jerry Nelson, a neighbor, stated when Mr. Jungwirth first started this thing it was going to be selling wine over the internet. There are now tour buses and extra traffic. He wasn't aware that he had gone this far with the permits to do the other things. Ben Huppert, a neighbor, stated this development was originally residential and was changed to agricultural for a woman that wanted to have horses. This opened up the floodgates for the vineyard dream. When they went to the Town Board with concerns, they were told it was going to be internet sales and open on the weekends. Now it's a five day event. His big concern is traffic; there are buses coming in and out. They are parking up the side of his driveway and walking behind his house and he feels he has lost his privacy. Mike LaCasse stated he spoke with Mr. Roy this summer and the unpermitted sign was up all summer long until the County put up the other sign. Mr. Jungwirth said he was going to have one tour bus by appointment or maybe two buses a week. He added a day and expanded his hours everyday. Traffic is his biggest concern. There are 30 to 40 cars on the weekend and it's a dead end street. The cars are parked on the grass all the time. Mr. Jungwirth stated he has had three buses there all summer. Holst asked where Mr. LaCasse lives in relation to Mr. Jungwirth's property. Mr. LaCasse stated he lives on the other side of Ben Huppert. Holst stated we have been asking applicants to build fences lately. Some sort of screening between Huppert's property and Jungwirth's property would be advantages to all parties. Parking also seems to be an issue; perhaps 12 parking spaces are not enough. Maybe you need to carve out enough spaces to get the traffic off the street. The development used to be farmland and now it's residential. But Mr. Jungwirth's use of his property is compatible with that zoning district. Anything this committee can do to help alleviate the problems, we should attempt to do. Chairperson Barkla asked Mr. Huppert, Mr. Nelson and Mr. LaCasse to keep track of the traffic and the days it's the busiest and contact Brad, Andy and himself so they can get a firsthand view of the complaints. Sanden asked Brad if this represents an intensification of use - the additional hours. Even though the hours of operation were never codified in the original conditions. Roy stated he doesn't think it would have since nothing was ever established to set a limit. Pichotta stated intensification does not typically have anything to do with an increase in hours but with an expansion or intensification of activities, for example, if you were selling gasoline to begin with and now you are selling food too. Sanden stated that it was claimed that originally it was going to be internet sales. Roy stated there were two permits issued; first an over-the-counter home business permit was issued. However, at the time it became a conditional use permit the idea of tours and sales was presented to the committee. Sanden asked Rudy how often have there been cars parked on the road? Mr. Jungwirth stated that there never has been, they've never gone more than halfway up his driveway and that is still 300 – 400 ft. There is parking along the grass if it gets to be a busy day. My normal traffic is 4 – 5 cars. Last week we probably had 25 – 30 cars. Sanden asked if the 25 – 30 cars is a maximum since you opened? Mr. Jungwirth stated he has looked at putting in a 25 car parking spot along with the parking for two buses, on the lower part of his property so you wouldn't even be able to see it from the road. **Holst moved to approve renewal of the conditional use permit for a Farm & Home Based Business for Rudy & Cathy Jungwirth for Valley Vineyard due to the fact the established conditions are adequate to protect the public interest, public health and safety and the character of the area with conditions #1 - #7 and adding #8 Plans to screen the commercial activities shall be presented to the Land Management Committee and #9 All parking shall be on site and adequate parking shall be delineated./Sanden seconded. All in favor. Passed.** Holst stated that this should be brought back before the committee for review in six months.

Discuss take action on a status report for a Nonmetallic Mining conditional use permit for CMC-Spring Valley LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T27N,

R15W, Town of Spring Lake, Pierce County, WI. Chairperson Barkla invited Jim Small

forward: Mr. Small stated he met with the Town because of some complaints he had received. They were operating in that wind after the dry weather. They are going to drop the conveyors down. The material was dropping a good 20 ft from the air which was creating dust. They adjusted the one already and will lower the other before spring. He had a complaint about the stockpile which could be seen over the berm. He noted that he had planted a dozen more trees on top. Most of the complaints he has received are about the traffic. The majority of the material is for their plants in Roberts and Eau Claire however they have byproducts they would like to be able to sell instead of having them pile up; sand which is used for asphalt, the lime for the farmers and some clay. There are trucks that are not County Material's trucks and they are the ones that aren't tarped. Those trucks also are the ones jake braking. Also, the trucks hauling ag lime sometimes don't have tarps. The dust problem they are fixing. The visual aspect; as soon as they could they moved the primary crusher down. As soon as there is enough room for the dry end, the ag lime end of things, the screener will be down in the hole also. They will fix up, re-grade and seed the berms on the north end. The stormwater is working well even with the big rains. There weren't any big washouts in the quarry. Everything runs into the quarry. Jim stated he is always willing to respond if he hears from people. He sampled the wells last week but doesn't have the results yet. We'll get an updated map to you. Faye Jones, Town of Spring Lake, thanked the committee and stated Jim Small has been a communicative and responsive person. She requested that County Materials support the Township with gravel, when roads are washed out and also help support the walking and bike paths. She emphasized that things have changed in the Township with the noise and dust. You can see the mine. Limited hours are appreciated so people can make plans. Mike Jacobson, Town of Spring Lake Supervisor, 3 ½ yrs ago - the Town recommended denial to this board for the same reasons they are here tonight. It's an eyesore from the air and ground. The piles above the berms are unacceptable. The elevator is at a fixed height. The noise is getting better because they are going deeper. He hears sentiment from the neighbors about the hours. There was one incident when they exceeded the hours but there was a power outage and they shut down as soon as they could. The CMC trucks are coming out without tarps also. The frequency, we were told would be every 15 minutes but they are running hard. Evelyn Jensen, the closest neighbor, stated that the dust issue has been going on for a long time. When the winds get to be 20, 30 or 40mph, she is in the house all locked up. She gets about an eighth inch of silt on the window sills. A year ago, the blasting had gotten so horrendous; it knocked down 2x4's and 2x6's off the wall in the shed. She worries about the integrity of her basement. The start and stop times are worse. The piles of sand right next to the berm and the height causes a lot of the dust. Greg Wells along with his wife Sherry, live just north of the pit, the number of trucks running a day has exceeded the number they were told. They just counted 80 trucks in one day, they are running back to back. When they come over the hill by his house and hit the jake brakes the boxes hit the frames and it sounds like they are dragging chains. For the blasting measurement, they use an instrument at the end of the driveway, while he is at his computer his chair pitches and the electrical wire outside is doing loops. County Materials is probably running 12 trucks and 4 semi's, the other 65 trucks are not abiding by the instructions about jake braking, the speed and tarps. Chairperson Barkla stated that every six months it's a pleasure to see you Jim but maybe Mr. Sonnentag should come to this committee and justify what he has done or hasn't done. Maybe you and Mr. Sonnentag should come back in three months.

Staff Report - Brad Roy: You are familiar with the operation. Land Management staff doesn't receive a lot of complaints since they are filtered through the Town. You're aware of the issues presented by the Town. Holst stated that perhaps if you had a committee of some of the neighbors that Mr. Sonnentag met with on a weekly basis and the concerns were forwarded to the Land Management Committee on a weekly basis, we could address the issues considerably more rapidly. With Evelyn's concern about her house, perhaps you could do a structural survey on the house, Mr. Wells' house also. If the errant blasts are doing structural damage, they can develop a base line today on the homes. If it is damaged during this blasting then CMC will have to fix what they've done wrong. They will bring in an independent structural engineer to protect both CMC and the neighbors. Holst stated maybe you

should plant some more trees and get your own trucks tarped. It's one of the conditions in the permit that you agreed to so let's abide by it. Mr. Small stated he discussed the jake brakes with the Town, maybe we can get it posted and the drivers can get a ticket. Bill Klanderman stated that when Jim Small is around things get done so maybe the committee should consider having County Concrete have a person on site full-time that would report to this committee. Sanden stated Jeff Holst addressed the blasting and the noise but what about the dust? How long before those ag lime piles are below the berm? Mr. Small stated that the one conveyor has been lowered and the other will be before they are operating in the spring. They took a lot of rock out this year which is double what they did in 2009. In two or three years they will be able to move that down. Sanden asked if there is any industry standard of when you shut down an operation because of wind. Mr. Small stated lowering those conveyors will make a big difference. We prefer to have it at our judgment. It has to do with moisture also. It would be a difficult condition to pin down. Chairperson Barkla suggested that Mr. Small get someone down there for the day to day operations that can make those judgments. Pichotta stated that we are going to step up our monitoring of activities to ensure compliance with conditions and suggested the County Materials make sure you are tarping your loads. **Chairperson Barkla directs staff to have CMC come back before the committee in three months and to possibly look at additional conditions.**

Discuss take action on review and potential modification of a conditional use permit for Nonmetallic Mining for Wisconsin Industrial Sand – Maiden Rock Facility on properties in the Agriculture Residential District, owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa and William & JoAnn Steele, all in Sections 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Staff Report – Brad Roy: The committee renewed the conditional use permit for nonmetallic mining on September 15, 2010. In 2008 during the renewal the condition regarding blasting was modified allowing Industrial Sand to blast without restriction, however, the condition stated if complaints were received, the previous restrictions would go back in place. At the last renewal on September 15th staff had not received any complaints. However, since then we have received complaints so that issue is back to the committee to see if blasting restrictions need to be imposed. The condition we're talking about states "Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to four times a week, including Saturday.) The other conditions are listed #2 - #11 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and make any additions or modifications to the established conditions deemed necessary. In terms of the other conditions they are in compliance and have submitted all the reports as required. Fetzer asked if all the complaints have been on blasting. Roy stated there have been numerous complaints because of proposed expansion but as to the established conditions what we're here tonight to talk primarily about the blasting. At the expansion meeting, we will hear more. Rich Budinger, Regional Manager for WI Industrial Sand, they have had discussion on blasting and other nonmetallic mining concerns. Within the last two to three weeks they have been working with the Village and the Township on a different matter concerning their conditional use permit. They've been attending a quite a few public hearings. Several issues have been brought up at the meetings. One of the things they've heard is evident to them that they have been guilty of being unapproachable. They are listening and have proposed a community advisory committee to improve their communication and public relationships. Chairperson Barkla stated we'll talk about the blasting issues and get to the other issues in another month. Mr. Budinger noted that with him are Al Nelson, Plant Manager of the Maiden Rock Facility, Michele Maxson, Environmental Health and Safety Coordinator, Sarah Leonard, Office Administrator at the Maiden Rock Facility, Mark Waters, Plant Manager at Bay City and Hager City, Blasting Specialist from Olson Explosives, Kurt Oakes and Eric McCloud, from Michael Best Associates who is their legal counsel. When talking to Mr. Roy, he asked him the names

and nature of the complaints but Brad stated that everything was logged anonymously. One of the things we've requested is to get feedback from our neighbors. If they call the office Sarah is there, otherwise Al's phone is open and Mr. Budinger has a phone at the facility as well. They asked for feedback and got general feedback with blasting complaints. They gathered data from the past three months to show the committee typical vibrations, included a calendar of what days they have shot over the last three months, how many headings, property map showing locations, our neighbors, addresses. The last page is the active mine workings and the proximity to our neighbors, essentially how we manage our program. We're available to answer any questions. Roy stated the complaints were the frequency and the vibrations caused by the blasting, nothing about a specific time of day. Chairperson Barkla asked Mr. Budinger if they have had any complaints on blasting. Mr. Budinger stated not on blasting and not on other issues either. They are working on putting together this citizen advisory committee with the help of Judy Daleiden, Village President of Maiden Rock and Jerry Duden, Town Chairperson. Kurt Oakes, General Manager with Olson Explosives, explained blasting practices, acceptable limits and criteria, z-curve, peak particle velocity and procedures. Sanden stated the average isn't really as important as the maximums or minimums because it only takes one to cause damage. Is there any effect on distance from the blast for velocity or frequency? Mr. Oakes stated distance from the blast will reduce the peak particle velocity and reduce the frequency. Sanden asked Brad if the complaints are structural damage, the aesthetics or the noise. Roy stated it's hard to characterize all the complaints; typically it was the number of blasts, the noise and the vibrations it caused. Holst stated looking at the blasting calendar; you are only blasting four days a week so you are well within the parameters of the previous condition. Mr. Budinger stated the last time we were before the committee was in September where we did request unlimited blasting. It takes some development, several months to change the mine planning, developing more headings to spread that out. Our intention is still to spread the blasting out over several days. Fred Harding, Village of Maiden Rock, inquired about the effects on residential structures by frequencies that are in the frequency range of the blasts that are occurring. We're talking about solid structures and what's happening here is the frequencies being hit are rattling things in the house. Can we address that? Mr. Oakes stated that for every action there is an equal and opposite reaction. Whenever you move something, it's going to push back. Whenever we shoot, there's going to be a vibration. But it's the frequency and the particle velocity in the blasts that dictates the potential for damage to occur. If there are dishes rattling, you will feel it and hear it because it's sitting above the earth. It has a chance to move. It's referred to in the industry as an oil-can effect. If there's structural damage, it's exceeding the limits as depicted on the z-curve graph. A woman from the Village of Maiden Rock explained that when they moved to the Village approximately 6 years ago on County Road S, they were woken up at 5:00am with a blast that shook every window in the house and the echoing afterward was horrifying. Mr. Oakes stated when he analyzed the data, generally speaking they are shooting between 4:00pm and 6:00pm. They try to shoot around 5:00pm because everybody is up. Rebecca Enberg asked what would be the cause of a sinkhole. There was a deep sinkhole across from their house. Mr. Budinger explained that several years ago there was some exploratory drilling done on that property. As a result there was a void left when they pulled the casing. To his knowledge there have been three holes that have had to be filled in. This drilling was done approximately 11 years ago before WI Industrial Sand purchased the property. He thinks the drilling was done for due diligence on the acquisition. When they pulled the casing out, typically what they do is backfill with bentonite and then seal the hole. When they pull the casing the dirt falls in around the hole, there was a void in there and over time the rain may be caused the area to fall in. A gentleman asked what are headings? Mr. Budinger explained they are the active faces in the underground workings, the ends of the tunnels. They go in and drill horizontally 12 – 14 ft into that heading and that's where the next shot (blast) is. Every blast is essentially 12 – 14 ft of sand being shot out of the heading which is at the end of the tunnel. The same gentleman asked, what does 11 headings mean? Mr. Budinger stated 11 headings means that on that event - 11 headings were shot on that sequence, there is a timing sequence more like a domino affect. Not all the headings are done at once but in a two second total duration. They time it in milliseconds. Chairperson Barkla suggested that in

advance of you being on the LMC agenda, it would serve you well to have a community meeting where this kind of information can be made available in the Village of Maiden Rock and the Town of Maiden Rock. It may move your request on more quickly. The policy issues, where the greater use could be the focus of this committee rather than these individual questions. Holst questioned Mr. Oakes, you stated earlier you aren't a proponent of early morning shots. What would be the ideal time to conduct a shot? Mr. Oakes stated for an underground unit, you want to do it during normal business hours. Holst stated we could just move this 5:00am back to 8:00am which the earlier conditional use permit stated. Mr. Budinger stated one of the goals of the community advisory committee is to develop a timeframe. Holst asked anyone that lives next to the railroad tracks to explain how the blast compares to a loaded train going by. A gentleman stated that he doesn't hear blasting in his location. Karen Laughlin stated she hears blasting and has lived a block from the railroad tracks. The blasting has more vibration and its much louder. The windows are rattling and she is concerned about her foundation. She would like to retrieve a copy of the video that was done of her property for two hours in 2009. Holst asked Mr. Nelson if he was going to take care of that. He stated yes along with Mr. Budinger. Another resident compared the difference between the railroad and the sand mine. At approximately the same time she was awoken by the blast, she was keeping track of the blasting. She lives at the highest level in Maiden Rock and she cannot tell by the maps where the tunnels are in relation to her property. When she would feel the blast she would go see if the trains were running. After she talked to Tim Stauffer, the mine changed their blasting time to 3:00am – 5:00am. At that time she believed they were blasting at the top of County Road S. She stated the vibration must be coming through the tunnel. The complaints that were raised in Maiden Rock were raised a long time ago. She knows that it creates jobs for good people. She is concerned about these complaints being after the fact and we're going to get more of them because the mine wants to expand. It does not look like anything proactive is happening. Mike Michaud, Maiden Rock Township stated he lives a mile east of where they are mining. He is speaking for a friend who is affected by the mine. He congratulated the mine crew for operating at a safe range and if they aren't we should be shutting them down. He read information from Comm 7.42 and Comm 7.44 regarding blasting. He also compared the blasting to shadow flicker from a wind tower. He stated he liked the idea he heard tonight about developing more tunnels so that will diversify their blasting. Condition #3 with the 100 ft buffer, he questioned what analysis led to the 100 ft buffer. He believes they are observing even more than 100 ft and people are still feeling it. He would ask that you observe a larger buffer. Corrine Young, Maiden Rock Township, questioned how the blasting affects the aquifers. If the well does go dry, can it ever be fixed? Mr. Oakes address the affect on aquifers, noting that there have been documented cases where there has been damage to wells. However, the US Bureau of Mines was involved with an in depth study and documenting occurrences throughout the Eastern US, where they were causing damage to wells and in only one occurrence in one shot did they manage to actually shut off the well. When they monitored the vibration on that one they were in excess of 12 inches per second. Based upon the numbers, the likelihood is very slim. To address the aquifers, he isn't a hydrologist but in his career they have never cut off the water to a residential well. Granted there are more sand-point wells in the upper Midwest than anywhere he has lived. Chairperson Barkla asked when this group is coming in before the LMC again. Pichotta stated it is his understanding that they had submitted a conditional use permit application for their proposed expansion today. That would put them on the Dec. 15th LMC meeting for a public hearing. Chairperson Barkla suggested those issues that have been raised tonight be considered as the staff drafts the staff report and suggests additional conditions. We have received a great deal of interesting information. He stated that the folks from Fairmont owe the citizens answers to their questions. Mr. Budinger stated the community advisory committee is a great way to begin communicating. But if someone has an issue with a well, they will address it. They have structural engineers that can do pre-blast or post-blast surveys. We're not turning away from any issue, we want to address them appropriately. **No action taken.**

Departmental Update and Future Agenda Items

Working today for a better tomorrow

Renewal of a CUP for Nonmetallic Mining for Rumpca Excavating in Clifton
Public hearing for expansion of Wisconsin Industrial Sand in Village of Maiden Rock

Motion to adjourn at 9:14pm by Holst/Rohl seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING REVISED AGENDA
Wednesday, November 17, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: December 1 st & 15 th if necessary, all in 2010.	Chair
3	Approve minutes of the November 3, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for Filling & Grading in the Shoreland/Wetland District for a snowmobile crossing for Dale & Suzanne Gilles, owners by Alan Clare, agent, on property located in the NE ¼ of the NW ¼ of Section 15, T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
5	Discuss take action on a request for renewal of a conditional use permit for a Farm & Home Based Business in the General Rural Flexible 8 District by Rudy & Cathy Jungwirth for Valley Vineyard, owners on lots 6, 7 & 8, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
6	Discuss take action on a status report for a Nonmetallic Mining conditional use permit for CMC-Spring Valley LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T27N, R15W, Town of Spring Lake, Pierce County, WI.	Roy
7	Discuss take action on review and potential modification of a Conditional Use Permit for Nonmetallic Mining for Wisconsin Industrial Sand - Maiden Rock Facility on properties in the Agriculture Residential District, owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa and William & JoAnn Steele, all in Sections 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
8	Future agenda items and departmental update.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(11/5/10)

*** Revised 11-15-10 at 9:46am.**

MINUTES - Pierce County Land Management Committee Meeting, November 3, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Brad Roy and Shari Hartung

Absent: Andy Pichotta

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 17th, December 1st & 15th, all in 2010.

Approve Minutes: **Sanden moved to approve the October 20, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for the Gilles Quarry by American Materials, agent on property owned by Marvin & Mina Gilles, located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.

Staff Report – Brad Roy: This nonmetallic mining operation was originally permitted in 1998. All permits have been kept current since then. The mining site has approximately 5 unreclaimed acres. Access to the mine is off of US Hwy 10. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday. There are renewal fees with this mine. No complaints have been received about this operation. All appropriate information has been submitted. The existing conditions #1 - #10 are listed in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100 foot setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells within 1000 feet of the mining operation before blasting commences and annually thereafter. Applicant shall not be required to test wells on properties where owners have not granted access.
6. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday.
7. Reclamation shall be according to submitted plans.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. Applicant shall pay renewal fees.
10. This CUP shall be renewed every two years.

Holst stated this has been before us many times; they had a little dirt to begin with but they have cleaned it up good. **Holst moved to approve the renewal of the conditional use permit for Nonmetallic Mining for the Gilles Quarry by American Materials due to the fact the established conditions are adequate to protect the public interest, public health and safety and the character of the area, with conditions #1 - #10/Fetzer seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent for Greg Bisel, owner on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI. Staff Report –

Brad Roy: Again this is a renewal. The last renewal was in 2008. In 2008, there was a blast which took out the south wall along Hwy 10. In February 2010, the LMC allowed the Highway Department to mine within the Hwy 10 setback to remove a portion of the highwall that had become unstable. The wall has been stabilized and the situation is better than it was. The mining site is approximately 17 acres in size. Access to the mine is off of Hwy 10. Approximately 5 acres have been mined. The active mining area is approximately 6.5 acres. The existing highwalls are approximately 100 feet. The original plan states that the highwalls will be benched to limit the heights to 35 to 50 feet. The plan states the mine will be restored to slopes of 3:1. A dry run is on the property. The mining area has not disturbed the dry run at this point, but future expansion may become an issue. There are no wells on the property; therefore no washing takes place onsite. The operation typically removes 30,000 to 40,000 tons of material each year. Blasting takes place dependant upon when material is needed. Hours of operation are 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm. The existing conditions #1 - #16 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Hours of operation shall be 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm.
2. A 100 foot setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur.
3. A groundwater response plan detailing resources used to protect the quality of groundwater beneath and adjacent to the extraction operation and proposed response to encountering groundwater shall be submitted to the Zoning Office. The Zoning Office shall be notified if groundwater is encountered and further operations shall cease until the response plan is implemented.
4. A reclamation plan that is consistent with the requirements of Chapter 241 shall be approved by the Zoning Office. A plan review fee shall be submitted with the plan.
5. Reclamation of the mine shall adhere to the original plan which states that slopes shall be restored to 3:1. Due to the location of the northern highwall and the potential for land development on the northern adjacent parcel highwalls or steep slopes would create unsafe conditions.
6. Fencing shall be installed around the northern edge of the mine.
7. The owner shall notify the Zoning Office when the operator of the mine is no longer a public entity. Modifications to the permit may be required at that time.
8. Applicant shall comply with NR 135 Annual Reclamation Permits.
9. All blasting shall be done by a certified state licensed blaster.
10. Residential property owners located within 1000 feet of mining operations shall be given a two day notice of any planned blasting.
11. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation annually.
12. An erosion control plan for the side of the south wall facing Hwy 10 shall be implemented in a timely manner. The plan shall be approved by the Zoning Office.
13. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
14. Applicant shall receive all necessary permits from other agencies.
15. This CUP is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
16. A renewal fee of \$200.00 plus \$20 per acre shall be paid.
17. The Reclamation Plan shall be modified to reflect the changes of the mine.

Sanden asked if there have been any complaints. Roy stated there have been no complaints since the last renewal. Chairperson Barkla asked if the committee could be promised no more errant blasts. Mr. Johnson stated they use a certified blasting professional. Holst asked if they are going to have enough room for the 3:1 slope. Mr. Johnson stated if they are up 100 ft they have to come out 300 ft so yes, they will. He stated he has a question on the fencing, what type of fencing are you looking for; chain link? Roy stated what you feel would be appropriate. The northern edge had expanded across property lines many years ago, so there is a condition #6 that fencing be installed as a safety measure. The last we heard, the plan is to try to acquire that land to the north. Mr. Johnson stated that is a lease. Holst asked why we don't enforce the fencing on the County like we do on private citizens on other issues. Mr. Johnson stated the fence won't be a problem. Holst stated the fence wasn't a problem two years ago and it isn't up. Chairperson Barkla stated Mr. Holst is asking when we can expect to see the fence up. Mr. Johnson stated by the end of the calendar year. **Holst moved to approve renewal of the conditional use permit for Nonmetallic Mining for Pierce County Highway Department, agent on property owned by Greg Bisel with conditions #1 - #17 due to the fact the established conditions are adequate to protect the public interest, public health and safety and the character of the area/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

CUP for a snowmobile bridge in the Town of Union

Renewal of a vineyard in Town of Oak Grove

Status report of County Materials in Town of Spring Lake

Motion to adjourn at 7:10pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

(10/22/10)

***Revised October 26, 2010 at 4:49pm.**

MINUTES - Pierce County Land Management Committee Meeting, October 20, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Andy Pichotta

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 3rd & 17th, December 1st & 15th, all in 2010.

Approve Minutes: **Sanden moved to approve the September 15, 2010 LMC minutes/Rohl seconded. All in favor with Fetzer abstaining due to his absence from the last meeting. Passed.**

Holst moved to hear agenda item #9 first and then proceed with the original agenda due to the fact this applicant may call in/Rohl seconded. All in favor. Passed.

Discuss take action on renewal of a conditional use permit for a Retreat Center in the Agriculture Residential District for Deborah Hansen, owner on property located in the SE ¼ of the NW ¼ of Section 19, T24N, R15W, Town of Maiden Rock, Pierce County, WI.

Staff Report – Brad Roy: The Retreat Center has been operating for one year and Ms Hansen has hosted various groups and weddings. The Retreat Center is closed for the season and will begin again next year. She is currently out-of-state and cannot attend this meeting. However, she is available if we need to call her. One of the conditions is that a Stop sign shall be installed. The applicant had problems obtaining a Stop sign for the driveway this year. The sign is now ready and will be installed before opening next year. Staff has not received any complaints. The Town of Maiden Rock was contacted regarding this renewal request; staff has not received any issues or concerns about the renewal from the Town. The existing conditions #1 - #8 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall secure all necessary permits and licenses from other applicable state and local agencies (Public Health, etc).
2. Activities conducted on site shall be limited to those uses identified in the applicant's narrative.
3. A traffic control sign (stop sign) shall be placed at the driveway entrance to 244th Street. Sign placement shall be coordinated with the Town of Maiden Rock.
4. Any advertising signage shall comply with County Zoning Code standards.
5. The CUP shall expire in 2 years or if compliance issues arise. Permit may be renewed administratively if no compliance issues arise.
6. The applicant understands that expansion or intensification of this use will require modification to this CUP.
7. Hours of operation are limited from 9:00am to 10:00pm.

Sanden asked Brad to remind him why the renewal was for one year rather than two? Roy stated he wasn't present at the meeting but there were some neighbors concerned about noise and lighting issues.

Holst moved to approve the renewal of the conditional use permit for a Retreat Center for Deborah Hansen, owner, due to the fact the established conditions are adequate to protect the public interest, public health and safety and the character of the area, with conditions #1 - #7/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the General Rural Flexible District for Myron Hoitomt, owner on property located in the NE ¼ of the SE ¼ of Section 26, T25N, R18W, Town of Trenton, Pierce

County, WI. Chairperson Barkla invited Mr. Hoitomt forward: Mr. Hoitomt explained that he started putting up a lean-to and did not realize he needed a permit because the shed has been there. He was stopped before he got too far. It was brought to his attention that he did not have a permit and he was building within the setbacks. He was 120 ft away from the center of the highway but had no idea there was the other requirement. He planned to use it for a storage area not a repair shop or any business. It would add value to the property and to him if he were allowed to continue. Sanden stated one of the things the committee has to consider when encroaching on the right-of-way is the safety to you if any cars careen off the road. The fact that you have all these trees making a nice block, are you intending to remove any trees? Mr. Hoitomt stated no and there is also an incline, like a berm before the building.

Staff Report – Jim Kleinhans: Mr. Hoitomt did obtain a permit in 1975 when he developed his house. He is working on a 24' by 42' lean-to on the west side of his house that is approximately 12 ft from the road right-of-way. The road right-of-way is fairly wide in this area of State Hwy 63 because there is a passing lane traveling north. That makes it tough to meet the 77 ft setback from the road right-of-way. So he is applying for a conditional use permit to allow for the addition. Under the zoning code, additions or extensions of nonconforming structures can be approved by this committee with a conditional use permit. The Town of Trenton Supervisors supported this request.

Staff Recommendation: Staff recommends the Land Management Committee consider whether this request is contrary to the public interest or detrimental to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The applicant shall obtain an after-the-fact building permit from the Town of Trenton to comply with uniform dwelling code requirements.

Chairperson Barkla opened the hearing to the public. No public input. Public hearing closed.

Rohl moved to approve the conditional use permit for Myron Hoitomt for expansion of a nonconforming structure due to the fact it is determined to be not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with condition #1/Sanden seconded. All in favor. Passed.

Discuss status of a conditional use permit issued for a Utility Facility >1000 square feet in the Agriculture Residential District by LS Marine, Inc, agent for Joseph and Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla noted that Mr. Pichotta had intended to be here for this item but a family emergency occurred which prevented his attendance.

Staff Report – Jim Kleinhans: Andy generated this report based on an approval from this committee back in May for a Utility Facility >1000 square feet in the Agriculture Residential District in the Town of Diamond Bluff. The Corp of Engineers awarded LS Marine a contract for unloading Corp Island in the Mississippi River. This operation commenced on about September 14th. Trucks were hauling sand through the Village of Diamond Bluff and on about September 17th staff was contacted and notified there were some compliance issues. There were some letters sent to our office, they are attached to the staff report. There was a response from Andy sent back to the complainants' attorney. The specific concerns raised were:

- Failure to notify Pierce County of the start of work;
- Failure to post a copy of CUP at the site;
- Failure to tarp loads as required by Conditions #8;
- Use of more than eight (8) trucks at any one time as limited by Condition #5;
- Failure to engage additional axles on trucks when loaded;
- Failure to come to a complete stop at stop signs;
- Excessive speed;
- Excessive noise;

- Excessive dust.

For the record, after staff was notified of the issues, out of the 16 ½ days they have been hauling, we have been on-site 10 of those days. Compliance issues were addressed on the 17th and on site conditions have gotten better.

Staff Recommendation: Staff recommends the Land Management Committee consider concerns raised by Patrick Hynes on behalf of the Citizens for Diamond Bluff, as well as any concerns raised at the meeting, to determine whether any action (change in conditions or revocation) is warranted. If determined to be appropriate staff will place this issue on an upcoming LMC agenda for such action. Chairperson Barkla stated that a document was passed out to the committee about the days staff was present on site and noted that there were extras for people interested. He asked if Jim was aware of any other activities taking place down there to make sure the conditions are being met. Kleinhans stated there was a misunderstanding at the onset of the project. The site supervisor was handed a copy of the conditional use permit and understood why there were complaints. Taylor Luke has been in correspondence with our office and involved in discussions on how to make things better. There was a period when the river was too high and they couldn't operate so there was a lull in activity. Based on our observations, the operation has been compliant with what we were looking for with the conditional use permit. Chairperson Barkla stated after receiving Mr. Hynes letter on the 23rd, as Chair of the Land Management Committee, he made a special point to talk to Law Enforcement Department and was assured by the Sheriff that there would be more frequent drive-bys to make sure traffic laws are being followed. He also did a ride along and saw that the officer made his presence very visible. The committee does take these concerns very seriously. Bill Nafe, a Diamond Bluff resident, stated some concerns they had at that time now appear to have been taken care of. Ken Wood was at a meeting with Taylor Luke present, he observed trucks that weren't tarped or putting their axles down and Taylor took down numbers. We haven't been monitoring lately. We appreciate what you are doing. Diane Johnston, lives right across from the haul site. She has e-mailed Taylor Luke because there were things sticking out of the rubber mat. She feels it's a safety hazard. She would like to see it taken off the road when they are not hauling so no one gets hurt. She is also concerned about the excessive cost to tax payers with extra trips; Law Enforcement, Land Management, County Board. Chairperson Barkla stated that it is not extra trips; they are just changing their route on their regular patrol duty. Kleinhans stated the reason staff has been on-site is because there were complaints and they are just looking into them. The issue with the mat in the road, it is probably spiked into the pavement. Ms Johnston stated no, it's just lying on the road. Taylor Luke stated at that time they had just went with the factory clips for it. Ms Johnston did make him aware of it on a Saturday evening at 5:00pm. He did respond back to her that he wouldn't be able to get down there immediately. He tried to contact the supervisor because he lives in that area. Taylor did respond at 8:00am Sunday morning to take care of it. Since that time, they have gone away from those clips. They were prone to breaking. It is now spiked to the road to keep it from moving. If it's an issue they can look at sliding it out. Pulling it out of the road, one issue is the road is pretty broken up under it. They will be fixing that when they're done. When cars drive over it, the potential for the issue of the smaller pieces that are broken are going to be popping up. We can fill it back in temporarily. Ms Johnston stated people are trying to avoid the mat so they are driving on their front lawn. Chris Johnston, presented a photo on his laptop and stated he has two questions; he noticed this barge floating loose out in the river. He watched for awhile and evidently what happens is LS Marine has two barges going, Taylor Luke corrected him and stated that they utilize three, as they empty the one on the shore they push it out and let it float on the river. The tug delivers the full barge and goes out to get the loose one. Mr. Johnston asked what if the tug blows a rod and can't move? It's sometimes a very strong current and there was a pleasure craft in close proximity. Is this a legitimate concern? Taylor Luke addressed this by stating it is a common practice and while they are unloading the barge it's not tied up either. As far as safety, they are on the L & M Local Notice of Mariners. All mariners can check that website. It's updated weekly. It gives their position and what they are doing. They are on there and it states we are working in this area. When it comes to right-of-way on the river, the hierarchy is first the towboats, then any working vessels and

then the pleasure crafts. They do monitor channel 16 and channel 14. They have a third channel that just scans all the boats. This is common practice on any job and on other jobs that they have contracted with the Army Corp of Engineers. On the mechanical dredging contract, they will operate three barges. The only time a barge is secure is when it's tied to the tugboat. Yes, they do float freely. Mr. Johnston asked what happens if a tugboat becomes inoperative when it's out there? Taylor Luke explained all vessels have vessel checks to ensure they are up to code and follow all the rules. There is redundancy on the boat. The tugs have two engines and they also have contact with the people at the locks in the event that would happen. Mr. Johnston asked if the tugboats have an operator and a deckhand. Mr. Luke stated yes and noted that the deckhand can operate the tugboat. Mr. Johnston's concern is the noise and the diesel fumes. He noted that they had met with Andy Pichotta about the dust situation. Andy suggested maybe there was a way to use spray or something on it. Anything that could be done would be appreciated. Paul Kosterman, Army Corps of Engineers (ACOE), commented that safety is the top priority with the Corps. There is a construction representative here with many years of training ensuring that all contractors comply with all applicable safety standards. We have people out there all the time, if anything unsafe was occurring, the Corps would put a stop to it. Sanden commented to Mr. Luke that when this was brought up, Mr. Holst made a point that this is a critical operation that has to be done and you saw the concern of the citizens and knew that they had hired an attorney; I have to comment that untarped loads seems a bit sloppy with that kind of scrutiny. You knew you would be watched. I am a bit concerned that you would let untarped loads slip through. Can you give the committee any assurance that we won't be back here? Mr. Luke stated that he certainly could. To back up; the issue was brought up constantly at the Diamond Bluff meetings and here. He always said they would follow all state rules. Wisconsin Motor Carrier rules and regulations, He took it as that condition to be tied into condition #9. The National Motor Vehicle laws, Wisconsin Dept of Commerce and the Wisconsin DOT all said that what we are doing, there is no regulation that loads need to be tarped. Sanden stated when you have a conditional use permit there are conditions put on by this body; that goes above and beyond any other regulations. Mr. Luke stated that he knows that now. Sanden asked Jim about the other complaints, the number of trucks and tarping of loads were more than covered; but what about failure to notify Pierce County at the start of operation, posting of the conditional use permit on site and engage additional axles. Kleinhans stated it wasn't a permitted condition that they had to notify us but we were notified by a local newspaper - which was odd. We went down immediately and found out they were operating for several days. Kleinhans noted that the first day he was down there, the 17th, he noticed a municipal type street sweeper that went all the way down to County Road K. According to the photos by Mr. Johnston there is a lot of dust created and there could be a chemical put down, that is not an uncommon condition for this committee. Jim noticed the trucks through town and the speed of those trucks. The trucks from this operation don't have a lot of time to gain speed before they go up the hill but the trucks from the Parks Construction project were probably pushing the speed limit. They appeared to be moving along quite well. As far as stop signs, Jim didn't stay up on Hwy 35 near the railroad tracks. When we started contacting these folks they started looking at their conditions more closely. Kleinhans noted that he did photograph some of the near shore areas and forward them to Dave Pericak with the Wisconsin Dept of Natural Resources and he didn't feel anything was out of the ordinary at the unloading facility down by the river. Chairperson Barkla asked Mr. Luke if we need another meeting to take care of dust or if he can take care of it. Mr. Luke stated that he can take care of it without another meeting being held.

Discuss take action on the Groundwater Response Plan for Monarch Paving's Nonmetallic Mining Facility located in part of the east half of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Jim Kleinhans: Earlier this year, we found out that the Monarch facility in the Town of Trenton was going to receive the dredge spoil materials from Corp Island. At the May 19th meeting the LMC approved placement of the material with some concerns. The groundwater response plan was approved and materials could then be brought in. At that meeting it was discussed whether this was interim reclamation or permanent reclamation. We understood this was

to be permanent reclamation with about 50 feet of sand fill and then capped with topsoil and seeded. On September 2nd, staff received a letter from Michael Byrnes from Monarch Paving indicating that the company intends to use the dredge materials as a viable product for their operations further down on Hwy 35. So we decided to bring this back before the committee, rather than wait for their renewal in March knowing that there is some controversy, to see if there was a need to amend the groundwater response plan. Candy Anderson and Mike Byrnes are here from Monarch Paving. We had a discussion yesterday and their response is in the committee's folder. They emphasize that the sand is so fine that they can not use it solely as a sand source for their operation so they still have to mix it and it will take a longer time to take the material out of the pit. If the pit is going to be open and the rainwater is going to run in, that could potentially cause a problem. We may want to adjust the duration of Phase 3 and have testing for more than 12 months. Candy Anderson, Monarch Paving, stated at the May 19th meeting Monarch didn't appear and we should have. It was always our intent to use the sand as a mix and it's in our reclamation plan. When we take the sand out, we can only use a little bit of it. As far as taking off the top soil, when we do use the product we're only going to take the top soil off that we have too. Our hope is to use the sand and at some point when the Army Corp needs a site in 10 years that they can use the site again. The other issue was that the sand is contaminated. In one of the bullets I state that Monarch would have never accepted the sand had it been contaminated. The sand is clean. We don't see it being a problem to use the sand in our products. The topsoil is going to stay except for what they strip off for the sand they are going to take. The reason they wanted the topsoil is to consider this interim and reduce their bond amount and fees for NR135 by having less open area. The monitoring wells around the pit were put in because they were planning on hydraulically dredging the sand, since the sand is being mechanically dredged, does the contamination issue go away? Does the observation and additional monitoring have to be done afterward? Our reclamation plan in 2001 and 2003 did state that we would be utilizing the sand; that has been our intent all along. Holst asked whether it was mentioned in subsequent years that they intended to use the sand. Ms Anderson stated that the reclamation plan was approved in 2003 and doesn't need to be updated unless there is a change. Holst asked if you received conditional use permits in subsequent years and it was never mentioned? Ms Anderson stated yes. Holst stated that the residents of Trenton Township were told or it was implied that one thing was going to happen and now something else is happening. They feel they have been misled. I understand that it is a COE approved site and it's done. Monarch needs to be more open with the Town of Trenton because the Town Chair feels he has been misled and this committee feels they have been misled by the mere fact that you weren't at the meeting. Ms Anderson stated she agrees they should have been at the May 19th meeting. Holst stated Monarch has been historically good at attending meetings and here the one you should have been at you weren't. Mike Byrnes, Monarch Paving addressed the issue, we have many leases with pits and it was discussed amongst ourselves and it was discussed that the Corps needs to do this every ten years. We understood that the Corps would act as our agents and we would let them handle it. If the Town doesn't have a copy of our reclamation plan, we can get them one. It is on file with the County. Kleinhans stated he would read the section from reclamation: Removal of sand and gravel and reclamation of the Trenton Pit will provide a large, safe and environmentally friendly site for dredging materials. COE expect that the site will be needed in 10 – 15 years. This was submitted on January 5, 2001. Sand from the channel dredging will be made available at no cost to individuals, contractors and municipalities making the site a perpetual location for maintenance of the invaluable Mississippi channel. Holst asked about the "no cost". Mr. Byrnes stated that initially with the shear volume and the fact that they could only use a fraction of it, Diamond Bluff is getting a portion for sand/salt control and it would be made available. It's not a free-for-all but the municipalities can get some at no cost. Paul Kosterman, COE, stated he was party to the confusion that took place back in May. As he understood it, Monarch's original conditional use permit was amended some years ago and after the last time they unloaded Corp Island into the Diamond Bluff pit and groundwater disturbances became an issue and a concern of the residents; the committee amended their conditional use permit saying if you ever put sand in here, we want groundwater monitoring. He didn't become aware of the committees need to approve the

groundwater response plan until after the contract had been let. Mike told us after the lease and we do it as a normal activity, primarily to protect the citizens and for ourselves. Mike handed it off to me because it was our area of expertise. I gave it to Jim so Monarch didn't show up for the meeting neither did I. I just became aware that the public was going to have access to this material. The material is not contaminated or we couldn't be putting it where it is. We do the dredge material disposal - which is a huge program. This is a very small operation and infrequent up here. Regarding the placement of volumes of material into pits that could affect the aquifer - the monitoring of the groundwater was superfluous once we found out it was going to be done mechanically. If it were being done hydraulically, there would be so much water going into the site that it would have the potential to agitate groundwater and people's wells could have gotten turbid. The chance of wells getting disturbed is remote. We can't wash our hands of the material when it goes into the Monarch Pit. We would share in the liability if it was found to contaminate wells. The one agency that we are directly accountable to is the WI DNR. Richard Bunce, Trenton Town Chairperson, asked if CUP's ever expire? The 2001 and 2003 CUP's have expired and had to be renewed. So the 2001 and 2003 CUP's have no basis except for the fact that they laid the ground rules for you to approve a new one. Kleinhans stated that typically they do not expire - they are renewed. Mr. Bunce stated the CUP you renewed was at the meeting I was at and they stated that they were going to cover it and reclamation was going to be done and they asked me if I was happy. I stated as the Trenton Chairperson it's the best we can hope for. As a businessman, if I ran a business as big as Monarch, and they have been a good neighbor, it would behoove me to be at that meeting instead of coming back at this late date and trying to change the rules. Mike Byrnes stated that the May meeting that was a requirement of the conditional use permit and the conditional use permit is still in place. That was strictly a requirement of the CUP to supply an analysis of the groundwater. Kleinhans stated that the two year permit is typically renewed in March. On May 19th, we had official approval of the groundwater response plan for the Nonmetallic Mining Facility. It was for something from 2005, one of the requests to modify the conditional use permit was that the groundwater response plan will not be a requirement until such time as the COE request that the Monarch Paving utilize the site as dredge disposal. Mr. Byrnes stated that Mr. Bunce is right and they should have been there. The topsoil and grass was to internally reclaim and so we wouldn't have erosion and a dust issue and also the bonding issue. Through the DNR and the NR135 permit, we are charged with every acre that is disturbed. That's why we wanted the Corps to put the topsoil cover on it so it was reclaimed and we wouldn't have to pay that money each year to have the pit open. Basically that's why we weren't here because we thought it was to go over and approve the Corps groundwater response plan. Fetzer asked how the capping and everything being left in the pit got thrown in. At the time he didn't understand why someone wouldn't want to use the sand. Paul Kosterman stated that he wasn't there but one of the big issues was the potential contamination of the materials they were pumping in. There were assertions that the COE was going to be stopped from doing this or that additional economic and feasible alternative requirements were going to be imposed upon us to do this because of the threat we posed to the public for contamination of groundwater. One of the topics was going to be the requirement that we line the pit with clay like a sanitary landfill. He conjectured that that evening when they were talking about a groundwater plan, this was perhaps offered up to get the support needed. The COE and Monarch weren't there. Nobody expected that to be the topic of the evening. Chairperson Barkla suggested the next time issues are considered you make sure you show up. You put everyone in a lousy circumstance and some of the apologies become a little hollow. Holst stated the groundwater monitoring plan was added in 2003 or 2005 at his request because they had gone through this in the Town of Diamond Bluff with hydraulic dredging and he didn't want to see Town of Trenton go through the same thing. So if we had that in place, we knew yours was a fallback site. The mechanical dredging came about and it fell on our lap. Mr. Kosterman and Holst had met about going over the road route a couple years prior. At that time we had anticipated it would be a hydraulic site and the water and sand would go to Trenton. Mr. Kosterman stated it was anticipated that it would be done hydraulically until the day before the bids were opened. The question was raised and nothing prohibited it from being done mechanically. Holst stated he believes the

groundwater monitoring was put in as a preemptive strike to give the people of Trenton some protection. As was when it was hydraulically dredged and put into Diamond Bluff, you had the plan and you monitored the wells. Mr. Kosterman stated when it was put into Diamond Bluff, the contract was awarded for the material to be put in the Trenton pit but it was value engineered and subsequently went to the Diamond Bluff pit. Holst stated some of it will probably end up back in Diamond Bluff. This is to appease the people of Trenton, to satisfy their concerns. Holst agreed that there are no contaminants in the sand. Mr. Kosterman stated from our prospective once safety is assured its economics. Holst suggested that it just shows you that the hydraulic guy was boogering you - because he should have been able to do it a lot cheaper than Taylor can do it with a truck. **Sanden moved to defer the decision of the groundwater response plan until the March conditional use permit renewal date/Fetzer seconded. All in favor. Passed.**

Discuss take action on proposed amendments to section 17.038 (Towers) and section 17.085(6) (lot and building specification in the Light Industrial District) of the Town of River Falls Zoning Code. Staff Report – Jim Kleinhans: We have Diana Smith, Chairperson and Jerome Rodewald in attendance. The Town is proposing to amend their Tower ordinance; any zoning ordinance that the Town of River Falls adopts or changes, the County Board needs to approve it. They have looked at new language for exclusions and some of the security information around the facility. Maybe the Town has been criticized about fencing in the past. This cleans up some issues and makes their ordinance more in line with the requirements that the state endorses. The second item they are looking at changing some items in the Light Industrial District. They are proposing to go from a 2 acre minimum lot size to a 1 acre minimum lot size, which is consistent with what the County has now. In 1997 the County had a 2 acre minimum and the Town of River Falls was just following suit with that. Since then, we have gone to a 1 acre minimum lot size. At this point their proposed ordinance will be more consistent with the County's zoning standards. **Staff Recommendation:** Staff recommends that the LMC approve the proposed amendments and forward a recommendation to the Pierce County Board of Supervisors that the proposed amendments be approved as written. **Holst moved to approve the proposed amendments to the Town of River Falls Zoning Code and forward a recommendation to the Pierce County Board of Supervisors/Fetzer seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for a duplex in the Primary Agriculture District for Paul & Judith Nielsen, owners on property located in the SW ¼ of the SE ¼ of Section 17, T26N, R16W, Town of El Paso, Pierce County, WI. Staff Report – Brad Roy: Last year Mr. and Mrs. Nielsen obtained a conditional use permit for a duplex on their 8.8 acre parcel. Currently the Nielsen's and a family member occupy both dwelling units of the duplex. Staff has not received any complaints. The Town of El Paso Chairman stated that the Town has not received any complaints or concerns about this use; however, the Town remains opposed to this CUP and its renewal. The existing conditions are listed #1 - #7 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Landowner must occupy one of the residences on the property.
2. Any deviation from the approved conditions requires the applicant apply for a new CUP.
3. This CUP shall expire in 5 years or if compliance issues arise. The permit may be renewed administratively if no compliance issues arise.
4. If a party other than a family member wishes to reside in the duplex, a management plan must be approved by the Land Management Committee.
5. A second uniform address number is needed for this building per PCC 15-3C.
6. The secondary driveway connection from this parcel to Hwy 72 shall be removed within 8 months of approval.

7. This CUP shall not run with the land and shall be automatically invalidated by the sale or other transfer of title to this parcel of land.

Condition #3 is modified instead of a one year renewal in front of the committee; staff is proposing that this CUP will expire in 5 years or if compliance issues arise. The permit may be renewed administratively if no compliance issues arise. Typically duplexes are more of an established use. We have some that don't have any renewal at all. Chairperson Barkla asked why that is. Roy stated the purpose is to establish the use and being that a duplex isn't much different than a single family resident, you don't typically renew those permits. Holst asked why the landowner has to occupy one of the residences on the property. He stated that we have granted several of these lately and that has not been a stipulation. Chairperson Barkla stated refresh my memory about the CUP recently issued for a duplex in the Town of Oak Grove. Kleinhans stated that everything is looked at site specifically. We also look at what the Town's recommendation is. Sanden asked if the fact that the conditional use permit doesn't run with the land have anything to do with the 5 year renewal? If that caveat wasn't in there would that requirement perhaps not be there? Roy stated a one year renewal in front of the committee fit initially, 5 years is a number suggested by staff that would still require monitoring, however, it wouldn't keep it on the forefront for staff and the committee. Holst stated there are a couple of conditions on this CUP that aren't typical; one is the landowner must occupy one of the residences and the other is the CUP doesn't run with the land. Sanden stated he thinks that was addressing the Town of El Paso's concern. Holst stated he finds this different than something that came out of the Town of El Paso not so long ago. I understand that one is in the Primary Agriculture Zone and the other is in some other zone more flexible. Dan Fischer stated that he can address that; he believes Mr. Holst is referring to the Ray Dohm case. The difference is that Ray Dohm has enough acreage that he can have more than one dwelling on his property. Holst asked if he knows what that threshold is? Mr. Fischer stated in the Town of El Paso, Primary Agriculture is two dwellings per 40 and General Rural is 4 dwellings per 40. We only have Primary Agriculture, General Rural and Commercial. **Sanden stated due to the fact these conditions are adequate to protect the public interest, public health and safety and the character of the area, move to approve the renewal of the conditional use permit with conditions #1 - #7/Holst seconded.** Ron Foley stated that he wants to make a comment from Chairperson Kannel that had just received a copy of the staff report. Mr. Kannel says that the comment that the Chair stated that the Town had not received any complaints; he said that he did not make that comment. I just wanted to make that known. Holst asked if it said the Town has not received any complaints or the Land Management Department has not received any complaints. Ron Foley noted that in the staff report it states the Town of El Paso Chairperson stated... Roy indicated that he called Mr. Kannel and asked if they had any complaints or any issues and Mr. Kannel stated his only statement would be that they are still opposed. Chairperson Barkla stated that if people are going to attack the integrity of people who work in this department, let them come forth and say so themselves. I appreciate, Ron, your bringing this to us but I regard this as really unfortunate. Mr. Foley stated Ron Kannel would have been here tonight but he had another meeting. Chairperson Barkla stated that this is a serious allegation to make against a member of this staff. I understand Ron wasn't able to make it here because he didn't receive it until today. Holst suggested that as a Town Chair he received an agenda for this meeting in the mail 10 days ago. Mr. Foley stated Ron was aware of the meeting. Chairperson Barkla stated that he finds someone making this kind of remark at a public meeting really distressing. Chairperson Barkla stated there is a motion on the floor. **All in favor. Passed.**

Departmental Update and Future Agenda Items

CUP renewal for Gilles Quarry by American Materials in the Town of Union.

Motion to adjourn at 8:30pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 20, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 3 rd & 17 th , December 1 st & 15 th , all in 2010.	Chair
3	Approve minutes of the September 15, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the General Rural Flexible District for Myron Hoitomt, owner on property located in the NE ¼ of the SE ¼ of Section 26, T25N, R18W, Town of Trenton, Pierce County, WI.	Kleinhans
5	Discuss status of a conditional use permit issued for a Utility Facility >1000 square feet in the Agriculture Residential District by LS Marine, Inc, agent for Joseph and Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Pichotta
6	Discuss take action on the Groundwater Response Plan for Monarch Paving's Nonmetallic Mining Facility located in part of the east half of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.	Kleinhans
7	Discuss take action on proposed amendments to section 17.038 (Towers) and section 17.085(6) (lot and building specifications in the Light Industrial district) of the Town of River Falls Zoning Code.	Pichotta
8	Discuss take action on renewal of a conditional use permit for a duplex in the Primary Agriculture District for Paul & Judith Nielsen, owners on property located in the SW ¼ of the SE ¼ of Section 17, T26N, R16W, Town of El Paso, Pierce County, WI.	Roy
9	Discuss take action on renewal of a conditional use permit for a Retreat Center in the Agriculture Residential District for Deborah Hansen, owner on property located in the SE ¼ of the NW ¼ of Section 19, T24N, R15W, Town of Maiden Rock, Pierce County, WI.	Roy
10	Future agenda items and departmental update.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/8/10)

MINUTES - Pierce County Land Management Committee Meeting, September 15, 2010

Present: Jeff Holst, Don Rohl, Eric Sanden. Paul Barkla by polycom.

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 6th & 20th, November 3rd & 17th, all in 2010.

Approve Minutes: **Sanden moved to approve the September 1, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District for Robert J. Pritchard II, owner on property located in the NE ¼ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Holst invited Mr. Pritchard forward: Mr. Pritchard explained that he would like to add a deck on the front of his property. It will be all steps except a couple railings, 12 feet out from the house and 22 feet wide. Sanden asked how high the highest platform would be. Mr. Pritchard stated 23 inches would be the maximum as that is the height of the bottom of his door.

Staff Report – Emily Lund: Mr. Pritchard is requesting a conditional use permit to expand a nonconforming structure. The owner removed broken cement steps on the front of his house and would like to build a platform deck as the new entry. The property is in Section 28, Town of Hartland in the Village of Esdaile and is zoned Rural Residential 20. The parcel is less than 1 acre. The existing house is encroaching on the 230th Avenue setback by 27 feet. Mr. Pritchard has proposed to replace the existing cement steps with a platform deck. He plans to encroach toward 230th Avenue by an additional 12 feet with the deck running 22 feet along the house. The highest point of flooring off the ground would be 23 inches at the door entrance. The attached drawings, photos and maps describe the proposed expansion. The existing sanitary system serving this dwelling is located west of the house. A two car garage that was permitted in 1987 is located north of the house. The existing well is located north of the garage. Mature trees border the south property line parallel with the bridge and waterway. The waterway was found not navigable and not part of the floodplain or shoreland overlay districts. A deck is a permitted use on a residential parcel. Many of the houses in Esdaile were constructed prior to the enactment of current zoning regulations and setbacks. The road is in a speed reduction zone posted 25 mph (traveling south is a bridge and then stop sign and traveling north is a curve). So far 12 neighbors living within 300 feet have submitted petitions and are in support of the addition.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve a conditional use permit to allow the proposed deck expansion. It should be noted that the deck would not be subject to the issuance of a Land Use Permit, but the applicant will need to contact the Town Building Inspector to ensure compliance with the Uniform Dwelling Code (UDC).

Chairperson Holst opened the hearing to the public. David Esterby, Town Chairperson, stated that all the homes in Esdaile are too close to the road. The Town approved the request and his neighbors are in support of it. Mr. Pritchard stated his neighbor's garage is less than 10 feet off the road, it's been there for a long time and it hasn't caused a problem. Lund noted that staff was unable to use that garage in setback averaging calculations. **Public hearing closed. Sanden moved to approve the conditional use permit for Robert J. Pritchard II for expansion of a nonconforming structure due to the fact it is determined to be not contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Public hearing to consider proposed amendments to Chapter 237 of the Pierce County Code (Subdivision of Land). Staff Report – Emily Lund: Governor Doyle recently signed legislation that modified Chapter 236 of Wisconsin Statutes (Platting Lands and Recording and Vacating Plats). Local units of government have been directed to update their ordinances to reflect these revisions. A couple meetings ago the committee reviewed the proposed amendments to Chapter 237 and directed staff to schedule the public hearing to consider for adoption. Required changes:

1. Change to submittal time limit for final plat following preliminary plat approval. Final plats must be submitted within 36 months following preliminary plat approval.
2. Local units of government had to determine if final plat was substantially conforming to the preliminary plat.
3. We have to specify that plats need to comply with local ordinances as it exists when the plat was submitted.
4. Specify that a surety bond or other security required for improvements is limited to the phase being constructed.
5. Establish a time limit for recording subdivision plats. Plats must be recorded within 12 months after the last approval and 36 months from the first approval.
6. Specify that local ordinances may not be more restrictive than state statutes.

Staff Recommendation: Staff recommends the Land Management Committee consider public comments relating to the proposed amendments to Chapter 237 and determine whether modifications or additions to the code are necessary. If no substantive changes are determined to be necessary, staff recommends that the LMC approve the attached ordinance amendment and forward it to the Finance and Personnel Committee for review and approval. Sanden asked about #1 stating final plats must be submitted within 36 months of preliminary plat approval and #5 states that plats must be recorded within 12 months after last approval and within 36 months of first approval. What happens if the approval goes right up to the 35 months and 30 days. Lund stated we have the ability to extend the approval date. Sanden asked if the recording date can be extended. Pichotta noted that there does seem to be some contradiction with time frames and suggested that clarification would be sought. Sanden asked about “substantially conforms” to the plat – and that needs to be reported to the LMC. Isn’t that what we already do? Pichotta stated that now the final plat is supposed to “conform” versus “substantially conform”. Noting that “substantially” could mean different things to different folks. Staff will need to make a recommendation as part of the record to the Land Management Committee as to whether it’s staff’s opinion whether the plat does conform. **Chairperson Holst opened the hearing to the public.** No public comment. **Public hearing closed. Rohl moved to approve the proposed amendments to Chapter 237 of the Pierce County Code (Subdivision of Land) and forward to Finance and Personnel/Sanden seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for Wisconsin Industrial Sand – Maiden Rock Facility for Nonmetallic Mining on properties in the Agriculture Residential District, owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa and William & JoAnn Steele, all in Sections 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Holst invited Rich Budinger forward. Mr. Budinger, Regional Manager, read a statement of community activities the employees have been involved in. **Staff Report – Brad Roy:** The mine expanded in 2004 into the unincorporated areas which required a conditional use permit. We’re looking at the third renewal. Current conditions are listed #1 - #11 in the staff report. The Zoning Office has not received any complaints about the operation. At the previous renewal, November 5, 2008, WISC indicated that they were in the process of obtaining leases to new lands which have not been included on the conditional use permit. Staff has not received any indication that they intend to pursue that plan. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or

modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Blasting shall occur up to four times a week with no time limit constraints unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to three times per week, including Saturday.)
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 500' of mining activity shall be comprehensively tested, including for suspended solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Reclamation of disturbed areas shall be done consistent with NR 135 and the submitted plan.
5. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
6. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
7. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
8. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
9. A map of facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
10. This permit shall expire in two years.
11. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.

Mr. Budinger requested changing condition #1 to “blasting shall occur up to 7 days” instead of four times a week. Roy noted that at the Bay City Mine renewal the committee granted 6 days of blasting with no time constraints. Chairperson Holst asked if there have been any complaints. Roy stated no. Sanden asked if they are still pursuing expansion in the future. Mr. Budinger stated yes, they are going through economic and business evaluation right now. We have obtained additional leases that are not listed, we are not actively mining on them and we are in the process of obtaining additional leases. We will then be in for expansion consideration. Sanden stated he appreciates everything they are doing for the community. Sanden asked Roy his opinion on the seven days a week. Roy stated the only issues he remembers are the initial blasts, but once they were underground, he doesn't remember receiving a concern about blasting. Al Nelson stated he talked to the affected neighbors in the last few days. Mr. Budinger stated the current operations are 24/7. Rohl stated if there are no complaints it's reasonable to grant the seven days. Chairperson Holst stated if they don't come back in three months, we live with this. They have been good neighbors. They have corrected their problems. Seven days a week seems a lot from what this committee has deviated from in the past. If they are running 24/7, you have to shoot when you can. Mr. Budinger stated one of the issues is the number of shots, the number of headings the amount of explosives and the ground conditions, it makes more sense to spread it out over more days with more frequency and less headings per event. We would have more of an average activity of blasting over the week. Sanden asked if the new leases would all be underground. Mr. Budinger stated yes, the leases would have a contingency where surface rights will be available for ventilation shafts. The shafts would be similar to the one on County Rd S; steel housing with a fan on top, with a cage and a fence around it. Mr. Nelson stated he has all their seismograph reports for staff. **Sanden moved to approve the conditional use permit renewal for nonmetallic mining for Wisconsin Industrial Sand – Maiden Rock Facility with conditions #1 - #11, amending condition #1 to read “Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received.**

If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to four times a week, including Saturday.)”/Rohl seconded. All in favor. Passed.

Discuss take action on proposed revisions to Chapter 240 relating to rural business/agritourism.

Staff Report – Brad Roy: Pierce County’s Comprehensive Plan “Action Plan” identifies the following tasks to be completed by Department staff (among others):

- Investigate potential for creation of new mechanism to permit entrepreneurial activities that are site dependent. (Completion date of 2011)
- Identify and pursue strategies to implement goals, objectives and policies identified in the Comprehensive Plan (Ongoing)

Many of the goal, objective and policy statements relate to creating conditions in the County that are conducive to the establishment of entrepreneurial ventures and agritourism.

Staff presented the concept for potential code amendments relating to rural businesses/agritourism on June 16, 2010 to the LMC. Staff was directed to proceed with developing Zoning Code provisions which would be permissive in regard to the establishment of rural businesses and agritourism. Such activities would be permitted through the issuance of a conditional use permit, with the understanding that the scope of allowable activities would be tempered by a given towns comprehensive plan. You may recall that the County plan states that Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the “public interest” for decisions relating to that governmental unit or municipality.

- The existing Zoning Code designates all business-related uses as Commercial Uses. This creates an assumption that the most acceptable location for all such uses is within the Commercial or Industrial districts. The Zoning Code currently lists specific “Commercial” uses in § 240-36 and in the Table of Uses such as Antique Shops, Kennels and Mini-storage.
- Property owners wishing to start a business which is not specifically listed in § 240-36 or the Table of Uses are left with three options: Home Occupation, Home Business and Farm and Home Based Business. Listed in the staff report are the regulations for Home Occupation and Home Business. Essentially, they are Land Use Permit businesses and are strict only allowing two outside employees and limited space.
- § 240-36E regulates Farm and Home Based Businesses which the committee is aware of. This allows for retail sales, the space and employees limitations are increased but it still restricts a businesses ability to grow. This type of permit could be considered an “incubator” permit which will allow for some growth but will ultimately require a move to a Commercial or Industrial district if the business is to expand beyond the size thresholds established in the regulations.
- Not all types of businesses are ideally suited for the Commercial and Industrial districts. The proposed code changes are intended to allow for expanded business opportunities that are site specific and compatible with active agriculture.

We’ve listed the definition of General Agriculture and types of agricultural practices. § 240-35 addressed agricultural uses, listed on page 3 of report and is very short, basically stating that agriculture is allowed in the ag districts.

- Staff is proposing to create a new subsection, § 240-35B for Agricultural Enterprises to provide additional opportunities that are site specific to property owners who are involved in active agriculture.
- Proposed new uses to be included in the Agricultural Enterprises subsection include: Agritourism, Nursery, Orchard and Winery. All of these uses will require activities which conform with the definition of “General Agriculture”.

- Staff is also proposing to move § 240-36D. Farmers Market and § 240-36L Roadside Stand out of § 240-36 Commercial uses and put into the new subsection. (Staff is also proposing to modify the existing regulations.)
- Proposed definitions associated with the “Agricultural Enterprises” classification and permitting requirements to be included in the Table of Uses are:
 - ♦ Agritourism – Activities conducted at a working agricultural operation and offered to the public or to invited groups for the purpose of recreation, education, or active involvement in the operation.

This is a conditionally permitted group in all the agricultural districts.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
C	C	C	C	C						

- ♦ ~~Roadside Stand~~ Direct Market Agriculture – A use or structure involving only the display and sale of agricultural products which are produced exclusively on the premises on-site and sold directly to consumers including uses such as roadside stands, pick-your-own fruits and vegetables and Christmas tree farms.

The permitting would stay the same as what is existing. This allows for more options than the old definition.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
C	P	P	P	P						

- ♦ ~~Farmers Market – A use or structure(s) which principally involves the retail sale of farm and garden products from local area farmers, regardless of whether such products were produced on the premises~~

We changed the definition because the way it was written before you could have run a nursery under a land use permit by shipping in all the products and selling them. By putting from local area farmers, addresses that issue.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
C	P	P	P	P				P		

- ♦ Nursery - A facility or facilities used primarily to raise trees, shrubs, flowers, produce and other plants for sale of which at least 50% are grown onsite. Landscaping and horticultural services may be offered along with the sale of garden products such as rakes, shovels, and pots. The sales of garden products shall not occupy more than 25% of the sales area.

Everything within this classification is site specific. We picked 50% stating that the reason your business is placed here is because you are growing half of your products. If you are bringing more in, it could be placed in a Commercial district. The 25% was picked under the same rationale.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
C	C	C	C	C						

- ♦ Orchard – An establishment located on a lot devoted to the cultivation of fruit trees that includes the sale of goods containing produce primarily grown on-site and items to attract customers and promote the sale of agricultural products such as baked goods, ice cream, crafts and other retail items.

The key to this definition is the retail sales. If you are just growing fruit and selling it; that's a Direct Market practice, when you bring in the other activities, then you need a conditional use permit.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>						

- ◆ Winery - An establishment located on land with a producing vineyard or similar growing area for the production of wine, as defined by the State of Wisconsin, that includes a room for the tasting of wine, nonalcoholic fruit juices or incidental food items or the retail sales of winery products, products by the bottle for off-premise consumption or other retail items.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>						

Here is the way the language would look in the code.

- Staff is proposing the following additions to §240-35. Agricultural Uses.
 - B. Agricultural Enterprises

(1) Agritourism

(2) Direct Market Agriculture (formerly § 240-36 L. Roadside Stand)

- a. ~~Such use shall only involve the sale of farm products produced on the premises.~~
- b. Except for temporary structures not exceeding 160 square feet of floor area, all structures associated with ~~roadside stands~~ Direct Market Agriculture shall meet all setbacks and other provisions of this chapter. Temporary ~~roadside stands~~ Direct Market structures which do not exceed 160 square feet of floor area ~~are exempt from § 240-27 but shall not be placed in public rights-of-way~~ shall be considered a minor structure such as those listed in § 240-32A(1).

c. Only one ~~roadside stand~~ Direct Market structure shall be permitted on a lot.

What the existing code allows is, any roadside stand is exempt from setbacks. We are proposing to consider them minor structures that would exempt them from all permitting as well. This is for roadside stands under 160 sq ft. They would be considered the same as a school bus shelter or fish house or anything else like that.

(3) Farmers Market (formerly § 240-36 D.)

- a. Such use shall principally involve the sale of farm and garden products, but other types of merchandise may be sold, provided such merchandise occupies not more than 25% of the indoor and outdoor display area of the farm market.
- b. At least one off-street parking space shall be provided for each 200 square feet of indoor and outdoor display area.
- c. Combined indoor and outdoor display areas shall not exceed 2,000 square feet.

d. ~~Minimum lot size for the parcel on which the farm market is located shall be 10 acres.~~

e. The farm market shall obtain site plan approval and a land use permit.

Staff is proposing to just eliminate the 10 acre requirement. None of the other uses had an acreage requirement so this is to keep it consistent.

(4) Nursery

(5) Orchard

(6) Winery

- Use specific regulations are limited to Farmers Markets and Direct Market Agriculture (formerly Roadside Stands). These are the only uses which are permitted by Land Use Permit. The other uses will require a Conditional Use Permit. The Land Management Committee will have the ability to impose any condition to limit the scale and intensity of the use to the level it believes is appropriate. It should also be noted that the Conditional Use Permit process will require an applicant to present the request to the Town and will allow for the Town’s Comprehensive Plan to be applied.
- Staff also believes that there is a need for an additional site specific uses which are unrelated to agriculture. Uses which are dependant on the natural surrounding area and the environment would also have the same challenges previously discussed under a Home Occupation, Home Business or Farm and Home Based Business permit. The Commercial and Industrial districts are not a suitable option.
- Staff is proposing to create the uses Resorts and Nature-Based Operations. The definitions and the designated permitting requirements to be included in the Table of Uses are proposed as:
 - ◆ Resorts - A facility for transient guests where the primary attraction is generally on-site recreational features or activities.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>						

- ◆ Nature-Based Operations - A site-specific operation reliant on the property’s natural environment and characteristics.

EA	PA	GR	GRF	AR	RR-8	RR-12	RR-20	C	LI	I
<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>	<u>C</u>						

- Nature-Based Operations would serve as a “catch-all” for proposals, but would require the LMC to make a determination of whether the proposed use is reliant on the natural environment and characteristics as well as impose conditions to limit the scale and intensity of the use to an appropriate level.
- § 240-36A. addresses Bed and Breakfasts and § 240-36J. addresses Lodging facilities; these are the only mechanisms for transient lodging. The definitions of these uses are:

- ◆ Bed and Breakfast establishment – Any place of lodging that provides eight or fewer rooms for rent to transient guests, is the owner's personal residence, is occupied by the owner at the time of rental and in which the only meal served to guests is breakfast.
 - ◆ Lodging - A use which provides commercial transient lodging in individual rooms, suites of rooms or units. Examples of such uses include motels, hotels, inns, cottages, cabins and resorts.
- Bed and Breakfasts are limited to a personal residence and Lodging facilities are only permitted in the Commercial District. The addition of Resorts will allow for outdoor recreational facilities to provide lodging to its guests. (Resorts will be removed from the Lodging definition if the LMC directs staff to proceed with the use.)
 - Because Resorts and Nature-Based Operations do not have a connection to agriculture. Staff is proposing to add these uses to § 240-39. Outdoor Recreational Uses.
 - Currently § 240-39. Outdoor Recreational Uses addresses:
 - A. Campgrounds and trailer camps.
 - B. Institutional recreation camps.
 - C. Riding stables, commercial and private.
 - Staff is also proposing the following additions to §240-39. Outdoor Recreational Uses.
 - D. Nature-Based Operations.
 - E. Resorts.
 - (1) Housing may be in lodges, cabins and other residential structures.
 - (2) Each housing structure may have one cooking facility.
 - (3) There shall be one off-street parking space provided for each sleeping room provided.
 - (4) Retail activities shall be limited to those specifically identified in the Conditional Use Permit.

That language is consistent with the Retreat Centers language that was passed recently.

- The uses will require a Conditional Use Permit. The Land Management Committee will have the ability to impose conditions necessary to limit the scale and intensity of the use to the level it believes is appropriate. And again, the Conditional Use Permit process will require an applicant to present the request to the Town and will allow for the Town's Comprehensive Plan to be applied.

Staff Recommendation: Staff recommends the LMC determine whether the concept identified and the amendments proposed are consistent with prior committee direction or are there any changes needed. Pichotta stated that we are, in some cases, proposing to do away with some minimum lot sizes. If a Town wants to impose a certain minimum lot size they could support the establishment of a specific use only on lots that are greater than a certain size. That gives the Towns the ability to pick and choose for a menu of the types of uses they would support the establishment of. Rohl stated the first step would be to coordinate with the Town. Pichotta stated that we're looking for the committee to tell us if we are headed in the right direction, does this approach make sense? Sanden commended staff on doing an excellent job. It does make the code more complex. Chairperson Holst questioned the language regarding Farmers Market; regardless of whether such products were produced on the premises, which is being removed. If you have an active Farmers Market, what if a hail storm comes through wipes out the local products. The market goes away, you have to reestablish the use and perhaps you never would. Pichotta suggested that the word local is somewhat subjective. Roy stated we can look at the definition again. We started looking at the definition of a nursery and the way it was worded before you could have shipped all your products in and called it a Farmers Market. Sanden asked about the Farmers Market being expanded into the Rural Residential 8 District. Pichotta stated the whole purpose of the rural residential districts is to separate the large lot developments from potential nuisance uses. It may be that that use is not be consistent with the rural residential districts. Roy stated we're looking at site specific. We did add them as a permitted use in the commercial district

which they weren't listed there before. Sanden stated this makes it a little more complex but in the long run a little easier. Chairperson Holst asked if any action needs to be taken. The committees consensus is that staff is headed in the right direction with the code.

Departmental Update and Future Agenda Items

There is nothing on the October 6th agenda so Pichotta proposed to cancel that meeting.

For the committee's information, the Sylla's called regarding an errant blast that left fly rock on their property, this is the Schoeder Mine that just came before the committee recently.

Motion to adjourn at 7:53pm by Sanden/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 15, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 6 th & 20 th , November 3 rd & 17 th , all in 2010.	Chair
3	Approve minutes of the September 1, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District for Robert J. Pritchard II, owner on property located in the NE ¼ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
5	Public hearing to consider proposed amendments to Chapter 237 of the Pierce County Code (Subdivision of Land).	Lund
6	Discuss take action on renewal of a conditional use permit for Wisconsin Industrial Sand – Maiden Rock Facility for Nonmetallic Mining on properties in the Agriculture Residential District, owned by Wisconsin Industrial Sand Co, Edmund & Dawn Daleiden, Dean & Mary Holden, David & Rayna Kassa and William & JoAnn Steele, all in Sections 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
7	Discuss take action on proposed revisions to Chapter 240 relating to rural business/agritourism.	Roy
8	Future agenda items and departmental update.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, September 1, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 15th, October 6th & 20th, all in 2010.

Approve Minutes: **Rohl moved to approve the August 18, 2010 LMC minutes/Holst seconded. All in favor. Passed. Sanden and Fetzer abstained from voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for an accessory residence in the Primary Agriculture District for Raymond Dohm, owner on property located in the SE ¼ of the NW ¼ of Section 4, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Barkla invited Mr. Dohm forward:

Mr. Dohm explained that he would like to turn the granary into an accessory residence. This was the building he received a conditional use permit on for a tack shop that was opened for a year and then closed. It was insulated and windows were put in. He plans to remodel his home and would like to live in the granary while remodeling. Once he remodels the house, he would like to rent the accessory residence out. Holst asked if he is going to live in the house afterwards. Mr. Dohm stated yes. Sanden asked if there is plumbing in the granary right now. Mr. Dohm stated no, that is his next step - to apply for a sanitary permit.

Staff Report – Brad Roy: Mr. Dohm did a good job of explaining his request. The proposal does meet the definition of our code. The building would be subordinate to the principal structure. The existing residence is a two-story house. The accessory residence will be in a single story structure which is attached to a machine shed. A Land Use Permit is not required for the establishment of a use permitted as a Conditional Use. The Town of El Paso recommended approval of this request on August 9, 2010 without specific conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request.

Staff Recommendation: Staff recommends that the Land Management Committee consider the above and if determined to be not contrary to the public interest, nor injurious to public health, safety or character of the area, grant this conditional use permit with the following conditions:

1. A Sanitary permit shall be obtained for the septic system.
2. The Accessory Residence shall be inspected by the Town of El Paso Building Inspector.
3. A Uniform Address Sign shall be obtained for the Accessory Residence.

Chairperson Barkla opened the hearing to the public. Dan Fischer, Town of El Paso, when the proposal was brought before the Town; they did not find anything in the Comprehensive Plan that would reference it. The Town Planning Commission and the Town Board did approve this. **Public hearing closed. Holst moved to approve the conditional use permit for Raymond Dohm for an accessory residence with conditions #1 - #3, due to the fact it is determined not to be contrary to**

the public interest, nor injurious to public health, safety or character of the area/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Primary Agriculture District for Raymond Dohm, owner on property located in the SE ¼ of the NW ¼ of Section 4, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Barkla invited Mr. Dohm forward: Mr. Dohm stated when he went to the Land Management Department to get the conditional use permit application for the accessory residence; he discovered he could not add on to his home without a conditional use permit because it was only 90 ft from the center of County Road G. One option would be to build at the 100 ft setback but that wouldn't make the floor space very usable. The plan is to take the porch off and add a 12 x 24 addition to square the house up. He is asking to build at the same plane as the house is now. There are several trees between the road and the house and there is an uphill incline to the house. There is also a 10 ft deck that will be added but that doesn't get any closer to the road.

Staff Report – Brad Roy: The applicant is proposing to construct 90 ft from the center of County Road G, the setback is 100 ft. The addition and the deck will align with the front of the existing house and be at 90 ft. The addition is to create additional living space. There are other additions that will be put on the structure however, those will meet the setbacks and don't require LMC approval. The Town of El Paso did approve this request on August 12, 2010 without specific conditions. The Town did not reference their Comp Plan so it is assumed the plan is silent on this request.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if determined to be not contrary to the public interest, nor injurious to public health, safety or character of the area, grant this conditional use permit.

Chairperson Barkla opened the hearing to the public. Dan Fischer stated the Town did look at this and felt the plan didn't have much to do with this. Since this is on a County Road, the Town felt it would be up to the County to accept or deny the setbacks along the County Road. **Public hearing closed. Fetzer moved to approve the expansion of the nonconforming structure for Ray Dohm due to the fact this request is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Discuss take action on proposed 2011 Land Management Department budget. Chairperson Barkla asked Joe Fetzer to Chair the meeting. Paul Barkla talked about the exercise of going through the Land Management Department budget and the effort Andy has expended to try and come up with the 3.4% decrease. He noted that LMC members that have served on this committee for the last few budget cycles know that Andy has complied with every directive from the County Board in dealing with budget matters. When the County Board requested the 15% cut, this department came through. Another year this department also came in with a significant cut. There was a crisis in another department and Andy stepped up - and while working on the budget for Land Conservation - he showed the same kind of devotion to following directives. Now the County Board has said the departments need to cut another 3.4%. Mr. Barkla stated that he has strong feelings on this issue when other departments have been unwilling to consider cuts. He further stated that he would resist any recommendation to cut department personnel.

Acting Chairperson Fetzer asked for the Staff Report – Andy Pichotta: The County Board directed all departments to reduce their budget by 3.4% this budget cycle. We did reduce our budget a few years ago by a substantial amount which leaves us with a very lean budget now. In the 2010 budget personnel costs make up approximately 94.6% of the total Land Management Department budget, with operating costs making up the remaining 5.4%. To comply with the 3.4% directive, the \$42,105 budgeted for operating costs would need to be reduced by \$26,511. Operating costs include such expenses as: gas, supplies, telephones, sign parts and supplies, public hearing and agenda publishing, training and conferences and professional services as well as per diems. The proposed 2011

budget is, as a whole, 0.1% under the 2010 budget. This has been achieved by reducing or eliminating the following in one or more division budgets: professional services, telephone, gas and road repair services. Further cuts would likely result in year-end overages. Pichotta stated there are two ways the department could achieve a 3.4% reduction. There is a list of the different expenses that are a part of operating costs followed by their percentage of the total operating budget. We would have to choose 33 % of the total expenses listed and cut everything else. Pichotta noted that the basic functions of the department are also those things that generate revenue. So if we limit our ability to buy gas and go on inspections, we limit our ability to generate revenue. The second option is to eliminate a staff position. Pichotta reminded the committee that a number of implementation tasks were identified in the Comprehensive Plan - so just because we're not issuing a large number of permits for new homes doesn't mean we're not busy. Pichotta went over the 2010 budget levels, proposed 2011 budget levels and percentage of change. Under the County Planner budget; we had budgeted \$5,000 for any wrap up that was necessary for the Comprehensive Plan. That item is being eliminated. Pichotta noted that we are required to do an update to the County's Farmland Preservation Plan in 2010. It might be prudent to roll that over. He noted that the Land Conservation Department will likely be getting a grant to assist in the development of the plan. Under the Zoning budget, I'm proposing to cut Other Professional Services by 50% and the Gasoline & Diesel Fuel by 20%, on the County Surveyor budget we are proposing to reduce the Road Repair Services and Other Travel, on the GIS budget, everything is proposed to remain the same. We hit this hard a few years ago and shifted a lot to Land Records Modernization. Under Park Development; we are not proposing to do anything but Parks may be proposing to utilize some of those funds. The Land Information Grant is a new budget which was created some time ago. We anticipate next years grant to be around \$10,000. I'm optimistic that it may actually be a couple of grand more. That money is ear marked for the aerial flight that was done this summer. Land Records Modernization: we are proposing another 500 hour temporary position to help out with our scanning and indexing of property files. As you are aware, there are going to be changes to the Land Records Modernization Program; a Land Information Council will be created later this year. The purpose of that Council is to provide guidance to this body in regard to updates to the Land Records Modernization Plan as well as Land Records Modernization expenditures. Pichotta noted that we have to submit a draft of the Land Records Modernization Plan by the first week of October of this year. Given the time frame, the council won't be put together by that point but the language is pretty specific that a draft must be submitted. So we are going to provide the draft the staff develops, then we will bring it to the council and then to LMC. Then it will be submitted as a final. As you are aware, our revenues have declined steadily over the last half a decade. In prior budgets I may have been too optimistic - so this year I will be more pessimistic. Monumentation Fees revenue will remain the same at \$8,000. Under Planning, State Aid-GIS - \$11,000, Fines - \$250, GIS Revenue - \$1400, Under Zoning, Zoning Permits, the six month current is at \$17,000 so I think \$30,000 is reasonable, Sanitary Fees & Revenues - \$20,000, Land Records Fees - \$2000 and the WI Fund - \$15,000. Capital Improvements: We haven't replaced vehicles in a good number of years. I have been pushing out the replacement of the jeep for several years. Had we been replacing vehicles all along the budget would look better and we could largely meet the County Board budget directive by simply not replacing a vehicle. There is going to be a substantial increase in our budget when we do replace them. So I've bumped back replacing the 1998 Jeep to 2012, the 2001 Chevy 1500 to 2013 and the 2002 Ford F150 to 2014. One thing to think about also is the fact that the Chevy is starting to get to the point where it is beginning to nickel and dime us. We have put \$1500 in it in the last several months. Under new equipment is the survey equipment. We bought the equipment in 2000. It's starting to get antiquated. Possibly we may lease instead of buying. We're probably going to be asked to make do with less again next year. Whether it be vehicles or survey equipment, we may have to make a request and move forward with it independent from the budget cycle. The last page is a 3-Year Budget & Staffing Summary. Basically I'm proposing that nothing will change. In 2012, looking at a vehicle, 2013 is the vehicle plus the survey equipment and 2014 is a vehicle again. Chairperson Barkla asked Andy if he has talked to the Sheriff's Department about getting equipment from Waunakee. Pichotta stated he

thinks that equipment must be retained by the Sheriffs Department. Holst stated that he was a strong promoter of the 15% reduction, several of the departments met the 15% reduction and those departments were promised at that time they would be looked upon favorably when it came to future budgets. We'll send it to F & P and see what happens. At some point and time we will have to reprioritize where the money is spent in the County. I'm favorable to the budget as presented. Sanden stated losing staff is a short-sided way of meeting these numbers. It's not just a dollars and cents type of thing, you lose experience and you can't replace that very easily. I would also encourage this budget to go through as it is and throughout the year to think creatively. Rohl stated he agrees with Eric about the staff and Jeff about the department meeting past reductions. Fetzer stated he agrees you need to cut back on budgets but there comes a time when you can't cut back any further. Holst stated Andy has met the directive of the Finance & Personnel Committee and presented a budget with different scenarios that would meet the -3.4%. Other departments have not presented the different scenarios. Therein lies the difference. If they would present their budgets and prove they can not meet the -3.4% then we would address that at F & P. **Rohl moved to adopt the 2011 Land Management Department Budget as presented and forward a recommendation to the Finance & Personnel Committee that it be approved/Fetzer seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Public hearing to consider the expansion of a nonconforming structure in the Town of Hartland.

Public hearing on amendments to Chapter 237 (Subdivision of Land).

Discuss take action on renewal of a conditional use permit for WI Industrial Sand-Maiden Rock Facility

Discuss take action on proposed revisions to Chapter 240 relating to rural business/agritourism.

Pichotta noted that as many as a third of the County's in the State are enacting a fee for properties that have septic system maintenance requirements. Usually the fee is around \$5 per year. This could potentially generate additional revenue for the department.

Pichotta noted that the Comp Plan implementation section identified the need to review the fee schedule – but suggested that not be done until substantive changes to the zoning ordinance have been made.

Motion to adjourn at 7:55pm by Holst/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

(8/20/10)

MINUTES - Pierce County Land Management Committee Meeting, August 18, 2010

Present: Paul Barkla, Jeff Holst and Don Rohl

Absent: Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 1st & 15th, October 6th & 20th, all in 2010.

Approve Minutes: **Rohl moved to approve the August 4, 2010 LMC minutes/Holst seconded. All in favor. Passed.**

Public hearing to consider a request for a rezone from General Rural Flexible 8 to Rural Residential 12 District by Steve Bensed and Leslie McGinnis-Bensed, owners on property being Lot 1 of CSM V2 P161, Outlot B, part of Outlot A and part of Lot 1 CSM V6 P52, all located in the NE ¼ of the NE ¼ of Section 34 and the NW ¼ of the NW ¼ of Section 35, all in T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Barkla invited Mrs.

Bensed and Larry Murphy forward: Mr. Murphy explained this is a small piece of property that is a little light to split again in the General Rural Flexible 8 District. It's an area that is developing. Rohl asked what the difference would be between General Rural Flexible 8 and Rural Residential 12.

Pichotta stated the rezone will allow one more lot to be created where as under the current zoning it's not possible. Holst stated some of us were on the committee when this development was started. The Town road ran through there and was dedicated back to you. Mr. Murphy stated the street was never vacated. There was a triangle piece of property and the Bensed's only got half of that. **Staff Report – Emily Lund:** Mr. & Mrs. Bensed are requesting a rezone from General Rural Flexible 8 to Rural Residential 12. The property is located in Section 34 & 35, Town of Oak Grove and is approximately 7.992 acres in size. The applicants indicated in their application they wish to create one new lot for a new home. They also indicated that the reason for the rezone is this land is already a smaller parcel that was subdivided out in 1987. There is an existing residential development to the south and west of this property. The new zoning will allow for another lot to be created. Adjacent land uses include agriculture, residential and some woods. Adjacent zoning districts include General Rural Flexible 8 and Rural Residential 12. § 240-15 Purpose and Intent of Zoning Districts are listed in the staff report. The Town of Oak Grove Board of Supervisors recommended approval of this rezone request at their July 19, 2010 meeting. The Town referenced the following provisions contained in the Oak Grove Comprehensive Plan to justify their approval.

Chapter 3: Housing, pages 3-7, under Goal #1. Support subdivision practices that maintain the Town's agricultural and natural resources;

Policies, Programs & Actions #1. Encourage the infill of existing undeveloped subdivision.

Chapter 9, Land Use, page 9-9 under Goal #2. Promote and encourage growth and development in appropriate areas within the Town of Oak Grove.

Policies, Programs & Actions #4. Guide development away from prime agricultural lands and environmentally sensitive areas.

Pierce County's recently adopted comprehensive plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone.

A small portion of the property to the west is included in Planned Residential Development (PRD). PCC § 240-47-52 describes PRD; and in short, it is an overlay district intended to give landowners greater flexibility in developing tracts of land on a project basis by relaxing the various lot area, lot

width, setback, yard and other regulations. In order to take advantage of the flexible development, a minimum of 40 acres of land is needed. She had 7.992 acres so this overlay is irrelevant. The land is not in the Farmland Preservation Program.

Staff Recommendation: Given that the Town of Oak Grove Board of Supervisors has determined this request to be consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors. **Chairperson Barkla opened the hearing to the public.** Mike Regnier, neighbor to the East asked to see the map of the proposed rezone. **Public hearing closed.** Holst stated it looks straight forward and is consistent with the Town's comprehensive plan. **Holst moved to approve the rezone request from General Rural Flexible 8 to Rural Residential 12 for Steve Bensed and Leslie McGinnis-Bensed and forward to the Pierce County Board of Supervisors/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for an accessory residence in the General Rural Flexible 8 District by Randy Beadles, agent for Martha Beadles, owner on Lot 1, CSM V6 P41, located in the NW ¼ of the NW ¼ of Section 22, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Barkla invited Randy Beadles forward: Mr. Beadles stated the accessory residence was built in the pole shed without a permit with the intension that some day he would live in the main residence and his elderly mother would live in the accessory residence. They rent out the main house and his mother has since moved to California. They will abide by the limitations on the septic system.

Staff Report – Emily Lund: Since 2006, our office has been working with Martha Beadles to bring her property in compliance on a variety of violations. An apartment was created in the pole shed without obtaining a Pierce County CUP for the accessory residence. The apartment needed a Town Building permit, an inspection for Uniform Dwelling Code compliance and the approval for a connection to the principal home's septic system. All outstanding issues will have been addressed upon approval of this CUP. The property is in Section 22, Town of Clifton and is zoned General Rural Flexible 8. The house address is N7640 1090th St, River Falls, WI 54022. The Town has not yet adopted a comprehensive plan, so their recommendation should be considered non-binding and advisory in nature. The Town of Clifton Board of Supervisors recommended approval of this CUP on 8-4-2009. The Town Board minutes state, "Building was meant for storage but somewhere along the way, a residence was established. Motion to approve was made by Greg Eggers, seconded by John Rohl, contingent on fulfilling the requirements of Land Management. The Town Board issued a building permit on 8-4-2009 which expires on 9-4-2010. The Town Building Inspector, Todd Dolan, will inspect the premises and issue an occupancy permit if appropriate. LeRoy Peterson, Town Chairperson, signed the CUP Town Recommendation/Approval form on 1-5-2010, noting, "This is to complete the pending situation." The applicant owns 10.890 acres with a house with an attached garage and a pole shed. She would like to convert the east 1/3 of the pole shed to an accessory residence to rent out. The house is currently being rented out to a family. They tied into the existing septic system and we determined they would only be able to have 6 people between the two residences. Pierce County Code (PCC) § 240-40(A) allows accessory residences, which are accessory to single family homes in the General Rural Flexible 8 District with the issuance of a conditional use permit. PCC § 240-88 defines Accessory Residence as listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. The total number of people living in both the house and the accessory residence shall be less than or equal to 6 people. If more than 6 people are found to be living in both the house and accessory residence and/or the septic system fails, then the septic system will need to be expanded and/or replaced with the issuance of proper permits.

2. The Town Building Inspector, Todd Dolan, shall inspect the premises to ensure that it meets the Uniform Dwelling Code on or before September 9, 2010.
3. The Town Building Inspector, Todd Dolan, shall issue an occupancy permit prior to the applicants renting of the accessory residence.
4. A Uniform Address Number shall be assigned for the accessory residence and located at the driveway entrance off of 1090th St.
5. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise.
6. Applicant shall submit a rental management plan to the Department within 45 days. Plan must identify a local contact and address logistics associated with absentee landowner management.

Chairperson Barkla opened the hearing to the public. Rodney Filkins, neighbor stated he was fine with this except he just doesn't want any complaints about noise if he should have a band on his property. **Public hearing closed.** Holst asked if we have ever had a similar situation in the County - where the main structure was rented out and they also want to rent out the accessory structure. Lund stated that she asked Jim Kleinhans that question and he had said there was - but she cannot recall who the property owner was. **Holst moved to approve the accessory residence for Randy Beadles, agent for Martha Beadles, due to the fact this request is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Rohl seconded. All in favor. Passed.**

Discuss take action on a conditional use permit renewal request for a Private Outdoor Recreational Use/rodeo in the General Rural Flexible 8 District by Mark Anderson, owner on property located in the SE ¼ of the NE ¼ of Section 9, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Barkla invited Mark Anderson forward: Staff Report – Brad Roy: Mr. Anderson received a CUP to operate commercial rodeo events last year. There have been two events to date. The property is located along Hwy 10 but access to the events is off of 1090th St. Tents for shelter and satellite toilets for sanitary facilities have been used for the events and it has been determined that this will continue for any future events. No commercial structures will be constructed for the events. Parking is along 1090th Street. There have been no parking issues at the hosted events. Events are during daylight hours. A public address system is utilized and directed to the north. Staff has not received any complaints. The Town of Oak Grove was contacted regarding this renewal request; staff has not received any issues or concerns about the renewal from the Town. The existing conditions #1 - #8 are listed in the staff report. Staff recommends eliminating the old condition #1 because the use has been established and staff is recommending going to a 2 year renewal because there have been no complaints. **Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:**

1. This permit shall be valid for two years or if compliance issues arise.
2. A land use permit shall be required for any buildings located or constructed on the site.
3. Any on-premise signs shall be permitted by Pierce County.
4. Solid waste dumpsters or waste containers be located on site and maintained.
5. Hours of operation shall be from 12:00pm until dark.
6. Adequate liability insurance shall be maintained.
7. Property and containment fences around the facility shall be maintained.

Rohl moved to approve renewal of the conditional use permit for a Private Outdoor Recreational Use/Rodeo for Mark Anderson with conditions #1 - #7/Holst seconded. All in favor. Passed.

Discuss take action on a conditional use permit renewal request for Nonmetallic Mining by BS Construction Inc & Steve Schoeder Properties on property located in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson

Barkla invited Jeff Schoeder forward: Mr. Schoeder stated he is here for the renewal request. **Staff Report – Brad Roy:** Mr. Schoeder owns a mine which was expanded in 2006. County Materials is the current operator of the site. Activity in the mine has been significantly less since the opening of the County Materials Spring Lake Quarry. There is a small amount of blasting that takes place in the mine. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road S. County Materials intends to remove approximately 30,000 tons of material every year for the next five years. Processing of the material will be done at the County Materials Spring Lake Quarry. A map detailing the final extent of County Materials’ activity was distributed. Dust has been controlled on-site by improving roadways with gravel and applying water on an as-needed basis. Operations occur during daylight hours during the peak construction season, from Monday through Friday with occasional operations on Saturday. A pond was installed on the site. Measures have been incorporated to drain all industrial stormwater internally. Staff has not received any complaints since the 2008 renewal. BS Construction intends to mine an additional two acres, towards Cty Rd S and then close and reclaim the mine. The existing conditions are listed #1 - #12 in the staff report. The applicant wishes to have the peak particle velocity limit for blasting increased which would require modification to condition #6. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Hours of operation remain consistent daylight hours Monday through Friday, 6:00am – 9:00pm during the construction season with an occasional Saturday, 6:00am to 6:00pm, property owners within 300 ft and Mr. Huebel shall be notified in advance of Saturday operations hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.35 inches per second.
7. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. 50 foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Rock blown onto adjoining property will be removed by the operator at the request of the property owner.

Jim Small stated he would like to make a clarification to the staff report which states they will remove approximately 30,000 tons of material, processing of the material will be done at the County Materials Spring Lake Quarry. Mr. Small stated they will drill & blast and have a contract crusher brought in to crush the rock before it leaves the site. Then it’s washed and processed at the Spring Lake Quarry. By his calculations - that amount of material would put the nearest corner of the quarry about 550 feet from the Sylla’s property, five years from now. Brian LaRue, the blaster at the quarry since 2006, stated that blasting is designed based on proximity to the nearest dwelling - which is the Sylla’s. The State of Wisconsin has adopted the Z curve which Mr. LaRue described the methodology of. He stated they could do a better job if the PPV was increased. He stated that, based on his seismograph readings, they have never exceeded the Z curve. Bill Sylla, Jr, stated they really believe the original setbacks

need to be maintained. The big question today is the Peak Particle Velocity. When they originally came in, they asked for a .2. The regulations for the State are a maximum and County's can adopt less than the .35, some County's are at .30. Mom & Dad have documented the blasts and what effect it has had on the property. County Materials has done a good job of staying within the limits and the Sylla's appreciate it. They want to maintain status quo. Mr. LaRue explained the history of the quarry until 2008, indicating that they used to do a couple blasts a year. He stated the blasts are going to shake a house 900 ft away but not enough to cause damage. He can do it in one shot. The less blasting is better than more blasting and explained why. Bill Sylla, Jr stated there have been some blasters that have gone way out there and they don't have documentation for those. The .35 is working and they don't mind more blasts. **Holst moved to approve the conditional use permit renewal for nonmetallic mining for BS Construction and Steve Schoeder Properties with conditions #1 - #12/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for site plan review for building expansion in the Industrial District for FL Industries DBA Thomas & Betts, owner on land located in parts of the S ½ of the NW ¼, NE ¼ of the NW ¼, SW ¼ of the NE ¼ and the NW ¼ of the SE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Brad Roy: Thomas & Betts last received Site Plan approval for an expansion in 2008. Current plans are to expand an existing structure, construct a new building for shipping/receiving/loading, and to relocate the plate storage area. The construction and modifications, along with new machinery, will improve efficiency and allow the company to remain competitive. Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Most of the site work was completed during the 2008 expansion. There will be no significant additional areas of impervious surfaces. The building additions are to be approximately 63' by 280' on each side of the existing building. Lighting on this building will be limited to exit lighting, motion detectors and landscape lighting for the sidewalk along the west side. The new shipping/receiving/loading building will be constructed on an existing gravel area towards the southern end of the property. This building will be 90' by 180'. The plate storage area will be relocated away from the rail spur to the west side of the facility. Gravel currently covers this area. Lighting will be installed and directed down over this area. The new equipment will reduce the amount of noise generated by the operation. The company may hire up to 30-40 additional employees. There are 233 parking spaces on-site; this appears to be adequate for existing and potential expanded staffing. The new construction will not impact the existing septic system. A new septic system may be installed for the shipping/receiving/loading building. If not, the building will be connected to the existing system. Either septic scenario would trigger Department review. A berm was constructed to lessen the effects of the facility on the residential properties located on the Southern border. A drainage pond was installed in the south-east corner of the property. The new construction may create the need for limited grading. The Corporate Offices have not yet approved the expansion. Thomas & Betts wishes to start construction once they receive corporate approval and wish to complete all concrete work before winter.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine whether any changes or modifications to the plan are necessary. Mr. Bartels, representing Thomas & Betts, stated they were here before the committee less than 3 years ago and did comply with all the conditions. They are proud of the grass growing on their berm and haven't heard of any complaints. They met with the Planning Commission and the Town Board to let them know what their intentions are and didn't hear any complaints. We would like to get the site plan approval so the minute they get approval they can start. Ron Bartels introduced Jared Matzek as the new Manufacturing Engineer. Holst stated that the plans look good and noted that there aren't as many locals present as was the case when the project was started. **Holst moved to approve site plan review**

for building expansion for FL Industries DBA Thomas & Betts/Rohl seconded. All in favor. Passed.

Discuss take action on proposed amendments to Chapter 237 of the Pierce County Code

(Subdivision of Land). Staff Report – Emily Lund: Recently new legislation modified Chapter 236 of Wisconsin Statutes so we now have to amend our code. Local units of government have been directed to update their ordinances to reflect these revisions. There are seven changes to the code proposed to comply with State Statutes. They are:

1. Changed time frame for submittal of final plat. Must be within 36 months of preliminary approval.
2. Establishes process for determining if a final plat conforms substantially to the preliminary plat
3. Specify that plats need to comply with the local ordinance as it existed at the time the plat was submitted.
4. Surety bond or other security required for improvements is limited to the phase being constructed
5. Changes the time limit for recording subdivision plats
6. Specifies that local ordinances MAY NOT be more restrictive than state statutes
7. Clarify when local review of plat or CSM can be based upon the lands proposed use.

Lund stated that the State is not making the Chapter more difficult but more flexible. Holst stated they are making the rules more attractive to developers. **Staff Recommendation:** Staff recommends the LMC approve the proposed amendments to Chapter 237 – Subdivision of Land and direct staff to schedule a public hearing to consider their adoption. **Holst moved to approve the proposed amendments to Chapter 237 – Subdivision of Land and direct staff to schedule a public hearing to consider their adoption/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Two public hearings for Ray Dohm in the Town of El Paso, one is an accessory residence and expansion of a nonconforming structure.

Proposed 2011 Land Management Dept Budget

Motion to adjourn at 7:55pm by Holst/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 18, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 1 st & 15 th , October 6 th & 20 th , all in 2010.	Chair
3	Approve minutes of the August 4, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request to rezone from General Rural Flexible 8 to Rural Residential 12 District by Steve Bensed & Leslie McGinnis-Bensed, owners of Lot 1 of CSM V2 P161, Outlot B, part of Outlot A and part of Lot 1 CSM V6 P52, all located in the NE ¼ of the NE ¼ of Section 34 and the NW ¼ of the NW ¼ of Section 35, all in T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
5	Public hearing to consider a request for a conditional use permit for an accessory residence in the General Rural Flexible 8 District by Randy Beadles, agent for Martha Beadles, owner on Lot 1, CSM V6 P41, located in the NW ¼ of the NW ¼ of Section 22, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
6	Discuss take action on renewal of a conditional use permit for a Private Outdoor Recreational Use/Rodeo in the General Rural Flexible 8 District by Mark Anderson, owner on property located in the SE ¼ of the NE ¼ of Section 9, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
7	Discuss take action on a conditional use permit renewal request for Nonmetallic Mining by BS Construction Inc & Steve Schoeder Properties on property location in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Roy
8	Discuss take action on a request for site plan review for building expansion in the Industrial District for FL Industries DBA Thomas & Betts, owner of land located in parts of the S ½ of the NW ¼, NE ¼ of the NW ¼, SW ¼ of the NE ¼ and the NW ¼ of the SE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
9	Discuss take action on proposed amendments to Chapter 237 of the Pierce County Code (Subdivision of Land).	Lund
10	Future agenda items and departmental update.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/6/10)

MINUTES - Pierce County Land Management Committee Meeting, August 4, 2010

Present: Paul Barkla, Don Rohl and Joe Fetzer

Absent: Jeff Holst and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 18th, September 1st & 15th, all in 2010.

Approve Minutes: **Rohl moved to approve the July 21, 2010 LMC minutes/Fetzer seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Private Outdoor Recreational Use (commercial paintball playing field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Barkla noted that the applicants were not yet in attendance and indicated that he would entertain a motion to table this agenda item until later in the meeting. **Fetzer moved to table agenda item #4 regarding the commercial paintball playing field/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for Filling & Grading in the Floodplain/Shoreland Area by Hoffman Construction Co, agent for Pierce County, owner on property located in the NW ¼ of the SW ¼ of Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Barkla invited Ron Overlien forward: Mr. Overlien stated that they intend to level the site to create a pad area for the loading and unloading of barges. There will be temporary stock piles. Once the trucks are loaded they will go to the Stogdill property to unload. The site will be covered with breaker rock and they will line the outside (north end) with jersey barrier to keep the silt from migrating off the site. When they're done for the winter, all the stockpiles will be removed. The jersey barriers can be removed off the site or redirected on site. When they are completely done they will restore with seed and mulch. He stated that he had talked with Dick Bunce, Town Chairperson, if the committee would like some trees put back that would be an option. Their estimated start date this year will be Sept 1st – 15th and completion date Nov. 15th - Dec. 1st. Next year it will be June 1st and completion date will be Dec. 1st. They are going to try not to go into the year 2012. **Staff Report – Jim Kleinhans:** Ron works for Hoffman Construction Co who is the subcontractor for Edward Kraemer and Sons who was awarded the contract from the ACOE to do the lower embankment project for Lock & Dam #3. This request is for filling and grading and modifying an area on Trenton Island that the County owns. Trees will be cleared, soils and the terrain will be adjusted. There will be stockpiles during the summer months. The property is zoned Rural Residential 20 and presently managed as floodplain woodlands. The Town of Trenton supervisors approved this proposal during their June 8, 2010 town meeting without specific concerns or recommendations. Dept of Natural Resources is working cooperatively with the COE and they expect a Chapter 30 permit will be approved prior to the end of August. The project site is not mapped as wetland however, adjacent land to the east of 831st Street is mapped as forested a floodplain complex that is subject to more frequent flooding. This site is a little higher. Portions of the haul road (831st Street) will be widened and trees cleared so trucks can pass each other without tearing up the road. Temporary ground cover, shredded trees and stone pads will be used to prevent vehicle tracking onto town roads. A temporary barge access dock and work platform will be established to support equipment for barge and truck loading/unloading. The proposed landing along the shore will include steel piles supporting wooden timbers with a fabric lined rock filled barrier surrounded by a turbidity barrier placed in the river. This component will be authorized under the Chapter 30 permit. The project perimeter is staked along with a temporary elevation benchmark. The transfer site and stockpiles will be less than one acre of

disturbance. The on shore transfer site is staked 60 feet north of Bargrain's recreational property. Jim explained the photos provided in the staff report. Ron went over the time lines of when they expect to do the work. Shoreland provisions in the zoning code regulate filling and grading. Floodplain fill is regulated under Chapter 238 in the County Code. If additional fill is left on the site, there would have to be an analysis to see what the impact of the fill would be. I believe they are going to bring it back to the original grade so we don't have any potential impacts from fill left in the floodplain. Equipment should be removed when not operating on the site, in the event of a spring flood, there wouldn't be equipment. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether the proposed use would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the LMC consider approval of this request with the following recommendations.

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.
2. Project shall not commence until a lease agreement with Pierce County has been executed. The Land Management Dept shall be notified at project initiation.
3. Fill and equipment placed on transfer site property shall be removed at the project termination.
4. Material stockpiles in areas subject to seasonal flooding shall be removed at the end of the working season.
5. Vegetation management and restoration shall be consistent with Section 240-46 with final seeding and plantings established to stabilize the site. LMC should consider requiring the submittal of a final restoration plan.
6. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete.
7. This conditional use permit shall remain valid until the spring of 2012 to allow for final site restoration.
8. Additional road fill placed along 831st Avenue for truck turnouts shall be removed at the termination of the project.
9. The LMC should consider requiring a bond for final site restoration.
10. Remaining rock found suitable for use as rip rap shall be incorporated along the shoreline of the north tip of Trenton Island if allowable under the approved Chapter 30 permit.
11. Hoffman Construction Co shall repair damages to local town roads.
12. Re-orientate the jersey barriers if left on site between seasons so they are parallel with the flood water flow.

Chairperson Barkla opened the hearing to the public. Delbert Johnson, neighboring property, asked about the repair of the road. We understood there was going to be an overlay over the whole road. Mr. Overlien stated that is correct. Pichotta asked Mr. Overlien if they have an agreement with the Town regarding use of Town Roads. Mr. Overlien stated yes. **Public hearing closed.** Fetzer asked who does the assessment of the road. Pichotta stated that the issue was addressed by Hoffman's agreement with the Town. Fetzer asked what the jersey barrier is. Mr. Overlien stated it's like a lane separator for erosion control, a barrier. Fetzer stated it won't be a problem moving them. Mr. Overlien stated no.

Rohl moved to approve the conditional use permit for filling and grading in the shoreland/floodplain district for Hoffman Construction Co due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 – #12. Fetzer asked if this was stating a bond will be necessary for this. Kleinhans stated for nonmetallic mining we typically ask for \$1000 an acre. We're not going to be disturbing more than an acre. Fetzer stated that's not a consideration then. **Fetzer seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the Rural Residential 20 District by Hoffman Construction Co, agent for Pierce

County, owner on property located in the NW ¼ of the SW ¼, Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Barkla invited Ron Overlien forward: Staff Report – Pichotta: basically it's the same project we just heard about. Essentially the first CUP was to allow for the filling and grading to prep the site to use as a barge loading and unloading area and the second CUP is to enable the use of the site for actual loading and unloading. This is for a Utility Facility >1000 square feet because it's the provision in our code that was the most similar to the proposed use and is being processed consistent with that use. A future amendment will be brought to the committee. The proposed site is located in Section 3, Town of Trenton. Materials are proposed to be brought in from various quarries and pits to the transfer site with dump trucks and then loaded on barges and transported upstream to the work site. Barges would in turn, bring back excess soils from the construction site which would also be loaded into dump trucks and hauled off site to a designated area. A small area for short term stock piling of materials is proposed for use if truck traffic doesn't correspond with the loading/unloading of the barges. Tracking pads of stone or shredded trees will be used to prevent sediment tracking from the site. Hoffman is proposing to use this site for loading and unloading of barges from the COE project only. Equipment listed for this project include: barges, loaders, backhoes, dump trucks and a street sweeper. Extra fuel will not be stored on site. The dredge materials will likely be disposed of in Pierce County's Stogdill nonmetallic mining pit. The proposed haul route to the site is from US Hwy 35 to US Hwy 63 to 825th St to 831st St to the site. Applicant has proposed to operate 10 to 12 hours per day, 5 days per week, unless delays warrant changes. There are 6 residential sites located along 831st Street. These residences are primarily seasonal. Pierce County's Comprehensive Land Use Plan supports floodplain protection and supports the utilization of rivers for multimodal transportation system and movement of goods and people. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Applicant shall secure all necessary federal, state and local permits and approvals prior to commencing operations.
2. Applicant shall conduct all activities as described in their CUP application and narrative, unless otherwise stipulated by the LMC.
3. All activities shall be completed on or before December 31, 2012, unless an extension is granted by the LMC.
4. Transfer site work hours shall be from 7AM to 7PM.
5. Materials stockpiles and any equipment, waste containers, restrooms, etc. located in areas subject to seasonal flooding shall be removed at the end of the working season.
6. Proof of adequate liability insurance shall be provided.
7. Applicant shall be responsible for and to repair any damage to the haul route and private property abutting the haul route caused by its activities.
8. Project shall not commence until a lease agreement with Pierce County has been executed. The Land Management Dept shall be notified at project initiation.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Kleinhans asked Mr. Overlien if they are running the trucks taking material from the river to the Stogdill facility are they going to deadhead or bring back material. Mr. Overlien stated they will either bring back sand or rock materials if possible. **Fetzer moved to approve the conditional use permit for a Utility Facility >1000 square feet for Hoffman Construction Co due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 – #8/Rohl seconded. All in favor. Passed.**

Fetzer moved to take agenda item #4 off the table and hear it/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for a Private Outdoor Recreational Use (commercial paintball playing field) in the Primary Agriculture District for Aaron Tholey, agent for Timothy & Carolyn Jennings, owners on property located in the NW ¼ of the SW ¼ of Section 5, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Barkla invited Aaron Tholey and Timothy Jennings Forward: Mr. Tholey stated they are looking for a conditional use permit for a paintball facility. Mr. Jennings stated he and friends had used the old beef pasture for paintball activities. Aaron approached him this spring and asked if it would be a possibility to lease the land and he figured both would benefit financially. I'm concerned about the property and checked with Land Conservation to make sure there wasn't going to be drainage issues. Everything will be established in grass. They stated there weren't any problems with erosion control. When I approached the Town Board, I didn't realize we had to come to this committee. I have 40 acres and the closest house is a quarter mile, plenty of parking area. It's hidden by the corn fields. When soybeans are planted you will be able to see it from County Rd M. We will have portable restrooms. Nothing permanent except poles in the ground to protect spectators, in case Aaron changes his mind in two years. **Staff Report – Emily Lund:** This is a conditional use permit request for a Private Outdoor Recreational Use for a commercial paintball playing field. Mr. & Mrs. Jennings own 520.04 acres. This parcel is 40 acres and currently two acres is being used for the paintball playing field. They hope to expand the playing field within the parcel if the business does well. The CUP is necessary because Mr. Tholey wants to start charging admission for the use of the paintball course. The property is located in Section 5, Town of Clifton and is zoned Primary Agriculture. Clifton Town Board recommended approval of this request on 7-6-2010. The Town's approval stated, "Be sure the parties follow the Pierce County guidelines." Pierce County Code § 240-88 defines 'outdoor recreation, private' as "land uses which offer recreation activities primarily outdoors, including such uses as private parks, sportsmen's clubs, campgrounds, golf courses and ski hills and which are operated for members or on a commercial basis for members of the public." Surrounding land uses include agriculture, woodland and residential. The commercial paintball playing field is to be located approximately 300 ft north of the Jennings' driveway; between 400-700 ft west of 1160th Street. The 2007 orthophoto map (attached to staff report) shows where the course has been set up in the past. The owner indicated that the location of the paintball playing field is on land that is not the best for farming. The name of the company is "Vintage Paintball Park LLC." Proposed hours of operation are daily 9AM to 9PM. The entrance will be gated and locked. The paintball course will typically operate on the weekends and an occasional weekday. The applicant anticipates a staff of 10 employees or less. Currently there are no employees and people assist on a volunteer basis. The paintball course will have inflatable bunkers, recycled electrical spools and collapsible/movable buildings. Safety netting will be put up for games and taken down at the end of the day. Equipment will be put away before winter and is proposed to be stored in two 8ft x 8ft x 40ft storage containers. With the CUP approval, a lean-to shelter and 3 on-premise advertising signs will be permitted. Pierce County Code § 240-61F(2)(a) allows a total of 3 signs per business. The owner indicated that no permanent structures will be built on the playing field. Portable satellite waste containers will be provided (1 to 50 people) and maintained for patrons. Insurance and waivers of liability were secured and reviewed by the owner's attorney. A copy of the liability insurance was submitted to the Department. When the business gets operating, Mr. Tholey indicated he will purchase sport insurance for paintball. A copy of the changes or additional liability insurance will be submitted to the Land Management Department. For public safety and to find the park, a Uniform Address Number should be assigned and located at the driveway entrance off of 1160th St. Mr. Tholey wants to start charging an admission fee for the use of the paintball course. He also wants to sell supplies, like equipment, paintballs, snacks and sport drinks. Alcohol will not be sold, served or allowed on premises. Off-street parking per Pierce County Zoning Code § 240-54(A) requires 1 space per 4 patrons. The area proposed for parking allows for 58 parking spots or 232 people. **Staff Recommendation:** Staff recommends that the Land Management Committee (LMC) determine whether or not approval of this request is contrary to the public interest and whether it

would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. A Uniform Address Number shall be assigned and located at the driveway entrance off of 1160th St.
2. Applicants shall be limited to two (2) – 8 ft x 8 ft x 40 ft proposed shipping containers on the property.
3. Adequate portable satellite waste stations (1 to 50 people) shall be provided.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.
5. Hours of operation shall be daily 9AM to 9PM, or as otherwise established by LMC.
6. The applicant shall be limited to 10 employees.
7. A copy of any changes or additional liability insurance shall be submitted to the Land Management Department.
8. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise.
9. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed.

Rohl asked if the storage containers are semi trailers or commercial containers. Mr. Tholey stated they are big shipping containers that he stores his tools in right now. Fetzer asked when they plan to get going. Mr. Tholey stated he has things to do yet and planned on opening in the spring. Pichotta stated that in looking over this he realized the retail sales component wasn't addressed. He suggested adding condition #10 Retail sales shall be limited to those items identified in the permit application. **Fetzer moved to approve the conditional use permit for a Private Outdoor Recreational Use (commercial paintball playing field) by Aaron Tholey, agent for Timothy & Carolyn Jennings, owners due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 – #10 with #10 stating: Retail sales shall be limited to those items identified in the application/Rohl seconded.** Mr. Tholey asked about the 2 year conditional use permit. He asked if he will be notified by mail or if he has to come back before the committee for that. Roy stated we attempt to notify but it ultimately is your responsibility to renew it. **All in favor. Passed.**

Public hearing to consider adoption of the Pierce County Outdoor Recreation Plan 2010 – 2014.

Staff Report – Brad Roy: The Mississippi River Regional Planning Commission completed the update of the recreation plan. No changes have been made to the plan since you last saw it. The County prioritized projects listed on pages 42 & 43. **Staff Recommendation:** Staff recommends the Land Management Committee review the enclosed plan and consider any public comments received to determine if changes or additions are needed.

If determined to be appropriate, staff recommends the LMC approve the plan and direct staff to forward the attached resolution adopting the Pierce County Outdoor Recreation Plan 2010 – 2014 to the Finance and Personnel Committee for approval.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Rohl moved to approve the Pierce County Outdoor Recreation Plan 2010 – 2014 and forward the resolution for adoption to the Finance and Personnel Committee/Fetzer seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Rezone request from General Rural Flexible 8 to Rural Residential 12 in Town of Oak Grove

Conditional use permit for an Accessory Residence in the Town of Clifton

Conditional use permit renewal request for Mark Anderson for a rodeo in the Town of Oak Grove

Conditional use permit renewal request for Nonmetallic Mining for BS Construction in the Town of Rock Elm

Site plan review for a building expansion in the Industrial District for Thomas & Betts

Proposed amendments to the Subdivision Code, Chapter 237.

Chairperson Barkla asked Pichotta when the budget would be brought to the LMC for review. Pichotta stated that he typically brings the budget to the committee at the first meeting in September.

Motion to adjourn at 7:55pm by Fetzer/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(7/23/10)

MINUTES - Pierce County Land Management Committee Meeting, July 21, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden

Others: Jim Kleinhans and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 4th & 18th, September 1st & 15th, all in 2010.

Approve Minutes: **Fetzer moved to approve the July 7, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss take action on status report and potential modification of a conditional use permit for a private heliport in the General Rural Flexible 8 District for Christopher Brekken, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Barkla invited Christopher Brekken forward: Staff Report –

Jim Kleinhans: Mr. Brekken obtained a conditional use permit for a private heliport on his property on January 6, 2010. One of the conditions required that he provide a status report to the Land Management Committee within 6 months. Staff contacted Chris and asked him to describe the use of his property as a heliport. Kleinhans noted that neighbors had filed a lawsuit which was dismissed by the court and that there has been one complaint. The conditions associated with the CUP are listed in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether modifications or additions to the conditions associated with this permit are necessary to mitigate off site impacts. Mr. Brekken explained he is asking to have a few night hours for flying. His pilot's license involves night flights. For some destinations, he is not able to turn right around and fly back because of flight rules or if storms move in, he has no choice but to wait out a storm. He would like a provision for that. Sanden asked about the occasional night flights, how feasible would it be to drop your car off at the Red Wing Airport and drive back. Mr. Brekken stated it's the unknown and getting to the airport would be challenging because he would still have to get back in time. During the summer it's easy not to fly at night. Holst asked how many hours of night flight he needs to retain his license. Mr. Brekken stated one flight every 90 days. Holst asked if ten hours a year would cover it. Chairperson Barkla asked if it were conceivable to state: an hour after sundown. Mr. Brekken stated technically by definition, according to FAA, night time flying means the time between the end of evening civil twilight and the beginning of morning civil twilight. Chairperson Barkla asked if he is coming in later than midnight if he could call the Land Management Office. Mr. Brekken stated it would be easy to report back or send an e-mail. Sanden asked for a little detail on the reasons the Pierce County case was dismissed. Kleinhans stated that he doesn't have that information. He also explained that when they permitted Riviera Airport they limited them to 80 flights a month, and stipulated that no flights shall occur between 10:00pm and 7:00am except for in an emergency. They have multiple pilots and they provide flight logs to our department. Fetzer asked how he has been keeping up his night flying. Mr. Brekken stated that he has let it expire. **Holst moved to amend condition #3 to add "and up to 10 night flights per calendar year" for the conditional use permit for a private heliport in the General Rural Flexible 8 District for Christopher Brekken/Rohl seconded. All in favor. Passed.**

Discuss take action on recommendation regarding creation of County Land Information

Council. Staff Report – Jim Kleinhans: A Land Information Council must be created by each county participating in the Wisconsin Land Information Program (WLIP) to remain eligible to retain fees for land records modernization activities or to apply for program grants. The Land Information Council is to consist of not less than 8 members and is to include the Register of Deeds, the County Treasurer, the Real Property Lister (or their designee), and members appointed by the County Board that are listed in the staff report. **Staff Recommendation:** Staff recommends that the Land Management Committee

recommend to the Finance and Personnel Committee that a resolution creating a Land Information Council be approved and forwarded to the County Board of Supervisors for adoption.

Sanden moved to forward a recommendation to Finance and Personnel, to create by resolution a Land Information Council/Fetzer seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Conditional use permit for a commercial paintball field in Town of Clifton

Conditional use permit for Filling & Grading in the Floodplain/Shoreland and a Utility Facility in the Town of Trenton

Adoption of the Pierce County Outdoor Recreation Plan

Motion to adjourn at 7:20pm by Holst/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

(7/9/10)

*** Revised 7-14-10 at 10:35am.**

MINUTES - Pierce County Land Management Committee Meeting, July 7, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the Pierce County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 21st, August 4th & 18th, all in 2010.

Approve Minutes: **Fetzer moved to approve the June 16, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District for Robert & Sharon Kelly, owners on property located in the SW ¼ of the SW ¼ of Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla invited Mr. & Mrs. Kelly forward:

Mr. Kelly explained that his wife's family has lived on the property for almost 60 years and they have had three different structures on the property. The structure they have now was built in 1988 and they didn't realize the house and the deck were built within 65 feet. This year they want to add a sunroom and a deck. Staff visited the site and said the structure was nonconforming. They received the permit for the sunroom but not the deck. They would like to get the deck permit with no foundation, which would be 55 feet from the center of the road. Most of the neighbors are closer than the 75 feet from the road. They don't have anyone within 200 feet for averaging. **Staff Report – Jim Kleinhans:** Mr. Kelly has a home along 290th Ave in the Village of Diamond Bluff. He had a deck on the front which was removed and we permitted a screen porch which has a second story that he would like to attach a deck to. He had one building within 200 feet from which averaging could be done from but it wasn't enough relief. The property is located on a dead end road with a 25mph speed limit. Several homes along this road are already located within that setback. We're trying to address public interest and public safety issues. Town of Diamond Bluff Supervisors recommended approval of this request and the Town building inspector was contacted to permit the screen porch conversion. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether this request is contrary to the public interest or detrimental or injurious to public health, public safety or the character of the surrounding area.

If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for expansion of a nonconforming structure. **Chairperson Barkla opened the hearing to the public.** Fred Ottem, property owner northwest of the Kelly's, stated most of the properties in Diamond Bluff are nonconforming. His property is even closer to the road. The Kelly's live on a dead end road and he feels this would work out well for the neighborhood. **Public hearing closed.** Holst stated Diamond Bluff was platted in 1854 and most of the houses sit right on the street. The Kelly's home is elevated so this shouldn't cause a problem if there would be an accident. Sanden noted the Town of Diamond Bluff Supervisors did approve this. **Sanden moved to approve the conditional use permit for expansion of a nonconforming structure for Robert & Sharon Kelly due to the fact it is found to be not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a duplex in the General Rural Flexible 8 District by Darrell Schuster, owner on property located in the NE ¼ of the NE ¼, Section 11, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Barkla recused himself from discussion and voting due to possible conflict of interest. Acting Chairperson Fetzer invited Darrell Schuster forward: Mr. Schuster explained that when he

purchased the property at the end of 2006 or beginning of 2007, it was already structurally a duplex. It has two kitchens, separate bathrooms and one half cannot be accessed without leaving the building. When he purchased the property, he thought it was OK to use as a duplex. He rented out both the upstairs and downstairs to tenants. He had issues with the tenants regarding dogs. He resolved the issues with the Town of Oak Grove. He is requesting this permit to use the structure as a duplex or half the house will be a waste. Sanden asked how the dog issue was resolved and if there have been any more issues. The Town of Oak Grove had called him and stated that one of his neighbors was having an issue with the dogs. Mr. Schuster stated that he allowed two dogs in the downstairs and one dog in the upstairs. He found out the downstairs tenants had five dogs that weren't licensed with the Town of Oak Grove. The dogs were licensed in River Falls, and since the tenants were moving in a couple months they allowed that. The upstairs tenants were evicted. He no longer allows pets or livestock.

Staff Report – Brad Roy: Mr. Schuster did a very good job of explaining the request. It has two three-bedroom units. Each unit will have a maximum capacity of 6 people. The owner believes the ideal occupancy for the entire structure is 8 people and will make efforts not to exceed that. The applicant has indicated the following will be included in the terms of any future lease agreements: Tenants will be allowed one working, licensed vehicle per adult living at the residence with additional vehicle approved on a case-by-case basis. Garage doors will be required to be closed when not in use. Tenants will be required to maintain the lawn; the owner will provide and maintain equipment. Snow removal will be contracted. Tenants will be required to contract their own sanitation and recycling. Trash burning will be prohibited in the lease. Animals will be prohibited on all leases. If animals become permitted in the future, proof of licensing and control measures will be required. Livestock and horses are prohibited.

The current septic system is designed for six residents. The applicant has been working with a plumber and the current system will be modified to accommodate 12 occupants pending approval of this request. § 240-54 Off-street parking requires that a minimum two off-street parking spaces be provided per dwelling unit. The property has been inspected by Todd Dolan, the Oak Grove Building Inspector. Several discrepancies were identified and will need to be brought up to code prior to use as a duplex. The property owner's and property manager's contact information will be provided to all neighbors within 300 feet of the property, the Oak Grove Town Board and any others who request the information for the purposes of maintaining good order on the property. The Town of Oak Grove recommended approval of this request on May 17, 2010. The Town's comprehensive plan was not referenced in the approval and is therefore assumed to be silent on this issue. The *Context Document of Pierce County Comprehensive Plan* states in cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall be advisory and non-binding.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest or detrimental or injurious to the public health, public safety or character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following condition:

1. All building code issues shall be resolved to the satisfaction of the Town of Oak Grove Building Inspector.
2. A minimum of two parking spaces shall be provided for each dwelling unit.
3. The septic system shall be upgraded to accommodate 12 occupants prior to using the structure as a duplex.
4. This conditional use permit shall expire in 2 years. Permit may be renewed administratively if there are no compliance issues.

Acting Chairperson Fetzer opened the hearing to the public. Greg Kerr, N6053 Cty Rd E directly north of the property, stated he feels this is a single family residence and wondered how a duplex would affect property values. He is concerned about vehicles, the fact that dogs could be allowed there in the future since that has been the problem in the past and the kids in his backyard. He stated he wouldn't mind someone that lives there and rents out one unit. **Public hearing closed.** Mr. Schuster stated he is not asking to make it a duplex rather to use it as it was built. Regarding the vehicles and

traffic, he stated there has never been an accident or vehicle incident. He stated the property manager has made several attempts to contact the neighbors. Mr. Kerr stated he has never been contacted by the property manager. Holst suggested that the best way to control your neighbors property is to own it. I understand concerns about an absentee owner and about a young owner that may need to do a few things to it and learn to be a good neighbor. He can't control bad tenants. There are other duplexes in the area. Sanden added he is satisfied with the lease agreement and this conditional use permit will be reviewed in 2 years. Holst stated the nice part about a conditional use permit is that if the applicant doesn't live up to the conditions, the committee can add more conditions or pull it. **Holst moved to approve the conditional use permit for a duplex for Darrell Schuster finding that the request is not contrary to the public interest, nor detrimental or injurious to public health, safety or character of the surrounding area, with conditions #1 - #4/Sanden seconded. Passed with Chairperson Barkla not voting.**

Public hearing to consider a request for a conditional use permit for filling and grading in Shoreland/Wetland District for Park Construction Co, agent for Thomas & Pauline Jurgensen Trust, owners on property located in the SW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla invited Gerrod McDaniel and Marc Allen forward: Mr. McDaniel explained that Coastal Environmental and Parks Construction hold a contract for nine embankment projects for Lock & Dam #3. 95% of the project footprint is located below the high water mark (OHWM) and the beginning 350 feet nearest 290th St is located above the ordinary high water mark. The 350 feet includes a trail and a cultural resource area that has to be protected. It will have textile fabric and sand to protect the artifacts, which will be removed after the project is complete. Looking at the six conditions in the staff report and hitting on them. They have talked to The Town of Diamond Bluff and notified them that they hope to start Monday (12th) and be done by December. Erosion control plans are in place along the slope and trail going out. Marc Allen stated they are asking permission to do this for the upper embankment project. It's a necessary part of Lock & Dam #3. They have had problems in the past in the roller gates of the dam. The river came up, flooded and caused damage. COE decided this is necessary to survival of Lock & Dam #3. Holst stated it's important to keep this pool high because it provides the water for cooling the NSP Plant. **Staff Report – Jim Kleinhans:** There are a number of projects the COE is leasing in this region. The original footprint of the plan was larger and had more fill. This group modified that to reduce the fill but it is still based on the slope and proximity to wetlands in the floodplain. The property is zoned Agriculture Residential and is used primarily for recreation. The Town of Diamond Bluff supervisors approved the request during their June 10, 2010 meeting without any specific concerns. Staff met with the contractors, Park Construction Co and Coastal Environmental Group, DNR and ACOE personnel on May 18, 2010 to assess the project. It was determined the county shoreland code controls work elements to create access to the site. There are two miles of work to be done. Trucks and equipment will be utilizing the proposed trail to bring material into the site and removing excess material to the Mathy pit. This will potentially be used as a cap for the sand that will be transported there from Corp Island. There is also an archeological feature at the base of the hill that requires some protection that they discussed earlier. The wetlands are at the base of the slope which is regulated by DNR Chapter 30 permits. The filling and grading provisions are listed in the staff report. Floodplain is at elevation 687 and the majority of the filling we are doing is above that elevation. Tree and vegetation removal is proposed to be at a minimum and we will be monitoring that. If there is any excessive tree trimming or grubbing we will have an issue with that. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether this land use request is contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the LMC consider approval of this request with the following conditions:

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.

2. The Land Management Department shall be notified at the project initiation.
3. Fill placed on the Jurgensen property shall be removed at the project termination and properly disposed of outside the floodplain.
4. Vegetation management and restoration shall be consistent with Section 240-46 with final seeding and plantings established to stabilize the near shore areas.
5. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete.
6. The project be completed within 12 months of approval.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Sanden asked when it stated the majority of the project is being approved by DNR. Is that because the area above the wetlands or the floodplain isn't pertinent to the DNR? Kleinhans stated they have jurisdiction over the area below the ordinary high water mark and they are overseeing approximately two miles of project. Holst stated we have 350 feet under our purview. The trail they are going down is an existing trail. **Sanden moved to approve the conditional use permit for filling and grading in the Shoreland/Wetland District by Park Construction Co, agent for Thomas & Pauline Jurgensen with conditions #1 - #6, due to the fact this is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for a rule exception to the requirement that an erosion control plan be completed for a 1-Lot major Certified Survey Map for William & Judith Emery, owners on property located in the SE ¼ of the SE ¼, Section 26, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Emily Lund: We have a request for a rule exception to the requirement that an erosion control plan be completed for a 1-Lot Major CSM. Mr. & Mrs. Emery are proposing to create their fourth parcel within a five year period, which is considered a Major CSM. Pierce County Code requires erosion control plans for the creation of Major CSM sites and rule exceptions per PCC § 237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The property is located in Section 26, Town of Trenton. The following conditions must be present for a proposed land division to qualify for this type of rule exception (LMC policy):

1. No roads are being constructed as part of the land division.
2. No erosion problems are present on the property.
3. There are no problems with stormwater or surface water flow on the subject property or that originate on the subject property.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Holst moved to grant the rule exception to the requirement that an erosion control plan be completed for a 1-Lot Major CSM for William & Judith Emery due to the fact it meets conditions #1 - #3 of the LMC policy/Fetzer seconded. All in favor. Passed.

Discuss take action on a request for approval of a 1-Lot major Certified Survey Map for William & Judith Emery, owners on property located in the SE ¼ of the SE ¼, Section 26, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Emily Lund: The same property; the same 1-Lot Major CSM. Again they are creating their 4th parcel within a five-year period, which is considered

a Major Certified Survey Map. This is in Section 26, Town of Trenton. Surrounding land use is mostly agricultural and residential. The zoning district is General Rural Flexible. Density shows 8.7 lots rounded per Chapter 240-25C(2) allows for 8 lots. The Town of Trenton Plan Commission and Town Board reviewed the CSM. It was approved by the Town Board on 6-8-2010. Town of Trenton issued a driveway permit. Town of Trenton's minimum lot size of 1 acre has been met. The property is not subject to any hazards to life, health or property. The property has the required road frontage and meets slope requirements. Mark Iverson completed a soil test and a mound septic system is recommended. Property is not in the Farmland Preservation Program. Pierce County Surveyor reviewed and approved the CSM. Survey review fees were paid. **Staff Recommendation:** If a rule exception has been granted to the erosion control plan requirement, staff recommends the Land Management Committee approve this Major CSM.

Holst moved to approve the 1-Lot Major CSM for William & Judith Emery/Rohl seconded. All in favor. Passed.

Discuss take action on renewal of a conditional use permit for Wisconsin Specialty Sand on parcels owned by WI Specialty Sand, Lloyd Anderson, Richard Anderson, Hugh Schilling Trust, Brown Seed Farms Inc, Dennis Potts and My Course in the General Rural District, all located in Sections 2, 3 and 10, T24N, R17W, Town of Isabelle, Pierce County, WI. Staff Report – Brad Roy:

WI Specialty Sand received a conditional use permit in 2006 for nonmetallic mining and a conditional use permit to expand operations in 2008. In 2008 the hours of operation were also expanded to 24 hours a day. WSS owns or leases the mineral rights to all of the above referenced parcels. There are four residences located within the permit area and others in close proximity. The Land Management Committee adopted a Nonmetallic Mining Policy on October 3, 2007; this policy states that setbacks to existing residences shall be established based on consideration of site specific criteria and in no case will extraction activities be permitted within 200 feet of any existing residence. This is a 24 hour a day operation with approximately 25 employees. The details of the mining process have not changed. An abandoned town road was disturbed when creating this, the previous conditions said that vegetation needed to be established; that has been done. Staff has occasionally received complaints about trucks not being tarped as they exit. It doesn't happen often and the situation is usually corrected with a phone call. The existing conditions are listed #1 - #22 in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions: The conditions are #1 - #21. Roy also noted that management has changed. Rich Budinger, Regional Manager for WI Industrial Sand, manages the properties of Maiden Rock, Bay City, which this conditional use permit is for, Hager City plant and Menomonie. Other Fairmount management staff was introduced. Mr. Budinger read a statement of the company's activities and community involvement in the past year and a half. Mr. Budinger asked to make a change to one of the bullet points in the staff report that states conveyors will carry the washed and partially dried sand to the outside face of the mine. They aren't using a conveyor. They actually load the trucks underground. Bechel Excavating is their contractor. Another condition they would like to request a discussion on is #7, the last sentence; Blasting shall be restricted to four days per week. Chairperson Barkla asked how many days they are asking for. Mr. Budinger stated six. Four days has been a challenge because of the volume needed to produce in four days of blasting for six days of operation 24 hours a day. They have to shoot that many more headings in the four days. It's quite a bit of blasting. They would like to spread that out over time. Right now they shoot Monday through Saturday, in four day rotations. They are working and communicating with the neighbors. They are policing the tarped trucks. With the increase in volume and running six days, potentially seven days a week, it challenges them to shoot earlier in the mornings and later in the day. Chairperson Barkla asked what the neighbors say about the request for additional days. Mr. Budinger stated they have not talked to the neighbors about the additional days. Holst asked if they are current on their blasting

reports. Roy stated yes. Sanden stated he appreciates the focus on sustainable development and all the community involvement. What is the frequency of the complaints on the tarping of trucks and is there any complaints about blasting? Roy stated one or two complaints a year about the trucks and staff has never received complaints about the blasting. Mr. Budinger stated they received phone calls from one resident about blasting. Chairperson Barkla stated he recalls a complaint about the speed of trucks coming down the hill into Bay City. Holst stated since they moved to the other driveway they can't get going as fast. Mr. Budinger stated the street sweeping they do is contracted and they sweep on Friday and Saturday's. They try to keep the sand off the apron. That started with the flood run last year.

Sanden moved to approve the conditional use permit renewal for nonmetallic mining with conditions #1 - #21, amending the end of #7 to read Blasting shall be restricted to six days a week/Fetzer seconded. All in favor. Passed.

Discuss take action on the Pierce County Outdoor Recreation Plan 2010 – 2014. Staff Report – Brad Roy: You have before you a draft of the plan developed by the Mississippi River Regional Planning Commission. On March 3, 2010 this committee developed “goals and actions” to improve the recreational opportunities in the county, which are listed on pages 42-43. We're looking for any guidance from committee for any changes that need to be made or if it's acceptable to move on to a public hearing. Holst stated it looks like it's everything that we asked for. Sanden asked Brad if there was any deviation. Roy stated no. **Rohl moved to direct staff to schedule a public hearing to consider adoption of the Pierce County Outdoor Recreation Plan 2010 – 2014 /Fetzer seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Chris Brekken heliport in the Town of Oak Grove

Motion to adjourn at 8:10pm by Holst/Rohl seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 7, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,

A quorum of County Board supervisors may be present.

(6/25/10)

MINUTES - Pierce County Land Management Committee Meeting, June 16, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 7th & 21st, August 4th & 18th, all in 2010.

Approve Minutes: **Rohl moved to approve the June 2, 2010 LMC minutes/Sanden seconded. All in favor. Passed with Fetzer not voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for expansion of a preexisting, nonconforming use (Salvage Yard) by William F. Holst III, owner on property located in the SW ¼ of the NE ¼ of Section 2, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.

Chairperson Barkla invited William Holst forward: Jeff Holst recused himself because of possible conflict of interest from discussion and voting on this issue. Mr. Holst presented a map showing the expanded area and the area already permitted that runs to Highway 35. He is asking to add five acres due west of the existing parcel. He has built his company up in the last couple years and now has 20 employees. There are over 1000 cars there and the new 4800 sq ft building holds racking for parts storage. Mr. Holst has met with the Diamond Bluff Planning Commission and the Town Board. They talked about building a 9 ft high fence from the scale staying 100 ft back from the highway. It's his understanding the County wants him to fence the entire site. He would like to fence back 100 ft along the highway and to screen the appliances and extend the fence to the top of the hill. **Staff Report**

– **Jim Kleinhans:** Mr. Holst has operated a salvage and excavation company on this site in the Town of Diamond Bluff since prior to the Town's adoption of County Zoning. On November 5, 2008, Mr. Holst obtained a conditional use permit to authorize the expansion of this use onto adjacent property. On April 21, 2010, Mr. Holst requested site plan review for a building expansion. Site plan approval was granted with several conditions which have not yet been satisfied. The site is zoned Industrial. The Town of Diamond Bluff recommended approval of this CUP with the condition that a 9 ft high fence be located 100 ft from the state highway centerline that would run from the scale to the south property line. This request is for an additional five acres on the west side of the property. The committee should consider the requirements of a new salvage yard to determine if it is appropriate or necessary to establish additional conditions to mitigate any of the potential impacts that said requirements are intended to address. If you look at the requirements under Section 240-37(C) for salvage yards and pay close attention to items #3, #4, #6 and #7. Chairperson Barkla asked Jim to read those.

#3 Salvage materials shall be enclosed by a suitable fence or vegetative screening as approved by the Department of Land Management Committee that the materials are not visible from other property in the vicinity of the salvage yard nor from a public road nor from navigable water. The fence or vegetative screen shall be a minimum of eight feet in height and shall be properly maintained to satisfy the obscuring objective.

#4 Salvage materials shall not be piled higher than the height of the fence or vegetative screen.

#6 For fire protection, an unobstructed fire break shall be maintained, 15 feet in width and completely surrounding the salvage yard.

#7 At the site, appropriate measures shall be taken to prevent water and soil contamination, for oils, gasoline, grease or other contaminants. At a minimum, there shall be five feet of soil between the water table and bedrock. If wells are located within 1,000 feet of the site the Land Management Committee may require a liner and bonds for removal of the contaminated soil.

Section 240-31 establishes standards for Landscape buffers:

B. Applicability. Landscape buffers requirements shall only apply to proposed uses in cases where a commercial or industrial use abuts a residential or agricultural district; which this site does.

Commercial and industrial parcels which are developed as of the effective date of this chapter are

exempt from this provision, except such parcels shall comply when the parcel is expanded in size or the use expands to an adjacent parcel which was previously undeveloped for such use.

Section 240-76 (F) The Land Management Committee may, in approving an application for a conditional use permit, impose such restrictions and conditions that it determines are necessary to prevent or minimize adverse effects from the proposed use or the development on other in the neighborhood and on the general health, safety and welfare of the county.

Section 240-75 Site plan approval for the original site plus five acres added in 2008 was granted on April 21, 2010 with the following conditions:

1. Applicant shall provide landscape buffer plan for the parcels within 6 months.
2. Proposed baler building shall be moved to comply with setbacks. Which he has done.
3. Onsite wastewater system shall be evaluated and brought into compliance with state plumbing code within 6 months.
4. Adequate parking for clients and employees be delineated in 6 months.

Jim explained this request would allow for a total expansion of ten acre beyond the original site. He presented photos to the committee, taken this afternoon, that demonstrated through the use of a pole and red flag, what would be screened and what would be visible if a fence, located 100 feet from the road centerline, were constructed to a height of 9 ft and 14 ft.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area.

If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for expansion of a nonconforming use. Staff suggests that the following conditions be considered:

1. The site shall be screened from public view within 6 months. (Requiring a fence of a specific height and location should be considered.)
2. Surface water drainage and sediment controls shall be maintained in accordance with the DNR stormwater permit.
3. A "fire break" 15 feet wide shall be established and maintained around the perimeter of the salvage yard.
4. Security fencing around the perimeter of the entire site shall be established within 12 months.
5. The applicant agrees that prior to seeking permits for new construction or an addition to an existing structure or building, site plan approval shall be sought.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked about Chapter 240-37C, has there been any evaluation for #7 water contamination with oil, gasoline or grease? Kleinhans stated Mr. Holst has a consultant to address those issues. Mr. Holst explained most salvage yards have the same consultant that deals directly with the DNR. They send us to school once a year. They make sure we are in compliance. They have a pond on site to catch runoff water and have never had any citations. We were inspected a month ago by the DNR for appliances. Mr. Holst asked about the pictures Jim presented. He plans on having the fence back further and it would be approximately four feet higher elevation and screen more. They have a 30 foot fire break around the property now. Mr. Holst explained the cars that are seen above Jim's mark are piled three high and they wouldn't have to pile them that high. Sanden asked if the County or the Town are interested in having the fencing between the buildings themselves. Kleinhans noted that there are three driveways there. Fetzer asked about fencing around the entire property. Kleinhans stated we are just making recommendations for security. Fetzer asked if there is just ag land on the backside. Mr. Holst stated yes, no one lives behind the property. Chairperson Barkla asked Jim if he is talking about double fencing for the security fence. Pichotta stated this is just something being suggested for the committee's consideration. Mr. Holst stated he is proposing a fence along Highway 35 and move it back about 30 – 40 ft from Jim's pictures and up the hill. Rohl stated the security fence could be addressed later if there are issues. Fetzer stated he thinks Mr. Holst would want to do a security fence around the entire property if he is having problems. If he is willing to screen the salvage yard from the

public then the fencing across the front and up the sides would be good enough. Sanden stated he agrees that the fencing for screening is more important than a security fence but noted that this would be the time to discuss it if it were to be addressed. **Rohl moved to approve the conditional use permit for expansion of a preexisting, nonconforming use (Salvage Yard) by William F. Holst, III, owner, due to the fact that it is found to be not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5, striking #4. Sanden asked if Mr. Rohl was going to specify anything about the height and location of the fence. Mr. Rohl stated the height to be affective. Chairperson Barkla stated it is his understanding that if the fence was moved back a 9 ft fence would be adequate. Pichotta suggested that it could be approved with the understanding it will be approximately 120 -130 ft from the center of the road and would L on the north and the south sides. Sanden seconded. All in favor. Motion passed with Jeff Holst not voting.**

Discuss take action on proposed revisions to Chapter 240 relating to rural businesses/agri-tourism. Staff Report – Brad Roy: The Pierce County Comprehensive Plan’s “Action Plan” identifies the following tasks to be completed by Department staff (among others):

- Investigate potential for creation of new mechanism to permit entrepreneurial activities that are site dependent. (Completion date of 2011)
- Identify and pursue strategies to implement goals, objectives and policies identified in the Comprehensive Plan. (Ongoing)

Many of the goal, objective and policy statements relate to creating conditions in the County that are conducive to the establishment of entrepreneurial ventures and agri-tourism. Much of the discussion held as part of the comprehensive planning process centered on the County Code being permissive in regard to the establishment of rural businesses and agri-tourism. Such activities would be permitted through the issuance of a conditional use permit, with the understanding that the scope of allowable activities would be tempered by a given towns comprehensive plan. You may recall that the County plan stated that Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the “public interest” for decisions relating to that governmental unit or municipality. Many of the goals, objectives and policy statement are listed in the staff report. It is staffs intention to propose code language that is quite permissive in the type and scope of such activities that are allowable within the County. It is expected that towns will amend their respective plans to the degree necessary to ensure that conditionally permitted commercial activities in that town do not exceed that which the residents of their individual town are willing to support. Activities of this type are currently scattered throughout the Zoning Code. The current structure of the code would seem to dictate that added business opportunities to be placed in § 240-36 Commercial Uses. This may not be the most appropriate classification for the uses given they are not “commercial” in a traditional sense. Staff is considering proposing amendments to the Zoning Code to provide a mechanism for expanded business opportunities for land owners taking part in active agriculture or in which the natural resources are the primary attraction. These uses could be considered a mix of agriculture, commercial and outdoor recreation. **Discussion:** Staff suggests that the Land Management Committee consider:

- Is the approach of being permissive appropriate for the county and the towns under county zoning?
- Should additional uses be placed in § 240-36 Commercial Uses or is the creation of a classification of “rural businesses/agri-tourism” more appropriate?
- Can the rural businesses/agri-tourism operations be principal uses or should they be accessory to another use?
- Should the current regulations for permissible uses remain or should they be reevaluated?

Sanden stated that he believes it is appropriate to be more permissive. The whole direction of zoning is moving more toward appearance and off-site impacts instead of the strict look at “uses”. This isn’t just

something we would be doing, it's actually a trend and in some downtown developed areas, use is not even an issue. It's all commercial and over time the upper level is used for residential. As long as the outside facade is maintained the inside use is secondary. Holst stated the committee has seen a lot of requests, different than we've ever seen, come up in the last couple years. Maybe we have to give people the opportunity to fail. At least let them use their land as long as it doesn't infringe upon their neighbors.

- Should additional uses be placed in § 240-36 Commercial Uses or is the creation of a classification of "rural businesses/agri-tourism" more appropriate?

Holst stated that use of commercial districts in the traditional sense aren't what the committee has been seeing. They fall under something more like rural business/agri-tourism. Sanden suggested it would be cleanest to create a new classification. The other option would be to expand the use to some of these uses that fall between the cracks and would be subject to conditional use permit review. Pichotta stated he is of the position that most if not all of these uses would be subject to a CUP. The whole intent is for us to be permissive and recognize that each of the Towns are very different. The uses that each Town will allow could vary widely. We have to put in place a set of rules that work for everybody. The Towns have to step up and put some thought into what they want to see happen in their Towns. The question is do we try to cram everything into Commercial uses or do we look at the whole structure of the table of uses and come up with a new categories? From staff's perspective, we think if we take a comprehensive look at the whole structure we might end up with a better end product. Sanden, are you more in support of expanding the uses under commercial use or coming up with a new classification? Pichotta stated coming up with a new classification, noting that some uses will still be considered strictly commercial uses. A gas station would be a commercial use, what we are discussing would be more for natural resource or agri-tourism based uses.

- Can the operations for those types of uses be principal uses or should they be accessory to another use?

Holst stated we've seen instances already, like Nesbitt's for example, that's a commercial use where under the new district (if acquired) they may be so intensified that they have to be commercial but maybe wouldn't have to be. He doesn't live there. Sanden agreed and stated as long as we have the conditional use permit processing that is our "gate keeping" mechanism.

- The current code talks about Bed and Breakfast and Farmers Markets already, if we were to reclassify or regroup these things, we would take those uses and move them in there. Are you happy with the way the code is written now or should the current regulations be reevaluated?

Fetzer asked if they come up for review. Brad stated a Farmer's Market or Road Side Stand wouldn't, we address part of the uses already in the code. Do we want to stick with those that are addressed already or look more comprehensively at all? Chairperson Barkla stated he thinks they should take a more comprehensive look at the code. Holst stated we have a Town Board Chair and Supervisor here and would like to get their opinion. Richard Bunce, Town of Trenton Chairperson, stated they have it in front of their planning commission right now as a Farm and Home Business as opposed to accessory businesses. The CUP standard to be reviewed every two years would be a good thing. It's when people have a conditional use permit on their property and then sell it and someone comes in with something else; no one knows what they are doing until it's too late. Pichotta asked if they are looking at amending their comprehensive plan. Mr. Bunce stated they are looking at how this fits in their plan. They aren't looking to keep people from starting businesses. Pichotta asked if he is suggesting that if a property has a conditional use permit on it and changes hands, it should be reviewed? Mr. Bunce stated yes and if they want to change things it could be brought up to the Town and the Land Management Committee. Chairperson Barkla stated that staff now has direction regarding this issue.

Departmental Update and Future Agenda Items

Conditional use permit requests for a nonconforming structure in the Town of Diamond Bluff, a duplex in the Town of Oak Grove, filling and grading associated with the Corp of Engineers in the Town of Diamond Bluff.

Rule exception to a 1-Lot major CSM and approval of the 1-Lot CSM

Wisconsin Specialty Sand conditional use permit renewal in the Town of Isabelle

Review the Pierce County Outdoor Recreation Plan

The meeting after that we will be reviewing the Brekken heliport

Motion to adjourn at 07:52pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, June 2, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden

Excused: Joe Fetzer

Others: Andy Pichotta and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 16th, July 7th & 21st, all in 2010.

Approve Minutes: **Rohl moved to approve the May 19, 2010 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for Filling and Grading in the Shoreland/Wetland District for Bruce & Colleen Anderson, owners on property located in the NE ¼ of the SW ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Barkla invited Bruce Anderson forward:

Mr. Anderson explained that he plans to riprap 460 ft along the Rush River and grade some of his field to create a berm. Larry Gruber with the Land Conservation Department designed the plan. The low bid went to Jeff Schoeder in Elmwood and he is ready to go.

Staff Report – Andy Pichotta: Mr. Anderson is requesting a conditional use permit for filling and grading in the shoreland/floodplain district. He contacted department staff after his agriculture field was damaged by high water flows from the Rush River last fall. The stream bed failed at a curve in the Rush River where a tributary drains from the west into the stream. The Land Conservation Department designed a field reclamation and streambank stabilization plan for the site. The site is located in the floodplain and shoreland area so a conditional use permit is required due to the extent of the grading and filling necessary to address the issue. The property is located in Section 9 in the Town of Salem and is zoned Exclusive Agriculture and General Rural. The DNR approved a general permit for integrated bank treatment on April 13, 2010. Shoreland provisions in the zoning code regulate filling and grading within 300 feet horizontal distance of navigable water where the existing or resultant slope is toward the water. The excavation and grading of soil material within a shoreland district is regulated under Sections 240-41E to insure surface water protection. Floodplain fill is regulated under Chapter 238 in the County Code. There is no base flood elevation established in this vicinity. This site is approximately ¼ mile downstream from the Highway 10 bridge. The 100 year flood elevation for the Rush River is below the bridge deck based on the bridge design. The cabin elevation was determined to be higher than the 1978 flood event referencing surrounding benchmarks. This plan design does not reference sea level elevation. Rock riprap will be stabilized at 2:1 slopes from the stream bed up to elevation 95.0. Approximately 460 linear feet of rock (534 cubic yards) will be placed in the stream over fill and geotextile fabric. Rock will be installed approximately 5 to 7 feet above the slope toe or rock footing. Pichotta noted that the placement of rock riprap below the OHWM is outside of our purview and is under the jurisdiction of the DNR. The following project components require LMC review and approval:

An earthen berm will be placed on fill materials approximately 15 feet upslope from the rock riprap. Slopes of 4:1 will be established between the top of the rock riprap and the earthen berm by cutting. The earthen berm will also be created with side slopes of 4:1 with a 4 foot top width. The earthen berm will be constructed 2 feet higher than original ground. The addition of a berm will control and divert surface waters from entering the Rush River at this location on the river bend. The plan cross section at location AA incorporates more fill to restore the agriculture field.

A Town recommendation is necessary for the issuance of a conditional use permit. However, because the Town of Salem Planning Commission meets intermittently, the Town Board Chair requested that the request be placed on an LMC agenda prior to Town approval due to the potential for resource degradation.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this proposed filling and grading in the Floodplain/Shoreland area is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the committee approve this conditional use permit with the following conditions:

1. Contractor shall follow plans as approved.
2. The Land Management Dept shall be notified at the project initiation.
3. Final grading and seeded areas shall be completed before September 15 to establish vegetative cover prior to dormancy period.
4. Erosion control best management practices shall be implemented immediately after final grading and maintained until the disturbed areas are stabilized.
5. Phosphorus applications to establish ground cover should be limited to what the topsoil is found to be deficient. The reason for this condition is the DNR had expressed concern about limiting the amount of phosphorus used.
6. The project shall not be initiated prior to approval by the Town of Salem.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked about conditions #3 and #5; the word should is in the report but Andy read shall for condition #3. Is that done intentionally for flexibility? Pichotta stated #3 should be shall. On #5, the phosphorus application is subjective. We encourage Mr. Anderson to limit it to that. Sanden stated the berm should benefit the Rush River. Holst stated the whole project should benefit the Rush River.

Holst moved to approve the conditional use permit for Filling and Grading in the Shoreland/Wetland District for Bruce and Colleen Anderson, owners, due to the fact that it is found to be not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #6 amending condition #3 to read shall instead of should/Sanden seconded. All in favor. Passed.

Discuss take action to accept Wisconsin Land Information Program grant funds, amend 2010 budget to create revenue and expenditure line items and amend planned Land Records Modernization Fund expenditures. Pichotta reports: There are a couple house keeping items we need address relating to the Wisconsin Land Information Grant Program. All counties currently participate in the Program. Dollars from deeds that are recorded go into a fund called the Land Records Modernization Funds. Another portion is sent down to the State who gives monies back to the Counties as a grant to be used to further the Land Modernization Plan. We're working on an update currently. The amount of the grant has ranged from \$300 to nearly \$20,000. The \$300 grant is an education grant that has enabled Rand Kluegel, our GIS person to go to the annual land conference held in various parts of the State. This year's allocation is \$11,683. The use of these funds is dictated by the Pierce County Land Records Modernization Plan. Although we've received these funds for many years, we need to formally accept the funds and approve the creation of specific revenue and expenditure budget line items. There are three things we need to do: 1. accept the grant funds, 2. amend the budget to create a revenue and expenditure line item and 3. amend the planned land records

modernization expenditures. As we discussed the budget last summer the following tasks were planned to further the land records modernization plan: COGO Rock Elm, Parcel Updates, Website & Map Maintenance, ESN Consolidation, Bulberry Data Update, Road Alignment, COGO Trenton and Temporary Staff. Due to changed circumstances, it's now become necessary to reprioritize and amend expenditures. Here is what we are proposing for 2010. It should be noted that last year there was some confusion regarding the land records budget which resulted in going over about \$10,000 on land record fund expenditures. One of the major changes is to the need to utilize land record dollars to purchase updated aerial photos. There was an effort by a consortium of counties to have aerial photos taken as inexpensively as possible. That was a coordinated statewide effort. The total cost for Pierce County is \$35,580. Out of the Land Records Modernization Fund we propose using \$10,554.50 for this year and would also use the grant we are getting of \$11, 683 for a total of \$22,237.50. That would leave \$13, 342.50 to be paid in 2011. We anticipate getting nearly the same amount in grant funds for next year. The difference would be made up out of the Land Records Modernization Fund. Holst noted that we aren't the only department that uses the funds. Pichotta stated a lot of the maintenance contracts and also licensing for GCS have been taken out of that fund and noted that this is not a sustainable use of that fund. Those expenditure were shifted to the Land Records fund probably to reduce expenditures coming out of the General Fund. What we are asking is to authorize the acceptance of the 2010 grant, approve the creation of a revenue and expenditure budget for said grant and approve the proposed amended 2010 expenditures from the Land Records Modernization Fund. Chairperson Barkla asked about the Temporary Staff shown in the first budget and asked why there is no Temporary Staff budgeted now. Pichotta stated that at a budget meeting, at which Mr. Barkla was present, it was suggested by the Finance Director that, given last years overage, it may be prudent to forego temporary staff this year. We are acting on that advice. **Sanden moved to accept the Wisconsin Land Information Program grant, authorize creation of revenue and expenditure line items and amend the 2010 expenditures from the Land Records Modernization Fund/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Conditional use permit request for expansion of a preexisting nonconforming use, a Salvage Yard, for William Holst in the Town of Diamond Bluff. Pichotta noted that he had suggested to Mr. Holst that he also include the proposed fence/screening plan for the property at the same time but that a proposal had not yet been submitted. Pichotta suggested that it may be appropriate to consider conditioning any approval on the placement of specific measures.

Discuss take action on proposed revisions to Chapter 240 relating to rural businesses/agritourism. In the comprehensive plan, it suggests we will take a look at the language regarding creation of a mechanism to allow things that are more agritourism, more location dependant than a Farm & Home Based Business. We're looking for direction from the committee regarding the approach we're taking.

Motion to adjourn at 07:20pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 2, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 16 th , July 7 th & 21 st , all in 2010.	Chair
3	Approve minutes of the May 19, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for Filling & Grading in the Shoreland/Wetland District for Bruce & Colleen Anderson, owners on property located in the NE ¼ of the SW ¼ of Section 9, T25N, R16W, Town of Salem, Pierce County, WI.	Kleinhans
5	Discuss take action to accept Wisconsin Land Information Program grant funds, amend 2010 budget to create revenue and expenditure line items and amend planned Land Records Modernization Fund expenditures.	Pichotta
6	Future agenda items and departmental update.	Pichotta
7	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(5/21/10)

MINUTES - Pierce County Land Management Committee Meeting, May 19, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 2nd & 16th, July 7th & 21st, all in 2010.

Approve Minutes: **Holst moved to approve the May 5, 2010 LMC minutes/ Rohl seconded. All in favor. Passed with Fetzer not voting due to absence at the meeting.**

Public hearing to consider a request for a conditional use permit for Filling and Grading in the Shoreland/Wetland District by LS Marine, Inc, agent for Joseph & Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla invited Taylor Luke forward: Jeff Holst stated due to the fact the Town of Diamond Bluff has entered into an agreement with LS Marine and he is the Chairperson, he recused himself from the discussion and voting but retained the right to represent the Town of Diamond Bluff. Mr. Luke, representing LS Marine and Joseph Mangin, explained they are requesting two conditional use permits. They have contracted with the Corp of Engineers (COE) for the unloading of Corp Island. Additional points; Solicitation date for this project was August 12, 2009, Diamond Bluff Town Board approval was received September 9, 2009 for use of Town property to complete the off loading and loading of trucks to the Mathy Pit and the contract was awarded September 10, 2009. Originally the Town Board approved the use of the boat ramp as the transfer site. December 2009 meeting it was moved to the parking lot and the Langer property. February 2010, we made the decision to move to the Mangin property, which is being presented for your consideration today. The benefits of the Mangin property for our purposes are; more secluded minimized the noise and backing up of trucks and there is more room to operate through that site. We'll start on Corp Island with an excavator and bulldozer to load barges and they are pushed to the Mangin property and unloaded to a surge pile of roughly 100 cubic yards. From there, another separate excavator will load it into trucks to travel through Diamond Bluff to the Mathy Pit where it will be stacked and graded. The agreement with the Town of Diamond Bluff was a signed lease agreement that was discussed and revised at several monthly meetings. There was a citizens group that helped make comments and things to be incorporated and that the project has everyone's interest in mind. One of the big issues at the meetings was safety. It is represented in the lease agreement. We have submittals with the COE, an accident prevention plan, an activity hazard analysis plan, a contractor loss control safety manual, an environment protection plan, a traffic control plan, truck haul route plan, quality control plan, site plan and equipment plan. Those are all submitted and in the process of being approved by the COE. The health issue was also brought up on a number of occasions. In speaking with the WI Dept of Health, Henry Nehls Lowe, the comments were that all loads needed to be tarped and all trucks meet the emission regulations and our dust control measures are in place and practiced. A traffic control plan was developed and approved by the Town. It's incorporated in the lease agreement. It provides a controlled intersection in town on the corner of 985th and 295th and shows where the flagman will be. This provides a controlled intersection for foot traffic or vehicle traffic. The person will also have a radio to be in communication with the trucks while they are coming out. During the short stretch of 985th where it is rather tight they will make sure to keep only one truck on there at a time. This does not add any distance to the local traffic; it adds two turns. We do have signage and access will be provided to the boat launch. This has been approved by the DNR. Based on what was presented in the letter dated May 13, 2010, from Stobel and Hanson from Mr. Hynes; a five month boating season, 153 total days, roughly 600 total uses of the season passes or four uses a day. That does not take into account the citizens that use it or the weekend traffic. LS Marine is also

providing a \$5000.00 donation to the boat fund that covers roughly two years of fees. The haul route is based on the shortest route to a major road. It's less effort to drive a quarter of mile on a town road rather than the 2.8 miles. We will be taking a road condition survey before beginning any traffic and we are responsible for replacing that road in like and kind when we're finished. 290th Ave is at 20% - 30% stage right now and the Town would be responsible for replacing 70% - 80%. 985th St is at 80% so therefore we would be responsible for replacing the 80% or whatever is determined by the road survey. Hwy 35 for the 2006 annual average daily traffic the road was rated at 2900 vehicles per day, at our 300 one-way trips that is less than 10% increase of traffic. All trucks will be loaded to comply with state weight limits, a base amount for trucks to be loaded and documentation will be kept. American Engineering will be doing random density tests to determine different material weights as we progress into the pile. The only thing we are subcontracting is the trucking and Holst Excavating was the best value. The material we are transporting is the river dredge material taken out of the river since 1998 and placed on Corp Island. The COE takes yearly tests on this site. All tests have passed the necessary requirements and particular levels to be classified as clean material. The COE can provide those reports to anyone interested. The location of the offload is in Diamond Bluff. It is the only feasible and economical place to unload the material and transport to the Mathy Pit. Using Diamond Bluff to unload dredging material is on about a ten year cycle. LS Marine has received permission from the Town of Diamond Bluff at the Sept 9, 2009 meeting. LS Marine's bid was over \$500,000 savings from the next bidder. The benefit to all of roughly 500 citizens of Diamond Bluff is a donation by LS Marine of \$15,000 to the City Fund, \$5,000 to the Boat Dock Fund, \$5,000 to the Town Hall Fund and estimated \$300 for paint for the interior of the Town Hall and 50,000 yards of sand to the Town sand pit for the citizens use. At a market rate in the area of over \$3.75/yd this equates to \$187,000 benefit, the total that is a direct and indirect benefit to the citizens of \$212,000. We have been to all the Town meetings since October of 2009 and will continue to attend meetings until the project is complete. We will address all the concerns brought up by the citizens incorporating the mitigation of those concerns and our overall plan, the Town Lease Agreement, the conditional use permit application and the COE submittals. Sanden asked Mr. Luke to repeat the information about 290th Ave and the 20% payback. Mr. Luke stated the condition of the pavement on 290th Ave is rated at 20% - 30% of the life of the pavement left. We would be liable to replace the street in like and kind so we would have to bring it back up to 20% - 30%. Since that is not feasibly possible we would replace the whole road and the Town would have to pay for 70% - 80% of the road.

Staff Report – Jim Kleinhans: A lot of the material has already been covered. This part of the public hearing is just for issuing the conditional use permit for filling and grading in the Shoreland/Wetland District. LS Marine has contracted with the COE to remove the river dredge material from Corps Island. The property is zoned Agriculture Residential where those types of uses are allowed. The Town of Diamond Bluff approved this request on March 15, 2010. WI DNR is cooperatively reviewing the project with the ACOE from initial excavation to disposal of dredge materials. The site being considered was filled with dredge materials in 1987 and 1989. Some of the area is above the wetlands but some is shrub and trees and are not characterized as wetlands. In the committees packets there is some updated information from the COE regarding topographic information and cross sections for proposed fill. LS hasn't submitted a restoration plan for vegetation and they are proposing for fill to remain on site. That would be a conflict with County Floodplain regulations. We want to be sure any fill left is stabilized and when fill is removed that the initial areas are stabilized as well. Shoreland rules require a conditional use permit for filling and grading within 300 feet of the OHWM or to the extent of the Floodplain which runs up to 290th Ave. The committee needs to consider not only the interest of the land owner with the status of the site but consider Shoreland and Floodplain regulations with the amount of fill that may be left and the condition of the site when it's finished. Staff suggests the following project components be considered:

- A. Total site disturbance including fill depths, tree clearing and final site restoration.
- B. Maintain best management practices during the duration of the project.
- C. Stabilize all graded and filled areas with suitable ground cover and mulch.

D. Effective means to address compliance issues.

Let me know if you have any questions of the fill depths that were just received. We want to make sure the site is left in a usable condition for Mr. Mangin and we don't upset any Floodplain regulations or violate Shoreland code requirements.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed filling and grading in the Floodplain/Shoreland area is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.
2. The Land Management Dept shall be notified at the project initiation.
3. Fill placed on Mangin's property shall be removed at the project termination unless authorized under the Chapter 30 permit and complies with local Floodplain regulations.
4. Vegetative removal shall be limited to the area identified as being within the "work limit line".
5. A vegetation management and restoration plan for areas within 300 feet of OHWM, consistent with Section 240-46, shall be submitted for approval within 6 months.
6. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete.
7. Applicant shall adhere to the agreement with the Town of Diamond Bluff.
8. The project shall be completed within 12 months of approval.

Chairperson Barkla asked Jim if he had copies for the public to view. Kleinhans stated they are regarding the detailed topographic of the one foot intervals of the Mangin site with fills placed over the road and cross sections of the locations of the pads for the excavators and the temporary placement of the fill. Several copies were passed around. **Chairperson Barkla opened the hearing to the public.** Einar Hanson, attorney for some of the citizens of Diamond Bluff, stated he wanted to point out the restoration plan has not been submitted therefore the application is not complete. The public needs an adequate chance to look at the plan. Second; it is too much dependant on the good faith of the applicant to ask for a vegetation plan and how it's going to be handled after-the-fact and this should be tabled. Finally; a bond should be requested. Chairperson Barkla stated in Pierce County, we have an understanding of Robert's Rules that tabling an item would mean it would be brought up later in the meeting. Kleinhans stated under condition #5 where we reference Chapter 240-46 does include a bond for vegetative replacement. Vic Langer, citizen of Diamond Bluff stated he submitted a letter in favor and wanted to know if the letter is part of the record. Chairperson Barkla stated we compiled a list of the names of people that submitted letters either for or against the project. The names were read. The letters will be made a part of the record. **Public hearing closed.** Sanden asked about conditions #3 & #5, Chapter 30 permit. Do either of these fall under jurisdiction of the DNR? Kleinhans stated yes. Sanden, Floodplain regulations would be a pre-requisite for this activity. Kleinhans stated there has been discussion between Gary Lepak, who is a Floodplain Engineer and Dave Pericak, who deals with a lot of the Mississippi permitting. The issue isn't finalized because originally it was going to be hydraulically moved now they are reacting to the transport of the dry material. In the last e-mail I read they concurred no material should be left on site. It could cause an obstruction of flood water. Leaving material in the floodplain is inconsistent with floodplain regulations unless it's studied hydraulically. Sanden asked about the precedence of approving the conditional use permit before the vegetative management plan is submitted. Have we done this in the past or is this the first time? Kleinhans stated we're looking at the restoration of the site. If you look at the map in the staff report you'll see the site is vegetative but there's a clear area by the beach. Looking at the map I gave you tonight, it appears that area is more open. I don't see the existing tree line. My interest is to get the site stabilized and restored to some suitable ground cover. We need to stabilize so in the event of a flood, it doesn't all wash away. Sanden stated his question is more procedural in response to Mr. Hanson's inquiry. Kleinhans, stated we have asked for restoration plans in similar situations and have had staff review

them or the committee. Fetzer asked if the topographical map is how it will be. Kleinhans stated the topographical is the existing site conditions and cross sections of where they are going to fill and how much. Jim suggests putting the site back to what it was, existing grades and stabilize it. **Sanden moved to approve the conditional use permit for Filling and Grading in the Shoreland/Wetland District for LS Marine, Inc, agent for Joseph & Marilyn Mangin, owners, due to the fact it was found not to be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #8/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the Agriculture Residential District by LS Marine, Inc, agent for Joseph & Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla invited Taylor Luke forward: Jeff Holst stated due to the fact the Town of Diamond Bluff has entered into an agreement with LS Marine and he is the Chairperson, he recused himself from the discussion and voting but retained the right to represent the Town of Diamond Bluff. Mr. Luke explained that all the same information applies. What they are doing there is to complete their contract with the COE. Sanden, asked what the difference would be if it was hydraulically removed vs the mechanical. Mr. Luke stated they deal just with mechanical where you dig it up, load and transport it away. Hydraulically requires a pipeline to vacuum or suck it out and transport it to Mathy Pit and eventually the water drains out and makes its way back to the river. Sanden asked how that would get across the highway. Mr. Luke explained the plans they submitted prepared by the COE shows it doesn't have to cross Highway 35. They would have a couple places where they would have to go under roads. They dig them out, place the pipe and repair the roads. To use the hydraulic method, you get 5% to 10% material and 90% to 95% water. Mathy Pit is designed to hold that. You get turbidity and wells are affected. The water is still healthy but doesn't look clean. Sanden asked if the impact of 41,000 truckloads over seven months figures out to a truck every three minutes. Mr. Luke stated it's a truck leaving the site every four minutes and then trucks returning also. Sanden asked if you were to consider the alternative site; taking 290th Ave all the way, logistically would there be enough room to pass safely, is it more constrained on Hwy 35? Mr. Luke stated he doesn't believe it would be any major constraints. Sanden asked about the 20% - 30% of it's life left, do you think the road would be capable of handling that every four minutes for the seven months. Mr. Luke stated no, township roads are not built like Hwy 35. They don't have the base, the pavement profile. As far as he is concerned it wouldn't be capable of carrying those trucks for that time. Sanden asked if the town road weight load limit would be exceeded. Mr. Luke stated that is a fineable offense by the state. What he believes those roads are weighted to, they would not be by their calculations. Fetzer asked if it is the 20% - 30% through Diamond Bluff remaining life or is it on 290th that goes the other way. Holst stated it was 290th to the south – it is a relatively good road. They have told us there are possible Indian artifacts that lay under that road so we wouldn't be able to disturb them. If our township were to have to replace 70% - 80% of that road and not disturb the Indian Artifacts it would be undesirable both financially and environmentally. Sanden asked if they have a ballpark figure of what it costs to replace a road. Pat Atherton, Diamond Bluff Supervisor, stated it was \$55,000/mile when they replaced the last road. He also noted that using 290th Ave to the south would actually affect more citizens.

Staff Report – Andy Pichotta: The Army Corps of Engineers (COE) has awarded LS Marine Inc. the Corps Island Placement Site Unloading Project. The project consists of mechanically unloading 350,000 cubic yards of sand from Corps Island (located in Goodhue County, MN.) on the Mississippi River into barges, transporting the material to shore, transferring the material from barges into trucks and then transporting the materials to the Mathy Gravel Pit in the Town of Trenton. The project is scheduled to begin in June 2010 and be complete prior to December 30, 2010. This project was originally anticipated to be completed by hydraulically pumping materials versus moving it mechanically. The COE had secured all easements necessary to run a slurry pipeline from Corps Island

to the Mathy Pit prior to letting the project for bids. LS Marine submitted the low bid despite proposing to move materials mechanically. If the project were to be completed hydraulically, up to 707 million gallons of water would be required to transport the 350,000 cubic yards of dredge materials to the Mathy Pit, as hydraulic dredging typically utilizes a 3:1 – 10:1 ratio of water to solids. LS Marine is proposing to utilize the Mangin Property as the staging site to transfer dredge materials from barges into quad axle dump trucks. Loaded trucks would then proceed to the Mathy Gravel Pit in the Town of Trenton (or potentially to another approved disposal site). LS Marine had initially planned to propose the use of the Town of Diamond Bluff’s public boat launch parking lot as the staging area, but now believes the Mangin Property to be a more appropriate site. LS Marine had, prior to securing use of the Mangin Property, entered into a lease agreement with the Town of Diamond Bluff for use of the boat launch parking lot. Said lease agreement included a defined “haul route” which was to be utilized for truck traffic associated with the project as well stipulated adherence to a Traffic Control Plan. LS Marine intends to honor the terms of the agreement with the Town despite no longer planning to utilize the Town’s property. Pichotta stated that it was his understanding the crew does intend to use the town parking lot to park their vehicles. LS Marine has submitted a project narrative, a site plan, and a copy of the Lease Agreement with the Town of Diamond Bluff, copies of which are included for your information.

Pursuant to §240-21(B)(1), this proposed unclassified use was determined to be most similar to a “Utility Facility >1000 square feet” and is therefore being processed consistent with that conditionally permitted use. A “Utility Facility >1000 square feet” is conditionally permitted in all zoning districts. Pursuant to §240-21(C), an amendment to Chapter 240 regarding this use will be presented to the LMC for consideration at a future meeting.

The subject property is located in Government Lot 1 of Section 24, T25N, R18W, Town of Diamond Bluff, Pierce County, Wisconsin. The parcel is zoned Agriculture-Residential. Adjacent parcels to north and west are zoned RR-20. This area of Diamond Bluff is characterized by residential uses with some commercial uses and is bordered on one side by State Highway 35 and an active rail road track and, on the other, the Mississippi River.

Materials will be removed from Corps Island and placed on barges utilizing a bulldozer and excavator. The contracted depth elevation is 675 ft. which will be achieved by removing 350,000 cubic yards of dredge materials. The excavator will be staged on a floating plant that will, as materials are removed and a cove area created, be moved into the cove area. Excavated materials will be predominately dry sand material taken from above the waterline. Materials excavated from below the waterline will be cast to the side to allow it to decant prior to loading. Loaded barges would then be transported to the Mangin Site for unloading.

Equipment to be utilized on Corps Island includes: 50 ft by 110 ft spud barges, 165,000 pound excavator and D8 class bulldozer.

The staging site/transfer area is proposed to be located on the Mangin Property located in the Town of Diamond Bluff. LS Marine has signed a lease to utilize said property and has been authorized to act as the Mangin’s agent in pursuing this conditional use permit.

Once barges arrive at the Mangin Property an excavator staged on the rivers edge will remove the material from the barges and place it into a surge pile. A second excavator staged adjacent to the surge pile will be loading material into quad-axle dump trucks which will haul the material to the Mathy Gravel Pit (or other approved site).

Equipment to be utilized on the Mangin Property includes: 165,000 and 85,000 pound excavators, quad axle dump trucks, skid-steer with street broom, and a loader. The skid-steer with street broom will be used as necessary to keep the paved roads clear of material.

Loaded trucks would leave the site following 290th Avenue from 980th Street to 985th Street and 985th Street from 290th Avenue to Wisconsin Highway 35 and then south to the Mathy Pit in the Town of Trenton.

Between 6 and 8 quad-axle trucks are proposed to be utilized in rotation for transporting materials. To minimize the potential of trucks “stacking” on Hwy 35 when returning to the staging area, LS Marine

has secured permission to utilize the PIG Transfer Station as an area for trucks to pull off the road if another truck is stopped and waiting at the rail road crossing.

Based on expected travel times, a truck is anticipated to be leaving from or arriving to the proposed staging/transfer area every 4 minutes during hours of operation.

A traffic control plan that establishes the location of a flagman as well as the placement of appropriate signage was presented to, and approved by, the Town of Diamond Bluff. Said plan is attached.

The proposed hours of operation for transfer of dredge materials is 7:00 A.M. to 5:00 P.M. Monday through Friday with no work occurring on weekends or holidays. This schedule is expected to result in the removal and disposal of 350,000 cubic yards by December 30, 2010 as required by the COE contract. Any delays from equipment breakdown, weather, etc. would require a contract modification to either increase operating hours or extend the deadline.

An advisory committee made up of a Town Board member, two citizens, and the Project Manager will be established to address any issues associated with the project that may arise.

Loaded trucks will enter the Mathy Pit and proceed to the south end of the pit where it will be placed and graded to final contours. Once all material has been placed, it will be capped with topsoil and seeded, per COE contract specifications.

Placement equipment to be located at the Mathy Pit includes a D9 Bulldozer and a loader.

According to the Pierce County Zoning Ordinance (Chapter 240) the placement of dredge materials, as well as dewatering and blending, is considered to be consistent with “nonmetallic mining operations”. Therefore a mining site that is either permitted or considered to be “grandfathered” may be utilized for the placement of dredge materials without LMC approval. The placement of dredge materials is also specifically exempted from the Pierce County Nonmetallic Mining Reclamation Ordinance (Chapter 241) and NR 135, which the County Ordinance is modeled after. Due to this, the LMC’s ability to impact the placement of dredge materials at a given site is limited. However, DNR and COE approval of a placement site is necessary.

At the March 2009 renewal of Monarch Paving’s Conditional Use Permit for nonmetallic mining at the Mathy Pit a condition was added that states “Prior to the placement of dredge materials on this site, a plan that describes activities and safeguards shall be presented for approval to the Land Management Committee.” This plan is being presented for approval as a later agenda item at this meeting. It should be noted when that requirement was put in place we were under the assumption that these materials were going to be unloaded hydraulically.

The Town of Diamond Bluff entered into a lease agreement with LS Marine Inc. at their March 15, 2010 meeting and also recommended County approval of the project “as long as all conditions of the lease are met.” Terms of the agreement include:

Term: Lease is effective until LS Marine completes the COE project or June 30, 2011, whichever occurs first.

Payment: Rent payable by LS Marine to the Town was established.

Specific Haul Route Established: The Town approved haul route is “defined as 290th Avenue from 980th Street to 985th Street and 985th Street from 290th Avenue to Wisconsin Highway 35.”

Survey: LS Marine agreed to have an independent “pre-condition survey” of the haul route completed that will include video and a written narrative. A “pre-condition survey” will also be conducted of structures located on lots and parcels of private property owners abutting the haul route. Copies of each will be provided to the Town as well as property owners.

Maintenance & Repair: LS Marine agrees to be responsible for, and to repair any damage to town property, the haul route, and private property abutting the haul route caused by its activities. Also established is the emergency project contact and a Dispute, Concerns, and Claim Process.

Traffic Control Plan: LS Marine agreed to develop and adhere to a “traffic control plan” which was approved by the Town of Diamond Bluff Board of Supervisors at their February 11, 2010 meeting.

Hours of Operation Established: LS Marine agreed to operate only between the hours of 7:00 a.m. to 5:00 p.m. Monday thru Friday. Any request to deviate from these hours must be made in writing to the Town Board. Also – no work is to be preformed on the following days: May 31, 2010, July 5, 2010,

and September 6, 2010. LS Marine is allowed to work longer hours to make up these days in the week leading to or following these dates.

Town Option on 50,000 cubic yards (+/-) of dredge material to be deposited in the Town's gravel pit at no cost to the Town. Subject to COE approval. LS Marine to secure necessary approvals.

Public Access to Ramp: LS Marine will ensure public's ability to access ramp.

Agreement Contingent: Agreement is contingent on all relevant parties (public and private) agreeing to use of their parcels of land along with all governmental agencies permitting the use pursuant to the lease, and no court issuing an order that would preclude use pursuant to the lease.

Insurance: LS Marine will provide Commercial General Liability, Marine Service Liability, Automobile Liability, Umbrella Liability, Workers Compensation, and Hull and P&I Insurance, with the Town named additional insured.

Governing Law: Matters of Federal law shall be governed by the laws of the United States of America. Matters of State law shall be governed by the laws of Wisconsin.

Pichotta indicated that staff has received a number of phone calls and letters from individuals concerned about potential negative impacts from this proposed project. Concerns include:

- Safety of citizens walking or biking, especially children.
- Interference of normal use of roads (garbage, gas, and delivery trucks).
- Ability of law enforcement and emergency services to respond to emergencies.
- Ability of residents, visitors, and boaters to use boat launch, Sea Wing Park, or visit the Nauti Hawg Bar and Grill.
- Potential health hazards associated with diesel fumes, exhaust, and sand particles.
- Potential contamination of private wells and septic systems.

Following 290th Avenue southeast to the intersection with Wisconsin Highway 35 and on to the Mathy Pit has been suggested as being a better route with fewer impacted homes. Staff has determined that a similar number of homes would be impacted along each route. Staff also spoke with a Town representative as to why the Town believes the established haul route to be a better option than following 290th Avenue southeast to Wisconsin Highway 35. Staff was informed that the condition of 290th Avenue is considered to be at approximately 30 - 50% (of 100%). If 290th were utilized as a haul route and damaged, the contractor could only be required to bring the road back to its prior condition (30-50%). Given that reconstruction would bring the road up to 100%, the Town may be, by default, responsible for up to 70% of the cost of reconstruction. This could potentially result in a substantial unplanned and unbudgeted expense for the Town of Diamond Bluff.

A handout titled "Issuance of Conditional Use Permits" is attached for your information. The document identifies applicable code provision from the Pierce County Zoning Ordinance, discusses standards that must be considered, and highlights what is considered should the LMC's issuance of a CUP be appealed to Circuit Court. Pichotta discussed conditional use permit provisions, what the purpose and intent out of the Pierce County Code Chapter 240 is, and what is meant by public health, safety, general welfare, and character, as well as what is considered if the issuance of a CUP is appealed..

Pichotta stated that staff recommends that the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Applicant shall secure all necessary federal, state, and local permits and approvals prior to commencing operations.
2. Applicant shall conduct all activities as described in their CUP application.
3. All activities must be completed within 12 months unless an extension is granted by the LMC.
4. Compliance issues shall be referred to Land Management Department staff.

Chairperson Barkla opened the hearing to the public. Einar Hanson, representing a group of Town residents, presented a handout with some bullet points for the committee to consider. The context is to the discretion of the committee. Originally this was to be a hydraulic operation and now it's going to be a mechanical project. The DNR is still considering this. This will actually turn the Town of Diamond Bluff into an Industrial Zone. There will be truck drivers every four minutes going one way and then the other. With that kind of danger and exhaust fumes is that the best route to take? The best possibility is option #1, this is not using the Mangin property at all but a site on Trenton Island that has been bought out. The advantages to the citizens of Pierce County and to Diamond Bluff is that it is routing their trucks straight across the back channel of the Mississippi to the Mathy Pit and less truck travel on Pierce County roads, less fuel and minimized rail crossings. Their first request would be that the committee deny the conditional use permit and require they consider the Trenton Island option. The second option has been addressed by Mr. Holst and the engineers; that is the 290th Ave. The homes on 290th Ave are set farther back and the trucks will be traveling at a constant speed so you won't have the exhaust fumes. It's closer to the Mathy Pit. With the shorter distance it reduces road damage and fuel consumption. They have a greater ability to radio back to say there is a train coming. The route they have proposed is going to be a noisy industrial site. In the lease agreement, 5F, this is contingent on all parties agreeing. Under paragraph 3, if a different haul route is approved, this lease has to be re-written. The Town would have every right and power to have LS Marine pay for the repaving of the road. Even now there is nothing in the contract that says they are only responsible for the 20% - 30%. If granted the conditional use permit should include the conditions in the lease agreement between the Town of Diamond Bluff and LS Marine. Joe Milbauer, Town of Diamond Bluff, has lived in Diamond Bluff for 17 years. In 1998 and 1999 all the sand came to us. The sand was hydraulically pumped and the water was not good. We have been filtering our water ever since. We're back ten years later. The pit never got covered. There are truck trailers parked in there. It's turned into a dump. Now we're asked to take on the responsibility of these trucks. My preference would be that the sand be pumped hydraulically to the pit in Trenton. Cris Johnston, opposed to this project, moved to Diamond Bluff in the mid 90's. He shared pictures of the houses along the proposed route as well as on 290th to the south. Approval of the conditional use permit requires that the proposed use at the proposed location will not be contrary to the public interest. All agree that the sand must be moved. But he believes the disagreement revolves around how it will be done. The two opposing views are motivated by money and the quality of life. The committee is aware of concerns about how public health and safety will be adversely affected. The decision makers have minimized, dismissed or just ignored that part of the issue that is the quality of life. Approval of the conditional use permit will be precedent setting and will contribute to future threats of quality of life and living in an industrial zone. The residential property values will be affected during the project. He asked the committee to consider the long-term impacts and quality of life. Chairperson Barkla reminded everyone not to make personal affronts about anyone. It's not fair and they cannot react. Bill Nafe, Diamond Bluff resident for 25 years, pointed out on the 290th south haul route there are 17 homes set way back along the route. By trucks using that route, it will keep the dust down, the noise down and keep the trucks from bunching up. Through Diamond Bluff, the route has 11 houses and they are very close to the road. When making a decision, if you don't consider Trenton Island as an option, consider the 290th haul route. Lois Kask, Town of Trenton, lives on the intersection past the tracks where they intend to have flagmen. She and her partner both have lung problems and don't need to add to it. **Chairman Barkla called for a 5 minute break.**

8:40pm – 5 minute recess

8:50pm – meeting resumes

Tom Giguere, lives in Diamond Bluff, reiterated about the quality of life and the lowering of his house value while this project is going on. Sheryle Wood, has lived in Diamond Bluff for 47 years, lives on the corner where the trucks will meet. She also has health issues and feels this is a health concern.

Kenneth Wood, Sheryle's spouse, his question is how long the hydraulic transfer would take. Pat Vickman, works for the COE, and will be overseeing the construction responded that the contract required the job to be done by the 31st of December, 2010. The contract was written around the sand being hydraulically moved but it did not preclude the use of mechanical options. The completion date is the same. It would be a similar amount of time because it takes a while to get the pipeline in place. Doing it mechanically, they don't have the long mobilization period and demobilization time but they have a longer haul period because they are moving less material a day. Kenneth Wood stated the land owner where the hydraulic operation was going to take place, has already been paid for it and it never happened. Mr. Vickman stated he works construction and has received copies of some of the lease agreements the government has procured to do the hydraulic pumping. The ones that he has read, the people got paid regardless of whether it was pumped hydraulically or not. Mr. Wood stated he feels the County should be looking at the road conditions and they should pay for it. Going out 290th is a lot safer. He stated that he had called Henry Nehls Lowe at the Dept of Health months ago after he had OK'd this. He stated he couldn't overrule what the County wants. Mr. Milbauer asked the COE what is the long-term plan so that in tens years we don't have to go through this again. Paul Machajewski, COE, Channel Maintenance, the long-term plan is to evaluate and refill Corp Island by dredging until the island gets full and will be offloaded again probably in 10 – 12 years again. Before this the methodology was identified at the State level but he will be at the Town Hall meetings in the future and will involve everyone to decide where best to go with the material. It's an inner agency coordinated effort to decide where to go. Richard Bunce, Town of Trenton Chairperson, the sand washes in from Minnesota and is in Minnesota right now, are they imposed upon in anyway? If they did it hydraulically and put it in the pit, the water doesn't have anywhere to go. Diane Johnston, Town of Diamond Bluff, lives on 290th Ave right across from where the trucks will come out, she is in disagreement that it isn't precedence setting. She doesn't feel people will be able to get to the boat launch or parking lot. She feels there are other options LS Marine hasn't considered. The railroad is going to back up the trucks. She doesn't feel it's safe for families that walk and bike up & down the road all the time, not just on weekends. Mike Maxson, resident of Diamond Bluff for four years, not opposed to business. He lives next door to the Johnston's. His wife has asthma and losses to home values will dwarf the \$212,000 benefit to the Town. COE, Pat Vickman, Contract Administrator, he will be there to make sure the contractor does what the government contract states. The contract was awarded to the lowest bidder, LS Marine, Inc. They have a responsibility to the government now to transfer material from Corp Island to the Monarch/Mathy Pit. The contractor is responsible to obtain the necessary permits that the government has not already received. The work cannot start until all the permits are obtained. Commencement date was the end of March or the latest in April. We are already behind schedule. There are always people impacted no matter what system is chosen. We will comply with all the Federal, State and local laws, all the safety requirements and we do listen to concerns. One of the highest things the COE looks at is safety. The trucks will not be going through town at 40 mph. The decision of where the route is going is LS Marine's responsibility. There was a meeting with Brad Perkl, an archeologist, and there are archeology concerns under 290th Ave. He stated all of 290th Ave is one of the best areas to find artifacts around here. For construction purposes, if we damage the road and have to go below the base, there would have to be an archeological survey. Vick Langer, Town of Diamond Bluff, stated that he had heard this route is also going to be used for rebuilding the levies for Lock 3. Mr. Vickman stated there are four different contracts the COE, St Paul District, has awarded in the vicinity of Lock and Dam 3. Corp Island is a lone project and there are three projects that go with Lock and Dam 3. Two of the three projects are on the Wisconsin side of the river. One, the upper embankment job, the only access to that job is 290th Ave right next to the cemetery. Ms Johnston stated LS Marine has no plan put into place to control traffic on 290th Ave. Mr. Vickman, LS has provided plans where they felt the greatest need was. They have safety plans, once we start work there are always things that have to be changed. We react to them. Safety is better due to the contractors, the people that are working and the safeguards required by the State, Federal and local agencies. Mike Miller, resident of the Town of Trenton, asked the LMC to state one or two positives to the residents in

Diamond Bluff other than the financial benefit. Pat Atherton, Town of Diamond Bluff Supervisor, stated that pile does not belong to the Town of Diamond Bluff but is a private property. He stated that many of the landowners that live here wouldn't have the property they have now if the COE wouldn't have put sand there in 1971. This is temporary. He has lived there since 1971 and this happens every ten years or so. Mr. Hanson stated he is unaware of any reason to go below the base of 290th Ave so the archeological concern shouldn't be a consideration in making a decision. Holst stated 290th Ave was also raised about three feet with the sand after the 1965 flood. The road was put down on top of the sand that was there and hasn't been rebuilt other than a little strip. Mr. Hanson stated within the three feet of fill there is no archeological issue so no study would have to be done. Holst stated the positive issue would be to keep the shipping channel open. The river is an industrial highway that affects commerce in the entire United States. It is a lifeline up here. It goes hand in hand with the railroad and highways. The last time Corp Island was dredged - the island was used for a tremendous amount of recreation. We felt as a Town that we got the best deal we could. Pichotta read a letter from Phil Carlson a Town resident who in favor of the project routed through Diamond Bluff and stands behind the Town of Diamond Bluff. He stated because of all the curves on the river, the dredging has to be done more often and should be done as economically as possible. **Public hearing closed.** Chairperson Barkla stated all the letters are being made a part of the record and asked the committee members if they have anything further to ask. Sanden stated when wind towers and cell phone towers are permitted, we are dictated to by the FCC or the State as to what choices we have. Because this is an ACOE issue are we being similarly constrained? Pichotta stated the COE has an immunity clause, basically if the COE is directly involved in leasing a property, they wouldn't be subject to our permits. If the COE leased this project instead of LS, we wouldn't be here. If the COE has a contractor for the COE and the contractor has discretion the immunity doesn't apply to them. If they don't have discretion, immunity does apply. Because it's LS and not the COE, we're involved. The upper embankment project that was mentioned down the river will be back for a conditional use permit for filling and grading. But filling and grading is not truck traffic so we won't be able to dictate anything regarding where truck traffic goes. Chairperson Barkla asked Mr. Vickman when the project would get started. Mr. Vickman stated they are waiting for the DNR permit which requires a 30 day public review, so probably a minimum of 45 days. The COE is doing an environmental assessment where there was a 30 day public review for that. That ended May 15th. The COE is currently reviewing comments - that assessment is being done to review the truck traffic associated with the mechanical dredging vs the hydraulic pumping. Once we get done with those, we have contractual issues that have to be taken care of but those are shorter time frames. Chairperson Barkla asked if it would still be their intent to complete the project by December 31, 2010. Mr. Vickman stated that is the contract completion date we have right now. This contract has the ability to have an extension built into it. To put it in a practical view, the end of November, the river ices up. Anything past the end of November is questionable as to whether it is usable time. With the delays that are being afforded for getting permits, LS would have a strong point in getting an extension from the government. Sanden asked if the lease agreement allows simultaneous use of the boat launch for the public and parking for the LS personnel? Kleinhans stated Holst will be doing the trucking so they will be coming from their site. The construction workers and excavators may be using the parking lot for their vehicles. Mr. Luke stated the use will be to park the crews vehicles; 2 operators, a deck hand, a boat pilot, 2 operators on the island, six vehicles, the general superintendent at some time and himself which would be 8 vehicles total. Fetzer asked if LS looked at the alternative routes. Mr. Luke stated moving it to Trenton before unloading is the theory of putting it in someone else's backyard - it would require going through the lock and would therefore add to the amount of time it takes. Before we placed our bid we came to the Town of Diamond Bluff for approval and then based our bid on taking it through Diamond Bluff. Sanden stated he would echo that maybe renegotiating the 290th Ave route should be considered. Chairperson Barkla stated he did take a ride and looking at that road and some of those curves. Someone is going to be inconvenienced in any case. On one road the homes are further away but the people are still going to be inconvenienced. Fetzer stated he also drove down 290th. There are a number

of houses there and right in town, he believes the Town put in a good amount of time and effort coming up with the terms of their agreement. He stated that if the route goes someplace else - we're going to be back here with the same issues and different people. Rohl stated that he agrees with Joe. **Fetzer moved to approve the conditional use permit for a Utility Facility >1000 square feet for LS Marine, due to the fact this is found to be not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area with conditions #1 - #4 and include the conditions in the letter from Mr. Hynes. #5 Use of a maximum of eight (8) trucks at any one time. #6 Requiring trucks to stop at PIG's transfer station in the event more than one must wait for a train to pass before entering the town. #7 Daily use of a sweeper to clear road of debris. #8 Tarping of all loads. #9 All trucks will meet all "applicable laws and regulations"/Rohl seconded. Passed with Sanden opposed.**

Discuss take action on a groundwater response plan for Monarch paving Nonmetallic Mining Facility located in part of the east half of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Jim Kleinhans: Back in 2001 Monarch Paving received a conditional use permit for nonmetallic mining to operate the former Pierce County property on the corner of Cty Rd K and Hwy 35. There was discussion of the use of this facility for placement of dredge material on site. In 2009, condition #12 stated prior to placement of dredge material on site the committee would review a groundwater response plan. We're looking to see if the placement of materials are detrimental to the surrounding area. With 350,000 CY of material coming onsite, the potential of impacts is much less than if we were to do this hydraulically. The groundwater plan was adjusted accordingly. Surface and groundwater samples will be contracted with EMES Inc, who are specialists in groundwater monitoring. Background samples will be collected prior to dredge placement. Phase 2 will occur during the dredge material placement and Phase 3 establishes sampling criteria after reclamation. Samples will be collected from four residential wells, four monitoring wells and two surface water sites. The residential wells at this point are not identified. Sample collection schedule is in the staff report along with the analysis that will be monitored. There are several residences within 500 feet of the site and two commercial properties. The overburden will be placed on top of the sand as deposited. The materials will be moved into the south side of the pit and filled up approximately 50 feet where the sand will be capped with 5 inches of topsoil and seeded to be stabilized. DNR and the COE are following this entire process to the removal from Corp Island to the deposition at Mathy Pit. Work limits are identified on the maps provided with the elevations. Location of the monitoring wells, are also provided on the map. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether the plans and safeguards proposed for this site are adequate to ensure public health and safety. If determined to be adequate, staff recommends that the plan be approved with the following conditions:

1. All required permits be obtained from state and local jurisdictions.
2. The Land Management Department will be provided with a copy of the sampling and analysis report or alternately a synopsis of the sampling program at the completion of the project.
3. Topsoil placement and final seeding should be completed so the site is stabilized within 6 months of project completion.

Holst stated he would like to hear what the Town has to say about this. Mr. Bunce stated the Town is in favor of putting the sand in, cover and seed it down. That reclaims the pit and it's not going to be taken back out of there. Mike Miller asked for it to be clarified if the pit could be reopened at some point in the future. Kleinhans stated that it could be opened at some point in the future subject to the issuance of a conditional use permit. **Holst moved to approve the groundwater response plan for Monarch Paving with conditions #1 - #3, amending condition #2 to also add the Town of Trenton/Rohl seconds. All in favor. Passed.**

Departmental Update and Future Agenda Items

Conditional use permit request on Filling and Grading in the Shoreland/Wetland District for Bruce Anderson in the Town of Salem.

Discuss take action to accept Wisconsin Land Information Program grant funds, amend 2010 budget to create revenue and expenditure line items and amend planned Land Records Modernization Fund expenditures.

Motion to adjourn at 10:09pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 19, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 2 nd & 16 th , July 7 th & 21 st , all in 2010.	Chair
3	Approve minutes of the May 5, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for Filling & Grading in the Shoreland/Wetland District by LS Marine, Inc, agent for Joseph & Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Kleinhans
5	Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the Agriculture Residential District by LS Marine, Inc, agent for Joseph & Marilyn Mangin, owners on property located in Government Lot 1 of Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Pichotta
6	Discuss take action on a groundwater response plan for Monarch Paving Nonmetallic Mining Facility located in part of the east half of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI.	Kleinhans
7	Future agenda items and departmental update.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(5/7/10)

MINUTES - Pierce County Land Management Committee Meeting, May 5, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 19th, June 2nd & 16th, all in 2010.

Approve Minutes: **Sanden moved to approve the April 21, 2010 LMC minutes/ Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for an expansion of a nonconforming structure in the Agriculture Residential District for Terry & Denise Pelzel, owners on property located in the NE ¼ of the SE ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Barkla invited Terry & Denise Pelzel forward: Mr. Pelzel explained that their home was originally the old Union School House and they have lived there for 34 years. The roof is in bad repair. They would like to put a metal roof on the house and garage. The walls are in bad repair and the floor is heaving in the garage. They would like to replace the 20 ft x 24 ft garage with a 30 ft x 32 ft garage. They would be building to the south and east so wouldn't be any closer to the road. **Staff Report – Andy Pichotta:** Mr. and Mrs. Pelzel are requesting approval for an addition to a nonconforming building on their property located at the intersection of 220th St and 350th Ave. Setback averaging did not allow a permit to be issued for the proposed building expansion. The one acre parcel is zoned Agriculture Residential and located in the Town of Union. The building is located 56 ft from the centerline of 220th St and required setback is 75 ft from the centerline or 42 ft from the town road right-of-way. The proposed garage expansion is on the south side of the existing dwelling. The size of the existing garage is 20 ft x 24 ft. This request is to expand the garage to 32 ft x 30 ft that will be 12 ft to the south and 6 ft east. The roof of the existing garage is failing. The location of the onsite sanitary system is on the NE side of this parcel. The building addition does not interfere with drain field and tank locations. The one acre parcel has dimensions of 209 ft x 209 ft and is described using metes and bounds. As stated earlier, the residence is located 56 ft from the centerline of 220th St and 90 ft from the right-of-way of 350th Ave. The width of the existing residence with garage is 73 ft. The proposed lateral expansion will not encroach on the 10 ft side yard setback or on the visual clearance triangle. The Town of Union Supervisors supported this request during their April 13, 2010 meeting. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether this land use request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit. **Chairperson Barkla opened the hearing to the public. No public comments. Public hearing closed. Holst moved to approve the conditional use permit for an expansion of a nonconforming structure in the Agriculture Residential District for Terry & Denise Pelzel due to the fact this request was found to be not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Two public hearings; one for Filling & Grading in the Shoreland/Flood Plain area near Diamond Bluff as well as a Utility Facility for the same site. We have determined that regulating this activity as a Utility Facility >1000 square feet is the most appropriate way to address this proposed unclassified use, that being the use of a site as a conduit for barges and trucks off the river. According to our code, we

should classify a use most closely to what it resembles in the code and the Utility Facility fits fairly well and works in all zoning districts subject to a conditional use permit.

Monarch Paving will be back as part of their conditional use permit renewal for placing dredge materials on their site. We will be looking at approval of a plan describing activities and safeguards for that site.

Potential rule exception for an erosion control plan on a 1 Lot Major CSM as well as the approval of a 1 Lot Major CSM in the Town of Trenton.

Motion to adjourn at 7:10pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 5, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/23/10)

MINUTES - Pierce County Land Management Committee Meeting, April 21, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer.

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 5th & 19th, June 2nd & 16th, all in 2010.

Election of Officers: Chairperson Barkla opened nominations for Land Management Committee

Chairperson: Holst nominated Paul Barkla for chairperson, Rohl nominated Jeff Holst for chairperson, Holst refused the nomination. **Nominations closed. All in favor of Paul Barkla elected**

Chairperson. Passed. Chairperson Barkla opened nominations for Vice Chairperson: Holst nominated Joe Fetzer for Vice Chairperson. **Nominations closed. All in favor of Joe Fetzer elected Vice Chairperson. Passed.**

Approve Minutes: **Rohl moved to approve the April 7, 2010 LMC minutes/Sanden seconded. All in favor. Passed with Fetzer not voting because of absence at the meeting.**

Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining in the General Rural District by County Materials Corp, owner of a parcel of land located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Staff Report – Brad Roy: Not much has changed since the status report heard last fall. At that time the committee determined no modifications to conditions was necessary. County Materials is not requesting any modifications to the existing Conditional Use Permit. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. Intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. The quarry is approximately 375 ft x 425 ft and 25 ft deep, totaling 3.6 acres. Expansion of the quarry will be to the south and west within the stripped area and to lower the floor to 25 ft. No operational changes are planned. There are approximately 22 unreclaimed acres on the site. County Materials has complied with reporting of the seismograph, well and noise monitoring requirements. Pine seedlings were planted on the berm to reduce noise impacts in the future. Many of the seedlings did not survive. Staff has not received any complaints recently however, we previous complaints include:

1. Noise from the operation.
2. Visual impacts from STH 128.
3. Dust.
4. The presence of sand in some of the nearby wells.

The Town of Spring Lake was contacted for comments or concerns regarding the renewal of this conditional use permit. Mike Jacobson, Town of Spring Lake Supervisor, responded that the Town did not have concerns about renewal of the existing conditions, but that they would oppose an increase of the hours of operation. The Town would also like for additional seedlings to be planted on the berm to replace those that didn't survive. The existing conditions are listed in the staff report. **Staff**

Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.

2. Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarpred) prior to leaving the site.
21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in 6 months.

County Materials has always complied with the requirements. Condition #25 states for another six month status report which the committee may want to consider removing or changing. Chairperson Barkla stated he and Andy discussed this and it's been really great to see how business in this County has been able to work with a Township and establish a good relationship. Jim Small stated he doesn't mind coming every six months, if there is a problem it can be caught early. He has ordered 3000 more white pines to replace the red pines that didn't make it. Mike Jacobson stated the best thing was modifying the hours. He requested that trucks not use 890th Ave as a cut-over route from Hwy 29 to Hwy 128. **Holst moved to approve the renewal of the conditional use permit for nonmetallic mining in the General Rural District by County Materials Corp with conditions #1 - #25 and**

we'll take their word that they will plant and take care of the trees/Fetzer seconded. All in favor. Passed.

Discuss take action on a request for site plan review for building expansion in the Industrial District for River City Metals, LLC, William F. Holst III, owner on Lot 1, located in the SW ¼ of the NE ¼ of Section 2, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Jeff Holst recused himself from discussion and voting on this issue due to possible conflict of interest. Staff Report – Jim Kleinhans:

We're here for site plan approval for new construction at an industrial facility in the Town of Diamond Bluff along Hwy 35. Site plan review per Section 240-75: The purpose of such approval is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County.

2. The Land Management Committee or its designee shall review the site, existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

The following text in the staff report gets into more detail about those specific items. The committee should approve a site plan if it's determined to be in conformance with the intent and purpose of this chapter. A map was submitted by Tom Geistfeld. Chapter 240-37 of the code talks about salvage yards and should be considered. Chapter 240-31, Landscape buffers is also included in the staff report. The commercial and industrial parcels that are developed as of the date of this chapter are exempt from this provision, except such parcels shall comply when the parcel is expanded in size or the use expands to an adjacent parcel which was previously undeveloped for such use. Mr. Geistfeld has submitted plans for the buildings and we received a copy of conditional approval from the Dept of Commerce. Staff visited the site and took some measurements and found out the proposed building encroached on the highway setback but there is room if it is moved toward the entrance door on the existing building. Otherwise the proposed location would require a variance. The staff report included some letters that were submitted to the LMC; a letter from the Dept of Natural Resources stating that the facility is in compliance with the State and meets DNR standards. Mr. Holst mentioned that he employs 25 people on the facility. Our file doesn't include any information on the existing onsite waste water treatment system. **Staff Recommendation:** Staff recommends the committee review the information provided with this report and the public concerns to determine which changes or additions to the site plan are warranted with the following conditions:

1. Address parking and traffic circulation.
2. Evaluation of the onsite sewer system.
3. Consider what landscape buffers would be warranted.
4. Make sure staff verifies that the building setback meets county zoning standards before it's erected.

Mr. Geistfeld presented state approved plans for the building and explained the proposed construction. Parts will be stored in a 4800 sq ft warehouse on pallets and shrink wrapped. This will clean up the area where the cars are parked now. There won't be anymore people employed so the parking issue will remain the same. The traffic flow will be the same. The Town's building inspector does not have commercial inspection status so Chris Luster from LaCrosse will be inspecting to make sure it's built according to state code. Fetzer asked if the baler is for crushing the cars. Mr. Geistfeld stated the smaller building has a crusher for aluminum cans. The 60 ft x 80 ft building will be strictly a pallet racked warehouse. The dismantling of the cars will be moved around behind the new building. Everything will be hidden from the highway. Sanden asked after the cash for clunkers ends what will the area that's being occupied by all these vehicles right now, be used for. Mr. Geistfeld stated after the vehicles are all dismantled, there won't be any vehicles in that area. There are actually two lots and whatever the other lot was used for before, it will go back to. Sanden asked if it would be used for storage and Mr. Geistfeld stated no, that's what the warehouse is for. Rohl asked if the flow of cars

will slow down now that the cash for clunkers program is done. Mr. Geistfeld stated yes, but he takes in other things from local people such as appliances. Leon Nesbitt, neighbor up the road from the operation, stated it's great that we have a business that employs 25 people. He stated that he became aware, a couple weeks ago, that there was concern about this being an eye sore. They are in the Ag tourism business so it doesn't help them. His concern is the way the area looks, it isn't the business. What has been explained sounds good and will be an improvement over what is there now. Donna Nesbitt asked, in the best case scenario, how long will this process take? Kleinhans stated the staff report lists how we do site plan review, the committee can require a surety to ensure this gets done or whatever they feel is appropriate; be it fencing, vegetation, etc. There is a mechanism under site plan review in the code that gives them the authority to react to whatever we are dealing with. Pichotta noted that typically there is a time frame established as part of this process. Dennis Donath stated that he represents Pierce County on the Mississippi River Parkway Commission and asked what will be done about screening the operation from the Great River Road. Kleinhans stated that when the addition on the existing building was permitted; we had Mr. Holst plant some trees on the south side of the building to soften the view. Anytime we do a building in an Industrial or Commercial District we do site plan review and address all the things mentioned in the staff report: drainage, landscape buffers, sewer and water systems, traffic circulation, etc. We're here to discuss that and come up with a reasonable agreement with Mr. Holst. Pichotta noted that it's his understanding that salvage has been going on, on that site, since 1965. As part of the conditional use permit process held in 1998 there was discussion about the potential for a landscape buffer and Mr. Sanden, at that time, noted that the more appropriate time to discuss a landscape buffer would be at site plan review. With his grandfathered status, had he not done any kind of expansion nor put in buildings he would have an argument for not screening - but once he added land and put in new buildings that triggered our ability to require screening. Sanden asked if he could be brought up to date on the Federal code for the scenic easement along this highway. Kleinhans stated that certain segments along Hwy 35 have scenic easements that were purchased in the 1950's. This site isn't affected by a scenic easement. Mr. Donath represents the Mississippi Region Highway Commission where they try to promote tourism along the road. Some of the people that sent concerns and complaints didn't see this as consistent with tourism but as an eye sore. Pichotta noted that staff had received a letter from Jane Corolla from the Scenic Byways Division of the Wisconsin DOT, that basically states that local government retain the ability to make land use decisions along scenic byways. Sanden asked what is the issue with the septic system. Kleinhans stated there is a mobile home and an office and we have no sanitary information in the file. He felt it needs to be inspected to make sure it's functioning to State sanitary guidelines. Fetzer asked about the photo of all the cars on the south side of the building. Kleinhans stated the view looking north shows all the appliances behind the building and also the stacked cars. Something to think about is the height on any landscaping buffer. Fetzer stated when he goes by places that have large fences it just looks like an open building and trees look so much better. Sanden asked if we put a condition for screening, how explicit would we have to be; adequate to screen from the road, trees of a certain height, etc? Pichotta stated that you could specify steps to be taken or you could put the onus back on the applicant and ask Mr. Holst to propose something that he believes would be adequate and give him a time-frame to present it to the LMC. Sanden, that would delay approval of the site plan. Pichotta suggested should you approve this you could attach several conditions to address adequate parking being delineated, sewer evaluation, landscape buffer, building setbacks be met and then establish a time-frame. Fetzer stated that he is hesitant to have someone spend money on a buffer if the claim is these cars will actually be removed in the near future. Fetzer asked if they are going to get cleared out of there or is it going to continue to be a few hundred cars out there? If we aren't going to be seeing the cars and hearing the complaints just allow him time. Sanden asked if that future state doesn't come to be, would we still have the ability to require a buffer? Pichotta stated that it is his position that you could - the approval of the buffer would be contingent on things being as stated or planned and if things changed you could revisit the issue. Sanden suggested that a surety be considered. Mr. Geistfeld stated that he talked to Mr. Holst about the buffer and the road sits 20 ft higher than his property so does he have to

have a 40 ft fence? Put a time frame to re-address the screening, six months or nine months. He has a construction business and that isn't part of the issue of being screened. He is grandfathered in on that. Pichotta stated Mr. Holst has multiple uses on a single lot and the entire site is subject to the site plan review. Mr. Geistfeld stated that is something you will have to take up with the owner. I don't know if the CSM shows that the construction is on the other lot. Kleinhans stated that CSM came in November of 2008. Mr. Geistfeld stated it's all on the same lot. What's been an eye sore are the cars stacked up. The complaints have come in since the salvage yard expanded. I agree about the salvage part but if this is turned down its business as usual. He's not going to shut down. Sanden asked when the conditional use permit comes back for renewal. Pichotta stated its like one issued for a nonconforming structure; it's a one time thing. Fetzer stated he looked at the aerial photo from 2007 and it's a thriving business with trucks sitting all around. Can a time-frame be put on the approval? Pichotta stated certainly. Rohl asked if we should have a list of conditions; parking, septic system, landscaping, etc. Fetzer asked when he is looking at building construction. Mr. Geistfeld stated that we can get materials onsite in three weeks. I would think in six, seven or eight months. It could be re-addressed and then you could say it needs a fence or something rather than having to fence the entire property right now.

Sanden moved to approve the site plan for building expansion in the Industrial District for River City Metals, LLC, William F. Holst, III with the following conditions:

- 1. Applicant shall provide a landscape buffer plan for the site to the LMC for approval within six months.**
- 2. Proposed baler building shall be moved to comply with setbacks.**
- 3. On-site waste water system shall be evaluated and brought into compliance with state plumbing code within six months.**
- 4. Adequate parking for clients and employees shall be delineated within six months.**

Mr. Geistfeld asked if there is an ordinance on the number of parking stalls required. Kleinhans stated it is in the zoning code based on number of employees, whether it's an office or warehousing facility.

Fetzer seconded. Chairperson Barkla asked about the landscape plan in six months, what happens if they have removed the cars? Sanden stated that, in his opinion, less screening would be required. **All in favor. Passed with Holst not voting.**

Discuss take action on recommendation to County Board of Supervisors regarding Fetzer and Sanden reelection to LMC as Citizen Members. The 2-year terms of Land Management Committee (LMC) members Joe Fetzer and Eric Sanden expired in April 2009. Their new terms would be effective through April 30, 2011. Staff suggests that the LMC forward a recommendation to the County Board of Supervisors supporting the re-election of Mr. Fetzer and Mr. Sanden as citizen members. Chairperson Barkla asked about the recommendation through 2011, didn't we have it staggered. Pichotta stated this will take care of that because the County Board positions are through 2012. The new 2-year term would have started last April and will go through 2011. **Holst moved to approve the reelection of Citizen Members Joe Fetzer and Eric Sanden and forward a recommendation to the County Board of Supervisors/Rohl seconded. All in favor. Passed.** Holst stated these are two of the best citizen members we've seen on any committee.

Departmental Update and Future Agenda Items

Conditional use permit for expansion of a nonconforming structure in the Town of Union

Motion to adjourn at 8:08pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

(4/9/10)

MINUTES - Pierce County Land Management Committee Meeting, April 7, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden.

Absent: Joe Fetzner

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 21st, May 5th & 19th, all in 2010.

Approve Minutes: **Rohl moved to approve the March 3, 2010 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Farm and Home Based Business for printing custom logos in the Primary Agriculture District for Bill Jiang, agent for Ellsworth Community Schools, Sunnyside School, owner on property located in the NW ¼ of the NW ¼ of Section 12, T26N, R17W, Town of Ellsworth, Pierce County, WI. Chairperson Barkla invited Bill Jiang forward: Mr. Jiang explained he runs a small business importing squeeze balls and mouse pads from China, Taiwan and Hong Kong. He prints custom logos on them and then sends them out for distribution. He currently has a business in Hastings but would like to buy a smaller space to be more economical. He generates very little waste; a small amount of water, some paper and quite a few pallets. Sanden asked how the supplies are delivered and distributed. Mr. Jiang stated they use the most economical way from port; either box trucks or 18 wheelers. Sanden asked how often he receives deliveries. Mr. Jiang stated when business was good, it was twice a week, recently it has been twice a month. Ninety percent is delivered by Fed Ex or UPS to distributors. Sanden asked if any of the materials need special handling or if it's considered hazardous. Mr. Jiang showed an example and stated the ink is 90% water, the screen print is very fine articles of plastic and he does generate paper from the iron-on logos. **Staff Report – Jim Kleinhans:** Mr. Jiang contacted staff about buying Sunnyside School and is interested in utilizing this as a residence and his business. Two years ago Northwest Counseling obtained a conditional use permit for this property but they didn't exercise their option to purchase. The school district is still interested in selling the property. The property is zoned Primary Agriculture. A FHBB is conditionally permitted in that district. The school building is nonconforming due to setbacks but Mr. Jiang is not interested in expanding the building at this time. The only modifications he proposes include the conversion of classrooms to bedrooms and living space and the addition of two overhead doors for material transfer via forklift. Off-street parking requirements for businesses are covered under Section 240-54. For residential it requires two. He does have a turn around driveway that accesses the county road and town road that will accommodate trucks. The widths are listed in the staff report. There is an existing on-site sanitary system. The Town listed groundwater concerns about chemical discharges. Mr. Jiang just explained that. Proposed hours of operation are 8:00am to 5:00pm. No advertising signs were requested at this time. The square footage for the business is less than 50% of the building size so that would qualify under FHBB. A materials list is included in the staff report. Mr. Jiang met with the Town at their meeting and the Town had the following recommendations:

1. No more than two conex containers plus one owned and licensed trailer.
2. No freight pallets in excess of 15.
3. All materials that can be recycled will be recycled.
4. No hazardous materials allowed in sanitary sewer to prevent groundwater contamination.
5. Residence to be immediate single family dwelling only.

Staff Recommendation: Staff recommends the Land Management Committee consider whether this land use request is contrary to the public interest or detrimental or injurious to the public health, public

safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Ellsworth Fire Department must review the materials list and approve storage of production chemicals.
2. Advertising signs shall comply with county zoning code standards.
3. This permit shall be renewed administratively in 1 year to verify establishment of the use, compliance with conditions and property ownership and every two years thereafter. Compliance issues regarding this permit will be directed to the committee.
4. The business and designated square footage shall comply with Section 240-36E.
5. Conversion to living space shall comply with uniform dwelling code standards and shall be inspected by the Town building inspector.
6. Applicant shall comply with the Town of Ellsworth recommendations.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Holst asked Barry Foy about the 15 pallets whether that is outside or inside. Mr. Foy stated outside, the Town doesn't want a rat trap. What he does inside is no concern for them. The Town does have a burning site that takes untreated lumber. **Sanden moved to find this request to be not contrary to the public interest nor detrimental or injurious to the public health, public safety or character of the surrounding area and to approve the conditional use permit for a Farm & Home Based Business for Bill Jiang, agent for Ellsworth Community Schools, Sunnyside School with conditions #1 - #6 and adding the Town's conditions #1 - #5 amending condition #2 to read "No freight pallets in excess of 15 stored outside."/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Farm and Home Based Business for coffee roasting and associated retail sales in the Primary Agriculture District for Peter Esanbock, owner on Lot 1, located in the SE ¼ of the NE ¼ of Section 11, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Barkla invited Peter Esanbock forward: Mr. Esanbock explained that his business is internet based. He imports coffee beans from St. Paul on a trailer. He stores them on pallets for roasting as ordered through his website and re-bags in smaller bags. He also sells espresso machines which are drop-shipped by the distributors. He does have some small, breakable items and would like to have some coffee pots, sugar bowls, etc for sale. He would also like to have a table or two for people to enjoy coffee. He is running out of room and would like to expand. Sanden asked how many times a month he brings in product. Mr. Esanbock stated about every two weeks and noted that he would put in a loading dock for use as the company grows. UPS and Spee-Dee Delivery come nearly everyday for orders being shipped. Rohl asked if this barn is across the road from where he lives. Mr. Esanbock stated yes, it is located on the homestead which has been in the family for years. **Staff Report – Jim Kleinhans:** Mr. Esanbock is requesting a conditional use permit to expand his retail facility, a coffee roasting business. He is in Primary Agriculture District where FHBB are allowed. The parcel size is 10.9 acres and he currently lives on a 4.5 acre parcel. He has provided a diagram of the work he wants to do on the barn. He will need a sewer system to handle the running water and bathrooms. He will need to grade a parking lot. He didn't propose any advertising signs at this time. The Town of Gilman did approve this permit on March 10, 2010 finding it consistent with the Town's comprehensive plan by promoting small businesses that operate while maintaining a clean rural environment and promoting local employment opportunities. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether this land use request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The proposed use must remain accessory to a single family residential use.
2. Waste materials shall be disposed of properly and follow county recycling procedures.

3. The business expansion shall be licensed with Dept of Ag. Trade and Consumer Protection and applicant shall secure all necessary local or state licenses or approvals.
Jim checked with our health department and because Mr. Esanbock has a license with the Dept of Ag, Trade and Consumer Protection he wouldn't need a license through them.
4. The barn shall be modified to meet commercial building standards.
5. Available parking shall comply with 240-54 (Off Street Parking).
6. A sanitary permit shall be obtained to provide for proper wastewater disposal.
7. The permit shall be renewed administratively in one year to verify establishment of the use and compliance with conditions, and every two years thereafter. Compliance issues regarding this permit will be directed to the committee.
8. A land use permit shall be required for the placement of a free standing advertising sign.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Holst stated this is the type of activities we need to promote in Pierce County. **Holst moved to find this request to be not contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area and to approve the conditional use permit for a Farm & Home Based Business for Peter Esanbock with conditions #1 - #8 /Rohl seconded. All in favor. Passed.**

Discuss take action on required amendments to the shoreland/wetland code and potential application for a state grant to help defray associated costs. Staff Report – Jim Kleinhans: On Feb. 1st of this year the shoreland rules were updated. In the interest of the State getting all the counties to cooperate with the mandated updated code, they have offered a grant proposal to offset staff time and public hearings. If we meet the minimum requirements we would qualify for \$5000. If we do something beyond that we could qualify for more. The key is to get the application to the DNR Regional Office by May 1st to qualify this year. If the committee is interested we would have the next year to work on public hearings and get the text down. In the grant application they would like us to do a resolution. Kleinhans stated that he had talked to Greg Breese about what is necessary to qualify. Breese stated we would need to do a little outreach and a pamphlet. He also noted that he had talked to Rod Webb about minimum standards. We have some outstanding water resources in Pierce County. Do we want to look at the minimums or beyond that? We should think about the Mississippi, St. Croix, Eau Galle and Big River. Rod Webb said he could come up with some ideas consistent with what his office does to keep sediment and phosphorous out of the rivers. We had a model ordinance released in Feb, another one Mar. 23 and there will be another one coming out in June. There is a certain amount of discretion and the State just wants us to do this and do a good job. There are some things changing like rules relating to impervious surfaces. Chairperson Barkla noted for the record that staff is seeking a recommendation from the LMC as to the direction as to whether a stand alone Shoreland and Wetland ordinance should be created. Jim stated our Shoreland and Wetland code has been included within our zoning code since 1998. After discussion with Andy and Emily, we decided it would be easier to administer if it was a stand alone ordinance. It would be a lot easier for the DNR to track also. It used to be a stand alone code but in 1998 we took Door County's ordinance and used that. From staff's point of view we would recommend that we do a stand alone code and delete it out of the zoning code. Sanden asked if we did that would you have to re-adopt the zoning code as a whole? Jim stated if it's just deleting, not adding anything to the zoning code, you shouldn't have to. We talked about whether it's a comprehensive revision to the zoning code or not. Sanden, if you go for more than \$5000 does the county's matching funds have to raise above \$1600? Pichotta stated he suspected that it would - but suggested that when using staff time as a match wouldn't take too long to achieve a higher match. Especially with Jim, Emily and myself working on it. Pichotta noted that he isn't yet sold on doing more than the minimums required by the DNR. Sanden stated he is just thinking about the comprehensive planning and if you accepted their grant it came with strings. Jim stated he asked about that when he was at the conference. We could wait to apply for this in the spring of 2011 but that may put us in a bind to finish by 2012. Kleinhans noted that he is keeping track of all the time he is putting

into this now. Holst stated his district is heavily impacted by such rules and sometimes it's hard to do anything with all the DNR requirements so at this time he could not support anything over and above the DNR requirements. **Staff Recommendation:** Staff recommends the Land Management Committee determine whether it is appropriate to apply for the grant discussed above and if determined to be, direct staff to submit a resolution to the Finance and Personnel Committee and County Board for consideration and to submit said grant application by May 1, 2010.

Additionally, staff is seeking LMC direction as to whether a stand alone Shoreland and Wetland Ordinance should be created.

Sanden moved to direct staff to submit a resolution to the Finance and Personnel Committee and County Board for consideration and to submit said grant application by May 1, 2010 and also to direct staff to create a stand alone Shoreland and Wetland Ordinance/Rohl seconds.

Chairperson Barkla stated there is a special meeting scheduled in front of the Finance & Personnel Committee on Apr. 13, 2010 at 6:40pm. All in favor. Passed.

Departmental Update and Future Agenda Items

Pichotta stated that at the next meeting the LMC would be conducting site plan review for River City Metals in the Town of Diamond Bluff. The applicant is seeking to add on to several buildings.

He also noted that we are working on a survey with the planning class out of UWRF, the final draft has been reviewed and it should go out shortly and may have the results in time for budget discussion.

He noted that there are two projects with the Corp of Engineers going on, on the Mississippi River that we are involved in, in varying degrees. One is the unloading of materials from Corp Island. Initially it looked like there may be some decisions involving the committee but it may be that the Corps sovereign immunity clause will rule and we won't need to issue a conditional use permit for filling and grading and won't have to deal with a potential unclassified use. However, a separate project taking place below lock & dam #3 will result in the construction of a substantial amount of road along the river over which the County has jurisdiction. There also is the potential for the use of a site on Trenton Island as a conduit to the river for barges and trucks. We may be presented with the issue of classifying an unclassified use. Pichotta suggested that he views this as a utility type function so we may need to consider creating a use that's allowable in all districts with a CUP.

Next week, staff is meeting with DATCP regarding the working lands initiative in the Town of Salem and the Town of River Falls to discuss the updating of the Farmland Preservation Program. The plan has to be updated by December of 2012. There is a grant available in a year or so but there may be a need to update prior to that time.

Preliminary Flood Insurance Rate Maps are currently being reviewed by staff. FEMA has contracted with folks to update those maps. There was an open house held out at Highway a few months ago. It was very clear there are accuracy issues. The Corp is using the same topo maps they used in the 60's. Jim and Emily along with the surveyor are working to get the best possible product. They identified problem areas that didn't follow the contours just right. Out of the 50 they identified, the consultant agreed to correct about half. The others they are going out into the field and establishing elevations based on sea level. At this point the surveyor has given us elevations and bench marks. Louie is going to write up the narratives and submit them to CDM, FEMA's consultant on the project. Pichotta noted the Departments involvement in litigation associated with the Brekken heliport CUP and a quarry located on Cty Rd VV.

Motion to adjourn at 7:50pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

(3/25/10)

MINUTES - Pierce County Land Management Committee Meeting, March 3, 2010

Present: Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden.

Absent: Paul Barkla

Others: Andy Pichotta, Brad Roy and Shari Hartung

Acting Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: Mar. 17th, April 7th & 21st, all in 2010.

Approve Minutes: **Rohl moved to approve the February 3, 2010 LMC minutes/Sanden seconded.**

All in favor. Passed.

Discuss take action on a request for renewal and potential modification of a conditional use permit for “Vino in the Valley,” a Farm and Home Based Business by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Larry Brenner forward: Mr. Brenner explained that he is happy with the Thursday, Saturday, Sunday line up. He is planning on opening Mother’s Day weekend and going through September with the regular schedule. The last two Octobers haven’t been profitable. This year he was hoping to be open for Farm Technology Days. Vino will have a booth out there and will try to offer an incentive for people to come for dinner. Also the Ellsworth School District wants to try to do a fundraiser called Tuscany in the Valley on a Friday night. Every year they have a couple rain days and may pull back on the October dates and he would like the flexibility to use those days for Farm Technology. He would plan on being open that whole week. He wants to stay away from expanding but would like a little flexibility. **Staff Report – Brad Roy:** Besides the request for flexibility on days this is also the renewal for the conditional use permit. If the committee would like to make any modifications, that could be addressed here. Staff hasn’t received any complaints on this operation. We’ve had complaints in the past but not in the last year or so. The request is to change condition #12. The applicant is asking to deviate from the established days of Thursday, Saturday and Sunday schedule while remaining in compliance with the 75 day limit. The applicant appeared before the Town of El Paso. The Town supported the request for the ability to deviate five times in 2010. Staff has verified this position with the Town Chairperson. The existing conditions are listed in the staff report. **Staff Recommendation:** Staff recommends the LMC consider the request for modification to the approved conditions and any impact on the public health, safety, the public interest and character of the area.

If the LMC determines that it is appropriate to allow for deviation from the operation schedule, staff suggests that Condition 12 be modified to state:

Hours of operation from April through September shall be Thursday 4pm to 10pm with lights out at 11pm; Saturdays 4pm to 10pm for the public with lights out at 11pm and allow for any charity or special private event from 12pm to 4pm; Sundays 12pm to 8pm. From October through December the hours shall be Saturday and Sunday 12pm to 6pm. *Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved.*

The LMC should also consider whether any other additions or modifications to the established conditions are necessary to mitigate any negative off-site impacts when considering renewal of this conditional use permit. Any motion to renew the conditional use permit should include all established conditions including any approved modifications.

Holst stated Mr. Brenner has come back before the committee every six months. He has lived within his CUP and done everything we have asked of him. I would like to modify condition #7 to state “This conditional use permit shall be reviewed for renewal administratively every two years or if compliance issues arise.” And condition #12 to include “Any deviation from the approved schedule shall be at the

discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved.” Sanden asked if this meant Mr. Brenner still needs to go back before the Town Board. Pichotta stated yes. Chairperson Fetzer asked Mr. Brenner if he is just asking for five days of deviation this year. Mr. Brenner stated yes, to move things around a bit. **Holst moved to approve the conditional use permit renewal with conditions #7 and #12 amended as presented for Larry Brenner, owner of “Vino in the Valley,” a Farm and Home Based Business/Rohl seconded. Chairperson Fetzer recused himself. All in favor. Motion passed with Fetzer not voting.**

Discuss take action on a request for renewal and potential modification of a conditional use permit for a Farmers Market & Gift Shop, a Farm and Home Based Business by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Larry Brenner forward: Mr. Brenner explained he is making the same request so that if “Vino” is open on a day other than Thursday, Saturday or Sunday he would like to have the Gift Shop open also. **Staff Report – Brad Roy:** This is the same thing so if there are any modifications the committee would like to make to the conditions, they should be addressed. This is to remain consistent with “Vino in the Valley”. Chairperson Fetzer asked about the 83 days. Is that because of the October and December events? Pichotta stated that at one time Mr. Brenner had asked for 83 days for both businesses but based on the Towns position, the committee approved 75 vs. 83 days for “Vino”. **Holst moved to approve the conditional use permit renewal with condition #5 amended to read “This conditional use permit shall be reviewed for renewal administratively every two years or if compliance issues arise” and condition #8 to add “Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved.”/Sanden seconded. Chairperson Fetzer recused himself. All in favor. Passed with Fetzer not voting.**

Discuss take action on the County Recreation Goals and Actions for the Pierce County Outdoor Recreation Plan. Staff Report – Brad Roy: The Mississippi River Regional Planning Commission is in the process of updating the Pierce County Outdoor Recreation Plan 2010 – 2014. There are two items that need to be discussed tonight. We need to prioritize general recreational activities for future development strategies and identify an action plan “wish list”, of specific actions the county wants to include in the plan. Inclusion of those provides eligibility for certain grant funds which they would otherwise not be eligible. Roy noted that this isn’t the only time the Committee will be able to act on the Plan. The entire Plan will be presented for approval at a future date. The Community Attitudes Survey from the Comprehensive Plan addressed some of these activities. It’s important to consider what recreational opportunities the County should be providing as opposed to what the Cities and Villages typically provide. Sanden asked what criteria they would be basing their priority. Pichotta stated the chart in the staff report is out of the Community Attitude Survey. This is what 42% of the County thought about available recreational opportunities. Pichotta suggested the LMC should also draw from their own personal experiences but also consider what the folks you represent would like to see. The following categories were discussed and ranked with a High, Medium or Low priority for guidance for future planning activities: Walking and Hiking, Driving and Pleasure, Picnicking, Bicycling, Swimming, Fishing, Motor Boating, Camping, Canoeing/Kayaking, Mountain Biking, Target Shooting, Hunting, Snowmobiling, Baseball/Softball, Soccer, Horseback Riding Trails. Roy referenced the Pierce County Park Property Plan stating that an action plan or “wish list” could be identified from the future conditions and goals established in the Park Plan. The committee discussed and by consensus identified various conditions and goals to be included in the Outdoor Recreation Plan as an action plan.

Departmental Update and Future Agenda Items

Pichotta noted that again there are no public hearings or renewals scheduled for the next meeting and instead of dealing with housekeeping items; he proposed to cancel the March 17th meeting. Committee agreed. Pichotta stated the budget status reports are in the folders for review.

Motion to adjourn at 7:43 pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, February 3, 2010

Present: Paul Barkla, Don Rohl, Joe Fetzer and Eric Sanden. Jeff Holst appeared by polycom.

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: Feb. 17th, Mar. 3rd & 17th, all in 2010.

Rohl moved to amend the agenda and have the #7 agenda item heard right after #4 agenda item/Sanden seconded. All in favor. Passed.

Approve Minutes: **Sanden moved to approve the January 20, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to request a conditional use permit for an accessory residence in the General Rural Flexible District for Arthur and Maria Gallardo Johnson, owners of property located in the SW ¼ of the NE ¼ and the SE ¼ of the NW ¼ of Section 6, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Barkla invited Arthur Gallardo Johnson forward: Mr. Gallardo Johnson explained that he purchased the out building shown in the staff report. He owns another piece of property about 1½ miles south. This fall they decided to build a residence on this site. The building inspector noticed the cabin and informed him of the accessory residence code so now he is addressing the second residence issue. Fetzer asked what he planned to use the cabin for. Mr. Gallardo Johnson stated for work, writing or just relaxing, maybe to have friends over. He stated there is no plumbing or electricity. Rohl asked if they used it while they were building. Mr. Gallardo Johnson said no, not while building and they don't use it during the winter because of the long driveway. **Staff Report – Jim Kleinhans:** Mr. Gallardo Johnson owns a 31 acre parcel in the Town of Hartland. In 2005 he permitted an ag building and brought in this small cabin while they were using their property. The cabin was placed right over the lot line so it makes it one big parcel. With two residences on the parcel he would need a conditional use permit as an accessory residence. He went to the Town of Hartland about the conditional use permit. Staff read through their comp plan and talked to Dave Esterby. He stated there is nothing in their comp plan that would restrict the use of an accessory residence on their property. The accessory residence is a conditionally permitted use in that zoning district. **Staff Recommendation:** Staff recommends that the Land Management Committee consider whether this land use request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. A sanitary permit be obtained for a sanitary system connection if the accessory residence is ever equipped with interior plumbing fixtures.
2. The accessory residence complies with uniform dwelling code and is inspected by the local building inspector.
3. The accessory residence shall not be managed as a rental unit as requested by the Town of Hartland.

Chairperson Barkla opened the public hearing. Dave Esterby, Chairman of Town of Hartland, stated the Town Board approved his plans with no objections. **Public hearing closed.** Sanden asked if the farmhouse was built on the property line or the cabin. Kleinhans stated the Quonset type building is behind the cabin that is on the property line. **Fetzer moved to approve the conditional use permit for an accessory residence for Arthur & Maria Gallardo Johnson due to the fact this request is not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #3/Rohl seconded. All in favor. Passed.**

Discuss take action on a request to modify conditions associated with Bisel Nonmetallic Mine/Exception to Departmental Policy requiring a 100 ft setback to property lines for Nonmetallic Mining. Chairperson Barkla invited Jim Harris forward: Mr. Harris explained that the Highway Dept has a mining operation, known as the Bisel Quarry, located just off USH 10 approximately 6 miles east of Ellsworth. They are starting to do reclamation and noticed a lot of loose rock adjacent to the south side of the highwall. It looks like there is some old wiring left in the hill from other blasting. If they are able to take 15 ft of material off of the top of the highwall they will stabilize the area. **Staff Report – Andy Pichotta:** This is a request to modify the conditions associated with the Bisel Nonmetallic Mine. To modify those conditions will require a deviation from the departmental policy regarding the 100 ft setback to property lines. Basically, as Mr. Harris explained, there is a portion of the mine adjacent to USH 10, with some fractured rock that has created an unsafe situation. There is a need to do some work within that area. In order to do that, we would need to change some conditions associated with the Bisel pit. In your packets, there is some back ground. There is information on how the pit will be reclaimed. Right now condition #2 states: A 100 foot setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur. Pichotta noted that the reclamation plan for the site will need to be modified to address any approved changes. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether this proposal warrants an exception to the departmental policy. If so, staff recommends that Condition #2 be modified to state:

A 100 foot setback shall be maintained from all property boundaries, *except in the area of unstable materials located adjacent to USH 10.* In areas where prior mining has extended within this setback no further encroachment shall occur.

Pichotta noted that a few years ago the LMC allowed a deviation from the 100 ft setback on the Schroeder Pit in the Town of Rock Elm – as part of an agreement with an adjoining property owner that allowed the mine to encroach closer in a specific area in exchange for a larger setback in another area. So there is some precedence for considering unique circumstances. Holst stated that he supported modification of the conditions due to the outstanding safety issue. **Holst moved to approve an exception to Departmental Policy requiring a 100 ft setback to property lines for Nonmetallic Mining and to modify condition #2 to state: A 100 foot setback shall be maintained from all property boundaries, except in the area of unstable materials located adjacent to USH 10. In areas where prior mining has extended within this setback no further encroachment shall occur/Rohl seconded.** Sanden asked if the 100 ft setback is for the mine area or the highwall. Pichotta explained the mining pit is located beyond the highwall. The cut on the road is associated with the placement of the road versus the mine. **All in favor. Passed.**

Discuss take action on proposed resolution establishing conversion fee for parcels zoned out of Exclusive Agriculture. Pichotta reported: This was on the last LMC agenda and there was some confusion as to what the conversion fee would actually be. It is based on the highest class of tillable soil present within the Town. It's not dependent on the soils on site. Even if it was forested not crop land it would be the same fee. For the Town of Salem the fee would be \$217 times 3 or \$651 per acre. This resolution would establish that fee and amend Resolution 04-16 of the Land Management Department Fee Schedule and establish the fee as discussed. The next agenda item would encourage the delayed implementation of this fee. We believe it would be prudent to move forward on both issues. Rohl asked if we would be raising or lowering the fee. Pichotta stated currently there is no fee. We are going to transition from the Exclusive Agriculture/Farmland Preservation Program to what is called the Working Lands Initiative. This initiative involves a number of different things such as the establishment of the Ag Enterprise Areas (AEA) as well as a few other changes. One of the changes being that there will no longer be the 35 acre lot size requirement in Exclusive Agriculture. It could now be a density situation, although if the Town wanted to remain subject to a 35 acre minimum lot

size it could, it will depend on what is established in the Town or County's farmland preservation plan. The next item on the agenda encourages the delayed implementation of the conversion fee for parcels zoned out of Exclusive Agriculture. The rationale of delaying the implementation is noted in the Whereas portion of the resolution. Specifically, Chapter 91 requires all counties to update their farmland preservation plan over the next five years and, within one year after plan adoption, requires counties to update their exclusive agriculture zoning ordinances to maintain certification for tax credit eligibility; it imposes these rezoning conversion fees on January 1, 2010 based on existing plans, ordinances and zoning maps without the benefit of an updated farmland preservation plan or ordinance; charging the rezoning conversion fee is a burden on property owners who are not farmers, whose land is not currently being farmed, and who never collected farmland preservation tax credits in the past; delaying implementation of the rezoning conversion fee until after revised plan and ordinance adoption and certification allows counties and landowners time to properly address all the planning and zoning requirements of the new Working Lands Program. Pichotta noted that he had received an email that indicates that Senator Dale Schultz plans to introduce a bill in the next few days that would result in the delay of the implementation of the conversion fee until such time as the farmland preservation plan for a given municipality is certified by the State, which, Pichotta stated, seems to make good sense. He also noted that the wording on of the Working Lands documents states that the conversion fee will be 3 times the value of the land or as established in a farmland preservation plan. He noted that we could address, in our farmland preservation plan, the fact that a lot of the land zoned Exclusive Agriculture have never been in ag production and that the soils aren't very good and the ground is often quite steep. My recommendation is to support the delayed implementation of the conversion fee. That would give us an appropriate amount of time to address some of the concerns shared with you previously. Chairperson Barkla asked if he is recommending supporting agenda #5 and move them both forward to the Finance and Personnel Committee. Pichotta stated yes and if we adopt it and it's not necessary to collect the fee, we simply won't collect the fee. Chairperson Barkla stated in effect what the budget bill did was mandate that the County adopt agenda item #5. To deal with the issue for the state mandate is agenda item #6. They need to be dealt with separately. **Sanden moved to approve the proposed resolution establishing a conversion fee for parcels zoned out of Exclusive Agriculture and forwarding a recommendation to Finance and Personnel/Fetzer seconded. Passed with Holst voting no.** Holst asked if this is just for land in Exclusive Agriculture or the land in farmland preservation. Pichotta stated just the land zoned Exclusive Agriculture.

Discuss take action on proposed resolution supporting delayed implementation of Exclusive Agriculture conversion fee. Pichotta reported: Pichotta noted that it may be that we will have to amend the resolution as it moves forward because the resolution asks for something to be introduced. Which appears to be happening. **Fetzer moved to approve the proposed resolution supporting delayed implementation of the conversion fee for parcels zoned out of Exclusive Agriculture and forward a recommendation to the Finance and Personnel Committee/Rohl seconds. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta noted that there are no public hearings or renewals scheduled for the next meeting and instead of just dealing with housekeeping items, proposed to cancel the Feb. 17th meeting. Committee agreed. Update – Last Friday Pichotta met with a group interested in creating Ag Enterprise Area in the town of Oak Grove and Clifton that would cover 60 sq miles. Pichotta stated that he was concerned about establishing an AEA before adopting of a farmland preservation plan by Pierce County or the Town and suggested that it is similar to adopting zoning districts prior to adopting a zoning ordinance. The Land Management Department is in the process of working with Dr. David Kuehl, a professor at UWRF, who teaches Community Analysis. His students will be preparing and distributing a survey that lists the services that Pierce County provides in attempt to gauge the value that citizens place on a given program. It should be useful in strategic planning as well as in budgetary decisions. It should be

good for the students by giving them a better understanding of county government and useful for the county decision makers by giving them an unbiased review of the services provided.

Motion to adjourn at 7:34 pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, January 20, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden.

Others: Andy Pichotta and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: Feb. 3rd & 17th, Mar. 3rd & 17th, all in 2010.

Approve Minutes: **Sanden moved to approve the January 6, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss transition from Farmland Preservation Program to Working Lands Initiative. Pichotta reported: There are going to be some changes in the Farmland Preservation Program. Basically it will be transitioning to what's called the Working Lands Initiative and was passed as part of the State's 2009-2011 biennial budget. The goals of the program are to expand and modernize the state's existing farmland preservation program, establish agricultural enterprise areas (AEA's) and develop a purchase of agricultural conservation easement matching grant program (PACE). As a part of this initiative it will be necessary for Pierce County to institute a conversion fee for land rezoned out of Exclusive Agriculture. Fee must be submitted to the Department of Agriculture, Trade and Consumer Protection (DATCP). An additional fee may be assessed by the County on top of the mandated fee. Said additional fee would then be used to fund local farm land preservation efforts. Pichotta stated that he has learned that a number of Counties are intending to tack on a \$50 administrative fee for their time and effort. There is a resolution as the next agenda item in regard to this issue. Holst asked if this is a flat fee. Pichotta stated he thought it is but he is not advocating an additional fee. The Town of River Falls and the Town of Salem are the two towns with Exclusive Agriculture zoning. He will speak primarily about the Town of Salem since that is the one he has been involved with. Over the course of the last couple of years they have been attempting to utilize DATCP standards on identifying land that qualifies for farmland preservation. We've gone through on a 40 acre basis in the Town of Salem, and identified land that is appropriate for preservation based on soil types, either statewide importance or prime as well as historical use. In the process we've come to the recognition that there is a substantial amount of land in the town of Salem that is zoned Exclusive Agriculture that should not be. A substantial amount is forested and has never been in ag production. DATCP seemed to want to keep the level of land zoned Exclusive Agriculture above a certain percentage. What we did is identify two different classes of land zoned Exclusive Ag, one being land that - based on its character - deserved to be Exclusive Agriculture. The other being land that is zoned Exclusive Agriculture basically because it has been historically. The Town endorsed a strategy to encourage people whose land was inappropriately zoned Exclusive Agriculture, to rezone it over time. Now we find that to do so, would mean they would have to pay a hefty conversion fee. If the existing zoning scheme in the Town of Salem made sense, I would support the establishment of this fee now. Pichotta also noted that it will be necessary for Pierce County to update our Farmland Preservation Plan because, according to materials distributed by DATCP, the certification of Pierce County's Plan will expire on December 31, 2012.

As part of the non point program, in 2012 Pierce County will be eligible for up to a \$30,000 match to update their farmland preservation plan. They would apply for that in 2011. My sense is that it probably makes the most sense to hold off on the updated plan until then. Not only do we need to update ours, but Town's need to update a subset of that plan to deal with their Town. The Town's are going to be very important in the creation of Ag Enterprise Areas, which are landowner driven. Where groups of landowners would approach the Town and the Town and the County would then have to support the AEA. Basically if one wants to enter into a farmland preservation agreement in the future

they will have to be within the borders of an Ag Enterprise Area. We would probably take an approach similar to how we moved forward on the comprehensive plan. Where we attempted to involve the Town's in our process where we developed Town specific goals relating to farmland preservation relating as part of that planning effort. If a Town wanted to do something specific beyond that they could either hire their own consultant or cut a deal with our consultant whoever that might end up being. Sanden asked about the AEA, is that equivalent to the comprehensive planning language of an ag cluster area that are uniquely suited for farming. Jerome Rodewald, River Falls Zoning Administrator, in our Township if you look at where our Exclusive Agriculture clusters are, we've got two or three areas that could be AEA. What they want is more than a thousand acres, more than five farmers continuing ag use so they could develop the structures they need to continue farming. To get the maximum payment from the State you must be zoned Exclusive Agriculture and be in an AEA. Someone who has a contract now will fall out of that if they aren't zoned AEA. Sanden asked if he meant 1000 contiguous acres. Rodewald stated yes. It could have some non Exclusive Agriculture land in it but has to be continuously farmed. Pichotta, being zoned Exclusive Agriculture and not in an AEA you wouldn't be eligible for farmland preservation agreement. Sanden asked would the consultant or whoever be looking at soils and contiguous acres or more mathematical approach like a Land Evaluation Site Assessed (LESA) analysis. Are we going to that level or do a more informal study? Pichotta stated it is his understanding that it's not up to us but a grass roots type of thing. Sanden, it will be more of a Town decision then. Mel Pittman stated he feels it's more the land owner's decision and their neighbors that want to participate. They would have to agree on that and enter into a contract. Pichotta noted that it is actually possible to include land from a neighbor that doesn't necessarily agree. Pichotta handed out a copy of a Resolution Supporting Delayed Implementation of Farmland Preservation Rezoning Conversion Fee and asked if there is an interest in delaying the resolution. Chairperson Barkla asked Pichotta to put the resolution on the next agenda. Pichotta stated as things transpire he will keep the committee up to date. There is more information regarding conversion fees and a chart in the reports on how they were handled under the farmland preservation program and how they will be handled under the working lands initiative.

Discuss take action on proposed resolution establishing conversion fee for parcels zoned out of Exclusive Agriculture. Pichotta reported: Pichotta read the proposed resolution and discussed the calculation of the conversion fee. Chairperson Barkla suggested penciling in February 1, 2010 on the resolution, as that is the next Finance and Personnel meeting. Pittman asked if there is just going to be one conversion fee whether it's Grade 1, 2 or 3. Pichotta stated that it is his understanding that it would be the highest class present on the property. Rodewald stated that it is his understanding that it's a flat rate for the entire Township. Holst stated he feels we need clarification on this issue before we can act. **Holst moved to defer action until more information is received/Rohl seconded.** Holst, it would make sense to act on this at the same meeting we're adopting the resolution. Holst thanked Jerome Rodewald for his input. **All in favor. Passed.**

Committee to convene into closed session pursuant to WI § 19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit: performance evaluation of Land Management Director. Holst moved to convene into closed session/Rohl seconded. Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes, Barkla-yes and Sanden-yes. Passed. Convene into closed session at 7:36pm.

Motion by Holst/seconded by Sanden to return to open session at 8:15 pm. Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes, Barkla-yes and Sanden-yes. Motion passed.

Motion by Holst/seconded by Sanden to approve a step increase for the Land Management Director based upon a satisfactory annual review. Motion passed.

Departmental Update and Future Agenda Items

Conditional use permit request for an accessory residence in the Town of Hartland

Motion to adjourn at 8:20 pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 20, 2010 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: Feb. 3 rd & 17 th , Mar. 3 rd & 17 th , all in 2010.	Chair
3	Approve minutes of the January 6, 2010 Land Management Committee meeting.	Chair
4	Discuss transition from Farmland Preservation Program to Working Lands Initiative.	Pichotta
5	Discuss take action on proposed resolution establishing conversion fee for parcels zoned out of Exclusive Agriculture.	Pichotta
6	Committee to convene into closed session pursuant to WI § 19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit: performance evaluation of Land Management Director.	Chair
7	Committee to reconvene into open session and take action on closed session item, if required.	Chair
8	Future agenda items and departmental update.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(1/7/10)

MINUTES - Pierce County Land Management Committee Meeting, January 6, 2010

Present: Paul Barkla, Jeff Holst, Don Rohl, Joe Fetzer and Eric Sanden.

Others: Andy Pichotta and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: Jan. 20th, Feb. 3rd & 17th, Mar. 3rd & 17th, all in 2010.

Approve Minutes: **Rohl moved to approve the December 2, 2009 LMC minutes/Fetzer seconded. Holst recused himself from voting as he was absent from the last meeting. All in favor. Passed.**

Discuss take action on a request for a conditional use permit for a heliport in the General Rural Flexible 8 District for Christopher Brekken, owner on property, located in the SW ¼ of the NE ¼ of Section 27, T26N, R19W, Town of Oak Grove, Pierce County, WI. Staff Report – Andy Pichotta:

Pichotta stated that the LMC held a public hearing to consider this request on October 7, 2009. The issue was referred back to the Town of Oak Grove to ascertain the consistency of the request with their recently adopted Comprehensive Plan. The Town Board took action on the referral on November 16, 2009. The property is zoned General Rural Flexible 8 where airstrips are conditionally permitted subject to provisions found in Section 240-41A. Surrounding land uses include agriculture, woodlands and several residential subdivisions across Hwy 35 towards the Mississippi River. The reason this was referred back to the Town to review against their Comprehensive Plan is because the County's Comprehensive Plan establishes the role of town plans as follows:

- The county acknowledges that the responsibility for accomplishing planning objectives set forth in plans developed by towns subject to county zoning lies jointly with the Town and Pierce County. The county further acknowledges that it will seek to further each Town's planning goals and objectives when considering the establishment of conditionally permitted uses. In cases where a town has not adopted a comprehensive plan, the county will continue to solicit a non-binding town recommendation regarding the proposed use.
- Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the "public interest" for decisions relating to that governmental unit or municipality.

The Public interest when considering issuance of a CUP would include consistency with that Town's Comprehensive Plan. When we consider the approval of conditional use permits we consider public health, safety and the public interest. Reading from the staff report, "In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall continue to be advisory and non-binding." Basically, if a Town Comprehensive Plan is silent on a request to establish a given use, the recommendation would not be considered to be the Public Interest but would be a non binding recommendation.

- The Town of Oak Grove cited the following sections of their Comprehensive Plan in support of their recommendation for denial of the request:

Economic Development Goals, Objectives, Policies, Programs and Actions

Goal 1: Support economic activity and development that does not detract from the rural way of life in the Town of Oak Grove.

Objectives:

1. Promote agricultural based businesses.
2. Avoid conflicts between farmland and residential areas.
3. Support Oak Grove remaining as an agricultural community.

Policies, Programs and Actions:

1. Support existing farms and their continued operation.

2. Encourage businesses that work with the farming community.
3. Promote the development of specialty farming and or small business that produce food/beverages for sale.
4. Support eco-tourism that promotes the enjoyment of our natural resources in ways that do not degrade them.
5. Ensure that businesses, no matter what size, do not adversely affect the Town's natural resources and quality of life for residents.

Future Land Use

Most land use changes in Oak Grove will be the result of residential development. There is little projected commercial or industrial growth in the Town of Oak Grove since the majority of these land uses are found in the City of Prescott but the Town is willing to consider the development of both uses at any location throughout the Town if it will not create a nuisance or hazard to the Town or neighborhood.

Land Use Goals, Objectives, Policies, Programs and Actions

Goal 1: Continue long-range planning and intergovernmental cooperation regarding land use issues.

Objectives:

1. To avoid land use conflicts.
2. Work cooperatively and effectively with neighboring communities.

Policies, Programs and Actions:

1. Continue to update the Land Use Chapter as needed.
2. Set up a joint committee among adjacent municipalities to address and discuss land use issues and opportunities.
 - The Town also cites a portion of the Town Ordinance relating to Public Nuisances and a portion of the Town Ordinance addressing Special Events. Those are attached to the staff report.
 - Staff has reviewed the portions of the Town of Oak Grove Comprehensive Plan and Ordinances cited and has identified the following issues:
 1. The Town cites a portion of the Plan that relates to Economic Development. Given that this request for a CUP can not reasonably be considered an "economic development" activity, the use of this section is questionable.
 2. The Town cites a portion of the Future Land Use narrative relating to future commercial and industrial growth. The request at hand can not reasonably be considered commercial or industrial in nature.
 3. The Town cites a Land Use goal that is intended to insure that long range planning and cooperation with neighboring municipalities is ongoing. One stated objective of continued planning is to minimize or avoid land use conflicts. This goal and objective does not, in staff's opinion, give guidance to the issue at hand.
 4. The Town cites portions of two adopted Town ordinances, one relating to Public Nuisances and the other to Special Events. Use of these ordinances in this context is questionable.
 - Staff is of the position that the Town of Oak Grove's Comprehensive Plan is actually silent on the proposed conditionally permitted use. Given this, staff suggests that the Town of Oak Grove's recommendation should be considered advisory in nature and non-binding. Any LMC decision should be based on a determination as to whether the request is contrary to the public interest, is detrimental or injurious to the public health, public safety or the character of the surrounding area.

Staff Recommendation: Staff recommends the Land Management Committee consider whether this land use request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a heliport with the following conditions:

1. The conditional use permit shall be renewed in 2 years. Renewal may be completed administratively unless complaints are received by the Land Management Department.
2. Any potential or future changes or intensification in the use of the heliport shall be approved by the Land Management Committee.
3. The heliport is approved for daylight operations only.
4. Approach and departure shall follow 180/360 flight path unless the committee finds modifications are necessary to mitigate impacts to surrounding neighbors.
5. Maintain the clear zone around the heliport following the 8:1 ratio.
6. Total number of take-off and landings may not exceed 30 per month.
7. Proof of adequate liability insurance shall be provided.
8. This conditional use permit shall terminate if the Dept of Transportation revokes either their certificate of approval or Mr. Brekken's pilot license.
9. Onsite fuel storage shall be in approved containment vessels.

Sanden asked if the Town of Oak Grove address air strips anywhere in their comp plan. Pichotta stated that they apparently do not. He suggested that the committee keep in mind when considering recommendations tied to language in comp plans that the cited language should speak directly to an issue and that the LMC is ultimately responsible for decisions made. The LMC is put in a position of having to determine whether the Town's plan states what they think it says. The concern is, if there is a challenge or certiorari review of the committee's decision; whether the use of goals and objectives that don't necessarily apply will withstand scrutiny. Pichotta stated that throughout the planning process he tried to get the Town's to think about the land use decisions they have been presented with over the last decade or so and to try to ensure that their plan addressed these issues and that their past responses were supported by their plan. He suggested that in cases where a Town's plan is silent on a controversial issue that they may likely amend their plan to address it in the future. An applicable goal for this would likely be under the Land Use element. Pichotta noted that if these properties were zoned Rural Residential this request would likely be viewed differently as the Rural Residential Districts are intended to protect large lot residential developments from conflicting uses. It will be a process of educating staff and committee as well as educating Town's on the role of their plan and that their plan may not actually speak to a given issue in every case. Holst stated the property is zoned General Rural Flexible 8 where airstrips are conditionally permitted. This is an agricultural district. If we start limiting the use of airstrips in the ag districts that will hinder aerial applications. Chairperson Barkla asked Pichotta if he has talked to the Township Fathers. Pichotta stated that he spoke with Chairperson Jerry Kosin, about the recommendation and the staff report. He noted that Kosin seemed to understand why staff might be of the position that their comp plan was silent on this issue. Steve Nelson, property line 400 ft from Mr. Brekken, he feels the difference with ag spraying is commercial and this is recreational, a different category. Mr. Brekken stated he is here to answer any questions anyone has. Sanden asked how far away the Red Wing airport is from his property. Mr. Brekken stated 10 miles as the crow flies. Mr. Nelson stated he has 40 acres and planned to develop it someday. He fears his property value is going to go down with the heliport. Chairperson Barkla stated two things concern him; recommendation #1 renewed in 2 years. He feels that is too long and it should be renewed in one year. Also he feels the neighbors concern with sound is a legitimate concern. He would like to invite Mr. Brekken and the concerned neighbors back in 6 months to give a report on how things are going. Sanden asked about condition #6, just to be clear the total number of take-offs and landings may not exceed 30 per month, that would be the combined total, so 15 flights during daylight hours. Pichotta stated that is correct. Sanden asked if the office has received any complaints. Pichotta stated we have received complaints but that he personally did not receive them. Sanden stated he recalls some complaints about houses getting buzzed. He would echo the concern about 2 years being too long for renewal. Being a good neighbor may make all the difference. Rohl stated it makes sense to review in 6 months. Chairperson Barkla stated at the 6 month review daylight hours will be longer and that impact can be discussed also. **Rohl moved to approve the conditional use permit for a heliport in the General Rural Flexible 8 District for Christopher Brekken due to the fact it is not found to be**

contrary to public interest nor detrimental or injurious to public health, safety or the character of the surrounding area, with conditions #1 - #9, amending condition #1 to be renewed in 1 year before the Land Management Committee and adding condition #10 Applicant shall provide a status report to the Land Management Committee in 6 months/Fetzer seconded. Joan Nelson asked how the wording in the comp plan was developed and how they can make it more clear. Chairperson Barkla stated they have a Chairperson, Town Board and a Town Attorney that they can contact. Barkla asked Pichotta to briefly explain the county's comprehensive planning process. Pichotta stated that back in 1999 a bill was passed that mandated that all municipalities adopt comprehensive plans and by Jan. 1, 2010 all land use decisions be consistent with those plans. Pichotta explained the steps, process and meetings that were held over a lengthy period to develop those plans. He stated that the county plan acts as an umbrella under which the Town's plans hang. The goal was to empower the Town's to have a direct impact on land uses in that given Town so it's not the County dictating uses to the Town. He stated that a given towns plan probably won't address everything and he fully expects that in cases where the Town makes a non-binding recommendation and the decision goes the opposite way of their recommendation they will likely put into the plan goals, objectives and policies that will support their position. Joan Nelson asked if they adopt the proper wording would Mr. Brekken be grandfathered in. Pichotta stated that typically if you create a rule in response to a given situation you can't apply it to that situation. The beauty of the conditional use permit is that if there are issues that arise in the future - the committee has the ability to change the conditions associated with approval, if necessary. **All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated there is a budget summary in the folders; County Planner Budget – nothing surprising there. Zoning – vehicles repairs were over, County Planner GIS – everything is as anticipated, County Surveyor – we were over on our health insurance coverage but we went from single coverage to family coverage, the last item; Land Records Modernization Fund – as you recall we have had a temporary position for the scanning and indexing digital files. Sundry Contractual Services, we are currently over budget because of some confusion of the amount allocated to the development of GIS Data. We have come up with a plan to address it. We are utilizing some of the money allocated in professional services and other budgets to offset that. It should be recognized that GIS expenditures over the last decade have been reimbursed, I believe through a 911 Grant, resulting in approximately \$85,000 going back into the General Fund. Holst stated the reimbursement should be noted in a budget summary.

Future agenda items include:

Performance evaluation of Land Management Director.

Review of dredge material placement site plan and monitoring proposal for Monarch Pit in the Town of Trenton.

Possibly Classification of Unclassified Use.

Working lands initiative regarding Exclusive Ag Zoning and Farmland Preservation is going to necessitate revising our Code. The State is also mandating a conversion fee.

Pichotta also noted that a revisit of the Fee Schedule should take place now that the Comprehensive Plan is completed.

Motion to adjourn at 7:50 pm by Holst/Sanden seconded. All in favor. Motion carried. Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, December 7, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Excused: Joe Fetzer

Acting Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin. He stated there will be no meeting on December 21, 2011.

Set next meeting dates: Pichotta suggested staying with the same schedule of the 1st and 3rd Wednesday of each month for the first half of 2012. **Sanden moved to set meeting dates for the 1st and 3rd**

Wednesday of each month for the first six months of 2012/Rohl seconded. All in favor. Passed.

Approve Minutes: **Sanden moved to approve the November 16, 2011 LMC minutes/Rohl seconded.**

All in favor with Holst not voting because of his absence from the last meeting. Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure for a deck in the Rural Residential 20 District for Michael Arnt and M Janell Hagan, owners by Michael Dorricott, agent on property located in Lots 6, 7 & 8 of Block 4 of Original Plat, in Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Barkla invited Mr. Dorricott forward. Mr. Dorricott explained that it is basically a simple deck off the ground about 8 feet to wrap around the side and tie into the existing deck on the back of the house. He stated he would disagree with the vision clearance triangle issue because by the time you get to the intersection the house is back 72 feet and if he puts a 10 foot deck on there it is still 60 feet back from the road.

Staff Report – Emily Lund: The applicants are requesting a CUP to expand the existing deck on their property. The house is at an intersection of two town roads and the house encroaches the building setbacks to both roads. The house is 72 feet from the centerline of 290th Ave and 49 feet from the centerline of 980th St. Applicants propose to expand the deck by wrapping it around the northwest of the house an area of 44 ft x 10 ft and to the southwest of the house an area of 31 ft x 10 ft. The expanded deck would be 62 ft from the centerline of 290th Ave and a small portion would be located in the vision clearance triangle. The property is located in Section 13, Town of Diamond Bluff. It is zoned Rural Residential 20. The uniform address number of the property is N2945 980th St. Pierce County Code §240-27C discusses the Town roads. The required setback for all structures fronting on all town highways shall be 75 feet from the center line of the road or 42 feet from the edge of the right-of-way, whichever is greater. We looked into setback reduction but that option does not help this situation. The vision clearance triangle is measured for a distance of 150 ft down from the intersection of the two roads and connecting those two points and a portion of the deck would be in the vision clearance triangle. Pierce County Code Attachment 2: Table of Dimensional Requirement states the maximum impervious area is 40% in the Rural Residential 20 zoning district. The property is 0.413 acres. The current impervious area is approximately 17.2% With the addition, the impervious area is 20.6%. Diamond Bluff Town Board recommended approval of this request on 5-12-2011 without any specific conditions. The Town did not

reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The private well is located between the house and garage so is out of the construction area. The house has a private septic system that includes a septic tank and dry well. The septic tank cover is 42 inches from the west corner of the house and the dry well vent is 11 feet from the septic tank cover. Lund stated this is a concern for the department because they don't want the deck to be over the septic tank.

WI Admin. Code COMM Table 83.43-1 requires a setback from a building component to a septic tank to be 5 feet and to a drainfield (drywell) to be 10 feet.

WI Admin. Code COMM 83.43(a)2(f) requires accessibility to tanks and all components that require maintenance or observation. General practice has been to allow for 3 feet vertical clearance for accessibility.

No renewal would be necessary for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the construction of the proposed addition at the proposed location would be contrary to the public interest or detrimental or injurious to public health, safety or character of the area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP for the deck expansion with the following conditions:

1. The applicant and agent shall comply with COMM 83.43 and shall:
 - a. Maintain vertical separation between the deck and septic tank manhole cover a distance of 3 feet for service accessibility,
 - b. Raise manhole cover 4 inches above grade,
 - c. Provide a locking mechanism to lock the chains over the septic tank cover and
 - d. Keep deck footings 5 feet or more away from the septic tank and 10 feet or more from the drainfield.
2. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.

Chairperson Barkla opened the hearing to the public. No public comment. **Public hearing closed.**

Sanden asked about the vision clearance triangle on the hand written drawing, it shows some encroachment but on the aerial photo it doesn't show it encroaching at all. He is assuming the hand written drawing is the more accurate. Lund stated that it is approximate. It depends on how far on the home the deck gets built. Holst stated he is very familiar with this lot. He stated where the deck is going it is approximately 10 feet in vertical elevation above 290th Ave. It's way up in the air. Sanden stated the existing home is closer in the vision clearance triangle than the deck addition would be. **Holst moved to approve the deck expansion on the nonconforming structure, due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1a-d and #2/Rohl seconded. All in favor. Passed.**

Discuss take action on status report of a conditional use permit for a Farm and Home Based Business for Valley Vineyard in the General Rural Flexible 8 District for Rudy & Cathy Jungwirth, owners on Lots 6, 7 & 8, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Staff Report – Brad Roy: The applicants operate Valley Vineyard LTD, which first received a conditional use permit in 2008. The CUP was renewed on November 17, 2010. Concerns were raised regarding parking and screening the operation from surrounding landowners. On June 1, 2011 the LMC modified the CUP to state;

9. Applicant shall screen operations by planting nine (9) spruce trees along the North/South property line with the Huppert property, between the existing trees on the Huppert property line and the town road and an additional three (3) spruce trees along the East/West property line between the existing trees on the Huppert property and the applicant's vineyard. All spruce trees shall be a minimum of nine (9) feet tall and shall be planted within six (6) months.

The committee added a condition #11 stipulating that the applicant shall provide a status report to the Land Management Committee in six months. Nine trees were planted in the required area along the north/south property line; the trees are over nine feet tall. No trees were planted in the area along the east/west property line. The applicant has stated that the commercial activity is limited to the accessory structures and the only activity along the east/west property line is agricultural. The neighboring property to the east receives the most impacts from the business.

Staff Recommendation: Staff recommends the Land Management Committee determine if any action is necessary.

Sanden stated that nine trees have been planted and asked the applicant to explain why the other three haven't been planted. Mr. Jungwirth stated the area where the trees were supposed to be planted is on Ben Huppert's property. He didn't plant them because he didn't believe that there was a need for it. There is no activity over there with the exception of a tour for the University of River Falls a little over a year ago. They assisted him with the planting of the grapes and they wanted to come out. He did plant an additional five trees in the center of the property where there is an existing cluster of trees. The one issue he did have was from the Huppert property to the corner stake where the nine trees were planted. The property line is only 6 – 8 feet wide from his driveway line. In a matter of 4 or 5 years the trees should be 25 feet tall and it should take care of the issue. Mr. Lacasse, a neighboring property owner, stated that he has talked to Mr. Roy several times, his issue is that this summer Mr. Jungwirth played a tape recording over and over. They contacted the Town Board and they stated he was going to play it when the neighbors weren't home. He ceased to play it between 4:30pm and 5:00pm for a few days and then it started back up. He lives probably 700 feet from the vineyard. He is requesting that something be done about it. Pichotta stated he isn't sure that this issue is related to the commercial use of the property and suggested it was part of the agricultural use. Holst stated it's his opinion that he's playing this noise to scare birds away from his grapes. It's part of the agricultural use. Anytime you have agricultural use and throw commercial into it, it gets more complicated. Mr. Lacasse stated he could understand if someone has an agricultural business for 37 years and the lot next door becomes housing. The houses were there before the vineyard. Holst stated that he had hoped this situation would have gone differently. He had hoped that when we gave direction where to plant the trees and he understands that you wouldn't want to plant trees on the neighbor's property but when he will allow you that's a different thing. He also understands that Mr. Jungwirth has had the bus tours there and that this where you had them. That was the information we were provided with. We try to do the best we can to alleviate situations that bring negative impacts onto your neighbors. You came in after Ben had his house up and planted your grapes. Things change and you have the right to use your land and they have the right to use theirs too. Mr. Jungwirth stated that he looked at Ben's trees and they are 22 feet apart and in another 6 or 7 years will grow together. He put the nine trees in that the committee requested. Holst stated that's the deal, as we requested. When we request, then it's up to the applicant to follow through with that request. If he doesn't then the applicant is in noncompliance and he is at risk of losing his CUP. Then you are talking about a life's worth of work. Do you want to risk it on three trees? It's a big deal to Ben and Rudy. Mr. Jungwirth stated that the bigger problem was the property line was 5 ½ feet north of his fence. If he is going to plant trees there he is going to move the fence up to the property line and plant the trees on his side. Holst stated that he should do that. Mr. Huppert stated that it's not Mr. Jungwirth's property, it's Stan Boles property. Mr. Jungwirth stated Mr. Boles farms his property and he farms Mr. Boles property, it was done on a handshake. He doesn't know if he would have to ask Stan if he could plant trees. Sanden stated his concern is that you make a good argument about the trees already being there and they will grow together but those arguments should have been brought up at the time we made these requirements. Now after the fact, we're hearing about some of these constraints. If we had known that from the beginning we probably would have asked for the placement in a different location or permission to plant in a suitable location. Mr. Jungwirth stated he called Jim and had food poisoning the night of the meeting and he wasn't in the mood to talk to anyone. He also wasn't aware of what the situation was that it was because of the group of people that he had from the University of Wisconsin. Had he known that last June, he could have explained that they were only there one time. Sanden reiterated what was stated by Mr. Holst, your

vineyards may have come in after the homes but you are still in a heavy agricultural area. Wisconsin still has the Right-to-farm laws and if engaged in a normal agricultural operation they are shielded from nuisance litigations. So that does limit that, I'm assuming this was like an electronic scarecrow. Mr. Jungwirth stated it was called the Bird Call or Bird Guard and it drew in predators such as Falcons, Eagles and Osprey. Sanden stated that being a good neighbor goes a long way and consider the times that you have these operations going on. There is always these conflicts and Mr. Holst said that residential/ag is one of the biggest conflicts we deal with. Holst suggested the committee stay with the original conditions to the conditional use permit. Sanden asked if that is unattainable if he doesn't own the land, how do we address that. Holst stated that they address it one of two ways: either Mr. Huppert allows planting of the trees there or Mr. Jungwirth puts the trees on his side and takes back the five feet of Mr. Boles property. However they choose to do it - unless Ben says he doesn't need trees anymore. Mr. Huppert stated he would like to barter for his neighbors and himself, if Mr. Jungwirth quits playing the animal noises, he will waive the need for three trees, for the sanity of his household and his neighbors too. Mr. Jungwirth stated he went with the Bird Guard because there was no aesthetic impact and because they live in such a nice community. If that is what Mr. Huppert wants he will go with the bird netting, it's easier for him. **Holst moved to strike the requirement for three trees from the existing conditions/Sanden seconded.** Roy asked if the committee would want to strike condition #11 which states a six month review. **Holst moved that condition 11 also be struck/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there is one travel request and that is for Jim Kleinhans to attend the WOWRA Convention in Steven's Point on January 27 & 28, 2012. **Holst moved to approve the travel/training request for Jim Kleinhans to attend the WOWRA Convention in Steven's Point on January 27 & 28, 2012/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta noted that there was possibly a rezone request coming in.

Chairperson Barkla asked about the budget handout. He stated the expenditure summary through the end of the year doesn't include December expenditures and it's at 87%. Pichotta stated that typically we don't expend every dime. Chairperson Barkla asked if they would be able to put money aside for trucks.

Pichotta stated it's his understanding that they are not able to carry-over dollars year to year. Certainly some money will revert to the general fund. He could request that we be allowed to utilize that toward a new vehicle. We're actually having some problems with the surveyor truck; it doesn't want to start very well. Chairperson Barkla stated that since you have equipment that may be showing some wear and tear, you could come to a meeting of Loss Control.

Motion to adjourn at 07:40pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 16, 2011

Present: Joe Fetzer, Paul Barkla, Don Rohl and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung, Jim Kleinhans appeared later for the meeting.

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 7th and 21st(if necessary), all in 2011.

Approve Minutes: **Barkla moved to approve the October 19, 2011 LMC minutes/Rohl seconded. All in favor. Passed.**

Chairperson Fetzer stated the applicant for the first agenda item will be a few minutes late. Barkla made a motion to table agenda item #4 for CMC-Spring Valley LLC until later in the meeting/Sanden seconded. All in favor. Passed.

Discuss take action on renewal, mitigation measures to comply with July 2011 LMC decision and potential modification of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Andy Pichotta: The ball sports facility was deeded to the Ellsworth Baseball Association in 2007. The CUP was renewed on September 16, 2009. On July 20, 2011 the Land Management Committee considered a status report and modified conditions of this CUP to address two ongoing issues. Baseball association representatives have been discussing various solutions to rectify complaints in the neighborhood. The attached written narrative was recently submitted to Heather Flueger and the zoning office as potential solutions. Pichotta read the submitted letter from the Ellsworth Baseball Association regarding putting up a 10ft wide and approximately 30ft high retractable light filter at the property line and in the future installing a cyclone fence along the property line that would be taller and heavier than the neighbor's existing fence. The property is zoned Rural Residential 20 and Commercial. The parcel size is 14.3 acres. The initial site layout included a baseball diamond, 4 volleyball courts, two soccer fields and playground equipment. The Baseball Association requests conversion of one of the soccer fields into a softball diamond. No lights would be needed on the second ball field. Mike Salewski, electrician, discussed possible lighting solutions with staff on June 29, 2011. Juno Lighting Group designed the baseball field illumination incorporating 45 light fixtures utilizing 400 watt lamps mounted on 60 and 80 foot high towers. A copy of the illumination design is included with this report. The lights and poles were adjusted last spring to comply with these plans. Placing shields over some light fixtures could focus lights more directly onto the playing field. Costs associated with manipulating the lights are high as charges for the service truck from St. Cloud, MN are assessed by the hour from the time the truck leaves until returning. Operating the 400 watt lamps is expensive and should be discouraged after games and field maintenance tasks are completed. One solution presented included the organization running late evening games will install mechanical switch gear to turn off lights at a predetermined time that should

coincide with conditions regarding hours of operation. One suggested solution presented to address overflow lighting for the residence at W8074 163rd Avenue is erecting a 30 foot high retractable light filter at the property line. This mechanism would only be utilized during evening events so as not to restrict the view or sunlight. A responsible party would be designated for control of this measure. The adjacent residents were not completely in favor of this proposal for 2 reasons; the plan does not specify exactly where this filter would be installed and secondly, how this feature might impact the sale of their property in the future. Another issue involved managing the foul balls. One solution is to increase the height of the backstop with additional fence material. Another consideration was to erect a cyclone fence along the property line with a "keep out" sign to eliminate trespass issues. The baseball association does not want to continue losing baseballs so some measures to contain foul balls will benefit both parties. The neighbors expressed concerns about the nature or attractiveness of the fence placed along their property line. No design was submitted as to the height or extent of the fencing material. The conditional use permit should be renewed in 2011 with the outstanding issues agreed upon by the Baseball Association representatives. Compliance issues will need to be implemented prior to the 2012 baseball season or wait to renew the conditional use permit until these issues are resolved. The original conditions for the CUP issued in 2003, are listed #1 - #12. In 2009 the conditions were modified in response to the installation of the field lights. Hours of operation shall be 8:00am to 10:15pm, Sunday through Thursday, 8:00am to 10:45pm Friday and Saturday. Alleviate lighting overflow problem for adjacent property owner. On July 20, 2011 the committee modified conditions to include the following: A plan be drawn up in conjunction with the neighboring property owners to address overflow lighting and foul ball issues by the conditional use permit renewal in September 2011. As stated earlier, these corrective proposals were provided but not discussed with adjacent property owners.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided by the Baseball Association and determine the effectiveness for whichever remedies will adequately address the issues discussed this past July prior to renewal of the CUP.

Ms Flueger stated they had their property surveyed and fenced in the entire yard. When the ball field came in they talked about trees so she paid to have trees and lilacs planted. She stated that they thought they were going to get to discuss a solution. Mr. Whalen stated that two weeks ago a letter was dropped off. In July they were under the understanding that they would be working with the baseball association to come up with a resolution that would work for both. They are concerned about the lighting, if they put up a 10ft filter, their house is longer than 10ft. They would like a little more information. Barkla asked Ms Flueger if they had talked to the people from the baseball association. Ms Flueger stated they received a notice paper clipped to their gate. Mr. Whalen stated he has called and talked to Jim because they haven't talked with anyone from the baseball association. Barkla asked Mr. Green why he hasn't been in contact with the neighbors except by something left on the fence. Mr. Green stated he has been in contact with Mr. Kleinhans as a conduit to deal with the neighbors through our consultants that came down and installed the lighting. When he left here he didn't understand that he was to go meet with the neighbors face to face. Chairperson Fetzer stated his point of view is that the neighbors sound like they want to be reasonable and work together. It would be very worth while to be in touch with them and if there needs to be mitigation then we will get Jim in on that. Mr. Green stated he didn't know he was to go door to door and resolve with each person. Chairperson Fetzer asked if they have meetings. Mr. Green stated yes they do and the neighbors are aware. Mr. Whalen stated they are not aware and he can not find any information on the website. Chairperson Fetzer asked when the meetings are. Mr. Green stated the association has meetings the first Wednesday of every month at the Middle School at 6:30pm with the exception of June and July. The next meeting will be December 7th. Mr. Green stated he has been working with Juno Lighting, with the installer, a consultant, Mr. Teby. This 10 x 30 section isn't just a stab in the dark, it came from Juno Lighting and they specified a 10ft wide section would block the lighting on the house. If you looked out the window you would be able to see that a ballgame is going on but the light wouldn't cast shadows in the house. The poles are going to be brown galvanized lighting poles, with plastic mesh, raised at the time the game starts and lowered within 24 hours. It will be 10ft wide and 30ft high and that would shield the home from any overflow lighting. Chairperson Fetzer asked what a cyclone fence was.

Mr. Green stated a chain-link fence. Ms Flueger asked if they could find out the cost for just putting up shields on the lights versus the fence and screening. Chairperson Fetzer stated that would be a question to ask at the meeting. Mr. Whalen stated he is a little concerned about going to a baseball association meeting without a mediator there. Mr. Green stated he would welcome Mr. Kleinhans meeting with him and the neighbors. Chairperson Fetzer asked Andy what his thoughts are on this. Barkla asked if that is the responsibility of this staff and committee to play mediator between contentious parties. Pichotta stated typically not but we are asked to do some unusual things. Barkla stated maybe they should come back every month until they can come up with a plan. Sanden stated he feels the Ellsworth Baseball Association has gone more than half way. They asked for a fence and they are putting up a fence now they are disagreeing on how the fence is going to look. They are spending a lot of money to put up some screening for the lighting and now it's not the right color or the right size. To have someone chaperone someone to a meeting is going well beyond what is reasonable. **Sanden moved to approve the renewal of the conditional use permit for the Ellsworth Baseball Association granting the remedies are adequate. Rohl seconded.** Ms Flueger stated they never asked for a fence. They would be willing to go to the association meeting in December to see what we can come up with. Chairperson Fetzer stated he thinks that would be a good idea and that the baseball association is trying. Mr. Whalen stated he doesn't feel they have come halfway. These are recycled materials that they want to put up. They have waited since July to hear something and they don't know anything about these consultants and they made speculations by looking at a drawing. Chairperson Fetzer stated they will have to go to the meeting and work on a compromise. Mr. Green stated he would be happy to take the fence out that was just one resolution to keep the foul balls out. Chairperson Fetzer stated we have a motion. **Sanden, Rohl & Fetzer in favor, Barkla opposed. Passed.** Pichotta questioned if the committee had approved what the baseball association had proposed for mitigation. Sanden stated yes, he mentioned the adequacy of the methods. Chairperson Fetzer stated they are going to have to work together.

Barkla moved to remove Agenda item #4 CMC-Spring Valley LLC from the table for discussion/Rohl seconded. All in favor. Passed.

Discuss take action on a status report for a Nonmetallic Mining conditional use permit for CMC-Spring Valley LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T27N, R15W, Town of Spring Lake, Pierce County, WI. Staff Report – Brad Roy: Everyone is pretty familiar with this operation. The conditional use permit for this operation was renewed on April 6, 2011. This review is to allow the LMC to determine if the permit needs to be altered to address any outstanding concerns. This season we have received complaints about dust on days with high winds. Hydraulic conveyors are onsite to mitigate this issue. The Town of Spring Lake has received complaints about noise and dust on adjacent properties. The conditions associated with this CUP are listed #1 - #25 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report, the submitted site plan, as well as input from the public, to determine if any additions or modifications are necessary to mitigate off site impacts.

Jim Small, County Materials, stated that this fall when there were strong winds, he received a call and he shut operations down as soon as he got the call. Some people were talking about the conveyors being still up. They may have been talking about the ag lime conveyor. There was a pile right up to the top of the conveyor. They did add tarps on the top of the dry screen end that screens out the ag lime. Also one at the end of the ag lime conveyor which has helped quite a bit with the noise. Although he is sure you can still hear it. He has gone in Evelyn Jensen's yard and measured the decibels. He asked her to let him know if it gets louder. Evelyn Jensen, neighbor across the highway, expressed her dissatisfaction and discussed her complaints regarding dust, noise and the tarping of trucks. She presented photos to the committee. Mr. Small stated the last time Ms. Jensen contacted him regarding excessive dust he shut them down. The operator should be watching that because we have committed to shutting it down when the wind is blowing like that. He stated that water test and seismograph are accurate. They put those in the ground and that's what it is. Results are well under the state limits. They have a sign in their window and he

keeps telling the truck drivers to cover their trucks. If they are hauling washed rock, he knows they are not covering them. The sand is manufactured sand so there aren't any fines in it. So it's probably coming from the road not from the piles. They have a water truck and every time he is out there, they are watering. They have monitored it over and over, so it's below the state level. The manufactured sand volume got out of control. The ag lime is all sold. He also noted that Jack Sonnentag is not with the company anymore. Mr. Small is meeting with the new person that will be taking over the aggregate. Faye Jones, stated her issues are with an employee who is hunting and harassing neighbors and friends on the edge of the property. She stated that she also regularly sees untarped trucks. Mr. Small stated he will be talking to the employee. Mike Jacobson stated that when he now gets calls he tells them to call Ellsworth. They were at the front end of it stating why they didn't feel it was a good land use and all the things have come true. At a township level, County Materials has been working with them. The reduction in hours was huge. Chairperson Fetzer stated it has been a dry fall. Mr. Jacobson stated that it is good that they are in front of the committee and that the committee listens. If the quarry is going to be there; how can it be more acceptable for the area, do the berms need to go higher? We keep hearing that it will go deeper and get quieter. Mr. Small stated when he finds out about things, he acts on it. Chairperson Fetzer asked if they use calcium chloride on the road. Mr. Small said they have done it before but they paved the road this year. Mr. Small stated they did reclaim the north side of the high wall. Chairperson Fetzer asked how much higher the berms have to be. Small said that they need to get their product cheaper so people will buy it and get it out of there. When there is a loader on top, you can see the loader. Ms Jensen asked why it can't be hauled to Roberts. Mr. Small stated it's not a product they use in Roberts. Mr. Small stated he will impress the urgency on the new aggregate person. Pichotta asked if County Materials has ever bought out adjoining properties where negative impacts were greater than anticipated. Mr. Small stated they have bought neighbors before, it's not unheard of. Ms Jensen stated her home is for sale. Sanden stated that when this does come up for renewal he would lean towards another condition of requiring conveyors to shut down when the wind exceeds say 20 MPH and hesitant to renew it if the tarping issue doesn't get resolved. That seems to be pretty straight forward and this has been an issue in the past. Mr. Small stated we can force our guys to tarp even if they are hauling washed rock. We can force our own people but the other haulers will say it's a state highway and it's not a law. We have a sign and he tells the person at the scale to remind them. Chairperson Fetzer stated we don't need to take any action as this was just an update to see how things were going.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Potential conditional use permit in the Town of Diamond Bluff

Rudy Jungwirth for the tree planting and renewal of his conditional use permit.

Motion to adjourn at 08:16pm by Sanden/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, October 19, 2011

Present: Joe Fetzer, Paul Barkla, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 2nd & 16th, December 7th and 21st(if necessary), all in 2011.

Approve Minutes: **Sanden moved to approve the October 5, 2011 LMC minutes/Rohl seconded. All in favor. Passed with Paul Barkla not voting due to not being present at the last meeting.**

Public hearing to consider a request for a conditional use permit for accessory residence in the Primary Agriculture District for Michael & Karla Polk, owners on property located in the SW ¼ of the NE ¼, in Section 36, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Mr. Polk forward: Mr. Polk stated they would like to move a mobile home on their property for his brother-in-law who has diabetes. He lived with his parents all his life and they have passed away. He should live where someone can keep an eye on him. Their house is too small.

Staff Report – Emily Lund: We have a CUP request for an accessory residence (mobile home) on their 115 acre property located in the Town of Trimbelle. The proposed accessory residence would be connected to the septic system associated with the principal residence. The property is located in Section 36, Town of Trimbelle. The property is zoned Primary Agriculture. The Trimbelle Town Board recommended approval of this request on 9-19-11 without specific conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The applicant owns 115.37 acres, but the proposed use will be on the 40 acre parcel that has an existing residence, barn and three storage buildings. The proposed accessory residence will be a mobile/manufactured home that has not yet been purchased. Issuance of this conditional use permit would eliminate the need for Land Use Permit (although mobile home must still meet minimum standards). The mobile home will require a reconnect permit for connection to the existing septic system. The applicants have hired a plumber, Darrell Hubbell, to obtain a Pierce County Sanitary Permit and to complete this task. The applicants plan to record a “Per Capita Flow Statement” on their deed because the septic system is sized for 6 people and only 4 will be residing on the property. Also an “Affidavit regarding Common Private Sewage System” will need to be recorded on their deed that notifies future property owners that the septic system is connected to two residential structures on the property. Pierce County Code (PCC) 240-40 (A) allows accessory residences in the Primary Agriculture District with the issuance of a conditional use permit. PCC 240-88 is defined in the staff report. PCC 240-40 (B) regarding Manufactured homes states, “The following requirements apply to manufactured homes which are not located in manufactured home parks:

1. Manufactured homes shall comply with federal inspection requirements per Housing Act 1976 and its successors.

2. The towing and transportation equipment, including the wheel assembly, shall be mounted on and attached to a permanent foundation.
3. Manufactured homes shall be a minimum of 14 feet wide.

No renewal of this request will be necessary. Pierce County Code 240-76 (G) states that “all conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use.” PCC Chapter 115 states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. A second address is not required for the accessory residence; however, this does not preclude the applicant or resident of the mobile home from obtaining one if they so desire.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicants shall record a ‘Per Capita Flow Statement’ and ‘Affidavit regarding Common Private Sewage System’ on their deed prior to issuance of a sanitary permit.
2. The applicant shall obtain a Pierce County Sanitary Permit in order to connect the existing septic system to the mobile home.
3. The mobile home shall be a model constructed after 1976, shall be a minimum of 14 feet wide, and the towing and transportation equipment, including wheel assembly, shall be removed and the manufactured home shall be mounted on and attached to a permanent foundation.
4. The applicants shall work with Todd Dolan, Town of Trimble’s Building Inspector, to obtain a Town Building Permit for this manufactured home and to have the building inspected to ensure that it meets the Uniform Dwelling Code.
5. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.**

Sanden asked about Chapter 240-88 being subordinate to the principal structure. Should we put a condition on saying that the square footage be less than the principal structure because the mobile home hasn’t been purchased yet? Lund stated you could do that. The home has a basement and two floors so it should be greater than a mobile home. Mr. Polk stated that they have found a mobile home already that is 16ft x 80ft, a 2006. Lund stated we haven’t added that condition in the past but you could add it. Sanden asked if his principal residence is greater than 1280 sq ft. Mr. Polk stated yes.

Sanden moved to approve the conditional use permit for an accessory residence for Michael & Karla Polk with conditions #1 - #5 due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Barkla seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for an expansion of a nonconforming structure in the Rural Residential 20 District for Rodney Wicklund Jr, owner on property located in the SE ¼ and the NE ¼ of Section 14, T27N, R17W, all in the Town of Martell, Pierce County, WI. Chairperson Fetzer invited Mr. Wicklund forward: Mr. Wicklund explained they replaced the old deck which was a hazard. They made it a foot and a half in from where the old steps were. Chairperson Fetzer asked closer to the house? Mr. Wicklund stated yes. The steps came out farther but the original ledge you walk on was in a little bit.

Staff Report – Emily Lund: Mr. Wicklund is asking for an after-the-fact conditional use permit for expansion of a nonconforming structure. The applicant replaced and expanded an additional 5 feet towards US Hwy 63. A 12.5ft x 12ft deck was constructed that includes a 4ft x 4ft stairway. The deck is 96 feet from the centerline of US Hwy 63 and 67 feet to the centerline of 801st Ave. The deck is located within the setback area of both and is located in the vision clearance triangle. The property is located in Section 14, Town of Martell and is zoned Rural Residential 20. The Town Board of Martell recommended approval of this request on 9-13-11 without specific conditions. The Town did not

reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. Pierce County Code Chapter 240-27 (A) information regarding state and town road setbacks is in the staff report. Pierce County Code Chapter 240-72 (E) discusses setback reduction; however, there are no principal structures within 200ft that are closer to the road, so this option does not help their situation. For the vision clearance triangle; you would measure 150ft for the town road and 300ft from Highway 63 and this addition did encroach on the vision clearance triangle. Pierce County Code Chapter 240-67 (A)(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in Chapter 240-76." Pierce County Code Chapter 240-76(A) states "Applicability. A conditional use permit shall be required for the establishment of each use permitted as a conditional use and for an addition to or expansion of a nonconforming structure, or expansion or intensification of a nonconforming use." Pierce County Code Attachment 2: Table of Dimensional Requirements states the maximum impervious area is 40% in the Rural Residential 20 zoning district. The current impervious area is approximately 10.5% and with the addition the impervious area is 10.6%. The septic tank is located northeast of the house and the drainfield is located southeast of the house. The well is located west of the house. The deck is not near the septic or the well. No renewal would be necessary for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed addition at the proposed location would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If determined not to be contrary to the above, staff recommends the Land Management Committee approve this request with the following conditions:

1. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.

Sanden asked how tall this is. Mr. Wicklund stated it's about 4 feet. Sanden stated it must just be encroaching the vision clearance triangle a few feet. Lund stated it encroaches just a few feet in the vision clearance triangle but the setbacks from the roads are more. Chairperson Fetzer asked what is showing up in the air photo out from the house, a garage? Mr. Wicklund stated a cement slab. Lund stated what is unique about the property is the lot was created and the house isn't all in the platted lot. It was an assessor's plat a long time ago. To correct it they would have to do the whole town of Martell.

Chairperson Fetzer opened the hearing to the public. Tim Wiff, neighbor and Town Supervisor, stated the Town is in favor of the deck. They did a nice job on it. He asked if we could cut him some slack on the \$300 fee. It had to be replaced. **Public hearing closed. Barkla moved to approve the conditional use permit for expansion of a nonconforming structure for Rodney Wicklund Jr with condition #1 due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for site plan review for mining, accessory uses for a sand processing facility by Short Elliot Hendrickson (SEH), agent for Greg Bechel, owner on property located on Lot 1, Certified Survey Map (CSM) V4 P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Mr. Bechel forward: Mr. Bechel stated they have been here before talking about the processing plant. Tonight they are here for site plan approval. He asked if the committee had the maps and if they had any questions. **Staff Report – Jim Kleinhans:** Greg purchased this property in August this year and came to the committee in September for a rezone request. That should be completed the end of October for the East half of the property. There is an issue of a variance for the height of the building and that will be accomplished on November 10, 2011. The industrial building will require approval for the Department of Safety and Professional Services. Department of Transportation indicated that the existing driveway must be modified to a Class B1 intersection. A soil test will be needed to determine the potential for a private onsite wastewater treatment system. The existing system that served the residence will be abandoned. Site

plan did not identify the advertising sign. It showed the location but lacked detail on sign message and size. The sign face area may not exceed 32 square feet. Some internal traffic circulation signage is also delineated on the site plan. Off premise signs on Hwy 10 need to be moved out of the right-of-way and onto the property. The 13.4 acre site presently has a substantial amount of ground disturbance. They have applied for a Stormwater permit from the WI DNR. Jim tried to contact Jim Devlin to see if that has been approved. Building dimensions are approximately 128 ft by 242 ft or 30,000 square feet. The north end of the structure is designed to be 96ft high. That will take a variance from the Board of Adjustment and that is in the works. Operations within the building include wet and dry processing of sand, wash water treatment and storage, and storage of sand and dry soil byproducts. They will be using a polymer; a water soluble chemical to help precipitate the fines out of the sand while they are cleaning it. Jim indicated that he has done some research on this and has found that it's considered a nontoxic agent and he also saw it in USDA Soil Erosion Control methods today and they use a similar product. High capacity wells are on the northwest side of the building. There are 10 employee parking spaces delineated. He made a note that one should be handicapped accessible 12ft x 18ft per Pierce County Code. The covered truck loadout facility on the southeast corner of the building includes a scale so they can verify truck weights. The site had some yard lamps with 400 watt pulse start metal halide lamps mounted on a 30ft pole with 90 degree cutoffs. The closest lamp to Hwy 10 where there would be a concern with overflow light would be 160ft away. So there shouldn't be any problem with offsite illumination and shining on adjacent principal structures which there aren't any for 1500 ft. There are some existing trees to the west and east side of the property. There are some trees in the perimeter of the property which will be preserved if possible. There is a lot of site grading to make stormwater ponds and access roads. There is an LP gas tank located on the west side of the property. Another gas line is drawn from Hwy 10 where they will try to tie into a natural gas line from Plum City or to the west. There is an above ground fuel tank located on the north side of the property. It will be used for onsite equipment instead of fueling trucks. It will have to comply with COMM 10 requirements as long as it's in excess of 110 gallons.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report, the submitted site plan, as well as input from the public, to determine if any additions or modifications are necessary. Staff further recommends the following conditions be included in any approval:

1. The location of solid waste storage facilities shall be delineated. Jim sent some information off to consultants and they indicated the waste storage dumpsters will be located to minimize view.
2. Stormwater and high capacity well permits shall be secured from the WI DNR.
3. Conditional approval for the new building shall be secured from the Department of Safety and Professional Services and a copy shall be provided to LM staff. Construction cannot begin until a sanitary system is approved by the state and permitted by the county.
4. Applicant is aware that any on premise advertising will require the issuance of a land use permit and that any future buildings or additions will also require a county land use permit as well as site plan review by the LMC.
5. One handicapped parking space shall be designated near the main building entrance.
6. The outdoor raw sand stockpile shall be protected from erosive forces and shall not exceed 35 feet high.
7. A truck parking area(s) shall be delineated. There was a response that the open space along the access corridor will be used for occasional truck parking. They don't intend to keep trucks on site for an extended period of time. #7 can be eliminated.
8. Onsite fuel storage facility shall comply with WI Administrative Code COMM 10.
9. Drainage calculations for the stormwater treatment shall be submitted for review. Jim did submit some information with the packets that showed a little more detail on the stormwater pond and drainage culverts. One item that is upgraded; a temporary process water basin located directly south of the building is proposed to move to the southwest side of the property just beyond the access road.

If you look at the site contours, they have one foot contours coming down on the access roads on Hwy 10. Greg indicated that the driveway access will be paved. From where the truck turnout is, it's roughly 6% grade going down toward Hwy 10. In PCC Chapter 240-57 (I) it says all driveways shall be sloped down from the road edge for at least 20ft from the road edge so elevation of the driveway is at least 6 inches below the level of the road at a point 20ft from the edge of the road. Jim suggested incorporating PCC 240-57 (I) in the conditions. Mike Swobada stated the taller part of the building is on the south end.

Barkla moved to approve the site plan for a proposed sand processing facility for Greg Bechel with conditions #1 - #9 striking #7 & modifying #9 to read "Access driveway shall comply with Chapter 240-57 (I) of the Pierce County Code"/Sanden seconded. All in favor. Passed.

Discuss take action on a request for site plan review for expansion of the Team Oil Travel Center by Eric Huppert, owner on property located in the SE ¼ of the SE ¼ of Section 12, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Mr. Huppert forward: Mr.

Huppert stated they are adding on, expanding to the west of the existing store.

Staff Report – Brad Roy: The Huppert's own and operate Team Oil Travel Center. In 2006 the site was expanded to include a bank with drive-through service, touchless carwash bay, office/decal shop and storage area. The proposed expansion is a 60ft x 64ft addition to the west end of the existing structure for a Subway restaurant which Mr. and Mrs. Huppert will own and operate. The addition will have an 8ft awning which will also extend around part of the existing structure. The Subway will have entrances on the north and west sides of the building. The main entrance will be on the west side, by the main parking area. There will be 6 parking spaces by the entrance of the Subway, two will be handicap spaces.

Customers will also be able to move to and from the gas station from inside the building. The area for expansion is currently being used for parking. There are 109 existing parking spaces. The expansion will require 12 parking spaces to be moved, but the applicant estimates that a minimum of 107 parking spaces will remain when construction is finished. 107 parking spaces are more than required per individual use by Pierce County Code Chapter 240-54. Chapter 240-54(A)(5) goes into multiple uses and that the same parking space can simultaneously serve both uses. Then you can combine or minimize the total number required. The carwash and bank drive-through entrances are in the back of the structure. All parking reconfigurations will be done to allow for access to this area and to not disturb the existing traffic flow. There are two road access points on Hwy 29 and one on County Road CC. The location of the proposed restaurant will not obstruct any of the access points. There is a navigable waterway that runs behind the buildings, existing and proposed, on the east side of the property. The carwash and storage garage are located 41 feet from the ordinary high watermark of the waterway. Pierce County Code §240-28 allows for setback reductions. Staff inspected the site in July, 2005 and determined that new structures can be placed 40 feet from the ordinary high watermark. The new awning will be the closest part and will extend 46ft from the navigable waterway. The new buildings will connect with existing Village of Spring Valley water and sewer lines on the property. Lighting will be added to the new building. The new lighting will be consistent with the existing lighting pattern. No vegetation will be removed from the property.

Drainage on the property will remain the same. The proposed building has received State Department of Commerce approval. Signage shall be consistent with Pierce County Code.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary.

Sanden moved to approve the site plan for expansion of Team Oil Travel Center for Eric and Michele Huppert/Rohl seconded. All in favor. Passed.

Discuss take action on a request for a rule exception to allow for an extension of Preliminary Plat approval on Whispering Pines for Jeff Oskey, Joyce Anderson and Lorelei Grines, owners on property located in the SE ¼ of the NE ¼, the fractional NE ¼ of the NE ¼ and the fractional NW ¼ of the NE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Ms Anderson forward: Ms. Anderson stated that she is asking for an additional rule exception for an extension of preliminary plat approval because of the poor economy. There have been no

lot sales in Trenton. The only homes that are selling are deeply discounted or short sales. For them to complete the project that includes a lengthy road to be built up to County standards would cost them more than sales can generate. She is asking for another two year extension so the economy can turn around. Barkla asked whose judgment would determine when the economy turns around. At some point there has to be a finish to a project. Ms. Anderson stated she is frustrated too. The road is the big deal and a huge expense right now. If they don't get the extension they would lose about \$10,000 in fees and would have to figure out something else to do with the land. They had a really nice looking plan with three different park areas. She is hoping they don't have to do that today.

Staff Report – Emily Lund: The request is for a rule exception to allow for an extension of Preliminary Plat approval for Whispering Pines. The applicants received preliminary plat approval on Jan. 2, 2008 and were given 24 months to complete their subdivision before seeking final plat approval. Preliminary plat approval for the proposed Whispering Pines subdivision would have originally expired January 2, 2010. The applicants sought and received an extension of preliminary plat approval on September 16, 2009.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception. If the Land Management Committee approves this rule exception to allow for an extension of Preliminary Plat approval the motion must include the reasons which, in the judgment of the Committee, justified the granting of the rule exception. All other conditions associated with the January 2, 2008 preliminary plat approval would remain in place.

Rohl asked how long the extension would be for. Chairperson Fetzer stated for another 24 months.

Sanden moved to grant the rule exception to allow for an extension of Preliminary Plat approval for Whispering Pines for 24 months with the reasoning that we are in extraordinary economic times/Barkla seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there is a travel request for an educational seminar being held in Stevens Point on November 14, 2011 called Mining in Wisconsin - Issues facing County Government. Mr. Roy will be in attendance, one of the issues discussed will be Frac Sand Mining, the Local Perspective. It's a day trip, nothing overnight would be required. **Barkla moved to approve the travel for Brad Roy to Steven's Point on November 14, 2011/Rohl seconded. All in favor. Passed.** Barkla stated there is another travel request he would like to make the committee aware of for Mr. Pichotta on October 25, 2011. Mr. Pichotta has been asked to attend a training seminar in Eau Claire on the Budget Repair Bill and the future relationships with union members and supervisors.

Departmental Update and Future Agenda Items

There are a couple housekeeping items that look like they will be at the second meeting in November: Baseball field, Status report for County Materials and a Status report for Rudy Jungwirth.

Given that there no items for the next meeting we won't be meeting the 2nd of November but on November 16th.

Motion to adjourn at 07:48pm by Barkla/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 19, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 2 nd & 16 th , December 7 th & 21 st (if necessary) all in 2011.	Chair
3	Approve minutes of the October 5, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for accessory residence in the Primary Agriculture District for Michael & Karla Polk, owners on property located in the SW ¼ of the NE ¼, in Section 36, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
5	Public hearing to consider a request for a conditional use permit for an expansion of a nonconforming structure in the Rural Residential 20 District for Rodney Wicklund Jr, owner on property located in the SE ¼ and the NE ¼, in Section 14, T27N, R17W, all in the Town of Martell, Pierce County, WI.	Lund
6	Discuss take action on a request for site plan review for mining, accessory uses for a sand processing facility by Short Elliot and Hendrickson (SEH), agent for Greg Bechel, owner on property located on Lot 1, Certified Survey Map (CSM) V4, P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
7	Discuss take action on a request for site plan review for expansion of the Team Oil Travel Center by Eric Huppert, owner, on property located in the SE ¼ of the SE ¼ of Section 12, Town of Gilman, Pierce County, WI.	Roy
8	Discuss take action on a request for a rule exception to allow for an extension of Preliminary Plat approval on Whispering Pines for Jeff Oskey, Joyce Anderson and Lorelei Grines, owners on property located in the SE ¼ of the NE ¼, the fractional NE ¼ of the NE ¼ and the fractional NW ¼ of the NE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items and departmental update.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/07/11)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, October 5, 2011

Present: Joe Fetzer, Jeff Holst, Eric Sanden and Jon Aubart

Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung

Absent: Paul Barkla, Don Rohl

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 19th, November 2nd & 16th, all in 2011.

Approve Minutes: **Sanden moved to approve the September 7, 2011 LMC minutes/Holst seconded.**

All in favor. Passed.

Public hearing to consider a request for a conditional use permit for Nonmetallic mining in the Agriculture Residential District for Norbert Kannel, owner, by Greg Bechel, agent, on property located in the NW ¼ of the NE ¼ and the NE ¼ of the NE ¼ of Section 24, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Mr. Bechel forward: Applicant was not present. Holst moved to table action until such time as the applicant is present/Sanden seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for sludge disposal in the Agriculture Residential District for Nestle Purina Pet Care Co, applicant by Cedar Corporation, agent on properties owned by Roger & Ronnie Dossdall, Kemmerer FMTR, Brad & Brian Kemmerer, Troy Kemmerer, Stanley & Catherine Kemmerer, Holst Farms Inc, MOAP LLC and Troll King LLC located in the NW ¼ and the W ½ of the SW ¼ of Section 6, E ½ and the SW ¼ of the SE ¼ and the SW ¼ of the SW ¼ of Section 7, the W ½ of the NW ¼ of Section 17, the E ½ and the SW ¼ of the NE ¼, N ½ and the SE ¼ of the SE ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff and the E ½ of the NE ¼, the SE ¼ and the SW ¼ of Section 2, the W ½ of the NE ¼, the NW ¼, the N ½ of the SW ¼ and the N ½ of the SE ¼ of Section 11, the E ½ of the SE ¼ of Section 12, T25N, R19W, all in the Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Nestle Purina & Cedar Corporation forward: Jeff Holst recused himself from discussion and voting due to possible conflict of interest. Dave Sauer, Cedar Corporation, agent for Nestle Purina, and Colin Cain, Maintenance Manager for Nestle Purina were present. Sanden asked if there is any surface water near the proposed spreading sites. Mr. Sauer explained that there is a whole set of setbacks from surface water. Those setbacks were noted all in the applications supplied to the DNR, they complied with all of the setbacks. Most were met indirectly by the steep slope conditions. They will be spreading only on slopes less than 12%. Sanden asked, for the record, if they would be spreading when it is frozen or snow covering more than 2% of the land. Mr. Sauer stated the plan is to start the third week in October and be done by deer season.

Staff Report – Emily Lund: This is a request for a conditional use permit for sludge disposal. Nestle Purina Pet Care Company previously obtained CUP's for sludge land spreading in 1997, 1999, 2001 and

2006. Located in Hager City, the pet food processing facility has two wastewater settling basins that need sludge material removed. It is estimated that 1.5 million gallons of sludge will be spread over approximately 1,327.8 acres at a rate of 10,000 gallons per acre. The seven different farm sites proposed are discussed in the staff report. The properties are all located in the Town of Diamond Bluff. The properties are all in the Agriculture Residential zoning district and are currently growing soybeans and corn. Surrounding land uses include agriculture, woodland, residential and industrial. The Diamond Bluff Town Board recommended approval of this request on 9-8-2011. The Town did not reference its Comprehensive Plan; therefore it is assumed that the plan is silent on this request. In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall be advisory and non-binding. Pierce County Zoning Code Ch 240 Attachment 1:1 Table of Uses define sludge disposal as a conditionally permitted use in the Agriculture Residential zoning district. NR214.18(2)(f) indicated that sludge spreading sites are limited to slopes of 12% or less when the temperatures are above freezing and 2% or less when the ground is frozen or snow covered. Since the maps in the application include spreading on slopes >12%, the land spreading site maps need to be revised and approved by WI DNR. Maps have been updated and today we received approval from the DNR. They will not be spreading on land over 12% slope. The soils on each site that have 0-12% slopes are classified as Seaton silt loam, 2-12% slopes, moderately eroded. The remaining soils on the land are too steep for sludge spreading. There were no contracts with the land owners submitted with the application. The applicant is planning to land spread this year before it freezes with injection at a rate of 10,000 gallons per acre. Bids for contracted liquid waste applicators will take place on October 7, 2011. They are also taking bids for land spreading without injection, but the sludge would have to be plowed/disked into the soil per the WI DNR's conditioned time frame; about 8 hours after land spreading. The list of setbacks that the DNR requires for sludge spreading are:

- 250 ft other wells per WI Admin. Code NR812.08 and NR 214.18(2)(c).
- 500 ft from inhabited dwelling or reduced to 200 ft if incorporated into the soil and affected owners/occupants give their consent per WI Admin. Code NR 214.18(b).
- 50 ft from any surface water, dry run, or dry run with vegetative buffer per WI Admin. Code NR 214.18(d).
- 36 inches between ground surface and bedrock or groundwater per WI Admin. Code NR 214.18(g).

The applicant has modified the sludge spreading maps to include WI DNR setbacks. The sludge contains nitrogen, phosphorous and other nutrients that support plant growth. Soil and sludge testing were completed. The sludge application does not exceed the nutrient requirements of the soils. They only need 150 acres for actual sludge spreading. It is estimated that 1.5 million gallons of sludge will be spread on less than 1,327.8 acres that are available at a rate of 10,000 gallons per acre. It is recommended that the properties receiving sludge should update their NRCS 590 Nutrient Management Plan to reflect the new fertilizer and future fertilizer needs. For example, the amount of phosphorus applied to the land from this sludge would have enough to feed plants up to four years.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not approval of this request is contrary to the public interest and whether it would be detrimental or injurious to the public health, public safety or the character of the surrounding area. If determined not to be contrary to the above, staff recommends the Land Management Committee approve this request with the following conditions:

1. The applicant shall adhere to all conditions and recommendations of the WI DNR.
2. Applicant shall update the land spreading site maps to reflect required WI DNR setbacks and slopes. We can strike number 2; that has been completed.
3. Applicant should retain sludge spreading contracts with land owners.
4. Sludge shall be applied only during daylight hours.
5. Sludge application shall cease if the ground becomes frozen or too wet for land injection.

6. Field access points shall be protected to control field soils and sludge from being tracked onto public roads.
7. Sludge spreading locations need to follow all WI DNR specified slope and setback requirements (i.e. to wells, to dwellings, to surface water, to dry runs with or without vegetative buffers, to bedrock or groundwater).
8. Any damage to roads shall be the responsibility of the applicant.
9. Applicant shall contact the Land Management Department when sludge spreading begins.

Chairperson Fetzer opened the hearing to the public. James E. Larson, adjoining property owner to some of the sites, stated he missed the Town meeting and asked what is the term of the permit? Lund stated it's a one-time land spreading from mid October 2011 to third week in November. Mr. Larson voiced concerns about the make-up of the sludge, whether any of it was from poultry, the formulas as to how much can be applied, he questioned it being applied by knifing into the soil or spreading and tilled in, he is concerned about the odor and how long it will linger. He also questioned whether there had been a TCLP (Toxic Characteristic Leaching Procedure) done. Mr. Sauer stated there was an entire nutrient and metal test run on the sludge; all the tests have been completed with the DNR. Its food based, there aren't any heavy metals. Lund stated she has been speaking with the DNR, Pete Skorseth, she had similar questions for him. He stated that due to the contents in the actual sludge, there isn't going to be a lot of health issues because is has been settling in the lagoon and breaking down. There wouldn't be odor with the injection. The odor would be minimal if disked within 8 hours. At 10,000 gallons per acre the soil should absorb it within 8 hours also. All the sites have had soil tests because they all have nutrient management plans. Mr. Sauer stated 10,000 gallons per acre is about 1/3 inch of rain. It's going to be knifed in, not put on the surface. It's going to be incorporated in about 4 – 6 inches into the soil. Chairperson Fetzer stated they farm and inject all of their manure to minimize odor. It's better for nutrients to stay in the soil. Lund stated Pete Skorseth said the EPA is pretty much the WI DNR's boss on this issue and they are following what the EPA says. The results that are in here are based on EPA analytical methods and they have all been followed. Mr. Sauer stated the Nestle sludge is less than 5% of high quality sludge concentrations of some sludge with heavy metals. It's not an industrial sludge but more an organic waste used by the crops. It's what we have done before. Mr. Larson asked if someone could send him a report of the make-up of the sludge. Lund will get that information to him. Mr. Larson asked where the materials have gone in the past. Kleinhans stated in Trenton and some places in Hartland. It's been done about every six or seven years when the settling ponds need to be cleaned out. Mr. Larson asked if there was a reason they're going to Diamond Bluff. Mr. Sauer explained there is no particular reason but just went with people that expressed interest in receiving the material. Mr. Larson also asked who will be responsible for the transport of the sludge. Mr. Sauer said it will be under contract with Nestle Purina. It will be the same contractor they hire that will empty the lagoons, haul it and have a unit in the field to apply the material. Mr. Larson asked who will be the contractor and if they will have all the DOT licenses. Mr. Sauer stated they are taking bids on October 7th and that is the business the contractors are in. **Public hearing closed.** Sanden asked about the wells, since the aquifer was brought up, are they are abiding by the 250 ft setback? Lund stated that yes that is correct. **Sanden moved to approve the conditional use permit for sludge disposal for Nestle Purina Pet Care with conditions #1 - #9, striking #2, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed with Jeff Holst not voting.**

The first agenda item for nonmetallic mining for Greg Bechel, agent for Norbert Kannel, owner, is being brought off the table, Sanden moved/Holst seconded. All in favor. Passed. Chairperson Fetzer invited Greg Bechel forward: Mr. Bechel explained they have been extracting some clay at Norbert Kannel's for a while on a smaller scale. The had been keeping disturbance to under 1 acre and had exceeded that when they were upping production so Jim said they needed a conditional use permit and that is why they are here. They haul the clay down to the sand mine in Maiden Rock. They use it for building ponds to hold the water back. There isn't a lot left here. They will probably be done next

summer. As far as the exposed utility line, that is what they wanted us to do. We dig it out and throw it along the side. We excavate out and the utility comes back and plows it back in. The fiber optic one is deeper in the soil this is an old copper line. They are doing reclamation as they go. Mr. Kannel has already planted soy beans in the part that was done. They are just matching it in with the road ditch. There are two plans; they are hoping to use the plan that allows them to go right up to the road ditch instead of having the ditch in there. Sanden asked if this was in operation between December 2010 and September 2011. Mr. Bechel stated yes. Sanden asked while the delay in asking for the conditional use permit. Mr. Bechel stated they went over there one-acre limit. They wanted to go right up to the road and get it done. They had an engineer draw up the plans. They want to do it right.

Staff Report – Emily Lund: This is an after-the-fact conditional use permit request for nonmetallic mining. Mr. Kannel owns property south of Hwy 10 and Mr. Bechel is the current operator on the site. The clay soils are used for pond/dike construction at the Maiden Rock sand mine. They have been operating without a CUP. Since December 2010, the Department has requested a CUP application for this use and received the application September 2, 2011. Approval from the WI DNR is also needed since ground disturbance exceeded one acre. A cease and desist order was issued because their mining operation began encroaching setbacks of both Hwy 10 and the neighboring residence. Their CUP request contains Option A and Option B for the committee’s consideration. The property is located in the NW ¼ of the NE ¼ and the NE ¼ of the NE ¼ of Section 24, Town of Union. This and surrounding properties are in the Agriculture Residential zoning district. Surrounding land uses include agriculture, woodland and residential. The mining site is approximately 5 acres in size. Access to the mining site is through Mr. Kannel’s residential and farm site driveway onto Hwy 10. Mineral extraction has occurred intermittently for several years but intensified over the past months. Two plans for excavation have been provided for consideration: Plan A would result in more limited excavation than would Plan B. Plan B would result in greater excavation – including up to the highway right of way. The Town of Union recommended approval of this request on 6-13-2011 and stated that looking at the location of the project, the Town recommends going with “Plan B”. The Town has not adopted a Comprehensive Plan. Technical information submitted includes 2 plans showing existing site conditions and proposed grades represented by two foot contours. No benchmark was established to confirm site conditions. The Hwy 10 right-of-way extends 70 feet south of the centerline. Recently staff found utility lines exposed at which point the cease and desist order was issued. The reclamation plan calls for restoration of this field back to agriculture as the completed portion of this project has been restored. A bond is required based on the amount of disturbance. The mining reclamation policy states that a mine must be restored to slopes of 3:1 or less consistent with the mining policy. The plan states the site will be finished on slopes of less than 4:1 to be utilized for farming. The county nonmetallic mining policy states that in no case will extraction activities be permitted within 200 feet of any existing residence nor within 100 feet of property lines. In this instance, there is no blasting required to extract the mined materials. The work is completed with trucks and backhoes so the potential harm to structures and wells is minimized. The biggest potential for impact to adjacent residences is from dust and noise. The policy states further that setbacks shall be established based on consideration of site specific criteria. Policy requires property line setbacks of 100 feet. Existing excavation is to property lines and State Highway ROW. The adjacent residences located at W202 and W196 Hwy 10 are 145 and 155 feet respectively from the proposed limits on mining plan B. It is apparent the excavation encroaches on the state highway right-of-way. Mr. Kannel’s residence is located approximately 100 feet from the extent of the mining operation. There are wells on each surrounding residential property but they are not identified on the site plan. Hours of operation are not listed. There is no record of lease or agreement with Mr. Kannel. No screening along the state highway was established or proposed per Section 240-31 (landscape buffers).

Staff Recommendation: Staff recommends the Land Management Committee approve this conditional use permit if the committee finds the use not contrary to the public interest, detrimental or injurious to the public health, public safety or character of the surrounding area for a nonmetallic mining operation with the following conditions:

1. Hours of operations shall be _____. Determined by committee

2. Property line setbacks shall be _____. Determined by committee
3. Setbacks from existing residences shall be _____. Determined by committee
4. A reclamation bond shall be required for the project in the amount of \$2500.
5. A reclamation plan that is consistent with the requirements of Chapter 241 shall be approved by the Zoning Office. A plan review fee shall be submitted with the plan. Reclamation of the mine shall adhere whichever plan the committee approves.
6. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
7. Applicant shall receive all necessary permits from the DNR for stormwater control.
8. This CUP is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
9. The initial land use permit fee for nonmetallic mining is \$1,000 based on the Department fee schedule.
10. A benchmark to verify final site grading shall be established.

Chairperson Fetzer opened the hearing to the public. Travis Breunig, lives across the street and is the closest neighbor to this mining operation, one of his concerns is the hours of operation. He stated most the time it is overnight and it keeps his family awake. They would propose non-mining hours of 10:00pm to 6:00am. Also when they are breaking the frost it's shaking their house. So he would disagree with Plan B because it's closer to the road and it will disturb them more. **Public hearing is closed.** Sanden asked if the utility company had been contacted to verify the information. Holst stated usually with a utility they will contact you if you break a line. Mr. Bechel stated they came out and contacted Steve. Sanden asked if Plan B violates any County 100 foot setback from property lines since it's going all the way to the road. Lund stated they are 70 feet and we have a 100 foot setback. Kleinhans stated the last line of our policy states setbacks should be set based on site specific criteria. The 100 foot is a guide. Holst stated when you drive by that property it's a better use of the land to slope it with the same slope from the road right-of-way. Sanden asked is it more of a ditch along the road. Mr. Bechel stated it was a hump. Holst stated they are taking it off and it looks pretty good. If they continue along that route, it would be beneficial to the public as well. Sanden asked about a screening plan per Chapter 240-31, if we were to require that would it be an independent plan or rolled into the reclamation plan done after-the-fact. Kleinhans stated if the committee wants to see something to screen it along the road then it should be made a condition. Pichotta stated the screening would be more during active operations rather than after their done mining. It's intended to mitigate the impacts from the activity from neighboring properties. As far as setbacks, the 100 feet to property lines, what that is intended for is to make sure someone doesn't have a smaller acreage lot and have high walls right up to the edge of their property lines. So if someone steps off their property they don't fall in a hole and the 3:1 is so they will roll down instead of falling down. Aubart asked if staff favored one plan over the other. Lund stated no. Pichotta stated the Town favored Plan B and the Town has a representative here. John Krings, Town of Union, stated Norbert Kannel favored Plan B also. Mr. Bechel stated they hope to be done in a year and they don't need to operate at night. They hope not to be back in the winter time. Chairperson Fetzer asked if the committee would like to discuss hours. Sanden suggested 6:00am to 10:00pm. He asked if property line setback is 70 feet? Kleinhans stated they are already at the road right-of-way. Lund stated that would be a zero foot setback then. Holst noted that the setbacks are site specific so you don't have to worry about setting precedence. Sanden asked if there are any residences within 200 feet. There are two of them one at 155 feet and one at 145 feet. **Sanden moved to approve the conditional use permit for nonmetallic mining for Norbert Kannel, owner, Greg Bechel, agent with conditions #1 - #10, with hours of operation 6:00am – 10:00pm, property line setbacks shall be zero feet, setbacks from existing residences shall be 140 feet not including Mr. Kannel's residence, with Plan B due to the fact this is not contrary to the public interest, nor detrimental or injurious to the public health, public safety or character of the surrounding area/Holst seconded. All in favor. Passed.**

Public hearing to consider amendments to Chapter 238 of the Pierce County Floodplain Ordinance.

Staff Report – Jim Kleinhans: In 2004 we adopted the model floodplain ordinance and since then there have been some minor amendments to that code. When we submitted our text amendments for adopting the new digital flood insurance rate maps, DNR folks said we needed to do some more changes in order for them to certify the ordinance. This should all be done before November 16, 2011. We have identified the list of things they wanted to see changed. Some are just a couple words, change chapter to ordinance and statute references that have changed, added a section about platting to list the floodplain, standards for development of floodway areas we've restructured some of the sentences, standards for development in flood-fringe areas we've talked about a dollar figure and square footage size, I don't know if it's real popular with Zoning offices around the state. We do typically have dollar figure limitations in floodplain buildings for modifications. It limits folks on the amount of work they can do on their homes. The next section talks about modification in additions to nonconforming structures, reworking the language. For nonconforming structures, getting into structural damage and substantial damage claims, they want offices around the State to do this. Chapter 238-33A talks about Floodway areas, there is some language added there to deal with the foundations of flood protection and modifications they would like to see to buildings to lessen the impact on foundations; also using the bottom of buildings for parking and limited amount of storage to reduce property damage. Flood fringe area, changed the language to "equals or exceeds". They are asking the Zoning Administrators to do some damage assessments after we do have a flooding event. That will be a good thing to have in the code. We can go out to a property that has established some damage; we can state we are authorized by the code. Land Use Permits, they want us to reference North American Vertical Datum instead of National Geodetic Vertical Datum because the new floodplain maps are going to be based on the North American Vertical Datum from 1988. Under floodproofing, they had us eliminate a section because it's covered under Section 238-32B(4). On violations, they want us to reduce the value of the violations if we write tickets to be consistent with state statutes. On the last page they want us to change and add a couple definitions: camping unit, deck, mobile recreational vehicle, North American Vertical Datum and Subdivision.

Staff Recommendation: Staff recommends the Land Management Committee approve proposed amendments to Chapter 238 and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Bill Herbison, lives on Plum Creek and totally opposes the map amendment; it includes part of his heifer shed which will require them to take out flood insurance on the entire home site. The farm has been in the family since 1836 and it has never flooded. The road, 330th Avenue was brought up about 6 feet in about 1930 and the creek has never even gotten to the bottom of the road. They have another place that is also now in the floodplain. He asked about nonconforming and if something happened to the heifer shed if they could replace it. Kleinhans stated he would be limited in the amount of money that could be put into the building. Fifty percent of the current equalized assessed value. Kleinhans stated he wrote letters to the property owners that are now in the floodplain explaining that they could either get preferred risk policies prior to the map being adopted or do a Letter of Map Amendment (LOMA). We have sent letters with the discrepancies and they wouldn't fix them. It's going to take a surveyor to fix it. The part that Mr. Herbison is looking at is mapping and that has been approved at a previous meeting, this is text amendments. It's a mandated program. John Krings, Union Supervisor, we have a problem with the mapping. Nuggett Lake was built in 1973 and there has never been any flooding. Holst stated this is typical of the State to dictate what we adopt and leave us in a hands tied situation. We put the rest of the County at risk if we don't adopt it. **Public hearing closed. Holst moved to approve proposed amendments to Chapter 238 of Pierce County Floodplain ordinance and forward a recommendation to the Pierce County Board of Supervisors/Sanden seconded. All in favor. Passed.**

Discuss take action on renewal of a conditional use permit for filling and grading in the floodplain Theresa Sullivan, owner on property located in the NE ¼ of the SE ¼ of Section 24, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Ms Sullivan forward: Ms Sullivan stated she was here two years ago and was granted the conditional use permit. She intended to do

it this summer but it got too late to do the driveway so she is hoping to extend it a couple years. She intends to do it next year but would like to extend it for two years just in case.

Staff Report – Jim Kleinhans: Ms Sullivan contacted our office knowing the permit was going to expire. She gave a brief narrative and based on economic conditions, she requested we extend her permit. I filled in what the permit was all about and listed the conditions #1 - #6 of the committee approval from 2009.

Staff Recommendation: Staff recommends a 2 year extension with the same conditions.

Holst moved to approve the renewal of the conditional use permit for filling and grading in the shoreland floodplain district for two years with the existing conditions/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing request for expansion of a nonconforming structure in the Town of Martell

Public hearing request for an accessory residence in the Town of Trimbelle

Pichotta noted that Chippewa Valley Energy had deviated from the stormwater plan that was submitted; the consultant didn't take into consideration a 24inch pipe under Hwy 72, the contractor made some adjustments that aren't going to work. We need to see a new plan submitted that will keep the water that comes under the road in the ditch and move it offsite. The water on the site itself will go into a settling pond. Holst questioned why it has to come back to the committee. Pichotta stated that it wouldn't necessarily have to come back to the committee. Pichotta noted that the primary purpose is identify strategies to mitigate offsite impacts. He stated he is looking for guidance from the committee as to whether they want to see this again, noting that the DNR and Land Conservation Department, as well as our Department will be involved. Chairperson Fetzer stated they should know what they are doing, as long as it's done to DNR standards, we should be fine.

Motion to adjourn at 08:15pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 5, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 19 th , November 2 nd & 16 th , all in 2011.	Chair
3	Approve minutes of the September 7, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for Nonmetallic mining in the Agriculture Residential District for Norbert Kannel, owner, by Greg Bechel, agent on property located in the NW ¼ of the NE ¼ and the NE ¼ of the NE ¼, of Section 24, T25N, R15W, Town of Union, Pierce County, WI.	Roy
5	Public hearing to consider a request for a conditional use permit for sludge disposal in the Agriculture Residential District for Nestle Purina Pet Care Co, applicant by Cedar Corporation, agent on properties owned by Roger & Ronnie Dosdall, Kemmerer FMTR, Brad & Brian Kemmerer, Troy Kemmerer, Stanley & Catherine Kemmerer, Holst Farms Inc, MOAP LLC and Troll King LLC located in the NW ¼ and the W ½ of the SW ¼ of Section 6, E ½ and the SW ¼ of the SE ¼ and the SW ¼ of the SW ¼ of Section 7, the W ½ of the NW ¼ of Section 17, the E ½ and the SW ¼ of the NE ¼, N ½ and the SE ¼ of the SE ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff and the E ½ of the NE ¼, the SE ¼ and the SW ¼ of Section 2, the W ½ of the NE ¼, the NW ¼, the N ½ of the SW ¼ and the N ½ of the SE ¼ of Section 11, the E ½ of the SE ¼ of Section 12, T25N, R19W, all in the Town of Diamond Bluff, Pierce County, WI.	Lund
6	Public hearing to consider amendments to Chapter 238 of the Pierce County Floodplain Ordinance.	Kleinhans
7	Discuss take action on renewal of a conditional use permit for filling and grading in the floodplain Theresa Sullivan, owner on property located in the NE ¼ of the SE ¼ of Section 24, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Kleinhans
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items and departmental update.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(9/23/11)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, September 7, 2011
Present: Joe Fetzer, Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden
Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung
Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.
Next meeting dates: September 21st, October 5th & 19th, all in 2011.
Approve Minutes: **Barkla moved to approve the August 17, 2011 LMC minutes/Rohl seconded. All in favor. Passed with Joe Fetzer not voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Agriculture Residential District for John & Karmen Freund, owners on property located in the NW ¼ of the NW ¼ in Section 8, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Freund forward: Mr. Freund explained that they would like to add a deck onto the east side of the house. It will be 8 feet further back than the house already is from the setback.

Staff Report – Emily Lund: The applicants propose to add a 14ft x 16ft deck to the east side of the house. It won't be encroaching the road any closer. The property is located in Section 8 in the Town of Union and is zoned Agriculture Residential. There is information regarding Pierce County Code on Highway setbacks and additions or extensions for existing nonconforming structures, also conditional use permit requirements in the staff report. The Town of Union recommended approval of this request on 8-8-11 without specific conditions. The Town has not adopted a Comprehensive Plan. The septic system is to the east side of the house, but the deck construction will not encroach on the septic system. No renewal would be necessary for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the construction of the proposed addition would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the conditional use permit for expansion of a nonconforming structure for John & Karmen Freund, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with condition #1/Sanden seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District for Patrick & Kristin Lynner, owners on property located in the NE ¼ of the NE ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Lynner forward: Mr. Lynner explained they have a 14 foot by 23 foot attached garage they would like to expand to 30 foot by 31 foot double car garage and 8 foot by 16 foot mudroom. It encroaches on Cty Rd C by 13 feet and the Town Rd by 8 feet. Sanden asked if the expansion is in width and length and not in height. Mr. Lynner stated not in height.

Staff Report – Emily Lund: They will be encroaching on the vision clearance triangle also which their house currently is not in. The property is located in Lot 11, Block G, Webergs Pine View Addition in Section 1, Town of Trenton and is zoned Rural Residential 20. Pierce County Code, Highway setback and Vision Clearance Triangle background information is provided in the staff report. Holst asked if there is a stop sign on 161st St. Mr. Lynner stated yes. Lund explained Pierce County Code Attachment 2: Table of Dimensional Requirements of impervious surface is 40%. The current impervious area is approximately 33.7%, with the addition the impervious area would be 36.1%. They are still under that requirement. The Town of Trenton Plan Commission recommended approval of this request on 8-4-11. The Trenton Town Board approved this request on 8-10-11 without specific conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The septic tank and drainfield are located on the southwest portion of the lot. The shared well is located on the northwest part of the lot. Both the septic and well are not located near the proposed addition. No renewal would be necessary for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the construction of the proposed addition at the proposed location would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP with the following conditions:

1. The applicant shall work with the local building inspector, Galen Seipel, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked if the County has any precedence on encroaching on the vision clearance triangle of a County Hwy. Kleinhans stated that in this case the building will not be out near the highway. There is a wooded area near the intersection and a controlled access. Chairperson Fetzer asked if there is a speed limit on that road. Mr. Lynner stated it is 45mph. **Barkla moved to approve the expansion for a nonconforming structure for Patrick & Kristin Lynner, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with condition #1/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a rezone from Agriculture Residential to Industrial by Greg Bechel, owner on property located in Lot 1 of Certified Survey Map (CSM) V4, P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Mr. Bechel forward: Mr. Bechel presented a newer map to each of the committee members. They would like to rezone the east side of the property to Industrial to match the west portion so they can expand a washing and screening facility there. Most of the buildings will be on the west side of the property but the parking area, stormwater ponds are on the same property, and it should be included in the Industrial District.

Staff Report – Jim Kleinhans: The property has been utilized for residential, wood saw mill and implement dealer since the early 1990's. The property had been zoned commercial prior to 1998. In 1993 the property owner requested a map amendment to remove the commercial zoning on the east half of the lot in order to permit the existing residence. In 1998, the Town of Union supported the west half of the property being zoned Industrial. Mr. Bechel recently purchased the property with the intent to process sand from his nonmetallic mining facility in Pepin County. The residential building will be relocated to

another property. Because the east half of the property will provide support and parking for the Industrial processes a map amendment was recommended. The property is along Highway 10. It has two addresses; one is for the dwelling and one for the industrial use. There is a well, septic system, dwelling and industrial buildings on it. Adjacent zoning districts are Industrial and Agriculture Residential. Pierce County Comprehensive Plan states: The County will approve rezonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan. In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone. The Town of Union Board of Supervisors recommended approval of this request to change the zoning from Agriculture Residential to Industrial. The Town of Union does not have a plan so we will refer to the County's Plan to lend support for this rezone. Things that we consider include Goals, Objectives and Policies: Encourage industrial development in appropriate locations within Heavy Transportation Corridors, Encourage the location of commercial and industrial development in accordance with sound land use principles, Encourage the preservation and function of existing business districts, Encourage the use of land that adjoins or is in proximity to significant transportation facilities to association with and benefit from these facilities. The map that was presented was put together by staff from Short Elliot and Hendrickson (SEH). Consultants are in the room and can respond to any issues you have with the layout. After the rezone request, we will entertain a conditional use permit request for development of that site. The soils are silt loam on slopes ranging from 2 to 12 percent. The Department of Transportation's comments regarding the driveway access to the site include a type B1 intersection based on the proposed use.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this rezone request is consistent with Pierce County's comprehensive plan. Staff suggests that the Town of Union's support for the request be taken into consideration when determining consistency. If it is determined to be consistent, staff recommends the LMC approve this proposed rezone and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Lalia Martin, neighbor behind the property stated she wasn't notified. She has concerns about the safety and pollution issues and feels it will take away from the scenery. Sanden asked if she lives within 300 feet of the property. Ms Martin stated no. John Krings, Union Town Supervisor, stated it was on the agenda and posted in three places. Ms Martin asked about the water table and how much water is this going to take. Kleinhans stated the next agenda item will address those issues. We will be looking more at the site and the high capacity wells. There is going to be a large building, some transfer and some stockpile. There will be site plan review after the rezone is complete. Ms Martin asked about the traffic, wear and tear on the roads. Kleinhans stated we wouldn't rezone a site to industrial that isn't along a state highway because those roads are designed to handle the traffic. The truck traffic will increase for this facility from Pepin County. What our committee has to look at is what our comprehensive plan states about rezones and deal with that. Then in the next public hearing we look at how the conditional use permit will be reviewed under our code and try to protect public health, safety and welfare of the surrounding citizens and character of the area.

Chairperson Fetzer closed the public hearing. Sanden asked Jim, it's along a state highway, it's adjacent to an already existing industrial zone, seems like it fits very well, have there been any complaints about the current industrial operations. Kleinhans stated no, the wood mill has been slowly going by the wayside. They use to have a kiln there drying wood and that would have produced some smoke. He measured the closest residence to this facility and its 1500 feet away. Under our conditional use permit we have to have a minimum separation of 1000 feet. So this exceeds the minimum of our ordinance. **Sanden moved to approve the rezone request from Agriculture Residential to Industrial for Greg Becheland forward a recommendation to the County Board of Supervisors, determining that it is consistent with the Pierce County Comprehensive Plan and has the support of the Town of Union/Barkla seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for Mining, accessory uses, for Greg Bechel, owner on property located in Lot 1, Certified Survey Map (CSM) V4, P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Mr. Bechel forward:Mr. Bechel stated that they want to try and enclose everything they can. It will look like a big building with a blacktop driveway. Mike Swoboda and Dan Hedrington are here from SEH. We would like to set the bar on how an industrial property should look on a state highway. The outside sand storage pile will be at its largest during the time of road restrictions in the spring. The pile won't be that big during the summer. Sanden stated this isn't actually expanding the mining it will just be processing. Mr. Bechel stated yes, it's just the processing facility. Once it's all landscaped and done, they won't be moving any dirt except the sand coming in and going out. Holst stated the stockpile is approximately where the old woodchip pile was. Mr. Bechel stated yes. We want to keep it as far back on the property as we can. We will be bringing raw material in on quad-axle trucks and will be using semis to haul the dry product out. Holst stated it's an 80,000 pound road, and asked why are he is concerned about road restrictions. Mr. Bechel stated the restrictions would impact him in Pepin County where the mine site is. There will be a drive-over ramp to dump into and it will go inside to process. It will be for frac and industrial use.

Staff Report – Jim Kleinhans: Greg recently purchased this property in the Town of Union for which he is pursuing a map amendment and a conditional use permit for a sand processing facility. It's to support a nonmetallic mine facility located in Pepin County. He chose the location based on its availability, location along a state highway corridor and the existing site conditions. The Town of Union Board of Supervisors has recommended approval of this request. The Town has not adopted a Comprehensive Plan so the Town's recommendation should be considered advisory. Adjacent land uses include agriculture, woodlands and several residences located in excess of 1500 feet from the proposed facility, which will meet our separation distance for nonmetallic mining accessory uses. The home is intended to be moved to another location in the Town. Jim estimated the adjacent woods on the east side of this facility has trees exceeding 60 feet in height which provides a fair buffer. The proposed use is a nonmetallic mineral processing facility. Sand will be trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The sand will be moved through a building and loaded on a truck and hauled to Eau Claire or Nelson. An updated plan view of the facility was provided by Short Elliot and Hendrickson with some modifications made. A high capacity well would be needed and they will be putting in some water-use facilities. There are two such sand mine processing plants in Pierce County; one in Maiden Rock and one in Hager City. The one in Hager City was zoned industrial and went through this process with a conditional use permit. There is an issue with the building height. It will exceed 60 feet which is a limitation from this committee so they will need to go to the Board of Adjustment for a variance for the height of the building and the conveying system for sand. Proposed hours of operation are expected to be 12 hours per day generally 6:00am to 6:00pm for quad-axle truck traffic. Then semi-trucks that haul the final product will spread out over 20 hours per day. The application was unclear if trucking operations would be six or seven days a week. The committee can take a look at this. The Department of Transportation has determined the driveway access will need to be modified to a class B1 intersection at the entrance to provide a turn lane from the east to the west. The Department of Safety and Professional Services will need to review building plans due to the size of the processing plant. The Department of Natural Resources will be responsible for permitting the high capacity well and issuing storm water permit for the development of the site.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. A site development plan shall be approved by the LMC to verify compliance with zoning regulations.
2. The high capacity well and grading/stormwater permit shall be permitted by Department of Natural Resources prior to construction.

3. Approval of a commercial driveway access shall be obtained from Department of Transportation and installed prior to the use being established.
4. Buildings shall be approved by the Department of Safety and Professional Services prior to construction.
5. Any proposed onsite sanitary facilities shall comply with state and county sanitary regulations.
6. The use shall be established within 12 months of approval.
7. The conditional use permit shall be renewed in 2 years and may be completed administratively if no complaints are reported.
8. Activities shall be conducted consistent with the submitted application.
9. Applicant understands that expansion or intensification for this use will require modification to this conditional use permit.
10. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.

Chairperson Fetzer opened the hearing to the public. John Krings, Supervisor for Town of Union stated he has a question about the wind, in Chippewa County they have to wet down the stockpiles. Will that happen here? Mr. Bechel stated there are wells on the property so water is available and on the conveyors that pile it up you can put a canon on it, so it sprays the piles. Mr. Krings asked how many weeks they would have it piled. Mr. Bechel stated in the spring of the year it would be at full capacity. In the summer, we would probably only have a weeks worth there to keep ahead. It's not processed yet so it won't blow away like the dry stuff does. Holst asked about the by-product. Mr. Bechel stated trucks will haul it back to the site. Holst asked if they would be hauling wet by-product or dry by-product. Mr. Bechel stated it will be semi-wet but not water running out of it. Mr. Swoboda stated the way this deposit lays it will come out of the ground at 3-4% moisture so the waste product will be wetter than that because it's going to have gone through a wash process already. If it takes a week to haul out of there it will have drained to 5-6%, not dripping. Mr. Hedrington stated it goes through a dewatering process before it goes out in that bin. Holst asked if the site is internally drained. Mr. Hedrington stated everything goes to the storm water pond. Sanden stated addressing the wind issue, south of Spring Valley they had an issue where their conveyor wasn't adjustable. Would yours be? Mr. Swoboda stated all the equipment hasn't been purchased yet. Sanden stated that would be a way to avoid any potential complaints. Mr. Hedrington suggested that the conveying system is going to be at an angle; maybe it could be a tube or sock that could control it and drop it to the pile. If you could recommend a drop sock or equivalent equipment to control the dust, then we have an opportunity to fit the equipment to the best situation. Mr. Freund stated he was at the Town meeting, he had asked if the neighbors had been notified and Mr. Bechel said they had not. It was brought up these people were not closer than 300 feet. So he is concerned about something with the size and scope of this operation, there are a group of people that are going to be affected by it but not within 300 feet. His second concern is the air quality, not so much the wind or dust but what's in it. Nothing has been offered to the local community, the people that are going to be breathing this in, as to how safe it is. Mr. Hedrington stated the air permits are required for this facility at the wet end and at the dry end. The permits themselves will encompass cumulative dust from access roads, stockpiling, loading ports, the equipment itself. Part of the reason the Bechel's have decided to put it all inside is because you can control it that much easier. The DNR does have full authority and approval jurisdiction over the discharge permits. The DNR does watch it very tightly. Mr. Freund asked if they are involved with other issues like this and if there have been any complaints. Mr. Hedrington stated he will answer to the best of his ability. Every one of the projects in Wisconsin that is being constructed passed easily within the emissions controls and the requirement of discharge. The DNR has said in some cases, because of very close proximity to houses, let's do on-site monitoring. All of the plants are still operating and haven't had any discharge issues that he is aware of. Sanden state if the conditional use permit is granted it will be up for renewal in two years so the public can be our eyes and ears. If there is an issue, make it known to the County and the committee. Mr. Freund stated we are still not being told the parts per billion that we are putting in the air; this is a safe level, this is a dangerous level. Mr. Hedrington stated that the DNR watches us. They are telling us what our limits are. On this facility DNR is all over air discharge. Chairperson Fetzer asked if they come out and do air quality tests. Mr. Hedrington stated the

permitting process involves us modeling it with the exact equipment that is being utilized and the exact procedures that are being completed in order to process it. Then they will model it and say whether they agree with our discharge calculations. They have an opportunity to do public hearings again. Mr. Freund stated that you have no plans to share that information with the community right now? Mr. Hedrington stated that if this wasn't on the safe side the DNR wouldn't have approved it now. The models haven't been done, the way this process works, in order for Greg and their company to move forward in this process; we have to take certain steps first. If they don't get the conditional use permit or the rezoning, why take the next step. We haven't applied for the air permit yet. But there is no justification for doing it. Chairperson Fetzer stated he has been to the Maiden Rock plant, the DNR or whoever sets the standards for the amount of particulate or the fugitive dust that's allowed out there, they are at a minuscule point to what's actually allowed. Mr. Freund asked when that information would be available. Mr. Hedrington stated when the DNR is reviewing the air permits you will be given the same opportunity to speak. They will have a public notice and the whole thing. Chairperson Fetzer asked Mr. Bechel if they would be willing to touch base with the Grange Hall area. It would be great to be open. John Krings, Union Township Supervisor, stated that was brought up about the neighbors. Kleinhans stated we have a minimum separation of 1000 feet from the facility. Based on what he measured, everyone meets that and exceeds that. We notified everyone within 300 feet. Holst stated we've had other instances where people didn't understand the process, it's advantageous for Mr. Bechel to keep his neighbors happy and well informed. The community would form a group that would talk to Mr. Bechel about issues that arose and he could cut them off at the pass. An educated community is usually a well informed and happy community. It's beneficial to all parties to have an open line of communication. Kleinhans stated to Mr. Freund that the Dept of Natural Resources just released a study on the affects of silica sand. He can include it with the approval of his conditional use permit and Mr. Freund can share it with his neighbors. **Public hearing closed. Sanden moved to approve the conditional use permit for mining, accessory uses for Greg Bechel with conditions #1 - #10, adding condition #11 Drop sock or equivalent equipment to reduce potential of blowing dust will be included on conveyor system, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Holst seconded and amended condition #2 to add "and air discharge permits" along with the well, grading/stormwater permits. All in favor. Passed.**

Public hearing to consider adoption of new Flood Insurance Rate Maps (FIRM) for the unincorporated areas of Pierce County along with corresponding amendments to Chapter 238 of the Pierce County Floodplain Ordinance. Staff Report – Jim Kleinhans: For several years we have been looking at revising our floodplain maps. If we accomplish the adoption of the maps by November 16th, we will be in good standing with the Federal Emergency Management Agency (FEMA). Staff has reviewed these maps; we identified some problems and tried to work out the issues to the best of our ability based on FEMA's standards. We are proposing some text amendments to adopt the new digital floodplain maps. One item in the folder this evening is the items that were changed. Added were the range of the digital maps under Chapter 238.6 and the community panel number 550330 for the City of River Falls. After talking to the DNR, Gary Hinrichs will help review our ordinance. What we're doing is minimal, adopting new maps and making necessary adjustments to Chapter 238 to adopt upgraded studies, also to incorporate the studies done to Plum Creek #2 and Bay City dam structure #1. Dan Rooney is here and his property was mapped floodplain. There are about 15 – 20 other properties where they included residential structures in the floodplain. The way staff intends to deal with this is to advise those folks, before the new maps are adopted, that they can apply for discounted flood insurance or wait until they are mapped floodplain and apply for a letter of map amendment. There are two methods to deal with this if your home is being financed under a federal insurance program; you can do a preferred risk policy where you can save on premiums or go through a grandfathering process three years after the maps are adopted. We will be sending letters to the property owners we have identified, between now and the time the maps are adopted, to take a pro-active approach.

Staff Recommendation: Staff recommends the Land Management Committee approve proposed amendments to Chapter 238 and the adoption of the DFIRM and forward a recommendation to the County Board of Supervisors to continue this process.

Chairperson Fetzer opened the hearing to the public. Dan Rooney, Oak Grove Township and owns a house in Trimbelle Township. In the spring his septic system failed there, Jim mentioned he was fortunate that it failed then because after this ordinance he wouldn't be able to issue a permit once the floodplain map was adopted. Mr. Rooney stated it's important to clarify now because this is an error. Holst stated they have places in his township that were 50 – 75 feet above floodplain and they were corrected. Staff worked diligently to get this corrected and it fell on deaf ears at FEMA. We have fought for years to get things changed. We have improved many, many things with the floodplain ordinance in Pierce County. We have been a leader in the State. Mr. Rooney stated he appreciates the efforts of Jim, Andy and Paul. He said what they told him he could do was a LOMA by hiring a surveyor and get this certificate to take to insurance agents. A number of property owners are going to incur this expense and if he ever wants to sell this place the buyers will have to have flood insurance. There are 22 properties that are likely going to be worth less because if you are in a floodplain he would think you would be assessed less. He wondered whether the county attorney, on behalf of the property owners, could sue FEMA. Paul Barkla stated the county attorney who is overworked with other projects and to take on litigation against the federal government would not be reasonable. If you want to raise your taxes, we could engage a couple attorneys. County government is cutting back on needed services; law enforcement, highway, human services, public health, etc and for the county to take on an open-ended commitment would be irresponsible for a county board member to support something like that. Kleinhans stated there were four pages, on the summary of map action, of properties listed. With a number of these, they didn't correct the map to include the LOMAs. They just said as long as you have a LOMA and it's on this list, you won't need flood insurance. Staff questioned it and asked how much more it would take to exclude these homes. They said they are on the summary of map action so they are OK, so they are not nonconforming. In your case Dan, we know based on that vertical elevation from that bridge that you are above, we can do permitting there. That's part of living next to a stream corridor or a lake, they are subject to regulations. **Public hearing closed. Holst moved to approve adoption of new flood insurance rate maps for the unincorporated areas in Pierce County along with corresponding amendments to Chapter 238 of Pierce County Floodplain ordinance/Barkla seconded. All in favor. Passed.**

8:10pm Chairperson Fetzer calls for a short recess.

8:16pm Chairperson Fetzer resumed the meeting.

Discuss take action on proposed 2012 Land Management Department Budget - Andy Pichotta: As a whole this budget is -1.8% under the 2011 budget. The County Planner budget: increase in salaries, there is a decrease to retirement due to the employees paying retirement; the only increase is our copier Sundry Repair & Maintenance is up 2.4%. That budget is under a -0.5% from last year. Under Zoning: increase in salaries, decrease in retirement for the employee, personnel subtotals are -2.1% under 2011. All of the individual line items are proposed at the same level as last year so overall that budget is -2.0% under last year. County Surveyor: salaries went up, retirement went up on one side and down on the other. Personnel subtotal is down -3.0% from the year before, operational costs are proposed at the same level as last year. That budget is proposed to come in at -2.7% under current levels. Holst questioned whether there is enough budgeted for gasoline & diesel fuel. Pichotta stated yes, he believes so. County Planner – GIS: slight bump up in salary, increase and decrease in retirement, no health insurance in this budget, -2.0% under for personnel, Professional Services same level as last year, as a whole -1.9% under last year. Park Development Fund: There will be some park development funds proposed through Parks Departments Budget, Barkla asked how much, Pichotta stated he thought around \$350,000. He stated we have gotten the DOT to agree to sell us the Trenton boat launch for a \$1. We own the property around it and will tear out the launch and put in a much nicer four lane launch. It will be a fairly substantial revenue generator for the County, somewhere in the amount of \$40,000 - \$50,000 a year just at minimal levels of use. Part

of the goal is to make the Parks Department a bit more self sufficient in the revenue game. WI Fund-Zoning Aids: This fluctuates a bit, generally we budget \$15,000 and it's usually slightly below or above. Land Information Grant: looks like we're going to get a little less than we had anticipated. We're down to about \$6,000, this grant is if the amount the County takes in for fees for recording in the Register of Deeds Office falls below a certain level then we are eligible for grants. Our estimation for 2012 will be somewhere around \$6,000. Land Records Modernization is the fund that \$8.00 for every deed recorded goes into, whose purpose is to implement the Land Records Modernization Plan. New this year is the Land Information Council, which is the gate keeper for that particular fund. That group convened to give a recommendation regarding expenditures out of that fund prior to my putting it in the budget. That group met a couple weeks ago and approved \$25,000 expenditures. Barkla asked what those expenditures are for. Pichotta explained; Arc 10 Server for \$6,000, Migrate to ArcMap for \$6,000, GIS Maintenance (road/boundary/zoning changes) for \$1,500 and COGO Trenton for \$11,500 and we plan to use the Land Information Grant in 2012 also. Barkla asked what is in the fund. Pichotta stated roughly \$36,000 or \$38,000. There have been some expenses out of that fund prior to 2012 like the fiddler system. That will no longer be able to be used for that. That is not a sustainable use for the fund. Next budget is Revenues: It looks like we will see about the same amount of revenue that we have for the last couple years. Capital Improvements: for the last three, four or five years we've just been bumping vehicles out another year. As long as repairs and maintenance doesn't become excessive, if it does then we will have to replace them. Barkla stated that you have been doing this for seven years, as long as he has been on this committee. We need to serve notice that you may have to come to the County Board to replace the 1998 Jeep. Pichotta stated the one that is starting to cost the most for repairs is the 2001 Chevy. We'll just keep bumping it out until we get to that point but like Paul said we may need to come in with an unbudgeted expenditure. Also the surveying equipment is getting old and starting to break. They are able to utilize it and get the job done. It may be more cost effective to lease than to buy. That would be an annual cost that we would have to put it under operational costs. The three-year budget and staffing summary; I'm anticipating the same levels of staff and a modest increase each year, hoping to increase revenue over the next few years. **Barkla moved to adopt the proposed 2012 Budget/Rohl seconded. All in favor.Passed.**

Discuss take action on Travel/Training Requests.Pichotta stated there is one request for Emily Lund to attend the Wisconsin County Code Administrators in Ladysmith on October 12th through the 14th.**Barkla moved to approve the travel/training request for Emily Lund for October 12th through the 14th for the WCCA Conference in Ladysmith/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

We have no public hearings or renewals of conditional use permit's unless something substantial comes in, there is the issue with the baseball field in Trenton which could wait until the first meeting in October. We also have filling and grading in the Town of Maiden Rock.Pichotta suggested that the LMC probably would not meet until the 5th of October.

Motion to adjourn at 08:32pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 7, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 21 st , October 5 th & 19 th , all in 2011.	Chair
3	Approve minutes of the August 17, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Agriculture Residential District by John & Karmen Freund, owners on property located in the NW ¼ of the NW ¼, in Section 8, T25N, R15W, Town of Union, Pierce County, WI.	Lund
5	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District by Patrick & Kristin Lynner, owners on property located in the NE ¼ of the NE ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
6	Public hearing to consider a request for a rezoning from Agriculture Residential to Industrial by Greg Bechel, owner on property located in Lot 1 of Certified Survey Map (CSM) V4, P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
7	Public hearing to consider a request for a conditional use permit for Mining, accessory uses, by Greg Bechel, owner on property located in Lot 1, Certified Survey Map (CSM) V4, P165, in the SE ¼ of the SW ¼ of Section 7, T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
8	Public hearing to consider adoption of new Flood Insurance Rate Maps (FIRM) for the unincorporated areas of Pierce County along with corresponding amendments to Chapter 238 of the Pierce County Floodplain Ordinance.	Kleinhans
9	Discuss take action on proposed 2012 Land Management Department Budget	Pichotta
10	Discuss take action on Travel/Training Requests	Pichotta
11	Future agenda items and departmental update.	Pichotta
12	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(8/26/11)

MINUTES - Pierce County Land Management Committee Meeting, August 17, 2011

Present: Paul Barkla, Jeff Holst, Don Rohland, Eric Sanden

Others: Andy Pichotta, Emily Lund, and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 7th & 21st, October 5th & 19th, all in 2011.

Approve Minutes: **Holst moved to approve the August 3, 2011 LMC minutes/Rohl seconded. All in favor. Passed with Paul Barkla not voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the General Rural Flexible 8 District by Dennis & Carol Ireland, owners on property located in the NW ¼ of the NW ¼ in Section 14, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Barkla invited Mr. & Mrs. Ireland forward: Mrs. Ireland explained that they would like to build a porch on the front of their home to enhance the curb appeal. They found out through their contractor that they didn't meet the 75 foot setback. They contacted the County and Oak Grove Township. They attended the township meeting and received approval. It will be an open sided covered porch.

Staff Report – Emily Lund: The applicants are requesting a conditional use permit to expand the existing residence on their property. The house is 73 feet from the centerline of 560th Ave. The applicants propose to add an 8' x 28' open sided porch to the southeast side (front) of the house. The resultant porch would be 65 feet from the centerline of 560th Avenue. The addition is intended to create a cover over the front entrance of the home. The property is located in Section 14, Town of Oak Grove and is zoned General Rural Flexible 8. The Town of Oak Grove recommended approval of this request on 7-18-11 without specific conditions. The Town did not reference its Comprehensive Plan, so it is assumed that the plan is silent on this request. The septic system was replaced 7-8-2010. The septic tank is located 15 feet south of the house and the drainfield is located >100 feet north of the house. No renewal would be necessary for this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the construction of the proposed addition would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the conditional use permit for expansion of a nonconforming

structure for Dennis & Carol Ireland, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with condition #1/Sanden seconded. Sanden asked about condition #1 the issue with the Uniform Dwelling Code. Lund explained after 2005, the State required local Towns to issue building permits for new homes, some towns have adopted to add accessory structures, additions, etc. Holst stated some towns have chosen to waive that up to a certain dollar amount. **All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Dog Kennel in the General Rural Flexible 8 District by Joshua & Lucille Blanch, owners on property located in the SE ¼ of the SW ¼ of Section 11, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Barkla invited Mr. & Mrs. Lucille Blanch forward: Mrs. Blanch explained they are working with Hartland Township and would like to use a pre-existing building or build a new building for a kennel for their dogs. They do not want to board dogs. They raise, breed and sell Springer's. They would have ten dogs at the most possibly 15 dogs. As their females get older they have them spayed and sometimes adopt them out but don't want to be forced to adopt them so that is why they would possibly have the 10 to 15 dogs. The closest neighbor, Ruth & Ray Carlson, were at the Town meeting and did sign a statement that they are OK with the kennel. Sanden asked if they have plans of breeding the dogs for commercial sales. They do breed their dogs once a year. Mrs. Blanch stated they run it as a business, collect sales tax and pay taxes on earnings.

Staff Report – Emily Lund: The applicants currently have 7 dogs but eventually hope to have up to 10 to 15 dogs. They have submitted two plans for the Land Management Committee's (LMC) consideration. Plan A involves modifying an existing building (40 ft by 60 ft) to create runs, kennels and a lean-to structure on the west side of the building. Two interior walls would also be added as well as new concrete floors with in-floor heat. Plan B would require the construction of a new building. The parcel is located in Section 11, Town of Hartland. The property is zoned General Rural Flexible 8, where dog kennels are conditionally permitted in the General Rural Flexible district subject to the provisions in Pierce County Code §240-36I. Per Pierce County Code §240-36I:

- A. All dogs are to be housed indoors within the hours of 9:00pm to 6:00am.
The narrative states dogs will be kept indoors from 9:00pm to 8:00am.
- B. Minimum side and rear yards for all structures associated with kennels shall be 200 feet.
Please see attached plan A and B.
- C. Except as exempted here, all kennels shall be screened from public highways by vegetative screening as described in Section 240-31D. Structures located at least 200 feet from the centerline of public roads are exempt from the screening requirement.
Please see attached plan A and B.
- D. There shall be no more than 2 adult dogs in any single enclosure unit.
The applicants plan to house no more than two dogs per kennel.

Pierce County Code §240-88 defines 'kennel' as "any establishment wherein or whereon eight or more dogs over the age of five months are kept."

The LMC adopted a policy relating to landscaping requirements on 2/7/2007 which states, "Vegetation, earthen berms, and/or fencing shall be placed between nonresidential development and adjacent properties so as to render the development as visually unobtrusive, as is practical, from adjacent properties or from public view. Native vegetation should be utilized whenever practical. Vegetated screening buffers shall be maintained in good condition. One proposed kennel location (Plan A) is 493 feet from the neighboring residence. Ray & Ruth Carlson signed a release letter that is attached to this report and their property along 550th Street. The breed of dogs to be housed in the kennel is English Springer Spaniels. The dimension of individual kennels will be 5 ft. by 10 ft. inside and outside the building with a 14 foot lean-to roof. The minimum separation distance from a well to a kennel is 50 feet per WI Administrative Code NR 812.08. The onsite well is 62 feet from the proposed Plan A. Dog waste will be disposed of in a manure pit on the farm. The Town of Hartland Supervisors

recommended approval of this request on July 26, 2011, noting that their comprehensive plan is silent on this issue. However, kennels and dog registration within the Town appear to be regulated under the Town's Animal Control Ordinance. Requirements differ for a private kennel versus a commercial kennel and depend upon the number of dogs over the age of 5 months to be kept at the facility. The Town of Hartland Ordinance appears to require that a private kennel be at least 300 feet from adjacent property lines and that commercial kennels be located a minimum of 700 feet from adjacent property lines. The Town's Ordinance does not appear to contain variance provisions. The Town Board Chair has indicated that the Town's Ordinance was intended only to apply within the borders of Esdaile. Ultimately, the applicability of the Town's Ordinance will be up to the Town of Hartland.

Staff Recommendation: Given that the applicability of the Town's Animal Control Ordinance is unclear, staff suggests that the LMC consider both potential sites when determining suitability for the proposed use. Recommended conditions were drafted to be applicable to either site.

Staff recommends the LMC determine whether the establishment of the proposed use at the proposed location would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP for a dog kennel with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
3. All new structures shall be located at least 75 feet from the centerline of 550th Street.
4. A vegetative buffer shall be required for any kennel not located more than 200 feet from a public road. Such screening shall be consistent with the LMC's policy regarding landscaping requirements.
5. Ordinances of the Town of Hartland shall be adhered to, if determined by the Town to be applicable.
6. The facility shall be established within 12 months of approval.
7. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise. Renewal shall be referred to the Land Management Committee if complaints or compliance issues arise.
8. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.

Chairperson Barkla opened the hearing to the public. Dave Esterby, Town of Hartland Chairperson, stated the Town did approve this. Two of the closest neighbors were present and they didn't have a problem with it. He stated the dog ordinance doesn't apply to this case it was meant for the Town of Esdaile. He feels the project is a good one. **Public hearing closed. Sanden moved to approve the dog kennel for Joshua & Lucille Blanch, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #8/Rohl seconded. All in favor. Passed.**

7:20pm Chairperson Barkla calls for a short recess.

7:23pm Chairperson Barkla resumed the meeting.

Discuss take action on a request for a rule exception to the required ten foot side yard setback for an existing building per §237-26H for Gloria E. Knight Revocable Trust on property located in the NW ¼ of the NW ¼ of Section 6, T26N, R18W, Town of Trimble, Pierce County, WI.

Chairperson Barkla invited Scott and Gloria Knight forward: Scott, son of Gloria Knight, explained that his father passed away and his mom would like to sell the house on the farm. He discovered they do not have enough property between the buildings and the only way around this is to

tear down the Harvester; which was built by his mom and dad. He would like to continue to use it. It's a 16,000 bushel grain bin. He talked to someone at Brave Harvester and they want \$26,000 to move it or \$6,000 to lay it down. The only other thing they could do is shift the lot line but it would lower the monetary value of the house. Also by shifting the lot line it takes away from some of the nicest class one crop land.

Staff Report – Emily Lund: The applicants are requesting a rule exception to the required 10 foot side yard setback for an existing building per Pierce County Subdivision Code §237-26H. The applicant owns 78.80 acres that is used primarily for farming. The structures located on the property include: 3 silos, 4 sheds, a barn and a house with an attached garage. In July 2011, a Certified Survey Map (CSM) was presented to the Land Management Department for review. The CSM included the house, attached garage and a barn on a 2.7 acre parcel that is planned to be auctioned off. The barn is situated 12 feet away from an existing silo. The survey shows the barn will be less than 5'8" away from the lot line; therefore, the silo would be 6'4" away from the lot line. If the CSM is approved, both the silo and barn would become non-conforming structures. If a rule exception to the side yard setback requirement is not granted, it will be necessary for Ms. Knight to move the lot line as well as remove a structure in order to achieve compliance with the Subdivision Code. The property is located in Section 6, Town of Trimble. The parcel is zoned Primary Agriculture. Pierce County Surveyor, Louie Filkins, has indicated that the CSM meets State Statue Chap. 236 requirements. Pierce County Code (PCC) Subdivision of Land §237-26H states: "There shall be ten-foot side and rear yard setback lines on each lot for all buildings unless a different setback is specified in the Pierce County Zoning Ordinance, where applicable." PCC §237 regarding Rule Exceptions states,

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception. Sanden asked what the intent of the code with the ten-foot separation is meant to accomplish. Lund stated there is a fire barrier required if buildings are closer than 10 feet. It's a standard in the subdivision code. If you need to get around it with some vehicle, you should be able to. Pichotta stated part of the purpose is that if a structure is very close to a lot line there may be runoff issues created that would impact the adjoining property. A lot of times people don't know actually where their lot line is and if they build right up to the property lines, they may actually build over it. Holst stated this is a unique case here, because it will be surveyed so they will know where the lot lines are. Sanden stated it is a pretty stiff penalty to tear the harvester down. Holst stated there is sentimental value to the Knight family. Dale Hines asked Scott if there is plenty of room to fill it. Scott stated they can get in all the way around it. There is a feed lot that stays with the silo. Lund noted that on the Certified Survey Map, in the NE part they are proposing an easement on the backside of the barn to get to it. **Holst moved to approve the rule exception to the required ten foot side yard setback for an existing building for Gloria E. Knight Revocable Trust due to the fact the entire committee agreed this would not nullify the intent and purpose of the code/Rohl seconded. All in favor. Passed.**

Discuss take action on site plan review for a Utility Facility >1000 square feet in the Primary Agriculture District by Chippewa Valley Energy, Barry Hines, agent for Dale & Julie Hines and Dean & Rebecca Hines, owners on property located in the NE ¼ of the NE ¼ of Section 19, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Barkla invited Mr. Hines and Mr. Alf forward: Staff Report – Emily Lund: Applicants are requesting site plan approval for a

utility facility >1000 square feet. On June 1, 2011, a conditional use permit for a Utility Facility >1000 square feet was approved by the Land Management Committee. On July 26, 2011, the County Board of Supervisors approved a rezone of the property from Primary Agriculture to Commercial. A Certified Survey Map (CSM) is currently being reviewed by Land Management staff for Chippewa Valley Energy to enable the purchase of 3.21 acres of a 28.270 acre parcel. This site plan review is for a propane storage and transfer facility. The property is located in Section 19, Town of El Paso and zoned Commercial. The surrounding area is primarily utilized for agriculture with two residences located immediately adjacent to the site across Highway 72. The parcel is currently in agricultural production as a soybean field. The Town of El Paso recommended approval of this issue on 5-9-11 and further recommended: “ No more than 2 – 30,000 tanks and no more than 40 small LP tanks stored at LP plant. Trees to be planted to screen neighbor’s view. Grass mowed as needed.” Site plan review is required for new construction or additions to existing structures for commercial uses under Pierce County Code (PCC) §240-75A(1). The purpose of such review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Road access will be south on State Highway 72. WI DOT is requiring shared driveway access for both the utility and farm land. Driveway access approval is required from WI DOT prior to CSM approval and issuance of Uniform Address Number (UAN). Project location; site layout with vegetation screening; semi-truck turning radius layout; contour, grading and erosion control plan; construction detail maps were submitted for review. The applicant’s first submittal included the placement of trees for screening only to the south and east of the facility. The second submittal only included trees for screening to the north of the facility. The Land Management Committee (LMC) should review the screening plans to ensure that neighboring residential uses are adequately screened and buffered (required by 240-75 and a condition of Town of El Paso support). The LMC should stipulate the number of trees, their location, type and height necessary to adequately screen and buffer the facility from neighboring uses. The propane facility is to be 58.2’ and 46.2’ x 82’. The entire facility will be fenced for security and will be enclosed by a 7’ tall chain linked security fence and gate. Two 30,000 gallon bulk LP tanks and up to 40 residential sized tanks will be stored within the fence. The facility will supply 24 hour service 365 days per year for residential, agriculture and commercial users. Off-street parking is required per Pierce County Code §240-54. Staff suggests that two parking places, consistent with the requirement for manufacturing/trade or contractor establishments, would likely be sufficient. The site shall comply with National Fire Protection Association Code NFPA 58 Chap 6 and with WI Department of Commerce COMM 10 for storage of flammable substances. L.P. Gas Equipment Inc. will obtain approvals from the State review agencies. We just received Dept. of Commerce conditional approval dated 8-9-11. The soil tested area will need to be reserved for a private sanitary sewer system on site, if one would be needed in the future. No personnel will be permanently assigned to the site, so no well or sanitary sewer facility will be installed. Chippewa Valley Energy personnel will routinely monitor and maintain the facility. The site will be graded to maintain adequate drainage and accommodate access by utility and emergency vehicles.

Staff Recommendation: Staff recommends the Land Management Committee review this site plan to ensure that site layout and landscaping promotes compatibility between land uses, creates a safe and attractive layout, provides proper access to transportation, protects property values and contributes to the efficient use of land. Staff suggests the following issues be addressed and/or conditioned:

1. The number of trees, their location, type and height necessary to adequately screen the facility from neighboring residences should be established and included as a condition of approval.
2. Two parking spaces should be required for this facility and the applicant should delineate their location.
3. The area in which a soil test identified a suitable site for a POWTS shall be reserved for potential future use.

4. Applicant shall follow NFPA and COMM code requirements for storage and handling of flammable substances.
5. Applicant shall obtain all necessary WI DNR approvals for erosion control and site grading.
6. Driveway access should be reviewed to ensure adequacy for shared use (commercial and agricultural).
7. Site layout and landscaping shall be established consistent with submitted plans as modified by the Land Management Committee.

Lund asked if the committee could discuss conditions #1 regarding the trees and screening and #6 regarding the driveway access for commercial and agricultural uses. Lund had just been presented with the new engineering driveway access for both of the uses. The shaded area is for the truck access off of Hwy 72; also the agricultural would be coming off of this and going east. They were thinking of putting another culvert under the agricultural driveway. Sanden stated so the agriculture traffic and the facility traffic will be separated. Lund stated once they are off of Hwy 72. Sanden asked if there is a guideline to follow or a standard for screening. Pichotta stated there isn't a standard, as you recall in the vineyard out in the Town of Oak Grove, it was almost a negotiated thing to determine what was adequate for the neighbors and the applicant. Joe Alf stated they need to have some visibility from the highway for security purposes. They do not want to have a full barrier for someone to go back there and mess around with the tanks. Barry Hines stated they are going to use the signage from the tanks themselves and not have to put up a sign, that's part of the visibility of this. Pichotta stated the purpose of this isn't to necessarily screen it from view but to strategically screen from neighboring residential uses. Barry Hines stated at the Town meeting the neighbor, Brad Johnson, was present and asked for screening. We're ready to go forward. Sanden asked where the origin of the screening on the grading plan came from. Joe Alf stated he thinks that was the designer's architectural suggestion. Sanden stated it's conveniently located to screen from the neighbor to the northeast. Chairperson Barkla asked Richard Heschke his comments. He stated he would like to see the screening go all the way to his driveway. Barry Hines asked what kind of trees. There was discussion on placement of trees for screening. Mr. Heschke stated he doesn't want it at all and has a petition according to Chapter 59.69(5)(G) to try and stop it. The safety and well-being of our families, the decline of our property values, semi-truck traffic 24 hours a day, 365 days a year and no 24-hour staffing to ensure problems. Dale Hines stated there is a possibility that your land value could escalate because of commercial property on both sides of your property. Barry Hines asked about the tree height. Holst stated spruce trees at 6 foot height. Mr. Alf stated there are numerous LP facilities, incident wise, those sites are proven to be safe. There have not been any major incidences at any of those. Their Eau Claire facility has been there since the early 1980's and they have never had an incident at that site. Dept. of Commerce COMM 10 and COMM 11 for LP Storage, adequately address these sites. Pierce County contains several locations that store fireworks. Fireworks contain black powder which is extremely volatile and subject to static electric discharge. Historically there have been more incidences involving fireworks than LP storage. Committee discussion of tree placement. Pichotta suggested 10 trees plus whatever they put in the neighbor's property, 6 foot tall, spruce planted at 20 foot intervals. Holst stated that will give them the softening affect they are looking for. Dale Hines asked if it could be a variety of spruce not just blue spruce. Holst stated we aren't going to make a decision on the neighbor's property. They can agree between themselves. **Holst moved to approve the site plan review as presented on exhibit A, 10 trees, some form of spruce, 6 foot tall and planted at 20 foot intervals, with conditions #1 - #7/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Conditional use permit for expansion of a nonconforming structure in the Town of Union
 Conditional use permit for expansion of a nonconforming structure in the Town of Trenton

Rezone request from Agriculture Residential to Industrial in the Town of Union

Conditional use permit for mining, accessory uses in the Town of Union

Code amendments to Chapter 238, Floodplain

Budget

The Natural Resource Board has pushed out implementation of NR115 Shoreland standards for two years. We got a grant and the timeframe on that grant is also pushed out two years.

Pichotta stated that he had met with representatives of the City of Red Wing about the Red Wing Airport. They are moving forward with the effort to establish a zoning overlay district and also moving forward with other activities. We had some discussion about what constitutes intensification or expansion of that use. They intend to respond to my letter where we expressed concerns about the airport at their meeting on September 7th. They have stated that they will provide a copy of their attorney's response to us prior to that time.

Motion to adjourn at 08:03pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 17, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 7 th & 21 st , October 5 th & 19 th , all in 2011.	Chair
3	Approve minutes of the August 3, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the General Rural Flexible 8 District by Dennis & Carol Ireland, owners on property located in the NW ¼ of the NW ¼, in Section 14, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
5	Public hearing to consider a request for a conditional use permit for a Dog Kennel in the General Rural Flexible 8 District by Joshua & Lucille Blanch, owners on property located in the SE ¼ of the SW ¼ of Section 11, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
6	Discuss take action on a request for a rule exception to the required ten foot side yard setback for an existing building per §237-26(H) for Gloria E. Knight Revocable Trust on property located in the NW ¼ of the NW ¼ of Section 6, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
7	Discuss take action on site plan review for a Utility Facility >1000 square feet in the Primary Agriculture District by Chippewa Valley Energy, Barry Hines, agent for Dale & Julie Hines and Dean & Rebecca Hines, owners on property located in the NE ¼ of the NE ¼ of Section 19, T26N, R16W, Town of El Paso, Pierce County, WI.	Lund
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items and departmental update.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, August 3, 2011

Present: Joe Fetzer, Jeff Holst, Don Rohland, Eric Sanden

Others: Jim Kleinhans and Shari Hartung

Absent: Paul Barkla

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 17th, September 7th & 21st, all in 2011.

Approve Minutes: **Rohl moved to approve the July 20, 2011 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Utility Facility > 1000 square feet for a natural gas meter station in the Exclusive Agriculture District by Northern Natural Gas Company, agent for Gail Collett, owner on property located in the NE ¼ of the SE ¼ in Section 1, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Tom Dixon forward: Mr. Dixon, agent for Northern Natural Gas Co. explained the purpose of the project is to construct a meter facility to serve the Maiden Rock area with natural gas service that would be provided by Excel Energy, who is represented here also. Rohl asked if the gas is piped to the user. Mr. Dixon stated currently there is an eight inch line that runs through the property and they would pipe that off to feed the station. From the location of the station itself, Excel Energy would tie on and they would pipe off to the businesses and residences. Sanden asked what the timeframe of the construction is. Mr. Dixon stated they hope to begin in mid October and finish by mid November unless the weather plays a factor.

Staff Report – Jim Kleinhans: Tom contacted our office several weeks ago about establishing this facility in the Town of Salem. The Town of Salem is going through comprehensive rezone right now. So the zoning will change on it but the Utility Facility is conditionally permitted in the existing Exclusive Agriculture Zoning and the future Primary Agriculture Zoning as well. The Town of Salem recommended approval of this request. The Town will have to approve the access to the facility. Right now there is a field access. We want to make sure they issue approval for a utility access so we can issue a uniform address number for the site. Preliminary drawings for the site have been provided to show where they are coming in off the eight inch line and metering it down, heading back out to the road right-of-way that will extend to County Road CC where Excel Energy will transmit the natural gas. The site will be surface rocked and fenced up to the road right-of-way and gated for security. Approximately 2.2 acres will be leased from Mr. Collett. There are a couple buildings showing on the site plan. The site is approximately 6 miles from the Plum City Fire Department. Several residences and a large dairy farm are located within 1000 feet of the facility. Jay Richardson called staff today. He owns the homes and dairy next to the facility. He could not be here this evening but supports the request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The security fence shall be constructed to a height of 10 feet.
2. The Plum City Fire Department shall be provided information specific to this facility to ensure appropriate emergency response.
3. Access approval shall be secured from the Town of Salem and a Uniform Address Number (UAN) obtained from the Land Management Department.
4. Any proposed signage shall comply with Pierce County Code standards.
5. Construction shall not occur until after the Town of Salem comprehensive rezone has been approved.
6. Any parcel, if created, shall comply with County subdivision regulations (Ch 237).

Chairperson Fetzer opened the hearing to the public. Mr. Collett stated he thinks it's the Ellsworth Fire Department district for that area. Mr. Dixon stated the field operation staff, when there is work taking place, always gets in touch with the police and fire departments. Mr. Collett stated he talked to Tom about the driveway. He told them he would like to have it west of the driveway because that is prime farmland. Jay Richardson said he didn't want it near the house. The pipeline is just on the edge of the south side of the house. **Public hearing closed.** Rohl asked how big an area is this facility. Holst stated it is 100ft x 100 ft. Sanden stated natural gas is an up and coming fuel in this country especially with the recent discovery in the Marcellus Shale and he is pleased to see it occurring. It will be competitively priced and help surrounding communities. Chairperson Fetzer asked how far they can feed? Tom Buchmeier, Excel Energy, stated it goes through a cost and justification process. What is driving this project is the sand mine down in the Village of Maiden Rock. Their load goes a long way as far as credit and there is a fairly large contribution toward the project too. All of the customers along the route, Cty Rd CC and Cty Rd S and everybody in the Village will have an opportunity to hook up to it. Our extension rules are basically, we will give them 100 ft free of service. Everybody along the route should benefit. It just depends on the demand, the load how far they can extend. **Holst moved to approve the conditional use permit for a Utility Facility >1000 square feet for a natural gas meter station for Northern Natural Gas Co, agent for Gail Collett, owner, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #6 amending condition #2 to read Ellsworth Fire Department instead of Plum City Fire Department/Sanden seconded. All in favor. Passed.**

Discuss proposed amendments to Pierce County Floodplain Code Chapter 238 and adoption of new floodplain maps provided by Federal Emergency Management Agency (FEMA).

Staff Report – Jim Kleinhans: The map amendments have been in the works since 2009. We conducted an open house and had a comment period due to the issues with the maps. The last time our maps were updated was in the '90's. In 1993 and 1994 our Floodplain maps were adopted. Some new studies have been developed since that time. Some studies that we submitted were adopted and up to FEMA standards and some were determined not to be. We had updated our Floodplain Code in 2004 but some additional changes are needed to adopt new maps and new studies. Proposed changes to the existing Floodplain ordinance include; changing the dates of Flood Insurance studies, including Plum Creek No 2 and the Bay City structure No 1. The reason we didn't include that that previously is because there was a road project on County Rd C that the Highway Department was doing and it would have conflicted. In Plum Creek No 2, there were three items that needed to be done at the Nugget Lake Dam, it took a little more time to get the emergency response system installed but that is installed now so we can proceed with including that study. The study done by Ayres on Plum Creek No 2 was not approved by FEMA. FEMA went ahead and used 20 foot contour intervals to figure out their Floodplain which, based on the detail done by Ayres & Associates, has some errors. Jim would

still like to adopt that study from Ayres because of the detail and it gives better information. In the staff report it talks about how they are going to utilize the information. There are some examples of what the new maps are going to look like. You can see that it is at a similar scale but the detail is lacking. Since the last maps, a number of folks have done a Letter of Map Amendment (LOMA) to remove their homes from the floodplain. There are about 10 homes for which people did LOMA's and on the final map they are still shown as being in the floodplain. We pointed this out and submitted 50 examples of things we wanted corrected and it was really discouraging that they wouldn't take the time to put that detail in the map. After looking at the final product, you can't really utilize this map for permitting purposes. You can't see anything. We're going to use the shape files on our GIS platform, that's where you can see some detail. The lending institutions are going to be using these maps to figure out who is in the floodplain and who isn't. There are going to be some problems so we would like to be a little proactive and send some letters to a dozen people or so that we know were included in the floodplain that we feel aren't. We would like to send the letters prior to the adoption of these maps so people know what is coming. We sent Louie and Barry out to characterize the areas where the homes and farms are. We looked at the contour maps and aerial photos. We were able to be successful on about ten of them. **Chairperson Fetzer directed staff to hold a public hearing on September 7, 2011 for text amendments and the adoption of the new floodplain maps provided by Federal Emergency Management Agency (FEMA).**

Discuss take action on Travel/Training Requests. Kleinahns stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

A public hearing for expansion of a nonconforming structure in the Town of Oak Grove

A public hearing for a dog kennel in the Town of Hartland

A rule exception for proposed Certified Survey Map in the Town of Trimble

Site plan review for Chippewa Valley Energy

Motion to adjourn at 07:29pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, July 20, 2011

Present: Paul Barkla, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Joe Fetzer & Jeff Holst

Acting Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 3rd & 17th, September 7th & 21st, all in 2011.

Approve Minutes: **Sanden moved to approve the July 6, 2011 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for a nonmetallic mining operation for County Materials, agent for BS Construction and Steve Schoeder Properties, owners on property located in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.

Staff Report – Brad Roy: The Zoning Office has recently received complaints regarding the blasting at the Rock Elm Quarry. The blasts were reported to have exceeded the peak particle velocity limits established in the Conditional Use Permit. Staff visited the site on May 18, 2011 to witness the blast and to verify the peak particle velocity. The blast had a peak particle velocity of .41 in/sec, the limit established in the conditional use permit is 0.35 in/sec. Brian LaRue of Olson Explosives, Inc stated at that time all blasts in the previous week had exceeded the limit. It was later confirmed that 2 of the 3 previous blasts exceeded the limit. On May 24, 2011 staff requested the following information from BS Construction and County Materials:

- The future mining plans at the Schoeder Rock Elm Quarry
- An estimate of the number of blasts before mining in the quarry will be completed
- An explanation of the recent blasts from Olson Explosives, Inc along with their opinion as to whether future blasts can be completed within the 0.35 in/sec limit.
- The readings of all blasts at the Schoeder Rock Elm quarry within the last two years taken from the Sylla and Huebel property.

County Materials informed staff that their lease at the quarry continues until 2015 and they intend to mine the property until the lease expires. Any mining after that will be at the discretion of BS Construction. The CUP requires a 400' mining setback from all existing residences. It is estimated that 35 blasts will be needed to bring the quarry to the 400' setback. (Blasting is done in sets of 4 or 5 shots; approximately 7 sets of 5 shots will be needed to complete the mining.) The response included a letter from the site blaster Kurt Oakes from Olson Explosives which describes the site conditions and blasting techniques that have been used at the site and alternative techniques that can be implemented for future blasts with the goal limiting the peak particle velocity to 0.35. The letter also states, "Moving forward I do firmly believe that we can continue to Safely and Securely Blast at this quarry without creating an unsafe environment." The letter does not state definitely whether it is possible to ensure

that all future blasts will be within the peak particle velocity limit established. (The complete letter is attached to the staff report.) The existing conditions #1 - #12 are listed in the report. Condition #6 is the condition in question.

Staff Recommendation: Staff recommends the Land Management Committee determine whether established conditions continue to be adequate to protect the public health, public safety and the character of the surrounding area or whether additions or modifications are necessary. Staff suggests that the addition of the following condition should be considered:

13. Blast readings shall be provided to all adjoining land owners upon request.

Sanden asked about the origin of the 0.35 in/sec limit. Roy stated that was an agreed upon limit dealing with a lot of factors between County Materials and the neighboring property owners. It was an agenda item dealing with the expansion of this mine. The original mine was permitted in the late 70's. Sanden asked with the expansion being closer to the neighbors; that was an issue taken up at that time. Roy stated yes. Rohl asked about the expansion getting the blasting closer to the property. Roy stated what triggered staff to notice the expansion was they were mining on additional property outside the original permit not close to the residence but the way the mining is progressing it is moving closer to the residence. Bill Sylla stated some of the blasts have exceeded the limit that was established; roughly 12 of 28 blasts. There have been a fair amount of blasts that were within the limits. One of the things brought up is different techniques to limit the particle velocities. It might mean more blasts and they are in favor of that because of the shaking of the house. They talked earlier today with County Materials about some of the options. It is his understanding the original blast takes a chunk and that gets boxed in on three sides. Maybe on that set they could do a smaller charge and take off less block and do a few more blasts to get started. They're in favor of that. Benching has been brought up in the past, not sure what that is or how it works or if it's even been tried. They're in favor of anything that maintains the conditions of the CUP. There are some other issues regarding fly rock on the property once in a while. They are in favor of the way the CUP reads right now. Jim Small stated County Materials is fine with the recommendation of a condition #13. The 0.35 was an arbitrary number that was decided on and we have asked Olson Explosives to try to keep it under that number but once that shot is off, there is no forcing it to be under the 0.35 in/sec. Kurt Oakes, Olson Explosives, stated there are some options they can incorporate in an effort to achieve a reliable consistent maintenance under the 0.35 in/sec. He had an opportunity to compile blasts data this morning from the Sylla and Huebel residences for this year. A report with this data was handed out. Mr. Oakes explained the z-curve from the US Bureau of Mines safe blasting vibration criteria in relation to the data. Sanden asked where distance factors in, particle velocity and frequency were mentioned but it would seem that a blast from one quarter mile away versus five miles away would have a different potential for damage. Mr. Oakes stated distance from the blast isn't a function because damage occurs to a structure where the wave forms are going through that object. When they are talking about distance they use a formula called scaled distance factor. They use that in the design but that doesn't have anything to do with what their vibrations are going to be at that given point. It does affect the pounds per delay that they can shoot in order to stay under a given limit. They can do a prediction but even that is site specific and you have to take 30 data sets. Sanden stated so the frequency doesn't change with distance and it would be the same at the site versus a mile away. Mr. Oakes stated no the frequency would actually go lower the further away you are. Through all the geological unconformities, a joint set, a mud seam or different bedding plain, it will attenuate out into the lowest common denominator of a frequency. Sanden asked if there is any other way than electronic detonator to increase the frequency of the blast. Mr. Oakes stated one of the things that can come into play is benching the box cut and then going full depth on the free face. In the Oneota Formation around here there are cavities in the rock itself. Where the blast hole comes through and intersects that cavity you're going to get more pounds in that region. That comes into play at this quarry. That was one of the basis he has on benching the box cut, take it in two shots, one up top and one below. Get that material excavated out and then you can shoot full face. Sanden stated the electronic detonator doesn't affect the velocity but the frequency. When you used the electronic detonator in the last two, it's closer to the limit than the earlier shots. Mr. Oakes stated every

shot this year at the quarry has actually been done with the electronic detonator. When he saw the results and how tight they were he was really pleased. The results at the Huebel residence are totally different. When they are shooting, they design everything to the Sylla residence. Sanden asked what the idea behind the 0.35 in/sec was. Mr. Oakes stated that Olson Explosives wasn't at that meeting. Mr. Small stated that County Materials wanted a higher number and Sylla's wanted a lower number so this is what was agreed upon. Bill Sylla stated that first meeting was contentious on several points and concessions were made on both sides and to look at one part when there were compromises on a variety of issues isn't fair. They are happy with the conditions and just want County Materials to adhere to them. Roy stated as staff, this is the first time we have seen multiple shots go over and we're looking for direction if this were to continue. Sanden stated it wouldn't be cheaper or efficient to have the 0.35 in/sec cap but given the nature of the compromises that were made to continue to monitor it and if it continues to exceed it consider taking action at that time. Rohl agreed with Dr. Sanden. **Sanden moved to add a condition #13 "Blast readings shall be provided to all adjoining land owners upon request"/Rohl seconded. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Jim Kleinhans: Leon Brown obtained a conditional use permit (CUP) to create an outdoor recreational sports facility in 2003. In 2007 the property was deeded to the Ellsworth Baseball Association Inc. In September 2009 lights, financed by Mr. Brown, were added to the facility as well and the Land Management Department started to receive complaints on the use of the facility. The original conditions are listed in the staff report for 2003. The conditions were modified in 2009. The conditional use permit will be renewed in September of 2011 for a two year renewal but I wanted to bring this in before the committee because of the complaints we are getting and possibly throw out some options for remedies. Since the lights were added there are night games scheduled so the committee established some evening hours of operation. Some of the complaints are about the lights being on too late and foul balls. Staff attended a game on June 29 and noticed that during a weekday the hours of operation were exceeded and the lights were still on after the game was over and still on at 11:30pm. I also observed what was going on with the foul balls and looked at the facility. I have been talking with Bill Green and he told me earlier this year the lighting was adjusted. There were some problems with some bolts being loose and they came out of adjustment. They were adjusted to maximize the candle power on the field. However, I documented the adjacent properties where the homes were well lit up and shadows were cast on the inside of the homes when their lights were shut off. I looked at the number of lights on the towers and the height of the towers. I tried to assess what other ball diamonds were like, that have night games. As stated earlier, I was there until 11:30pm, the game ended at 10:50pm and some lights were turned off at 11:03pm while infield maintenance was being done. Third base lights were turned off at 11:19pm and the first base lights were still visible from Highway 63 and 35. These towers are very tall. I've had some reports of the lights causing glare onto Hwy 63 for motorists. Some of the industry in the area has security lights, a different kind of lighting and they point those lights down on their facility. As far as foul balls, I observed seven foul balls to the end of the game; two of the balls went into neighboring property and that has been an issue with the neighbors about people trespassing into their yards and potential damage to their property. The distance to the setbacks and the backstop to the property lines; one was 70 feet and the bar is about 90 feet. I've suggested some possibilities the committee could consider to address the problems before the conditional use permit renewal in September; including shielding the lighting, possible lowering the tower heights, arrange for the lights to be turned off by a responsible party, and to possibly modify the backstop to contain foul balls. The backstop is approximately 20 feet in height and some others in the area are higher, possibly modify hours of operation or scheduling games to comply with the conditions and post hours of operation. **Staff Recommendation:** Staff recommends the Land Management Committee consider the options out there and consider the discussion from the folks in the audience to rectify some of the issues that have

been generating complaints and hopefully we can implement some of the adjustments at the renewal in September before all the games are over.

Heather Flueger, a neighbor to the ball field, stated when the ball field first went in there was some discrepancy with the lot lines but that was taken care of. At first it was little kids playing soccer and little league. Then it was a backstop 20 feet closer to her house. It isn't just little league now but a minor league playing ball there. They don't even use their front yard when a game is going on because of the foul balls coming in the yard. When they are there they give the balls back. But it is an inconvenience, while they are eating dinner, people are hollering for them to throw the balls back. They have had people coming in the yard and they have two dogs and have them fenced in. Mr. Flueger has video of the lights in the house, they have skylights in their bedroom and it shines right in. Mrs. Flueger stated occasionally they have people urinating on their fence and harassing them. They just want peace of mind and their safe house back. Bill Green, president of the baseball association, Leon Brown decided to build the park in Hager City and give it to Trenton Township but they didn't want it because of the upkeep, they tried to give it to the Ellsworth School District but they didn't want it because of the upkeep. Mr. Green called Mr. Brown's granddaughter, Sabrina Welsch, and asked if she would consider giving it to the Ellsworth Baseball Association which they agreed to. He still manages it for the baseball association. They have 8th grade, high school, legion ball and an amateur league that play there. Chairperson Barkla asked how many games they play there. Mr. Green stated the junior legion has eight regular games and a tournament, probably ten games this year for the legion. This year the 8th grade didn't play there. Right now the junior legion and the Hager City Skeeters play there. Mr. Green stated he has talked with some of the property owners and they haven't had a problem with the field, the owner of the Border Lounge, the next family down is the Brown Family, then Dorris Gardas, Mr. Morris and Hager City Glass. The measurement from the fence is 80 feet to the adjacent property owner's fence. It is 125 feet from the batter's box. They did increase the fence from 16 feet to 20 feet. Mr. Green stated if he understands it correctly there are two issues; the foul balls and overflow lighting. Kleinhans stated also the hours of operation. Mr. Green stated Jim had suggested Musco Lighting and they do not have the means to bring in the shielding for the lights. There are two 60 ft light poles, one left of home plate, one right of home plate and the rest are 80 ft poles. The two poles around home are fixed and aren't able to be lowered at this point. The other two were twisted into place with friction. Mike Salaski out of St. Cloud, MN was contracted by the family to put the lights in. When they put the lights in there was a problem at the manufacturer, it's an aluminum box that holds the transformer that illuminates the bulbs. The shoulder on the bolt was too long. The wind blew them out of direction and they brought in another contractor to replace the shoulder bolts, corrected them and repositioned them. The lights are set up to give the maximum illumination of the field by a computer engineer. As far as the foul balls go, we could go up and out with netting to try to alleviate the balls that go out. The hours of operation, the Skeeters had an umpire that was late so that game started late, the other was a rescheduled legion game so they were forced to start later, the third issue was an extra innings game that went 14 innings. As far as the box being locked, he wasn't aware that was an issue. He leaves it open so that he doesn't have to drive down to turn them off. There are locks on there and he can lock them up. They do control the power at their storage area and if there was a fire they wouldn't be able to turn the power off. One option he thought of is there are two very large trees there that they could string a cable with a product that diffuses the light and would limit the overflow lighting and keep foul balls from going in. There are a couple options of putting in poles and using ¾ inch black landscape underlayment that would block everything from going in. Hours of operation, he can assure the board that wouldn't happen again. Chairperson Barkla stated the games would be called? Mr. Green stated "yes sir". Kleinhans stated we are reacting to a facility that expanded into evening hours. In 2009 the committee established those hours for weekdays and weekends so the neighbors understood what they were going to be dealing with. He gets complaints so he has to deal with them and found out there was compliance issues as well so that is why this is on the agenda tonight. He talked to the neighbors as well and didn't get negative responses from everyone. We need to make it fit with the local community. Mr. Green stated there are four variances; legion, 8th

grade, high school and the amateur team, is it all the teams that the complaints are about or one specific one. Mr. Flueger stated they don't have any complaints about the team, it's about the field and they just want it to be in compliance. He asked if the lights were added without approval. Kleinhans stated yes and we reacted to that issue. Mr. FluegerThe conditional use permit states #10 Alleviate lighting overflow problem for adjacent property owner. It doesn't state that if the majority of the owners don't have a problem and one person who complains will just have to deal with it. He doesn't feel the netting is going to work with their skylight and then they will have the netting and not be able to watch the games. Mrs. Flueger asked how much the shielding would cost. Looking at other fields, they have those caps on the lighting and the backstops have the curved top. Sanden stated in 2009, the condition #10 Alleviate lighting overflow problem for adjacent property owner. What has been done since September 16, 2009 to correct that overflow problem? Mr. Green stated the adjustment of the lights after they were initially installed, they found those shoulder bolts weren't to spec, they came in replaced all the shoulder bolts, adjusted all the lights to the engineers diagram. Sanden asked Jim if condition #7 Operation and maintenance plan be submitted, has that been submitted yet. Kleinhans stated we established hours in 2009, weekday hours are different than weekend hours. Maybe they were conservative but that was what the neighbors were informed of and they are running over from time to time. Sanden stated this committee is always in the unenviable position having to deal with good intentions that have unintended consequences. In the time that he has been on this committee, they have been very active towards trying to provide as much leniency as possible; whether it be to respect peoples private property rights or to encourage economic growth in the County. In response we tend to put a lot of conditions on. All those conditions, as with the last group with the mining, are not just suggestions, those are conditions and if they aren't met then those are grounds for repealing the CUP. The hours of operation are something well within someone's control. When we see things like that being violated, these are the letter of the law. We try to be as accommodating as possible to every different use within the County and the way we do that to protect the neighbors is to put these conditions on. We take these conditions very seriously. Rohl stated he agrees with Dr. Sanden and that someone has to take responsibility to discipline the hours of operation and directing the light down so it doesn't annoy the neighbors. **Sanden moved to add condition #11 "A plan drawn up in conjunction with the neighboring land owners to address overflow lighting and the foul ball issue to be submitted by the conditional use permit renewal in September 2011"/Rohl seconded. All in favor. Passed.**

Discuss take action on request by City of Red Wing to join in creation of a Joint Airport Zoning Board. Staff Report – Andy Pichotta:As you are aware the City of Red Wing is pursuing the creation of a Joint Airport Zoning Board. The purpose of said board is to develop a zoning overlay district that would restrict uses, densities and heights of structures located within 3 miles of the Red Wing Regional Airport. It appears that the Joint Board would determine what regulations and restrictions to include above and beyond the minimum standards mandated by Minnesota statutes. The proposed Joint Airport Zoning Board would be made up of two representatives from the following entities: Pierce and Goodhue Counties, the Towns of Hartland, Trenton, Isabelle and Wacouta, the Village of Bay City and the City of Red Wing. Correspondence received from the City of Red Wing regarding the creation of the Joint Airport Zoning Board is attached to the staff report. Basically there is a letter in your packets that deal with some of the issues identified with what the Red Wing Airport wants to do with the establishment of the Joint Zoning Board. There are a couple issues; one being interstate reciprocity. Given that MN and WI statutes treat municipalities from adjoining States differently, WI Statutes specifically say that their reciprocity doesn't extend to an adjoining State if that adjoining State doesn't have reciprocity that extends to Wisconsin's municipalities. Arguably interstate reciprocity doesn't apply and arguably they may or may not have the right to own and operate an airport in the State of Wisconsin. If it is determined that they do have interstate reciprocity there are some other issues – one being the use of MN Statutes instead of WI Statutes for issues not relating to the financing of said project. Another issue is in the section that deals with protection of airspace, with the establishment of

zoning, a strong argument can be made that there is not the ability granted to WI municipalities to regulate land uses in another State. Another issue, City of Red Wing wants to zone the area as if it's already got a 7000 foot runway versus a 5000 foot runway. Given the relationship between conditional use permits and Town Comprehensive Plans and also the consistency requirement as of January 1, 2010 all land use decisions made by a WI Municipality needs to be consistent with its comprehensive plan. We couldn't approve a rezone which would be necessary as part of the expansion of the airport unless it was consistent with the Town of Trenton's Comprehensive Plan which it's not nor is the granting of a conditional use permit for expansion of the airport consistent so I don't foresee a circumstance where we could approve a 7000 foot runway unless the Towns were in favor of it. I'm still in consultation with legal staff and we feel it's prudent to move a resolution forward on the chance that they try to establish this board despite the concerns that were raised just to ensure we have a place at the table.

Staff Recommendation: Staff recommends the LMC direct staff to draft a resolution authorizing Pierce County's participation in the Joint Airport Zoning Board. Said resolution would be forwarded to the Finance and Personnel Committee and ultimately to the County Board of Supervisors for adoption. This issue is on the Finance and Personnel Board agenda for next Monday and it's on the County Board agenda for Tuesday. Given that the City of Red Wing has indicated that failure to adopt a resolution within 60 days may result in their proceeding without the participation of the invited entity, a recommendation that the resolution be adopted by the County Board on the first reading may be warranted.

David Esterby, Hartland Town Chairman, stated they are one of two other townships, Isabelle and Trenton, none of the airport zoning is in Hartland but if they expand it would reach up. We will have two representatives on that board. If they expanded, Thomas & Betts would have to move where they test their poles, homes would have to be moved, Bill Schoeder's facility and the cabinet shop would have to go. It's going to get very expensive. Maybe it won't happen when they find out how many dollars it's going to take. The letter from the City of Red Wings sounded threatening to him, if you don't respond in 60 days you will have no representation. Chairperson Barkla asked Andy to explain what attempts are being made to limit what the Townships or the County can do to appoint people to this committee. Pichotta stated in the correspondence from the City of Red Wing stated that none of the representatives appointed to the joint Airport Board could be actual elected officials. Based on my review of Minnesota and Wisconsin law, that appears to be an arbitrary requirement that they have come up with. Pichotta stated that he had contacted Mr. Moskwa with the City of Red Wing and asked under what authority they were limiting membership. No response to that question has yet been received. Wendy Schommer, Town of Trenton Planning Commission, asked why they are going ahead with a zoning board when they haven't even gotten the rezone yet. Pichotta stated Minnesota and Wisconsin Statutes do not mesh very well. There is a portion of Minnesota Statutes that suggests that if an airport facility is in another state, it should be governed as if it is in Minnesota which is clearly contrary to what our statutes say. They believe eventually they are going to grow to 7000 feet. They want to deal with the zoning issue once and for all. What we have been told is that the zoning may be a requirement for funding in the future. Ms. Schommer stated it's her understanding that the zoning board is just an advisory board. Pichotta stated he would agree that is probably the case. They believe there are minimum standards established in Minnesota Statutes and this board would determine what standards in addition to those minimum standards will be added on to the zoning ordinance. Ms. Schommer stated they can't do a comprehensive plan, it's a zoning board? Pichotta stated for all WI Municipalities all land use decisions need to be consistent with their comprehensive plan effective January 1, 2010. It's a different zoning ordinance done in conjunction with a comprehensive plan as authorized under 59.69 which is the power granted to Counties and Cities to regulate uses which is different than a public health and safety ordinance much like a nuisance ordinance. They would put that in place under a different mechanism so that consistency with a comprehensive plan wouldn't be required. Ms. Schommer asked if the board here has been informed of how this is going to fall with the three mile zone. Pichotta stated that they are aware. He suggested that it may take a change in

Minnesota Statutes. Chairperson Barkla stated that several members have taken a long look at what the impactsto Pierce County would be. MsSchommer asked if this is granted, anything in that three mile area would go through the airport zoning board? Pichotta stated basically they would be an overlay district that they would administer. We would still administer the underlying zoning and not all issues would come before this board. We had some compliance issues with some trees they were supposed to plant and it took some effort to get them to comply with conditions that were in place but they have complied. The letter stating our concerns went out today and it will be interesting to see what their response is. If they try to push forward to create the Joint Zoning Board it may be we would present a legal challenge. Such action would likely start with this committee.

Sanden moved to direct staff to draft a resolution authorizing Pierce County's participation in the Joint Airport Zoning Board and forward a recommendation to the Finance and Personnel Committee and to the County Board of Supervisors for adoption on the first reading, due to the fact the City of Red Wing has indicated that failure to adopt a resolution within 60 days may result in their proceeding without the participation of the invited entity/Rohl seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests.Pichotta statedthere are no travel/training requests at this time.

Departmental Update and Future Agenda Items

A conditional use permit for a natural gas meter station in the Town of Salem
Amendments to the Floodplain Maps

Motion to adjourn at 08:26pm by Rohl/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 20, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 3 rd & 17 th , September 7 th & 21 st , all in 2011.	Chair
3	Approve minutes of the July 6, 2011 Land Management Committee meeting.	Chair
4	Discuss take action on a status report and potential modification of a conditional use permit for a nonmetallic mining operation for County Materials, agent for BS Construction and Steve Schoeder Properties on parcels located in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Roy
5	Discuss take action on status report and potential modification of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Kleinhans
6	Discuss take action on request by City of Red Wing to join in creation of a Joint Airport Zoning Board	Pichotta
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items and departmental update.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(7/08/11)

PIERCE COUNTY WISCONSIN

MINUTES - Pierce County Land Management Committee Meeting, July 6, 2011

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung

Absent: Paul Barkla

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 20th, August 3rd & 17th, all in 2011.

Approve Minutes: **Holst moved to approve the June 15, 2011 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider amending the Pierce County Zoning Ordinance to include proposed comprehensive zoning map changes as submitted by the Town of Salem, Pierce County, State of Wisconsin. Said map changes include amending the town zoning map to include Primary Agriculture. A map is available for viewing at the Pierce County Department of Land Management Office and at the Pierce County Herald Office. Chairperson Fetzer invited Mike Graham forward: Mr. Graham, Town of Salem Planning Commission Chairperson, stated they have been working on this for the past 8 to 10 years on comprehensive changes to their zoning; working closely with Land Management and Andy Pichotta particularly. DATCP got involved and slowed them down. They are finally ready to go forward with a comprehensive rezone of the town based on criteria they predetermined; primarily steep slopes where ag land wasn't and couldn't be used as such. They feel their comprehensive rezone will be more consistent with the actual land use in their comprehensive plan. Holst stated this has been going on for a long time.

Staff Report – Andy Pichotta: This is a public hearing to consider proposed comprehensive revision to the Town of Salem zoning map. Land Management staff has been working with the Town of Salem since approximately 2002. In 2005, a public hearing to consider proposed changes was scheduled but was ultimately canceled when DATCP representatives raised last minute concerns about the percentage of land that was to be removed from Exclusive Agriculture. DATCP had, prior to that point, been involved in multiple discussions with staff and Town of Salem representatives in an attempt to identify a strategy that provided the flexibility that the town desired as well as meet DATCP standards and concerns. DATCP, in 2010, notified the Department of Land Management that the certification of the portion of the Pierce County Code relating to Exclusive Agriculture zoning had expired two years prior. DATCP representatives who had been involved in the Towns efforts noted that this afforded the Town an opportunity to move away from Exclusive Agriculture zoning, and that their approval of any such changes was no longer required. A substantial portion of the Town of Salem is currently zoned Exclusive Agriculture despite being largely wooded and, in many cases, never used for agricultural production. Due to this fact, there has long been a desire by the Town Board to institute a more flexible zoning scheme based on the actual characteristics of the land. The proposed zoning scheme primarily utilizes the Primary Agriculture (2 density points per 40) and General Rural

(4 density points per 40) zoning districts. A limited amount of Industrial Zoned property is also present in the town and no additional Industrial zoning is proposed. The Town, 5 or 6 years ago, developed specific criteria (based on cropland, steep slopes and parcel size) with which to determine which land should qualify for conversion to General Rural. Several town meetings were held at which individuals owning land which qualified for conversion to General Rural (GR) were invited and made aware of their options. Land not eligible for conversion to GR is proposed to default to Primary Agriculture (PA).

240-15 The purpose and Intent of Zoning Districts:

Primary Agriculture (PA) This district is established to maintain, preserve and enhance prime agricultural lands historically utilized for crop production but which are not included within the Exclusive Agriculture District. This district is also intended to provide farmland owners with additional management options by allowing limited residential development but with residential density limits set so as to maintain the rural characteristics of the district.

General Rural (GR) This district is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land area and/or are compatible with surrounding rural land.

Pierce County adopted a “Smart Growth” compliant comprehensive plan in 2009. Therefore, effective January 1, 2010 all land use decisions made by Pierce County must be consistent with that adopted plan. The Pierce County Comprehensive Plan states that:

- **The county will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan.** In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone.

The Town of Salem also adopted a “Smart Growth” compliant comprehensive plan, with which all of their land use decisions must be consistent. Their Land Use Element (attached in its entirety for your information) includes the following goal statement:

- Goal:** Transition from Exclusive Agriculture based zoning to Primary Agriculture based zoning.
- Objective:** Establish a zoning scheme that ensures the continued viability of agriculture within the town while recognizing landowners need for flexibility in the management of their land holdings.
- Policy:** Pursue the rezoning of land zoned Exclusive Agriculture to Primary Agriculture and General Rural consistent with the cropland and steep slope criteria previously developed by the Town.

The Town, in their comprehensive plan, also states its intent to develop and adopt a Town Subdivision Ordinance that will minimize the fragmentation of agricultural land and ensure that their rural character is maintained. Said ordinance will likely restrict residential density on a 40 acre basis and limit lot creation to 4 lots every 5 years.

Staff Recommendation: Given that the comprehensive zoning map revision proposed by the Town of Salem is consistent with their adopted Comprehensive Plan; staff recommends the Land Management Committee support the proposed comprehensive map revisions and recommend adoption by the Pierce County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst stated he believes Mr. Graham and his cohorts have worked strenuously for a long time. They have taken a great deal of time and thought, put a lot of effort into coming up with a plan that was a viable alternative to what they had and would meet the needs and desires of the residents of their Township as well as all entities involved. **Holst moved to approve the proposed comprehensive**

map revisions for the Town of Salem and recommend adoption by the Pierce County Board of Supervisors/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for a Farm & Home Based Business, Construction Design Mgmt, in the General Rural Flexible 8 District by Kevin G. Peterson, owner on property located in Lot 5, in the E ½ of the SE ¼ and the NE ¼ of the SE ¼, in Section 20, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Mr. Peterson forward:

Mr. Peterson stated he is here to come into compliance. He does internet sales of erosion control products, sells some equipment and has storage in the shed (the old Tegeler Cattle Auction Barn). They are not expanding, just bringing the business into compliance. We have a sign on the outside. They make and distribute erosion control socks, all generally inside the building.

Staff Report – Emily Lund: This request is for a conditional use permit for a farm & home based business. This property is Lot 5 of Mesa Ridge, Section 20 in the Town of Clifton and is zoned General Rural Flexible 8. The lot size is 6.782 acres. The Clifton Town Board recommended approval on 6-1-2010. The Town did not reference its comprehensive plan; therefore it is assumed that their plan is silent regarding this request. Pierce County Zoning Code Section 240-36(E) allows farm and home based businesses as accessory to single family residential uses subject to the conditions listed in the staff report. The applicant has already established his business on the site and currently has no employees. The business is named Construction Design Management (CDM). There is an existing Quonset storage shed that is 40 ft by 120 ft with an addition that is 16 ft by 90 ft. Half the shed is used for business activities (storing equipment and erosion control products) and the other half is used for general storage. The applicant makes erosion control logs that are used for construction site stabilization. He utilizes special bagging equipment to fill bags with wood and corn stalks. The wood used in the bags is procured from John Rohl, who was granted a CUP for a Farm & Home Business/wood processing plant in May 2005. Equipment utilized for this business includes: trucks, trailers, skid steers and erosion control equipment. All of the equipment will be stored in the shed except that trailers will be parked outside. Pierce County Code Ch. 240-54(A) Parking Requirements – requires two off-street spaces for contractor establishments. There is one service door and the site has more than two parking spots currently available. Hours of operation are 8am to 5pm, Monday thru Friday, closed on Saturday and Sunday. The applicant currently has two wall signs present on the property (photo attached). After review, both signs were determined to be compliant.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not approval of this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
3. No more than 8 persons not residing on the site shall be employed in the business.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise. Renewal shall be referred to the Land Management Committee if complaints or compliance issues arise.
6. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Rohl, asked if they had any intention of expanding? Mr. Peterson stated no at this time with the economy and construction the way it is. He doesn't see it coming back for a period of time. **Rohl moved to approve the request for a conditional use permit for a farm and home based business, Construction Design Mgmt, for Kevin G. Peterson with conditions #1 - #6, due to the fact this**

request is not contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Holst seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for an accessory residence in the General Rural District for Chris & Linda Tyler, owners on property located in the NE ¼ of the SE ¼ of Section 8, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Mr. Tyler forward: Mr. Tyler explained the accessory residence will be a 16 ft x 16 ft addition to an existing building; a bedroom and a bathroom. It will not be seen from the road, at least in the summer and they will have the same number of residents that they have now as when the original sewer was put in.

Staff Report – Emily Lund: The property is located in Section 8, Town of Trimbelle and is zoned General Rural. The address is N5865 Cty Rd O. The Trimbelle Town Board recommended approval of this request on 6-14-2011. The Town Board submitted a letter to the Land Management Committee (attached to staff report) in support of this request. The Board Chair indicated that the Town’s plan is silent on this request. The applicant owns 120 acres, but the proposed use will be on the 40 acre parcel that has an existing residence, detached garage, barn, four storage buildings and a cottage. The proposed accessory residence will be established in the existing cottage. The issuance of this CUP will eliminate the need for Land Use Permit for said expansion. The applicants would like to have a separate Uniform Address Number (UAN) for the accessory residence. The proposed addition to the existing cottage would include a bathroom and will require a connection to the existing septic system. The applicants have hired Charlie Webster, Master Plumber, to obtain a Pierce County Sanitary Permit to complete this task. The applicants recorded a “Per Capita Flow Statement” on their deed because the same number of people will be residing on the property as is allowable for the size of the existing septic system. Also recorded is an “Affidavit regarding Common Private Sewage System” on their deed that notifies future property owners that the septic system is not only connected to the house but also to another building on the property. Pierce County Code (PCC) Ch 240-40(A) allows accessory residences, which are accessory to single family homes in the General Rural District with the issuance of a conditional use permit. PCC Ch 240-88 defines Accessory Residence, the definition is listed in the staff report. No renewal of this request will be necessary. Pierce County Code Ch 240-76(G) states that “all conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use.”

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicant shall obtain a Pierce County Sanitary permit in order to connect the existing septic system to the cottage.
2. The applicants shall work with the Town of Trimbelle’s building inspector to determine whether a Town building permit is needed for this remodel and addition and to have the building inspected to ensure that it meets the Uniform Dwelling Code.
3. A Uniform Address Number shall be acquired for the accessory residence.
4. Construction of the addition to the cottage shall be completed within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the conditional use permit for an accessory residence for Chris & Linda Tyler with conditions #1 - #4, due to the fact this request is not contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.

Discuss take action on a request for concept plan approval for Diamond Ridge Addition for William F. Holst III, owner by Brad Bohlen, agent on the parcel located in the NE ¼ of the NW ¼ and the SE ¼ of the NW ¼ and the SW ¼ of the NE ¼, all in Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Mr. Bohlen and Ms Beeler

forward: Mr. Bohlen, representing Bill Holst and Nancy Beeler, stated the concept plan was approved in 2005 but because of a historic site it was placed on hold. After the historic evaluation was done and nothing was found on the site, time lapsed so we need to go back through the process to get this done.

Jeff Holst recused himself from discussion and voting because of possible conflict of interest.

Staff Report – Emily Lund: This is a request for Diamond Ridge Addition concept plan approval. A concept plan for Diamond Ridge Addition was originally approved by the LMC on 10-5-2005. Subsequent to that approval, the WI DNR reviewed the applicants Notice of Intent (NOI) Permit application. Their records indicated a number of archaeological sites lie within the footprint of the project area and they requested that the applicant complete an archaeological study of the site prior to site disturbance permit issuance. For two years, no progress on the project was evident. In April 2008, a road and other improvements were found to have been constructed on the property. This was determined to be a violation of the WI DNR rules regarding site disturbance. On December 18, 2008, an enforcement conference took place among the owners, the WI DNR and the County. In 2011, the WI DNR and owners settled out of court with stipulations and orders that the project be carried through to fruition. Because condition #3 of the original concept plan approval was not followed; concept approval was revoked. Condition #3 stipulated that; “ Applicant shall secure preliminary plat approval prior to beginning construction of roads or installation of erosion control and stormwater measures.” Two archaeological studies have been completed on the site and no Native American artifacts, human remains or features were found. The applicant is now requesting concept plan approval for a 79.62 acre, 28-lot subdivision in the Town of Diamond Bluff. The property is located in Section 19, Town of Diamond Bluff. Surrounding land uses include a cemetery, a residential land division and agriculture. This land is not in the Farmland Preservation program. Zoning is Agriculture Residential. Density calculation shows $(79.62ac) \times (1 \text{ d.u./1 ac}) = 79.62 \cong 79$ density units. However, only 28 lots will be created. The Town of Diamond Bluff approved the concept plan on 9/15/2005 and 6/9/2011. The applicant deeded an adjoining property owner in Marissa’s Addition Outlot G. The land within Outlots A-D contain floodplain. The cul-de-sac near Lots 7-9 will not be extended in the future because the Diamond Bluff Cemetery borders this property. A Conditional Use Permit (CUP) for this site was approved on 4/19/2006 with conditions that allowed for the creation of two storm water retention ponds within 300 feet of navigable waters. That work was not completed and the CUP has since expired.

Staff Recommendation: Staff recommends the Land Management Committee approve this concept plan with the following conditions:

1. Applicant shall include private road numbers consistent with the Pierce County Uniform Numbering System on the Preliminary Plat.
2. Applicant shall secure a conditional use permit for filling and grading in the shoreland district prior to preliminary plat approval.
3. Applicant shall secure preliminary plat approval prior to beginning construction of any additional roads or installation of erosion control and stormwater measures.
4. Applicant shall obtain all necessary sign permits.

Mr. Bohlen stated there are 28 lots, they eliminated A – D but they are considering Outlots E & F. He just wants to make it clear that there are more than 28 lots. Lund stated the plan she has shows all the outlots. Mr. Bohlen stated he just wants to verify that the road is an outlot and included. Lund, The whole area is included, just 28 buildable lots. **Rohl moved to approve the concept plan for Diamond Ridge Addition for William F. Holst III with conditions #1 - #4/Sanden seconded. All in favor. Passed with Holst not voting.**

Discuss take action on a request for renewal of a conditional use permit to complete the road construction project in the floodplain to Lock & Dam #3 for Park Construction Co, agent for Thomas & Pauline Jurgensen Trust, owners on property located in the SW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Marc Allen forward: Mr. Allen, here on behalf of Park Construction, Coastal Environmental and the Corp of Engineers with a request to extend our conditional use permit for the project known as Lock & Dam #3, upper embankments. The project is approximately 85% complete and we have about five to six weeks left to complete the project. All the sheet pile walls and wiers are all installed. We have to tune them up a little bit. We have to finish armoring the embankment with rip rapping. They need to complete the road and build a box cover.

Staff Report – Jim Kleinhans: Marc was here to obtain a conditional use permit in July last year. No one could foresee having this amount of high water. They were running in conjunction with another project running through Town of Diamond Bluff. We did not have any complaints. A conditional use permit was approved with six conditions listed in the staff report. Sand fill was placed over the protected archeological features in the road in 2010. Staff verified the erosion control elements were installed on the site in 2010. Silt fence needs to be maintained. There is a tree down over the lane. You probably haven't been down there. The water is still high right to the base of the slope. Jim recommends the committee approve an extension for about six months. He asked Mr. Allen how long the Corp gave them for completion. Mr. Allen stated until January 2012. Jim would like to emphasize that the erosion control fencing needs to be maintained consistent with condition #5 and that we approve it for another six months. **Holst moved to approve the conditional use permit extension for 12 months with original conditions #1 - #6, adding condition #7 to read, Erosion control fencing shall be inspected and maintained as soon as practical/Rohl seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Request for a rule exception request in the Town of Diamond Bluff

Status report and potential modification of a conditional use permit for County Materials in the Town of Rock Elm

Conditional use permit renewal and compliance issues for Ellsworth Baseball Association

Red Wing Regional Airport is forming a joint zoning committee, it will likely fall on this committee, we may want to appoint a couple members

Motion to adjourn at 07:40pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 6, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 20 th , August 3 rd & 17 th , all in 2011.	Chair
3	Approve minutes of the June 15, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider amending the Pierce County Zoning Ordinance to include proposed comprehensive zoning map changes as submitted by the Town of Salem, Pierce County, State of Wisconsin. Said map changes include amending the town zoning map to include Primary Agriculture. A map is available for viewing at the Pierce County Department of Land Management Office and at the Pierce County Herald Office.	Pichotta
5	Public hearing to consider a request for a conditional use permit for Farm & Home Based Business, Construction Design Mgmt, in the General Rural Flexible 8 District by Kevin G. Peterson, owner on property located in Lot 5, in the E ½ of the SE ¼ and the NE ¼ of the SE ¼, in Section 20, T27N, R19W, Town of Clifton, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for an accessory residence in the General Rural District for Chris & Linda Tyler, owners on property located in the NE ¼ of the SE ¼ of Section 8, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
7	Discuss take action on request for concept plan approval for Diamond Ridge Addition for William F. Holst III, owner by Brad Bohlen, agent on the parcel located in the NE ¼ of the NW ¼ and the SE ¼ of the NW ¼ and the SW ¼ of the NE ¼, all in Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.	Lund
8	Discuss take action on a request for renewal of a conditional use permit to complete the road construction project in the floodplain to Lock & Dam #3 for Park Construction Co, agent for Thomas & Pauline Jurgensen Trust, owners on property located in the SW ¼ of the NW ¼ of Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.	Kleinhans
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items and departmental update.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, June 15, 2011

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Jim Kleinhans and Shari Hartung

Absent: Paul Barkla

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 6th & 20th, August 3rd & 17th, all in 2011.

Approve Minutes: **Holst moved to approve the June 1, 2011 LMC minutes/Rohl seconded. All in favor. Passed with Sanden abstaining from voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for a Farm and Home Based Business for a fishing tackle business (Fin-Tech Tackle Co) in the General Rural Flexible District by Mikel R. Huppert, agent for Douglas Hartle, owner on property located in the SW ¼ of the NE ¼ of Section 1, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mikel Huppert forward: Mr. Huppert stated he is here to get a conditional use permit. He went to the Town Planning Board and they approved this. Holst asked what kind of lures they make. Mr. Huppert stated jigs, spoons, rigs and stuff but the business is just distribution and shipping, they don't manufacture anything there.

Staff Report – Jim Kleinhans: This parcel was created in 2004 before the owner purchased the property in 2008. The parcel is 5.6 acres and zoned General Rural Flexible. Staff was made aware of this use of the building so we've been working with Mr. Hartle and Mr. Huppert to try to correct the zoning so here we are for a Farm & Home Based Business application. They purchased a mobile home to install on the property to qualify for this permit. The facility is a 50 ft x 100 ft building that will comply with the Farm and Home Based Business requirement. Mr. Hartle lives in Canada so it was agreed that the home wouldn't be used for anybody else or for rental. Mr. Hartle will use it when he is here traveling from Canada. The building is used as a warehouse and office. Fishing tackle is packaged and shipped by employees from this location. Several semi trucks deliver materials to the facility and staff disperses the materials. Additional parking spaces are available along the driveway and in front of the mobile home. The property is surrounded by agriculture operations and several residences. Approximately four acres are rented for farming. One complaint was received in 2008 so we've been working on coming to a resolution ever since. There are no advertising signs on the business. Typical hours of operation are 8:00am to 5:00pm, occasionally earlier during the winter. The Town of Trenton recommended approval of this conditional use permit request without any specific concerns. The Town did not reference its Comprehensive Plan, so it is assumed that their plan is silent regarding this request. Jim had some discussion with Dick Bunce and they feel if the Farm & Home Based Business is approved it should be the principle residence of the land owner but our ordinance doesn't state that so we follow the County ordinance but they suggested we look into that in the future. **Staff**

Recommendation: Staff recommends the Land Management Committee determine whether or not this

request is contrary to the public interest or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home business with the following conditions:

1. The residence shall be occupied by the business owner.
2. Any proposed advertising signs shall comply with the zoning code standards.
3. This business permit shall be renewed again in 2 years. Renewal may be done administratively unless compliance issues exist.
4. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
5. Solid waste shall be disposed of in compliance with Chapter 201 of the Pierce County Code.

Jim stated he would like to add an additional condition:

6. The building be approved by Dept of Commerce and inspected for commercial building code standards per Comm 61.20 of WI Statutes Chapter 101.2 and approval required within four months.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Holst asked how much of the building is occupied by people. Mr. Huppert stated they have one employee that is in an office 10 ft x 20 ft. and the rest is all pallet racking and inventory. Holst stated to build this to code would put these people at a hardship. It was built as an ag structure. They have been operating. If the employee is in an office it's shored up and has stud walls. Mr. Huppert stated it was a post and frame building. Holst stated he doesn't want to make this into more than it needs to be. Rohl stated we wouldn't require that the owner reside there. Holst stated we can require whatever we want, that's just his opinion. Mr. Huppert stated that's why we're out there. If we ever outgrow that area we would probably be able to afford to go to commercial. Holst stated but you can't afford it now. Mr. Huppert stated no, the mobile home created a lot of excess expense while we're trying to build a business and keep an employee. Holst stated he understands Jim's concern also but he doesn't want to put someone out of business. Mr. Huppert stated they spend a lot of money to keep it looking nice and keep it mowed.

Holst moved to approve the conditional use permit for a Farm and Home Based Business for a fishing tackle business (Fin-Tech Tackle Co) in the General Rural Flexible District by Mikel R. Huppert, agent for Douglas Hartle, owner, with conditions #1 - #5 due to the fact this request is not contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District by Robert Buroker, agent for Amis Farms LLC, owner on property located in Lots 1, 2 15 & 16 in Block 3 Diamond Bluff Plat, in Section 13, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Mike Dorricott forward: Mr. Dorricott, local carpenter, stated Mr. Buroker couldn't be here tonight and asked him to appear. The house needs improvements. He has already done a lot of work for Bob. At the Town meeting, there was an issue with the vision clearance triangle. The conclusion was that the bottom deck would be 8 ft x 20 ft with no bottom railing. The upstairs deck will meet code and the retaining wall will stay, everything has to follow code.

Staff Report – Jim Kleinhans: This property was recently purchased by Amis Farms, they are from the central part of the state. They would like to put a deck out front to enjoy the river. The building is entirely in the vision clearance triangle and within both town road setbacks. Included in the staff report is the Pierce County Code for additions to nonconforming structures and included is a map of the encroachments and the proposed deck footprint. The deck will be 20 ft x 8ft. It would be a two story deck with a railing on top. The local building inspector would ensure it meets code. The sanitary system is on the backside of the building so it's not in the encroachment. There is a retaining wall around the outside of this building that is in poor repair. That may be from the big cottonwood trees out in front. Their roots may have caused pressure on them. The retaining wall does surround what

they are proposing to do. They want to make some improvements on the front of the building, maybe a picture window. The Town of Diamond Bluff did consider this request at their May meeting and did not reference their Comp Plan so it is assumed their plan is silent regarding this request. So their recommendation was advisory but they did recommend to approve.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest, or detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following condition:

1. The applicant or agent shall work with the local building inspector to ensure compliance with uniform dwelling code requirements (UCD).

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Rohl, if any additional construction would be done that would have to be approved? Mr. Dorricott stated in the footprint. There was an old stone type footing and it was either torn down or fell down. Kleinhans stated we are coming out two feet beyond that old footing. In the Town of Diamond Bluff the roads are 70 feet wide as platted, which isn't typical. But we are coming out into that platted area a little bit but the Committee decides if this meets the intent of our code for safety. Holst stated due to the fact that the retaining wall is there, that keeps them from bouncing off too hard. Kleinhans stated any expansion would require committee approval because it's so close to the road. Holst stated any expansion but if he stays within the existing footprint he can remodel. **Holst moved to approve the request for a conditional use permit for expansion of a nonconforming structure in the Rural Residential 20 District by Robert Buroker, agent for Amis Farms LLC, owner with condition #1 due to the fact this request is not contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Kleinhans stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Conditional use permit request for an accessory residence in the Town of Trimbelle

Comprehensive rezone for the Town of Salem, entire zoning map

Conditional use permit request for a Farm & Home Based Business in the Town of Clifton

Concept Plat approval for Bill Holst in Diamond Ridge Addition in the Town of Diamond Bluff

Park Construction who started a road project at Lock & Dam #3 has been held up by the high water.

They are coming back for an extension.

Last Friday we got the final maps for the Floodplain, we're trying to get accurate maps and trying to work with FEMA. They have to be adopted by November 12th. Holst asked what happens if we don't adopt them. Kleinhans stated then the people trying to get flood insurance won't be eligible. It will be a bad deal for the community if we don't adopt them.

Motion to adjourn at 07:23pm by Rohl/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, June 1, 2011

Present: Joe Fetzer, Paul Barkla, Jeff Holst and Don Rohl

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Eric Sanden

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 15th, July 6th & 20th, all in 2011.

Approve Minutes: **Barkla moved to approve the May 18, 2011 LMC minutes/Holst seconded. All in favor. Passed.**

Public hearing to consider a request for a rezone from Primary Agriculture to Commercial District by Chippewa Valley Energy, Barry Hines, agent for Dale & Julie Hines and Dean & Rebecca Hines, owners on property located in the NE ¼ of the NE ¼ of Section 19, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Mr. Hines forward: Mr. Hines stated they would like to move into the area for business with propane tanks.

Staff Report – Jim Kleinhans: Barry Hines contacted us about putting a propane facility in the County. He has contacted Dale Hines about purchasing some property across from the El Paso Town Hall which is zoned Primary Agriculture. He approached the Town of El Paso and they indicated they would like to see that zoned Commercial. He is also going to pursue a conditional use permit but the big hurdle is the rezone. They are looking at purchasing approximately 2.9 acres. It is pretty much all in agricultural production right now. The Town of El Paso has a Comprehensive Plan and they reference that plan. The request is consistent with what the plan states for development along Hwy 72. It is a high access corridor in an area they have identified as suitable for commercial development. The Town Board did recommend approval of this request. Mr. Hines approached the Dept of Transportation for changing the agricultural access to commercial access. At some point there would be site plan review by this committee. The commercial district has a one acre minimum and this would exceed that. The soils shown on the site map show that not all the soils are prime for agriculture so it's probably a good candidate from Primary Agriculture to Commercial. There are a couple residences in the area along with the Town Hall. We will probably have to address these issues during the conditional use permit. A rezone to commercial would allow for retail and services based on the purpose and intent of the zoning code.

Staff Recommendation: Given that this rezone request is consistent with the Town of El Paso's Comprehensive Plan; staff recommends the Land Management Committee forward a recommendation to the Pierce County Board of Supervisors in support of this rezone from Primary Agriculture to Commercial.

Chairperson Fetzer opened the hearing to the public. Richard Heschke, Town of El Paso, lives right across from the site, is concerned about his family's safety and isn't in favor of this. He is concerned his property value will drop also. Scott Jones, Town of El Paso, lives three-quarter's of a

mile away, he is also concerned about his property value and safety. He asked what kind of back-up plan is in place if something goes wrong. **Public hearing closed.**

Holst asked the applicant if their safety and contingency plans follow State and Federal regulations and also asked what the average distance between a residential structure and these types of structures is? Joe Alf, from Chippewa Valley Energy, stated that the basic clearance of a 30,000 gallon LP tank and the next nearest structure on the same property is a minimum of 50 feet per the NFPA, National Fire Protection Association. The State of Wisconsin, Dept of Commerce will be inspecting the site. A qualified contractor will be installing it. Everything will be to the National Fire Protection Code. There are safety features built-in for excessive flow so if a pipe does break there are automatic shut-off's. We have a listing of safety procedures for the local fire department, in the event there is an emergency, until we arrive on scene.

Barkla moved to forward a recommendation to the Pierce County Board of Supervisors in support of this rezone from Primary Agriculture to Commercial for Dale & Julie Hines and Dean & Rebecca Hines, owners/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet in the Primary Agriculture District by Chippewa Valley Energy, Barry Hines, agent for Dale & Julie Hines and Dean & Rebecca Hines, owners on property located in the NE ¼ of the NE ¼ of Section 19, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Mr. Hines forward: Mr. Hines stated that this relates to the same request for LP storage.

Staff Report – Jim Kleinhans: Without the rezone, this won't happen but Barry requested that we go through both processes at one time. There are proposed to be two 30,000 gallon tanks and also smaller tanks for residential and commercial use. The Town recommendation included requiring additional screening and also that the site is maintained and mowed. Adjacent lands include agriculture and several residences and the Town shop. The entire facility will be fenced for security. There are several propane facilities in the County right now, Pierce-Pepin has one and there is one in the Town of Martell approximately 7 miles northwest. The facility would supply 24 hour service 365 days per year for residential, agriculture and commercial users. So the location along the State Hwy is desirable because there wouldn't be load restrictions for trucks coming in to service the facility. The Dept of Transportation responded to this request a little different than they did for the proposed rezone. They responded with a requirement that sufficient internal traffic circulation must be established so that no vehicle has to back into the facility from Hwy 72. Right now there is an existing agriculture access. That access will have to be improved and upgraded to get to a commercial access. Eventually the Land Management Committee will review a site plan for this development if it gets to be zoned commercial. We will need more information than what is here, specifically regarding vegetative screening. There is a tree line along the west property right now and I think they would also want to see something along the north property line at a minimum. They will need to comply with National Fire Protection Association Code NFPA 58 Chapter 6 and WI Dept of Commerce Administrative Code COMM 10 for storage of flammable substances. Barry said that LP Gas Equipment will work with the Dept of Commerce to get all necessary approvals to establish the facility.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. A site development plan shall be submitted and reviewed by the LMC to verify compliance with the Town of El Paso concerns, zoning regulations and Department of Commerce siting standards.
2. Any proposed advertising signs must comply with Department of Transportation and County zoning regulations.
3. Approval of a commercial driveway access shall be obtained from Department of Transportation.

4. Any proposed onsite sanitary facilities shall comply with county sanitary regulations.
5. Grading for site development shall comply with county sanitary regulations.
6. The use shall be established within 12 months of approval.
7. The conditional use permit shall be renewed in 2 years and may be completed administratively if no complaints or compliance issues are reported.
8. A Uniform Address Number (UAN) shall be obtained from the Land Management Department.
9. The local fire department shall be provided information specific to the facility to ensure appropriate emergency response.
10. No more than two 30,000 gallon fuel storage tanks and no more than 40 small LP tanks shall be stored on this facility.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Barkla asked about screening requirements, what is being suggested? Kleinhans stated that the Town recommends that some additional screening be established between the facility and the residential structures. We'll ask the company to put together a vegetative plan. The map shows they are proposing a 6" high chain link fence, I think we want to see a 6' high chain link fence. The fenced in compound is smaller than the actual lot so we want to see exactly where that's going to be located on that 2.9 acre parcel. That will help determine the view from adjacent properties. That will come with site plan review but first the rezone will need to go through at the County Board level. Holst stated the things he is interested in will come during the site plan review; the screening and the placement of the 30,000 gallon tanks so they are most favorable to the area. **Barkla moved that the committee determined this request is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. Holst also moved to approve the conditional use permit for a Utility Facility >1000 square feet for Chippewa Valley Energy, Barry Hines, agent for Dale & Julie Hines and Dean & Rebecca Hines with conditions #1 - #11, condition #11 stating that it is contingent on the rezone being approved by the County Board of Supervisors/Barkla seconded. All in favor. Passed.**

Discuss take action on review and potential modification of a conditional use permit for a Farm and Home Based Business – Valley Vineyard Ltd, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Mr.

Jungwirth forward: Mr. Jungwirth stated he was before the committee on May 4th and there was an item that was not clear on the original conditions of putting in trees or screening. He had 13 dots on the property line and they were actually fence posts. He would have been glad to put trees in the 13 dots but that night he stated he wanted to check with his neighbor to see if he has anything better in mind. He has looked into two different kinds of trees, one is a hybrid willow that lives up to 70 years and gets 30 feet tall. He was talking to Mr. Roy and he stated he didn't think it was necessary to screen the vineyard. So he is asking what he is supposed to be screening. Barkla asked Mr. Roy what he is suggesting. Roy stated a lot of the property is the grapes and suggested that there may not be a need to screen the agricultural use from the surrounding properties, maybe just the commercial activities. He stated that is a question for the committee to decide with input from the neighbors. Chairperson Fetzer asked the neighbors for their input. Ben Huppert, neighbor to the northeast, indicated that he had called Digger's Hotline. He also thought the dots represented trees. He presented several pictures with the flags from Digger's Hotline. Chairperson Fetzer asked if he would appreciate seeing trees there and if the willow trees would be alright with him. Mr. Huppert stated yes to having the trees there but absolutely not to the willow trees. He would like to see spruce trees. There are existing spruce trees there and would provide a good screen with no mess. Chairperson Fetzer stated willows are a pretty weak tree. Mr. Jungwirth stated that is what he thought too until he looked into these hybrid willows that are germ free, bug free and no mess. He also noted that on Lot 1 that you see on your plan, he had shown that there would be about 16 or 18 parking places there. After they put in the driveway there is room for 22 parking spaces in Lot 2. So Lot 1 will probably only be used twice a year when they have their two annual events. He is moving six of the Fraser Firs that he does have. Going down the new

driveway there are 14 trees that are 14 – 16 feet tall. He is moving two of those down to the buildings so Mr. Huppert won't even be able to see a parked car. They are also putting three up on the northeast corner of the Lot 1 parking lot to block that view in the future. Those trees get up to 15 - 20 feet wide when they are mature. Chairperson Fetzer asked Brad if he had anything to add. Roy stated that we are looking for clarity on the size, type and location of vegetation needed to adequately screen the property and a timeline for the planting.

Staff Recommendation: Staff recommends the Land Management Committee amend condition #10 to establish the type, size, location of and timeline for planting vegetation adequate to ensure that commercial activities are appropriately screened from neighboring residential uses. An additional condition that stipulates that the applicant's failure to comply with approved conditions and established dates shall result in the immediate suspension of the conditional use permit and that all commercial activities must cease until such time as the permit is reinstated by the LMC should also be considered. Barkla stated he didn't feel it was this committee's responsibility to determine the size and the location of these things. The time would be better served if staff met with Mr. Jungwirth and the interested parties. Holst stated that this is a part of site plan review and that it is our responsibility and would alleviate a situation that has been ongoing for years. Barkla stated he would like to see Mr. Jungwirth before this committee on a regular basis so we don't have to deal with these kinds of issues. Like the issue in Spring Lake Township. Holst stated this isn't as contentious an issue as that, it doesn't effect as many people and can be resolved tonight if we so choose. Chairperson Fetzer stated as he recalls the last meeting when Mr. Jungwirth suggested he would work with the neighbors and coming up with a plan for trees. The neighbors would be happy with spruce trees. Mr. Jungwirth stated that they are not on my property. Chairperson Fetzer said he was just stating what Mr. Jungwirth said. So you are trying to keep your neighbors happy and work with your neighbors. That's an olive branch, that's what I'm suggesting. Work with your neighbors and we can come up with something right now. Mr. Jungwirth stated he talked with Mr. Nesbitt and Mr. Huppert one evening. Mr. Nesbitt said it wouldn't be a good thing to put the trees on his property because it's too low, it's better to put them on Mr. Huppert's property. Mr. Huppert stated he asked Mr. Nesbitt about planting the trees. Mr. Nesbitt stated they can plant them in the lower water way below the driveway and the cable lines. They might succeed and some might get wet feet from having their roots saturated and then they may rot. Mr. Jungwirth asked what we are trying to screen. He has 34 trees planted on the property; most are 8 -10 years old. Mr. Huppert stated he would like the whole thing screened because to him it's a commercial business. Mike LaCasse, next door neighbor to Ben, stated that willows are a messy tree and the business would not be screened 12 months out of the year. Mr. Huppert stated there would be some negatives of trees being planted in the waterway. When they get bigger they may shadow upon his driveway which might be a problem for people coming in and drifting also in the winter. Chairperson Fetzer asked how much room there was along the driveway. Mr. Jungwirth stated about 35 feet. He was planning on planting the trees five feet off the property line. Chairperson Fetzer asked if they were talking about planting where the 13 dots are on the map. Mr. Jungwirth stated yes, he wouldn't put any trees on the bottom four because that would shadow the spruce trees. It would just be the north line. Mr. Huppert suggested they start from the top of the L of his spruce trees and do a staggered row for the best screening all the way to the transformer box and then put an additional 3 or 4 on the bottom of the L on the backside. **Holst moved to add a condition requiring the applicant to provide screening by planting nine trees along the North/South property line and then three trees on the East/West property line, 9 foot tall spruce trees planted within six months/Rohl seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Conditional use permit request for a Farm & Home Based Business in the Town of Trenton

Conditional use permit request for an expansion of nonconforming structure in the Town of Diamond Bluff

Amendments are being made to the County Flood Plain maps; we provided a lot of information trying to ensure a better product. We put together 50 plus areas where we thought the information was incorrect. Basically they didn't accept any information provided to them stating that the information didn't meet their standards. So we are ending up with a product that is possibly worse than what we had to begin with. Kleinhans stated except that we'll have air photos with the FIRM maps. Our letter of final determination is running and the new maps will have to be adopted by November 12th.

Barkla informed the committee that Mr. Pichotta had volunteered to take on two more budget matters; the Mississippi River Regional Planning Commission and the Historical Society budget.

Motion to adjourn at 07:49pm by Barkla/Holst seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 18, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Absent: Joe Fetzer

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 1st & 15th, July 6th & 20th, all in 2011.

Approve Minutes: **Sanden moved to approve the May 4, 2011 LMC minutes/Rohl seconded. All in favor. Passed with Jeff Holst abstaining from voting because of absence at the last meeting.**

Election of Officers: Holst nominated Joe Fetzer for Chairperson. **Rohl moved to close nominations and cast a unanimous vote to elect Joe Fetzer as Chairperson. All in favor. Passed.** Holst nominated Paul Barkla as Vice Chairperson. **Rohl moved to close nominations and cast a unanimous vote to elect Paul Barkla as Vice Chairperson. All in favor. Passed with Barkla abstaining from voting.**

Discuss take action on a status report/update on the Red Wing Regional Airport, by City of Red Wing, owner on property located in Section 1, Town of Trenton and Sections 5 & 6, Town of Isabelle, Pierce County, WI. Rick Moskwa, City of Red Wing Public Works Director, along with Tammie Dougherty, Assistant Airport Manager, Megan Stritchko from the WI Bureau of Aeronautics, Ryan Gaug and Kathy Vesely from the MN Bureau of Aeronautics, Mike Schultz, Council Member for the Airport Board, Jim McCowrath, Harold Henn and former Airport Board Member Tim Hendel are present tonight. Mr. Moskwa stated there will be a presentation from the State people that are here from both Wisconsin and Minnesota. He will explain some of the procedural events that have taken place. The Council has approved the appointment of a zoning board to begin the process of zoning the Red Wing Airport. The Council has also approved a contract with Consultant Short Elliot Hendrickson (SEH) to help us through the process. In 2008, the past Public Works Director came before this group to have this same discussion. We, as a municipality, have held township meetings and have met with all the groups and are now ready to move forward with this. We will try to get the people from the local units of government at a meeting and start the process moving. We look forward to meeting with everyone and encourage all participants to come to the table with a true spirit of cooperation to accomplish a difficult task. Megan Stritchko, WI Bureau of Aeronautics, started with a power point presentation about what the Wisconsin Statutes allow for airports, Extraterritorial Zoning Authority and Land Use Zoning in Wisconsin. The Bureau of Aeronautics strongly encourages airports to work with the surrounding municipalities. The State will fund reimbursement for 80% of cost of the ordinance adoption, up to \$50,000. Lastly, Ms Stritchko explained the Wisconsin-Minnesota Relationship: Wisconsin statutes grant zoning rights to airport owners in adjoining states. Kathy Vesely, MN Office of Aeronautics presented information on the history of aviation, establishing clear

zones or runway protection zones, now regulated by the FAA and establishing complimentary effective zoning laws. Minnesota also has reciprocity; the laws only apply if the states agree. The Joint Airport Zoning Board has a big job; they need to think in terms of what the community needs as well as what the airport needs and focus on airports as an essential part of the larger community of people, businesses and jobs. Zoning should be tied to the municipal comprehensive plan. Red Wing has an existing, around 5000 foot runway and in the future they are planning on a larger runway. We want them to zone for both so they only have to go through the process once. We suggest you have an airport zone influence area disclosure statement on property titles, although this is not a requirement and you may want to revise your variance ordinance to allow for technical input from our office; if there is a question about a use, whether it would have an impact on the aviation environment. The local authorities maintain the decision making authority on those. There are ten steps the Joint Airport Zoning Board will have to go through and the last one is filing with the County Recorder so that every land owner and potential land owners would understand the restrictions on the property as a result of the ordinance. There would be two public hearings on this as well. The airspace is also a component of the zoning ordinance and Megan talked earlier about how Wisconsin has height restrictions already in place. The airspace component of our ordinance is the compliment of that. Pichotta asked to verify that Wisconsin has a height requirement versus a land use ordinance requirement. Ms Stritchko stated that was correct they specifically require public airports have a height ordinance. We strongly recommend and the statutes allow for land use. Pichotta asked whether the model ordinance being discussed is a Minnesota model ordinance. Ms Vesely stated that it is a Minnesota model ordinance because the Red Wing Airport, even though it exists in Wisconsin, is actually part of the Minnesota system because of the sponsorship of the City. Holst asked how many WI airports are in MN, versus MN airports in WI? Ms Vesely stated she believes there are zero WI airports in MN and one MN airport in WI. Holst stated so we are talking about a site specific State Statute? Ms Vesely stated we also have an airport that is International at Pine Creek where half of the runway is in MN and the other half is in Canada. Sanden asked Ms Stritchko about the ETZ model that will be used in this case; is it advisory or does it have various vote requirements, has to be unanimous or a majority vote? Ms Stritchko stated that MN requires a joint zoning board. Ms Vesely stated there are two options in MN but the most affective is to have the sponsor invite everyone to participate in a Joint Airport Zoning Board and if the invitees decline to participate, they may move ahead without that participation. Alternatively, each municipality can create their own zoning ordinance. In this case, I think there are seven jurisdictions that would have to go through the whole process on their own. It's much more affective when there are many jurisdictions affected by the airport safety area to us the Joint Airport Zoning Board model in MN. Ms Stritchko stated WI doesn't specify how it has to look. All the statutes say are that you can go up to three miles and zone that much. Whether a municipality wants to involve the surrounding municipalities or if they want to act autonomously; it's up to the municipality that owns the airport. Sanden asked assuming that one model with one board with this jurisdiction, are decisions made by majority vote, unanimous consensus and is that ruling then enforced or is it advisory. Ms Vesely stated the zoning board would establish it's own rules of operation, there is nothing prescribed by statute that says how they have to count votes, the piece that is prescribed by statute is who has to be invited. How the zoning board comes to their model is on them. An early meeting would be about agreeing on procedure. The ten things on the list are set in statute, how they get to that point is defined by the group and there has to be a person elected as the chair. Holst asked if they could list the municipalities involved. Mr. Moskwa stated on the MN side, it's the City of Red Wing, Goodhue County, Wacouta Township, in WI, Pierce County, Bay City, Hartland, Isabelle and Trenton. There are eight communities with the statutes stating two members from each unit of government. Pichotta asked if the decisions made by the Joint Zoning Board are binding or could the City overrule a decision made by that board? Ms Vesely stated that the Joint Zoning Boards task is limited to protecting the plan of the airport. The question is kind of about can we decide to change the plan of the airport. That's already been signed, sealed, delivered and approved by the FAA so the task is really about protecting that plan. Pichotta stated the model ordinance imposes minimum standards and you can't go below the minimum

standards anyway - so it's going to be the model ordinance plus whatever the joint group agrees to add to it? Ms Vesely stated the statutes allow for the Joint Airport Zoning Board to be more restrictive than the model in cases where it benefits the community. There are two cases when the statutes allow for it to be less restrictive than the model; when there is an established residential neighborhood and there are special exceptions for that in our model language and when the social and economic impact of the zoning is substantially different. We encourage the Joint Zoning Board to work with us early and often so we can check the draft against the standards and let them know where it meets or doesn't meet. The bluff land to the east is an issue, looking at St. Paul, they proposed a model that was less than standard, in the Zone C, the big oval traffic pattern, they made the big oval but when they got to the bluff line the line followed the bluff. They worked very closely with the FAA to establish airspace clearance height at whatever the local authority building height is. It's a mitigation technique that they have accepted in other airports. Pichotta asked if there would be additional studies necessary in order to justify any deviation from the model. Who would pay for that? Ms Vesely stated the FAA is a partner and she didn't think they would be charging you anything for that. Holst asked about the timeframe and expediency. Ms Vesely stated that if you go through all the steps in the MN process and figure out the legal requirements, it takes about 120 – 180 days, depending on whether or not there is an established residential neighborhood involved. It's not uncommon for the Joint Zoning Board to meet for a period of about two years by the time they finish their second public hearing. Carol Graske, neighbor to the airport, asked about the three mile radius and by-passing the bluff area, would it be over Red Wing or the river. Ms Vesely stated the three mile radius is a WI Statutes and they can go up to that. Ms Stritchko stated, up to three miles from the boundary of the airport. Ms Graske stated so they can circle over the City of Red Wing if the bluff area doesn't meet the height restriction. Ms Vesely stated the ordinance that would be crafted would be about land use controls not pilot operations. The pilots need to circle the runway and generally it's left-hand traffic so the pilot can always see the runway. It's a safety issue. Ms Graske asked about the expansion of the runway, she stated the runway is at 5000 ft now. Mr. Moskwa stated that it's at 5100 ft now. Ms Graske asked what the plan is - that has been approved to expand too? Ms Vesely stated it's planned to be around 7000 ft. The master plan is their idea of where they want to be in the far future. In order to build that plan they would have to have the justification. They would have to have enough landings by an aircraft substantially larger than is based at Red Wing today. In order to qualify for State or Federal funding on the MN side and Federal funding on the WI side, the need for that airport would have to be justified so there is a study they would have to do well ahead of construction to prove that there is enough increase of traffic to warrant that size of an investment in the infrastructure. There is competition with other airports. Tim Hendel asked if they were to expand to the 7000 ft, would there be any consideration for the local residents at that point. Ms Vesely stated there is a picture here and the expansion would be to the west. Some additional property would have to be acquired. Before an airport can even start to expand they have to be justified and prioritized for funding. Then they have to start acquiring the land they need because they have to have a bigger clear zone. If there are homes in the future area, they have to have an environmental document prepared to show what the ramifications would be. They must provide fair market value and residents are entitled to their own appraisal. Mr. Hendel asked about the rest of the residents that won't have property bought out. Would they have any say or being that it's rezoned at that point does it just move forward? Ms Vesely stated that their opportunity for public input would come as part of the environmental documentation phase. Doug Whaley asked on a 7000 ft runway, what size aircraft are you talking about; a CRJ? Ms Vesely stated yes, a CRJ, probably a 20-30 passenger plane. Sue Moldenhauer asked what the people in the three mile zone can do with their houses? Ms Vesely stated that is a limitation in the State of WI. In the MN model, we base everything on the runway length. Zone C would be 10,000 ft from the end of the runway; it's the least restrictive. Ms Moldenhauer stated Thomas & Betts would be in that area. Ms Vesely stated they would be fine. Mr. Moskwa stated at 7000 ft they wouldn't be fine but at the 5000 ft they are fine. Ms Vesely stated we lowered the poles with the last expansion. Pichotta asked is it your position that this is a zoning overlay district or does it replace existing zoning? Ms Vesely stated it would amend existing zoning

but it is a good comparison. It's somewhat like the DNR Shoreland District, it's an airport overlay district. Pichotta so underlying zoning remains in effect also. Ms Vesely stated yes and the most restrictive of the two applies. Chairperson Barkla thanked everyone for the presentations and information.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Rezone request in the Town of El Paso from Primary Agriculture to Commercial
Conditional use permit request for Utility Facility >1000 square feet in the Town of El Paso

Motion to adjourn at 07:57pm by Holst/Rohl seconded. All in favor. Motion carried.

MINUTES - Pierce County Land Management Committee Meeting, May 4, 2011

Present: Paul Barkla, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 18th, June 1st & 15th, all in 2011.

Approve Minutes: **Sanden moved to approve the April 20, 2011 LMC minutes/Fetzer seconded. All in favor. Passed with Paul Barkla abstaining from voting due to his absence from the last meeting.**

Public hearing to consider a request for a conditional use permit for mining, accessory uses (ready mix plant) in the General Rural Flexible District for William Holst III, owner on property located in the SE ¼ of the NE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Barkla invited Mr. Holst forward: Mr. Holst stated that he was here with Chris Hanke, owner of a ready mix plant, and explained that he wants to establish a ready mix plant operation and has approval from the Town of Trenton. It's a portable plant to set on a concrete foundation. He is 1500 ft from the nearest dwelling. This will be 200 – 300 yards east of the existing wash plant. He feels the area needs another ready mix plant to get some competition going. They already have water there and will bury another water line. They have three-phase power there as well.
Staff Report – Brad Roy: Mr. Holst is requesting to establish a Ready Mix Plant in his gravel pit in the Town of Trenton. The gravel pit is a preexisting nonconforming (grandfathered) mining operation. The entire site is approximately 250 acres with approximately 130 acres used for mining. The remaining land is predominantly used for agriculture. The Ready Mix Plant area will be 2 acres in size and will be placed on a mined portion of the site. Pierce County Code regulates Mining Accessory Uses in § 24-37B. Asphalt plants and accessory uses to nonmetallic mining.

- (1) Such uses shall be located a minimum distance of 1,000 feet from dwellings and 100 feet from all property lines.
- (2) Hot mix asphalt plants shall be licensed for air emissions by WI DNR.
- (3) Reclamation of sites and bonds required.

The area for the plant is currently used for stockpiling mining materials. The closest residence would be approximately 1100 feet from the plant. It's over the 1000 foot minimum. The proposed hours of operation are daylight hours, seven days a week. It should be noted that because of the preexisting nonconforming status of the quarry, the hours of operation are not regulated. A portable office and batch plant (see attached photo) will be placed in the plant area. Sand and gravel stockpiles will be situated near the plant. A loader will be used for the plant along with four concrete trucks. The Ready Mix plant will be near the wash plant for the mining operation. The plant will have 8 employees. A portable toilet will be placed onsite. The site is covered in the existing mining reclamation plan and

does not require a change to the plan. Bonds are required as part of the approved reclamation plan. Staff has determined that it is probably not necessary for an extra set of plans and bond, however the LMC could require them if determined to be necessary. The Town of Trenton recommended approval of this request on April 12, 2011 with no specific concerns identified or conditions suggested. The Town did not reference its Comprehensive Plan; therefore it is assumed that the plan is silent on this request. In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall be advisory and non-binding.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the establishment of this use at this location is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Use shall be conducted consistent with submitted plans.
2. The CUP shall expire in 2 years or if compliance issues arise. Renewal may be completed administratively if no compliance issues arise.

Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Sanden asked Brad if it was because this is covered under a preexisting nonconforming status, we don't set hours of operation for this use. Isn't this an intensification of use? Roy stated it's technically a different use, an accessory use. We have a mining operation with no hour limit on it. So they can operate all day or all night and we wouldn't have anything to say about it. However, the committee could choose to put hours on this operation. Mr. Holst stated that we talked about this at the Planning Commission meeting. They could have set hours but chose not too. It's an advantage for the farmers on the weekends. Sanden asked what is the intent on the hours. Mr. Hanke stated 95% of the time will be Monday through Friday 7:00am to 3:30pm. But occasionally weekends or a late evening when someone needs materials. **Sanden moved to approve the conditional use permit for mining, accessory uses (ready mix plant) in the General Rural Flexible District for William Holst III, due to the fact it is not found to be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #2/Fetzer seconded. All in Favor. Passed.**

Public hearing to consider a request for a conditional use permit for private outdoor recreation (motorcycle hill climbs) in the General Rural Flexible and Commercial Districts for Larry Gerdes, owner by Dean Gerdes, agent on property located in the E ½ of the SW ¼ and the W ½ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Barkla invited Mr. Gerdes forward: Dean Gerdes explained they used to have the hill climbs from 1976 to 1991 but his father got tired of running it. They have now formed a club and want to do it again. The hill is still there and won't be much work to get it going again. Sanden asked what time of the year they are looking at. Mr. Gerdes stated September 4th, a one day event, 9:00am until dusk. Fetzer asked if they were looking on expanding at all. Mr. Gerdes stated that if it goes well, they would like to have one in the spring next year and one in the fall. Fetzer asked what the limit would be. Mr. Gerdes stated two events per year.

Staff Report – Emily Lund: Larry Gerdes, the father, owns 171.5 acres of land and has a business called Valley Springs Elk & Trout Farm. He has raised trout since 1965, elk since 1990, and recently acquired llamas and alpacas. Larry Gerdes applied for a CUP for motorcycle hill climbing events that was first approved 1-13-1977. The CUP was renewed 2-12-1979, 2-9-1981, 3-7-1983, 9-9-1985, 9-8-1987, and 9-20-1989. The attached photos show the applicant's site map and photos from 1986 and 1977. The Department sent correspondence on 12-1-1994 asking if he wanted to renew the CUP. Larry said they were not interested at that time. Now they are again interested in holding an American Motorcyclist Association (AMA) sanctioned motorcycle hill climbs, which was previously held thru 1992. The host will be the Valley Springs Motorcycle Club, an AMA District 16 Chartered Club. The property is located in Section 28, Town of Hartland. The property is zoned General Rural Flexible and

Commercial. Hartland Town Board recommended approval of this request on 4-12-2011. The Town did not reference its Comprehensive Plan; therefore it is assumed that the plan is silent on this request. In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall be advisory and non-binding. Surrounding land uses include agriculture, woodland, and residential. Looking at the contour map and the topography of the land, it appears the sound from the motorcycle hill climbs would probably project to the south. There are 31 homes within 0.53 mile radius of the proposed use. The motorcycle hill climbers and spectators will enter Larry Gerdes' driveway and drive ~527 ft westerly into his property and past the buildings. The entrance is currently gated and locked, but will be open for the event. Parking is separated into two locations and covers an area ~ 4.4 acres. The spectator parking area is just west of the buildings and farther to the west is the rider's parking area. One ambulance will be on-site. Another ambulance will be on stand-by at the Ellsworth Ambulance station. If the on-site ambulance leaves, the stand-by will come to the site. This way the motorcycle hill climb may continue. Applicants propose one event this year, which is tentatively scheduled for September 4, 2011 and the rain date is September 5, 2011. If this event goes really well, they want to have a maximum of 2 events per year. The requested hours of operation are 9am to dusk. Applicants will not hire any employees. Everyone working at the event will be volunteers. The existing building on-site will not be used for the events. Participants and spectators would bring their own pop-up tents and trailers. Equipment to be used will be generators, skid steer, and miscellaneous small equipment. Concession stand(s), 5 portable restrooms, and trash cans will be provided and maintained for patrons. Applicants should contact the Department of Public Health to comply with their regulations, licenses, and/or permits. Applicants said that camping is not allowed for spectators and applicants for 2011. If camping is allowed for participants and spectators in the future, camping would be limited to day prior and day after the event. An adult and minor release and waiver of liability and indemnity agreement were submitted to the Department. Each individual entering the event will sign this waiver. The waiver documents will be forwarded to the Pierce County Corporation Counsel for review. Applicant indicated that they plan to secure a \$2 million year long general liability insurance plan through Northfield Insurance Company and a \$1 million public/spectator and participant legal liability insurance for the day of the event. A copy of the insurance plans will be submitted to the Department. If there are any changes to the plan, the new plan shall be re-submitted to the Department. Pierce County Corporation will be asked to review the liability insurance to determine adequacy. An admission fee will be charged \$10 per person. Alcohol will not be sold on-site. The applicants want to have seasonal signs for advertising banner signs. They also want to put up directional sandwich signs the day before the event that will be taken down the day after the event. Staff was notified of three advertisement signs up before the CUP was approved. The applicants indicated the signs were up to notify people during the Flood Run. One off-premise advertising sign was located 300 feet east of the intersection of 135th Avenue and St Hwy 35.

Staff Recommendation: Staff recommends the Land Management Committee (LMC) determine whether or not approval of this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to not be contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. If any structures are built on-site, a land use permit shall be obtained for all future structures prior to construction.
2. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Commerce, Department of Public Health).
3. Adequate portable satellite waste stations (1 per 50 people) shall be provided.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.
5. Activity approved for September 4, 2011 and the rain date is September 5, 2011. Request for additional dates to be approved by Land Management Committee.
6. Hours of operation shall be 9AM to dusk, or as otherwise established by LMC.

7. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
8. A copy of the insurance and any changes to the insurance shall be submitted to the Land Management Department.
9. If an emergency evacuation of injured riders will go through an adjoining property owner's property, applicants shall obtain written permission from the adjoining property owner prior to the event.
10. If camping is allowed for participants and spectators in the future, camping shall be limited to day prior and day after the event.
11. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise.
12. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially, the issuance of a new conditional use permit.

Chairperson Barkla opened the hearing to the public. Melissa Stogdill, representing the Stogdill Irrevocable Trust, the adjoining land owner, wants to see clarification on condition #9. What specifically they would be asking of neighbors and if there would be any monetary damage because that crop land is leased. Lund stated that she talked to Larry about the issue and he didn't see any reason they would need to access the adjoining property. Ms Stogdill stated she needs to make sure her lessee is covered if there is any crop loss. Pichotta suggested that if you are unwilling to allow them on your property, then they can't go on your property. Ms. Stogdill asked if they have confirmed with EMS that they would not do that in an emergency situation. She needs to know that if there is crop loss that it will be compensated. Lund indicated that Larry Gerdes had stated there is an area north of the hill for a helicopter to land. Dean Gerdes stated that if necessary the ambulance would be down in the valley where the spectators and visitors are. Mr. Gerdes stated there is a road that goes up the hill that would not be on her land. In the years that they have had hill climbs, they haven't even had to use an ambulance. Ms Stogdill asked if anyone had reached out to the wildlife services. There are migratory song birds and nesting bald eagles on the property. Would this in any way impact them? Kleinhans stated it's a one day event. If it were continuous, then they may be disturbed. The eagles wouldn't be nesting that time of year. Lund stated that they are not shaving down a hillside, it is the existing one and they will be doing some repairs. Kurt Funk, lives close to the property, stated that they have had hill climbs before there and they have always been good neighbors, it's positive for the area. **Public hearing closed.** Sanden asked how many people they are estimating to attend? Mr. Gerdes stated around 500 to 600 people. Sanden asked how many would be participants? Mr. Gerdes stated 300 - 350 participants at the most. Sanden asked Emily if in the past years if she was aware of any complaints. Lund, there were no complaints in the file and noted that the renewal was always approved on previous occasions. Sanden asked if there is anything in the code that covers this use. Lund stated it is classified as an Outdoor Recreation use and noted that she believes there was a motorcycle event proposed about five years ago. Kleinhans stated that there was a motocross track proposed and noted that it didn't get approved. Sanden asked if there is an erosion issue due to the fact it is close to Isabelle Creek. Mr. Gerdes stated they build it up again; it doesn't erode away. Lund stated there are four acres of flat land at the bottom of the hill. Fetzer asked if they strip the hill down or peel the grass back. It looks like there is grass with a hill up the middle in the pictures. Mr. Gerdes stated we seed it down after the event. Pichotta suggested the land owner could have a contingency agreement in place should the need arise to utilize the neighboring property in the case of an emergency. Rohl stated he thought the liability insurance should cover the issue. Chairperson Barkla asked Mr. Gerdes what type of insurance they are going to have. Mr. Gerdes stated Larry is going to have a \$2 million dollar liability policy and a \$1million for the riders. It's two different companies. Bill Holst stated that he has had a lot of insurance policies over the years and it won't cover her issue. I think if you would agree that if there is any damage to her crops you would pay for them and it could be settled. Ms Stogdill stated they could have a conversation about it but she is not going to commit to anything now. **Rohl moved to approve the conditional use permit for private outdoor recreation (motorcycle hill climbs) two**

climbs per year, for Larry Gerdes, owner by Dean Gerdes, agent, due to the fact this is not found to be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #12. Fetzer seconded the motion.

Fetzer stated he is concerned about approving this without addressing the EMS and the other questions. Lund asked Ms Stogdill where her property is located. Ms Stogdill stated to the north. Fetzer asked if there is a lot of woods between them. Ms Stogdill stated there is a woods and then a field. Chairperson Barkla stated in taking a look, he is getting a different impression about the woods and the property line. Kurt Funk stated there are woods between the hill site and the field site that they own. His experience in working with injuries and being on First Responders with the County; it's not an easy way to get someone out. They are probably going to be injured on the hill, not if they make it to the top. Fetzer asked if a four-wheeler could get up the hill. Mr. Funk stated there is a road, a jeep could get up. If there is a major injury they are going to go back down the hill and not through the woods and to her field. Fetzer asked if there is a spot on top of the hill for a helicopter to land. Mr. Gerdes stated it would be in one of their fields and his dad owns a field up there that he leases out. **All in favor.**

Passed.

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming use of land (motor freight transport) in the Primary Agriculture District for Paul Frandsen, owner on property located in the NW ¼ of the SW ¼ of Section 23, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Barkla invited Mr. Frandsen forward: Mr.

Frandsen stated he lives on Hwy 63 and has had trucks out there for years. They have 18 trucks and 18 drivers. He doesn't plan on having anymore. They have a blacktop driveway and they are right off of Hwy 63. They keep their place pretty neat and don't have junk lying around.

Staff Report – Jim Kleinhans: Mr. Frandsen has operated a motor freight transport business from his farm parcel since he moved there in 1970. He operates quite a few trucks and has 17 or 18 drivers. He's obtained a lot of permits for buildings. I wasn't aware of it until someone called me and we tried to establish whether he was grandfathered. There is another trucking company permitted with a conditional use permit 1.5 miles to the south along Hwy 63. A 10,000 gallon double wall fuel tank is set on a concrete slab along the north side of the driveway. The tank has been inspected and approved by the Dept of Commerce. The well is located behind their residence and more than 100 feet from the fuel storage tank. The main truck service building has a floor drain and a 10,000 gallon holding tank to capture wash water etc. Mr. Frandsen is currently applying it to his agriculture fields. Tanks installed for nondomestic wastewater should be registered with the Dept of Natural Resources and serviced by licensed wastewater haulers. I checked with a local environmental engineer on the operation of those tanks and he forwarded the forms to register with the State. There are two forms of disposing of the wastewater, Paul could either get certified to empty the tank himself or he could have the tank serviced by a wastewater hauler. The business maintains a portable satellite for use by employees near the main building. The trucking facility is located approximately 800 feet west of Hwy 63 and a lot farther from surrounding residences with the exception of one of his employees. The designated employee parking is on the north side of the shop along an agricultural field. No advertising signs are requested. The Town of Martell recommended approval of this conditional use permit without specific conditions on March 8, 2011. The Town did not reference its Comprehensive Plan; therefore it is assumed that the plan is silent on this request. In cases where a Town's comprehensive plan does not provide guidance regarding a proposed use, the recommendation shall be advisory and non-binding.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the expansion of this use at this location is/was contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. Applicant shall delineate adequate parking consistent with § 240-54.

2. Applicant shall secure all applicable permits and approvals from other state and/or local agencies.
3. Applicant shall continue to provide sanitary facilities (satellite toilet) for employee use.
4. Waste materials, parts, fluids recovery, wastewater etc. shall be disposed of according to appropriate solid waste disposal standards.
5. This conditional use permit shall be renewed every two years administratively to verify compliance with conditions. Compliance issues will be directed to the LMC.

Chairperson Barkla opened the hearing to the public. No comment. Public hearing closed.

Sanden asked about the wording on condition #4, wastewater shall be disposed of according to solid waste disposal standards, does wastewater fall under solid waste. Kleinhans stated no it wouldn't, just remove the word solid. **Sanden moved to approve the conditional use permit for expansion of a nonconforming use of land (motor freight transport) in the Primary Agriculture District for Paul Frandsen, due to the fact this location is not found to be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5, striking the word solid in condition #4/Rohl seconded. All in favor. Passed.**

Discuss take action on status report of a conditional use permit for a Farm and Home Based Business for Valley Vineyard in the General Rural Flexible 8 District for Rudy & Cathy Jungwirth, owners on lots 6, 7 & 8, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Brad Roy: The applicants operate Valley Vineyard LTD. They grow grapes, produce wine and also offer wine tastings, tours and sales of cheese, maple syrup, cookbooks and art work. Operations take place in an accessory structure. The CUP was renewed on November 17, 2010. Concerns were raised regarding parking and screening the operation from the surrounding landowners. The LMC requested the applicant return in six months with plans to address the concerns. The site has adequate parking space for 12 vehicles. The applicant will construct an additional parking area for 16 vehicles as soon as weather allows. A parking area for two buses has been constructed. The commercial activities take place in the accessory structure adjacent to the residence. The existing vegetation screens the structure from the south and west. The applicant would like to discuss screening options with the LMC regarding the neighbors to the north and east. The existing conditions of the permit are:

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The CUP shall expire in two years or if compliance issues arise. Renewal may be completed administratively if no compliance issues arise.
7. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
8. Plans to screen the commercial activities shall be presented to the Land Management Committee.
9. All parking will be on site and adequate parking shall be delineated.

Staff Recommendation: Staff recommends the Land Management Committee determine whether modifications or additions to the conditional use permit are necessary to mitigate off site impacts. A parking plan is attached.

Rudy stated regarding the screening he would like to talk to the neighbor first. A fence isn't going to do it. It would have to be some kind of foliage but that would block a lot of view. Ben Huppert, the

neighbor Mr. Jungwirth was referring to, stated he is open to suggestions and hasn't heard any plans yet. He stated the trees on the drawing are not there. Mr. Jungwirth stated he doesn't want it but if Mr. Huppert wants it he can do that. Mike LaCasse, neighbor, stated he has been to every meeting and his concerns are traffic and increased traffic. It's a dead end road. What started out with two tour buses by appointment has grown to 30 – 40 cars a day on the weekend. It's only going to increase. This morning there were an 18-wheel truck and another truck blocking the road while unloading pallets. Valley Vineyard has done nothing good for him and he doesn't feel it's done anything good for the development. Sanden asked if the 12 parking spaces have ever been exceeded. Mr. Jungwirth stated there are at least three weekends a year that could have 30 – 40 cars. The new parking, turn around will eliminate the trucks in the road. Sanden asked when do you anticipate having the turn around in place. Mr. Jungwirth stated he talked to Mike Holst, who is doing the job, stated he doesn't want to ruin the driveway by hauling the breaker rock so probably the second or third week in June, maybe the end of May. **Sanden moved that no modifications are necessary at this time/Fetzer seconded.** Roy asked if the committee wants to clarify the screening issue with the two neighbors. **Sanden amends motion to include: Screening shall be provided to the north and east of the property, with appropriate planting of trees and Parking will be provided as presented and the truck turnaround put in place as soon as possible/Fetzer agreed to amendments. All in favor. Passed.**

Discuss take action on a request for a rule exception to the requirement that every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26 (C) for Jason M. Boles on Lot 5 of a CSM, on property located in the SE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI. Staff Report – Emily Lund: In 2001, William Braun owned approximately 11.5 acres of land and Lot 2 & 4 CSM V1, P54, which gave this land parcel road frontage on 1180th St. Bill Holst then conveyed Mr. Braun Lot 38 Denlyn Second Addition, which is land to the east. Our office wrote Braun a letter describing the requirements and options for a land division. In 2002, a 33 ft easement was created across Lot 38, Denlyn Second Addition to access the NE ¼ of the NE ¼ of Section 19. In October 2002, the Braun's sold Lot 2 of CSM V1, P54 and Lot 38 Denlyn Addition. Jason Boles then bought Lot 4 of CSM V1, P54 and the property to the east. In March 2006, Jason conveyed Lot 4 CSM and some of the land to the east to Bill Holst, resulting in the property becoming land locked. Mr. Boles apparently inadvertently, violated provisions of Chapter 237 which require that a Certified Survey Map (CSM) be completed when a parcel is reduced below 15.00 acres. Mr. Boles has cooperated with our Department and has submitted a CSM for review and approval. Their proposed CSM contains a 33 feet easement to 1168th Street, which does not satisfy the 66 ft road frontage requirement. Mr. Boles does not own any other adjoining land with which to achieve frontage. If a rule exception to the frontage requirement is not granted, it will be necessary for Mr. Boles to purchase additional land with road frontage in order to achieve compliance with the Subdivision Code. The property is located in Section 19, Town of Oak Grove and is zoned General Rural Flexible 8. The Town Board of Oak Grove approved the CSM on 3/21/2011. Pierce County Surveyor, Louie Filkins, stated the CSM meets State Statute Ch 236 requirements. Pierce County Code (PCC) Subdivision of Land § 237-26 (C) states: "Every lot in a land division shall front or abut on a public or private street for a distance of at least 66 feet unless a rule exception is granted by the Land Management Committee."

PCC § 237 regarding Rule Exceptions states,

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted

shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Sanden asked when the Town of Oak Grove approved this in March were they aware that this was not in compliance or was this before the issue came to their attention. Pichotta stated he doesn't believe the Town of Oak Grove has a road frontage requirement in their subdivision code. They reviewed it for consistency with their subdivision code versus ours. Sanden asked Andy to refresh his memory regarding an issue similar to this, a flag lot, he thinks the committee required them to purchase more land adjacent to it. Pichotta stated we've seen a few of these, the one that you are thinking of would have resulted in additional lots being created. You would essentially intensify the use of a limited access by more car trips per day. That might be viewed differently from one would allow an existing circumstance to continue. Sanden asked in the past, has a similar issue been approved or allowed to continue. Pichotta stated that typically in the past, where it has not resulted in additional homes being created on the site and allowed an existing circumstance to continue; the committee has supported those. Jason Boles asked if anyone had questions for him. He stated to clarify Lot 5 is property he sold off to Mr. Holst. Its part of Lot 4, you never would have been able to get frontage out that way. Where the house sits on Lot 5, a 1000 ft or so it's a coulee and drops right off. The easement was there when he purchased the house. It's a shared driveway with the person that owns the property to the left of him. Right at the end of the easement is a cul-de-sac. There won't be any other homes built back there. **Fetzer moved to approve the rule exception to the requirement of every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26(C) for Jason Boles on Lot 5 of a CSM due to the fact the entire committee agreed this would not nullify the intent and purpose of the code/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel or training requests at this time.

Departmental Update and Future Agenda Items

Chairperson Barkla stated he is resigning as chair of the committee, so a new chair and potentially vice chairperson will need to be elected at the next meeting.

Status report/update for Red Wing Regional Airport, SEH, along with representatives from both Minnesota and Wisconsin Aeronautics, in the Towns of Trenton & Isabelle.

Motion to adjourn at 08:09pm by Rohl/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 4, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 18 th , June 1 st & 15 th , all in 2011.	Chair
3	Approve minutes of the April 20, 2011 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for mining, accessory uses (ready mix plant) in the General Rural Flexible District for William Holst III, owner on property located in the SE ¼ of the NE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Public hearing to consider a request for a conditional use permit for private outdoor recreation (motorcycle hill climbs) in the General Rural Flexible and Commercial Districts for Larry Gerdes, owner by Dean Gerdes, agent on property located in the E ½ of the SW ¼ and the W ½ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming use of land (motor freight transport) in the Primary Agriculture District for Paul Frandsen, owner on property located in the NW ¼ of the SW ¼ of Section 23, T27N, R17W, Town of Martell, Pierce County, WI.	Kleinhans
7	Discuss take action on status report of a conditional use permit for a Farm and Home Based Business for Valley Vineyard in the General Rural Flexible 8 District for Rudy & Cathy Jungwirth, owners on lots 6, 7 & 8, located in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
8	Discuss take action on a request for a rule exception to the requirement of every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26(C) for Jason M. Boles on Lot 5 of a CSM, on property located in the SE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items and departmental update.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, April 20, 2011

Present: Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta and Shari Hartung

Absent: Paul Barkla

Acting Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 4th & 18th, June 1st & 15th, all in 2011.

Approve Minutes: **Rohl moved to approve the April 6, 2011 LMC minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for a rule exception to the requirement that every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26 (C) for Jason M. Boles on Lot 5 of a CSM, on property located in the SE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer asked if Mr. Boles or an agent were present. No representative was present. Sanden moved to table the rule exception requirement for Jason Boles until later in the meeting allowing Mr. Boles time to appear/Rohl seconded. All in favor. Passed.

Discuss take action on a status report/update on the Red Wing Regional Airport, by City of Red Wing, owner on property located in Section 1, Town of Trenton and Sections 5 & 6, Town of Isabelle, Pierce County, WI. Staff Report – Andy Pichotta: Some time ago, I sent a letter to the folks at the Red Wing Airport asking if they would come to a Land Management meeting and update us on their work program and activities. Pichotta noted that they are looking at creating an airport zoning overlay district that would impact heights, densities, uses. Rick Moskwa, Public Works Director for the City of Red Wing, stated that he is here with Council Member, Mike Schultz who is the Council liaison for the airport board. The City of Red Wing funds the airport out of its general fund. The financing for projects is typically federal funding in the form of a 95/5 grant or state aid from the State of MN in the form of a 67/33 split. To this day, they have not secured much funding from the State of WI Bureau of Aeronautics. The State of WI does play a roll in what goes on at our airport in your State. There is no boiler plate for a Minnesota entity owning an airport in Wisconsin. It has worked and as we go forward we want to see if we can work a little better. Our projects for the year; the first is a wind cone access road and installation of fencing. When the Feds do a fly over to see if there are unsafe conditions at the airport, they saw a road going off of our runway to our wind cone area. They don't want to see any traffic on the runway. The Airport Board isn't sure they want to spend the money, it's projected to be about \$25,000, a 95/5 project. The Airport Board thinks we can get by without the road or fencing. These are items that we present when we meet with the State and Fed folks for our five-year capital plan. We will also be redoing the paving on the apron and taxi way. It will be more in the fuel pump area and then going back towards Thomas & Betts. We have about

\$460,000 to complete the project so this year we will be doing about \$250,000 if they continue the funding. That is also a 95/5 match. We hired a consulting firm SEH out of the Twin Cities. On the East end of the airport we have a project for removal of the trees. They have said that those trees are in the approach slope for the runway. That's a 95/5 match as well and that's about a \$20,000 project. The big project that will take a lot of time, that won't be finished in 2011 but will start in 2011, is the Land Use/Zoning process. The State of WI Bureau of Aeronautics is requiring us to do this. It impacts a couple areas for us. This is a conditional use permit that you are aware of. It can affect our funding if we don't do this. Every community has been contacted that is affected by this. We have had preliminary meetings. Our City Council has approved entering into another contract with SEH to move forward with the process. The process will have a representative from each governmental jurisdiction in zone A, B & C, including Pierce County, Bay City, Hartland, Isabelle, Trenton, Goodhue, Wacuda and Red Wing. We have to go to Council one more time to get this zoning board approved. Each entity will be asked to have one person to sit on this board. We're required to do this to operate and maintain the airport. State of WI is funding this. Mr. Moskwa read from WI Statutes: WI Statutes provide for airports develop land use ordinances and zoning for airports. Representatives of the WI Bureau of Aeronautics have discussed the need for Red Wing to comply with their goal of creating this throughout the State. Land use zoning has been put into place to restrict land uses that may be hazardous to the operational safety of aircraft using the airport and to protect the safety and property of people on the ground in the areas near the airport. The zoning must be consistent throughout the three mile limit. WI Statutes Chapter 114.136 provides that public airport owners the authority to impose height limitations within three miles of the airport. The State of MN and the FAA are the outside sources of funding for the airport. The zoning of the airport will provide additional compliance for our facility with requirements for receiving federal and state funding for improvements and maintenance funding allocations. This will be a longer process because of trying to get a lot of people to the table. We are also talking about some security fencing at the airport on the main roads. We had put it in as one of our projects to close the main entrance to keep people from getting to the actual take-off area. We are going to add a new light to the airport entrance sign. We have not done a good job of keeping people in the loop so we need to do a better job. We will send out packets to entities that would be interested. We have an airport board that meets every other month. If we have Council meetings, we can send out that information too. Mike Schultz, Council Member, stated the airport dynamics have changed. We need to step back and understand our dynamics. We are a Minnesota airport in Wisconsin. The more I've talked to people, after looking at the study; we realized that 35% of our business is coming out of Wisconsin. If this is going to be a regional airport we have to let other people come to the table, so they understand what the zoning is all about; what it might accomplish or won't accomplish. There is some economic activity. We have two free-base operators that are looking at putting two new hangars out there. We have to think about the people living at the end of the runway. We've talked to Pierce County Economic Development and Goodhue Economic Development. Fifteen of the employees at the airport live in Wisconsin. There are 37 hangars, one owned by the City of Red Wing, one hangar owned by Blue Airways, there are 35 privately owned hangars of which 17 are owned by Wisconsin residents. We need everyone to come to the table and be fair to everybody. We need to have them heard. The property taxes are around \$23,000.00. The County gets about \$6,000 and the school district gets about \$10,000. We get about \$1200 or \$1500 per year in a lease. It's not going to work if Red Wing comes over and says that here is what the new zoning is going to be. We are the sponsoring political subdivision. He has talked to both Congressman Kind and Congressman Kline's offices. They find it rather unique. There are issues that come up and we have to deal with both offices. Ninety-five percent is federal funding; it's not coming out of Red Wing, MN. State of MN has some funding. It is the State of WI that will pay for this zoning. Rick and I can come back and make a presentation to the board. Until the study was done, we had different ideas about the airport. In the study, it talks about potential expansion. We're going to go through the process. FAA looks at these studies. We have to be honest about these studies. We didn't put it there but it's in the study they told us we had to have done. The Bay City Mayor and Mr. Schultz have had some conversations. Bay City

did some expanding of systems that were critical to their city. That was federal money also. We don't want to chase good money after bad. We want to do things right. We aren't going to say we want to go over to Pierce County and this is the way it's going to be. Holst stated he is the County Board Representative for the Trenton part of this. There are a lot of people that feel that Red Wing has taken advantage of them. The airport came from Frontenac and moved to Trenton. It has grown since then. This is a land use committee; economic involvement has no bearing on this. I appreciate the fact that you are finally allowing us some input on what happens at the airport. At least allow the people that live there to feel like they are a party to it. You talk about coming back before the committee; you can come back every six months like a lot of other conditional use permit holders have to do. Mr. Schultz stated that when we are talking about coming to the table, we are talking about a joint powers board. They are going to come and have a representative chair right at the table. Holst asked if it would be a voting representative chair or just a representative chair. Mr. Schultz stated his vision is a voting representative chair. Holst stated that if the State is the push behind this, it doesn't matter what Red Wing, Pierce County, Trenton, Isabelle or anyone says, even though you don't get any funding from the State of WI they still pull the strings on this deal. Mr. Moskwa stated maybe Andy or Jim should comment on this. The State of WI says this is what we are supposed to do. Holst stated he has been on this committee for a long time and the City of Red Wing was suppose to plant trees and water them. Those trees didn't live and they replanted them and I don't think they watered them. Mr. Moskwa stated that there is an irrigation line out there. Council Member Schultz stated he wants to get a joint board. We believe Pierce County and Goodhue County should be talking about this as an economic development engine because it is well used by both sides of the river. Bill Warner has worked with people about the development of hangars. He has tried to see if there is any funding to help them, there is significant investments on some of these hangars. Sanden asked to clarify if this is an overlay district at the State level, not a County overlay or Federal overlay district. Pichotta stated his understanding is it would be an overlay district administered by the City of Red Wing. Sanden, by the City, but does it have the jurisdiction or the force of a State or Federal overlay zone. Pichotta stated yes, according to WI Statutes, Red Wing is treated like a Wisconsin municipality. So they have the ability to unilaterally impose the height restrictions, densities and uses. It's similar to the Extra Territorial Zoning without the joint committee. Sanden stated they are trying with the joint committee approach. Mr. Moskwa stated they started on the process before the previous Public Works Director left. It wasn't number one on my plate but now Council believes and the consultant wants to get paid so we are trying to move forward. Sanden asked, on this board what power do we have. If it's a state overlay district, we would have no power what so ever. Are we at that same level on this board, are we just advisory? Pichotta stated they are subject to the conditional use permit. There are underlying zoning issues. Although they may have the power to unilaterally impose the zoning overlay district they don't have the power to unilaterally expand. That would require the Town's to sign off. Conditionally permitted uses have to be consistent with their Town's plan and requires an action by this committee. It's not entirely clear what kind of ability we have to impact the zoning overlay. Mr. Schultz stated this is why we want everyone at the table. We recognize those overlay districts can have an impact on this. We don't want to go in there arbitrarily. Mr. Moskwa stated we will have State of MN and State of WI people to outline those kinds of questions. Sanden stated that he thinks they are off to a positive start and he has been on this committee for a number of years and that committee members are fair minded and do keep in mind the impact on the neighbors and the economic potential. If we are treated fairly, we have been receptive. I don't know the history but it sounds like you have some fences to mend. If this is anticipated to be a year long process, I recommend you come back sooner than six months, just so you keep us in the loop and whatever jurisdiction we have, it isn't just dumped on us at the last minute. If we are in the loop at every critical stage of this process, it will make your efforts a lot smoother. Mr. Moskwa stated they are hoping Pierce County will have someone at the table from a land use/zoning board, someone that has the background. Kleinhans stated Lisa Acker has notified us of all the airport meetings. If the committee would like that information, we can forward the meeting minutes and agendas to you. Mr. Moskwa asked if he could address that, we can send it out to the commissions or

boards, as well as the townships, electronically. Kleinhans asked about the three-mile overlay, he stated that's bigger than the height limitation zoning that we did, because that extends all the way across the river to Red Wing. So that's a little different situation than we dealt with at the last expansion. Mr. Moskwa stated the land use/zoning people from SEH keep telling him they already have height zoning in place. Holst stated he is glad the two gentlemen came and they do represent their city well. There is a new age of openness here and we do have to put up with each other. Pichotta asked when you are talking about a joint powers arrangement, are you actually talking about different, joint, management of the airport? Mr. Moskwa stated as the director of the airport, he has been instructed by the council to look for ways to make the airport work better. They put about \$100,000 from the general fund money into the airport each year. It does not cash flow. Those are some of the issues. I see it as a joint board on the economic side. Mr. Schultz, our thought is being the zoning is coming out, that is a good starting point. Pichotta asked if the group that deals with the zoning issues would be a joint group including a board of adjustment. Mr. Schultz stated this zoning is going to impact people; they should have a right to be at the table. Holst asked if they felt Minnesota or Wisconsin zoning law applies. Mr. Moskwa stated they are run by Minnesota so they feel Minnesota but if you talk to the WI Bureau of Aeronautics or the State of MN, they are going to say we're going to make it work. Pichotta asked about the lighting, it was alluded to that higher intensity lighting was going to be brought in along Hwy 35. Mr. Moskwa stated that is already in and they had one complaint. Pichotta asked if taking the trees down, will impact the way the lights affect the neighborhood. Mr. Moskwa stated no, it's so far at the end of the runway other than the approach lighting. Pichotta stated when you do something that has to potential to impact the neighbors it would be beneficial for use to see some maps or diagrams to evaluate any potential impacts. We should get you in for site plan review since it's our folks that surround the airport, not yours. Holst asked when we are going to see you back again. Mr. Moskwa stated he has to go back to the Council meeting on the second Monday in May, and hopefully get approval at that meeting. We have made contact with some communities already and hopefully they will participate. Richard Bunce stated it's his understanding that they have talked to Representative Kind at the State level. Mr. Schultz stated we had a discussion with him last year. We were aware this was coming and we had a funding issue (federal funds) to discuss with him. Mr. Bunce stated it's a little presumptuous to go to the State level before the Town and County levels. Pichotta stated it would be appropriate, once you have a contract signed with SEH and they are on board, to come back to this committee to discuss the process. Mr. Moskwa stated they have gone to the townships. They will bring maps to give you the visual of the zoning. Chairperson Fetzer asked if they would have their meeting before May 18th. Mr. Moskwa stated yes, he will check with SEH's availability on the 18th. They would do the presentation. Pichotta reiterated WI is actually driving this zoning overlay, and the driving factor is that you wouldn't be eligible for funding if you did not have this overlay? Mr. Moskwa stated that's what they tell us. Pichotta asked if that is funding from the Feds or from the State of MN? Mr. Moskwa stated in what he has read, said both from State and Federal because we are not in compliance with airport zoning. These are things they send us so he doesn't know the facts. It really comes down to a safety issue for the folks on the ground and in the air. Mr. Schultz stated when the study came out; the volume of use was what heightened everybody's awareness. Mr. Schultz stated they will try to come back on the 18th, try to get SEH to come.

Discuss take action on proposed amendments to Pierce County Code Chapter 240 relating to Industrial Uses. Staff Report – Andy Pichotta: Basically part of the Comprehensive Plan stated we should go back through to ensure that our code meets the goals and policies of the plan. We reviewed the Industrial Uses and in doing so it became clear that changes were required to the Nonmetallic Mining regulations as well as to the Industrial Uses. We're looking to present the code in a more clear; concise manner and make it easier to enforce, as well as eliminate some redundancies and take care of a legal issue or two. Starting with Chapter 240-37, which deals with Nonmetallic Mining which is under the Industrial Uses, there is now Chapter 241, Nonmetallic Mining Restoration. It isn't necessary

to include the need for a restoration plan in the zoning portion because it's already dealt with through NR135 and our Chapter 241. We're proposing to add the word Reclamation Plan under A 1 and strike the entirety of A 2. Under A 5 there is some additional language; anticipated final vertical contours as they relate to health and safety of existing or anticipated neighboring land uses. This is intended to give us the ability to require that folks not leave high walls in proximity to residential areas. In NR135 and Chapter 241 there is the ability to leave high walls and we want to be able to address that. Staff is proposing to make Nonmetallic Mining Conditionally permitted in the Industrial district, as several nonmetallic mines currently operate in the Industrial Districts, mostly in the Trenton area. Under Mining Accessory Use; we're proposing to tweak the definition to uses and activities which are customarily incidental, appropriate and subordinate to mining such as stockpiling, sorting, screening, washing and crushing when conducted on property that is not contiguous etc. Toward the end of that definition add: The stockpiling of materials by a public agency for construction, reconstruction, maintenance or repair of public transportation amenities at public-owned sites or within the property boundary of the transportation amenity is not considered an accessory use.

We already have language in the code that says that if it's in the right-of-way it's not considered mining but this just makes it a little more clear.

Under Nonconforming uses there also is a reference to mining there:

A. Nonconforming use of land.

- (2) Expansion of a nonconforming nonmetallic mining operation shall be permitted up to the lot lines existing on the effective date of this chapter ~~or 20 acres in area, whichever is less~~, except that greater expansion may be authorized by a conditional use permit.

We have been advised numerous times that, or 20 acres in area, whichever is less, is unenforceable because existing case law says you can expand to the boundaries of the property as it existed at the time it became nonconforming. So if we were to try to enforce that particular provision we would lose in court.

Under Discontinuance, we are proposing to add; Nonmetallic mining operations are considered to be discontinued when the activity complies with the definition of Abandonment of Nonmetallic Mining Operations. Which is a definition contained in Chapter 241.

Staff is also proposing to amend the definitions of Heavy Industry. The current definition emphasizes certain activities which can take place on a property. Staff is proposing to focus on the impacts that a use will have on the surrounding land uses and designate the uses with greatest potential of significant impact as Heavy Industry.

INDUSTRY, HEAVY - ~~Assembly and manufacturing activities which may include processes such as metal foundries, metal plating, thermoforming of plastics, blending or formulation of fuels or other hazardous substances, extensive painting or coating of products which would require a spray booth, water wall, drying oven, or apparatus or any process or activity which involves hazardous materials, produces hazardous wastes, produces excessive noise, creates air or water emissions requiring pretreatment, special treatment or pollution control devices, produces odors detectable in the ambient outdoor air or which causes any other conditions or nuisance which impairs the full use of the neighboring properties.~~

Uses such as manufacturing, assembling, fabrication and processing, bulk handling, storage, and trucking which are likely to generate significant levels of traffic, noise, pollution, vibration, dust, fumes, odors, pesticides, herbicides, or other hazardous materials, fire or explosion hazards, or other undesirable conditions which are unsuitable for any other district.

Staff is also proposing to list Heavy Industrial Uses in §240-37 Industrial Uses. It is currently only listed in the Table of Uses. By doing this the code will be presented more consistently in that every use will be listed in the appropriate use section, Table of Uses and have a definition.

The definition of Light Industry is vague on whether the use must be conducted indoors. To be more clear staff is proposing: to strike can be and add are.

INDUSTRY, LIGHT – Non nuisance, low-impact industrial uses compatible with surrounding commercial, residential or public uses which have a minimal impact on traffic, ~~can be~~ are conducted indoors and without significant noise, odor, dust and glare which do not contribute to the degradation of the land, water and air.

Concerns were presented to the LMC about the potential impacts of hydraulic dredge material storage on surrounding land. Staff is proposing to create a Hydraulic Dredge Material Storage use in the Industrial Use section of the code, which will require any applicant to address concerns about contamination and impacts and allow the LMC to determine which site is best suited for the storage.

§240-37F. Hydraulic Dredge Material Placement and Storage.

- (1) Application for such project shall include:
 - (a) Soil properties of dredge materials.
 - (b) The amount of dredge material.
 - (c) Volume of water anticipated.
 - (d) Chemical analysis of dredge material.
 - (e) Identification of surrounding land-uses.
 - (f) Depth to Water-table.
 - (g) Groundwater levels, flow and direction, and potential impact on groundwater discharge and recharge.
 - (h) Proposed runoff patterns and adjacent drainage.
 - (i) Potential for effluent, leachate, and surface runoff impacting adjacent ground and surface water resources.
 - (j) Potential for dust, noise or odor problems.
 - (k) Proximity to sensitive ecological environments.
 - (l) Inventory of wells, private and municipal, which will likely be affected.
 - (m) Mitigation plan for affected properties.
 - (n) Soil properties of storage site.
 - (o) The possible migration pathways of contaminants from the storage site.
 - (p) Proposed reuse of material, if applicable.
 - (q) Project timeline.
 - (r) Such other requirements as specified in §240-76 shall also apply.

This next one we are asking for some feedback on, we are suggesting that

- (2) Analysis shall be provided for three sites along with the feasibility of each site.
- (3) All attempts shall be made to eliminate or reduce any potential impacts on residential districts or neighborhoods.

Is it reasonable to ask for three sites? Holst stated up to three is realistic. It doesn't mean that three will be presented. Sanden stated that would also put a limit on it. Holst stated that the proximity to the pump is where they are going to go. Seven miles to the pump is about as far as they can go. Sanden suggested using at least two sites. Holst stated two or more. He stated he feels at some time the Corp will purchase their own property and then they will have the Federal sovereign immunity that we will have no say over anyway. Pichotta stated it may be able to tweak the language, for example when a cell phone company looks for a tower location, they have a search ring, basically if they have a limit of seven miles we could ask they identify all areas within whatever range they have.

The proposed definition is:

HYDRAULIC DREDGED MATERIAL PLACEMENT AND STORAGE– The placement and storage of dredged material that is transported through a pipe or hose typically utilizing large amounts of water for transfer.

Staff is proposing to make this a Conditionally Permitted use in the Primary Agriculture, General Rural, General Rural Flexible, Agriculture-Residential and Industrial districts.

Basically, anywhere but in a residential district.

As you will recall, we recently had someone come in for an undesignated use for a shaving mill.

SAWMILLS/PLANING MILLS – A facility where wood is sawed, split, shaved, stripped, chipped, or otherwise processed to produce wood products to be sold.

Warehouse and Storage is currently listed in §240-37.1.B. The definition of this use is also in §240-37.1.B. and not in S240-88 Definitions. The use is also not included in the Table of Uses.

Staff is proposing the following changes to §240-37.1.B:

~~Warehouse and storage, which, for the purpose of this section is defined as the holding of packaged or wholly or partially finished materials, foods or products within enclosed buildings. Examples of such uses include wholesale establishments and storage wherein customers do not have individual access to storage cubicles (see "commercial storage"). Inside storage shall be subject to the following limitations:~~

Staff recommends a new definition:

WAREHOUSE AND STORAGE - The holding of packaged or wholly or partially finished materials, foods or products within enclosed buildings and will not create significant impacts to surrounding uses. Examples of such use includes wholesale and distribution establishments primarily engaged in selling and/or distributing merchandise to retailers; to industrial, commercial, institutional, or professional business users, or to other wholesalers. The use does not include those which are consistent with the definition of "Mini-storage".

➤ Staff is proposing to list this as a Conditionally Permitted use in the Commercial district and a Permitted use in the Light Industrial and Industrial districts.

- Indoor Maintenance is listed in §240-37 Industrial Uses and also in §240-36 Commercial Uses. This redundancy creates confusion. It is listed in the Table of Uses under Commercial Uses. As discussed at previous meetings, staff is proposing to keep Indoor Maintenance in §240-36 Commercial Uses and remove it from §240-37 Industrial Uses. The definition would remain the same. It is currently permitted in the Light Industrial and Industrial districts; staff has previously proposed to also permit it in the Commercial district. The code to be removed from §240-37 is:

~~C. Indoor maintenance, which, for the purpose of this section, shall include the repair of goods and equipment, such as automobile repair and service and electronics maintenance and repair. Indoor maintenance uses shall be subject to the following limitations:~~

~~(1) All operations, except loading, shall be in enclosed buildings.~~

~~(2) The rebuilding or assembly of automobiles engines, transmissions on a factory basis, and/or disassembly of automobiles shall not be permitted except in the I District.~~

~~(3) All damaged or inoperable goods and equipment shall be stored indoors.~~

~~(4) Outside storage of more than six vehicles for repair shall be screened from public rights-of-way. All permitted storage of vehicles for repair shall be behind the building setback line.~~

- Recycling Facility is listed in §240-37.1, but not defined or listed in the Table of Uses.

➤ Staff is proposing a new definition to be added to §240-88:

RECYCLING FACILITY – A facility in which recyclable materials are recycled, reprocessed and treated to return such products to a condition in which they may again be used for production.

➤ Staff is proposing to allow for collection to take place onsite. The proposed code would be:

~~Recycling and nonhazardous/nontoxic/inorganic waste recovery facilities, provided:~~

- (1) All activities are conducted indoors.
- (2) Outside storage of goods or equipment is not permitted.
- (3) Collection is allowed onsite.

That is a question that I would have, when you think of our Solid Waste facility, a portion of the operation is conducted outside. That might be worth taking a look at and allowing some things outside. Holst stated that should be looked upon on a case by case basis. Pichotta stated this would be conditionally permitted use and that would be the mechanism to look at it on a case by case basis.

- Staff is proposing to have this use conditionally permitted in the Industrial and Light Industrial districts.
- The definition of Recycling Facility does not include sites that are limited recycling collection, so staff is proposing to create a Recycling Collection Point use to be included in §240-37.1.
 - The proposed code is:
Recycling Collection Point
 - (1) Processing of materials is limited to sorting and transferring.

Basically, a place where you can go and drop off your stuff. Holst stated a lot of our townships have drop-off points. This wouldn't affect those. Holst stated if they chose a new site, would it? Pichotta stated it would impact new sites. If there are some wholesale changes to the way solid waste is dealt with by the State this language may be necessary.

- The proposed definition is:
RECYCLING COLLECTION POINT – A site in which recyclable materials such as paper, cardboard, glass, metal, and plastic are collected and temporarily held until transferred.
- Staff is proposing to make this a Permitted use in the Commercial and Light Industrial districts and Conditionally permitted in the Primary Agriculture, General Rural, General Rural Flexible and Agriculture Residential districts.
- Staff is also proposing to make Salvage Yards Conditionally permitted in the Industrial district. It is currently conditionally permitted only in the Primary Agriculture, General Rural, General Rural Flexible and Agriculture Residential districts.

Staff recommends that the LMC determine if any changes to the concept or draft amendments that staff has proposed are necessary. I want to remind you that any changes to the zoning code are subject to approval by the Towns. If one more than half of the Towns doesn't like the changes proposed, they can't be adopted. Sanden asked under Heavy Industry; the end of the line says for any other undesirable conditions. This isn't conditionally permitted, it would be allowed by right in any heavy industry. Is that statement too broad, should it include health, safety and welfare? Pichotta stated heavy industrial uses are conditionally permitted in an industrial district. Sanden asked if they had to make any provision for the clean sweep. Holst stated that doesn't fall under County zoning because it's in the Village limits. Pichotta stated one thing he is concerned about is that we are consistent with the solid waste code, so they work together well.

Discuss take action on Travel/Training Requests. Pichotta stated Louie Filkins, County Surveyor, has requested to attend the WI Land Information Association Conference in LaCrosse on May 17th & 18th for a fee of \$120.00. Pichotta feels it is pertinent to his job and noted that it will require an overnight stay. **Holst moved to approve the travel/training request for Louie Filkins to attend the WI Land Information Association Conference in LaCrosse on May 17th & 18th/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Jason Boles request for a rule exception will be back on the agenda.

Conditional use permit request for a ready mix plant in the Town of Trenton

Conditional use permit request for outdoor recreational use in the Town of Hartland

Conditional use permit request for expansion of a motor freight transport operation in the Town of Martell

Status report for Rudy Jungwirth in the Town of Oak Grove

Chairperson Fetzer stated he would entertain a motion to bring back the tabled agenda item #4. **Holst made a motion to bring back, to the table for action, agenda item #4, a request for a rule exception to the requirement of every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26 (C) for Jason M. Boles on Lot 5 of a CSM, on property located in the SE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove/Rohl seconded. All in favor. Passed. Sanden moved to defer action on agenda item #4 for Jason Boles until a future meeting when he is present/Holst seconded. All in favor. Passed.**

Motion to adjourn at 08:12pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 20, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 4 th & 18 th , June 1 st & 15 th , all in 2011.	Chair
3	Approve minutes of the April 6, 2011 Land Management Committee meeting.	Chair
4	Discuss take action on a request for a rule exception to the requirement of every lot in a land division front or abut a public or private street for a distance of at least 66 feet per Chapter 237-26(C) for Jason M. Boles on Lot 5 of a CSM, on property located in the SE ¼ of the SE ¼ of Section 19, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
5	Discuss take action on a status report/update on the Red Wing Regional Airport, by City of Red Wing, owner, on property located in Section 1, Town of Trenton and Sections 5 & 6 Town of Isabelle, Pierce County WI.	Pichotta
6	Discuss take action on proposed amendments to Pierce County Code Chapter 240 relating to Industrial Uses.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items and departmental update.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/8/11)

PIERCE COUNTY WISCONSIN

MINUTES - Pierce County Land Management Committee Meeting, April 6, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 20th, May 4th & 18th, June 1st & 15th, all in 2011.

Approve Minutes: **Rohl moved to approve the March 2, 2011 LMC minutes/Fetzer seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining in the General Rural District by CMC-Spring Valley LLC, (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Staff Report – Brad Roy: Two status reports were presented to the LMC, November 17, 2010 and February 16, 2011, to determine if the permit needed any modifications. The committee chose not to make any changes at that time. The concerns presented at these meetings have been typical: number of trucks, visibility of the operation, untarped trucks and dust. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. County Materials intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. The average floor elevation of the quarry is 1100'. The plan is to expand the quarry to the south and lower the floor to 1075'. No operational changes are planned. There are approximately 28 unreclaimed acres on the site. County Materials has complied with the seismograph, well and noise monitoring requirements. Hydraulic conveyors were installed last year. This should lessen the dust problem. The Town of Spring Lake was contacted for comments or concerns regarding the renewal of this conditional use permit. Mike Jacobson, Town of Spring Lake Supervisor, responded that the Town did not have concerns about the renewal of the existing conditions, but that they would oppose an increase of the hours of operation. The existing conditions #1 - #25 are listed in the staff report. Note on condition #21, the quarry shall have no more than 30 unreclaimed acres at one time, with their existing size County Materials is getting close. That is something we will have to monitor.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.

3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in 6 months.

Sanden asked what is the anticipated time before the wash plant will be below grade? Jim Small stated they still have to lower the floor, it will probably be close to two years. The wash plant will be up top longer than that. The frontend screens that take off the ag lime, the dry material, will be the first down. We took a lot of material out of there last year. Mr. Small stated we plan on reclamation on the north side and on the west end of that point of rock. Last winter when we discussed it, we're just going to reclaim at that elevation 1100' and not worry about the rock where the slopes are. Where the toe of the slope is and up - we'll take the rock down. It's not the best quality material. There is so much overburden to be moved around. The more we can get in a permanent location the better. We'll be sloping the overburden and reseeding. Holst asked the Town if they appreciate coming here every six months or would a year be better for you. Mike Jacobson stated they would like to come back in the fall after the season. Then if it is a good season like they anticipate it could probably go to a year.

Holst moved to approve the conditional use permit renewal for a nonmetallic mining operation for CMC-Spring Valley LLC with conditions #1 - #25/Sanden seconded. All in favor. Passed.

Discuss take action on recommendation regarding re-election of LMC Citizen Members. Staff Report – Andy Pichotta: Holst stated we have the best citizen members of any committee. He feels we should do everything in our power to convince them to stay on the committee. Rohl agreed. Sanden and Fetzer stated they agree to stay on the committee. **Holst moved to recommend the County Board of Supervisors re-elect Citizen Members, Eric Sanden and Joe Fetzer to the Land Management Committee/Rohl seconded. All in favor. Passed.** Holst stated some time ago we changed the term limits for these positions from 3-year terms to 2-year terms. Would it be beneficial to change back to 3-year terms? Chairperson Barkla stated that he would talk with Corporation Counsel and see if that could be added at the time of election of County Board on the 19th of this month.

Discuss take action on Travel/Training Requests. Pichotta stated that there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Request for a rule exception in the Town of Oak Grove.

Proposed amendments to the Industrial Code

Pichotta also noted that the Red Wing Airport was sent a letter asking them to come to an upcoming committee meeting to give us a status report and discuss their plans. That report will be made at our next meeting.

Motion to adjourn at 07:14pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, March 2, 2011

Present: Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Absent: Paul Barkla

Acting Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 16th, April 6th & 20th, all in 2011.

Approve Minutes: **Rohl moved to approve the February 16, 2011 LMC minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for renewal for a conditional use permit for an Asphalt Plant in the Industrial District for Monarch Paving, owner on property located in the NW ¼ of the SE ¼ of Section 34, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Brad Roy: This operation was originally permitted in 2001 for nonmetallic mining and the asphalt plant. In 2008 the Zoning Office inspected the site and determined that the portion used for mining had been reclaimed in accordance with the approved reclamation plan. Final reclamation within the approved plan designates the site as a permanent asphalt plant and the bond associated with reclamation was released. Pierce County Code provides that opportunity for the LMC to require a bond for Asphalt Plants. On March 4, 2009, the LMC determined that no bond should be required since this is an Industrial use in the Industrial District. If Monarch proposes to mine this site in the future a new conditional use permit must be obtained. The asphalt plant at this location has been established as a “permanent” use versus a “temporary” use. This facility is close to a concentration of residential properties, increasing the potential for negative off-site impacts. The original permit conditions included the establishment of a vegetative berm. The berm has been established around the facility and is being maintained, but will require more time to become completely effective. At a previous renewal a transportation route was designated for Minnesota projects. It was stipulated that trucks traveling to Red Wing shall be routed from 830th Avenue to Hwy 35 to Hwy 63. This route limits the impacts to town roads. A Stormwater Pollution Prevention Plan is on file in the Zoning Office for this site. The Town of Trenton was contacted regarding this renewal request. The Town gave no formal recommendation but wanted the allowable hours of operation and height limits emphasized. The Town also appeared to suggest that issues related to stormwater drainage and other matters were unresolved. The County has received no complaints about this operation since the last renewal. On March 4, 2009 the conditional use permit was renewed with conditions #1 - #6 listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Use shall be according to submitted plans.

2. The hours of operation are from 6am to 8pm Monday through Saturday.
3. The haul route for trucks traveling to Minnesota projects via Red Wing shall be routed from 830th Avenue to Hwy 35 to Hwy 63.
4. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
5. Height of stockpiles shall be limited to 35 feet.
6. This CUP shall be reviewed for renewal in two years unless compliance issues arise.

Holst stated the Town appeared to suggest issues related to stormwater drainage and other matters were unresolved, what were those issues? Roy stated that apparently drainage from the pond was being hooked up to a hose and pumped over the berm. Town representatives are here and they may want to elaborate. Mike Miller asked on the original conditional use permit, what was supposed to happen to the water from the pond. Roy stated on the permit from 2003, there was no discussion of the stormwater pond. Holst stated that isn't the original one. Mike Miller stated the whole thing is blacktopped. There is no place for the water to filter out. They pump it over the berm. Fetzer asked if there is a drainfield that it can run in to. Richard Bunce, Town of Trenton Chairperson, stated they have used some of the water for dust control but when we get a hard rain, like we have on occasion, it fills the pond to overflowing. What they get is residual oil runoff from the blacktop plant operation and you will see stuff floating on the top of the pond. That is our concern when we see that pumped over the berm. A containment pond that has no form of treatment has to go somewhere. Neil Bakke, with Monarch Paving, stated that he is unaware of any pumping. The pond fills up and we use it for dust control. We shouldn't be pumping onto other property. We have an area in the back where it could get pumped and could self drain. Mr. Bunce asked why you would pump oil residue on your property. Mr. Bakke stated part of the stormwater permit is that you take the sheen off using absorbents and then you can pump the water. Holst asked if that is in their stormwater response plan. Mr. Bakke stated yes, he will check the procedure but it shouldn't be pumped over the berm. They will need to change that practice. An absorbent should be part of the daily inspection if there is an oil sheen. That will collect the sheen off there. Sanden asked about the impact on Town roads. Mr. Bunce stated they are only on a Town road for 150 ft so that isn't an issue. Holst asked Mr. Bakke if we need to put that down as a condition or are you going to address the issue. Mr. Bakke stated that will be procedure. **Holst moved to approve the conditional use permit renewal for a Hot Mix Asphalt Plant for Monarch Paving with conditions #1 - #6 /Rohl seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District for Monarch Paving, owner on property located in the NE ¼ of the SW ¼ of Section 28, T25N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Brad Roy:

The mining operation was originally permitted in 2001. This is the storage site of approximately 350,000 cubic yards of dredge materials from Corps Island. The dredge material will continue to be placed in the pit throughout this year. At the previous renewal (2009) there was discussion about whether the dredge materials would be use for permanent reclamation or stockpiled for future use. At that time a representative of the pit stated that they were planning to use the material for final reclamation and close the pit. This was contrary to the approved reclamation plan. Staff notified the representative that any change in reclamation would need to be reflected in a new reclamation plan. On May 19, 2010, a Groundwater Response Plan was presented to the LMC and approved with the understanding that the dredge materials would be used for final reclamation. On August 31, 2010, the Zoning Office received a letter from Monarch Paving which stated that it is now their intention to use the dredge material for "interim reclamation" and to then use the materials in their operations. The change in plans as it relates to the Groundwater Response Plan was presented to the LMC on October 20, 2010. The LMC deferred any decision on the Groundwater Response Plan until this 2011 Nonmetallic Mining CUP renewal. The applicant has not submitted an updated reclamation plan. The existing plan states that the site will be used to store/stockpile the dredge material for use in future projects. This is consistent with the letter received August 31, 2010. The site is internally drained. The

floor of the pit is at 690 feet above mean sea level. Surface water is directed to the northwest near the pit entrance. Permitted hours of operation are 6:00am to 6:00pm Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35 towards the asphalt plant. No traffic is recommended along County Road K. The haul road was paved to reduce and address airborne dust concerns. The dredge material will be covered with topsoil and seeded. Condition 12 states, prior to placement of dredge materials on this site, a plan that describes activities and safeguards shall be presented for approval to the Land Management Committee.

- A groundwater response plan was presented to the Land Management Committee on May 19, 2010 and approved. The groundwater response plan was again presented to the LMC when staff was notified that the materials were not going to be used for final reclamation. The LMC deferred any decision on the groundwater response plan until CUP renewal.
- EMES Inc. will conduct groundwater and surface water monitoring in three phases. Background samples were collected prior to the dredge placement. Phase 2 is currently in progress during the placement of dredge material. Phase 3 establishes sampling criteria after placement is completed.
- Samples are collected from 4 residential wells, 4 monitoring wells and 2 surface water sites. Residential wells will be sampled from outside spigots. The pH, specific conductance, temperature, dissolved oxygen and turbidity will be recorded for each well.
- The sampling collection schedule is listed in Table 1. The sampling parameters and detection limits are listed in Table 2.

The LMC should determine if, given the change in plans for use of the dredge materials, any action is required on the approved Groundwater Response Plan.

The County has received no complaints about this operation.

The Town of Trenton has expressed its preference that Monarch Paving be held to their 2009 statement that dredge materials would be used for final reclamation and the pit then closed at the completion of the Corps project.

On March 4, 2009 the conditional use permit was renewed with conditions #1 - #12 listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. Hours of operation are from 6:00am to 6:00pm, Monday through Friday and 8:00am to 6:00pm on Saturday during the construction season.
3. The haul route for commercial trucks is from the pit entrance on County Road K to Hwy 35.
4. Blasting shall be conducted by a state licensed blaster.
5. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.
6. A 50 ft setback shall be maintained from all property lines for all mining activity.
7. The applicant shall notify the Zoning Office if groundwater is encountered.
8. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
9. Reclamation shall be according to submitted plans.

10. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the County.
11. The approved Groundwater Response Plan shall be adhered to.
12. This CUP shall be reviewed for renewal in two years.

The change is the existing #12 condition required the development of a groundwater response plan, that has been removed and switched to, The approved Groundwater Response Plan shall be adhered to. Holst asked if condition #4 is needed. Roy stated it is a standard condition on most mining sites. It's approved for mining if they want to change their practices, the condition is in place. Holst stated it looks like the Town of Trenton is interested in Monarch adhering to the 2009 statement that dredge materials would be used for final reclamation and the pit closed at the completion of the Corps project. Pichotta stated in talking with the Town, I believe that their concerns about the mine being permanently reclaimed with dredge materials has to do with concerns about what might happen in the future should that site be used for hydraulic movement of dredged materials, that would result in some 700 million gallons of water filtering through the groundwater table. That particular site is very close to groundwater. In response to the Town's concern's I would recommend adding a condition #13 - Any future use of this site for hydraulic dredge material placement shall not be allowed until such time as information is presented that demonstrates, to the satisfaction of the LMC, that the impacts of said placement will not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area. This would essentially make the placement of those hydraulic materials subject to the same standards as the issuance of a conditional use permit. Additionally, I would note that as staff is working on amendments to the section of our Code that deals with Nonmetallic mining, we should investigate the potential for creating a mechanism that treats the placement of hydraulically transported dredge materials as a stand alone conditionally permitted use. It could then be judged on its own merits. A large percentage of the nonmetallic mines in the County are actually pre-existing nonconforming uses on which we have no conditional use permits. This would give us a better handle on those sites because currently those materials could be placed there and we would have nothing or very little to say about it. Sanden stated it also could possibly free up the other mines from being so heavily regulated. Is the water test analysis all within the normal parameters? Candy Anderson, Monarch Paving, stated she gave Brad the results of the water testing and she read through everything and it all looked fine, nothing out of the ordinary. They would like to renew their permit and they have a reclamation plan on file that would stay the same. There is one amendment they would like to make. The existing plan states the sand would be made available to everyone at no cost. With all the Federal MSHA rules and safety issues, they would like to change it to be available to the municipalities at no cost because they have their MSHA training. They worry about people being allowed into the pit and bringing garbage in and dumping it. She did send a letter and ask to amend it. Holst stated that was part of the selling point, now today things change. I would like some input from the Town Chair. Mr. Bunce stated they have gates on the pit and they are locked on the weekends. He doesn't feel it would be an issue but can understand why they wouldn't want someone coming in there with a pick-up loading out sand without an idea of what's going on. Realistically, the sand must not be worth anything or the County would have taken it. Holst stated his Township would still take some. Sanden stated the municipalities still have free access to it. He asked Mr. Bunce what he feels about the condition relating to hydraulic dredging material, if that satisfies his concerns. Mr. Bunce stated it's easy for the Corp of Engineers and anybody to talk about water quality. We take water quality for granted. The EPA is pretty fussy about water. They regulate sewage and water, so for them to say they are going to take water that's been in the river and put it in a pit, and Trenton and Diamond Bluff are the likely source, we understand that, but 700 million gallons of water and they will just check the wells for turbidity? You see your water and it's brown and the Corp says you can drink it, it's just turbid. Who wants that? So we want it to go in by trucks and try to do as much responsible use of sand as possible and have less impact to the Township residents. If we have to live with it being a repository for sand instead of reclaimed as they said they were going to do. We definitely don't want it pumped in there. It's just a repeating process. He knows it's going to go to Trenton or Diamond Bluff so they want

some control over how it gets there. **Holst moved to approve the renewal of this conditional use permit for Nonmetallic Mining for Monarch Paving with conditions #1 - #13 /Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated there are no items on the agenda at this time but he could add some housekeeping items if the committee wanted to meet. Committee agreed the March 16, 2011 meeting will be cancelled.

Motion to adjourn at 07:25pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

(2/17/11)

MINUTES - Pierce County Land Management Committee Meeting, February 16, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 2nd & 16th, April 6th & 20th, all in 2011.

Approve Minutes: **Fetzer moved to approve the February 2, 2011 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for an Accessory Residence in the Primary Agriculture District for Steven Boyer, owner on property located in the NE ¼ of the NE ¼ of Section 13, T27N, R17W, Town of Martell, Pierce County, WI. Chairperson Barkla invited Mr. Boyer forward:

Mr. Boyer explained they would like to build another residence for his daughter and son-in-law, Nate Flosberg, to help out with the horses. His daughter has a couple horses she is training and they board them now at their place. The site is just north of their existing residence so it won't disrupt the pasture or hayfields. Sanden asked if their intent is to use the same driveway for both residences? Mr. Boyer stated it will come down to cost. It would be a longer driveway if they come off of theirs. There is an existing field road now but they would have to apply for a driveway permit and upgrade it.

Staff Report – Jim Kleinhans: Mr. and Mrs. Boyer own 29.3 acres where they have lived since 1995. They are requesting approval of a conditional use permit for an accessory residence for their daughter and her husband to help with horses and associated chores. The requested location is in a hay field to the north of their existing residence. The street address is N7921 490th Street. The property is zoned Primary Agriculture. The requested building locations comply with zoning setback standards. The dimensions of the proposed 2 bedroom single story residence are 24ft by 44ft (1056 sq ft). Dimensions of the existing residence are 25ft by 54ft.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. A sanitary permit shall be obtained for connection to an onsite wastewater system.
2. The accessory residence must comply with uniform dwelling code and shall be inspected by the local building inspector.
3. Applicant shall obtain a uniform address number for the accessory residence after road access approval is obtained from the Town of Martell.
4. The use shall be established within 12 months of committee approval.
5. The future shed will require a separate land use permit.

They have proposed another pole shed, so I wanted to make the need for a land use permit part of the conditions. Typically an accessory residence would be covered under the conditional use permit but not the pole shed unless the committee elected to put the accessory building in as well. **Chairperson Barkla opened the hearing to the public. No public comment. Public hearing closed. Sanden moved to approve the conditional use permit for an accessory residence for Steven and Susan Boyer, due to the fact it is not contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5/Holst seconded. All in favor. Passed.**

Discuss take action on a status report for a conditional use permit for a Nonmetallic Mining operation in the General Rural District for CMC Spring Valley LLC, owner on property located in the SE ¼ of the SE ¼ of Section 9, T27N, R15W, Town of Spring Lake, Pierce County, WI. Staff Report – Brad Roy: You are all familiar with this site. This review is intended to enable the LMC to determine if the conditions associated with this permit need to be altered or amended to address any outstanding concerns. Last fall the Town of Spring Lake had a meeting to address some concerns it had with the County Materials operation. The issues discussed were:

- The number, type and frequency of trucks
- Visibility of the operation
- Dust
- Jake-braking
- Un-tarped trucks

A status report was presented to the LMC on November 17, 2010. The LMC requested another review to be attended by plant management to respond to the concerns presented. The conditional use permit for this operation was renewed on April 21, 2010 with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm, Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline and for all other properties as agreed upon by County Materials (Jones, etc). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.

21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.

22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line and at 1 ½ miles from property boundary and shall submit results to the Land Management Department. Such readings shall be taken three times annually and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.

23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.

24. A lockbox with access key shall be made accessible to emergency personnel.

25. Applicant shall provide a status report to the LMC in 6 months.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area.

Chairperson Barkla invited Mike Jacobson, Town of Spring Lake Supervisor, to speak. Mr. Jacobson stated since last November the quarry has been quiet. He would like to have Jack Sonnetag address the complaints that arose last summer. Jack Sonnetag stated the most prevalent complaint is the dust. He takes full responsibility on this one because he didn't order the right equipment when they put in the two conveyors. These conveyors are up 35 ft in the air and the material was dropping and the wind was taking it. As soon as they got hydraulics on the conveyors to raise and lower the load, it helped. The untarped trucks; they have checked with DOT and their attorneys on how often they will be sued on enforcing a law the DOT doesn't have. State of WI doesn't have a tarp law. All their trucks are tarped but if they try to make the other driver's tarp their trucks because they won't follow their rules, they are open to a suit. The jake-braking; every time he has been out there he has never heard a jake-brake. They have signs up also for tarping their loads. Once the truckers are on the highway, if they untarp their load, he doesn't know what they can do about it. Holst stated the truck driver is responsible to keep his load on his truck, correct? Mr. Sonnetag stated correct. Holst, if that load blows off because it is not tarped then he is in violation of the law, correct? Mr. Sonnetag stated correct if he is stopped by a State Patrol or any other officer of the law. Holst stated it would be in the best interest of the law for them to have their loads tarped so they are not in violation of the law. Put a sign up stating that. Mr. Sonnetag; The visibility of the operation; they have been planting more trees. An area on the north end is unreclaimed yet so that will be one of their first jobs in the spring. The number, type and frequency of trucks; they did a job for the State of WI through an asphalt company and that's why they had an excess number of trucks this past year. It's hard to regulate the number of trucks in at one time. Holst stated it was never the intent of this committee to limit your ability to produce your product or transport it. Sanden stated the only condition that comes close to that is the hours of operation. Chairperson Barkla stated until things get better, suggest to your truck drivers that there might be a little more of a presence by the Sheriff's Dept on the highway near the quarry. Mr. Sonnetag stated he doesn't believe that any of the violations are by their trucks. He stated he is all for that. Chairperson Barkla asked Mr. Jacobson when they would like to come back before the committee. Mr. Jacobson stated in late October or early November. Roy noted that CMC will be back for Conditional Use Permit renewal this April.

Discuss take action on a request for renewal/extension of a conditional use permit for Filling and Grading in the Shoreland/Wetland District by LS Marine, Inc, agent for Joseph and Marilyn Mangin, owners on property located in Government Lot 1, Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Jeff Holst recused himself from discussion and voting on this issue due to possible conflict of interest. Staff Report – Jim Kleinhans: This is a two phase request; this will take care of the filling and grading that is occurring in the near shore area and floodplain. The property is zoned Agriculture Residential. The CUP was approved for Filling and Grading in May of 2010. This is somewhat of a status review on the conditions. The conditions associated with this CUP are as follows:

1. Applicant shall secure all necessary federal, state and local permits and approvals prior to commencing operations.
2. The Land Management Dept shall be notified at the project initiation.
3. Fill placed on Mangin's property shall be removed at the project termination unless authorized under the Chapter 30 permit and complies with local floodplain regulations.
4. Vegetative removal shall be limited to the area identified as being within the "work limit line".
5. A vegetation management and restoration plan for areas within 300 feet of the ordinary high water mark consistent with Section 240-46, shall be submitted to the Land Management Committee for approval within 6 months.
6. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete.
7. Applicant shall adhere to the agreement with the Town of Diamond Bluff.
8. The project shall be completed within 12 months of approval.

There are/were compliance issues associated with conditions 2 and 5. Please consider the following:

Condition 2. Land Management Dept shall be notified at the project initiation. *Land Management Department staff was not notified at the onset of the project.* Jim was notified by a newspaper reporter that they had started operation and the trucks were not being tarped so he reacted on a Friday afternoon and gave the site foreman a copy of the permit that he should follow.

Condition 5. A vegetation management and restoration plan for areas within 300 feet of the OHWM consistent with Section 240-46 shall be submitted to the Land Management Committee for approval within 6 months. We have not yet seen that.

Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CU P be renewed with the following conditions:

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.
2. The Land Management Dept shall be notified when project resumes and at termination. Jim would like to clarify this by adding that if they start up and stop because of flooding we should be notified so we can monitor what is going on in Diamond Bluff.
3. Fill placed on Mangin's property shall be removed at the project termination.
4. Vegetation removal shall be limited to the area identified as being within the "work limit line".
5. A vegetation management and restoration plan for areas within 300 feet of OHWM, consistent with Section 240-46, shall be submitted to the Land Management Committee for approval within 90 days.
6. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete.
7. Applicant shall adhere to the agreement with the Town of Diamond Bluff.
8. The project shall be completed within 12 months of approval/renewal.

Rohl asked how long the extension would be for. Kleinhans stated a year from today but the DNR permit is good until December 31, 2012. **Fetzer moved to approve the renewal/extension of the conditional use permit for Filling and Grading for LS Marine due to the fact this is not contrary to public interest, public health and safety, and the character of the area, with conditions #1 - #8/Rohl seconded. All in favor. Passed with Holst not voting.**

Discuss take action on a request for renewal/extension of a conditional use permit for a Utility Facility >1000 square feet in the Agriculture Residential District by LS Marine, Inc, agent for Joseph and Marilyn Mangin, owners on property located in Government Lot 1, Section 24, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Jeff Holst recused himself from discussion and voting due to possible conflict of interest. Staff Report – Andy Pichotta: This is the second part of the same issue. A conditional use permit was approved on May 19, 2010 to operate a

utility facility > 1000 square feet on the Mangin property to facilitate the movement of dredge materials from Corps Island onto trucks to a disposal site. The CUP was approved with nine conditions listed in the staff report. Dredge material transfer operations did not actually commence until sometime in September 2010. Staff (Roy and Kleinhans) monitored the truck traffic through the Village on a regular schedule once the Department became aware that operations commenced. An advisory committee made up of a Town Board member, two citizens and the Project Manager was established to address any issues associated with the project at the local level. Staff has received complaints regarding the following issues (includes issues raised prior to the October 20, 2010 “status” discussion):

- Failure to notify Pierce County of the start of work
- Failure to post a copy of CUP at the site;
- Failure to tarp loads as required by Condition #8;
- Use of more than eight (8) trucks at any one time as limited by Condition #5;
- Failure to engage additional axles on trucks when loaded;
- Failure to come to a complete stop at stop signs;
- Excessive speed;
- Excessive noise;
- Excessive dust;
- Flag person not present during operations.

Staff monitored the operations on a number of dates and a number of issues were addressed. Staff assessment of issues associated with established conditions:

Condition #2. Dust control appears to be an ongoing problem. Also the traffic control person was found absent on a number of occasions. It was explained to staff that late in the afternoon the traffic control person filed daily work reports at the Monarch pit during the last round of trucks – with this occurring between 4:30pm and 5:00pm. This issue should be resolved as the Town has directed LS to ensure that a flag person is present during all hours of operation.

Condition #3. A permit extension will be necessary to complete this project (current CUP will expire May 19, 2011).

Condition #7. The municipal street sweeper was utilized occasionally. It was noted during periods of frequent rainfall the dust complaints were not as prevalent. A more aggressive maintenance schedule may be necessary.

Condition #8. Photographs were provided to staff showing that, initially, the trucks were not engaging their tarps for outgoing loads. That problem was soon resolved. The drivers will need to insure the tarps are in good condition and utilized for all outgoing loads.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety, and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall secure all necessary federal, state and local permits and approvals prior to commencing operations.
2. Applicant shall conduct all activities as described in their CUP application.
3. All activities must be completed within 12 months unless an extension is granted by the LMC.
4. Compliance issues shall be referred to Land Management Department staff.
5. Use of a maximum of eight (8) trucks at any one time.
6. Requiring trucks to stop at PIG’s transfer station in the event more than one must wait for a train to pass before entering the town.
7. Daily use of a sweeper to clear road of debris.
8. Tarping of all loads.
9. All trucks will meet all “applicable laws and regulations”.

Sanden asked from the staff monitoring as well as condition #8, have there been anymore complaints about untarped loads? Pichotta stated that there may have been one more complaint about a driver that untarped his load just shortly before entering the pit where he was to deposit his load. Pichotta asked Jim and Brad if they had seen any untarped truck during their visits. Roy stated that he had not. Sanden asked about the flag person, it sounded like they weren't present only after the last trucks had ceased for the day. Mr. Luke stated no, the flag person does the paperwork to sign the trucks out. After four had gone through, there would be four more to come, she would go to the pit and sign them out. She was leaving around 4:30pm. It was brought up at a Town meeting to ask them what they wanted us to do. The truck drivers are being paid by the yard and to have to sit there for a half hour was unfair to them. The options were either A: the trucks would come back into town empty or B: they would stop on their last load of the day. They would stop at the intersection with their tickets where they wouldn't normally have to stop. It slows them down for about 30 seconds per truck. That was the option the Town selected. So basically she is there all day with the exception of using the restroom. Chairperson Barkla asked Holst if that is accurate. Holst stated yes, and suggested that the lack of attendance shows that LS Marine has satisfied the people of Diamond Bluff with their performance of meeting their conditions and the spirit of what was going on and some of the larger opponents told these people what a good job they were doing. There are still a handful opposed but they will always be opposed. Fetzer asked how much time LS has left. Mr. Luke stated we figure we are approximately half done with the contract. What they thought was going to work hasn't worked and they are exploring other options. We have never had more than eight trucks, with the number that they are getting they would like to add two more trucks, up to ten trucks. They could get that much more done. Given the fact that they started in September, they had 20 days of down time, they have had two and a half or three months of running time. The Corp has added a little more sand to the island and to get through the whole island to make it more efficient which would be an additional two and a half weeks. Pat Vickman, ACOE, stated the contract that LS Marine originally had with the Corp was for 350,000 cubic yards and that was based upon the Corps measurement of sand that was on the island before the contract was awarded. The Governments contract also allowed them to vary that quantity. Before LS Marine started removing dredging material, the Corp had added another 55,000 yards to the island. The original survey LS Marine did said there was 350,000 yds on the island. Because the money paying for the project is stimulus funds, which are going away, the contract has been modified to go to 405,000 yds and in doing that extended their time for the reasons, #1 was a late start, #2 high water event and #3 because they added an extra 55,000 yds. They are expecting the normal high water event this spring. Government allows extension of time with no money through October 21, 2011, with normal conditions. We don't see any reason why this contract will not be done during the 2011 construction season. If there are issues with Pierce County or Diamond Bluff then they will only take the 350,000 yds but if they take it now, then they can be done for a longer period of time. Chairperson Barkla asked Taylor Luke if he has talked with staff and if there have been complaints of more than eight trucks at a time and about the request for ten trucks. Mr. Luke stated no, it just came up and they believe they can efficiently run, without trucks getting backed up. That's up 800 yds more each day. It wouldn't be any more trucks than last summer with Park's trucks hauling. They had anywhere from eight to ten trucks running and they won't be there this summer. A couple other things; we can try to control the excessive dust. It was our intention of sweeping the street and we watered the haul road and it turned into watering the street. That became an issue in November when watering the road became ice. They plan on having a company spray a chemical to help knock down the dust. They recommend about once a month. The catch 22 on that is it soaks and adheres to everything. They will do it on a Friday afternoon and Monday morning the trucks tend to track it and it sprays up on vehicles. It looks like a film and does wash off. The plus side is that it will help with the dust. **Sanden moved to approve renewal/extension of the Utility Facility >1000 square feet for LS Marine with conditions #1 - #9, modifying condition #5 to the use of 10 trucks at one time/Fetzer seconded. Pichotta stated he has one suggestion; because we attempt to involve Towns and this is an issue in the Town of Diamond Bluff he would modify that to say "Up to 10 trucks may be utilized if authorized by the**

Town of Diamond Bluff. Sanden and Fetzer agreed. Chairperson Barkla suggested another amendment, an additional condition for the flag person to be present during all hours of operation. Sanden and Fetzer agreed. All in favor. Motion passed with Holst not voting.

Discuss take action on Land Records Modernization Plan. Pichotta reports: Recent changes to § 59.72 (Land Information) required that Pierce County create a Land Information Council to remain eligible to participate in the Wisconsin's Land Information program. The purpose of the Council is to review the priorities, needs, policies and expenditures of the land information office and to advise the Land Management Committee on matters affecting the land information office. A county participating in the Land Information Program is able to retain a portion of the fees associated with recording documents in the Register of Deeds Office. These fees are placed into a Land Records Modernization Fund and are to be utilized to implement the Land Records Modernization Plan. A portion of the fees submitted to the State are also utilized to implement Land Records Modernization Plans by awarding grants to counties whose level of fee retention falls below a certain level. The County's Land Records Modernization Plan establishes the county's goals and priorities in making land records and information more accessible to the public and establishes eligible expenditures from the Land Records Modernization Fund. The plan has been subject to a peer review which was conducted to insure that all required elements had been adequately addressed. The Pierce County plan was reviewed by staff from Pepin County and Jackson County. It was their determination that all requirements had been met. The newly created Land Information Council reviewed the draft plan February 1, 2011 and recommended that the Land Management Committee approve the plan. The LMC should primarily review the sections detailing ongoing activities and proposed future initiatives.

Recommendation: Staff recommends the Land Management Committee review the draft Land Records Modernization Plan and determine whether changes or additions are necessary. If no changes are warranted, the Land Management Committee should approve the plan as written. Pichotta reviewed the plan focusing on current projects and future plans, noting that those sections are the crux of the plan. Holst asked about the funds and how much we receive per recording. Pichotta stated there is now a flat rate in place and he believes we receive \$8 or \$10 out of each recording. Holst stated of all the things listed here, will those funds cover all this. Pichotta stated it has, as long as people continue to have documents recorded. Sanden asked about page 11, #9 Land Use Mapping, it says it was done using 1992 orthophotography, is that being updated being that it is over 10 years old. Pichotta suggested that it could be updated. Basically that is just a coverage map used when someone requests to know what areas are developed, wooded, cropland or water. It was done more recently than 1992. That's a good point, we will look into that. **Holst moved to approve the Pierce County Land Records Modernization Plan as written/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated that Emily is requesting to go to the West Central Zoning Association meeting at the Eau Claire County Courthouse on March 10th. There will be no additional costs involved. Jim is requesting to attend the NR115 Shoreland Zoning Rule Ordinance Training hosted by the Department of Commerce in Mosinee on March 31st through April 1st. There are costs involved. **Sanden moved to approve travel/training requests for Emily Lund for the West Central Zoning Association meeting and Jim Kleinhans for the NR115 Shoreland Zoning Rule Ordinance Training/Holst seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

CUP renewal for an asphalt plant and for nonmetallic mining for Monarch Paving in the Town of Trenton

Motion to adjourn at 08:09pm by Holst/Rohl seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(2/4/11)

MINUTES - Pierce County Land Management Committee Meeting, February 2, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 16th and March 2nd & 16th, April 6th & 20th, all in 2011.

Approve Minutes: **Sanden moved to approve the January 19, 2011 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the Industrial District, General Rural District and the Exclusive Agriculture District for Wieser Concrete Properties, LLC, owner on property located in Sections 4, 9 & 10, T25N, R16W, Town of Salem, Pierce County, WI.

Staff Report – Brad Roy: This request is for four nonmetallic mines on the Wieser property. The mining product is used for production of concrete products. Reclamation plans and fees are submitted to Pierce County for pits 1 and 2. Pits 3 and 4 have been issued DNR Chapter 30 permits which covers reclamation. The property is zoned Industrial, General Rural and Exclusive Agriculture. Mining operations are located primarily in Exclusive Agriculture zones. Mining has continued on a very limited basis. Acreage has remained similar since the previous renewal. There is a chart in the staff report showing the sizes of the pits. The Quarry (#1) on the hilltop is located in Sections 9 & 10 and is the limestone source. Blasting operations are from 8:00am to 5:00pm several days per year. After blasting, the limestone is crushed and transported to the bottom quarry via conveyor for washing and stockpiling. The mine behind the pre-cast plant (#2) is located in the valley and is mined for sand and gravel. Review fee calculation is \$200 plus \$20/acre, which totals \$200 + (\$20/ac x 40.3 ac) = \$1,006. The WDNR has notified Land Management staff that Wieser Concrete does not have all of their required WDNR permits. The Chairperson of the Town of Salem was contacted about this renewal; Mr. Shingledecker stated that the Town supports the renewal of the existing permits. Staff has not received any complaints about the mining operations. The existing conditions are listed in the staff report #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Renewal fee in the amount of \$1,006 shall be submitted to the Land Management Department.
2. All required permits shall be kept current with the DNR.
3. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
4. A 100-ft setback shall be maintained from all property lines for all mining activities.
5. The applicant shall notify the Zoning Office if groundwater is encountered.
6. Blasting shall be conducted by a state licensed blaster.
7. Blasting shall take place between the hours of 8am and 5pm.
8. Reclamation shall be completed consistent with the submitted plans.
9. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of any mine where blasting takes place. All results shall be provided to the Zoning Office.
10. Any unforeseen erosion issues shall be addressed to the satisfaction of the County.
11. Applicant shall comply with PCC Chapter 241 Nonmetallic Mining Reclamation.
12. Reclamation financial assurance information shall be reviewed and approved by Corporation Counsel and kept current.

13. The conditional use permit shall expire in 2 years.

Holst asked what DNR permits are missing. Roy stated there is an issue with Shoreland and a Filling & Grading issue not related to this. With the reclamation permits that they just gave me there was some information that is needed, but nothing crucial.

Holst moved to approve the conditional use permit renewal for nonmetallic mining for Wieser Concrete with conditions #1 - #13/Rohl seconded. All in favor. Motion passed.

Committee to convene into closed session pursuant to WI § 19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit: performance evaluation of Land Management Director. Holst moved to convene into closed session/Fetzer seconded, Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes, Barkla-yes and Sanden-yes. Passed. Convene into closed session at 7:07pm.

Motion by Rohl/seconded by Sanden to return to open session at 7:25pm. Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes, Barkla-yes and Sanden-yes. Motion passed.

Motion by Holst/seconded by Rohl to approve a step increase for the Land Management Director based upon a satisfactory annual review. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta stated that there were no requests at this time.

Departmental Update and Future Agenda Items

Conditional use permit request for an accessory residence in the Town of Martell

Status report for County Materials

Renewal/extension of conditional use permit for Filling & Grading and for a Utility Facility for LS

Marine in the Town of Diamond Bluff

Update on the Land Records Modernization Plan

Motion to adjourn at 07:27pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, January 19, 2011

Present: Paul Barkla, Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Barkla called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 2nd & 16th and March 2nd & 16th, all in 2011.

Approve Minutes: **Rohl moved to approve the January 5, 2011 LMC minutes/Fetzer seconded. All in favor. Passed.**

Discuss take action on a request for a conditional use permit for the expansion for a Nonmetallic Mining operation in the Agriculture Residential District for Wisconsin Industrial Sand Co., agent on property owned by Edmund & Dawn Daleiden, Jeffrey Von Holtum and Lost Creek Farms, on property located in Sections 10, 11, 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.

Chairperson Barkla, speaking on his own behalf, expressed his frustration after reading the minutes of the CAC meeting in which it is stated that the County is not allowing the public to speak. Chairperson Barkla stated he has leaned over backwards to give people the chance to give their opinions. That is one of the things he really tries to do.

Chairperson Barkla directed Pichotta to present the handout on conditional use permit standards. Pichotta presented applicable Pierce County Code provisions and discussed issues relating to the issuance of conditional use permits. Chairperson Barkla asked if anyone had questions regarding the conditional use permitting process. No questions were raised.

Staff Report – Brad Roy: WISC is requesting to add 538 adjoining acres to its current underground mining operation (Lost Creek Farms-318 acres/Daleiden-102 acres/Von Holtum-118 acres). They have agreements to lease or purchase properties. This request is not to change the mining process or activities, but rather to allow the existing mine to continue onto new property. The mine operates 24 hours a day, seven days a week and employs 45 people. Most of the activity associated with the operation takes place within the Village of Maiden Rock, which houses the processing plant. The mine received its first conditional use permit from the Land Management Committee in 2004. The original permit was renewed on September 15, 2010. The original permit was also discussed on November 17, 2010 regarding blasting complaints from surrounding land owners. This request for expansion was first heard on December 15, 2010. The Land Management Committee deferred action and asked that additional concerns to be sent to the Land Management Staff prior to January 5th. Staff received numerous letters with various concerns and complaints. The letters were also forwarded to Wisconsin Industrial Sand to provide them an opportunity to respond. Tunnels are created by blasting; WISC uses a room and pillar method. The entire mining process will take place underground; mining activities will include underground blasting and washing. Surface activity is largely limited to the processing plant in the Village of Maiden Rock. There are two ventilation shafts in the current mining area that extend up to the surface. New shafts will most likely be required, if the expansion is granted, to provide clean air to the underground mine. The exact location of any potential new shafts cannot be determined at this time. The potential new ventilation shafts should be the only change to the current surface activity on the proposed expansion site. The land is currently used for agriculture. The proposed expansion will not prevent future agricultural uses. No new wells are needed for the expansion. There are currently four wells onsite. Three of the wells are high capacity wells capable of

pumping 1,000 gallons per minute. WISC is currently using two of the three high capacity wells and its goal is to create a water recycling system which will reduce the need so only one well is used. The current mining activity takes place at approximately 800-830 ft MSL; the Water-Table elevation in this area is mapped at approximately 750 ft MSL. In the expansion area the Water-Table is mapped at elevations which reach approximately 800 ft MSL. No new exits are planned on the expansion properties. Blasting typically takes place three or four days a week; the blasts usually occur around 5:30pm. The WDNR (and other agencies) regulate many of the activities of a mining operator. This regulatory authority originates not only in the mining laws, but in different environmental statutes. For example, primary authority for the regulation of storm water runoff, impacts to navigable waterways and high capacity wells rests with the WDNR and other State agencies, but are not included in the mining laws. WISC has agreed to provide staff with updated copies of the operation's Storm Water Pollution Prevention Plan, Spill Prevention, Control and Countermeasures Plan and the Wisconsin Pollutant Discharge Elimination System Permit to keep on file.

- The Storm Water Pollution Prevention Plan (SWPPP) is a written document that 1) identifies sources of storm water contamination; 2) prescribes appropriate source area pollution prevention best management practices (BMPs) designed to prevent or minimize storm water contamination; 3) prescribes storm water treatment BMP to reduce storm water contaminants prior to discharge; 4) prescribes actions needed either to bring non-storm water discharges under a WPES permit or to remove these discharges from the storm drainage system; and 5) includes schedules, as necessary, to ensure that the storm water management actions prescribed in the plan are implemented and evaluated on a regular basis.
- The Spill Prevention Control and Countermeasures Plan identify structural and non-structural controls designed to minimize potential effects on storm water discharges and to minimize potential sources of spills.
- The Wisconsin Pollutant Discharge Elimination System Permit (WPDES) applies to discharges of wastewater and storm water from nonmetallic mining operations to surface waters or groundwater directly or indirectly that result in a discharge of one or more of the following:
 - ◆ Contaminated storm water,
 - ◆ Washwater associated with cleaning or separating earthen materials,
 - ◆ Mining site dewatering wastewater,
 - ◆ Dust suppression water,
 - ◆ Water from the outside washing of vehicles, equipment and other objects, or
 - ◆ Other similar wastewaters.

This permit also states that water treatment discharge concentrations shall be below the level of concern for impacts to aquatic life and human health.

- Staff has received concerns from citizens regarding the proposed expansion. The concerns include:
 - Health effects of Silica in the air.
 - ◆ A progress report is currently being prepared to be submitted to the Wisconsin Natural Resources Board that presents a review of what is currently know about sources, emissions, controls, health effects, monitoring and how other air programs in the United States address the issue of silica as an ambient air pollutant. The current findings state *“very little conclusive information exists regarding sources, controls or levels of silica present in ambient air. Because this is a new issue for Wisconsin, this lack of data means it is not currently possible to determine conclusively whether or to what extent the quantity, duration or types of silica emissions in the state may, indeed, be a public health concern.”* It can be assumed that this study will continue. When conclusive determinations are made an informed decision can be made by the Land Management Committee if additional regulations are needed.
 - Depletion of the aquifer.

- ♦ Owners of all high capacity wells are required to submit annual pumping reports to the DNR. Any new high capacity well application is required to face an environmental review. DNR hydrologists will evaluate the information for any potential impacts. Proposals that have the potential to impact protected resources undergo an environmental assessment process by the DNR.
- Contamination of the aquifer and surface water.
 - ♦ The site is internally drained. The previously discussed WPDES and SWPPP are monitored by the DNR.
- Various Village Issues including safety risks due to truck traffic and railroad use, noise and uncovered trucks.
 - ♦ The plant is located within the Village of Maiden Rock. The LMC jurisdiction is limited to the unincorporated areas of the County.
- Blasting effects on wells and structures.
- Potential decrease in property values.
- Several citizens have requested that an Environmental Impact Statement (EIS) be completed. An EIS is a decision making tool which addresses the quality of the human environment. The requirements for an EIS come from the Wisconsin Environmental Policy Act (WEPA). WEPA applies only to the action of state agencies. It does not apply to local governments or private parties unless their actions involve state agency regulation or funding. Although, the Land Management Committee could, theoretically, require the development and submittal of an EIS. PCC §240-76 allows for the LMC/Zoning Administrator to require an applicant to submit any additional information it determines is necessary.

A request for additional information must be accompanied by an explanation of why that information is needed and should be in response to a specific concern or issue. Staff does not recommend the LMC require that additional information be submitted unless the LMC has a specific issue (or issues) that it believes has the potential to present a significant risk to the human or natural environment and that it does not currently possess adequate information with which to make a decision regarding the proposed use.

The Town of Maiden Rock recommended approval of this request on November 10, 2010, without reference to the Town Comprehensive Plan, with the following comments:

- Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what the data means.
- The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.
- The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if the proposed use at the proposed location will not be contrary to the public interest and will not be detrimental or injurious to public health, public safety or the character of the surrounding area, grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate or as suggested by the Town of Maiden Rock or area residents:

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to four times per week, including Saturday.)

2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.
3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. The Reclamation Plan shall be updated to include the changes.
5. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
6. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
7. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
8. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
9. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
10. This permit shall expire in two years.
11. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
12. WISC and the Citizen Advisory Committee shall develop a plan for WISC to respond to damage claims to wells or structures by surrounding land owners. The Land Management Staff shall receive a copy of the agreed upon plan; any failure to comply with the plan will be brought to the Land Management Committee.
13. A groundwater response plan, including accurate determinations of the groundwater level and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation, and a proposed response to encountering groundwater, shall be provided.
14. The Town of Maiden Rock's recommendations/comments shall be adhered to.

Fred Harding asked about condition #2, test results or testing of water, how does that compare to the environmental protection agency safe water guidelines, he understands they have a more stringent test requirement than for three elements. Roy stated it's been our practice with this committee that these are the elements typically found with the blasting in this area and if more elements were found, these tests would signal that. As for another agency, we can't comment on that. Carol Jennings asked if condition #14 means the Village. Roy stated no, it means the Town of Maiden Rock. Our process for a conditional use permit is that it goes to the Town. The Village has its own jurisdiction and has its own process. Ms Jennings asked if it includes the Village at all. Roy stated no. Noting that Ms Jennings question is about the procedure to the vote taken in the Village and that vote does not yet apply because the Village doesn't have a plan yet. Roy stated they are two totally separate issues. The Village has jurisdiction over its land. The Town of Maiden Rock does not have its own zoning authority therefore they have County Zoning. Ms Jennings stated the mine is asking to extend their mining in the Village. Are we discussing the Bamford property? Roy stated no, we are not addressing any land in the Village. Mike Michaud, Town of Maiden Rock, stated that you talk about getting copies of the storm water plans, spill prevention plans, etc, can you explain what review you will do with those documents when you receive them. Roy stated none. We would trust that the DNR is doing their job. This is just to ensure that they are keeping up with their required DNR permits. Mr. Michaud asked if Brad would independently monitor to see that they are keeping up. Roy stated we make sure they are current and that they have them. We're not technically reviewing the information. Mr. Michaud asked about the WPDES, it states the water treatment discharge concentrations shall be below

the level of concern. Do you know if the actual levels of concentration in the discharge water have ever been measured? Roy stated he understands that it has been done by the DNR. These are DNR permits, the fact that they were issued would typically indicate they are at acceptable levels. Michele Maxson, WISC, stated on the storm water ponds they took original samples that were sent to the laboratory. They also did it again, with all the concern from the public, even though the permit states that if your initial sample is within the screen you do not have to do it again. They did it again just to be certain. Mr. Michaud asked where the samples are taken from. Rich Budinger, WISC, stated they are taken from the wash water pond. Mr. Michaud asked if they are taken as it leaves the process and enters the pond. Mr. Budinger stated yes. Mr. Michaud stated regarding the DNR report on the silica; he asked Brad why he chose to recite the particular quote in the staff report rather than the quotes from California or Texas. Roy stated he thought that quote conclusively showed what the report found at this time. The other reports and what they found, didn't apply to the State of WI. The State of WI reports aren't conclusive yet. Mr. Michaud asked if the inconclusive information is due to sources and the fact that nobody has measured anything in the State of WI. Roy stated he would agree this issue is largely an unknown. There are a lot of studies out there that need to be validated. Mark Krumenacher, GZA, stated that the DNR study is a work in progress. It was an assessment by the State to start gathering information to consider if there are health risks with the crystalline silica. So the staff report is correct. The study will be over the next few years. In our office we have an Industrial Hygienist and a Toxicologist that have reviewed the written responses that addressed crystalline silica dust as a concern, including Mr. Michaud's letter. We reviewed the DNR report and the recent report from Environment Canada and from Health Canada. They just finished their screening assessment of crystalline silica. There was also some misinformation provided to the County from a local professor. We also reviewed his work as well. The results of all this information are in our report submitted this week. The bottom line with respect to what GZA recommended and discussion with Wisconsin Industrial Sand is that WISC is going to plan and implement an ambient air monitoring study in the Village of Maiden Rock. Realizing that they are a stake holder with other sand and mine companies that the DNR is going to regulate in time, regarding the crystalline silica dust, they are going to participate in a study to evaluate the air quality in the Village, in the Township, in and around the mine, to start gathering data that the DNR can then use for their study. Mr. Michaud stated you received complaints on blasting effects on wells and structures, but the condition didn't change. Roy stated the original permit was discussed on November 17, 2010. The issue wasn't resolved. Mr. Michaud asked if this scope would cover amendments to the existing permit or if it is limited to the conditional reserves. Pichotta stated that this is a request for an expansion, an addition to the existing permit, so it would encompass the entire operation in the County's jurisdiction. Mr. Michaud asked if changing of blasting conditions is appropriate to consider, yet you didn't recommend any changes. Pichotta stated anything associated with the mine could be considered by the LMC. Staff recommendations are merely that, for the committee to consider. Cheyianne George stated condition #12 should take care of her problem. Mr. Michaud stated staff and the committee received an extensive report in the past few days. Very few people have had a chance to view that and respond. Roy stated we have copies of it in our office. We sent you everything electronically that we could. Mr. Budinger stated they will be getting copies to the Village and Town. Ms Jennings asked if it could be put online. Mr. Budinger stated it's very large and tomorrow they will be making the copies for the Village and the Town. Chairperson Barkla stated that he and the other gentlemen on the committee, who have to make the decision, have had a chance to review the information. Sanden thanked the citizens for providing letters and WISC for the systematic way they provided good information on each of the topics brought up. He spoke with a Hydro-geologist, with no association to the mine, about the impact on drinking water. One of the issues brought up by several people was the relying on experts hired by the mine and that information would be tainted. He took the latitude of talking to some experts in the field who have no association with Wisconsin Industrial Sand Co. The Hydro-geologist, worked in consulting firms throughout WI and MN. He has about two decades of experience in the field. Sanden asked him about contaminants in the drinking water. He is familiar with the area, especially the

hydrogeology of the area. He mentioned all the underground water flow is heading from the mine directly down toward the river, there's nothing going upstream in that situation. So any pollutants that may be generated by WISC would not be able to get into anybody's wells that are upstream. He did say if anything we should be concerned about the Mississippi because that's the way it's flowing. Sanden also asked him about heavy metals, he verified what WISC experts opinion stated. This formation is 99.9% quartz silica sand. There are no heavy metals in that formation. As far as the polymers to wash the sand, he stated it could be an issue with the river, not the wells. Not knowing what the polymer is, they couldn't go into detail. Sanden also spoke with a Field Geologist, who has worked in the field for 35 years, regarding the radon gas release. He mentioned that the Prairie Duchene formation that overlies the material that they are mining is already fractured. The whole formation is riddled with fractures and that any blasting will not cause additional radon gas release. He did mention that subsidence might be an issue in the future but the pillaring system would have to be robust and they did mention in the document that they are very conservative. He mentioned also that blasting now days is pretty much an art form. They really have it down to a science and they know how much they need and where it should be placed. Sanden was satisfied with the answers that for the most part validated everything told to you by the mine experts. Chairperson Barkla asked if he would state who the individuals were. Sanden stated Dr. Kerry Keen, Hydrogeologist and Dr. William Cordua, the Field Geologist. Sanden suggested monitoring wells between the mine and the river if they wanted to think about contamination. Fetzer thanked the public for their input and stated he did take the time to read everything he received. When he knows it's an important issue he likes to check things out himself. He toured the mine and also noted that he had stayed in a B & B in Maiden Rock. Rohl agreed that most questions have been covered. Holst stated he commends the public participation; that everyone has acted civilly over a contentious issue. WISC did a very good job of addressing the issues in the public hearing and after the hearing. In his mind, the questions that needed to be answered were answered. **Holst moved to approve the conditional use permit request for expansion of the nonmetallic mine operation with conditions #1 - #14 due to the fact this is not contrary to public interest nor detrimental or injurious to public health, public safety or character of the surrounding area/Rohl seconded.** Sanden asked if the committee wanted to add conditions that were suggested in the report about a domestic water supply/well protection program, blasting vibration monitoring program, ambient air monitoring study. Holst stated he believes they are doing them voluntarily and he sees no point in adding them. Mr. Budinger stated condition #12 covers what they stated in the report that would cover the ground vibration study and would include pre-blast surveys and response to complaints. An excellent recommendation is adding the CAC development working with WISC. Chairperson Barkla asked if we have it on record that you are going to continue to work with the CAC. Mr. Budinger stated it's a commitment they have made with the neighbors and community to have monthly meetings at this time until everybody is satisfied. Maybe a year from now they will go to a quarterly meeting. The postings for the meetings will be in the Village and Town Halls. Holst stated they will come back before us. **Sanden asked to make a friendly amendment the motion by adding condition #15 WISC will be subject to control methods deemed adequate by LMC for silica emissions if current studies suggest a significant public health threat from such emissions. Holst and Rohl agreed to the amendment. All in favor. Motion passed.**

8:00pm Chairperson Barkla called for a 5 minute recess.

8:06pm LMC meeting resumed.

Discuss take action on Travel/Training Requests. Andy Pichotta reports: Rand Kluegel would like to attend the Wisconsin Land Information Association Conference in Madison, February 16th through the 18th. Andy reminded the committee that we receive a \$300 grant for his attendance at this conference. Sanden stated that it is a very good conference. **Sanden moved to approve the travel**

request for Rand Kluegel to attend the Wisconsin Land Information Association Conference in Madison/Fetzer seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Performance Evaluation of Director of Land Management

CUP renewal for Wieser Concrete in the Town of Salem

Motion to adjourn at 08:10pm by Holst/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 19, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates: February 2 nd & 16 th , March 2 nd & 16 th , all in 2011.	Chair
3	Approve minutes of the January 5, 2011 Land Management Committee meeting.	Chair
4	Discuss take action on a request for a conditional use permit for the expansion for a Nonmetallic Mining operation in the Agriculture Residential District for Wisconsin Industrial Sand Co, agent on property owned by Edmund & Dawn Daleiden, Jeffrey Von Holtum and Lost Creek Farms, located in Sections 10, 11, 13 & 14, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
5	Discuss take action on Travel/Training Requests	Pichotta
6	Future agenda items and departmental update.	Pichotta
7	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(1/7/11)

MINUTES - Pierce County Land Management Committee Meeting, January 5, 2011

Present: Jeff Holst, Don Rohl, Eric Sanden and Joe Fetzer

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Absent: Paul Barkla

Acting Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 19th, February 2nd & 16th and March 2nd & 16th, all in 2011.

Approve Minutes: **Sanden moved to approve the December 15, 2010 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet for a substation in the Primary Agriculture District by Xcel Energy, agent for Fannie Mae, owner on property located in the SE ¼ of the SE ¼ of Section 1, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Fetzer invited Sarah Schwartz forward: Ms Schwartz, Land Rights agent for Xcel Energy, stated that this is a replacement project. We have a switching structure that is located on Dallas Webb's property at 510th St. The equipment that is on the structure is outdated and needs to be replaced. We needed to stay in close vicinity of where these lines meet. There wasn't enough room on the Dallas Webb property. This property was in foreclosure and the project really needs to be completed within the next year.

Staff Report – Emily Lund: Xcel Energy is requesting a Utility Facility >1000 square feet. They currently have the cross wires on an easement through this 34.92 acres, where overhead wires run southwest to northeast. Another set of wires follow the road of 510th St. The property is located in the SE ¼ of the SE ¼ of Section 1, Town of Hartland. The property is zoned Primary Agriculture. A CUP is required for utility facilities over 1000 square feet under Pierce County Code § 240-41F. The lot is currently farmed as a corn field. A CSM was reviewed and approved on December 10, 2010. Overhead lines run parallel with 510th St and intersect on a utility pole at Dallas Webb's property and run southwest to northeast. The new project will extend three overhead power lines to Xcel's parcel. One of the overhead lines will be extended off of 510th St onto the NE side of the parcel and two overhead lines will be extended off the existing SW-NE line and run from the south part of the parcel. The substation will be enclosed by a chain linked security fence and gate. Off road parking will be provided for operation and maintenance vehicles, warning signs will be posted, miscellaneous transmission and distribution electrical equipment and a 14 ft by 24 ft electrical equipment enclosure will be constructed. Various maps, construction details and a contour, grading, erosion control & maintenance plans were submitted for review. The structure meets the setbacks. The soil tested area was approved. No personnel will be permanently assigned to the site, so no well or sanitary sewer facility will be installed. The site will be maintained for drainage and utility vehicles. Road access off of 510th St has been submitted and approved by the Town of Hartland. Xcel has received a UAN sign. The Town of Hartland recommended approval with no conditions.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use is contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The substation shall be enclosed by a chain-link fence at least 10 feet high.
2. All structures over four feet high shall be located at least 75 feet from a dwelling unit and 50 feet from any residential lot line.

Chairperson Fetzer opened the hearing to the public. David Esterby, Hartland Town Chair, stated that the town approved this some time ago. Sheldon Huppert questioned where the property line is to the north. Ms Schwartz showed the map and explained the location. Mr. Huppert asked if they are building more than a switching station; a transformer as well? Schwartz stated no, just a switching station. Lund explained there is a NE-SW line on the map, there is currently overhead power lines going that direction. She showed him where the switching pole is located and the area where the CSM is located. Mr. Huppert stated the lines are on the east side of the road and they have to cross the road. Ms Schwartz stated this isn't changing anything at all its still 69KV line. It's outdated equipment that they will be replacing. They will only be working with the overhead line. Looking at the location plan, you can see where the 69KV line from the south goes, that is the overhead line. It will go to the north and cross over to the east. It's basically a tap into that line. Brenda Singer, lives on 370th Ave in Salem Township, asked how big it is going to be and how far does the electric magnetic field go? Ms Schwartz stated it isn't any bigger than what is there right now in terms of the electro magnetic field. There isn't any voltage increases with that. The electrical equipment house is 14ft x 24ft. It's just basically the poles that cross. There has to be a safety chain link fence. They are taking existing wires and taking them into the switching station. Ms Singer also asked about any interference with TV, internet, phone or if there will be humming noise. Ms Schwartz stated there shouldn't be anything different than it is today. **Public hearing closed.** Rohl asked how much larger this lot is than the previous lot. Ms Schwartz stated the previous lot was very small. This lot had to be at least an acre for County requirements. The lot is larger because otherwise they would have had to have easements. It made more sense to own it. Rohl asked if the property was from the same owner. Ms Schwartz stated it was Jim Dahl that owned it but it went back to the bank so Fannie Mae owned it. Holst stated that there are very few places in the County, outside of an incorporated area, that are on a power source other than Pierce-Pepin. He noted that it is common place for Xcel to run their power lines through jurisdictions where we don't get to take advantage of their rates. They bought the easements; they have to get their lines in to get power to their customers same as the way we get power. **Holst moved to approve the conditional use permit for a Utility Facility >1000 square feet for a substation in the Primary Agriculture District by Xcel Energy, agent for Fannie Mae with conditions #1 - #2 due to the fact that the proposed use is not contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for a rule exception to an erosion control plan for a 2-Lot Major Certified Survey Map (CSM) for Ryan P. Kelly, owner on property located in the NE ¼ of the NE ¼ of Section 16, T26N, R17W, Town of Ellsworth, Pierce County, WI. Chairperson Fetzer invited Ryan Kelly forward: Mr. Kelly stated that he is selling a 14 acre parcel off the 74 acre farm, selling the house and buildings off. This created a second lot of five acres that is land locked. He is selling the least tillable land possible. He had to make it a lot, it's not for building. It has been perked and the Town granted a driveway permit.

Staff Report – Emily Lund: Ryan Kelly has a request in for a rule exception to the requirement that an erosion control plan be completed for a 2-Lot CSM. The previous owners created Lot 1 CSM V12, P36 on Jan. 7, 2008. Mr. Kelly is proposing to create his 2nd and 3rd parcels within a five year period, which is considered a Major CSM. This Major CSM received approval from the Village of Ellsworth this week. The Pierce County Code requires erosion control plan for Major CSM's include accompanying information:

Rule exceptions per PCC Subdivision of Land § 237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.

- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The property is located in the NE ¼ of the NE ¼ of Section 16, Town of Ellsworth. The surrounding land use is mostly agricultural and some residential. This property is in the Village of Ellsworth's ETZ District. The following conditions must be present for a proposed land division to qualify for this type of rule exception (LMC policy):

1. No roads are being constructed as part of the land division.
2. No erosion problems are present on the property.
3. There are no problems with stormwater or surface water flow on the subject property or that originate on the subject property.

No roads are being constructed as part of this proposed land division. Staff visited the site on 12-21-2010 and no erosion or stormwater issues were apparent on the property. Please note that it is winter and the ground is frozen. Lot 2's land is flat, Lot 3 has some rolling terrain and existing buildings and the corn crop was harvested. Town road 610th St adjoins the proposed lots to the East.

Staff Recommendation: Staff recommends the Land Management Committee consider whether or not this situation warrants a rule exception.

Sanden asked whether, given that the property is snow covered, any erosion issues would be apparent at this time. Barry Foy, Ellsworth Town Chair, stated he is very familiar with the property and that drainage on the land is not a problem. There is a lot of water that comes off the hillsides but it has its own natural way of getting out of there. He sees no problems with the land.

Sanden moved to grant the rule exception to the requirement that an erosion control plan be completed for a 2-Lot Major CSM for Ryan Kelly due to the fact it meets conditions #1 - #3 of the LMC policy/Rohl seconded. All in favor. Passed.

Discuss take action on a request for approval of a 2-Lot Major Certified Survey Map (CSM) for Ryan P. Kelly, owner on property located in the NE ¼ of the NE ¼ of Section 16, T26N, R17W, Town of Ellsworth, Pierce County, WI. Staff Report – Emily Lund: We're in the same location.

The request is for a 2-Lot Major CSM. The previous owners created Lot 1 and Ryan Kelly is proposing to create Lots 2 and 3 within a five-year period, which is considered a Major CSM. A rule exception has been approved. Surrounding land use is mostly agricultural and some residential. The property is located in the Village of Ellsworth's ETZ District. The Village of Ellsworth's Plan Commission and the Town Board approved the CSM on Jan. 3, 2011. Barry Foy, Town Chairman issued a letter of access approval on 12/20/2010 for a driveway to be allowed in the future for Lot 2 when the Lot gets developed. They conditioned the location of the driveway. The current owner doesn't want to develop the property at this time. He wants to continue farming Lot 2 and the remainder of the land surrounding the buildings. The Town of Ellsworth's minimum lot size of 2.5 acres is met on both lots. Per § 237-17(B)3, staff reviewed if the land was subject to any hazards to life, health or property; no such hazards were found. The CSM meets slope requirements. Charlie Webster completed a soil test and found a location for a drainfield. The Land Conservation Department reported this land is in the Farmland Preservation Program through February 6, 2011. Therefore, no buildings shall be constructed on Lot 2 until the land is taken out of the program or the contract expires. Pierce County Surveyor, Louie Filkins, reviewed and approved the CSM. Survey review fees have been paid.

Staff Recommendation: Since the rule exception has been granted, staff recommends the Land Management Committee approve this major CSM with the following condition:

1. No building shall be constructed on Lot 2 until the land is either taken out of the Farmland Preservation Program or until after the contract expires.

Rohl moved to approve the 2-Lot Major Certified Survey Map (CSM) for Ryan Kelly with condition #1/Sanden seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for a private heliport in the General Rural Flexible 8 District for Christopher Brekken, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Chairperson Fetzer invited Mr. Brekken forward: Mr. Brekken stated he just wants to continue with what has been going on for quite awhile.

Staff Report – Brad Roy: The conditional use permit for the heliport was issued on Jan. 6, 2010. The site was approved by the Dept of Transportation. The FAA granted approval for personal use only; therefore this facility could not be used for public or commercial flights. A status report was submitted on July 21, 2010. Condition #3 was modified to allow up to 10 night flights per calendar year. At the status report the applicant submitted a statement describing the activities up to that time. The applicant recently stated that the activities have remained consistent to those described at the status report. Staff has received complaints regarding the flight path for take-offs and landings. The Town of Oak Grove Chairperson was contacted about this renewal request and expressed no issues or concerns. The conditions are listed in the staff report #1 - #10.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area. If no additions or modifications are necessary, staff recommends the LMC renew this conditional use permit with the following conditions:

1. The conditional use permit shall be renewed in 1 year before the Land Management Committee.
2. Any potential or future changes or intensification in the use of the heliport shall be approved by the Land Management Committee.
3. The heliport is approved for daylight operations and up to 10 night flights per calendar year.
4. Approach and departure shall follow 180/360 flight path unless the committee finds modifications are necessary to mitigate impacts to surrounding neighbors.
5. Maintain the clear zone around the heliport following the 8:1 ratio.
6. The total number of take-offs and landings may not exceed 30 per month.
7. Proof of adequate liability insurance shall be provided.
8. The conditional use permit shall terminate if the Department of Transportation revokes either their certificate of approval or Mr. Brekken's pilot license.
9. Onsite fuel storage shall be in approved containment vessels.
10. Applicant shall provide a status report to the Land Management Committee in 6 months.

Holst asked about the complaints of the flight path and landings. Pichotta stated that those were complaints that he had received. It was stated that Mr. Brekken was not following the prescribed flat path. Sanden noted that in the report it said there were no issues or concerns. Pichotta stated the complaints were made directly to County staff and not the Town. Andy spoke to Jerry Kosin who indicated he hadn't received any complaints. Sanden asked if the person gave any details as to whether it was happening often or once? Pichotta stated he received two or three complaints regarding the issue. Steve Nelson, neighbor, stated that Mr. Brekken has flown out east to west right above his property. He wasn't aware that he could fly at night now. Roy stated the condition states 10 night flights per calendar year. Mr. Nelson questioned why he wasn't contacted for that meeting. Roy stated that we are required to contact residents for public hearings, that wasn't a public hearing. Mr. Nelson asked if there have been any changes to the helicopter that he has permission to fly. He knows there has been another helicopter coming in and out of there, it's yellow but it's a different one. Roy stated the permit does not specify what helicopter he can fly. Mr. Nelson stated when it was originally discussed it stated what helicopter was coming in and out of there. According to Aircraft1.com he owns two helicopters, one for individual and one corporate. The corporate one wouldn't be for personal use. Roy stated the permit states it's for personal use, it would be permissible to use a different helicopter for personal use. Mr. Nelson asked Mr. Brekken if he is flying his corporate helicopter out of there and what the other helicopter was. Mr. Brekken stated no and that he bought it

for parts. Sanden asked Mr. Nelson how many times was the east-west flight pattern done in the last year. Mr. Nelson stated about half a dozen. Mr. Brekken stated he always takes off to the north, eventually he turns depending on where he is going. He avoids the south because there are more houses. Fetzter asked if there was a distance determined. Mr. Brekken stated no. Holst stated he usually turns after a 40, about a ¼ mile whenever he has seen him. Mr. Nelson stated there is a bluff to the north so if he went out and went past the top of the hill then went east or west, there isn't anyone up there. **Holst moved to grant renewal of the conditional use permit for a heliport for Christopher Brekken with conditions #1 - #9 eliminating #10/Sanden seconded. All in favor. Passed.** Mr. Brekken asked if he will be notified when he has to come back before the committee. Roy stated that we do track it, but ultimately it is your responsibility to contact the department.

Discuss take action on amendments to Pierce County Code Chapter 240 relating to rural business/agritourism. Staff Report – Brad Roy: The Pierce County Comprehensive Plan's "Action Plan" identifies the following tasks to be completed by Department staff

- Investigate potential for creation of new mechanism to permit entrepreneurial activities that are site dependent.
- Identify and pursue strategies to implement goals, objectives and policies identified in the Comprehensive Plan.

Many of the goal, objective and policy statements are relating to entrepreneurial ventures and agritourism. Staff presented the concept for potential code amendments relating to rural business/agritourism on September 15, 2010. Staff was directed to proceed with developing Zoning Code provisions which would be permissive in regard to the establishment of rural businesses and agritourism. Such activities would be permitted through the issuance of a conditional use permit, with the understanding that the scope of allowable activities would be tempered by a given towns comprehensive plan. You may recall that the County plan states that Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended comprehensive plan to be consistent with the "public interest" for decisions relating to that governmental unit or municipality. Once the committee has approved the proposed changes, staff will, prior to scheduling a Public Hearing, distribute the draft language to Towns under County Zoning. Staff will also provide examples of comprehensive plan language that could be used to limit allowable uses within a town to those deemed appropriate by the Town Board and Planning Commission. Along with the proposed agritourism/rural business amendments, staff is proposing numerous additional changes to the code that will remove redundancies and address portions of the code that are confusing or unneeded. This will help ensure consistent interpretation and administration. The existing code designates all business-related uses as Commercial uses. This creates an assumption that the most acceptable location for all such uses is within the Commercial or Industrial districts. The Zoning Code currently lists specific "Commercial" uses in § 240-36 and in the Table of Uses – such as Antique Shop, Kennels and Mini-storage. Property owners wishing to start a business that is not specifically listed are left with three options: Home Occupation, Home Business and Farm and Home Based Business. Each one of these has size and employee limitations. They all could be considered as a sort of business "incubator". Once those businesses get beyond those sizes and threshold of employees, they would be required to move into the appropriate district either Commercial or Industrial. Not all types of businesses are ideally suited for the Commercial and Industrial districts. The proposed code changes are intended to allow for expanded business opportunities that are site specific and compatible with active agriculture. Staff is proposing to create a new subsection, § 240-35B for "Agricultural Enterprises" to provide additional opportunities that are site specific to property owners who are involved in active agriculture.

- Proposed new uses to be included in the Agricultural Enterprises subsection include: Agritourism, Nursery, Orchard and Winery. All of these uses will require that activities conform to the definition of "General Agriculture".

- Staff is proposing to move § 240-36D Farmers Market and § 240-36L Roadside Stand out of § 240-36 Commercial uses and into the proposed Agricultural Enterprises subsection. (Staff is also proposing to modify the existing regulations.)
- Use specific regulations are limited to Farmers Markets and Direct Market Agriculture (formerly Roadside Stands). These are the only uses that would be allowable with a Land Use Permit. Establishment of other uses would require a Conditional Use Permit. The Land Management Committee will have the ability to impose any condition to limit the scale and intensity of the use to the level it believes is appropriate. It should also be noted that the Conditional Use Permit process will require an applicant to present the request to the Town and will allow for the Town's Comprehensive Plan to be applied.

Staff also has identified the need for an additional site specific use classification which is unrelated to agriculture. Uses which are dependent on the natural surrounding area and the environment would also have the same challenges previously discussed under a Home Occupation, Home Business or Farm and Home Based Business permit. The Commercial and Industrial districts are not typically a suitable option.

Staff is proposing to create a "Nature-Based Operations" and a "Resorts" classification. A proposed "Nature-Based Operation" would require the Land Management Committee make a determination as to whether the proposed use is, in fact, reliant on the natural environment, as well as impose conditions to limit the scale and intensity of the use to an appropriate level. An example of a nature based operation would be Crystal Cave located near Spring Valley.

The addition of "Resorts" will allow for outdoor recreational facilities to provide lodging to its guests. Currently, Bed and Breakfasts are limited by the need for an associated personal residence and Lodging facilities are only permitted in the Commercial District. An example of such a use would be a hunting or fishing outfitter that provides lodging.

Because Resorts and Nature-Based Operations do not have a connection to agriculture, staff is proposing to add these uses to § 240-39 Outdoor Recreational Uses.

- The establishment of these uses will require a Conditional Use Permit. The Land Management Committee will have the ability to impose conditions necessary to limit the scale and intensity of the use to the level it believes to be appropriate. And again, the Conditional Use Permit process will require an applicant to present the request to the Town and will allow for the Town's Comprehensive Plan to be applied.

Staff is proposing the following changes relating to the Agricultural, Commercial and Outdoor Recreational Uses.

- Staff is proposing to remove Greenhouses, Antique Shop/Art Gallery, Institutional Recreation Camps and Trade/Contractor Establishment from the code. These uses do not require special designation and can be permitted more appropriately through other mechanisms.
- Staff is also proposing to insert language relating to General Retail and Services, Offices, Private Outdoor Recreational Uses and Public Outdoor Recreational Uses into the code, uses which were previously only listed in the Table of Uses. A definition of General Retail and Services was also created. By doing this the code will be presented more consistently in that every use will be listed in the appropriate use section, the Table of Uses and have a definition. This should provide clarity for the general public.

Staff is also proposing to modify the Campground regulations in § 240-39. There are currently different regulations for regular "campgrounds" and "seasonal campgrounds". Staff is proposing to unify these regulations into one section for all campgrounds. The proposed changes will also eliminate regulations that address options that would arguably be best handled by campground management. Another proposed change is to no longer allow for Outdoor Recreational Uses in the Residential Districts. The definition of Outdoor Recreational Uses is very general and could result in a use which is not compatible with the residential districts and what they are intended for (protecting residential

development from incompatible uses). This change would eliminate the opportunity for a residential development to establish a private park, so staff is proposing to create a “Residential Park” use classification that would be Conditionally Permitted in the Residential Districts. This will provide protection to the Residential District and again, the LMC would have the opportunity to react to the private park proposal and address any issues with its size or scope.

The attached pages show the actual code changes, listing the conditional use permit and table of use changes, any definition changes as well. Most of the changes the committee has seen before. Holst asked where Trade/Contractor Establishments, which is proposed to be eliminated, would be permissible. Roy stated it could be General Retail or Services; it could be permitted in the Commercial or Industrial District, if it were to be done out of a residence, depending on its scope, it could be a Farm and Home Based Business that would have the size and employee limitations. I believe it could also be a Home Occupation if there were no outdoor storage and it were completely run out of the home. A lot of the changes are in the Outdoor Recreational Uses. Holst asked if it was still allowed to have a tent and a mobile recreational vehicle on the same site. Roy stated we are proposing to leave those types of decisions up to campground management. Sanden asked Brad about pick-your-own farms, would that fall under the Direct Market Agriculture? Roy stated yes. Pichotta asked about page 9 where we’ve eliminated the shelter unit. Does that eliminate the potential for additional Nugget Lake camping cabins? Roy stated he doesn’t think it would. Pichotta suggested that staff would look at that again to ensure no issues. Sanden stated we recently had a winery/restaurant operation that created a messy situation, where would that use fit in. Roy stated it could fit in several areas. It could fit the Winery because by definition of the Winery, it would allow retail sales. If it were to come in now, he would recommend it fit under Agritourism; the fact that they are growing grapes on site, if they weren’t growing grapes, he might look at the Winery or the Outdoor Recreational Use. Sanden asked about the Farmer’s Market and Roadside Stands were taken out of the Commercial District, would they still be allowed in the Commercial District? Roy stated Farmer’s Market is permitted but a Roadside Stand wouldn’t because it has the need for the product to be grown on site.

Staff Recommendation: Staff recommends the LMC determine whether the proposed amendments are consistent with prior committee direction. If so, direct staff to begin outreach to the Towns and schedule a Public Hearing at a future meeting. **Committee directed staff to move forward with revisions to Chapter 240 relating to rural business/agritourism.**

Discuss take action on Resolution Authorizing Land Management Department to apply for Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP) Grant to Assist in Farmland Preservation Planning. Pichotta reports: Andy stated there is no resolution associated with this request. Initially, it was thought that it would need to go up through Finance & Personnel and to the County Board but because we’re not spending any outside dollars, and it is within our budget, the LMC has authority to authorize. DATCP is currently accepting county applications for farmland preservation planning grants. A grant may help pay county costs to update the county’s certified farmland preservation plan. County’s facing the earliest planning deadlines will receive higher priority for planning grants. Pierce County must complete their plan by December 31, 2012. Pierce County is eligible for up to 50% of the cost to prepare a farmland preservation plan, up to a maximum of \$30,000. A grant recipient must enter into a grant contract with DATCP in order to receive grant funds. Eligible cost may include county staff costs, consultant fees and related expenses incurred between January 2011 and December 31, 2012. The grant application must be submitted to DATCP by January 14, 2011. What we’re planning to do is basically offset staff costs associated with the in-house development of the plan. As such, only standing committee approval is necessary. We’re essentially looking at using this as a revenue stream. We can do it in-house and get our time partially paid for by DATCP.

Staff Recommendation: Staff recommends the Land Management Committee authorize staff to apply for, as well as enter into a contract to receive, a farmland preservation planning grant from the Department of Agriculture, Trade and Consumer Protection.

Holst asked if the grant contract would just be specific to these funds. Pichotta stated that is correct. **Rohl moved to approve the authorization for Land Management to apply for a Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP) Grant to assist in Farmland Preservation Planning/Holst seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Andy Pichotta reports: Pichotta stated Rand Kluegel plans to travel to Stevens Point at the end of the month with Paul Barkla, Brad Lawrence and Jamie Feuerhelm for a redistricting seminar. **Holst moved to approve the travel request for Rand Kluegel/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Wisconsin Industrial Sand request for expansion in the Town of Maiden Rock

Andy's performance evaluation for the first meeting in February

Pichotta stated that after discussion with Corp Counsel it was determined that, due to an inability to ensure public access and involvement in a mobile meeting, it was not advisable to hold a special on-site meeting. Brad Roy stated that the mine tours are going to be held Jan 13th & 14th from 8:00am to 5:00pm. We will work on getting notice to the public and also noted that they will also be having their Citizens Advisory meeting on the 13th where it would be announced.

Roy stated the County has received a stimulus grant and the Highway Department has installed new boilers for \$30,000.00. We should be getting the reimbursement check soon.

Motion to adjourn at 08:13pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 5, 2011 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Set next meeting dates: January 19 th , February 2 nd & 16 th , March 2 nd & 16 th , all in 2011.	Chair
3	Approve minutes of the December 15, 2010 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet for a substation in the Primary Agriculture District by Xcel Energy, agent for Fannie Mae, owner on property located in the SE ¼ of the SE ¼ of Section 1, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
5	Discuss take action on a request for a rule exception to an erosion control plan for a 2-Lot Major Certified Survey Map (CSM) for Ryan P. Kelly, owner on property located in the NE ¼ of the NE ¼ of Section 16, T26N, R17W, Town of Ellsworth, Pierce County, WI.	Lund
6	Discuss take action on a request for approval of a 2-Lot Major Certified Survey Map (CSM) for Ryan P. Kelly, owner on property located in the NE ¼ of the NE ¼ of Section 16, T26N, R17W, Town of Ellsworth, Pierce County, WI.	Lund
7	Discuss take action on a request for renewal of a conditional use permit for a private heliport in the General Rural Flexible 8 District for Christopher Brekken, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
8	Discuss take action on amendments to Pierce County Code Chapter 240 relating to rural business/agritourism	Roy
9	Discuss take action on Resolution Authorizing Land Management Department to Apply for Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP) Grant to Assist in Farmland Preservation Planning.	Pichotta
10	Discuss take action on Travel/Training Requests	Pichotta
11	Future agenda items and departmental update.	Pichotta
12	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(12/22/10)

MINUTES - Pierce County Land Management Committee Meeting, December 5, 2012

Present: Joe Fetzer, Jeff Holst, Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Brad Roy, and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: December 19th, if necessary, Pichotta indicated it isn't necessary.

Set next meeting dates: Chairperson Fetzer asked the committee if they had any problem continuing on the 1st and 3rd Wednesday of every month at 6:00pm. No one objected. Chairperson Fetzer stated setting a few meeting dates out, they will be January 2nd and 16th, February 6th and 20th, March 6th and 20th and April 3rd and 17th.

Approve Minutes: **Holst moved to approve the November 7, 2012 LMC minutes/Ross seconded. All in favor with Fetzer not voting due to his absence at the last meeting. Passed.**

Public hearing to consider a request for a conditional use permit for General Retail and Services for a canvas and upholstery business, in the Light Industrial District, pursuant to Pierce County Code, Chapter 240-36E, for George Jacques Trust, owner, by Natalie Kraft, agent, on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Natalie Kraft and George Jacques forward: Ms Kraft explained she is requesting a conditional use permit for an existing canvas and upholstery shop. Sanden asked what kind of truck traffic this would generate. Ms Kraft stated very little. It's just drop off and pick up.

Staff Report – Emily Lund: The request is for a conditional use permit for General Retail and Services for Two Rivers Canvas and Upholstery. The property is located in Section 35, Town of Clifton. The request is for a commercial use to be established in a Light Industrial zoning district and the north half of the land is in the General Rural Flexible 8 zoning district. The business is located on a 35 acre parcel. The applicant has been operating this business at this location since late 2003. The Clifton Town Board recommended approval of this request on 11-7-2012 without any specific conditions. The Town did not reference its Comprehensive Plan. The purpose and intent of the Pierce County Code is stated in the staff report. Pierce County Code 240-36E establishes that general retail and services are allowed in the Light Industrial zoning district subject to issuance of a conditional use permit. The proposed use is to be located in an existing building formerly occupied by Jake's Seed. This property is located adjacent to 4 lots that were created by a CSM in 2009 for commercial development. The applicant rents an existing 40 ft by 50 ft building to sew canvas and upholstery and specializes in boat covers and furniture, custom covers and sewing repairs for the public. All work will be done by sewing machines, hand drills, staple guns and air compressors and other small tools and equipment. Applicant is proposing to sell canvas and upholstery cleaners as well as water proofing compounds. There will be no outside storage. Solid waste materials will be disposed of in the dumpster shared with the adjoining property to the south. The applicant plans to run the business without any additional employees. The applicant proposes to be open to the public Monday through Saturday 7 AM to 6 PM and Sunday by appointment only. The 40 ft by 50 ft existing building is located on 35 acres and has an existing well, septic system and two bathrooms, storage area,

office and workshop inside. No new buildings are proposed to be built. There is a parking pad west of the building for 3 parking spaces, with one handicapped parking spot closest to the entrance. Pierce County Code requires a minimum of one space. The applicant proposes to utilize one wall sign that does not exceed 15% of the area of the side of the building to which it is attached, as per PCC 240-60K(1). One off-premise advertisement sign is proposed to cover another existing sign, located on the south adjacent land in the Light Industrial zoning district and will not exceed 24 square feet in size per PCC 240-61F(1). As indicated on the attached plot plan, applicant would need to keep signs out of the road right-of-way and out of the vision clearance triangle per PCC 240-60C & D. WI DOT sign regulation needs to be followed also. PCC 240-76G discusses expiration of Conditional Use Permit and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for General Retail & Services for Two Rivers Canvas and Upholstery with the following conditions:

1. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. Hours of operation shall be Monday through Saturday 7 AM to 6 PM and Sunday by appointment only.
3. Two regular parking spaces and a minimum of one handicapped parking space shall be delineated.
4. The two advertising signs may be placed on the site as proposed and shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle. Any additional advertising signage shall be in compliance with the Pierce County Code and shall be subject to the issuance of a Land Use Permit.
5. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked if there was plenty of room for overflow parking with only 3 spaces delineated. Ms Kraft stated there is plenty of space there. Holst stated she has run a business for years, she has a good reputation in the type of work that she does. It's a steady flow. Ms Kraft stated she has done work for the Ellsworth Fire Department, the Prescott Fire Department and this winter the Dakota County rescue boats canvas will come in.

Holst moved to approve the conditional use permit for a canvas and upholstery business for Natalie Kraft, agent for George Jacques Trust, owner, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #5/Sanden seconded. All in favor. Passed.

Discuss take action on site plan review for a small engine repair business in the Commercial District pursuant to Pierce County Code Chapter 240-75, for Laverne & Cathy Rosenberg, owners on property located in the NE ¼ of the NW ¼ of Section 15, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Laverne Rosenberg forward: Mr. Rosenberg stated he put up a small storage shed and staff contacted him because he didn't get a building permit for it. He obtained a LUP and they moved it to a good spot. It should be OK now.

Staff Report – Emily Lund: This is site plan review for the construction of a new structure for commercial use. The property is located in Section 15, Town of Trimbelle. This request involves the construction of a new commercial structure located in the Commercial zoning district. The other portion of the lot is zoned General Rural. The 8.67 acre parcel has a home on one part and a small engine repair

business on another part. Mr. Rosenberg also sells equipment. Applicants constructed a cement slab and structure prior to any permits. The structure was located within the vision clearance triangle of 570th Ave and Cty Rd J. The applicants were notified of this issue by Department staff. The owners subsequently obtained a land use permit on 4-24-2012 and moved a structure to a new compliant location. The owners propose to construct a chain linked fence around the first cement slab for temporary outdoor storage. The purpose and intent of commercial zoning is stated in the staff report. Site plan review is required per Chapter 240-75 Pierce County Code for new construction of buildings located in commercial district with commercial uses. The CSM creating this lot was recorded in 2006. Two separate driveways are located along the west of the property and the north driveway serves the business. The nonresidential driveway meets the minimum driveway width requirement per PCC 240-57D(2). There is ample room for 3 parking spaces. PCC 240-54I requires that 2% of parking spaces be designated for handicapped parking, with a minimum of one space delineated. Stormwater drainage will be overland flow on the 8.67 acre property. There are drainage ditches to the west and north of the property to accommodate large rain events. The property is served by an existing private well and private on-site wastewater treatment system. The property is characterized by existing trees, a house, the business and two sheds. Adjacent uses include agricultural and commercial.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the LMC consider including the following conditions in any plan approval:

1. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health & Family Services, etc).
2. One handicap parking spot shall be delineated.

Sanden stated he lives right down the road from Mr. Rosenberg and Mr. Rosenberg has always been a good neighbor and runs a clean shop and he doesn't anticipate any problems with this.

Sanden moved to approve the site plan for commercial use for a small engine repair business for Laverne and Cathy Rosenberg with conditions #1 - #2/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Joe Rumpca forward: Mr. Rumpca stated they would like to renew the conditional use permit the way it is. He stated the only change he talked about with Brad Roy. Roy stated the neighboring property, many years ago, mined across the line about 100 feet over. They would like to connect that. It might require a couple feet within the 100 foot setback. Roy stated he thinks if they stay within the 100 feet they can line those up. Mr. Rumpca stated yes, he thinks they would do that.

Staff Report – Brad Roy: Rumpca Excavating owns and operates a nonmetallic mine which was expanded in 2002 requiring the issuance of a conditional use permit. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road MM. The product mined is lime rock. Portable crushing equipment is brought in to make C/5 Gravel, Recycled C/5 and Screened Hard Rock and trucks are used to haul the product. Blasting is conducted by a bonded professional explosive company. Blasting takes place infrequently on this site. Hours of operation are 7:00am to 6:00pm Monday through Friday and 7:00am to 4:30pm on Saturday. Blasting is between the hours of 8:00am to 4:00pm Monday through Friday. Crushing is between the hours of 7:00am to 4:30pm Monday through Friday. A 100 foot setback has been maintained for all extraction. We discussed the neighboring property. No complaints have been received about this operation. The current conditions for the permit #1 - #12 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether changes or additions to existing conditions are necessary to protect the public interest, public health, safety or character of the surrounding area. If no changes or additions are necessary staff recommends that the LMC renew this conditional use permit with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-foot setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted annually for all wells within 1000 feet of the proposed mining operation.
6. The applicant shall notify the Zoning Office if groundwater is encountered.
7. Dust control measures shall be implemented along haul roads.
8. Hours of operation are 7:00am to 6:00pm Monday through Friday and 7:00am to 4:30pm on Saturday.
9. Recycling of concrete, asphalt and bricks into Class Five materials is allowed.
10. Reclamation shall be according to submitted plans.
11. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
12. This CUP renewal shall expire in two years.

Holst asked about the new wording for condition #2. Roy stated he didn't think we had to worry about it. It's close to the 100 foot setback. No adjustment to condition #2 should be necessary.

Aubart moved to approve the renewal of the conditional use permit for nonmetallic mining for Rumpca Excavating Inc with conditions #1 - #12/Holst seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining for Rickey Deising, owner on a parcel located in the SW ¼ of the SE ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Rickey Diesing forward: Mr. Diesing stated he would like to renew his permit.

Staff Report – Brad Roy: Diesing Trucking received the original CUP for this site in 2006. Mining had previously taken place on this site, but it was discontinued prior to 2001. Because the use was discontinued before 2001, no reclamation had taken place. The mine was originally considered “grandfathered” so there are no prior mining permits on the parcel prior to the 2006 CUP. Because of the “grandfathered” status many of the mining regulations that are now in place had not been followed in the past. All new mining has been consistent with current regulations. The mining site has approximately 3.5 unreclaimed acres; the total extent of the mine will be approximately 6.5 acres. Sand screening and sizing equipment is placed on the site when necessary. There is no blasting on this site; sand is extracted with excavating equipment and trucks. There are numerous residences located within close proximity to the site; staff has not received any complaints about this operation. A 100 foot setback will be maintained from property lines for all new extractions. The current conditions of the permit #1 - #8 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether changes or additions to existing conditions are necessary to protect the public interest, public health, safety or character of the surrounding area. If no changes or additions are necessary, staff recommends the LMC renew this conditional use permit with the following conditions:

1. Hours of operation remain consistent with daylight hours Monday through Friday, Saturday hours will be 8:00am – 4:00pm.
2. Applicant shall receive all necessary permits from other agencies.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. A 100 foot setback shall be maintained from all property lines for all mining activities, which includes stockpiling and equipment placement.

5. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.
6. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
7. This CUP renewal shall expire in two years.

Roy stated we eliminated the old #8 because they already received their address sign.

Holst moved to approve the renewal of the conditional use permit for nonmetallic mining for Rickey Diesing with conditions #1 - #7/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated he has three requests at this time, two for Emily Lund: December 7th in Wausau at the NR 115 meeting, one on December 18th in Eau Claire for a Wisconsin Central Zoning Administrators (WCZA) Meeting. The other request is for Brad Roy to attend a frac sand task force meeting put on by Wisconsin County's Association, in Chippewa Falls on December 17th.

Holst moved to approve the travel/training requests for Emily Lund and Brad Roy/Ross seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Pichotta stated there won't be a meeting on December 19th. The next meeting will be January 2, 2013 and noted that renewal of Wisconsin Industrial Sand's conditional use permit for the Maiden Rock facility would be on the agenda.

Motion to adjourn at 06:25pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 5, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: December 19 th if necessary, 2012.	Chair
3	Set next meeting dates for 2013.	Chair
4	Approve minutes of the November 7, 2012 Land Management Committee meeting.	Chair
5	Public hearing to consider a request for a conditional use permit for General Retail and Services for a canvas and upholstery business, in the Light Industrial District, pursuant to Pierce County Code, Chapter 240-36E, for George Jacques Trust, owner, by Natalie Kraft, agent, on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI	Lund
6	Discuss take action on site plan review for a small engine repair business in the Commercial District, pursuant to Pierce County Code Chapter 240-75, for Laverne and Cathy Rosenberg, owners on property located in the NE ¼ of the NW ¼ of Section 15, T26N, R18W, Town of Trimble, Pierce County, WI.	Lund
7	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Rumpca Excavating, owner on property located in the NE ¼ of the SE ¼ and the SE ¼ of the SE ¼ all in Section 29, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
8	Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining for Rickey Diesing, owner of a parcel located in the SW ¼ of the SE ¼, in Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
9	Discuss take action on Travel/Training Requests	Pichotta

MINUTES - Pierce County Land Management Committee Meeting, November 7, 2012

Present: Jeff Holst, Jon Aubart, Jim Ross and Eric Sanden

Absent: Joe Fetzer and Andy Pichotta

Others: Jim Kleinhans, Brad Roy, and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 21st, December 5th and the 19th, if necessary, all in 2012.

Approve Minutes: **Ross moved to approve the October 17, 2012 LMC minutes/Sanden seconded. All in favor with Aubart not voting due to his absence at the last meeting. Passed.**

Public hearing to consider a request for a conditional use permit for Filling and Grading to improve an existing boat ramp, in the Shoreland/Floodplain District, pursuant to Pierce County Code, Chapter 240-41E, by Pierce County Parks, owner on property located in part of Government Lot 5 in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI.

Staff Report – Jim Kleinhans: Pierce County acquired this property during the floodplain buyout program in the late 1990's and recently obtained the land adjacent to the Hwy 63 right-of-way with the primary boat ramp from the WI Department of Transportation. The property under review has an existing public outdoor recreational use including a boat ramp and parking area that is currently in disrepair. Cedar Corp designed a facility that will comply with FEMA standards and also qualifies for a development grant from the WI Department of Natural Resources (WDNR). The proposed project requires conditional use permit review and approval by the Land Management Committee for filling and grading, however the LMC may want to review all aspects of this development since this is a county owned and operated facility. Public outdoor recreational uses are listed as permitted uses in the zoning code. The 2.4 acre property is zoned General Rural Flexible and located in the Town of Trenton. The Town of Trenton supervisors recommended approval of this proposal during their October 19, 2012 town meeting with the concern that all conditions and permits are adhered to. A Chapter 30 permit and Chapter 151 for storm water erosion control will have to be reviewed. The Department of Natural Resources has not received that application yet. This project involves removing the existing asphalt parking area and boat ramps and reestablishing the facility with a new double wide boat ramp with two handicap accessible docks, 32 boat trailer parking stalls, storm water ponds, a portable restroom and security lighting. Two rain gardens are proposed to treat surface runoff water from the reconstructed pervious and impervious parking surfaces. Cedar Corporation completed the facility design and created the erosion control and storm water management plans with narratives and recommendations for this project which are attached. The property abuts the Wisconsin Channel of the Mississippi River, the WI Department of Transportation Hwy 63 right-of-way and adjacent wetland property owned by the Lois Brown Trust. Shoreland provisions in the zoning code regulate filling and grading within 300 feet horizontal distance of navigable water where the existing or resultant slope is toward the water. Another section under the Pierce County Code regulates cutting vegetation more than 35 feet inland along any 100 foot section of shoreline. This includes a request to remove a lot of vegetation. So the section is included in the staff report that authorizes this

committee to approve more extensive vegetative removal along the stream corridor. There was a vegetative management plan provided with the plans from Cedar Corp. There are some large cottonwood trees and scattered shrubs located along the shoreline that will make it difficult for equipment to complete the work project such as placing a rip rap and site clearing. The proposed shrub and tree restoration plan was reviewed by the County Forester. All recommended shrub and tree species were determined appropriate for this location. Chapter 238 of the Floodplain Code regulates filling and grading and restricts the filling to the point where the increases of floodwater heights are experienced by adjoining property owners. The map that shows existing or proposed conditions shows there will be no increase where substantial increase in flood heights. The ground elevation will stay pretty much the same just with reconstructed surfaces. Two bioinfiltration ponds are designed to collect and treat surface water runoff prior to discharging to the river. Engineered soil will be incorporated (209 cubic yards) for both features. Excess soils material from pond excavations should be removed from the floodway or incorporated into the site grading. The plans specify development and maintenance practices for these drainage structures. One thing to consider is area between the storm water ponds, if we don't reduce sediments to those rain gardens there will be a lot more maintenance involved. The plans indicated low growing, no mowing type of fescues to plant in that area; Jim talked with the Land Conservation Director today and he has provided some grass types that are a little more specific considering the aspect between the runoff and the ponds. He suggested some redtop and timothy red clover to maintain some sort of buffer to catch sediment before it gets into those ponds at a rate of about 30 lbs per acre. There is a lot more to this than just the filling and grading and tree cutting. Jim touched on the Utility facilities and elevations: the proposed operating hours are 4:00am to 11:00pm appears consistent with water sport activities. The proposed lighting plan illuminates the parking and launch site utilizing 250 watt bulbs. Consideration for hours of operation, intensity of the lights and management during periods of mayfly hatches may warrant a little bit different management than leaving those lights on all night long. Another consideration is having the lamps on over a wetland complex that could impact invertebrates, reptiles, bats, etc. Waste disposal and ongoing site maintenance will be the responsibility of the Parks Department. There is a proposed portable restroom located next to the handicap parking area. Jim checked the Pierce County Sanitary code which requires any type of a privy to be located a minimum of 50 feet from the high water mark, 75 feet from a stream or lake and 25 feet from a property line. The proposed location is inconsistent with county code standards. A compliant location should be identified. The proposed parking stall dimensions are 12 feet by 45 feet. Each parking spot is required to have a wheel stop. Two handicapped parking areas are proposed on the higher parking area and closest to the launch ramps. Off street parking requirements under PCC 240-54 requires 15 spaces per launching pad.

Staff Recommendation: Staff recommends the Land Management Committee consider whether issuance of this conditional use permit request would be contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the LMC consider approval of this request with the following conditions:

1. Contractor shall secure all necessary state and local permits and approvals prior to commencing operations.
2. The Land Management Department shall be notified at the project initiation.
3. Vegetation management and restoration shall be consistent with PCC Section 240-46 with final seeding and plantings established to stabilize the near shore areas.
4. Erosion control best management practices shall be implemented and maintained until the project site restoration is complete in accordance with approved plans.
5. Contractor shall utilize adequate equipment to complete the project and remove working materials and equipment prior to and during flood events.
6. Existing gas, telephone and proposed electrical utilities located in the parking lot shall be installed or protected above the base flood elevation or abandoned.
7. The project shall be completed within 12 months of approval.
8. Solid waste debris removed from the shoreline shall be properly disposed of out of the floodplain.

Scott Schoepp, Pierce County Parks Foreman, he asked that #7 on the conditions, he would like to have 14 months to be consistent with the contracts. As they move forward with this they are going to have a deadline of December 1, 2013. Sanden asked about the erosion control plan, does the siltation fence go all the way around the perimeter of the site. Dennis Blau is here to answer that. The County hired Cedar Corp to design and engineer this so he has some drawings and will be able to help out with that. Dennis Blau presented larger drawings. Ross stated currently there are two ramps there and you plan to eliminate the one. Mr. Schoepp stated that there are three there, one is functional, one is maybe doable and the other isn't really there. They are going to remove all three, the trees along the river edge and riprap. The initial plans were to put two double-wide ramps in there. They have scaled it back to one double-wide ramp, 30 feet by 60 or 70 feet with a handicapped accessible ramp on one side and then the other side will also be handicapped accessible but it doesn't need to be as accessible; one has to be 100% and the other wouldn't have to be. It will be a poured concrete slab and a portion of this was FEMA property. Our initial plan was to put blacktop on the entire surface; due to FEMA restrictions we could only put blacktop on the County property. The FEMA acquired portion has to remain a permeable surface. Sanden asked Mr. Schoepp is he was comfortable with the 30 lb mix of seed per acre. Mr. Schoepp stated yes. Sanden asked Jim if he could expand on the lighting issue. Kleinhans stated the lighting plan that was provided and there are 35 foot towers with lamps that are aimed down toward the parking area. Six lamps are proposed, one along the shoreline. He is concerned about overflow lighting. He knows that in the summer when they get massive May Fly hatches, they turn the lights off on the bridge going to Red Wing. There might be some management provision we want to think about. He talked with Harvey Halverson from the Department of Natural Resources regarding all the lighting on the facility. He thought the adjacent wetland; it may have an impact on the biotics too. Maybe the intensity of them, we have a 250 watt lamps proposed. We have a lighting standard for minimum landscaping requirements for parking areas that we approved back in 2007; that one talks about maximum 150 watt lamps in residential areas and larger in commercial and industrial areas. Ross asked if they are running them only along the shoreline side or around the whole lot. Kleinhans stated there is one at the boat launch, one at the upstream part of the property, one across from that too. Sanden asked if that is something to articulate in the conditions tonight. Kleinhans stated the facility is here for filling and grading and shoreland restoration. If he was permitting it, he would think about this. Holst stated maybe it's something as simple as putting a timer on a light. It could be shut off a half hour after the facility closes. Mr. Schoepp stated we could go with a 175 watt bulb too. Mr. Blau stated there are a number of options, you can put it on a timer, you can downsize the luminaires, you can put a cutoff on the light so the ones by the wetland it wouldn't shine on them but on the parking lot. Kleinhans asked about the ability to shield the lights once they are put up. Mr. Blau stated he talked to the electrical designer and he said they just put a little thing in the luminaire. These aren't cutoff lights but they meet the standards. There is no light pollution. They shine down and forward. A little plate can be put in there. Kleinhans asked if that is a problem adjusting that during the construction phase. Mr. Blau stated they would want to know before they bid it. Holst asked if they can find a safe place for the privy. Mr. Blau stated there are a couple options. Holst stated that site has been under water four times in the last ten years. Mr. Blau stated there is always that possibility, currently they propose the restroom on the higher site or they could make some minor points on the pond and put it near there but that would make it the focal point when you come in.

Chairperson Holst opened the hearing to the public. No public comment. Public hearing closed. Sanden moved to approve the conditional use permit for filling and grading to improve an existing boat ramp for Pierce County Parks due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #8/Ross seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for a Farm and Home Based Business for a fabrication shop in the General Rural District, pursuant to Pierce County Code, Chapter 240-36D, by R. Jay and Kristi Richardson, owners on property located in the NW ¼ of the SW ¼ of Section 18, T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Holst

invited Jay Richardson forward: Mr. Richardson explained that he built a sizeable shop for the farm with offices and they would like to use a portion, 50 foot by 70 foot, to build race cars. Sanden asked if all operations are done inside the building. Mr. Richardson stated yes.

Staff Report – Brad Roy: The applicant recently constructed a 14,400 square foot pole shed and plans to use 3,500 square feet of the structure for a fabrication shop for building race cars to be sold to the public. The business also includes sales of parts but this is conducted at the NAPA store in the Village of Spring Valley. The address is N7872 Cty Rd CC and the property is zoned General Rural. Section 240-36E allows farm and home based businesses as accessory to single family residential uses subject to the conditions listed in the staff report. Equipment to be used includes: welders, grinders and a forklift. Hours of operation are planned for 8am to 6pm Monday through Saturday. Occasional late nights are needed. The operation will have 2-3 full-time employees. The site will have a business sign, however plans have not been finalized at this time. The area around the structure provides adequate parking. Access to the business will be off of Cty Rd CC. Restrooms are available in the structure. The Town of Spring Lake recommended approval of this request on October 9, 2012. The Town did not reference their Comprehensive Plan or recommend any conditions.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a Farm and Home Based Business with the following conditions:

1. Any proposed advertising signs shall comply with the zoning code standards and be permitted.
2. Hours of operation shall be 8am to 6pm Monday through Saturday, with an occasional late night when required.
3. All waste shall be disposed of in compliance with the Pierce County Code Chapter 201 Solid Waste Collection and Transportation.
4. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
5. Outdoor storage of vehicles and vehicle parts shall comply with Pierce County Code Chapter 225.
6. This conditional use permit shall be valid for 2 years or if any compliance issues arise. Permit may be renewed administratively if no compliance issues arise.

Roy stated in regards to condition #2, after being at the site, he doesn't feel it will be a problem. It's hard to put a number on the late nights and times at this point. Kleinhans asked if they are going to build engines there also. Mr. Richardson stated no, just chassis. They have had a shop adjacent to this building for about 30 years. He has had his own personal racecar for 25 years and has gotten along with his neighbors. He doesn't see that being a problem.

Chairperson Holst opened the hearing to the public. No public comment. **Public hearing closed.**

Ross moved to approve the conditional use permit for a Farm & Home Based Business for a fabrication shop for R. Jay & Kristi Richardson, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Aubart seconded. All in favor. Passed.

Discuss take action on a status report and potential modification of a condition use permit for Nonmetallic Mining in the General Rural District by CMC – Spring Valley LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9, and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.

Chairperson Holst invited Jim Small and Pete Krautkramer forward: Mr. Krautkramer stated they kept up with the watering and they are on target to move the lime end of the business in the hole by the end of next year.

Staff Report – Brad Roy: In June, the hours of operation were expanded to 6am to 6pm Monday through Friday, Saturday 8am to noon. The number of allowable unreclaimed acres was also increased to 40. This status report is to determine the impacts of the increased hours and acreage. Staff has received one

complaint regarding off-site dust. A Fugitive Dust Plan for the operation is being implemented. The Town of Spring Lake was contacted regarding this status report. They have received complaints from a neighboring property owner regarding noise and dust, but have been satisfied with the watering and other dust suppression practices. The Town did indicate that they would not support any increase in hours of operation. The existing conditions #1 - #28 are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and modify this conditional use permit for a nonmetallic mining operation with the following conditions (potential modifications in **bold**):

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm Monday through Friday and 8am to noon on Saturday. Operation shall be closed on holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuation circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation bench mark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarp) prior to leaving the site.
21. The quarry shall have no more than 40 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 feet from the property line and at 1 ½ miles from property boundary and shall submit results to the Land Management Department. Such readings shall be taken three times annually and at locations

agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.

23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in **1 year**.
26. Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.
27. The Fugitive Dust Plan shall be implemented as approved.
28. Applicant is allowed to water anytime necessary to mitigate off-site dust impact.

Roy stated the only change to the conditions is the #25, the status report in 1 year instead of 3 months. The permit is due for renewal in April and then the status report would be in the fall to see how the operation went. Ross stated the purpose of the status report is just to make sure we're staying up on the conditions. Roy stated that the Town has indicated that come spring the operations are minimal during the winter so there aren't any complaints. They would know more about the operations in the fall than in the spring. Since this was permitted, the status reports have been every three months. Sanden asked Brad about the Fugitive Dust Plan if it is controlled by the DNR or who monitors it. If there is a problem, do they have the authority to do anything? Roy stated he doesn't believe they get into it, if it were a hazardous material, they would. Mr. Krautkramer stated MSHA is their regulator. When they come on-site they will do a dust monitor. Sanden asked if it is something like 20% opacity. Mr. Small stated that is for heavy equipment and it's based on the year the equipment was constructed. That's coming off the conveyors, not the roads and stockpiles. Sanden asked if that is the correct percent. Mr. Small stated it's less than that now for transfer points. Aubart stated he took the opportunity to visit the site. He thought the site was very well run. Everything was running, the crusher was running and there was a wind speed of 10 – 15mph. It was fairly breezy. He did not experience the fugitive dust problem. He went out on the berm and you could hold a conversation. From his stand point, unless we get the complaints he doesn't feel we should keep bringing them back.

Aubart moved to approve the renewal of the conditional use permit for nonmetallic mining for CMC-Spring Valley (County Materials) with conditions #1 - #28 as presented/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Kleinhans stated there are no requests at this time.

Departmental Update and Future Agenda Items

Kleinhans stated there isn't anything on the agenda for November 21st. There is a possible public hearing for December 5th for a vineyard in Clifton and there are some conditional use permit renewals.

Motion to adjourn at 06:40pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

Date: 10/2/13

MINUTES - Pierce County Land Management and Land Conservation Committee Meeting, October 25, 2012

Present: LMC Jeff Holst, Jon Aubart, Jim Ross LCC Jerry Kosin, Mel Pittman, Leroy Peterson, DeWayne Benedict, Ruth Wood

Others: Andy Pichotta, Brad Roy, Rod Webb, Deb Larson, Barry Foye (Town of Ellsworth)

LCC Chairperson Kosin called the joint meeting of the Pierce County Land Management and Land Conservation Committee to order at 8:30 am in the County Board Room, Ellsworth, Wisconsin.

Public Hearing to consider adoption of the updated Pierce County Farmland Preservation Plan and to amend the Pierce County Comprehensive Plan to include said document.

LCC Chair Kosin read public hearing notice. Brad Roy, LMD staff, stated that Pierce County is required to update its Farmland Preservation Plan by December 31, 2012. This planning process has been a joint effort of Pierce County's Land Management and Land Conservation Departments and will be adopted as part of the County's Comprehensive Plan. He noted that the County has taken the same approach with this plan as it had with the comprehensive plan. The County will have broad goals, objectives and policies and allow for each town to develop more specific goals, objectives and policies within its comprehensive plan. Farmland Preservation Areas were designated throughout the county. Each town was asked to identify lands appropriate for farmland preservation according to their comprehensive plan and with characteristics suitable for productive agriculture. These lands were designated as Farmland Preservation Areas. Landowners in a Farmland Preservation Area have the option to voluntarily enter into Farmland Preservation agreements. Staff developed goals, objectives and policies which were reviewed and approved by both the Land Management and Land Conservation Committees. The goals are consistent with the overall direction of the Comprehensive Plan and satisfy the requirements of the Working Lands Initiative. The updated plan also outlines actions the county will take to implement the goals, objectives and policies. Roy noted that if the draft plan is approved, the updated Farmland Preservation Plan will be sent to DATCP for certification. After certification, the plan will be presented to the Finance and Personnel Committee and the County Board for adoption by ordinance. Holst noted that it is stated that Pierce County's population is projected to grow to more than 54,000 by 2035 and suggested that the forecast may be a bit high. Wood agreed. Committee discussed likely future population and housing growth. Roy discussed the current trend in farm sizes and also noted that the average age of farmers is increasing and also noted that the number of female farm operators was also increasing. The relationship between the Farmland Preservation Plan and the town comprehensive plans was also discussed and it was noted that it would not change from that outlined in the county's comprehensive plan. Holst noted that higher commodity prices are the best farmland preservation strategy. Wood questioned the change in the undeveloped land classification. Roy noted that this was due to a change in the way assessments are completed. Holst noted that as a land owner he supports the concept of Ag Enterprise Areas. Pittman agreed. Roy stated that staff

recommends that the Land Management and Land Conservation Committees review the proposed plan to determine if any changes or modifications are necessary, and if appropriate, approve the plan and send the approved version to the Finance and Personnel Committee for review. He noted that if substantial changes were required as part of DATCP's review the plan would be brought back to the joint committee.

Pittman moved to approve the Pierce County Farmland Preservation Plan and to amend the Pierce County Comprehensive Plan to include said document/Benedict seconded. All in favor. Motion carried.

Motion to adjourn at 9:15 a.m. by Holst/Pittman. All in favor. Motion carried.

Respectfully submitted by A. Pichotta

**JOINT LAND MANAGEMENT COMMITTEE AND LAND CONSERVATION
COMMITTEE
MEETING AGENDA**

**Wednesday, October 25, 2012 – 8:30 a.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Pichotta
2	Public Hearing to consider the adoption of the updated Pierce County Farmland Preservation Plan and to amend the Pierce County Comprehensive Plan to include said document.	Roy
3	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(10/12/12)

MINUTES - Pierce County Land Management Committee Meeting, October 17, 2012

Present: Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Absent: Jon Aubart

Others: Andy Pichotta, Brad Roy, and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 25th there is a joint meeting with Land Conservation Committee to consider the adoption of the Farmland Preservation Plan. November 7th & 21st, December 5th and the 19th, if necessary, all in 2012.

Approve Minutes: **Ross moved to approve the October 3, 2012 LMC minutes/Sanden seconded. All in favor with Holst not voting due to absence at the last meeting. Passed.**

Discuss take action on a request for Site Plan Review for a storage building and roof extension in the Industrial District, pursuant to Pierce County Code, Chapter 240-75, for Thomas & Betts Corporation, owner on property located in the SE ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Jared Matzek forward: Mr. Matzek, Manufacturing Engineer, stated they would like to add a roof extension. They are looking at two structures, one is a 40ft x 60ft steel frame pole shed for storage of items that are outside right now, with a 20 foot peak height. The second structure will be a storage yard for storing steel plate. They use a mobile crane to pick it up and handle it. This storage facility will replace the mobile crane and store all the material under a roof. The dimensions are 72ft x 350ft and it's just under 36ft to the peak. The advantage is the unit they are replacing is diesel powered and has to run at full throttle in order for the magnet to work properly. This is an electric unit so it will be quieter and the roof will be lit under the roof so you shouldn't see too much lighting.

Staff Report – Andy Pichotta: This is a request for site plan approval for Thomas & Betts. On October 1, 2008, a conditional use permit for heavy industrial use was approved by the LM C to allow for the expansion of a nonconforming use and to bring the pre-existing, nonconforming use into compliance with the Pierce County Code. The applicant also sought site plan approval in 2008 to construct a new production building. In 2010, the applicants sought site plan approval for the expansion of the new production building to support efficient shipping, receiving and loading. The 2010 planned expansion did not occur. The property is located in the Industrial District in Section 2, Town of Trenton. Mr. Matzek described the proposed construction. The heavy industrial use is not being expanded with this request. They currently have 225 employees working 3 shifts and no additional employees are proposed at this time. They currently use a portable crane to move steel plates. The proposed new construction will allow the company to complete steel fabrication more efficiently and quietly and will allow equipment to be stored inside. Purpose and Intent of the Industrial District is in the staff report. Pierce County Code Chapter 240-75 discusses Site Plan Review:

A. Review and approval.

- (1) Permits for new construction or additions to existing structures and buildings for commercial, industrial, institutional or multifamily uses shall require site plan approval as set forth in this section. The purpose of such approval is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County.
- (2) The Land Management Committee or its designee shall review the site, existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking areas, driveway location, loading and unloading areas, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

The property is characterized by existing trees along the driveway, rotation corn/soybean crop along US Hwy 63/150th Ave/adjoining neighbors and an existing berm between the buildings and neighbors. Adjacent uses include residential, agricultural, commercial and industrial uses. Applicants have 233 existing parking spaces. There will be no increase in traffic. No additional advertisement signs are planned at this time. The property is served by an existing private well. The manufacturing building has a conventional system adequate for the number of people using it. Stormwater water management was addressed in 2008 with the berm construction. The proposed material/plate storage is to be approximately 70 feet northeast of the existing finishing building and about 30 feet southwest of the railroad lot line. The proposed equipment storage building is to be approximately 140 feet north of the residential homes. Per Pierce County Code Chapter 240-30B(5), buildings in industrial districts located adjacent to railroad access are exempted from front, rear and side yards provided they do not violate any other provision of Chapter 240 Zoning Code. There is an existing light pole is near the plate storage area. Additional lights may be constructed around the plate storage structure. The crane has a light beneath it to light up the work area. The equipment storage building will have lights around the perimeter and inside the building. Applicants will need to contact the Department of Safety & Professional Services – Technical Review Bureau to ascertain State regulations and obtain any permits, if required. The applicants should also contact the Town Building Inspector to obtain any necessary town building permits, if required.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the LMC consider including the following conditions in any plan approval:

1. Applicant shall obtain a Land Use Permit for the industrial accessory structures for a \$300 fee.
2. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Galen Seipel, Trenton Building Inspector; Department of Safety & Professional Services (DSPS), etc.).

Ross asked if the building is going nearest the track and if they would use the rails for shipping. Mr. Matzek stated the rails are typically used for incoming plate. They haven't used the rails in seven years. Most of their freight is by truck. Sanden asked if there have been any complaints. Pichotta stated that staff contacted Dick Bunce, the Chair of the Town, and asked if he had any concerns regarding this request and he indicated that he did not. **Holst moved to approve the site plan review for Thomas & Betts Corporation with conditions #1 - #2/Ross seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for the Gilles Quarry by American Materials, agent on property owned by Marvin and Mina Gilles, located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Candy Anderson forward: Ms Anderson, Geologist for American Materials, stated they are asking to renew the conditional use permit with no changes in operations. Chairperson Fetzer asked if they have been doing much out there. Ms Anderson stated no, they need to get some work.

Staff Report – Brad Roy: This request for renewal of a nonmetallic mining operation was originally permitted in 1998. All permits have been kept current since that time. The property is located in the Town of Union. The mining site has approximately 9 unreclaimed acres. Access to the mine is off of US Highway 10. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday. Renewal fees for this mine are \$200 + \$20 per additional acre of expansion. A 2 acre expansion is anticipated to occur within the 2012 to 2014 renewal period. No complaints have been received about this operation. All appropriate information has been submitted to the Zoning Office. The existing conditions are listed #1 - #10 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. In no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Applicant shall follow all recommendations and receive all necessary permits from other agencies.
2. A 100-ft setback shall be maintained from all property lines for all mining activities.
3. Applicant shall comply with DNR NR 135 Annual Reclamation Permits.
4. Property owners located within 1000 feet shall be given adequate notice, at least 48 hours, of any blasting and all blasting shall be done by a certified state licensed blaster.
5. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all wells within 1000 feet of the mining operation before blasting commences and annually thereafter. Applicant shall not be required to test wells on properties where owners have not granted access.
6. Hours of operation are 6:00am to 9:00pm Monday through Friday and 6:00am to 12:00pm on Saturday.
7. Reclamation shall be according to submitted plans.
8. Applicant agrees that any unforeseen erosion issues shall be addressed to the satisfaction of the county.
9. Applicant shall pay renewal fees.
10. This CUP shall expire in two years.

Chairperson Fetzer asked if condition #10, the renewal can be done administratively. Pichotta stated the Pierce County Code states that nonmetallic mining renewal must be reviewed by the LMC.

Sanden moved to approve the conditional use permit renewal for nonmetallic mining for the Gilles Quarry by American Materials, agent for Marvin and Mina Gilles with conditions #1 - #10/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a condition use permit for Nonmetallic Mining for Pierce County Highway Dept, agent for Gregory Bisel, owner, on property located in the W ½ of the NW ¼ of Section 5, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Chad Johnson, Pierce County Highway Department, forward: Mr. Johnson stated they are requesting renewal for the Bisel property and they are moving back, nowhere near the highway.

Staff Report – Brad Roy: Mr. Bisel owns a nonmetallic mining operation along Hwy 10. The Pierce County Highway Department is the current operator of the site. In 2008 there was an errant blast which extended the mining area within the setback of USH 10. In February 2010, the LMC allowed the Hwy Dept to mine within the Hwy 10 setback to remove a portion of the high wall that had become unstable. The mining site is approximately 17 acres in size. Access to the mine is off of US Hwy 10. The active mining area is approximately 6.5 acres. Mineral extraction has extended into the 100 foot setback on the north end of the property line, however, this activity had taken place before 1998 and there has been no mineral extraction within the setback since that time. A mining road encircles the outside edge of the mine and crosses the north property line. The Highway Department is in discussions with the property owners to the north about potential for leasing the property. The existing highwalls are approximately 100 feet. The original plan states that the highwalls will be benched to limit the heights to 35 to 50 feet. The original plan states that the mine will be restored to slopes of 3:1. A dry run is present on the property. The mining area has not disturbed the dry run at this point, but future expansion may become an issue.

The rock is removed by drilling and blasting. Crushing and processing of the rock takes place onsite. Storage of the product is in the active mine as well as on an adjacent property across Hwy 10. The adjacent property is considered to be a pre-existing nonconforming use, so a permit is not required on that site. There are no wells on the property; therefore no washing takes place onsite. The operation typically removes 30,000 to 40,000 tons of material each year. Blasting takes place dependent upon when material is needed. Hours of operation are 7:30am to 3:30pm Monday through Friday, except in June, July and August; hours of operation shall be 6am to 6pm. There have been no erosion issues on the south wall facing Hwy 10. Well tests of neighboring property will be submitted by the end of the year. The Hwy Dept. has begun installation of the fence on the northern edge of the pit. Mr. Johnson stated that has been completed. The current conditions are listed in the staff report #1 - #17.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Hours of operation shall be 7:30am to 3:30pm, Monday through Friday, except in June, July and August; hours of operation shall be 6:00am to 6:00pm.
2. A 100 foot setback shall be maintained from all property boundaries. In areas where prior mining has extended within this setback no further encroachment shall occur.
3. A groundwater response plan detailing resources used to protect the quality of groundwater beneath and adjacent to the extraction operation and proposed response to encountering groundwater shall be submitted to the Zoning Office. The Zoning Office shall be notified if groundwater is encountered and further operations shall cease until the response plan is implemented.
4. Reclamation of the mine shall adhere to the original plan which states that slopes shall be restored to 3:1. Due to the location of the northern highwall and the potential for land development on the northern adjacent parcel highwalls or steep slopes would create unsafe conditions.
5. Fencing shall be installed around the northern edge of the mine.
6. The owner shall notify the Zoning Office when the operator of the mine is no longer a public entity. Modifications to the permit may be required at that time.
7. Applicant shall comply with NR 135 Annual Reclamation Permits.
8. All blasting shall be done by a certified state licensed blaster.
9. Residential property owners located within 1000 feet of mining operations shall be given a two day notice of any planned blasting.
10. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation annually.
11. Any unforeseen erosion issues shall be addressed to the satisfaction of the Zoning Office or the Land Conservation Department.
12. Applicant shall receive all necessary permits from other agencies.
13. This CU P is valid for two years and may be renewed upon request. The owner/operator is responsible for requesting renewal. Operations conducted without a valid permit shall be subject to enforcement action.
14. A renewal fee of \$200.00 plus \$20 per acre of expansion shall be paid.

We are recommending removal of conditions #4, #12 & #17.

Holst moved to approve the renewal of the conditional use permit for nonmetallic mining for Pierce County Highway Department, agent for Gregory Bisel with conditions #1 - #14/Sanden seconded. All in favor. Passed.

Discuss take action on a request to amend site plan approval regarding the screening plan for Stanley & Beverly Boles, owners on property (Value Implement) located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimble, Pierce County, WI. Staff Report – Andy Pichotta: The Land Management Committee on 6-20-12

approved the site plan with the conditions listed in the staff report #1 - #10. Condition #10 required the planting of 10 additional trees to be located offset from the existing trees that had been planted. Although they had sought to purchase and plant the 10 additional trees in this growing season as required by the LMC, they had been advised by a professional arborist that, given the current drought conditions, planting trees at this time is not advisable. The applicants are requesting that condition #10 be modified to allow them to plant the required 10 trees in the spring of 2013. Pichotta stated he spoke with the neighbor, Mr. Blodgett, this morning. He wanted to make sure that if there was a drought condition in the spring that the trees would get planted and that, as you may recall, there was some discussion during site plan review about the need for a private drive sign to discourage folks from driving around back and walking down to view the implements for sale from there. At that time, Mr. Boles had indicated there would be something put up. Nothing has been put up yet. It was not put in as a condition. Pichotta indicated that he had spoke to Jay Boles about it and he had indicated they would do that. I don't believe at this time any change in the conditions are necessary but if it isn't done in the spring we could revisit the issue.

Staff Recommendation: Staff recommends the Land Management Committee consider modifying condition #10 to allow the 10 trees to be planted in the spring of 2013 versus during the current growing season. **Holst moved to approve the amended condition #10 to allow the 10 trees to be planted in the spring of 2013 versus during the current growing season/Ross seconded. All in favor. Passed.**

Discuss take action on proposed policies regarding:

- **Citation issuance for noncompliant conditionally permitted uses;**
- **LMC action when a Town Recommendation is purported to adhere to an adopted Town comprehensive plan but appears to be unsupported by said plan.**

Staff Report – Andy Pichotta: As you are aware, the Zoning Code was recently amended to include several new conditionally permitted use classifications (Winery, Resort, Nature Based Operation). These new classifications will likely result in an increase in the number of conditional use permits (CUPs) issued by the Land Management Committee. Staff is proposing to create policies to address two issues that will likely arise from the anticipated increase in requests for conditionally permitted uses. The first policy relates to the issuance of citations for noncompliant conditionally permitted uses. This policy is intended to not only give staff clear direction as to how to react to CUP violations but also to provide an applicant or existing CUP holder with a clear understanding of the consequences associated with violating the conditions in an approved CUP. Chapter 240-76 Conditional Use Permits. (I) states “If a use is not conducted in conformity with the permit or this chapter, the conditional use permit may be terminated by action of the Land Management Committee.” Consequently, staff currently refers compliance issues relating to CUPs to the LMC for action, including the possible revocation of the permit. The proposed policy would clearly establish the expectation that repeated violation of the conditions associated with a CUP will result in a citation as well as potential LMC action. The second policy relates to circumstances in which a town recommendation is purported to be consistent with the goals, objectives and policies of an adopted town comprehensive plan, but upon review, does not actually appear to be consistent with said plan. This would most likely occur when a town (possibly in response to citizen concerns) is opposed to the establishment of a proposed use and seeks to tie their recommendation for denial to their comprehensive plan despite its being silent on the use or its anticipated impacts. As you are aware, denial of a proposed conditional use must either be justified by citing legitimate concerns regarding potential impacts to public health and safety or by citing specific and relevant guidance regarding a proposed use or its anticipated impacts contained within the goals, objectives or policies of an adopted town comprehensive plan. The proposed policies are as follows:

“Issuance of Citations for Noncompliant Conditionally Permitted Uses; In cases where a conditionally permitted use is found to be operation in violation of established conditions, staff shall inform the permit holder of such fact, in writing, prior to the issuance of a citation. Any violation of an established condition following the written notice shall be subject to the issuance of a citation for each specific instance when a condition is violated. Multiple violations or a single violation on multiple days may result in multiple citations. In cases where a citation is issued, the Conditional Use Permit shall, in a timely manner, be

referred to the Land Management Committee for consideration and action, including potential revocation.”

Rather than go through both of them, let’s take them one at a time. Any thoughts or concerns about this first proposal. Sanden asked about the nature of the citation; does it just let them know there is a problem or does it come with a penalty. Pichotta stated it comes with a penalty; similar to a speeding ticket, there are court fees associated with it. Sometimes we have found the only way to get someone’s attention is to give them a citation and ultimately fines. If you recall years ago we had a woman that had 40 plus dogs on what she called a rescue facility. Between us and the Town there was \$40,000 in fines hanging out there before we finally got her to do anything. As part of the court action, we had to drop most of those but we did ultimately gain compliance. Sanden asked whose discretion is the citation issued, a citizen or the zoning administrator going out there and witnessing it? Pichotta stated it could be either; we would not necessary issue a citation based on a citizen complaint unless it is verified. We have to be first hand aware that a condition has been violated. It would trigger a visit by us to determine that. If we found a problem, we would issue written notice and repeated violations would get citations. We would probably include a copy of this policy informing them of the process. The next proposed policy is:

“LMC action when a Town Recommendation is purported to adhere to an adopted Town comprehensive plan but appears to be unsupported by said plan. What we are trying to do here is proactively set up a process so if a Town submits a recommendation that isn’t consistent with their comprehensive plan we don’t have to figure out how to deal with it at that time. There is already a clear cut process.

In cases where a Town provides a Town Recommendation that purports to be consistent with that Town’s adopted comprehensive plan, but upon review appears to be unsupported by that plan, the Land Management Committee (LMC) shall, after holding a public hearing, defer action on the conditional use permit request and shall refer the issue back to the Town for additional consideration and clarification. Upon receipt of clarification and/or additional information from the Town the conditional use permit request shall be placed on an LMC agenda as an action item. The LMC shall make a determination as to whether said recommendation can reasonably be considered to be consistent with the goals, objectives, or policies of the Town’s adopted comprehensive plan. This determination shall be made by motion and is potentially subject to certiorari review by the affected town. If the Town Recommendation is found to be consistent with goals, objectives and policies of the applicable Town’s adopted comprehensive plan the recommendation shall be considered to be consistent with the Public Interest for that Town. If the recommendation is found to be inconsistent with the goals, objectives and policies of an adopted town comprehensive plan, or not applicable to the issue to which it is applied, the recommendation will not be considered to be consistent with the Public Interest for that Town. In either case, a decision regarding the proposed conditionally permitted use would then be made by the LMC.” Pichotta noted that we had an instance of this previously when there was a request for a heliport and the Town recommended denial based on consistency with their comprehensive plan. It was in fact silent on that use and I advised the committee that it was my opinion that it was silent on that. The committee then took the town recommendation as an advisory recommendation and ultimately approved the conditional use permit. The Town still feels they were slighted by that determination and staff doesn’t want to be put in that position again. So this would establish a process that clearly identifies what will be done if we get a recommendation that we have questions as to whether or not it is truly applicable. Sanden stated that the determination would then be made by the committee as to whether or not it requires further review by the Town. Pichotta stated yes. Chairperson Fetzer asked what does a Township have to go through? Pichotta stated our Town Recommendation Form says if one is quoting consistency with their Town Comprehensive Plan, they are asked to provide the language that is contained within their plan and actually applies to it. We do have most of the Town’s Comprehensive Plans, they are available through our website. Chairperson Fetzer asked if all of the Towns have comprehensive plans. Pichotta stated sixteen out of the seventeen have plans, Union does not. Chairperson Fetzer asked if they are working on that. Holst stated Union feels they are covered under the County Plan. Ross stated they had to be done by January 2010. Pichotta stated that any land use decisions made after 2010 have to be consistent with a

plan. If they had a subdivision ordinance or other Town ordinances relating to land use they would have an issue. But because they don't, they don't have an issue. Ross stated they can still write a plan. Pichotta stated yes. Chairperson Fetzer asked what kind of process do they have to go through amending their plans? Pichotta stated the Town Comprehensive Plan is actually a lot easier to amend than the County Plan. The Town Plan would run through the Planning Commission, go to the Town Board and hold public hearing on it. They could do it in a month or so. Sanden stated the intent is that they should update it. Chairperson Fetzer stated his concern is that when someone comes in you shouldn't change it to swing things one way and then change it to swing things another way. Sanden stated it was seen as a positive that as things change, if a Town gets more populated it could change. Holst stated it allows flexibility that a Town has to have. It's a living document, things change. Ross stated they wanted us to look out 20 years in those plans as best you could. But as you say, they are a living document with the opportunity to adjust. Sanden asked about the heliport issue. What if you put that back to the Town and there's nothing specific about heliports or aircraft in general but the general goal of the Town is to maintain a quiet condition. Pichotta stated that's why we talked about the fact that you don't have to address specific uses; you could address the likely impacts of uses. You could have a policy relating to the establishment of uses that have a high potential to create nuisance complaints or potential issues with neighbors. A Town could put in a catch-all type policy relating to impacts that could cover uses they didn't think of. Sanden ask if in one of the goal statements it is stated that it is the intent of the Town to provide a quiet neighborhood for residents and if that heliport issue went back to the town and the town came back to us citing that goal – would that address it. Pichotta stated that it likely would. Sanden stated he assumes every plan has some language like that, that states maintain a nice, quiet, livable community. Holst suggested that a plan should be simplistic, it shouldn't be so itemized that it becomes an ordinance. It should fall under generalization as opposed to specific criteria. Pichotta suggested that folks would be surprised at the goals, objectives and policies contained in a lot of comprehensive plans. A lot of them don't actually contain language like that. A broad goal that was properly worded and put in the right section would go a long way and it could be cited in a whole host of circumstances. Sarah Palodichuk and several other Town of Oak Grove residents expressed concerns about requiring the town to seek certiorari review of LMC decisions. They are also concerned because the Town is in the process of amending their comprehensive plan and aren't certain it is necessary. The relationship between town comprehensive plans and the issuance of conditional use permits by the LMC was also discussed by staff, the committee, and attendees. Several hypothetical permitting situations were also discussed.

Staff Recommendation: Staff recommends the LMC consider the above and, unless changes or additions are determined to be necessary or additional information required, approve the proposed policies as written.

Sanden moved to approve the proposed policies as presented/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time.

Departmental Update and Future Agenda Items

Public hearing for filling and grading to improve existing boat ramp in the Town of Trenton.

Public hearing for a fabrication shop in the Town of Spring Lake.

Renewal of County Materials

Motion to adjourn at 07:18pm by Ross/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

LAND MANAGEMENT COMMITTEE
REVISED MEETING AGENDA
Wednesday, October 17, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 7 th & 21 st , December 5 th and 19 th if necessary, all in 2012.	Chair
3	Approve minutes of the October 3, 2012 Land Management Committee meeting.	Chair
4	Discuss take action on a request for Site Plan Review for a storage building and roof extension in the Industrial District, pursuant to Pierce County Code, Chapter 240-75, for Thomas & Betts, owner on property located in the SE ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI	Lund
5	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for the Gilles Quarry by American Materials, agent on property owned by Marvin and Mina Gilles, located in the NE ¼ of the NW ¼ and the W ½ of the NE ¼ of Section 23, T25N, R15W, Town of Union, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining for Greg Bisel on property located in the W ½ of the NW ¼ in Section 5, T25N, R16W, Town of Salem, Pierce County, WI.	Roy
7	Discuss take action on a request to amend site plan approval regarding the screening plan for Stanley & Beverly Boles, owners on property (Value Implement) located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimble, Pierce County, WI.	Lund
8	Discuss take action on proposed policies regarding: <ul style="list-style-type: none"> • Citation issuance for noncompliant conditionally permitted uses; • LMC action when a Town Recommendation is purported to adhere to an adopted Town comprehensive plan but appears to be unsupported by said plan. 	Pichotta

MINUTES - Pierce County Land Management Committee Meeting, October 3, 2012

Present: Jon Aubart, Joe Fetzer, Jim Ross and Eric Sanden

Absent: Jeff Holst

Others: Andy Pichotta, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 17th, November 7th & 21st, all in 2012.

Approve Minutes: **Ross moved to approve the September 19, 2012 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for General Retail and Services for a Greenhouse, pursuant to Pierce County Code, Chapter 240-36E in the Light Industrial District for George and Julie Jacques, owners on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited George Jacques forward: Mr. Jacques stated they would like to put up a greenhouse. His daughters have been doing some of the work. Mostly they would be going to businesses selling hanging potted plants. Sanden asked how will you be getting your materials, by UPS or by trucks? Mr. Jacques stated he will be going to the Horticultural Supply in St. Paul.

Staff Report – Emily Lund: The Jacques are requesting a conditional use permit for General Retail & Services for a greenhouse. The property is located in Lot 2, CSM V12, P104, in Section 35 in the Town of Clifton. The request is for a commercial use to be established in the Light Industrial District. It is located on 3.33 acres. The Clifton Town Board recommended approval of this request on 9-5-12 without any specific conditions. The Town did not reference its Comprehensive Plan. Pierce County Code 240-15J the purpose and intent of Light Industrial zoning is stated in the staff report. Pierce County Code 240-36E allows general retail and services. The use would not appear to adversely affect the property in the area as it proposed to be located on one of the 4 lots created in 2009 for commercial development. The use is compatible with the adjoining agricultural and commercial uses. Applicants plan to grow annuals (petunias, etc.) and vegetables to sell to the public. All work will be done by hand with small tools and equipment; there won't be any automated equipment utilized at this time. They plan to sell fertilizers, soil, compost, garden ornaments, sun globes, pots and other items. Bulk dirt, compost and some larger plants are proposed to be stored outside the greenhouse. Plant waste material will be taken to the City of Prescott compost site. The other solid waste materials will be put in the dumpster shared with the north adjoining property. The applicant plans to run the business along with 6 other family members and volunteers. The applicants are proposing to work in the greenhouse Monday through Sunday 8 AM to 9 PM. The retail component is anticipated to be seasonal and open to the public May 1 – July 15 with the hours being 8 AM to 9 PM. The 3.33 acre property has an existing well, septic system and 2-storage sheds. The 30' x 30' shed will be used for their business but will not be accessible by the public. They propose to add a 10' x 28' greenhouse onto the 30' x 30' shed and build a separate hooped 21' x 48' x 11' greenhouse. Since the greenhouse is under 25,000 cubic feet, the commercial building code does not require plan submittal

for review & approval per SPS 361.30(1)(b). However, the building must still be constructed in accordance with commercial building code and Todd Dolan, the Town's Building Inspector, will be responsible for determining UCC compliance. Mr. Jacques asked what is meant by including a foundation. Lund suggested that he will have to work that out with Todd Dolan. Applicants propose to utilize the existing cement parking pad for one handicapped parking spot and the existing gravel driveway for guest parking area. They have enough room for over 10 parking spaces. Pierce County Code 240-54I requires handicapped parking spaces should include 2 percent of the total spaces created, with the minimum of one space. The applicants propose to have three on-premise advertisement signs which can be a maximum of 32 square feet in size per PCC 240-60N(1)(d) and PCC 240-61F(2). As indicated on the attached plot plan, one would be located along State Rd 29, the other at the intersection of State Rd 29 and 1250th Street and the third by the building. Applicant would need to keep signs out of the road right-of-way and out of the vision clearance triangle per PCC 240-B, C & H. PCC 240-76G talks about expiration of Conditional Use Permits.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends that Land Management Committee approve this conditional use permit for General Retail & Services for a greenhouse with the following conditions:

1. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health & Family Services, etc.).
3. Hours of operation shall be Monday through Sunday 8 AM to 9 PM.
4. Two regular parking spaces and a minimum of one handicapped parking space shall be delineated.
5. Up to three advertising signs may be placed and shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
6. Applicants shall work with Todd Dolan, Clifton Building Inspector, to follow the commercial building code requirements from DSPS.
7. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Aubart moved to approve the conditional use permit for General Retail & Services for a greenhouse for George and Julie Jacques, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to the public health, public safety or the character of the surrounding area, with conditions #1 - #7/Sanden seconded. All in favor. Passed.

Discuss take action on a request for Site Plan Review for General Retail and Services (Greenhouse) in the Light Industrial District, pursuant to Pierce County Code, Chapter 240-75, for George and Julie Jacques, owners on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R20W, Town of Clifton, Pierce County, WI.

Staff Report – Emily Lund: This is site plan review for a proposed addition to an existing structure and construction of a new structure for commercial use. The property is located in Lot 2, CSM V12, P104 being part of the SE ¼ of the SE ¼ of Sec. 35, T27N, R20W, Town of Clifton. This request involves the construction and modification of commercial structures located in the Light Industrial zoning district. The address of the 3.3 acre parcel is N6531 1250th Street. Pierce County Code 240-15J is stated in the staff report. Because this is a commercial use, it requires Site Plan Review. The CSM creating this lot was recorded in 2009. An existing shared driveway is located along the north of the property and serves this lot and the adjacent lot to the North. The nonresidential driveway meets the minimum driveway width

standards. Applicants propose to utilize the existing cement parking pad for one handicapped parking spot and the existing gravel driveway for guest parking area. There is ample room for more than 10 parking spaces. Stormwater drainage will be overland flow onto the 3.33 acre property. There are drainage ditches to the east and south of the property to accommodate large rain events. Stormwater and surface water management on this property was addressed at the time of lot creation. The property is served by an existing private well and on-site septic system. The property is characterized by existing gardens, trees and landscaped vegetation. Plant waste material will be taken to the City of Prescott compost site. Other solid waste materials will be put in the dumpster shared with the adjoining property to the north. Plans for security lighting were not provided. No freestanding light poles are proposed. Applicant should be asked to detail any future lighting plans. Adjacent uses include agricultural and commercial. The applicants plan to add a 10' x 28' greenhouse onto the 30' x 30' existing shed and to build a separate hooped 21' x 48' x 11' greenhouse. Three signs are proposed. They can be a maximum of 32 square feet and must be out of the right-of-way. Applicants should also contact the Department of Transportation, Patty Paulik, to ascertain State sign regulation.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the Land Management Committee consider including the following conditions in any plan approval:

1. Two regular parking spaces and a minimum of one handicapped parking space shall be delineated.
2. Advertising signs shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle. WI DOT regulations shall also be adhered to.

Sanden asked if the reason the placement of the buildings isn't on the diagram is because of the size, it doesn't show the addition. Lund stated it is pretty much in the center. She presented a drawing of the hoop structure and placement. Sanden asked if there was going to be any additional lighting. Mr. Jacques stated no, there is one light out in the middle of all the buildings. **Sanden moved to approve the site plan review for George and Julie Jacques with conditions #1 - #2/Ross seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time and reminded the committee that zoning staff is attending a conference being held in Eau Claire this week.

Departmental Update and Future Agenda Items

Site plan approval for Thomas & Betts for two buildings in the Town of Trenton.

Motion to adjourn at 06:23pm by Ross/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, September 19, 2012

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Eric Sanden and Jim Ross

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 3rd & 17th, November 7th & 21st, all in 2012.

Approve Minutes: **Ross moved to approve the September 5, 2012 LMC minutes/Sanden seconded. All in favor. Passed with Holst not voting because of his absence from last meeting.**

Discuss take action on request for renewal of a conditional use permit for nonmetallic mining by County Materials, agent for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼ of Section 15, and the N ½ of the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Jim Small explained that Pete Krautkramer, the mine manager, and the blasters from Olson's Explosives are here; Kurt Oakes, General Manager and Engineer, and Brian LaRue, Sales Manager. Mr. Krautkramer explained they would like to get off the .35 inches per second peak particle velocity for the blasts. Mr. LaRue explained that a previous manager had agreed to the .35 inches per second before any expertise was here. They will propose tonight what Wisconsin has adopted; the Z-Curve, a very strict, conservative guideline that brings in the two parts of the equation. The .35 is just amplitude; the Z-Curve equation of the frequencies is a really important tool that has been taken out of their toolbox.

Staff Report – Brad Roy: BS Construction/Steve Schoeder Properties owns a mine which was expanded in 2006. County Materials is the current operator of the site. Activity in the mine has been significantly less since the opening of the County Materials Spring Lake Quarry. There is a small amount of blasting that takes place in the mine. Typically one or two times a year. The mining operation is moving closer to the neighboring residence which is causing concerns for the neighbors. There have been multiple instances in which “fly-rock” has landed on the neighboring property. In 2006 the two parties agreed to allow mining within 50 feet from the property line as long as the mining did not encroach within 400 feet from the house. Mining is currently approximately 550 feet from the house. The mining site has approximately 10 unreclaimed acres. Access to the mine is off of County Road S. County Materials intends to remove approximately 30,000 tons of material annually until its lease expires in 2015. Processing of the material will be done at the County Materials Spring Lake Quarry. Operations occur during daylight hours during the peak construction season, from Monday through Friday with occasional operations on Saturday. BS Construction intends to mine an additional one acre, towards Cty Rd S and then close and reclaim the mine. Peak particle velocity is limited to 0.35 inches per second. In 2011 there were numerous instances where the blasts exceeded the limit. The neighboring property owner would like a condition to be added to eliminate any fly-rock on his property.

*Fly-rock can be caused by multiple factors. The operator and blaster have techniques available which can minimize the potential for fly-rock. There are also suppression techniques such as

blasting mats available to minimize fly-rock. If fly-rock cannot be adequately managed it may be that the inclusion of a condition relating to the use of blasting mats is warranted.

The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the surrounding area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. Hours of operation remain consistent daylight hours Monday through Friday, 6:00am to 9:00pm during the construction season with an occasional Saturday, 6:00am to 6:00pm, property owners within 300 ft and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.35 inches per second.
7. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. 50 foot setback shall be maintained from all property lines and a 400 foot setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Rock blown onto adjoining property will be removed by the operator at the request of the property owner.
13. Blast readings shall be provided to all adjoining land owners upon request.

Bill Sylla Jr, explained how the condition relating to peak particle velocity versus the Z-Curve versus other options was arrived upon. They were asking for a .2. At that time there were several municipalities throughout the State using that as their limit. He presented a chart that showed when blasting is perceptible, objectionable and uncomfortable for the person going through it. He lives in a town where they put a new sewer in and he was home when the blasting took place. They had made the charges low enough so the neighbors wouldn't notice. When we first talked about this, the discussion was having more blasts at lower magnitude. We're OK with a .35 and we know they occasionally exceed it. If they start designing to a .5 are they going to exceed that? 80% of the quarry is gone and we understand that people need rock. They feel there needs to be some reasonable limits on how the quarry is mined. It's in the staff report to add another condition about the fly-rock; we actually don't want another condition. We just want to inform the County and the blasters that there is a real liability and safety concern. He stood there last summer and the fly-rock is coming onto the property. They have to let the committee know. Sanden asked about the fly-rock, how often and how much are they experiencing? Bill Sylla Sr stated last summer they experienced fly-rock and there were two blasts this year, they experienced it on both blasts. The first blast was June 29th and there were two fly-rocks that he found. The second blast was a peak particle blast of .17 and didn't think with such a low peak particle velocity that there would be any. He mowed about a week after the blast and found two pieces of fly-rock. Last year they exceeded one blast to .61, well beyond a .50. They have blasted many times previously where it didn't produce fly-rock - so they should be able to reproduce those conditions so we don't have it now. Chairperson Fetzer asked Oakes and LaRue if there is anything that can be done to alleviate the fly-rock besides using mats. Mr. Oakes stated this year they have been nothing but successful in June and July. They stayed under the .35 and as far as the CUP,

everything was good. There is now a report that fly-rock went onto the neighboring property. He didn't know anything about the fly-rock occurring in July until he received the letter from the Sylla's today at their office. They design the blast to meet the CUP limits. Since they instituted the design parameters and they changed how the quarry is being developed they've been successful but the drawback is its more labor intensive to make a price competitive product. Mr. Sylla made a statement that correlated fly-rock to peak particle velocity. Mr. Oakes stated you can't correlate those two together. Holst asked if fly-rock is a site prep problem then. Mr. Oakes stated most of the time, yes. Holst stated so if you did a better job prepping your site you could control the fly-rock? Mr. Oakes stated that would certainly alleviate the fly-rock issue. Mr. Sylla, Jr stated they are OK with the conditions as they are. They had to mention the fly-rock because it's a safety concern. Holst asked what the duration of a shot is. Mr. Oakes stated typically a second, about 1.1 seconds. Mr. LaRue stated that's with a three deck shot with three powder columns. We were doing a full-face at 70 feet. How we designed it, we split that bench in half. They shoot, then shoot and carry it off. They have to bring in the crushing contractor. Mr. LaRue stated it's harder to clean up when you fragment that rather than going to the floor. Mr. Sylla Sr asked if they do 30,000 ton a blast. Mr. LaRue stated 30,000 ton a year. Mr. Sylla Sr asked if it took the four blasts last year to achieve the 30,000 ton. Mr. LaRue stated the four blast equaled 50,000 ton because of catch up. Mr. Krautkramer stated the problem now with benching is that they shot off the top half. The top half is the poor material. He needs to do a full-face to mix the good with the poor. The fly-rock issue, if he has to he will have three people there and after every blast they will walk Bill's property and pick everything up. Chairperson Fetzer noted that only if that's OK with Mr. Sylla. Mr. Sylla Jr stated that's not the issue. The issue is they are flying onto their property and they are a hazard. Once they are sitting on the ground, anybody can pick it up but a flying rock is dangerous. Mr. Oakes stated that if the blaster in charge feels an area needs to be cleared before a blast; it's his professional obligation to clear the blast area. Mr. Sylla Sr asked if they shouldn't be doing smaller size shots so there isn't this potential for fly-rock. Mr. Oakes stated it's not the size of the shot and it's not a matter of the peak particle velocity that causes the fly-rock. Holst asked what does? Mr. Oakes stated bench preparation, shot design, paying attention to loading. We can go through and design the shot and we get very good repeatability on vibration numbers. These past two shots this year have been excellent but there are quality issues. If the quality isn't there, the County or State has to go somewhere else to get their rock. It's important to make a saleable product and that's where shooting full-face comes into play. Mr. Sylla Sr asked if they should have to endure a greater vibration in the house so you can market your rock. Mr. Oakes stated all County Materials is asking for tonight is to adopt the Z-Curve at this location because we're taking into play frequency and amplitude. Chairperson Fetzer asked if the .35 is under or over the Z-Curve. Mr. Oakes stated part of it is in it and part is out. Chairperson Fetzer asked if that makes it better or worse? Mr. Oakes stated it makes it worse at a low frequency you are exceeding the Z-Curve. Chairperson Fetzer said you are saying a higher shot will make it less vibration? Mr. Oakes handed out graphs. Ross asked if County Materials gives a 48 hour notice of blasting, why would anyone be in that range during blasting? Mr. Sylla Jr stated it was last summer and all the kids were home and a camper was in the backyard, kids were playing there. We are now getting to a range where the rock could fly up and hit the house. Mr. Sylla Sr stated their property extends 200 feet back toward the quarry. It's 400 feet from the house but only 200 feet from the backyard. Holst asked if in your professional opinion if you increase your velocity it would diminish the occurrence of fly-rock in their yard, amount of shots they have to live with until you get out of there and what is the timeframe to be done with the quarry, 2015 is the year that is in the staff report. Pete Krautkramer stated he doesn't know where that number came from. It might be possible they will go over to where the road comes in and take that out of there too. But that's a lot further away from the house too. Holst stated you have an acre of hard rock to mine yet. Mr. Oakes stated blast vibrations are amplitude and frequency. Amplitude is the peak, when we refer to .35 inches per second that is the velocity. That's what is showing on the Y axis on the graph, the vertical line. Mr. Sylla Sr asked if the seismograph that they get the .35 or .5 reading, is that the same scale they use for earthquakes? Mr. Oakes stated yes. Mr. Sylla Sr stated it would be better to blast at a .8 rather than a .5? Mr. Oakes stated no, you are thinking Richter scale. You bring up a good point, the reason an earthquake does so much damage is that the frequencies an

earthquake generates are usually between 2 and 5 hertz. That is what's being shown on the X axis. When you look at the Z-Curve, down where the frequencies are low, the lower frequencies are 1 & 2 on the chart. That threshold for potential damage which is the slope line, that allows a structure to respond more. Mr. Sylla Jr stated it could come in lower and actually cause more damage? Mr. Oakes stated no, there is never been documented damage by the US Bureau of Mines, Northwestern University and Fiber Tech Engineering that has shown damage that has been documented from blasting at lower limits than the Z-Curve. He has had multiple discussions with Chuck Downing and David Siskind about this. Mr. Sylla Jr stated he has his paper here that shows some of his work that produced the Z-Curve and there was damage to structures, statistic events that have happened. As he was doing his data to come up with the Z-Curve, the data to say that it can't happen is not statistically valid. Mr. Oakes disagreed with that. This is what was adopted by the United States Federal Government and the State of Wisconsin. Sylla's house is plaster and lath on the inside. There is a dash line on the chart. If the structure is made out of plaster and lath, that is what they are held to be responsible. If the frequencies can increase, the likelihood of having damage is much less. If we can maintain frequencies of 30 hertz or even higher. Mr. Sylla Jr stated you have never had a blast that was less than 10 hertz. Mr. Oakes stated yes, he is sure there have been some blasts of less than 10 hertz. Mr. Sylla Jr and Chairperson Fetzer stated not on this data set. Mr. Sylla Jr stated they don't see why they can't maintain a .35 inches per second and still maintain a higher hertz. Mr. Oakes stated in order to get the higher hertz, you need the amplitude to get the higher frequency. If we can get recommendations here so we can use frequency in conjunction with amplitude, we can make things work better. That's where electronic detonators are really going to prove beneficial for us. We can shoot a signature hole, find the optimum blast timing to utilize and then get a frequency shift so we can get our frequencies in the 25, 28, 30 hertz range. Sanden stated the last time we looked at this curve, it wasn't so much an issue of damage as inconvenience or disturbance. If you are able to increase the frequency by increasing the peak particle velocity, does that translate to a more comfortable blast from their prospective as well as less damage? Mr. Sylla Jr stated the problem is this chart runs exactly backwards from theirs. The higher frequencies you create the bigger problem for people inside the house. It's a different vertical axis but the horizontal axis is exactly the same. They are operating well up in the range. It's actually way past uncomfortable by this data set. Mr. Oakes stated the Y axis is displacement. Holst asked if the .35 was an arbitrary number. Mr. Sylla Jr stated we were asking for .20 inches per second and they wanted the .50. Sanden asked if with higher particle velocity will we have higher displacement? Mr. Oakes stated not necessarily. It depends on the material. It's not the easiest limestone to shoot. We load the shots accordingly. If we could get frequency tied into the conditions, cycles per second, it doesn't allow the structure to respond to the wave going through the ground. Mrs. Sylla stated it's not only uncomfortable, people are losing their houses and they are trying to protect theirs. They have overcome all the taxes and now the valuation has gone down \$50,000. As a family they are the ones directly affected. She has been in the house during the blast and it isn't just rattling. Why should she be driven off her land because someone else has corporate problems, if the rock is not good she can't help it. Holst stated this is the only mine that has a number and he understands there are ways to protect the Sylla's. There should have been a pre-blast inventory of their property and have a neutral engineering firm come in. Mr. Sylla Sr stated they did do that but it was after the blasting. It's an old house and the foundation was cracked and he has re-caulked and re-grouted. It stood there fine and then they had this crazy blast, he thinks it was the first blast County Materials set off. They had fly-rock hit the window. It was over 1000 feet. He stated he feels the .35 would have never sent rock that far. Mr. Oakes stated what he would like to propose is to shoot a signature hole. Set up a single hole drilled in the ground. We set up a seismic array between where the hole is and the Sylla's house. We'll put a couple seismographs and bisect that length into thirds. From that single hole we can analysis that wave form in order to determine an optimum blast time to utilize with the electronic detonators. Through the optimum blast timing they can get destructive wave form interference. Mr. Oakes stated in order to get repeatability; we need to get the frequencies. The last thing he ever wants to be a part of is having safety compromised. He has been in the business for 30 years and has never had anybody hit with fly-rock, never had anyone hurt on a blast that he was responsible for or one of his crew was responsible for. They want to be a good neighbor. He is sure County Materials wants to be a good

neighbor. Mr. Krautkramer stated he stood in Bill's yard with him and they weren't worried about rocks flying. Mr. Sylla Sr stated no, he didn't feel safe. Those initial blasts were throwing rock over an acre of land. Sanden asked about the signature holes; are they to calibrate the process or to make measurements. Mr. Oakes stated the whole purpose is to shoot a single hole as you would load a production hole and the seismic array out there so when that one hole goes off it has its unique wave form. The software he has analyzes the wave form. They can start overlaying multiples - say for example we can use 2 rows, 10 holes long. Sanden stated you use wave cancellation then to configure the best blast. Mr. Oakes stated exactly. Mr. Sylla Sr asked what the last signature hole did. Mr. Oakes stated he doesn't think it was loaded in the same manner as this one. They want to use three decks at a given sequence between the powder decks going off. Mr. Sylla Jr stated we would like them to use the data to keep them below the .35. Sanden stated unfortunately, he isn't in their shoes, but it is a function of two variables and by focusing just on the particle velocity, it's kind of missing a bit. If they can get higher frequency and it might be higher particle velocity but the overall impact on your home and the comfort level; that should be less damage on the structure should be less noticeable within the home. Mr. Sylla Jr stated it's not, the higher frequencies are found to be more uncomfortable to folks in their home. That's why the .35 has been an acceptable standard for them. He has lived through one and it's not a great feeling but it's something they can handle. The .35 has worked for five years. They have stuck to their deal. They didn't even ask for a condition about the fly-rock. All we have to do is bring up the liability. Sanden stated you have the fly-rock and the comfort issue, they are two separate things. If you say .35, then they could go down one frequency and you would have a lot of damage to your house. You could conceivably have a .35 and have more damage to your house than at a higher frequency. Mr. Sylla Jr stated none of the blasts are down there. The .35 has worked. They would like to continue the CUP the way it is. Sanden asked if the signature hole can be done at .35 or the particle velocity work at that level. Mr. Oakes stated it can be done regardless but would be taking a tool out of the toolbox. It truly is a function of frequency and amplitude. Holst stated he understands your position and if you don't feel comfortable in your home then you have lost something. Let them shoot their signature holes and let us see what it does. If it's a problem, we can go back to the .35. If it isn't, they will get out of there a little quicker and alleviate the fly-rock. There are a lot of variables here for us to consider. Safety is our concern and his concern is your family being safe on your own property and County Materials being able to utilize the property and get out of your life. Mr. Sylla Jr stated it was in the report that it was closing in 2015 but we came in today and there is no inclination as to when it will close. Roy stated that the lease will end with Schoeder in 2015. Mr. Sylla Sr asked if they are obligated to take their 25,000 ton in 2015. Mr. Krautkramer stated they can't answer as to whether they will sign another lease. If they decide at that time there is material left they will want to renew the lease. Mr. Sylla Jr stated they thought the reclamation plan only includes a couple acres, are you now going to get another CUP and have another reclamation plan to expand it. Mr. Small stated it's not their quarry, they just lease it. Mr. Sylla Sr asked if they are going to get within the 400 foot setback of the home. Mr. Sylla Sr stated that Brad told him that was a negotiated issue. Pichotta stated Land Management has policy related to setbacks. Setbacks are 100 feet from property lines. The committee established the setbacks; agreed that they would be able to go within 50 feet of the property lines in certain locations as long as they increased it from 100 feet to 400 feet to keep them away from the house. If something different were to be proposed, it would be up to this committee to make a determination. Mr. Sylla Jr stated which is the same thing we're facing right now with the .35; the .35 was set as a standard, now that is open for debate, next the setbacks. Holst stated as long as he is on the committee, it will stay at the 400 feet setback to the house. He is an elected official but there are two citizen members that you have made an impact on. Sanden asked County Materials how many blasts they will have in the next six months? Mr. Krautkramer stated zero. Sanden asked how many they predict in the next twelve months. Mr. Krautkramer stated then they are going into the next 25,000 tons, his agreement with Schoeder ends in May, they have about 25,000 ton on the ground to crush so after next May they will be blasting. Sanden asked over the years they have been operating there, what is the average number of blasts. Mr. LaRue stated last year was eight. Holst asked why. Mr. LaRue stated they went in January for the signature blasts; four in the winter and then four in May. Mr. Sylla Sr stated

actually four where you took rock. Mr. LaRue stated we did the south face in four segments. We are just asking for, like the rest of the State of WI in residential areas to adapt to the Z-Curve. We'll use electronics and do the signature hole. Mr. Oakes stated they will always try to make things better. Mr. LaRue stated they are going to try and maintain a .35. Mr. Krautkramer stated he needs to shoot a full-face. Mr. Sylla Jr stated Mr. LaRue is saying they will continue benching and you are saying you need to shoot full-face. That's where it starts to get hard. Why can't you still shoot full-face just put in a smaller blast. Mr. Krautkramer stated he doesn't believe they can get much smaller and get a good blast. Mr. LaRue stated in this one letter that Jim wrote about, it asked would you rather have less blasts or more blasts. Smaller blasts, we'll have to shoot more times. Mr. Sylla Jr stated as you get closer to the house, you are going to have to shoot more times. We're OK with that. Mr. Oakes stated the closer you are to a structure; you are going to get higher frequencies. So as you get closer to that structure, you know the amplitudes (inches per second) are going to get higher but with the frequencies being higher there is less potential for damage to occur. The Z-Curve makes that big step up where above 40 hertz you are allowed 2 inches per second. We are always going to keep that minimized. That's where the destructive wave form analysis comes into play. Mr. Sylla Jr stated but that's going to be very uncomfortable. Mr. Oakes stated 2 inches per second would be damn uncomfortable, yes. Mr. Sylla Jr stated 4 or 5 years ago when you were blasting, it was OK to have a .35 because you knew you were further away and you weren't going to have difficulty because the amplitudes were going to be lower because of the distance. Now that you get closer, you are backing out of your deal and asking for higher lines. Mr. Oakes stated you are hitting the nail on the head. Since we are designing the shot this short of distance away, we're reducing the pounds. So we're asking that given pound of explosive to work harder. If something has to work harder, it's pushing harder backward. We're going to get a higher vibration. Mr. Sylla Jr stated but you can take less rock per blast. Mr. Oakes stated no, it's all a matter of powder factor, pounds per cubic yard. The easier the explosive can work the lower the vibration levels. Mr. Sylla Jr stated you could use less explosive to blast less. You could use less explosives and remove less rock. Mr. Oakes stated you are still going to be asking that pound of explosive to do a given amount of work. When you ask that pound of explosive to work harder, you are going to get higher vibrations. Mr. Sylla Jr stated you are saying if I blow up a pound of explosive somewhere in the quarry or if I back up and blow up 500 pounds of explosives, it's going to be the same at my house, it doesn't make sense. Mr. Sylla Sr asked about the question of the .35, if the committee decided on it. We wouldn't be here complaining about it. Chairperson Fetzer stated we want to make things better for you and that is hopefully what is being proposed, if we're wrong we will go back. He hopes what is being proposed will be better for you. Mr. Sylla Sr said we have no way of monitoring in the house what is uncomfortable. Sanden stated unfortunately, it's going to change with every blast. Sanden asked Pichotta if it would be feasible for staff to be there during a blast. Pichotta stated absolutely. Chairperson Fetzer stated his guess is they will be able to tell after a signature hole. Mr. Oakes stated to a degree. Mr. Sylla Sr stated one of the signature blasts went over. Mr. LaRue stated that was at 250 feet, well inside of the setbacks. Sanden stated he will try and preface it with, if things don't work out they will go back, especially with the fly-rock issue, he has no qualms about requiring matting if what he is about to propose doesn't work.

Sanden moved to approve the renewal of the conditional use permit for nonmetallic mining for County Materials, agent for BS Construction Inc and Steve Schoeder Properties with conditions #1 - #13, amending condition #6 to change "peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibration. And add condition #14 Site preparation will be sufficient to eliminate fly-rock from leaving the site. #15 County Materials will return before the Land Management Committee in one year for evaluation, urging staff to be on hand during a blast./Holst seconded. Holst amended #12 to read "Operator shall ensure that fly-rock does not negatively impact adjacent properties." Sanden agreed to that and stated his condition #14 can be struck. Pichotta questioned the timeframe, suggesting that we might want them to come back more quickly. Sanden stated that is why he asked about the blasting, he wanted to have them come back in six months but he said there will be zero blasts. Come back after the signature hole? Mr. Oakes stated he would be fine with that. He would hope there would be enough time between the

signature hole and the first production blast that allows that to happen. Chairperson Fetzer asked if they could make that happen. Mr. Krautkramer stated yes, if he is going to bring in his equipment, they don't want to have him come back in three weeks. He'll do it. Chairperson Fetzer stated you know when these meetings are set and you can set up your signature hole. Sanden stated to contact staff so they can have someone out there as well. **Sanden amended condition #13, "County Materials shall come back before the Land Management Committee after the signature blast for a status report." Holst agreed. All in favor. Passed.** Chairperson Fetzer stated there will likely be a couple people out on the site for the signature hole. Mr. Sylla Jr stated he would like to be back for the signature hole. Mr. Krautkramer stated he will let everyone know a month ahead of time.

Discuss take action on Travel/Training Requests. Pichotta stated there is a request to attend the State Cartographer's Office on the future of aerial photography in Eau Claire on Friday, September 28, 2012 by Rand Kluegel. **Sanden moved to approve the travel/training request for Rand Kluegel/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Conditional use permit for a nursery in the Light Industrial District in the Town of Clifton and associated site plan approval.

Motion to adjourn at 07:41pm by Holst/Ross seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 19, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 3 rd & 17 th , November 7 th & 21 st , all in 2012.	Chair
3	Approve minutes of the September 5, 2012 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal of a conditional use permit for nonmetallic mining by County Materials, agent for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI	Roy
5	Discuss take action on Travel/Training Requests	Pichotta
6	Future agenda items.	Pichotta
7	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(9/7/12)

Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, September 5, 2012

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Jim Ross

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Excused: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 19th, October 3rd & 17th, all in 2012.

Approve Minutes: **Ross moved to approve the August 1, 2012 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Recycling Facility in the Industrial District, pursuant to Pierce County Code Chapter 240-37.1(C & D) for Paul Larson (Paul's Industrial Garage), owner on property located in Lot 2, Certified Survey Map (CSM) V2, P15, being a part of the SE ¼ of the SE ¼ of Section 13, T25N, R19W and part of the SW ¼ of the SW ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff, Pierce County, WI.

Chairperson Fetzer invited Paul Larson forward: Mr. Larson explained that right now they pick up co-mingled recyclables. At the present time, the recycling center in Ellsworth doesn't take that so they take their recyclables into Minnesota. They have been doing it for over two years and they would like to be able to handle it themselves. It will save on fuel and time. They can collect more recyclables locally. Ross asked if it was a collection point. Mr. Larson stated they go out and collect, bringing them back, sorting and then compacting them. Sanden asked about the size of the vehicles they use. Mr. Larson stated they have split-body trucks; one side is for garbage and the other side is for recyclables. When they come back they dump the garbage in the transfer station and dump the recyclables on the floor and put them in roll-offs to take to Minnesota. Sanden asked if the truck traffic would increase. Mr. Larson stated they use their own trucks. They do one trip per truck each day and they own eight or nine trucks.

Staff Report – Jim Kleinhans: Paul contacted us about getting into the recycling program. He has been talking to the DNR and the Solid Waste Department. There isn't much in the zoning code under Ch 240-37.1. It talks about recycling facilities; for sorting and transferring and it's located in the Industrial District. Chapter 201 of the Solid Waste Code covers Solid Waste Management for recycling and composting facilities. Paul will also have to go before the Solid Waste Board. The Town of Diamond Bluff recommended approval of this request on August 9, 2012 without reference to their comprehensive plan but suggested planting 12 spruce trees on the south side of the building. The Department of Safety and Professional Services will have to approve the building because of the size. The Department of Natural Resources Waste Materials Management Specialist approved the application for this new materials recovery facility (MRF) last December. Under WI Administrative Code NR544; Paul will have to self-certify that he is complying with that program. What Paul intends to do is single stream recycling of paper, plastics, glass, tin, aluminum, cardboard, etc, primarily during day time hours and employ a couple of additional employees. Equipment will include a baler, forklift, magnetic separators and conveyors. Some mechanical sorting will be done. Materials will be processed and baled for shipping to

markets. The building is designed for the transfer of materials from trucks backing into the east side of the building and loaded out the west side of the building. So no service doors will face Highway 35. The building will be equipped with an employee restroom so a sanitary reconnection permit will be needed and has already been applied for and approved. Adjacent land uses include the solid waste transfer station, a highway shop, general agriculture and residential districts in the Village of Diamond Bluff. This facility is located along the Great River Road Scenic Highway. The intention is to initially process recycling materials for the Village of Bay City that could provide approximately 50 tons per month. After operations are running efficiently they intend to add the materials they presently collect and truck to a facility in the Twin Cities. There is an existing stormwater retention basin. Paul, Dave and I looked at it, it's filled with water so it is either is filled with sediment and not draining correctly or it's undersized for the facility. Mr. Larson stated that the basin had recently been cleaned out.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC approve this conditional use permit with the following conditions, in addition to those suggested by the Town of Diamond Bluff Supervisors:

1. A sanitary permit will be required prior to construction for the domestic wastewater from this building. We can strike #1; they already have the Reconnection Permit for the wastewater.
2. DNR approval for a holding tank to accept industrial floor drain wastewater shall be secured. Paul stated his plumber has obtained that as well.
3. A copy of Commercial Building plan approval by the Department of Safety and Professional Services shall be provided to the Land Management Department prior to construction.
4. Twelve spruce trees shall be planted along the south side of the proposed building within 12 months of this approval along with any other mitigation as directed by the LMC.
5. Any new advertising signage will require a land use permit.
6. A stormwater pollution prevention plan (Notice of Intent) regarding roof and parking lot surface water runoff be approved by the WI DNR.
7. A license to operate this recycling facility shall be obtained from the Pierce County Solid Waste Management Board.
8. The conditional use permit shall be renewed in twelve months to insure permit compliance with the LMC and Solid Waste Management Board decisions. On this last condition the committee might want to specify if it has to be done in front of the committee or administratively.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Pichotta suggested under condition #8 that renewal be done administratively unless compliance issues arise. **Ross moved to approve the conditional use permit for a recycling facility for Paul's Industrial Garage, due to the fact the proposed use at the proposed location is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #2 - #8 modifying #8 to read "The conditional use permit shall be renewed in twelve months. Permit shall be renewed administratively unless compliance issues arise."/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for Site Plan Review for a Recycling Facility in the Industrial District, for Paul Larson (Paul's Industrial Garage), owner on property located in Lot 2, Certified Survey Map (CSM) V2 P15, being a part of the SE ¼ of the SE ¼ of Section 13, T25N, R19W and part of the SW ¼ of the SW ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Paul Larson forward: Mr. Larson said he would let Jim explain.

Staff Report – Jim Kleinhans: With any industrial development we look at site plan review. Locations are such that you apply the standards in the code and identify things, by priority, to assure site designs that promote compatibility between land uses and to create safe and attractive layout; structures that promote proper access to streets, transportation and protect property values. The Town of Diamond Bluff wanted

to have spruce trees planted along Hwy 35. They weren't specific about the size or locations and Paul hasn't presented a landscaping plan. He requested that we postpone that until the building is up. Paul went through this in 2008 when he did his flea market out there. He planted some shrubs that survived and some trees which didn't. We are going to want to ensure, with the big building, that the trees make it. We want to get a minimum size on the trees so they are effective. The building is 36 feet tall and with the height of the building there is an extra foot of separation from the setback, so he meets that requirement. The code information is provided in the staff report. It's to make things industrial or commercial a little less noticeable on the landscape. Northland Buildings was contracted for the building project. The steel building will be a cold storage design with 26 ft sidewalls and a peak height of 36 feet. A bathroom is proposed for the NW side of the building that will tie into the existing septic system serving the office building and that has been approved. The well is located near the parking lot between the office building and this proposed building. WI Administrative Code NR812 which dictates separation distances between uses, does not have a separation distance to a recycling facility so that's not an issue. The Town of Diamond Bluff recommended 12 spruce trees. It's good to use evergreens because they give year round coverage. I don't know if 12 is enough when you are thinking about 102 feet along the Hwy 35 corridor. If they are 10 feet apart, that may just screen it when you are in front of them. It may take more or a mix of fencing and trees. There is a stormwater detention basin established back in 2008 and Paul said he cleaned that out. That would be reviewed by the Department of Natural Resources, Jim Devlin. The hillside north of the property drains out of an agricultural field and a steep hillside that is wooded. That has caused some problems in the past. He has a large berm developed that's ripped that takes the runoff water down into the light industrial area. So it won't impact the immediate area of the recycling facility. In the road right-of-way on Hwy 35, a picture is included, Paul had some sand fill brought in, he is grading that out and has topsoil on it and he will be seeding it. So that is addressed. Mr. Larson currently has 17 employees and with the recycling center he may be adding a couple more. The parking lot east of the office provides 12 parking spaces and there are four additional parking areas around the office building. There are no handicapped parking spaces defined. Typically people do not come into the office as it is a drive-thru facility. Roll off containers will be stored to the north of the new recycling building and on the new proposed parking lot just east of the proposed recycling building. Additional external lighting for this recycling building is on the north side for loading and unloading of materials. The recycling center will primarily be operated during daylight hours. Assuming every truck that comes in and leaves will go through the scale, so the traffic circulation comes off of Hwy 35 into the facility and exits through the same driveway. Screening of the open storage area behind the transfer station; Paul converted a semitrailer into a storage container for electronics (TV's and computer monitors) that is placed behind the transfer station to help screen the scrap metal bins. There are hardwoods planted there so we will see what it looks like when the leaves are off.

Staff Recommendation: Staff recommends the Land Management Committee review the information provided with this report plus any public concerns to determine whether changes or additions to the site plan are warranted to comply with the purpose and intent of the zoning ordinance. Staff suggests the following items from this report be specifically addressed:

1. Approval of a vegetative buffer plan and timeline for implementation. That is something that should be brought back to this committee when the building is up and that needs to be done within 12 months of this approval.
2. Restoration of the Hwy 35 ditch. This one can be scratched because it's already done.
3. Stormwater pond design and maintenance. We will need a sign off from the Department of Natural Resources saying that the current design or capacity is adequate.

Sanden stated that 12 trees on a 102 foot distance doesn't sound like a lot but on the other hand it's less than 10 feet apart. As they mature they are going to branch out at least five feet in each direction. Kleinhans stated the building is 102 feet long and they don't need to be right in front of the building. We may want to stagger them or spread them out because the people traveling along Hwy 35 or the ones living right across the street may see. Those are all hardwood trees and when leaves come off they will be able to see. Mr. Larson stated they have a five foot berm up there and they will put the trees on top of that.

Once we get the building up, we can take a look and see what we can do to make it more attractive. Kleinhans stated 12 would be the minimum because that's what the Town of Diamond Bluff requested. He agrees with Paul that we should take a look at the building, take some photographs and bring it back before the committee. Get a height and based on the berm and locations of the trees. Paul is going to be storing dumpsters behind the building and it would be nice to screen that even though it's industrial. Sanden stated because of the nature of the business they will need easy truck access going in and out. To block out this one building when a lot of the other will be visible, he doesn't want to overdo it. The height of the trees would have to be a balance so the trees are large enough to be affective sooner than later but then it would be cost prohibitive. He was thinking around six foot trees. Kleinhans stated the larger tree the harder it is to get them to grow. It's pretty sandy soils. A six foot tree would be something you would want to consider out there instead of a seedling. Sanden asked if it would be out of the ordinary if they requested a plan be drawn up between now and when the building is put up and brought back before the committee for final approval. Kleinhans stated we don't have anything to react to now, but you can visualize what the 12 trees would look like in front of a 100 foot building. It could be more effective to screen the dumpsters and Paul's garage. It would be a good idea to figure out what it will look like once the building is there. There needs to be a management plan with the planting of the trees. Pichotta suggested potential conditions: #1 Approval of a vegetative buffer plan and timeline for implementation shall be presented to the Land Management Committee within seven months. Plan shall include a minimum of 12 trees, 6 feet high. #2 Documentation of DNR approval of stormwater management shall be submitted to the Land Management Department.

Sanden moved to approve the proposed site plan for a recycling facility for Paul's Industrial Garage with conditions #1 - #2 as proposed/Ross seconded. All in favor. Passed.

Discuss take action on request for renewal of a conditional use permit for a Private Outdoor Recreational Use/Rodeo in the General Rural Flexible 8 District by Mark Anderson, owner on property located in the SE ¼ of the NE ¼ of Section 9, T26N, R19W, Town of Oak Grove, Pierce County, WI. Staff Report – Andy Pichotta: Mr. Anderson operates a horse boarding stable along US Hwy 10 and in 2009 he received a CUP to operate commercial rodeo events. The number of events varies from year to year. A Special Event Permit is also required from the Town of Oak Grove. The property is located in Section 9, Town of Oak Grove and is zoned General Rural. The property is located along Hwy 10, but access to the events is off of 1090th Street. Tents for shelter and satellite toilets for sanitary facilities have been used for the events and it has been determined that this will continue for any future events. No commercial structures will be constructed for the events. Parking is along 1090th St; Pierce County Code §240-54 requires 1 parking space for every 4 patrons. There have been no parking issues at the hosted events. Events are during daylight hours. A public address system is utilized and directed to the north. Staff has not received any complaints about the events. The Town of Oak Grove was contacted regarding this renewal request; staff has not received any issues or concerns about the renewal from the Town. The existing conditions are:

1. This permit shall be valid for two years or if compliance issues arise.
2. A land use permit shall be required for any buildings located or constructed on the site.
3. Any on-premise signs shall be permitted by Pierce County.
4. Solid waste dumpsters or waste containers be located on site and maintained.
5. Hours of operation shall be from 12:00pm until dark.
6. Adequate liability insurance shall be maintained.
7. Property and containment fences around the facility shall be maintained.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditionals are adequate to protect the public interest, public health and safety and the character of the surrounding area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions:

1. This permit shall expire in two years. Permit may be renewed administratively if there are no compliance issues.

2. A land use permit shall be required for any buildings located or constructed on the site.
3. Any on-premise signs shall be permitted by Pierce County.
4. Solid waste dumpsters or waste containers be located on site and maintained.
5. Hours of operation shall be from 12:00pm until dark.
6. Adequate liability insurance shall be maintained.
7. Property and containment fences around the facility shall be maintained.

Sanden asked what kind of parking facilities do they have. Pichotta stated they utilize a field. Kleinhans noted that they have parking attendants. Chairperson Fetzer asked when the last rodeo was. Pichotta stated that he believed in 2011. Ross asked if they have any other type of events. Pichotta stated that they typically hold one or two rodeo events per year.

Aubart moved to approve the conditional use permit for a Private Outdoor Recreational use/Rodeo for Mark Anderson with conditions #1 - #7/Sanden seconded. All in favor. Passed.

Discuss take action on proposed 2013 Land Management Budget. Pichotta reported: Pichotta stated this includes a combination of four different budgets; Planning, Zoning, GIS and Surveyor which comprise the Land Management Department budget as a whole. It is slightly higher than last year. The directive from the Board this year was to offset the increase in personnel costs by reducing operating costs. Given that the department's budget is 95% personnel, 5% operating costs, it is just about impossible to whittle away at operating costs without impacting our ability to do our jobs. He noted that he was able to reduce operating costs by \$2466.00. County Planner budget: Pichotta discussed each line item and explained that health insurance went up substantially because an employee with single coverage was replaced by an employee that now has family coverage. In the operating costs of the Planner budget, Pichotta reduced Other Professional Services by \$2500. Everything else is proposed to remain the same which ends up being a 4.8% increase. The Zoning budget is much the same, reduction in longevity, a little increase in retirement, 1.6% when you factor in step increases and cost of living increases to the grid, 0% increases in all the operating costs. Ross asked about the publication of legal notices and asked if we have looked into ways of reducing costs or are they set. Pichotta stated they are pretty well set. We actually switched from box ads to columns because they are cheaper. Some time ago the committee discussed whether we should publish agendas or just post them. The LMC opted to continue publishing them in the interest of transparency and keeping the public informed. It would be cheaper not to publish them but then people would have to go on the County's web site versus looking at them in the Herald. Chairperson Fetzer asked whether you could put an ad in the Herald that stated "if you are concerned with County Meetings, check out this website". Pichotta stated he would have to get a legal opinion to see if it met the purpose and intent of Chapter 985 relating to public notice. County Surveyor; personnel side of things is a 1.8% due to increase in salaries, reduction in longevity, operating costs are status quo and hope gas prices don't go up. GIS, once again an increase in salary, decrease in longevity, operating costs to remain the same. The Other Professional Services is some licensing for Arc View products which didn't make sense to take that out of the Land Records Modernization Fund. We had until several years ago funded much of our GIS data development through the General Fund through that line item but it has been reduced substantially and we put the main thrust of GIS data development into the Land Records Modernization Fund - which is very appropriate. Sanden asked about the line item Retirement Employer, why it went up by 15.8%. Pichotta stated there is only one employee's salary in here, the formula changed with the Budget Repair Bill. Aubart stated WRS just changed their contribution rate and that's the increase in the employer contribution. Pichotta stated the personnel costs are provided to us by admin, that's not really something we have much to say about. Park Development; this is a fund that for a lot of years \$600.00 was put into the fund when a new lot was created by a CSM and when lots were created by plats it was 10% of the raw land value or a land donation. The Parks Committee also has access to this fund and any expenditures of this fund need to be consistent with the Pierce County Parks Plan. We have been involved in a couple different things. A year or two ago, we budgeted for the purchase of 20 acres adjacent to the existing County Park on County Road O. The large expenditure shown for 2012 is the development of a boat ramp on Trenton island. We are hoping to recoup much of the expenditure through a variety of

DNR grant programs. The WI Fund is a program where folks who meet certain income requirements can get assistance to replace failing septic systems. Land Information Grant is when someone records a document in the Register of Deeds Office, a portion is retained by the County and a portion is sent to the State. The portion sent to the State; if the County doesn't trigger a specific threshold that they were able to retain themselves, the State will grant some of your monies back to you to further your Land Records Modernization Plan. We typically retain enough dollars where they don't give us money back. This year we were granted \$680.00. The money we actually retain is placed in the Land Records Modernization Fund. The Land Records Modernization Fund is the fund through which we implement the Land Records Modernization Plan and is governed by the Land Information Council which was created about a year or two ago. That was mandated by the State for us to continue to participate in the program. The council meets once a year to review proposed expenditures out of the Land Records Modernization Fund to determine whether or not they are consistent with the Land Records Modernization Fund. It did away with the multiple departments chewing away at that budget. We hadn't utilized that fund up until six or seven years ago and it had several hundred thousand dollars in it. We started to use that for GIS data development and Register of Deeds Office used it for their life cycle payment for their software which is \$25,000 per year, plus some other things that may or may not have been consistent with the Land Records Modernization Plan. There wasn't previously that formal tie in with the fund and so now the Land Information Council is the gatekeeper of that fund. The recommendation from the Council is just that to you. What we are proposing to purchase out of that fund is a flatbed scanner that was requested by the Register of Deeds Office for approximately \$7500.00. Andy stated that he had done some research and found several meeting the spec that were cheaper than that. He stated that he had talked to Information Services who indicated that they will get three bids and purchase the cheapest one. Other proposed purchases are two receipt printers for the Register of Deeds Office, GIS updates (Bulberry & ProWest), Migrate to ArcMap, COGO Trimble and River Falls Sections. The total expenditure amount is \$34,493. If we don't need to replace the flatbed scanner, if it doesn't die this year, we would use those dollars to further COGO Trimble and River Falls. Sanden stated he hoped we could find a scanner for less than that. Pichotta stated it needs to be able to scan 11 x 17 and be a flatbed. Revenues; Pichotta has anticipated a little increase in permitting, so he is optimistic that we will have an increase over this year. Other revenues are anticipated to stay the same. Capital Improvements Plan, he keeps bumping vehicle purchases out a few more years every year. We have a 1998 Jeep Cherokee, 2001 Chevy pickup and a 2002 Ford pickup, all starting to show their age. Some of the miles put on them are fairly rough miles, driving across corn fields and down big hills. Ross asked if you consider buying used vehicles. Pichotta stated we do buy used although the F150 was purchased new. It was actually cheaper than the one it replaced. The 2001 Chevy was from the Highway Department. We will keep bumping those out as long as we aren't spending hundreds of dollars a month for maintenance. However, it may be at some point, one may die and we will have to come in with an unbudgeted expenditure for a new vehicle. The other new equipment we need to be aware of is our survey equipment. It's getting hard to get parts. The technology has changed. Its twelve years old. He believes in 2001 they spent \$80,000 or \$90,000 on it. Pichotta is suggesting looking into leasing something. It may be more money in the long run but we wouldn't have to replace it. It would be a smaller yearly cost. Pichotta suggested that if issues pop up that would likely be covered versus us having to repair. Aubart stated the technology has changed a lot in twelve years. Chairperson Fetzer stated in ten years the technology will change again. They would keep you up to date on things. Pichotta stated when we come to that we'll bring the surveyor in to present options. Aubart asked if Pichotta thought they could wait that long. Ross suggested we could budget some money for 2013 for a possible lease program. It would give you a chance to look into it, if you don't need it, you don't use it. Aubart asked if the software or firmware is up to date. Pichotta stated it is his understanding that there are some issues with the existing software. Pichotta suggested we could use a figure of \$7500.00 to look into a lease option with the understanding that if it's determined that it's something we can put off or we can limp along, we just wouldn't spend those dollars. We will add that and noted that the budget would be going up from 2.39% to over 3%. Ross stated everybody is very mindful of the fact we need to keep our budgets down but we also need to function as a government body

and we need the tools to do that. In looking at what you have done in cost savings for the County in utilizing vehicles for so many years this shouldn't be an issue. Pichotta noted we were one of two departments that cut 15% off and the other was Land Conservation. Pichotta is anticipating no changes in staff and similar amounts in revenue. Aubart stated as he sits on a number of committees, Pichotta and staff do a very good job of preparing the committee and he really appreciates that. **Ross moved to approve the 2013 budget as proposed with the increase of \$7,500.00 to the Capital Improvements Plan, survey equipment for 2013/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there is a request to attend the 2012 Fall Conference for WI County Code Administrators in Eau Claire on October 3-5, 2012. He is hoping to send the appropriate person regarding wetlands, floodplain and mining for Jim, Emily and Brad. It won't be overnight. Kleinhans stated Emily is an officer so she may want to attend all three days. There is a tour of the EOG mine in Chippewa so Brad would like to attend that. On the last day there is a discussion about Towns and Counties and comprehensive planning and zoning. Because it's so close it would be prudent to take advantage of the training. **Sanden moved to approve the travel/training request for the Fall Conference for WI County Code Administrators as submitted/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Renewal of the Schoeder Quarry out in Rock Elm.

Pichotta noted that it had looked like we would be having a discussion on a proposed moratorium on frac sand mining but, that due to process issues; it was taken off the agenda. He noted that he had put together some materials on existing regulations and processes in the County as it is. Materials include an analysis put out by the Center for Land Use Education; which is a collaborative effort by the University Extension of UW of Steven's Point. They reviewed our zoning ordinance as well as our comprehensive plan for our ability to adequately regulate frac sand mining as well as those of other counties. The determination through that review was that we are one of the few Counties well prepared to deal with these things. The document that he put together describes the processes we have, some of the existing conditions, the number of mines we have, the relationship between Town Comprehensive Plans and the issuance of CUP's by this committee. The chief reasons for declaring a moratorium is to determine whether or not your ordinances are adequate to protect public health and safety and if they are not to make adjustments to them in order to make yourself able to address those issues. We have expended a lot of effort trying to ensure that our Towns understand their abilities through our processes as well as their abilities otherwise. There was a recent court decision regarding Cook's Valley that basically formalized a Town's ability to adopt a licensing ordinance which allows them to regulate such things as nonmetallic mining within their Town but it applies not on a zonal basis, it applies across the board. The other interesting thing about licensing ordinances is unless they are exempted they apply to even grandfathered mines that aren't subject to County Zoning. It's another way a Town can have a lot to say within their borders. There are six or seven Towns in the County right now that have moratoriums on mining. In order to take a look at their comprehensive plan to give us the guidance they want if someone does propose a new mine and some are looking at licensing ordinances as well.

Motion to adjourn at 07:10pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

AMENDED 8/29/12
LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 5, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 19 th , October 3 rd & 17 th , all in 2012.	Chair
3	Approve minutes of the August 1, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Recycling Facility in the Industrial District, pursuant to Pierce County Code Chapter 240-37.1(C&D) for Paul Larson (Paul's Industrial Garage), owner on property located in Lot 2, Certified Survey Map (CSM) V2, P15, being part of the SE ¼ of the SE ¼ of Section 13, T25N, R19W and part of the SW ¼ of the SW ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff, Pierce County, WI.	Kleinhans
5	Discuss take action on a request for Site Plan Review for a Recycling Facility in the Industrial District, for Paul Larson (Paul's Industrial Garage), owner on property located in Lot 2, Certified Survey Map (CSM) V2, P15, being part of the SE ¼ of the SE ¼ of Section 13, T25N, R19W and part of the SW ¼ of the SW ¼ of Section 18, T25N, R18W, all in the Town of Diamond Bluff, Pierce County, WI.	Kleinhans
6	Discuss take action on request for renewal of a conditional use permit for a Private Outdoor Recreational Use/Rodeo in the General Rural Flexible 8 District by Mark Anderson, owner on property located in the SE ¼ of the NE ¼ of Section 9, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
7	Discuss take action on proposed 2013 Land Management Budget	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present (Amended 8/29/12@9:44a.m.)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, August 1, 2012

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Jim Ross

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Excused: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 15th, September 5th & 19th, October 3rd & 17th, all in 2012.

Approve Minutes: **Sanden moved to approve the July 18, 2012 LMC minutes/Ross seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Nonmetallic Mining Operation in the Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A and Reclamation Plan hearing, pursuant to Pierce County Code Chapter 241-15A(2)(a), for Wisconsin Industrial Sand Company, agent for Diamond Bluff Investments LLC, Holst Farms Inc, William McCusker, MOAP LLC, WTW Properties, Steven Burmood, Helen Holst, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Rich Budinger forward: Rich Budinger, Regional Operations Manager, introduced Lauren Evans, Regional Sustainable Development Coordinator, Loren Merchen, Mine Manager for the Bay City operation, Michele Maxson, Regional Environmental Health and Safety Coordinator, Mark Krumenacher, Hydro geologist Consultant from GZA Environmental and Eric McLeod, Legal Counsel. Mr. Budinger gave an overview of the company and their community involvement, number of employees, financial contributions and projects they are working on. They have identified an opportunity to develop an underground mine in Diamond Bluff. They submitted an application to Diamond Bluff Township and held a public informational meeting at the Bluff's. They appeared before the Diamond Bluff Town Board and received an approval with recommendations to the Land Management Committee. They are an experienced industrial sand mining company that services many markets including glass, water filtration, construction, foundary, animal bedding, oil and natural gas. Mr. Budinger stated the economic and employment benefit the proposed underground mine in Diamond Bluff will provide along with the Trenton facility.

Staff Report – Brad Roy: WISC is requesting a Conditional Use Permit for a new mining operation in the Town of Diamond Bluff. Activities on the site would include blasting and screening underground as well as stockpiling and loading on the surface. The material from the proposed mine would be processed at the recently permitted processing facility in the Town of Trenton. A Reclamation Plan was also submitted for the above ground disturbance and will be discussed. No action is required for the Reclamation Plan. WISC has also submitted a request for a Nonmetallic Mining operation to the Town of Oak Grove for recommendation. The town currently has a moratorium on Nonmetallic Mining and has not given a recommendation. Pierce County requires a town recommendation as part of the CUP application. The proposal encompasses 59 parcels totaling 1,867 acres. The primary use of the land is

agriculture. Much of the land is forested and undeveloped. Other uses include low-density residential and a scrap metal business in the Industrial District. Adjacent land uses are also agriculture and low-density residential. Access to the proposed mine entrance site is off of 1005th St. The current use of this site is a single family residence and active agriculture. Almost all of the above ground disturbance will be on this site. The only other above ground disturbance will be the future ventilation shafts. An adjacent undeveloped property to the mine entrance site has access from 1005th St. The road will need significant upgrades if the proposed facility is approved. The applicant and the Town of Diamond Bluff have discussed a road agreement for 1005th St. No formal agreement has been reached at this time. WISC is proposing to create three mine openings at an approximate elevation of 770 feet within the bluff. A ramp will need to be constructed to provide access to the mine openings. The existing road is at an approximate elevation of 720 feet. The mining process will be consistent with that conducted at the Maiden Rock and Bay City mines. WISC will use room and pillar mining where the sandstone will be mined in parallel tunnels approximately 30 feet wide separated by 70-foot wide sandstone pillars. The mining will be done by drilling and the use of blasting agents. The blasted sandstone will be moved using diesel powered front end loaders to an initial screening to remove large rocks and then conveyed to an outside stockpile where another front end loader will load it into trucks for delivery to the new Trenton plant. The conveyor from the mine to the outside stockpile will be a fixed height, but will pivot horizontally. The applicant has expressed a willingness to add a watering system to the top of the conveyor to mitigate dust. The proposed structures include an office and maintenance/storage building. Outside storage will include raw sand waiting for transport and temporary storage of steel and equipment intended for use in the mine. The applicant is proposing to operate the facility 24 hours a day, seven days a week with up to 22 employees. WISC has indicated that it may convert the existing residential structure into the Office Building. This would require approval from the Department of Safety and Professional Services. The applicant submitted a conceptual request to the WisDOT regarding the Hwy 35/1005th St. intersection. WisDOT recommends that the intersection be upgraded to the B1 class. This will widen the intersection to allow trucks to enter and exit simultaneously and create a 200' right turn lane on northbound Hwy 35. Ventilation shafts are anticipated in the future to provide clean air to the underground mine. The exact location of any potential shafts cannot be determined at this time. They are typically located on flat, easily accessible, leased property with access paths for maintenance and monitoring. One high capacity well is proposed on the site. No washing will be done on the site. The water will be used for dust suppression and other uses. There is a residential well and septic system. These will be analyzed to determine if they will be suitable for the facility. The WDNR permits high capacity wells. Any new high capacity well application is required to be subject to an environmental review. DNR hydrologists will evaluate proposed wells for any potential impacts. Proposals that have the potential to impact protected resources undergo an environmental assessment process by the DNR. The mining activity will be at approximately 770 to 800 ft; the Water-Table elevation in this area is mapped at approximately 700 to 720 ft. The Wind River runs through the mine entrance site and the eastern edge of the site is in the Floodplain. The proposal is for the existing 1005th St. to be moved into the Floodplain. Two stormwater ponds are also proposed within the Floodplain and the Shoreland area. These activities require additional information and permitting. The proposed mining operation will be required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans will identify potential sources of stormwater pollution and spills of oil-related materials and other chemical, and establish controls to minimize any potential impacts to surface waters. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. The plan details the use of a watering truck and potentially a sweeper for roadways and water cannons for the stockpiles. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. The Bureau of Air Management has indicated that the applicant has begun the permitting process for the

proposed facility. Concerns have been raised in other “frac sand” mining operations about the health effects of silica dust.

- In 2011 the DNR conducted a Silica Study to describe what is currently know about sources, health effects, exposures, controls and the regulatory status of silica in Wisconsin as well as in other states and countries. The Report states *“A recurring theme from the literature review and survey is that very little conclusive information exists regarding sources, controls or levels of silica present in ambient air. This lack of data means it is not currently possible to determine conclusively whether or to what extent the quantity, duration or types of silica emissions in the state may be a public health concern.”*
- On November 11, 2011 a group of citizens submitted a petition to the DNR for the promulgation of rules to govern respirable crystalline silica. That petition was denied on January 30, 2012. Deputy Secretary Matt Moroney concluded that: *“Because silica emissions are a component of particulate matter emissions, existing regulations that govern fine particulate matter can be used to control these emissions.”*

A Reclamation Plan was developed for this site.

- The structures, vents and ramp are to be removed.
- Mine openings are to be closed in accordance with agreements to be determined with the WDNR and to allow continued ingress and egress of bats.
- Final slopes will match predevelopment topography. 3:1 slopes cannot be obtained because of the location of 1005th St. and the Wind River.
- The flat areas will be returned to a condition for potential agricultural use.
- The sloped areas will be seeded with natural grasses.
- The final land use will be dependent on future land use trends.

Wisconsin Department of Safety and Professional Services establishes uniform limits on permissible levels of blasting resultant to reasonably assure that blasting does not cause injury, damage or unreasonable annoyance to persons or property outside any controlled blasting site area. SPS 370 addresses “unreasonable annoyance” as well as injury and damage to persons or property by requiring a pre-blasting survey, adherence to established blasting schedules, use of seismographs meeting minimum specifications and control of adverse effects. WISC will use controlled blasting techniques to minimize ground vibrations and seismographs to measure and document the resulting ground vibrations. WISC will offer pre-blasting surveys to residents or owners of dwellings or other structures and respond to claims of impacts. No blasting schedule has been proposed at this time. The Town of Diamond Bluff recommended approval of this request on June 14, 2012, without reference to the Town Comprehensive Plan, with the following comments:

- All trucks must be tarped so no sand blows out. Better than a roll bar tarp.
- Similar conditions applied as the WISC Bay City mine, which includes the following conditions #1 - #26 listed in the staff report (it should be noted that not all those conditions are applicable to this site.)

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location will be contrary to the public interest or will be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends that the LMC grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate by the LMC or as suggested by the Town of Diamond Bluff or area residents:

1. Applicant shall submit verification of lease agreements before mining is conducted.
2. Comprehensive water testing shall be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties within 1000’ of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.

3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, Mining under a leased property shall be a minimum of 100' from any well. A 200-foot buffer shall be maintained around structures.
4. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
5. A map of mining activity and areas of future expansion shall be provided to the Zoning Office annually.
6. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
7. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy 35.
8. WISC shall develop a plan to respond to damage claims to wells or structures by surrounding land owners. WISC shall offer pre-blasting surveys to residents or owners of dwellings or other structures within 1500 feet (or as established by the Town of Diamond Bluff) and shall respond to claims of impacts/damage.
9. A ground water response plan, including accurate determinations of the ground water level and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation, and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.
10. Engineering analysis shall be conducted to demonstrate slope stability for the reclamation of the mine entrance area. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
11. A formal road agreement with the Town of Diamond Bluff shall be established and provided to the Zoning Office prior to any site disturbance.
12. Applicant shall obtain all necessary permits for the proposed development within the Floodplain and Shoreland area.
13. Applicant shall pay the Nonmetallic Mining fee to the Zoning Office prior to site disturbance.
14. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences.
15. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
16. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
17. All loaded trucks shall be tarped in a manner acceptable with the Town of Diamond Bluff.
18. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
19. Applicant shall implement Fugitive Dust Plan as presented. Modifications to the Fugitive Dust Plan may be required by the LMC if warranted.
20. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster. Notification to all surrounding landowners within 1500 feet shall be given notice of the blasting schedule. Blasting shall be restricted to six days a week.
21. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, WisDOT, MSHA and other agencies if required.
22. Applicant shall obtain all necessary permits for structures or signs not discussed in this plan from the Zoning Office.
23. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
24. This permit shall expire in two years.

Chairperson Fetzer asked that anyone that has a comment to use the podium, give your name, the township you live in and with the number of people that may want to speak, please try to limit your comments to five minutes.

Chairperson Fetzer opened the hearing to the public. Sarah Palodichuk, Town of Oak Grove, stated she has concerns about this process being very fast. Her #1 request is to delay a decision on this. She feels time is important. The people are getting together to try to make their voices heard. They don't have the resources to do that and she questioned whether the committee has had access to those resources individually. Her #2 concern is the Pierce County Code and Zoning. She understands that the application is appropriate for the land it is applied for. Just because it's permissible doesn't mean it's beneficial. The Pierce County Code has a distinction between Light Industrial and Heavy Industrial. She feels a 24/7 operation should be in a Heavy Industrial area and not next to a low density, residential area. She feels Highway 35 is a valuable resource and there is no regard for the Great River Road. Her #3 concern is the conflict of interest. She isn't sure if there is a conflict of interest but the perception is there. Bill Holst's family has a lot of land and with Jeff being Chairman of Diamond Bluff Board, Chairman of the County Board and Chairman of this committee. The perception is so strong it creates skepticism. The issue for the Land Management Committee is for health, safety and welfare. Your job is to weigh the will of the people into it and not just say that this is permissible. She feels the wells being tested within the boundaries each year are just the land owners who are making a ton of money and feels that recommendation should include more testing for a wider space. The Town Recommendation is advisory in nature, it's not binding. It's not based on their Comp Plan. She questioned if this proposal is for Oak Grove and Diamond Bluff as two separate mines or if it's one mine in Diamond Bluff. Pichotta stated this request is only for operations in Diamond Bluff. She asked if it wouldn't be possible to limit the mine to a certain size to begin with. She stated the staff report says something about an amendment for any change in intensity. She suggests limiting it to a couple hundred acres for the next two years and then let Diamond Bluff review it. She feels they are trying to get this in for the next 30 years under the rules so it gets grandfathered in. If trucking is a major issue and it doesn't affect people, make them do the majority of it at night. Bill McCusker, Diamond Bluff, one of the land owners that has signed on for the mine, his family has been on that place since 1870 so he takes this seriously. He went to the mine in Bay City and looked at the processing plant and spent all day there. Other than the penetration, he couldn't see any big deal about it. He walked up the bluff and people had horses eating grass, they were growing corn, just like always except there was this 30 foot hole in the side of the bluff. He looked for trucks and they were running every ten minutes. He didn't see a traffic issue. He went to the processing plant in Bay City; it was so quiet he thought it was closed until he knocked on the door. The noisiest thing there is the train; it's been going through there for a hundred years. He asked if anything can happen until Oak Grove makes a decision? Roy stated yes, this is for operations proposed to occur in Diamond Bluff. That comment about Oak Grove was just to notify the committee that this is not the full scope of the plan. There is another piece that can't be acted on at this time. Mr. McCusker stated he didn't see any traffic problem, noise or dust. Pam Joel, Oak Grove Township, stated that we have just been given an honor that the Great River Road is one of the most scenic places to drive in the United States. Just when the economy is starting to come around, we have to look at where we live and make it an exciting place in a positive way. We don't want to look at just a few people's pocketbooks and have them benefit and everybody else stay depressed. She lives on Highway 35 and there are plenty of trucks creating environmental problems every day. She doesn't want to see a short term fix of development with a few jobs, all can create a wonderful St. Croix Valley with lots of resources. Connie Turley, Oak Grove, her property is adjacent to the proposed mine property in Oak Grove, she is concerned about property values and homes that are for sale now and not being sellable after the mine is there. Her roads are not maintained by the County, yet she is required to pay her share of taxes. She is concerned about conducting her business in her home, which requires her as an educator, to conduct classes over computer and telephone lines with blasting going on constantly that will interfere with her livelihood. Jim Drost, invited by a resident in the area is from Stillwater, he has a background in mining and research engineering, BS and MS degrees from UW of Madison. His master's degree research was on frac sand, floatation and flocculation. He has been a mining engineer for 45 years. He doesn't feel the DNR has the manpower or the expertise to properly deal with frac sand. There have been more than a dozen loopholes brought into the statutes and administrative codes of the DNR. He stated what precipitated this is Assembly Bill #8 or ACT 21, which he read part of. He stated the DNR has different

laws and regulations depending on whether it deems the operations to be a minor or major source of air pollution. In addition, they have removed the fugitive sand measured in respect to air pollution particulates. Originally the Bill (NR407.105) said major source; any stationary source or any group of stationary sources that are located in one or more contiguous or adjacent properties that are under the same person or persons under common control. His interpretation of that is three mines are lining up just a quarter of a mile away from each other, get to come under minor source of air pollution because under that clause they would have to be owned or operated by the same source. Most of the miners will state that the polyacrylamides are fairly stable and do not degenerate into acrylamide which is a neuro toxin. They need to be testing for that. He also stated that the DNR will state where they can put their washwater or wastewater. He said the DNR stated that they can discharge onto the surface of the groundwater and used as they so decide. He feels the DNR is saying they can put their silica silt, not all of it comes out when they settle it, back onto the ground where they say bacteria takes care of it. Based on his calculations for a 150 ton per hour plant for 24 hours a day, it will jettison nearly half a million gallons of water a day. They need 3000 to 3700 gals of water to circulate, about 10% of that has to be removed in order for there mine to function. He discussed NR815 in regards to discharge of water into wells. Ila Drost, read a letter regarding water pollution, polyacrylamides, chemical additives, coagulants, groundwater contamination, chemicals, etc not known. It also regarded EPA and DNR water testing protocol. Debbie McClure, Oak Grove Township, stated she is not necessarily opposed to mining. She has been to Town meetings and shocked at the perception of this being a done deal. She has talked to 38 people and only two knew anything about this. This will impact her if the wind blows in her direction. Just because Oak Grove isn't in the plan today it doesn't mean it won't affect her. She is asking for time to give the people the opportunity to ask questions. Bert Levy, Oak Grove, he is echoing the feelings of the people here that don't have monetary gain from this issue. He also stated we have no active journalism or press in the area to inform the people. He feels the 99 page proposal is a lot to absorb and react too, what happens in Diamond Bluff will filter into Oak Grove. The road is going to have significant more truck traffic. He is concerned about health implications from silica dust and his well possibly getting a little lower in 20 years. Ruth Wood, River Falls, County Board Member, questioned a number of the recommended conditions stating that it seems like the company doesn't have to be responsible; water testing, road traffic, degradation of roads, etc. She stated that she is questioning the language of the recommendations because it seems like they are leaving the company lots of leeway to do exploitation and that the County seems to be willing to cede responsibility. She knows it's usual for the conditions to be two year renewal, but it seems like the ones she is aware of involve far less potential impact than this proposal. It seems like it provides a long time before things are checked. She asked if it would be useful for the Land Management Committee to reconsider some of the 26 stipulations before the proposal is acted upon. Pichotta stated that as far as the time-frames go, two years is mandated by our code. As far as nonmetallic mining, the purpose of that renewal is to determine whether the conditions that were established are adequate to mitigate negative impacts to neighboring properties. We have a County Materials Mine up on Highway 128, we have them on a three month tether where they come back in every three months and we do status reports with the Town Board as well as residents of the area. This committee is very responsive when there are issues or conditions that don't seem to be addressed adequately. Ms Wood asked who checks. Pichotta stated staff, the Town Board as well as the neighbors as well as the folks that manage the mine, everyone that is impacted or interested. As far as the conditions we are recommending; we have two active CUP's that have been in place for almost a decade, and the conditions are similar to the conditions associated with those other uses. As Brad noted in the staff report, the Town of Diamond Bluff wanted to see similar conditions to those of Bay City. The proposed condition relating to six days of blasting, that was what was in place in Bay City and because the Town of Diamond Bluff wanted to see similar conditions – it was included. Roy noted that condition #23 requires an annual report from the company to staff demonstrating compliance with the conditions. If we get complaints throughout the year, those are addressed. Ms. Wood stated she feels it's a huge operation and it's a long time and would like the proposal to start on a smaller basis. Kenneth Langer, Oak Grove Township, asked about the number of vents. Roy stated they have not been determined at this time, the

mine would know when they need them. The committee could impose a limit if need be. Mr. Langer asked how many they have from Maiden Rock to Bay City. Mr. Budinger stated they have two ventilation shafts at the Maiden Rock facility and one at the Bay City operation. Mr. Langer asked if they spread them out as you are tunneling. Mr. Budinger stated, yes, it depends on ventilation, the air quality and when their next plan for a ventilation shaft would be. Right now they don't have any plans at Bay City for an additional one in the next twelve months, Maiden Rock they are potentially looking at one next year. It depends on where they are as far as ventilation; typically on a mine this size they are looking at five to ten ventilation shafts over the course of the mine and geography, not all will be active at the same time. They would activate ventilations shafts and decommission ventilation shafts. The goal is to get fresh air as closest to the working environment underground as possible. Mindy, Oak Grove Township, concerned about the adverse health effects and silica dust and feels this is not an industrial area. Kathy Breen, Oak Grove Township, new resident, referenced a letter to the editor in the Minneapolis paper in which it was stated that the economic benefit of tourism to Pierce County is \$4.25 million a year. She wishes they would look at the negative impact of the economic part. She hopes there is an informational meeting that all can get the straight story before there is a decision made. Ken Langer, Jr, Oak Grove, stated he has a problem with rushing through this. The sand isn't going anywhere. Kim Anderson, Oak Grove, her concerns are air, water and noise pollution, traffic, health ramifications and impact on nature, the things that you can't see as well as the things you can. She has a hard time seeing what benefit there could be to the population at large when you factor in the risks. Ms. Palodochuk brought up mining spills, preventative preservation is much better than going back and fixing it. Ms Anderson, a valid concern is the ground water for the residents. She wondered if the company could put in writing for a piped in water processing plant for the peoples whose wells have been damaged. Graham Ryan, Maiden Rock Township, he commented on the recommended condition that Diamond Bluff was to develop a road agreement. Chippewa County decided that the mining is accountable for up to \$3 million dollars in damage per year, so that is how much they collect from the trucking companies in Chippewa County. He questioned if the water testing is being done by the same company as in Maiden Rock, GZA Environmental, Mark Krumenacher, is the Vice-President of that company. He was a speaker at a summit in Denver; the lecture was Winning Battles Against Anti-mining and Anti-development. He thinks the water testing should be looked into. Tom Breen, Oak Grove Township, asked if the mining representatives can comment on the status of two cases where the DNR was pursuing prosecution of mining companies for pollution, one in Trempeleau County and one in Burnett County. Pichotta summarized a letter from Victor and Karon Langer, Town of Diamond Bluff, who are not able to be here; they are supportive of the mine and state that we need the 52 new long-term jobs with no investment on the part of the County or the Town of Diamond Bluff. They recognize that there are negatives to it. They recommend that the County Board institute a tonnage fee until mineral rights valuations are added to real estate taxes instead of imposing a moratorium until this clears. If needed the State Governors Office should be involved in resolution to more equally assess taxes. Kleinhans summarized a letter from Fred Harding, Maiden Rock, his concern is primarily about traffic and the load out facility. His letter stated that he has asked the question of WISC as to how many truck traffic trips would be per day, per hour, per minute. He did not get an answer. He talked about fully loaded trucks, road wear and tear as compared to bicycles, motorcycles and automobiles. He suggests that if we let WISC use the roads for profit we should follow the lead of Wood County and assess an impact fee per vehicle. He noted that Highway 35 was named as the prettiest drives in America. Kleinhans noted that notice of this hearing was published for two consecutive weeks, Andy, Brad and I have all talked to some of the folks in this audience and some others to discuss the plans. The plans have been in our office for weeks. People are always more than welcome to come into our office to discuss it. **Public hearing closed.** Mr. Budinger stated he is aware that a lot of people are nervous about this proposed mining operation. Industrial sand mining has been going on for over a hundred years. Their company has a tremendous amount of experience both in underground mining and surface mining. They operate a surface mine in northern Illinois, it's one of the largest industrial sand mines in the United States if not the world. That mine has been in operation since the late 1800's. Glass, water filtration, foundry have always been a big part of their business. They are very experienced miners as far as environment, the

safety of the workers and the engineering, in a successful manner. They are an environmentally responsible company. They track their carbon footprint, their diesel usage, dryer fuel usage and have goals put into place to reduce that every year. They continue some improvement projects at their facilities to minimize water usage and have done some new technology. Those goals are sustainability goals and environmental goals that have as much weight as our production and prosperity revenue we generate. Mr. Budinger invited people to visit the website. As far as the blasting for six days instead of seven days; that is the condition put on our Bay City mine. The Maiden Rock facility condition is for seven days. As these two year renewals come up, modification to the conditions, additions and sometimes even subtractions of conditions occur. It's an on-going process. We have been able to successfully operate Bay City mine under its conditional use permit since 2007 when we first acquired the property and 2004 was the first conditional use permit in Bay City. The County has a tremendous amount of experience with nonmetallic mining and industrial sand mining. They have been working with them for quite some time. They felt they went beyond what they had to do with mailings and informational meetings and contacted the Red Wing Republican Eagle and the Pierce County Herald with a press release. WISC is asking the committee to consider seven days a week for blasting. It allows them more flexibility with spreading it over seven days. Eric McLeod, stated condition #3, the 100 foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, Mining under a leased property shall be a minimum of 100 feet from any well. The remaining issue in the clause is: A 200 foot buffer shall be maintained around structures. A structure could mean any small structure or shed, that aren't of any concern. He feels that condition should relate to residences and that limitation would apply on non-leased property. If there are structures on leased properties, those would be matters for the landowners who are leasing their property to WISC. They would like that clarified to know what the Land Management Committee intends there. The company has been operating successfully under these existing conditions in two other locations and concerns of the type that have been raised haven't materialized. The final issue he would like to address is the effectiveness of DNR enforcement. There are those that think they have been pretty aggressive in their enforcement and those that think they have been ineffective. It's difficult for the Land Management Committee to assess that and effectively presume that a State regulatory body that's charged with this authority isn't doing their job and therefore there's a need to duplicate those efforts and micro-manage those issues at a local level. This committee gets to review the operation of this facility every two years and make sure those conditions are working. If there are concerns about the lack of enforcement or regulation that should apply from State regulatory body, that can be a factor. There were some suggestions that the County should impose certain fees, those are issues the County Board can take up but ultimately they are legal issues that are legislative and not properly the subject for the Land Management Committee to entertain. If there are additional conditions that the committee believes it wants to consider, we would ask that the committee give us an opportunity to address them. Mr. Budinger stated our company operates under a financial model where as significant an investment as this is, requires a certain amount of time. The other two operations run under the financial model of a 30 year investment; which means as we deplete our reserve base, we are also pursuing other acquisitions. It is a large geographic area; all 2900 acres will not be mined at the same time. We will mine 40 to 70 acres per year all underground with the exception of ventilation shafts. The farming, agricultural use and industrial use will continue without being disturbed. The frac sand floatation and flocculation process is six to seven miles away. We are not washing sand or a wash process at this location. The wash process is at the Trenton facility to the south of the proposed Diamond Bluff mine. The application does not include a large amount of groundwater usage. Mark Krumenacher, we feel we have addressed most of the issues when we submitted the application. There is no better sustainable way to mine than underground and leave all existing land use on top untouched. We're affecting less than ten acres and one road - 1005th Street. Traffic will be on Highway 35, the Great River Road. That road is designed for 8 to 10 thousand vehicles a day. Currently the use is 20 to 30% range. The highway is maintained as a State Highway per WI DOT to meet global economic demands. The mine is an economic industry. Tourism also uses that highway. If there wasn't an economic reason to have that highway there, having that tax money to pay for it; it wouldn't be there. It's a Mississippi River corridor highway, its major rail, major water borne freight, it's

a major highway. It's an economic lifeline and tourism is conveniently added to that. The DNR and US EPA regulate the environmental industry. They have senior staff that manage silica sand and a mining expert to help manage the environmental issues. These issues for silica sand are not necessarily unique to the sand mining business. Storm water concerns, air quality concerns, groundwater, surface water concerns are all very important and that's why the DNR is there to protect them. People have addressed property values repeatedly, that's why we hired two real estate appraisers from this area to assess property values. We wanted them to do an independent study and have the second one review the first one's work. There is no evidence that the mine will have any negative impact on property values. He addressed the comment about his appearance at the summit titled Addressing Challenges in Obtaining Special Use Permits for Nonmetallic Mining or Industrial Sand Mining. He has given the presentation about eight times. The presentation addresses all the challenges that are important for any mining operation. It's important for the mining companies to recognize what the environmental concerns are; the property values, economic concerns, reclamation concerns, so they can address them; the social, traffic and environmental issues. If you don't act like a good neighbor and become part of the community, your license to operate isn't going to happen. Aubart asked about condition #3, addressing the 200 foot from all structures instead of residences. Roy stated we issue permits for a lot of structures that have a lot of value, so providing protection to those structures should be considered. In the past it has been just residences. This is just a recommendation to give those other structures some protection. Aubart asked what is a structure, a pump house? Roy stated technically, yes. It's hard to draw the line from a pump house to a \$60,000 pole barn. Sanden asked about those that are on leased properties. Is there a precedence that they are under a separate agreement with the lease? Roy stated once you get onto leased land, that's the power of the agreement. If the landowner wants to keep a setback in place, they can request it. Pichotta stated one thing you could do if you are interested in differentiating between minor structures and principle structures. You could simply say principle structures, that wouldn't include accessory structures or garages. As far as non-leased property, you could modify the condition to reflect that. If folks are on leased property they are being compensated by the company for their presence there. Ross commented on the tourism on the Great River Road. The Department of Tourism does an impact study for all 72 Counties in the State. They conduct the impact study at the end of each year. It's a consolidation of trying to track numbers and growth in the tourism sector. In Pierce County in 2006 we had an impact from tourism dollars of \$33 million. We had a dip in the number in 2008 or 2009, directly affected by the economy. In 2010, it was \$39 million in annual spending related to tourism. Great River Road was selected as the prettiest drive in the USA. We went up against in the semi-finals, Big Sir Highway and in the final round, against Hana Highway in Hawaii. We have people travel from all over the world; Japan is a heavy visitor to the Laura Ingalls Wilder site. The sand on the roads is not an issue, if it were, people would be hearing about it from him. The trucks are tarped, he watches them every day on the Great River Road. He never has to sweep up sand. He respects the views of everyone here tonight. He witnesses this seven days a week, if it were a problem or if it becomes a problem, we will be addressing this. When sand does get on the road, it's swept up immediately. He sees the sweepers on a regular basis. We do have an increase in tourism every year. We have an increase in traffic counts related directly to tourism and he works closely on a regular basis with the Department of Tourism. Sanden asked WISC, the mines that he has dealt with have always been above the water table. Could you address the issue of the mining activity going down to 800 feet with the water table of 720 feet? He understands there isn't any washing going on but what other implications would there be. On page 2, the mining activity will be at 770 to 800 feet and the water table is mapped at approximately 720 feet. Mr. Budinger stated what that describes is the sea level elevations – mining at this site will also be above the water table. At the top of the bluffs there is approximately 220 to 250 feet of limestone cover. The elevation of the mining horizon is elevation 770 to 800 feet above sea level. So when we talk about the water table being at 720 ft, it's 50 to 60 feet below the mining horizon. It's very similar to the way they operate at Bay City and Maiden Rock. Sanden asked about the reclamation plan. The final slopes will match predevelopment topography. 3:1 slopes cannot be obtained because of the location of 1005th St and the Wind River. Mr. Budinger stated with the topography that exists currently, they will be constructing a ramp approximately 40 feet to go up to 770 to

800 feet. The slope that is out there is steeper than a 3:1 so the ramp will be a cut and fill, we'll cut where the portals are going to go and use the material as fill for the ramp. The reclamation plan has us removing the ramp or that fill and original topography will be reestablished. Sanden asked about the Town of Diamond Bluff recommendations, one he didn't see is #6 dealing with sufficient trees being removed from site triangle. Roy stated that went into the DOT review of that specific intersection, when we looked at that we did separate out the conditions that the Town of Isabelle wanted for that specific site. Sanden asked about the condition stating - 590th St shall be restored to the Town of Isabelle satisfaction, should we address that? Roy suggested that the recommended condition stating, "A road agreement with the Town of Diamond Bluff shall be reached before construction" is the equivalent. Anything Diamond Bluff wants done to their road should be put in that agreement. Sanden asked about #19, outdoor storage of equipment. Roy stated the reason for that one is because the Bay City mine is neighboring DNR property. So we didn't want any outside equipment storage being done on DNR property; noting that this was another site specific condition that doesn't apply to this specific property. Sanden echoed what Ross stated and added this process isn't just a formality and the LMC has dealt with a lot of mines for a long time in Pierce County. Committee members have become familiar with this process and he has been on the LMC long enough to have seen even larger groups than this- so large that it required that we move to a different venue. After the conditional use permit process for that mine there was a lot of skepticism and now there are just one or two people that continue to have concerns. If they do grant this tonight, this is just the beginning, not the end. If there is any violation, you bring them to us and we'll put them on a short leash. As Andy was saying, we have one mining company that comes back every three months because they didn't fulfill their obligations. With these things in place (CUP), it gives us leverage to say you aren't doing what we want you to do and we can pull the permit at any time. **Aubart moved find that the proposed use at the proposed location is not contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area and to approve the conditional use permit for a Nonmetallic Mining Operation in the Agriculture Residential and Industrial District and Reclamation Plan for Wisconsin Industrial Sand Company, with conditions #1 - #24 modifying #3 to read "principle structures on non-leased property"**. Sanden suggested amending condition #24 to have them back in 6 months for a status report. Chairperson Fetzer asked Mr. Budinger how long before they are up and running. Mr. Budinger stated they will be starting in October according to the development plan, he would say six months, although he isn't sure as to what magnitude. It will be several years before the mine is at full capacity. **Sanden seconded the motion and suggested amending condition #24 to include "Applicant to come back before the Land Management Committee in one year for a status report"**. Aubart agreed. All in favor. Passed.

Discuss take action on a request for Site Plan Approval for structures associated with a Nonmetallic Mining Operation in the Agriculture Residential District for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner on property located in the SE ¼ of the NW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Rich Budinger forward: Mr. Budinger stated they have submitted their proposed site plan along with the conditional use permit application. The maps show a very small area of disturbance, it shows the ingress and egress off of Highway 35, the scale of the property and where the portal activity will be. The ramp will climb up to 40 feet to access the elevation where the portals will be. They will develop three portals; one being a primary, the second a secondary and the third for equipment to transfer raw sand out of the mine. The reason for the primary and secondary, besides ventilation is for fresh air intake and for emergency exits. The stockpile - for dust suppression they will have water cannons and a water wagon on the property and a spray bar. The sand has a natural moisture level of 3% and has clay in it. Typically dust won't be a problem. There is the potential if the material is exposed to temperatures, wind, dry conditions, that the crust of the material will dry out. That's where they will manage it with the water cannons, dust suppression, the water wagon and adding of water through the conveyor. They will have a road agreement with the Town of Diamond Bluff and they will be maintained and managed. Kept clean of sand and swept on a regular basis and any areas that would be dust generators around the traffic area will be concrete,

asphalt or managed with the water wagon. The stormwater plan shows the retention ponds and the flow of stormwater, there will not be any discharge of stormwater off the property. The proposed maintenance building and residence will be the administrative building and will remain on-site. The appropriate permits for the sanitary system will be obtained. The high capacity well will be on-site for utility water and to be able to fill a water wagon. They would like to turn over the water wagon in ten to fifteen minutes maximum. Also they run about 150 to 200 gpm to work the water cannons effectively. The windier it is the more effective these dust suppression cannons are. Sanden asked what the expected height of the stockpile will be. Mr. Budinger stated the stacker height will be 59 feet above the road grade. The maximum size of the stockpile without causing mechanical failure would be at the base of the conveyor. The top of the conveyor would be 59 feet, the pile would max out at 57 or 58 feet. Sanden asked if they will use an adjustable conveyor. Mr. Budinger stated not vertically but horizontally to create a pile similar to what is predicted on the drawing. The idea is to maximize the stockpile within that small footprint and also minimize the fall of material. So they could build the pile all the way up to the conveyor and move it a foot at a time and the material would build up and there wouldn't be a drop. If we were starting a new pile it would be dropping 59 feet. Because of the elevation of the mining horizon and where the portal is we didn't feel it was necessary to have the ability for vertical movement or an extendable motion on the conveyor. Sanden asked if they will be using a chute at the end of the conveyor. Mr. Budinger stated the sand will be dropping straight from the conveyor. The drop would be minimized through the management of the motion. The material is wet, 3% moisture. It's not a concern of it being actively blown across the property unless it dries out. At that point, it's already been in place on the stockpile and we have the ability to manage it through the dust suppression, the fugitive dust plan, the water wagon and the dust suppression cannons. We also have the option of adding water to the sand while it's being put into the stockpile if we're predicting challenging conditions. It makes it more difficult to handle as far as loaders and putting into the trucks but sometimes that would be more beneficial. Ross the main concern relating to blowing dust is when it is coming out of the dryer and into a railcar? Mr. Budinger stated yes, at that point the material has 0% moisture. We use chutes that retract into the railcars and trucks. When that material comes to a transfer point, it has to be encased and closed. The best way to do that is to have the retractable spout, a Pepco Spout, they have a seal that will sit on the truck and the railcar so that negative pressure in the air is being collected. The dust collector engineering and management at the mine site is not necessary for this material because it has moisture in it. We feel it's going to be appropriately managed through the dust suppression systems that we have identified. We can show evidence of it at our current facilities. Sanden stated that became an issue at another site and they are basically shutting down when it is windy. Mr. Budinger stated as a situation shows itself, with their continued improvement process, if there is a benefit to having a rock ladder, where the material is not falling all the way down, it's in a chute and it builds a stockpile from the bottom up, they will use one. Ross asked about an emergency exit. Mr. Budinger stated you are speaking about the portals, MSHA, one of their regulations is to have two ways to exit and enter the mine. If we are in the mine and there happens to be equipment breakdown that is blocking personnel from exiting a fire or some sort of emergency that people cannot exit the mine; we have a turn around and head into a different direction, we have flagging drills in the mine if people can't see. It's essentially like in basements of homes where people have to have a window and two ways out. Its similar in mines to have a primary and secondary exit.

Staff Report – Brad Roy: Site Plan Review is required for all Commercial and Industrial developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Access to the site is off of 1005th St. All vehicles entering the site will use the same access point. The trucks will enter the site and to be loaded with sand. The trucks will make a continuous forward path and exit the site. The proposed plan has 16 parking spaces with one space reserved for handicap parking. Pierce County Code §240-54 requires one space per employee during the peak shift as well as 2 spaces for manufacturing/ trade contractor establishments. The applicant anticipates 22 total employees at the site working various shifts. Restrooms are proposed to be located in the Office Building. The existing residential septic system will be assessed

for the future use. The lighting is intended to stay onsite in the working areas. MSHA regulates lighting and may require modifications to the plan. Outside storage will include raw sand waiting for transport and temporary storage of steel and equipment intended for use in the mine. None of the outside storage areas except the raw sand storage have been depicted in the plan. The plan anticipates the need for one high-capacity well as well as one potable water supply well on the site. Rich addressed the high capacity well. The site will have two storm water retention areas. They are proposed to be located in the Floodplain. Additional information and permits will be needed. The area is heavily vegetated. Additional screening may be needed along 1005th St. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from stockpiles and roadways during periods of dry or windy conditions. The plan details the use of a watering truck and potentially a sweeper for roadways and water cannons for the stockpiles. No advertising signs have been proposed at this time. Adjacent land uses are also agriculture and low-density residential.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary.

Sanden moved to approve the proposed site plan for a Nonmetallic Mining Operation for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner, as presented/Ross seconded. All in favor. Passed.

Public hearing to consider a request for Expansion of Nonconforming Structures in the Agriculture Residential District for John & Monica Robey, owners on property located in the NE ¼ of the SW ¼ of Section 15, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs Robey forward: Mr. Robey explained they have a doorway off the house with no porch or anything for access that is five feet off the ground. They would like to build a porch there. The milk house roof is shot and they have water running in there and would like to raise the floor but then they lose ceiling space. They would also like to add onto the calf shed for more space.

Staff Report – Jim Kleinhans: Mr. & Mrs. Robey contacted us several years ago about some modifications to their building. At this time they would like to pursue the request for expansion of both nonconforming structures into the road setback. County Road S has a 100 foot setback from the center of the road or 67 foot from the right-of-way. There were no existing buildings to allow for setback reductions so they are pursuing the conditional use permit for an expansion of a nonconforming structure. The land use permit issued in 2005 was on the west side of the residence that met the setback. But they did change the front entrance to their house and put a door on the south side. They would like to add a deck to meet the doorway that is five feet above grade and have that part of the house handicap accessible. The lean-to addition to the milk house is 73 feet from the centerline. John submitted plans. The Town of Rock Elm Supervisors approved this request at the July 9, 2012 meeting based on the fact that they aren't going any closer to County Road S than existing buildings are currently. The septic system was replaced in 2005 during the last building expansion. The applicant also requested that we include a 24ft x 30 ft expansion on shed #4 on the plot plan. Mr. Robey stated they are only actually adding 9ft on instead of 24ft. Mr. Kleinhans added that when we do a land use permit we typically add in the minor structures and the permit fee is based on the most expensive permit required. This is a little different because that particular shed is not a nonconforming structure but John asked for it to be included because that is all part of his request for his buildings. All conditional use permits expire 12 months from the date of issuance just as the land use permits do.

Staff Recommendation: Staff recommends that the Land Management Committee determine whether the expansion of a nonconforming structure at the proposed locations would be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP with the following conditions:

1. The applicants shall follow Pierce County Solid Waste Code Ch 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.

2. The applicant shall work with the local building inspector, Todd Dolan, to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
3. The work shall be completed within 12 months of approval.

Chairperson Fetzer opened the public hearing. No public comment. Public hearing closed. Mr. Kleinhans noted that he had heard from a neighbor, Robert Huebel and that Mr. Huebel indicated his support for the request. **Ross moved to approve the request for a conditional use permit for Expansion of Nonconforming Structures for John & Monica Robey, due to the fact this request is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Aubart seconded. All in favor. Passed.**

Public hearing to consider a request for Filling and Grading in the Shoreland Area, pursuant to Pierce County Code Chapter 240-41E, in the General Rural District for Mark & Lisa Erb, owners on property located in Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Erb forward: Mrs. Erb stated their property is adjacent to Vino in the Valley. They established a walking trail. It was the opinion of their attorney that they didn't need a conditional use permit but that opinion was not shared by Judge Boles.

Staff Report – Jim Kleinhans: Mr. & Mrs. Erb purchased their property in 2010. In the fall they hired a contractor to develop the walking trail adjacent to the Rush River along 400th St. Staff was made aware of it, we exchanged some letters and here we are with a plan developed by the Land Conservation Department to finalize the stabilization of the hillside. Roughly 3800 feet of disturbance on average slopes of 29% which triggered the need for a conditional use permit for the Shoreland Area. During the fall of 2010 they did incorporate some straw bales and grass seed with the oats at a rate of 10 lbs per acre. On those slopes that was insufficient for stabilizing the hillside. The vertical slopes left over from the bulldozer action took someone with expertise on stabilizing critical sites. You have the plan as proposed. The Town of El Paso Supervisors commented on this request during their November 8, 2010 meeting without identifying any specific concerns.

Staff Recommendation: Staff recommends the Land Management Committee determine whether approval of this conditional use permit would be contrary to the public interest, or detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP with the following conditions:

1. The erosion control plan shall be implemented as designed by September 15, 2012.
2. Department staff shall be notified of the completed project to verify permit compliance.
3. Any unforeseen erosion that may occur in the future within the disturbed area shall be addressed to the satisfaction of the county.

Chairperson Fetzer opened the hearing to the public. Dan Fisher, Town of El Paso Supervisor, we have discussed the proposal and the Town is in favor of what is proposed. **Chairperson Fetzer closed the public hearing.** Ross asked if September 15th is a doable date and that you are clear on the three conditions. Mrs. Erb stated yes. **Sanden moved to approve the request for after-the-fact Filling and Grading in the Shoreland Area, for Mark & Lisa Erb, due to the fact this request is not found to be contrary to the public interest, nor detrimental and injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Ross seconded. All in favor. Passed.**

Discuss take action on temporary extension of a conditional use permit for BS Construction Inc and Steve Schoeder Properties, on property located in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Staff Report – Brad Roy: Roy stated we have a mine that has generated a lot of concerns out in Rock Elm with the neighboring property owner. Due to scheduling, they couldn't be here before the permit expired - the property owner is OK with this also, they would like to temporarily renew it and come in on September 19th. **Staff Recommendation:** Staff recommends the Land Management Committee temporarily renew the conditional use permit for

this nonmetallic mine, with existing conditions, thru November 1, 2012 or until such time as all interested parties are able to attend, whichever comes first. **Aubart moved to approve the temporary extension of the conditional use permit for BS Construction Inc and Steve Schoeder Properties thru November 1, 2012 with the existing conditions/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Pichotta stated we could get by without having a meeting on August 15th. He needs to convene the Land Information Council before he presents the budget. Aubart and Sanden stated they would not be available on the 15th. The next meeting will be September 5, 2012.

Motion to adjourn at 09:19pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 1, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 15 th , September 5 th & 19 th , October 3 rd & 17 th , all in 2012.	Chair
3	Approve minutes of the July 18, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Nonmetallic Mining Operation in the Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A and Reclamation Plan hearing, pursuant to Pierce County Code Chapter 241-15A(2)(a), for Wisconsin Industrial Sand Company, agent for Diamond Bluff Investments LLC, Holst Farms Inc, William McCusker, MOAP LLC, WTW Properties, Steven Burmood, Helen Holst, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
5	Discuss take action on a request for Site Plan Approval for structures associated with a Nonmetallic Mining Operation in the Agriculture Residential District, pursuant to Pierce County Code Chapter 240-75, for Wisconsin Industrial Sand Company, agent for Steven Burmood, owner of property located in the SE ¼ of the NW ¼ Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
6	Public hearing to consider a request for Expansion of Nonconforming Structures in the Agriculture Residential District for John & Monica Robey, owners on property located in the NE ¼ of the SW ¼ of Section 15, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Kleinhans
7	Public hearing to consider a request for Filling and Grading in the Shoreland Area, pursuant to Pierce County Code Chapter 240-41E, in the General Rural District for Mark & Lisa Erb, owners on property located in Section 33, T26N, R16W, Town of El Paso, Pierce County, WI	Kleinhans
8	Discuss take action on temporary extension of a conditional use permit for BS Construction Inc and Steve Schoeder Properties, on property located in the SE ¼ of Section 15 and the NE ¼ of Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.	Roy
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(7/20/12)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, July 18, 2012

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Jim Ross

Others: Andy Pichotta, Brad Roy and Shari Hartung

Excused: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 1st & 15th, September 5th & 19th, October 3rd & 17th, all in 2012.

Approve Minutes: **Aubart moved to approve the June 20, 2012 LMC minutes/Ross seconded. All in favor. Passed with Sanden not voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) in the Industrial District for Wisconsin Industrial Sand Company, agent for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Rich Budinger forward: Rich Budinger, Regional Operations Manager, introduced Lauren Evans, Sustainability Coordinator, Michele Maxson, Regional Environmental Health and Safety Coordinator, Mark Krumenacher, Hydro geologist and Consultant from GZA and Eric McLeod, Legal Counsel. Mr. Budinger gave a general overview of the company and their community involvement, number of employees, financial contributions and projects they are working on. On April 11th they submitted a conditional use permit application to Trenton Township. On May 1st they held a community information meeting at the Bluff's on Hwy 63. They mailed out flyers with information to a one-mile radius from the proposed facility in Trenton and the proposed underground mine in Diamond Bluff and Oak Grove. On May 3rd they appeared before the Trenton Planning Commission and on May 9th they appeared before the Trenton Town Board, May 23rd they had a pre-application meeting with Pierce County to go through the application process. On June 21st, they appeared before the Pierce County Board of Adjustment to review the variation on building heights. Recently they submitted the site plan and conditional use permit application being reviewed this evening. Several issues have been brought up through the planning commission and community meeting; within their application they have included an extensive report that highlighted numerous issues and concerns. Several recommendations were included on the approval from the Town of Trenton; berm along Hwy 35 with trees on top, lights shall be adjusted away from residences, noise controls shall be implemented, berm shall be constructed along Cty Rd K to block the view of the railroad, all rail cars shall be behind the berm on Hwy 35 and trucks shall have a drive-through unload to avoid back-up alarms. The one recommendation that they have a question about is the berm along Cty Rd K, they recently created an aerial view of the area along Cty Rd K and map. This was presented to the committee with an explanation. Sanden stated on page 3 of site plan, you have a storm water pond at the top and then on the bottom an optional retention, is that for overflow? Mr. Budinger stated the optional retention is an existing feature. The idea is that it would continue to be a retention area for storm water. We're not planning on building anything there.

Staff Report – Brad Roy: WISC is seeking a permit for a Mineral Processing Facility in the Town of Trenton. At this site sand will be received, washed, dried, screened and shipped either by rail car or truck. The materials will come from a proposed mining operation to be located nearby in the Town of Diamond Bluff. When this was written staff had not yet received an application for the proposed mining operation, we have since received the application and it is scheduled for a future meeting. The applicant is also seeking exemption to the 35 foot structure height requirement to allow for several structures up to 60 feet. On June 21, 2012 the Board of Adjustment granted a height variance for six structures on the proposed site for heights greater than 60 feet. The property is located in Sections 28, 33, and 34, in the Town of Trenton. The property is zoned Industrial. Pierce County Code §240-15K states: the Industrial District is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. There is not a use classification specifically for a Sand Processing Facility. This application is being processed as a Heavy Industrial Use due to the scope of planned activities and the potential for impacts from the proposed facility. Pierce County Code §240-88 defines Heavy Industrial Use as - Uses such as manufacturing, assembling, fabrication, processing, bulk handling, storage, and trucking which are likely to generate significant levels of traffic, noise, pollution, vibration, dust, fumes, odors, pesticides, herbicides, or other hazardous materials, fire or explosion hazards, or other undesirable conditions which are unsuitable for any other district. The applicant is proposing that the facility operate 24 hours a day, seven days a week. The plant will produce approximately 1 million tons of sand per year. Raw sand will be transported to the site by truck from Hwy 35 and entering the site from 830th St. The trucks will enter a drive-thru structure and unload the sand in a below grade pit. The trucks will make a continuous forward path and exit the site. The sand will be conveyed from the pit to a building where it will be crushed and screened and further conveyed to a covered storage structure (Raw Sand Storage) or an outside stockpile. The stored material will be collected and liquefied and pumped to the Wet Process Building. The sand/water slurry will be separated into a course/fine fraction. Chemicals are added and dewatering screens are used to aid in the separation process. The course product will be conveyed to storage ahead of the Dryer. Fine material washed out of the sand will be allowed to settle and be dewatered mechanically and then sold for various uses or used for reclamation at the adjacent mining operation or returned to a mine as part of the reclamation process. Sand stored after the Wet Process will be conveyed to a Rotary Dryer where the moisture content will be reduced to less than 1%. From the Dryer the sand will be conveyed to the Screening Plant where it will be separated in 8 separate products and stored in steel storage silos. From the storage silos sand will be conveyed to a rail load out system or to the truck load out. The rail system will use a weigh hopper to state a predetermined amount of sand before it is further conveyed to the rail car. The truck system will utilize a platform scale. It is anticipated that 90% of the material will be shipped by rail. It will average 40-45 rail cars per day. Waste sand will be reused for engineered fill or mine reclamation. The proposed plan includes the construction of six rail sidings to the BNSF Railroad. The sidings will be used for storage and in the loading process. The applicant is proposing to construct a berm between the proposed rail sidings and the BNSF rail line. Trees are also proposed atop the berm. Pierce County Code §240-29 D allows the Land Management Committee to grant height exemptions for structures over 35 feet up to 60 feet – as long as required setbacks are increased by not less than one foot for each foot the structure exceeds 35 feet in height. The applicant is requesting this exemption for the Truck Dump Structure – 45 feet, Scalper – 60 feet and Truck Load structure – 39 feet. These proposed structures at the proposed locations satisfy the requirements of §240-29 D. Other equipment proposed to be used onsite includes front-end loaders, maintenance vehicles, personnel vehicles, rail cars, track mobiles, end-dump trucks and contractor vehicles. The plan anticipates the need for two high-capacity wells to supply the approximately 300 gallons per minute the plant needs when in operation. The water will be used to wash the sand and remove the clay and silt-sized particles. The wash water will be recycled using a closed-loop sand dewatering system, ponds, pumps and pipes. Some water will be lost through retention of the fines and

drying of the sand. The WDNR permits high capacity wells. Any new high capacity well application is required to be subject to an environmental review. DNR hydrologists will evaluate proposed wells for any potential impacts. Proposals that have the potential to impact protected resources undergo an environmental assessment process by the DNR. The aquifer used for the high capacity wells will not be the same one used for the existing residential and agricultural wells in the area. One potable water supply well will also be needed on the site. The site will have two storm water retention areas; no storm water will flow off-site. Concerns relating to the chemicals used in the wash process and the potential for ground water contamination have been raised. The polymers and the quantities used by WISC have been reviewed and approved by the WDNR. It is anticipated that the proposed plant will be required to develop and implement a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans will identify potential sources of storm water pollution and spills of oil-related materials and other chemical, and establish controls to minimize any potential impacts to surface waters. WDNR regulates and monitors storm water and process water through the WPDES Permits. The WPDES permit ensures that water samples are collected and analyzed to demonstrate that water is not discharged that could negatively impact surface water. Due to the design of the proposed plant, the applicant does not anticipate the need to obtain a WPDES Permit. A Fugitive Dust Plan has been developed for the operation. The plan details the measure to be taken to reduce roadway dust from truck traffic on paved roads and railway dust from rail traffic, during periods of dry or windy conditions. Any evidence that dust from truck or rail traffic is causing excessive fugitive dust emissions will trigger fugitive dust control measures to be implemented which includes the use of a watering truck or street sweeper. Any sand that is spilled on tracks will be cleaned up regularly. The plan states that during rainy periods or periods when roadways surfaces are wet or partially snow covered there is no need to implement fugitive dust control measures. Roadways are to be inspected daily during the dusty periods and the railway is to be inspected during each shift to determine need for cleanup. The plan does not address dust control methods for any stockpiled sand on-site or the sand transfer points through the progression of processing. The plan does not address additional dust control measures to be taken in instances of exceptional events, such as high winds, where stated dust control methods are not adequate. Various methods for dust suppression are proposed on the site. All loaded trucks will be tarped on the site. The Dryer and screening devices will be equipped with a dust collection system. During the rail/truck loadout process each hopper, conveyor and loadout spout will be dust collected, and the dust will be reintroduced back into the stream and loaded with the sand. All traveled areas will be paved. Numerous concerns have been raised about the health effects of silica dust. In 2011 the DNR conducted a Silica Study to describe what is currently know about sources, health effects, exposures, controls and the regulatory status of silica in Wisconsin as well as in other states and countries. The Report states *“A recurring theme from the literature review and survey is that very little conclusive information exists regarding sources, controls or levels of silica present in ambient air. This lack of data means it is not currently possible to determine conclusively whether or to what extent the quantity, duration or types of silica emissions in the state may be a public health concern.”* On November 11, 2011 a group of citizens submitted a petition to the DNR for the promulgation of rules to govern respirable crystalline silica. That petition was denied on January 30, 2012. Deputy Secretary Matt Moroney concluded that: *“Because silica emissions are a component of particulate matter emissions, existing regulations that govern fine particulate matter can be used to control these emissions.”* The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. The Bureau of Air Management has indicated that the applicant has begun the permitting process for the proposed plant. The applicant is proposing various practices to limit the noise onsite. Loaded trucks entering the site will unload in a continuous forward path to eliminate backup alarms. The crusher, which is a noise generator, will be enclosed to limit its exposure. The vacuum pumps in the wet process will be housed in separate buildings to reduce exposure. All equipment owned by WISC will utilize a “hissing” backup alarm instead of a “beep.” Per MSHA regulations the backup alarms must be louder than other ambient noise. The site will have a Trac-mobile which will reduce the noise from moving the rail cars. A Traffic Impact Analysis (TIA) was completed for the

facility to determine if improvements were needed at the Hwy 35/830th St intersection. The analysis was reviewed by WisDOT and it was concluded that the 330 foot right turn lane and the 150 foot long bypass lane on Hwy 35 are adequate to store/handle the increased level of trucking at the intersection with 830th St. It was also recommended that individual trucks be spaced a minimum of 2 minutes apart. The Traffic Impact Analysis stated that the peak traffic would be 16 trucks entering and exiting per hour. Adjacent land uses are nonmetallic mining to the east and west, residential to the north across Hwy 35 and agriculture to the south. Higher density residential, a Rural Residential 20 District (allows 20 residences per 40 acres), is located near the proposed site approximately one-half mile to the south. Staff has received concerns from nearby residents about the proposed facility.

The Town of Trenton recommended approval of this request on May 9, 2012 without reference to the Town's Comprehensive Plan and with the following recommendations:

- Extend berm on Hwy 35 and include trees on top.
- Lights shall be adjusted away from residences.
- Noise controls shall be implemented.
- Berm shall be constructed along County Road K to block view of the railroad.
- All rail cars shall be behind the berm on Hwy 35.
- Trucks shall have a drive-through unload to avoid back-up alarms.

The Wisconsin Mississippi River Parkway Commission (WIMRPC) recently passed a Resolution relating to frac sand mining and processing within the Great River Road National Scenic Byway Corridor. A copy of the letter and resolution is enclosed for your information.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area. If determined to be not contrary to the above, staff recommends that the LMC approve the conditional use permit with the conditions listed below as well as any additional conditions deemed necessary to address concerns raised by the Town of Trenton or area residents:

1. Activities shall be conducted consistent with the submitted plan.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required. Copies of permits and approvals shall be provided to the Land Management Office.
3. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
4. Applicant shall obtain a sanitary permit prior to the construction of any structures.
5. Applicant agrees that any erosion or storm water issues that arise shall be addressed to the satisfaction of the County.
6. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.
7. Any polyacrylamide flocculants must be used consistent with WI DNR permits.
8. The Fugitive Dust Plan shall be modified to include dust suppression methods for any stockpiled materials, at sand transfer points, and during instances exceptional events such as high winds.
9. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
10. This permit shall expire in two years and may be renewed administratively if no compliance issues arise.
11. The Town of Trenton's recommendations/comments shall be adhered to.

Additionally, if this request for a conditional use permit is granted, staff further recommends that an exemption to the 35 foot height requirement be granted for the proposed Truck Dump, Truck Load, and Scalper structures.

Chairperson Fetzer opened the hearing to the public. Ann Marie Rose, Hager City, most of the questions are for the board. She stated she will see the processing plant from her house in the winter. Twelve years ago they purchased their home and were told that it was Industrial land close to them and it

was a sand pit with not much activity. She questioned why there haven't been public meetings regarding this issue. A realtor from Red Wing stated that homes go down approximately 45% in value near sand mines. She has heard that zoning allows this. WISC is owned by an Ohio Company, she asked how many employees will be hired from Pierce County and what contractor is going to build this facility. She wants to know if they will be from Pierce County. She talked to a relative that stated frac sand mining may end any day. If WISC starts building and they are halfway through this process and the sand becomes worthless, she wants to know how this is going to be taken care of and cleaned up. David Husom, Ann Marie's husband, grew up near a sandpit; Southdale. Those are all nice beautiful homes and shops now. The Red Wing Airport may force the plant to close if the airport expands. Tourism is a major issue for the area. He would call this a job killer. They are not going to come down if there is a truck every four minutes. Someone is investigating the traffic that turns from Prescott and the traffic that will enter near their area. He contacted Fairmont Minerals and was put in touch with their HAZMAT person. He received a material safety data sheet with information about Silicosis and stated that they are working 40 hours a week around this stuff and residents will be living with it 168 hours a week. Sand is hazardous and the DNR is overlooking this. His other concern is other County's looking at this same issue. Pepin County is looking at a moratorium and Goodhue is currently talking to its attorneys. His recommendation would be to table this tonight and do a public hearing. Doug Van Heerde, lives on County Rd K, wanted to know if he could see the photos submitted. With the facility operating 24/7 and trucks going by, how does that not affect the quality of life? He suggests also that this be tabled and more studies done. Sarah Palodichuk, has questions for Rich, she want to know who defines excessive fugitive dust, where the standard comes from, because there will be sand spills. There is no good data on sand mines of this size, as far as ambient air is concerned, she feels you have to respect both sides of what inconclusive means. How long does WISC intend to use the processing plant? If there is 20 years of sand, does that mean the processing plant goes out in 20 years. She would like to know what the difference is between open-pit mines versus underground mines. She also asked about reclamation and if underground mining requires reclamation. If you have the waste material being put back into the mine, how often is the process of reclaiming the underground tunnels? That economic development in one part of the County will benefit the whole County; you have to look at a parallel, that putting 384 trucks on the highway is also going to affect the whole County. 384 trucks is the number of trucks with 16 per hour at the peak. The committee has a choice and she feels public health, public safety and the character of the surrounding area, you can justify saying no to this issue. You have water issues, silica sand issues and public safety, a big stretch of road that is filled with motorcycles and tourists, you add trucks and there are going to be problems. Ken Regelman, representing his cousin that has property on County Rd K and Hwy 35, she lives in Japan and she feels she hasn't received any information on this issue other than the letter regarding this meeting. Mr. Budinger stated as far as property values, they conducted a study done by two licensed appraisers that looked at a corridor that identified similar properties that did have mining operations and an area that didn't. One appraiser found there were no negative impacts due to Industrial Use and Sand Processing. They had another appraiser verify the work of the first appraiser. As far as employees, they do not hire specific individuals from a specific area, if you are qualified, you may be able to get a job. He hires the most qualified person. They do not know who will be the contractors for this job if they receive the conditional use permit. They won't know until they go through the bidding process. As far as frac sand being worthless in the future; yes there is always the opportunity for a new and improved product to come out on the market. If there is an alternative to frac sand, Fairmont Minerals will also be marketing and producing that product as well. They have been in this business for decades. They are very experienced. They are one of, if not the largest industrial sand producer in the United States. There is a reason they are successful. If frac sand was going to be worthless, they would not be pursuing the investment opportunities. Mr. Budinger has not heard anything about the airport expansion and how it would affect their operation. As far as the deserted plant, how many years will they be operating, they look into a 30 year business model, including reserves. They are constantly trying to keep a 30 year life on reserves to support any further capital investment on the processing facility as well. It's a standard they are held up to in the longevity of their plants and investments. The traffic issues along Hwy 35 or Hwy 63, he isn't

aware of any issues with the DOT. He is aware of a stretch of highway recently replaced by Mathy Construction or Monarch Paving between Prescott and north of Oak Grove. The Material Safety Data Sheet (MSDS) for silica, they are required to have them. The MSDS sheet on silica, which is the product they produce, has many details on the origin, the hazards, if flammable, etc. Certain criteria on a MSDS sheet that is standard. So the MSDS for crystalline silica does list inhalation hazard for silicosis, it's a hazard of silica. We've been through several stages of occupational health safety training and awareness. Also programs designed to eliminate silicosis in the work place. Silicosis is in several other industries, not limited to industrial sand mines and processing facilities. It is an occupational hazard monitored by several regulations by Department of Labor which is divided into two categories, Mining (MSHA) and Industrial (OSHA). MSHA comes through on a consistent basis to test our employees like we test the employees on a more frequent basis. If there is ever an area that appears to be above regulated exposure levels we would be required to wear respirators. We do not have any of those areas identified where we have to wear respirators. When we stand up in front of our community, whether it be a public hearing or information meeting; we hold ourselves in a very professional manner. We take a tremendous amount of pride in our ethics and integrity. As we are stockpiling material, if wind is blowing across the pile or any spillage, loadout of a railcar, that is all fugitive dust. We have prevention methods. The responsible person on site is the Plant Manager. When checking the weather and knowing it's going to be windy, the stockpiles are going to be watered. Mr. Krumenacher stated that excessive in a fugitive dust plan is anything that is visible and what Rich tried to explain is that the Plant Manager, on a daily basis, determines that and will implement the fugitive dust plan by watering the stockpiles and keeping the roads wet. Ms Palodichuk stated there is no standard. Mr. Krumenacher stated the biggest aspect of this permitting process is the air permit. There is nothing regulated more tightly. The air permit regulates dust and air emissions. The emissions are about silica dust and burning natural gas to dry the sand. It's all about the silica dust and a little about diesel exhaust from the trucks. Ms Palodichuk asked if the air permits specifically regulates silica dust. Mr. Krumenacher stated yes, when the State did their study on silica dust exposure, they concluded they cannot specifically regulate silica dust; they regulate dust. What the processing facility is going to process is mine silica sand so the theory is the dust can come from processing the silica sand. So if you can control the dust, you are controlling the potential exposure to silica dust. The air permit specifically addresses particulate matter which is in the dust and the dust is crystalline silica dust. Mr. Van Heerde, isn't the dust what the neighbors are complaining about in Maiden Rock? Isn't that a bad thing? Debra McClure, are you going to be controlling the trucks going in and out and how much dust? Mr. Budinger stated we have a vendor communication relationship. We have an inspection process on site, the truck loader is typically also the lab tech, has a list of what they have to inspect, tarps, excessive sand buildup due to any spillage. There is training process each truck driver has to go through, no jake braking, tarps are in working condition, no littering, no speeding, community related concerns and also if there are any issues it's recorded immediately so the client can address it immediately. Fairmont Minerals is a member of two organizations: Industrial Minerals Association (IMA) and National Industrial Sand Association (NISA). There is a code of conduct that the members have to adhere to. Other issues are also covered from water use and storm water. NISA covers Silicosis and occupational therapy. As long as we can compete in the market place and operate safely, continue to get permits, we will be back every two years. We'll be here for infinity. We see a very strong future in the oil and gas industries, frac sand, there are different types of profit media from ceramics to silica coated products and we are involved in all those markets. Mr. Budinger also talked about another large mine; Wedron that has been in operation since the early 20's, is thousands of acres and continues to acquire property. Mr. Budinger explained reclamation of the sand waste and its uses, animal bedding, clay tilling into agricultural fields for retention of water, storm water, land fill capping, engineered fill, it could be used by the neighboring Highway Dept for sand and gravel operation or by Holst excavating, or hauled back to the mine to fill in the tunnels. As the materials accumulate at the plant it will be removed immediately. He reiterated all the economic benefits back into the community. Mr. Krumenacher discussed tourism and stated that a study had been done two years ago. The population of Maiden Rock is currently 150 and at one time it was 300. There are ten businesses that were considered tourism

businesses and five of those have come into the Village since 2006, at timeframe in which the mine was in operation. The design study of capacity for Highway 35 is eight to ten thousand vehicles per day. The current capacity is 1500 to 3400 per day for the trucks. Mr Van Heerde asked about the Flood Runs. Mr. Budinger stated they do not operate the trucks during the Flood Runs, one in the spring, one in the fall, they shut down in the afternoon for the 100 mile garage sale, they do not run trucks south of Maiden Rock during Stockholm Art Fair and there are several Saturdays and specific events they don't switch railcars out during Summerfest because of the safety issues. They have not been asked to by the Townships or the County, they understand that is a safety issue. Debra McClure asked about the DOT study, the 8 – 10 thousand vehicles per day, is that based on pure numbers. Or is it based on axels, for example stating that a garbage truck is the same wear and tear on a road as 1000 cars, impact is much higher than actual volume. Mr. Krumenacher stated the capacity study isn't a weight study. Mike Miller, Trenton Township, asked when you make your decision about this conditional use permit, have you seen the air quality permits? Pichotta stated that an applicant doesn't typically secure all necessary permits before seeking a conditional use permit to establish the use. Mr. Miller stated let's assume you vote in favor of this and you get a bad air quality permit back with heavy concerns, that can't affect your decision because you have already approved the permit. Pichotta stated the conditional use permit will require them to come back every two years for renewal and if there is an issue that comes up sooner or later, we have the ability to have them come back in at any point if it was determined that the conditions associated with the permit are not adequate to protect public health and safety. Mr. Miller asked if the public gets involved at that point or not. Pichotta stated all LMC meetings are open to the public. It would not however require a new public hearing. Dick Bunce, Town of Trenton Chairperson, stated they issued their comments on what they wanted to see. They have a separate operation currently in the Town. He did a survey of the residents around there and no one had a complaint. He went to the plant unannounced. He didn't have to wear ear or eye protection. They were dumping trucks and sprinkling water on sand. They were running a big vacuum. He was told it's a vacuum that runs on anything the sand is moving on; a conveyor or a loader or in a railcar that takes the extra dust and puts it into a big tank at which point they take it out of there and put it back in the mine. He asked if it controls the dust. They told him everything that moves on a conveyor or a track is controlled by the vacuum. The outside sand at the Hager Plant, a small pile, is just there for emergency if they have problems with a truck or something. He asked the other board members to drive by and take a look. They haven't had any complaints at their meetings and the mine has been there for five years. He stated they are asking to put an industrial project on an industrial site if the State and the DNR blesses it. He has no objection. Sanden asked about the proximity of Industrial Zone and Residential area. How long has this area been zoned as Industrial? Pichotta stated the Town of Trenton didn't come into County Zoning until mid or late 1980's. It's his understanding that this area was primarily zoned Ag Residential prior to 1998. In 1998 when the County did its comprehensive land management plan each Town was given the opportunity to establish zoning districts and this was the zoning scheme that the Town Board asked for at that point. Sanden stated because it was comprehensive, the Industrial and Residential were zoned at the same time. Ross stated that if something comes up that is a major issue, he is going to want to see it and will want to take a look at what the problems are. We represent the folks that live and work in these areas. He lives and works in these areas. As far as the comment about LMC members pushing things through, he sits on nine committees for this County. He doesn't make a single decision without understanding and thinking about it. Sometimes he sits on 20 meetings a month. Rarely does he see this kind of turnout so he's not sure how that opinion was formed. Sanden asked if there is any precedent in a facility like this for hours of operation. Pichotta stated that is one of the factors as to why it is considered to be a heavy industrial use. The purpose of the district is to accommodate heavy volumes of traffic, heavy noise and factors that would be a nuisance in other districts. Something operating 24/7 is more industrial in nature than other uses. The other facility operates in the same timeframe and it's in the Industrial District. Each conditional use permit application is judged on its own merits. If you were to allow 24/7, an Industrial District would be the appropriate place to allow that. Sanden stated it is Industrial District but on the other side of Hwy 35 it is Rural Residential District. Pichotta suggested that raises the importance of site plan review where you attempt to address screening

issues and also this conditional use permit process is intended to identify conditions necessary to mitigate negative impacts on adjoining properties. Sanden asked about road repair if there is excessive damage to Hwy 35. Would that be something we would do or the DOT would visit. Pichotta stated State Highways are intended for a higher level of use than other roads. That would be something the DOT would address. The Town has the jurisdiction of maintenance of Town roads and the County on County roads, the State on State roads. His sense is that if the DOT didn't feel this road was adequate to handle the volume and magnitude, we would have been so informed by the DOT. Sanden asked Mr. Budinger about considering setting up an information board, points of contacts for the citizens to deal with a person on a daily basis or having monthly meetings. Mr. Budinger stated the way they have handled communications at the Maiden Rock operation as well as in Menomonie; they recently added informational mailings, newsletters, etc, relisting their contact information, availability with the open-door policy. As construction begins at any of their operations, they would begin communicating at that level, a more frequent level for the first year. Then as they would evolve with a Citizen Advisory Committee; that would either go to monthly, quarterly, or semi-annually. Right now at Maiden Rock we hold monthly CAC meetings; at Menomonie they hold quarterly meetings. Sanden stated the committees seem to make really good sense before they get to us. Mr. Bunce, Town of Trenton Chairman, stated they have Ralston Purina who operates 24/7 and Thomas & Betts work 24/7 when they have the work. They had some problems when Thomas & Betts when they had their expansion and the committee saw fit to go by our recommendation to add a berm and the local residents have been happy with that as far as mitigation for noise. With every industrial development that they have in Trenton, there are always issues. It's a decision you have to make if it falls into the parameters of what those other operations do, the jobs they generate, the impact they have on the public. We have other issues down there, they wouldn't be the only ones that operate 24/7. Sanden asked if we reiterate what the Town put as their conditions? Pichotta stated they are referenced in the recommended conditions. **Aubart moved to approve the conditional use permit for a Heavy Industrial Use (Sand Processing Facility) for Wisconsin Industrial Sand Co, agent for William F. Holst III, due to the fact that it is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #11 and also grant an exception to the 35 foot height requirement for the proposed Truck Dump, Truck Load and Scalper structures/Ross seconded. All in favor. Passed.**

Discuss take action on a request for Site Plan Approval for a Heavy Industrial Use (Sand Processing Facility) in the Industrial District for Wisconsin Industrial Sand Company, agent for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Rich Budinger forward: Mr. Budinger stated that, as was presented, the facility will have a rail siding; the berm in between the main line and siding, as well as details for storm water runoff, location of administrative buildings, restrooms, traffic pattern as trucks enter the property. There is adequate room for the trucks so they don't have to back up, they dump the load into the hopper and continue the forward motion through the property. We wanted to minimize back-up alarms; it will be a hissing instead of a beep. Sanden stated he is confused, it looks like the BOA allowed structures up to 60 feet and then there are some exceptions. Pichotta stated the BOA took action on several proposed structures that were taller than 60 feet. The Land Management Committee's jurisdiction is limited to allowing structures greater than 35 feet but not greater than 60 feet. A number of proposed structures required BOA approval whereas the Land Management Committee had the authority to authorize an exception to the 35 foot requirement – between 35 and 60 feet is LMC jurisdiction. Ross asked what is a Trac-mobile? Mr. Budinger stated Trac-mobile is a piece of machinery that has casters that drop down onto the rail and also retract the tires so they can move on the rail and across the yard as well. It's a way to shuttle railcars on site. They will have two Trac-mobiles on site, one will be a backup. The capacity is to move ten empty cars or less, move them through loadout and place them on the out bound track.

Staff Report – Brad Roy: We're here to look at the site plan for the approved facility. A lot of the information here is redundant. Site Plan Review is required for all Commercial and Industrial

developments. The purpose of the review is to assure site designs which promote compatibility between land uses, create safe and attractive site layouts and structures, provide proper access to streets and transportation, protect property values and contribute to efficient land use in Pierce County. Access to the site is off of a private driveway which connects to 830th St. All vehicles entering the site will use the same access point. The trucks will enter a drive-thru structure and unload the sand in a below grade pit. The trucks will make a continuous forward path and exit the site. The Traffic Impact Analysis stated that the peak traffic would be 16 trucks entering and exiting per hour. The proposed plan has 36 parking spaces with one space reserved for handicap parking.

- Pierce County Code §240-54 requires one space per employee during the peak shift as well as 2 spaces for manufacturing/ trade contractor establishments.
- The applicant anticipates 30 total employees at the site working various shifts.

Restrooms are proposed to be located in the Crew and Administration Buildings. The plan proposes one wastewater disposal system site to serve the two buildings. A lighting plan for the site was developed (Drawing 4) and was included in the CUP application. The lighting is intended to stay onsite in the working areas. MSHA regulates lighting and may potentially require modifications to the plan. The proposed plan includes the construction of six rail sidings to the BNSF Railroad. The sidings will be used for storage and in the loading process. The applicant is proposing to construct a berm between the proposed rail sidings and the BNSF rail line. Trees are also proposed atop the berm, but the plan does not detail the type, number or height of the trees. One condition put on the BOA Variance, when they looked at screening of these tall structures was that White Pines be planted on top; no number or height. They appear to have left that to your discretion. Outside storage will include temporary stockpiles of raw sand, washed sand and tailing from dewatering operations; steel and equipment intended for use in the proposed plant, backup processing equipment; and redundant or scrap equipment. None of the outside storage areas, except the raw sand storage, have been depicted in the plan. Other than the proposed trees on top of the berm adjacent to the rail no other vegetative screening has been proposed in particular along the southern edge of the site. High density residential is one-half mile to the south. The applicant has indicated that much of much of the disturbed area will be vegetated. There was a submittal they made to our office that indicated the seeded areas. No advertising signs have been proposed at this time. The Town of Trenton recommended approval of the CUP request on May 9, 2012 with the following recommendations which are also relevant to Site Plan Review:

- Extend berm on Hwy 35 and include trees on top.
- Lights shall be adjusted away from residences.
- Noise controls shall be implemented.
- Berm shall be constructed along County Road K to block view of the railroad.
- All rail cars shall be behind the berm on Hwy 35.
- Trucks shall have a drive-through unload to avoid back-up alarms.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed site plan and determine if any changes or modifications to the plan are necessary.

Aubart asked about the height of the berm. Mr. Budinger stated the berm in its existing height is probably 10 – 12 feet above Highway 35. The property on the plant side of the berm is 5 feet lower. As far as any enhancement or extension to the berm, we don't have any plans to raise it any higher than it is. The way the rail lays in, the berm is at the point where the tracks pinch off and return back to the main line. There may be some room for extension and they will do that. They want to maximize storage behind the berm. The number and type of trees; they will use white pine and will fill in empty space. They haven't identified a number of trees. Sanden asked what they plan to do on the south side as far as screening. Mr. Budinger stated on the south side there is some natural screening, a pine grove and cottonwoods. They don't have any plans to add trees now, any opportunities in open space after the construction, they would want to plant trees. There are some tree identifications on the site plan, page one. Sanden stated there is natural vegetation on the southeast but what about on the southwest? Mr. Budinger stated they designed that to be green areas for grass. Storm water ponds will be on both sides of the driveway there. There is a potential to plant trees along there. Pichotta stated that in the future if screening is thought to be

inadequate, we have, in other cases, asked for berm heights to be higher or required additional screening. You could address such issues at renewal or call for a status report. **Sanden moved to approve the proposed site plan for a Heavy Industrial Use (Sand Processing Facility) for Wisconsin Industrial Sand Co, agent for William F. Holst III, with condition #1 added, White Pines and other trees adequate to screen buildings shall be planted on berm along Highway 35/Aubart seconded. All in favor. Passed.**

Discuss take action on status report and potential modification of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Jim Small forward: Mr. Small stated Pete Krautkramer will be speaking. Mr. Krautkramer, Manager of the Spring Valley Quarry, explained he is here to ask for longer hours; 6am – 6pm, Monday through Friday and 8am to noon on Saturday. They have come up with a fugitive dust plan and have purchased a weather station with which they don't have to rely on just the production people at the premise. The weather station gives them the wind, humidity, everything. They have it set so that when the wind gets up to 25 mph they will stop production. It's on computer and the lady at the scale monitors the computer and writes down the wind speed, temperature and everything else. We were asked to lower the sand pile and within a month it was lower. He hired a man and his main job is to water the road, piles and keep the dust down. The other item was to plant 12 foot trees on top of the berm. He gave the Town of Spring Lake Board Members a tour. Up on the berm, the wind was 9mph. When you are on top, the trees which are pretty much all along the highway, are 20 feet above the berm. He doesn't want to disturb the vegetation on the berm. There is an access road for the farmer that rents the south property. He goes along the berm, so he isn't inside their gated area. If they plant more trees, they will have to build the berm up. He spoke to a person about planting trees and he told him he would have to have a 10 foot area on top to drive on. He would have to close off the farm entrance to the lessee. The first question was when they are going to get the screening/lime production down in the hole, which creates the most dust. He told the committee it would be spring of 2014 and they are on track for that but he needs a little more land. They have 30 acres of unreclaimed land now. They are asking to increase that 10 more acres to give them a little more room. He had Mike, Gary and Richard there during washing and producing lime; peak production with the crusher running. They stood on the berm. You couldn't hear any crushers. He could hear the screening a little bit. Sanden asked if upping the acreage from 30 to 40 acres would give you the room to be able to bring the floor elevation down quicker. Mr. Krautkramer hopes to bring the floor elevation in half of the quarry, south half, down next spring. He is going to be putting the lime production screening plant on the north half of the quarry which they are down 30 – 40 feet right now. Sanden asked if the 10 acres would be visible from the road. Mr. Small stated that area would be on the south side and the aesthetics wouldn't change at all.

Staff Report – Brad Roy: County Materials received a Conditional Use Permit for Nonmetallic Mining in April, 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. The operation plan states that excavation would create a floor elevation of 1050 feet above sea level, where all activity would be conducted. The average current floor elevation is 1100' and the processing area has an approximate elevation of 1160'. Modified and new conditions to mitigate the impacts to neighboring landowners created by operation activity above the extraction area were added at the April 4, 2012 permit renewal:

- Hours of operation shall be 7am to 5pm Monday through Friday. Operation shall be closed on holidays. (*Previous condition: Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.*)
- Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.

- 12 foot spruce trees shall be planted and maintained in a manner to create a continuous barrier atop the berms.
- A Fugitive Dust Plan shall be developed. The plan shall be presented to the Town of Spring Lake for comment and presented to the LMC for review and approval within 6 months.
- Applicant is allowed to water anytime necessary to mitigate off-site dust impact.

The LMC requested a status report in 3 months to see if the added conditions have improved the situation for the neighbors and to review the Fugitive Dust Plan, if completed. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. County Materials intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. There are 30 unreclaimed acres on the site. This is the maximum allowed by the CUP. Stockpiles have been lowered below the berm. Trees have not been planted atop the berm at this time. A Fugitive Dust Plan was developed for the site and presented to the Spring Lake Town Board in May and is included for your review. Plan objectives are:

- Procedures that CMC personnel will follow to control fugitive dust emissions
 - Environmental conditions requiring corrective actions
 - Steps that will be followed to bring emissions within appropriate ranges
 - Steps that CMC will take to demonstrate that corrective procedures are followed and to verify that the quarry is controlling avoidable fugitive dust emissions
- Unpaved roads will have watering and other dust suppressant materials applied as the primary control.
 - Paved roads will be washed and swept as needed.
 - Stockpiles will be watered and have the drop distance minimized
 - Material Transfer Points will minimize drop distances and suspend crushing and screening operation in high winds.
 - Record keeping and employee training are also important parts of the plan.

The existing conditions of the permit are listed in the staff report #1 - #29.

Staff Recommendation: Staff recommends the Land Management Committee approve the presented Fugitive Dust Plan, if appropriate, and consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and modify this conditional use permit for a nonmetallic mining operation with the following conditions (potential modifications in **bold**): A change to #25, if you want the applicant to come back in 3 months or at a later time and #28 to now state “The approved Fugitive Dust Plan shall be implemented as approved.

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 7am to 5pm Monday through Friday. Operation shall be closed on holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.

12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
- 25. Applicant shall provide a status report to the LMC in 3 months.**
26. Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.
27. 12 foot spruce trees shall be planted and maintained in a manner to create a continuous barrier atop the berms.
- 28. The Fugitive Dust Plan shall be implemented as approved.**
29. Applicant is allowed to water anytime necessary to mitigate off-site dust impact

Mike Jacobson, Spring Lake Town Supervisor #2, the Land Management Committee has been very active on this site. When Pete came, he begged for a chance and he has done a good job for them. Pete has been accessible. He brought the entire board up there for a visit. Our concerns are as follows: site visibility, the berms went down, a dust plan, it's no longer subjective, if the wind is at 25mph they stop production and start watering. They always have someone watering, they paved past the scale and that keeps Hwy 128 cleaner. The other issue was noise, when we were there, everything was running. You can hear it but it probably isn't over or above any mandated level. Squeezing them on the hours sent a strong message. He believes they deserve the 6am to 6pm because they are trying to make a living and they aren't running it in the winter. They are donating materials at cost or below cost; breaker rock on washout, they needed some things in the Town Cemetery. He doesn't see a truck now that doesn't have its tarp down. They need to go deeper and once they are deeper some of those issues will go away. Opening up another 10 acres, they would put it to good use; it's not a lot extra. Aubart asked Mr. Jacobson about the issue of trees on the berm. Mr. Jacobson stated he loves trees but they were up there and if they have to put trees on the berm the service road goes away, so the farmer couldn't get to his fields and the snowmobile trail would probably go away. The trees are growing and it's full of vegetation. Ms. Jensen agreed that the trees probably wouldn't help. The dust plan has really helped with her allergies. Sanden asked Mike about the shortened hours, are you implying that you wouldn't like to see the 6am to 6pm hours reinstated. Mr. Jacobson stated the original hours were even longer and then it went to 6am to 6pm, then they were shortened up even more. The 6am to 6pm doesn't seem excessive. They need to run a business. If you go beyond that, he feels you will have more people back here. Mr. Krautkramer stated he does need that Saturday morning back, he needs hours. He stated they are really hurting with the 7am to 5pm. Evelyn Jensen, neighboring property owner across Hwy 128, stated that she isn't happy with the idea of the hours

going back. She presented a recording of the noise from inside her house. She complained about the constant noise. She presented pictures of the machinery right across from her house. She stated they do work in the winter time. She stated the dust is gone. She stated that they have been promised that the equipment is going down in the quarry and it hasn't happened yet. They have alleviated her health problems and she enjoys not being woken up in the morning. They have done a good job with the truck traffic. Sanden asked Ms. Jensen if we were to expand the hours to 12 hours, would she find it more acceptable to go from 6am to 6pm or 7am to 7pm. Ross asked what the Saturday hours are? Richard Johnson, Spring Lake Town Supervisor, there is a lot that has gone on in the last four/five years, everyone was upset that it was approved in the first place. Before he worked for Pierce County, he worked construction. If you don't get overtime, you can't make a living. That is a contractor that comes in to do the crushing; they come in three/four times a year. You can see the quarry from Highway 128 but there is a farmer's field and the driveway. He was up there for a tour. They stood by the scale and he didn't know they were crushing because it was down in the quarry. The screener and the washer were going and he has heard farm tractors with choppers that made more noise than that. He will back them on the hours: 6am to 6pm and four hours on Saturday. He lives in the same Section 16 to the northwest of the quarry and he doesn't even have the back-up alarms. Sanden asked Pete to address the noise issue. Mr. Krautkramer stated that he has stood on the berm and on the highway; he wants to have a good neighborhood. He made a note about the hissing back-up alarms and he will look into this. He has to please MSHA first with the safety of his people. **Ross moved to modify the existing conditional use permit for CMC-Spring Valley LLC (County Materials) with conditions #1 - #29 extending the hours of operation to 6am to 6pm, Monday through Friday, Saturday 8am to noon, changing #21 to 40 unreclaimed acres, leaving #25 to have a status report in three months, striking #27 and changing #28 to The Fugitive Dust Plan shall be implemented as approved/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a Nonmetallic Mining (Underground Operation) in Diamond Bluff

Site Plan Approval for the mining operation

Public hearing for expansion of Nonconforming structures in Rock Elm

Public hearing for Filling and Grading in Shoreland Area in El Paso

Extension of renewal of a conditional use permit for BS Construction/Schoeder Properties in Rock Elm; The renewal comes due in August and both parties are asking for it to be heard in September.

Motion to adjourn at 08:57pm by Ross/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 18, 2012 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 1 st & 15 th , September 5 th & 19 th , October 3 rd & 17 th , all in 2012.	Chair
3	Approve minutes of the June 20, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Heavy Industrial Use (Sand Processing Facility) in the Industrial District for Wisconsin Industrial Sand Company, agent for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
5	Discuss take action on a request for Site Plan Approval for a Heavy Industrial Use (Sand Processing Facility) in the Industrial District for Wisconsin Industrial Sand Company, agent for William F. Holst III, owner on property located in Sections 28, 33 and 34, all in T25N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Discuss take action on status report and potential modification of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(7/6/12)

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, June 20, 2012

Present: Jon Aubart, Joe Fetzer, Jeff Holst and Jim Ross

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Eric Sanden

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 18th, August 1st & 15th, all in 2012.

Approve Minutes: **Aubart moved to approve the June 6, 2012 LMC minutes/Ross seconded. All in favor. Passed with Holst not voting because of absence at the last meeting.**

Discuss take action on a screening plan for Stanley & Beverly Boles, owners on property (Value Implement) located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimble, Pierce County, WI.

Staff Report – Emily Lund: The screening plan for the Value Implement property is under review tonight. The property is located in Section 15, Town of Trimble and is zoned Commercial. The Land Management Committee reviewed and conditionally approved the site plan for expansion of Value Implement on 4-18-2012. Condition number 10 established that “A screening plan that is acceptable to neighbors shall be submitted to the Land Management Committee for review.” Staff wrote a letter to applicants to remind them of this condition on 5-3-2012. A screening proposal with signatures of 3 of the 4 adjacent residential property owners was sent to staff on 5-11-12. One neighbor would still like additional screening established. Staff inspected the site 6-14-2012 and found 30 Black Hills Spruce trees planted in a line that followed the northwest property line. The tree heights ranged from 9 to 12 feet tall and they were spaced 16 to 20 feet apart.

Staff Recommendation: Staff recommends the Land Management Committee review the established screening to determine whether or not it provides sufficient screening between the commercial expansion and the existing residences.

Phillip Blodgett, neighbor, stated that their biggest concern is the distance between the trees. Out of the first 21 trees, 10 are 10 feet and over. They would like to see 13 more trees put in between those. He doesn't see this as being much of a screening plan, it's more of a landscape plan. He talked to Buhl's nursery and they stated that the trees could have been planted 8 feet apart and staggered. They don't have a problem with the business itself. He doesn't want this to drop the value of his property. They aren't happy with what's there and would have appreciated being able to go over the plan first. Chairperson Fetzer stated that while he appreciates the Boles enthusiasm for getting it done but the committee understood that there was going to be a cooperative plan brought back to the LMC. Stan Boles stated he wouldn't want to plant them any different. They put them off of the highway so they wouldn't be affected when they plow snow. They talked to two people about planting and they both stated 16 feet apart. He thought if they waited until the next meeting, it would get too late to plant trees. They were budding out. They weren't going to put them through the middle. They put them around the edge of the road, 16 or 18 feet off, 16 feet apart. If they plant another row of trees, they're going to use up the lot. He stated they are

willing to plant trees on the Blodgett's property. Mr. Blodgett stated that Liz approached you about the issue and those trees could have been staggered. They want a screening plan, not a landscaping plan. Mr. Boles stated he has seen people put in 20 foot trees and two or three years later only a third of them are living. Mr. Blodgett stated that is why we supported the use of 10 to 12 footers. Mr. Boles stated they can't put trees high enough to block your view. Mr. Blodgett stated that we discussed that here and he understood that. Jay Boles stated he made an offer to plant trees on their property. Chairperson Fetzer stated we weren't looking for another meeting here. We were looking for some cooperation. He thought there would be a quick meeting with the neighbors, come up with a plan and if you couldn't come up with something then we would. Jay Monson, Value Implement, stated that the Boles have been very proactive whenever they have asked for something. Mr. Boles stated they spoke with the other neighbors. Lund stated that Keith Johnson, property owner to the east, was contacted and he has big trees present on the property already. Mr. Blodgett stated he has a lot right there. If he wanted to sell that lot he couldn't. Mr. Blodgett stated it was talked about at the meeting that it was going to be tight and keep people from driving back there. They would like 13 more trees planted that are 10 feet tall between those trees. Ross stated that we had talked about defining the area to isolate the property and he feels they have accomplished that part of it. It's defined, there is a line there. Aubart stated the condition read that a screening plan acceptable to the neighbors shall be submitted to the Land Management Committee for review. This is after-the-fact. We're stuck, we're not reviewing anything. Elizabeth Blodgett, neighbor, stated going back to the initial planting of the trees; she came home from work and stopped at Value Implement to see what was going on. Al Hines stated they were planting trees. This was the first time she met him and Stan Boles. She asked what they were planting the trees for. Mr. Hines stated for Stan Boles. There was only 6 or 7 trees planted. Ms Blodgett told him they are beautiful trees but this is supposed to be a screening plan and they are too far apart. I asked who I talk to. Mr. Boles told her, I'm not pulling these trees out and you can call whoever you want. She called someone at the Land Management Department and feels someone should have come out and done something. But he continued to plant and nobody stopped him. They are not doing what they are supposed to do. She doesn't want to have to worry about backing into somebody else's customer in her yard. Holst stated he thought that was another condition on there that a private road sign be put up. Lund stated there is a sign up. Holst stated the screening plan is just that - to screen it, not to make it invisible. We typically do ask that trees be staggered, as they will fill in faster. Since you already have them planted in a row, he suggests planting 10 more trees staggered at 10 feet back and ,once the other have filled in, cut them out. If Blodgett's don't want them in their yard, the burden lies upon the applicant. Aubart stated we have to have a resolution. Ross asked if there is ever any intent to bring equipment through the trees onto that road? Mr. Boles stated no, this is how Mr. Hines recommended to plant or when they grow up you won't have a nice looking tree. Two different tree guys said to put them 16 feet apart. In front of their house they are 16 feet apart, down on the side they are farther apart because of the septic thing and he didn't think they needed that many. He thought it was urgent to get them planted because they were budding out. Mr. Blodgett reiterated that Stan was supposed to present a screening plan - this is after-the-fact, now there is an issue. His recommendation is to plant trees in August. He feels Stan should give the County \$5,000 to \$6,000, the cost of the trees, when the trees are put in, in August, you get your money back. If he doesn't do it the County can plant the trees. Ross asked why a plan wasn't submitted. Mr. Boles stated he thought it was getting late to plant trees. What would you do to use the least amount of property so they wouldn't be damaged by the snow plow? We planted all the way to the end so you would have a pretty drive. We went off the highway 20 feet. If we plant another row we're going to use 36 feet of property. Aubart reiterated that there is no screening plan to approve. Lund noted that in the past, the LMC has taken it upon themselves to determine where the trees should be planted. Holst stated when the neighbors haven't been able to reach a civil agreement, then we have come forward to establish a plan.

Holst moved to require the planting of 10 additional trees to be located offset from the existing trees, starting at existing tree #12 off the highway, with trees located 10 feet from the line of existing trees, trees are to be Blackhill spruce that are 9-12 feet tall and shall be planted later in this growing season. In 5 years, applicant may come back before the Land Management Committee to

review the tree screening requirement and, if the front line of trees fills in enough to provide adequate screening, the 10 trees may be removed/Ross seconded. All in favor. Passed.

Discuss take action on review and approval of Department forms and applications including Conditional Use Permit and Rezone applications and Town Recommendation Form.

Staff Report – Andy Pichotta: Staff has been advised by the County’s Corporation Counsel Office to periodically bring the Department’s forms and applications to the LMC for review and approval. Said approval establishes the forms and applications consistency with the Pierce County Code.

Staff Recommendation: Staff recommends the Land Management Committee review the attached forms and applications to determine whether changes or clarifications are necessary. If no changes are needed, staff recommends the forms and applications be approved as written.

Pichotta reviewed the information required/requested on the Map Amendment (Rezone) application, fee, current zoning, requested zoning, legal description, proposed use and reason for rezone. Applicants will typically fill this out to the best of their ability and if they have questions relating to legal descriptions, etc, we’ll walk them through filling them in. All the forms/information is on our website. The Town Recommendation Form, this highlights the need for a Town recommendation and also has some of the language out of the Comprehensive Plan relating to the use of a Town’s Comprehensive Plan and recommendation. The Town Recommendation Form is used for a variety of things. Holst stated the forms are easy and simple to use from a Township point of view. Chairperson Fetzer asked how long we have been using the existing forms. Pichotta stated ever since he has been here. After the Comprehensive Plan they were tweaked to reflect the new language and the Town Recommendation Form. We had a Town Recommendation Form prior to the Comp Plan, back to 2001. These things have been discussed but the forms had not been reviewed by the committee.

Pichotta reviewed the information required/requested on the Conditional Use Permit application, much the same information, appeal rights also. He noted there is one more reading for the Agribusiness/Agritourism code language so the committee will probably see this again assuming we add those new uses. The next page is for proposed use, affidavit, this gives staff and the committee the ability to conduct a site visit to make, creating a plot plan using the County’s interactive GIS - for those who are computer savvy and the Town Recommendation Form. The process has seemed to work well. One of the things we struggle with is trying to get Town’s to understand the relationship between the Comprehensive Plan and conditional use permit issuance. Brad Roy and Andy went out to 12 or 13 Towns to discuss Farmland Preservation and as part of that they presented a discussion piece about conditional use permits and Comprehensive Plans. We are giving towns the ability to control and shape uses within their town without assuming the liability associated with administering their own ordinances, by simply utilizing their Comprehensive Plan. If you are comfortable with the forms I would encourage you to approve as written.

Aubart moved to approve the Department forms and applications including Conditional Use Permit, Rezone applications and Town Recommendation Form as submitted/Ross seconded. Ross stated that an issue had come up about broadband recently and someone said that there is a lot of things businesswise that happen and people don’t get their permits so it’s difficult to identify whether they need broadband or not. They apparently don’t want to go through the high expense of getting a permit. Is there any place where you are aware of, because the fee is so high, that businesses aren’t securing permits? Pichotta stated a conditional use permit is only necessary for a use that meets a certain magnitude. Our Home Occupation and Home Business permits are over the counter and are relatively inexpensive. I would suggest that our fee structure and the way we approach businesses is actually very supportive of entrepreneurial type things versus stifling them. We are much more open to new business endeavors. Our fee structure for these types of uses is actually much less than in many other places. **All in favor. Passed.**

Discuss take action on potential change to Land Management Committee (LMC) meeting time.

Staff Report – Andy Pichotta: The LMC has historically met at 7pm. A number of years ago the Committee considered moving meetings to an earlier time but ultimately decided that, in the interest of

ensuring that the public had an opportunity to attend, meetings would continue to be held at the usual time. Emily compiled a list of meeting times for zoning committees and boards of adjustment (or their equivalent) for other Counties in the region. That compilation is attached on the back of the staff report. As you can see, they vary widely; folks meet at 6:30pm or 7:30pm, 9:00am, 8:00am, 1:00pm - so they are all over the board. Historically we have sought to have meetings in the evening, the thought being that folks would be more able to attend things that they are concerned about. Would an applicant be able to get off during the day? Certainly they would. Folks are able to come get land use permits from us during the work day but a concern would be that if you weren't the one applying - would you be able to take a half day off of work because you are concerned about what your neighbor is doing? That was a large part of the reasoning that the committee considered when it opted to keep meetings in the evening. Pichotta noted that after some informal discussion with folks it does sound like there would be support for bumping the time up an hour or so. Pichotta suggested that since we have a substantial break between this meeting and the next, July 18th, if the committee opts to make a change, it would be reasonable to make a change for that meeting. Holst stated it doesn't matter to him, it's always much easier to do it later in the day but it's neither here nor there. Ross stated he is in the same boat as Jeff; 6:00pm would be nice so if it's a long meeting you aren't too terribly late. Aubart stated the earlier the better for him. He would prefer to move it up to 5:30pm or 6:00pm. Chairperson Fetzler stated 5:00pm was brought up and he feels that is a little too early, 5:30pm would be good, no matter where you are in the county, you can get to Ellsworth within a half hour, 5:30pm or 6:00pm would be good. Chairperson Fetzler stated last time, Eric said 5:00pm would be a little early but 5:30pm or 6:00pm would work.

Aubart moved to change the Land Management Committee meeting start time to 6:00pm on the 1st and 3rd Wednesday's of each month starting with the July 18, 2012 meeting/Ross seconded. All in favor. Passed with Holst opposing. Pichotta suggested that if, for some reason, we find the new start time isn't working we can always change it later.

Discuss take action on Travel/Training Requests. Lund stated she and Jim are planning to attend the West Central Zoning Association meeting at Whitehall on Thursday. Holst moved to approve/Ross seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

Status report from County Materials

CUP for a processing plant in the Town of Trenton

We may have a subdivision review if it is approved by Land Conservation

Motion to adjourn at 07:56pm by Holst/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 20, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 18 th , August 1 st & 15 th , all in 2012.	Chair
3	Approve minutes of the June 6, 2012 Land Management Committee meeting.	Chair
4	Discuss take action on a screening plan for Stanley & Beverly Boles, owners on property (Value Implement) located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
5	Discuss take action on review and approval of Department forms and applications including Conditional Use Permit and Rezone applications and Town Recommendation Form.	Pichotta
6	Discuss take action on potential change to Land Management Committee (LMC) meeting time.	Pichotta
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(6/8/12)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647

MINUTES - Pierce County Land Management Committee Meeting, June 6, 2012

Present: Jon Aubart, Joe Fetzer, Eric Sanden and Jim Ross

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Absent: Jeff Holst

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 20th, July 18th, August 1st & 15th, all in 2012.

Approve Minutes: **Ross moved to approve the May 16, 2012 LMC minutes/Aubart seconded. All in favor. Passed with Sanden not voting because of absence at the last meeting.**

Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Agriculture Residential District for Dixie Brown, owner, on property located in NE ¼ of the SE ¼ of Section 7, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Ms. Brown forward: Ms. Brown explained she is requesting to get a conditional use permit to build a new home on her property that was owned by both her parents and her grandparents previously. When talking to Jim, she found out, because of the setbacks, she would have to build into the hillside so they are proposing to put it on the existing footprint and expand to the back, not toward Highway 35 or 452nd Street.

Staff Report – Jim Kleinhans: Ms. Brown has a residential property of 1.81 acres. It's located along Highway 35 and on a corner. In an intersection we look at setbacks from the road, setbacks from the town road and the vision clearance triangle. In this case, the right-of-way setback on Hwy 35 was pretty excessive. So we considering setback averaging and used the neighboring property owned by Mr. Glaus and that did not provide her enough relief to build what she wants to build. Her requested conditional use permit is for expansion of the existing structure. Maiden Rock Town Board approved this request on May 3, 2012 with the following comment: New house will sit on the old house footprint expanding but not towards Hwy 35 or town road. The well is located in the basement of the existing home. They proposed to move the foundation back to allow the well to be underneath the proposed deck and build the home on the existing location so they can connect to the existing septic system that was replaced in 1998. The existing building footprint is approximately 24 feet by 45 feet. The proposed footprint with a 2 car garage, screen porch and deck is roughly 60 feet by 57 feet. The property is subject to a scenic easement with the Department of Transportation where single family residences are allowed. Pierce County Code §240-76 (G) states that "all conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use." They have been clearing the site in hopes of getting a permit from this committee.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the expansion of a nonconforming structure at the proposed location would be contrary to the public interest, or detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The applicants shall obtain a Pierce County Sanitary Permit for reconnecting to the existing septic system.
2. The applicants shall follow Pierce County Solid Waste Code Ch. 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
3. The home shall maintain a 10 foot setback from rear and side lot lines, 10 foot setback from the drainfield, 5 foot setback from the septic tank, 75 foot setback to 452nd Street and not exceed 35 feet in height above the grade elevation.
4. The applicant shall work with the local building inspector, Todd Dolan, to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
5. The use shall be established within 12 months of CUP approval.
6. The deck shall be constructed to provide access for well maintenance.

Chairperson Fetzer opened the hearing to the public. Matthew Costello, owner north of Ms. Brown's property, stated he doesn't know what the elevation will be of the building and he doesn't want to be looking through Ms. Brown's home at the river. Kleinhans stated the elevation from Mr. Costello's house is 60 feet and Ms. Brown won't be building more than 35 feet high. **Public hearing closed.** Aubart asked why the setback is so far. Kleinhans stated on state highways it varies quite a bit and it could have been because of the old Hwy 35 and how it was routed. It may have gone a little bit farther to the north at one time. Ms. Brown meets the setback from the centerline of Hwy 35 but not from the right-of-way. Sanden asked if the original home was one-story or two. Ms. Brown stated it was one story with a garage and basement. It was a walkout. This will have a basement that will look like a walkout, one-story and then a loft.

Sanden moved to approve the conditional use permit for expansion of a nonconforming structure for Dixie Brown, owner, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Ross seconded. All in favor. Passed.

Discuss take action on renewal of a conditional use permit for Wisconsin Industrial Sand on parcels owned by Wisconsin Specialty Sands Inc, Lloyd Anderson, Richard Anderson, Hugh Schilling Trust, Charles Brown, Dennis Potts and My Course in the General Rural District all located in Sections 2, 3, 4 and 10, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand forward: Jeff Himes, Manager of the Hager/Bay Operation, Rich Budinger, Eric McLeod, Michele Maxson, Mark Krumenacher and Loren Merchin (?) were present. Mr. Himes presented information about the Hager/Bay operation which started in 2008. They have grown and now employ forty people, the majority from Pierce County and surrounding areas. Mr. Himes presented financial information about the company, their investments into the community and their volunteer service. He believes they have been meeting or exceeding the conditions in the permit. They have received two complaints since the last renewal; both have been addressed and resolved. They are requesting renewal of the CUP and they understand the staff report will be presented with recommended changes. They look forward to discussing the changes after the presentation.

Staff Report – Brad Roy: The mining operation began in 2006 and was expanded in 2008. In 2008 the hours of operation were also expanded to 24 hours a day. The applicant is not requesting expansion or modification. The entire mining process takes place underground; mining activities include underground blasting and washing and load out of sand products from the mine. The sand is trucked offsite to a processing facility in Hager City. The trucks enter and exit the site directly from STH 35. A street sweeper is kept onsite and is used as necessary to clean STH 35. Settling ponds are located in tunnels adjacent to the washing area. A pumping system will be installed to send clarified water back to the washing process. Water is supplied by two 1000 GPM fresh water wells. High capacity wells are permitted by the WDNR. The use of high capacity wells has caused concerns over groundwater elevations from the general public. Ground water elevation is mapped at approximately 720 to 740 feet mean sea level. The lower level of the sand is approximately 800 feet or about 60-80 feet above the groundwater table. The use of flocculants in the dewatering process has caused concerns from the general public

regarding the possible contamination of groundwater. These flocculants are also used in municipal drinking water systems. An agreement has been reached between the applicant and the WDNR about the use of adjacent WDNR property; mining does not occur on the WDNR property. Staff recently received a call from Dennis Potts, Town of Isabelle Chairperson, regarding the mine. He stated that he had no complaints about the operation and was satisfied with the state of 590th St. and that he wanted condition #17 removed from the permit.

- Staff suggests that this condition should remain in place until the Town of Isabelle submits their position in a formal document to the Zoning Office.

In the past staff had received numerous complaints regarding trucks not being tarped, but have not received any such complaints recently. Staff recently received a complaint from an adjacent landowner regarding the required blasting notification. The neighbor stated that no notification has been given prior to any blasting. Staff contacted WISC about this complaint and said that all neighbors had been notified of the blasting schedule and were given the option of having notices sent to them via phone, text or email before any blasting. The existing conditions are listed #1 - #21 in the staff report. Staff is proposing that the following conditions be added due to increased public concern about silica emissions and groundwater quality associated with industrial sand mining:

- A fugitive dust plan that utilizes industry standards and best management practices shall be developed and adhered to.
- The operator shall provide notice to the County of any notices of violation, citations or other enforcement actions taken by any other governmental body or regulatory agency against this mining operation.
- Any polyacrylamide flocculants used must meet the same use standards as flocculants used in Wisconsin municipal drinking water systems.
- WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
- A groundwater response plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation, and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the surrounding area. If no additions or modifications are deemed necessary, staff recommends this CUP be renewed with the following conditions.

1. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Commerce, Mine Safety and Health Administration and other agencies if required.
2. Applicant shall submit written verification from all real property owners granting access to the abandoned tunnels of which WSS will be accessing pursuant to this CUP.
3. Applicant shall submit verification of lease agreements before mining is conducted and before mining is conducted within the 100 foot setback to parcels of which WSS does not hold the mineral rights, subject to condition number 5.
4. Applicant shall comply with the conditions recommended by the Town of Isabelle. The Town of Isabelle recommended approval of this request on March 22, 2006, subject to the following conditions:
 1. A map of the facility and underground tunnels shall be posted conspicuously at the site.
 - a. This same map shall be provided to the Town Clerk of the Town of Isabelle and emergency officials.
 - b. This map shall be updated semi-annually.
 2. A site stability study shall be completed by a professional engineer qualified for such work.
 - a. The stability of the site shall be monitored by a qualified professional engineer annually.
 - b. A copy of the engineer's report shall be made available to the Town of Isabelle.
 3. The ground water shall be monitored by professionals qualified to perform such work.
 - a. Check all wells within 1,000 feet of company wells. This is the same as county requirements.
 - b. The ground water shall be monitored annually as well as any time the Town of Isabelle deems appropriate.

- c. A copy of this report shall be made available to the Town of Isabelle.
- 4. A reclamation plan shall be prepared-
 - a. In compliance with the requirements of the County of Pierce.
 - b. Including a performance bond to insure that reclamation work can be completed after operations cease or the operating entity ceases to exist.
- 5. Hours during which blasting operations can be performed will be unrestricted unless official complaints are registered with the Town of Isabelle-
 - a. Upon receipt of an official complaint to the Town of Isabelle, the Town of Isabelle will advise the operators of the facility of the hours of blasting restrictions.
 - b. Within 24 hours of notification, the operators of the facility shall not perform blasting between the hours of 9:00 PM to 5:00 AM.
- 6. Town of Isabelle does not control driveway permits onto a State of Wisconsin highway and therefore cannot approve or deny any such driveway. However, the Town of Isabelle is very concerned about trees on either side of the driveway blocking the view of the drivers on the driveway and the State Highway. The Town of Isabelle strongly recommends that sufficient trees be removed to promote safe vehicular traffic.
- 5. A 100-ft setback shall be maintained from all property lines for which Wisconsin Specialty Sand does not hold the mineral rights, except for any areas which were granted an exception to this requirement. An exception was granted on the west property boundary of the parcel subject to this CUP. Mining is permitted 57 feet from this boundary.
- 6. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
- 7. Real property owners located within 1000 feet of the parcel subject to this CUP (# 014-01008-0220, 014-01005-0100, 014-01005-1000, 014-01006-0100, 014-01006-0300, 014-01006-0400, 014-01006-0500, 014-01008-0100, 014-01008-0200, 014-01008-0210, 014-01008-300, 014-01008-400, 014-01006-0700, 014-01024-700, 014-01024-0800, 014-01024-0810, 014-01010-0700, 014-01010-0400, 014-01008-1000, 014-01008-0800, 014-01008-0600, 014-01009-0100, 014-01006-0900, 014-01006-1000, 014-01006-0800, 014-01007-0100, 014-01010-0810) shall be given 48 hours notice of any planned blasting. Blasting shall be restricted to six days a week.
- 8. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all wells located within 1000 feet of the parcel subject to this CUP (# 014-01008-0220, 014-01005-0100, 014-01005-1000, 014-01006-0100, 014-01006-0300, 014-01006-0400, 014-01006-0500, 014-01008-0100, 014-01008-0200, 014-01008-0210, 014-01008-300, 014-01008-400, 014-01006-0700, 014-01024-700, 014-01024-0800, 014-01024-0810, 014-01010-0700, 014-01010-0400, 014-01008-1000, 014-01008-0800, 014-01008-0600, 014-01009-0100, 014-01006-0900, 014-01006-1000, 014-01006-0800, 014-01007-0100, 014-01010-0810).
- 9. Reclamation shall be according to submitted plans and shall be completed within one year of ceasing mining operations.
- 10. After the asphalt and road gravel is removed, following mine closure, the road bed shall be graded so storm water will run laterally off the old road bed and not longitudinally down the old profile grade of the road bed.
- 11. The financial assurance for reclamation shall be reviewed and approved by Corporation Counsel before mining commences and kept current.
- 12. Applicant agrees that any unforeseen erosion issues that arise during or after construction shall be addressed to the satisfaction of the county.
- 13. Applicant shall submit to the Zoning Office a copy of the Storm Water Pollution Prevention Plan and a Spill Prevention, Control and Countermeasures Plan if these plans are required by other agencies. If they are not required, applicants shall submit verification from those agencies stating that the plans are not required.
- 14. This CUP shall be renewed every two years.
- 15. An annual audit, detailing mining activities to date and demonstrating adherence to approved conditions shall be submitted to Pierce County Land Management Department by January 31st.
- 16. The applicant shall submit written verification from the Department of Natural Resources that a binding agreement between the DNR and WSS is in place to preserve the conservation values of the existing DNR State Natural Area and associated tunnels. Such agreement shall also address access.
- 17. 590th St. shall be restored to the satisfaction of the Town of Isabelle.
- 18. Verification of an agreement with the Wisconsin DOT shall be submitted before mining extends under Hwy. 35.

19. Outdoor storage of any equipment and/or mining materials shall only occur on the parcel with the mine entrance.
20. Mining shall not encroach within 200 feet of any existing residence.
21. All loaded trucks shall be tarped.
22. A fugitive dust plan that utilizes industry standards and best management practices shall be developed and adhered to.
23. The operator shall provide notice to the County of any notices of violation, citations or other enforcement actions taken by any other governmental body or regulatory agency against this mining operation.
24. Any polyacrylamide flocculants used must meet the same use standards as flocculants used in Wisconsin municipal drinking water systems.
25. WISC will be subject to control methods deemed adequate by the LM C for silica emissions if current or future studies suggest a significant public health threat exists from such emissions.
26. A groundwater response plan, including accurate determinations of the groundwater elevation and which details resources to be used to protect the quality of groundwater beneath and adjacent to the extraction operation and a proposed response to encountering groundwater, shall be provided. Groundwater elevation shall be monitored annually and the results submitted to the Zoning Office.

Sanden asked if they could overview the two complaints received. Mr. Himes stated the first one was received in 2010 about smoke coming out of the shaft after blasting. We tested the smoke and fumes coming out and they were well below any health issues. We went back to the person that made the complaint and he was OK with the results. The second was a neighbor saying she hadn't been notified of the blasting. We did a follow up and called her to see if she wanted to be notified. She said no as long as you blast when you say you are going to blast. Sanden asked Brad in reference to #3 and the water testing, has there been anything coming back to the County that has caused concern. Roy stated no. Aubart asked about the chemical in the drinking water supply, what is that? Mr. Krumenacher stated the polyacrylamide is added to the wash water. When they mine the sand, they wash it. The sandstone they mine is about 95 - 99% sand and they have to wash out the fines so they use water. They want to reuse that water so they can pump less out of the ground. When they wash the fines out of the sand, the fines are clay and silt size particulars. The water stays very muddy. In order to drop out the clay and settle out faster, they apply this water additive, polyacrylamide. What it does is creates an ionic electronic molecular bond with the fine particles and then they adhere together and drop out. Then the water is clear. Jeff Himes handed out a summary of frequently asked questions regarding the chemical, put together by Mark Krumenacher's organization. Mr. Himes stated they have a question concerning condition #23. They are willing to accept this condition. They are regulated by the Mine Safety and Health Administration (MSHA). They receive regular inspections four times a year. MSHA doesn't function like OSHA where they generally only come in if there is an issue. Every mine receives citations from MSHA. A minor violation could be for not having a lid on a garbage can containing food. Every mine operation safely and well managed, gets citations from MSHA. Over the course of the two year period, they could have 40 citations from MSHA. This is available on the internet for public information. Ross asked what's the drive behind condition #23? Roy stated that if there was something with the DNR, the County would be notified. If there was a major issue with one of the different agencies, we would never know about it. By putting this in, if there is a reoccurring problem out there we would at least be notified of it and bring that information to you. Ross asked if there has been a history of problems. Roy stated not that we're aware of. Mr. Budinger stated any of the inspections are public record; you can go to the website. MSHA doesn't or wouldn't contact the County, the other federal agencies; ATF and DNR is the other one. Aubart asked if there is a level or a way to flag different levels of citations. There are minor things. Mr. Himes stated that when MSHA is writing citations, they check off boxes. If they look at something that may cause injury and that the injury would result in loss of time, they refer to that as a significant and substantial (S&S) citation. That is a more serious citation than a non S&S. Mr. Budinger stated that those are just two classifications of citations, if there are serious violations or serious negligence at a mining facility they will put out an order. Since Bay City has been opened, we have not received an order to cease and desist. It's the opinion of the inspector. We work with the general office and get a better clarification of the actual citation. A good break point would be an order. Aubart said his concern would be like you stated, that you receive 40

citations that on its face sounds bad and that raises a certain amount of excitement unduly; if it was an order where you are ordered to fix something immediately. Sanden stated the way the condition is written, it is any notice from any governmental body. If we specify only orders to cease and desist from MSHA, will that be enough. Pichotta stated the intent was simply to ensure that we are in the loop as far as what is going on in the mine. Brad met with a number of the other counties dealing with mining and there was a desire to have some consistency in the types of conditions that were being required with the various counties or other municipalities. This is one of those that was discussed at that meeting. It's not in response to any specific problems, just trying to have the County aware if there are any issues that crop up. We need to know about things that are related to public health and safety. He stated he would have a comfort level in what you are talking about doing but the intent was just to make sure we are in the loop and know about the different uses occurring in the County. Sanden asked about a language such as "any orders to cease and desist from MSHA and any other significant citations". I know it is a gray area and it could be problematic. If we do make that request, do we go against your intent to standardize? Pichotta stated it does go a little bit against the intent but the reality is these are merely recommendations to the committee and it's ultimately your judgment and if you feel the threshold is adequate, it's your place to make that decision. Sanden asked in his professional opinion if he puts "any other significant violations or citations" is that too squishy a term to use. Does that get into problems legally? Pichotta stated that is the subjective part, what is significant and what isn't. Until we weren't told something that we thought was significant, I think it would be fine. Aubart stated the other thing is, what other agencies are we talking about and what are they calling a citation. Ross stated he personally would like to see condition #23 struck unless we can come to an absolute specific, if the information is available to us if we really need to get it. Sanden asked if the DNR does issue a citation, do they notify us. Pichotta stated typically. Mr. Krumenacher stated that they understand now where this may be coming from talking to other counties. The wording says that polyacrylamide flocculants must meet the same use standards as flocculants used in Wisconsin municipal drinking water systems. The National Sanitation Foundation has studied and approved 66 different solutions of polyacrylamide flocculants. The use at a drinking water system does not apply to use at a mine. What they are trying to do at the mine is reduce the solids content of the water after washing the sand. The water is muddy; it might be 5% solids. The water in a drinking water system, wherever they get the water from; if it's a lake, a river or groundwater, if it's turbid, then they run it through solid filters. Then if it's a little cloudy, they might use a polyacrylamide polymer. That water that they treat at that point is essentially clear water to you and I; but not to the discerning water treatment folks. At the mine they are trying to treat water that might contain 5% solids, at the drinking water plant they are trying to treat water that is a fraction of a percent of solids. So there is a big difference. The use standards aren't State specific; they are federally set and it's actually set by the USEPA (?). They are much lower standards. The DNR use permit allows a higher use standard than the drinking water standards. So the mine is already regulated by permit to use the polyacrylamides to a certain level, which is an order of magnitude higher than is allowed in drinking water. The permitted use by the State does result in a very low concentration of residual acrylamide. Remember they are using a polyacrylamide solution. There is residual acrylamide left. The permitted use the mine has from the DNR will result in a lower concentration of acrylamide in groundwater than allowed in drinking water at a drinking water system. So the standard that is already set by the DNR for the use in the mine meets the same end game as that used to protect drinking water supplies. But the use standards, how much can be used to treat the water is lower. Sanden asked if there is any terminology equivalent to discharge standard that leaves the site? How much can be in the water that leaves the site. Mr. Krumenacher stated their use is all underground, the rinse water goes into ponds so the tailings or settlement ponds is where you are going to find this residual water because they are reusing the water. Some of that water may seep into the ground and into the aquifer. Ross asked if we are concerned about this wash water ending up as municipal water. Pichotta stated this is one of those things that people are concerned about. If they got the explanation like you just had and understand that the end result is less than these polymers than occurs in drinking water. That was what this attempt was to build in an easy to understand standard for folks that look at the conditional use permit and look at the conditions associated with it. So they are able to understand that

there is less of these than actually they drink out of their house, more of a comfort level thing. Sanden suggested any polyacrylamide flocculants used must be used to meet EPA Standards. Mr. Krumenacher stated there is no standard use by the EPA how it is used by the mine. The Wisconsin DNR has actually issued a permit approval to use this stuff at a certain level. It might make more sense to rephrase this that the use must be consistent with the WIDNR approval. Eric McLeod stated that if there are any other conditions or concerns before you make a final decision, we appreciate notice and an opportunity to comment on any of those concerns to make sure we haven't missed anything.

Sanden moved to approve the renewal of the conditional use permit for nonmetallic mining for Wisconsin Industrial Sand, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #26, amending #23 to read "The operator shall provide notice to the County of any orders to cease and desist from Mine Safety and Health Administration (MSHA)" and amending #24 to read "Any polyacrylamide flocculants must be used consistent with Wisconsin DNR permit requirements"/Ross seconded. All in favor. Passed.

Discuss take action on proposed Goals, Objectives & Policies for Farmland Preservation Plan.

Staff Report – Brad Roy: As part of the Working Lands Initiative, Pierce County is required to update its Farmland Preservation Plan by December 31, 2012. The planning process is a joint effort of Pierce County's Land Management and Land Conservation Departments and will be adopted as part of Pierce County's recently completed Comprehensive Plan. It is required to develop goals, policies and objectives regarding farmland preservation and agricultural development. The plan must be consistent with adopted comprehensive plans. The County will take the same approach with this plan as it did with the Comp Plan. The County will have broad goals, objectives and policies and allow for each town to develop more specific goals, objectives and policies within its comprehensive plan. Staff has developed draft goals, objectives and policies for review. They are consistent with the overall direction of the Comprehensive Plan and satisfy the requirements of the Working Lands Initiative. These will also be presented to the Land Conservation Committee.

Staff Recommendation: Staff recommends the Land Management Committee reviews the proposed goals, objectives and policies and determine if any modifications are necessary.

We just want to make sure we are going in the right direction.

Goal 1: Identify and preserve areas suitable for agriculture.

Objectives:

- A. Assist Towns in preserving productive farmland within their borders consistent with town policies and plans.
- B. Protect existing agricultural operations.
- C. Discourage the conversion of productive agricultural land to nonagricultural uses.
- D. Encourage development patterns that preserve farmland.
- E. Support land use practices that reduce potential conflicts between agriculture and other land uses.

Policies:

1. Support the creation of Agricultural Enterprise Areas when supported by impacted towns.
2. Support the creation of Farmland Preservation Zoning Districts which are consistent with town comprehensive plans.
3. Encourage greater use of the density transfer mechanism.
4. Investigate whether modifications to existing Cluster Development zoning provisions can promote greater agricultural preservation.

Goal 2: Maintain the operational efficiency and productivity of the county's agricultural areas for current and future generations.

Objectives:

- A. Encourage landowners to adopt modern crop production methods that reduce topsoil losses.
- B. Encourage land use practices that minimize environmental pollution.
- C. Improve and protect surface and groundwater quality.

Policies:

- 1. The county will promote conservation programs and best management practices to protect valuable natural resources.
- 2. The county will promote participation in conservation programs.

For this goal, a lot of this gets into what Land Conservation does, so when they put their input in we expect this to grow a lot.

Goal 3: Promote agriculture and agricultural enterprises so that farming remains economically viable.

Objectives:

- A. Maintain, support and enhance agriculture as a strong component of the county’s economy.
- B. Support and encourage agricultural enterprise.
- C. Encourage broad-based agricultural ventures.

Policies:

- 1. Support the establishment of Agricultural Business Operations in appropriate locations consistent with town comprehensive plans, when applicable.
- 2. Support appropriate infrastructure development such as rail, transit and roads which assist agricultural commerce.
- 3. Encourage agriculture friendly land uses (such as agritourism) at appropriate locations.

This is a draft so the next time you see this, it will probably be different. Sanden stated he thinks Brad did a really good job, his question is on Goal #2, the first part is maintain operational efficiency. Will there be more as far as operational efficiency such as placement of processing plants, encouraging them in certain locations? He isn’t seeing that reflected as much in the objectives and policies as much as maintaining of the productivity. Either operational efficiency is part of Goal 3 or there should be another objective or two under there. Roy stated that Goal came from Land Conservations Land and Water Management Plan Resource Guide. Sanden asked if he would forward that comment for them to look at it. Ross stated under Goal #1, Policies #3, Encourage greater use of the density transfer mechanism. What does that mean? Roy stated if someone has 120 acres which allows four lots per 40 acres. They can put all 12 lots (allowed density) and put into one small area and use remaining land to continue to farm. Pichotta stated it has to be contiguous land, can be across roads, across rivers, under the same ownership. Sanden stated it allows them to develop their rough land with the higher density and still get the same benefit. Pichotta stated we try to make folks aware of it because in some cases, it keeps folks from wanting to rezone. Chairperson Fetzer stated there is consensus. Pichotta stated it will be brought before the Land Conservation Department and Land Conservation Committee. You will see it again before we adopt it, we may schedule a joint meeting with Land Conservation so you aren’t tweaking something and then they are tweaking something and it keeps going back.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

- Discuss take action on the screening plan for Value Implement/Stan Boles.
- Discuss take action on Department’s forms and applications including Conditional Use Permit and Rezone applications and Town Recommendation Form.
- Potential for having meetings earlier in the day.

Motion to adjourn at 07:55pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 6, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 20 th , July 18 th , August 1 st & 15 th , all in 2012.	Chair
3	Approve minutes of the May 16, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for expansion of a nonconforming structure in the Agriculture Residential District for Dixie Brown, owner on property located in the NE ¼ of the SE ¼ of Section 7, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Kleinhans
5	Discuss take action on renewal of a conditional use permit for Wisconsin Industrial Sand on parcels owned by Wisconsin Specialty Sands Inc, Lloyd Anderson, Richard Anderson, Hugh Schilling Trust, Charles Brown, Dennis Potts and My Course in the General Rural District, all located in Sections 2, 3, 4 and 10, T24N, R17W, Town of Isabelle, Pierce County, WI.	Roy
6	Discuss take action on proposed Goals, Objectives & Policies for Farmland Preservation Plan.	Roy
7	Discuss take action on Travel/Training Requests	Pichotta
8	Future agenda items.	Pichotta
9	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(5/25/12)

PIERCE COUNTY WISCONSIN
DEPARTMENT OF LAND MANAGEMENT & RECORDS
Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011
ZONING OFFICE 715-273-6747
PLANNING OFFICE 715-273-6746
Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, May 16, 2012

Present: Jon Aubart, Joe Fetzer and Jim Ross

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Jeff Holst and Eric Sanden

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 6th & 20th, all in 2012.

Approve Minutes: **Ross moved to approve the May 2, 2012 LMC minutes/Aubart seconded. All in favor. Passed.**

Pichotta stated he has a question regarding future meeting dates - in July the first Wednesday is the 4th.

We could just meet once that month or would you like to schedule a meeting for a different day?

Chairperson Fetzer asked what is on the schedule. Does it look like a large agenda? Pichotta stated it doesn't look like it at this point but we do always pay when we skip a meeting. That is what he would advocate. Committee consensus is to stay with the one meeting in July, if we need, we can always schedule another meeting.

Public hearing to consider a request for a conditional use permit for a Farm & Home Based Business for Holster Bulldozing Inc in the Shoreland District for Michael & Suzanne Holst, owners, on property located in Lot 1, Certified Survey Map (CSM) V2, P183, in the SE ¼ of the SW ¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Michael Holst forward: Mr. Holst explained he would like to get a conditional use permit to put up a building and permit a business. He has been operating the business without a conditional use permit as part of the preexisting quarry located on the site.

Staff Report – Emily Lund: Lot 1 is located in Section 21, being 1.18 acres and 3.869 acres pending Quit Claim Deed to exchange land from adjoining property owner, MS Holst LLC, is also located in Section 21, Town of Trimbelle and is zoned Agriculture Residential and Primary Agriculture with a total of 5.049 acres. The applicants have previously established Holster Bulldozing Inc at the existing quarry (on the adjacent parcel) and currently have 3 full-time and 3 part-time employees. Most work is conducted off-site and the site is used mainly for outside storage. There are 2 existing storage trailers. They have a chemical toilet (satellite) at the site and there is a bathroom at the house nearby. There is one onsite advertising sign that does not exceed 24 square feet. The applicants are seeking this CUP to allow them to construct a storage building for Holster Bulldozing Inc. that is 50 ft x 80 ft that will be located on the same parcel as their home. The building will be used to store equipment, hand tools and lubricants and also used for equipment repair and maintenance. Issuance of a CUP for a Farm and Home Based Business will enable the applicants to distinguish Holster Bulldozing as a business entity separate from their business activities relating to the existing quarry. The Town of Trimbelle Board of Supervisors recommended approval of this request on 4/10/12. The Town did not reference its comprehensive plan; therefore it is assumed that their plan is silent regarding this request. They did note that the business will be located on a piece of land that once was the location of the Pierce County Hot Mix Plant and that it will

be a good use of the land. Information regarding Section 240-36(E) of the Pierce County Code is listed in the staff report. Equipment utilized for this business includes: backhoe, bulldozer, 2 loaders, 3 dump trucks, truck and trailers. Pierce County Code Ch 240-54(A) Parking Requirements – requires 2 off-street parking spaces for contractor establishments and the property currently has more than 2 parking spots available. Hours of operation are to be 7am to 5pm, Monday through Saturday, closed on Sunday.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The advertising sign shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. The storage building shall maintain a 10 ft setback from rear and side lot lines, 75 ft setback to the centerline of 480th Ave, stay out of the Wisconsin Pipeline Easement and shall not exceed 35 ft in height above the grade elevation.
6. Applicants shall work with Todd Dolan, Trimbelle Building Inspector, to determine whether or not commercial plan review and approval is required from Department of Safety and Professional Services.
7. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
8. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.**

Aubart asked about condition #5, on his copy it says County Road O. Lund stated that is incorrect and it should be 480th Ave.

Ross moved to approve the conditional use permit for a Farm & Home Based Business for Holster Bulldozing Inc, Michael & Suzanne Holst, owners, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #8, amending #8 to read 480th Avenue/Aubart seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for a Farm & Home Based Business for towing and crane service in the Primary Agriculture District for Dan & Theresa Thom, owners on property located in NW ¼ of the NE ¼ of Section 16, T26N, R18W, Town of Trimbelle, Pierce County, WI. Chairperson Fetzer invited Dan & Theresa Thom forward: Mr. Thom explained they are requesting a conditional use permit for a crane service and Melstrom Towing. Chairperson Fetzer asked how long they have been in business. Mr. Thom stated they have been in the crane service since 2006 and the towing business for three years.

Staff Report – Emily Lund: The property is located in Section 16, Town of Trimbelle. The 35.84 acre parcel is zoned Primary Agriculture. The applicants have already established this towing and crane service onsite and currently have family working full-time and 2 people not residing at the residence working as part-time employees. The business name is Melstrom Towing & Thom’s Crane Service. The bathroom in the house is available to all employees. Most of the work is conducted off-site and on-site is mainly for storage. When vehicles are towed or impounded to this property, they are typically stored outside temporarily. Proposed hours of operation are 24 hours a day, 7 days a week. Equipment utilized for this business includes: truck, trailer, crane and towing trucks. In addition to the towing and crane service, the property is being used for cash crop farming. There are other storage buildings, silos and a

home on the property. All the signs on the property are in compliance with current zoning regulations. The Town of Trimble Board of Supervisors recommended approval of this request on 5-7-2012. The Town did not reference its comprehensive plan; therefore it is assumed their plan is silent regarding this request. The Town stated, "Dan & Theresa farm and have two businesses that help support the farm. The businesses have not changed the footprint of the farm or the rural look to the farm. In addition, several people are provided employment by this farm/business operation." Information from Section 240-36(E) of the Pierce County Code is provided in the staff report. Pierce County Code Ch 240-54(A) Parking Requirements – requires 2 off-street parking spaces for contractor establishments and the property currently has more than 2 parking spots available.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest, detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions.

1. Activities shall be conducted as presented in the application, including hours of operation.
2. Advertising sign shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
3. No more than 8 persons not residing on site shall be employed in the business.
4. The entire business area shall not exceed 5,000 square feet in an accessory structure.
5. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
6. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Aubart moved to approve the conditional use permit for a Farm & Home Based Business for towing and crane service for Dan & Theresa Thom, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #6/Ross seconded. All in favor. Passed.

Continuation of public hearing to consider proposed amendments to Chapter 191 Sewage Disposal of Pierce County Code; to update code references.

Staff Report – Emily Lund: This is the continuation of the proposed amendments to Chapter 191 Sewage Disposal of Pierce County Code to be considered for adoption. The background information: the 2011-2013 Wisconsin Budget Repair Bill merged the Department of Regulation & Licensing and parts of the Department of Commerce to start the new Department of Safety & Professional Services (DSPS). Wisconsin Administrative Codes that were previously under the authority of the Department of Commerce have been retitled to reflect the authority of the new DSPS. "COMM" codes became "SPS" codes as of January 1, 2012. Also, the previous code chapters "COMM 81-87" became "SPS 381-387". Local units of government have been directed to update their ordinances to reflect these revisions. Proposed changes were forwarded to SPS for comments and review for uniformity per SPS 383.03(5)(b). DSPS recommended numerous additional changes to the draft language. Their comments, as well as the draft language, have been reviewed by the Corporation Counsel office. Additionally, the Corporation Counsel office has reformatted the Chapter to conform to other County Code sections. Given this, staff intends to resubmit the new draft to SPS for review and comment prior to submittal to the Finance and Personnel Committee. Consequently, additional minor changes to address their comments, and potentially, to address formatting issues, may be necessary.

Staff Recommendation: Staff recommends the LMC consider public comments relating to the proposed amendments to Pierce County Code Chapter 191 – Sewage Disposal and determine whether modifications or additions to the code are necessary. If no substantive changes are determined to be necessary, staff recommends the LMC approve proposed ordinance amendments and forward to the Finance and

Personnel Committee, subject to review and comment by the Department of Safety & Professional Services. Chairperson Fetzner asked for public comment. No public comment. **Public hearing closed. Ross moved to forward to Department of Safety & Professional Services (DSPS) for their review and then forward to Finance & Personnel for consideration for adoption/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for expansion of a nonconforming structure in the Town of Maiden Rock

Public hearing for expansion of a nonconforming structure in the Town of Martell

Discussion on updating the Farmland Preservation Plan; there was a good number of goals, objectives and policies in the comprehensive plan that relate to the plan but we need to discuss further goals, objectives and policies relating to implementation of Town's goals, objectives and policies relating to Farmland Preservation. We will continue to attempt to empower the Towns to pursue strategies of their choosing and support those strategies within their Town.

Motion to adjourn at 07:21pm by Aubart/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 16, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 6 th & 20 th , all in 2012.	Chair
3	Approve minutes of the May 2, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for a Farm & Home Based Business for Holster Bulldozing Inc in the Shoreland District for Michael & Suzanne Holst, owners on property located in Lot 1, Certified Survey Map (CSM) V2, P183, in the SE ¼ of the SW ¼ of Section 21, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for a Farm & Home Based Business for towing and crane service in the Primary Agriculture District for Dan & Theresa Thom, owners on property located in the NW ¼ of the NE ¼ of Section 16, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
7	Continuation of public hearing to consider proposed amendments to Chapter 191 Sewage Disposal of Pierce County Code; to update code references.	Lund
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, May 2, 2012

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 16th, June 6th & 20th, all in 2012.

Set meeting dates: Pichotta stated that in the past we have gone with the 1st and 3rd Wednesday's of each month. Given we have new committee members, we could reassess that or we could follow the same pattern. Ross stated they all blend together. Chairperson Fetzer stated we will stay with the same pattern then.

Approve Minutes: **Sanden moved to approve the April 18, 2012 LMC minutes/Ross seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Retreat Center in the Primary Agriculture District for Lorraine Peterson, owner, by Melissa Deyo, agent on property located in the SE ¼ of the SE ¼ of Section 33, T27N, R17W, Town of Martell, Pierce County, WI.

Chairperson Fetzer invited Melissa Deyo forward: Ms. Deyo explained that the request is to have a Wedding Farm. We want to keep it a farm and not change the appearance much, just clean it up, to do nice landscaping and have two signs; one at each end of each driveway. We want to be good neighbors. The events will end at 9:00pm. There will not be any loud music. We have been working toward this for five years and found the perfect place. They will do their best to meet everybody's worries and answer any questions. They want it to be a quiet, peaceful place to have a wedding and little reception. Sanden asked what the hours of operation would be. Ms. Deyo stated they will do weddings on Fridays, Saturdays and Sundays. It will probably take them two or three years to get up and running. Whenever they would want to start during the day, she can't imagine it would be before 10:00am and they would be done by 9:00pm. Sanden asked if there would be any overnight lodging? Ms. Deyo stated no. Holst asked if they had any intent to sell alcohol. Ms. Deyo stated the bride and groom's family could bring it in but they could not sell it.

Staff Report – Emily Lund: The property is currently used as a residence and for agriculture. Ms. Peterson sold the property to Melissa Deyo and Donald Dufek on 4-17-2012. The applicant wants to change the use of barn to a retreat center for country-style weddings and receptions. The property is located in Section 33, Town of Martell and zoned Primary Agriculture. The Martell Town Board recommended approval of this request on 4-10-2012 without any specific conditions. The Town did not reference its Comprehensive Plan so it is assumed that the plan is silent on this request. PCC §240-88 defines retreat center as, "A facility or facilities used for professional, educational, organizational or religious meetings, conferences or seminars and which may provide meals, housing and recreation for participants. PCC §240-36(N) allows retreat centers subject to seven standards listed in the staff report. The 40 acre property has an existing home, 5 storage sheds, hog house, silo and barn. The barn and grounds will be utilized for retreat and gathering activities (e.g. weddings and receptions). The applicants

want to keep the look and charm of the farm, the buildings and the rustic barn. The applicants plan to renovate the barn, replace the floor and make it handicapped accessible. They also plan to landscape the property by adding flower gardens and a patio. The applicants plan to run the business and hire 1 or 2 part-time employees to help with hosting and cleaning up after the wedding. Applicants propose to establish a gravel parking area for guests to park in the field to the west of the house. They intend to allow a maximum of 150 guests per event and at 1 parking spot per 3 guests per PCC §240-54, a total of 50 parking spaces are required. PCC §240-54I requires handicapped parking spaces should include 2 percent of the total spaces created, with the minimum of one space. The applicants are interested in allowing a maximum of 150 guests per event, with one event per weekend day (Friday, Saturday and Sunday). They intend to have the events done by 9PM and will not allow any loud music as they want to keep it informal and country-style. The applicants propose to have two on-premise advertisement signs which can be a maximum of 32 square feet in size per PCC § 240-60N(1)(d) and PCC § 240-61F(2). As indicated on the attached plot plan, one would be located along County Rd N and the other along 610th Street. Applicant would need to keep signs out of the road right-of-way and out of the vision clearance triangle per PCC § 240-B, C & H. The applicants do not plan to have any retail sales activities. The applicants will not be catering or providing alcohol. Food and beverages will be brought off site and catered into the event by couples renting the building. Alcoholic beverages will not be sold on site and people renting the site will be asked to buy beverages elsewhere and give them away to the guests. Future plans are to build a kitchen for the retreat center. The Department does not have any record of the septic system on this site and has heard from the applicants that it is very old. Applicants shall work with a Wisconsin Certified Soil Tester complete a soil and onsite evaluation and a Wisconsin Master Plumber to design and install a private on-site wastewater treatment system for the proposed capacity of 150 guests.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a retreat center with the following conditions:

1. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DPS), Department of Health and Family Services, etc).
3. Maximum occupancy shall be limited to 150 people, 3 events per week and 1 event per day on Friday, Saturday and Sunday.
4. The maximum capacity of 150 persons will require 50 available parking spaces, with a minimum of one space for handicapped parking.
5. Advertising signs shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
6. Applicants shall work with a Wisconsin Certified Soil Tester to complete a soil and onsite evaluation and a Wisconsin Master Plumber to design, obtain a State Sanitary Permit and install a private on-site wastewater treatment system with the capacity necessary for 150 guests.
7. Applicants shall work with Todd Dolan, Martell Building Inspector, to determine whether the cubic footage of the barn is over 25,000 cubic feet. If the barn is 25,000 cubic feet or larger, commercial plan review and approval is required from DPS.
8. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. Linda Hannegraf, lives on County Road N, they farm with their two boys. She spoke with Emily Lund about this. She received a copy of the staff report and distributed it to all the neighbors. They have a petition with 60 signatures on it and submitted it for

the record. She explained this is agricultural land and doesn't feel this business is agriculture related. She voiced concerns on turning the west field into a gravel parking lot for 150 guests and asked where the overflow parking is going? They farm on all sides of the Peterson farm. She stated County Road N and 610th Street are used by all the residents for jogging, walking, biking and pushing strollers. River Falls has their bicycle route out there. Those roads are heavily traveled. She questioned who is going to monitor the number of cars out there or the number of guests. She also voiced concerns about fireworks. Shelly Vold, lives on County Road N, recently purchased their house. The reasons they chose this house were because of the peace and quiet and felt this was a great place to raise a family; they feel all that is being compromised. They would be the first place for people to turn around if they miss the wedding barn. That is not OK with them. The privacy issue of people wondering over; who will monitor how much liquor people are consuming. The noise factor carries over. She noticed that there is not a condition to end by 9:00pm. David Lebeis, lives across from where the parking area will go. One of the issues is some of the buildings are in disrepair, he wants to make sure no one is allowed to be in them. He would like it in writing that it is going to be done at 9:00pm. Angie Sweere, lives on 610th Street, has three girls and her concern is for their safety. She is also concerned about the overflow parking on 610th Street, the noise and safety. **Public hearing closed.** Ms. Deyo discussed the concerns: they are still renting out the cropland. They are taking the 20 acres behind them and using approximately one acre for the parking lot. They will be planting trees around it to shield it. There will be no fireworks. She has been in business all of her adult life and if people want to get married in a place – they won't have a problem ending at 9. If they don't want their wedding to end at 9:00pm or if they want fireworks, they won't book with us. They will have contracts written out about certain things. If they need to do a decibel level, she doesn't know how that works but they can do a check. We're not going to let people go crazy. If they have a wedding of 150 people, that is a maximum. The barn size may be limited, she isn't sure. As far as drinking, her fiancé and her have both had training and experience with that. They are bartenders and they know how and when to tell people to switch to water. The sorts of people who come to an event like this are probably not big partiers. Holst stated your intentions are excellent. However, you don't have a clue how big your fields are. It's a stretch to get 20 acres of open land on that property. The impact to agriculture will be minimal. Sanden asked if this is going to be for the actual wedding ceremony, the reception or both. Ms. Deyo stated either one of those, whatever they want to do. Sometimes a Judge comes in and does the ceremony or sometimes they get married in a church and then would have the reception there. Sanden asked Ms. Lund what the committee had done with Vino in the Valley as far as decibel levels. Roy stated the level was around 80 decibels at the property lines. Pichotta stated 80 decibels is pretty loud. Roy stated normal conversation is probably 55 decibels. Mr. Lebeis, where he works, stated an OSHA standard at 80 decibels you have to wear hearing protection.

Holst moved to approve the conditional use permit for a Retreat Center for Melissa Deyo, owner, due to the fact this request is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7 as stated, adding to #8 use shall be established in 12 months with a 6 month status review before the Land Management Committee, #9 Closing time to be 9:00pm, #10 No parking on Town or County Roads, Sanden amended condition #4 to add 75 available parking spaces, Holst questioned if that is by code, Pichotta stated it's a recommendation by code but you could deviate from it, Sanden added #11 No fireworks allowed and #12 Landscaping plan screening the parking area from the road, to be submitted within one year, to Land Management Committee./Sanden seconded. Motion passed with Aubart opposing.

Public hearing to consider a request for a conditional use permit for an Accessory Residence in the Agriculture Residential District for Robert Buroker, owner on property located in SW ¼ of the SW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Robert Buroker forward: Mr. Buroker explained he built a secondary house and would like to keep the mobile home on the property. He built a two-story garage and would like to turn it into a one-bedroom apartment on top.

Staff Report – Emily Lund: The applicant obtained permits and hired a Master Plumber to install a conventional septic system in 2007, which was connected to a 26 ft x 40 ft shed in 2007 and a 14 ft x 50 ft mobile home in 2008. In 2011, Mr. Buroker obtained a Land Use Permit for a 2-story garage. This request is to convert the top floor of the garage to an apartment that will be accessory to the existing mobile home. The property is located in Section 12, Town of Diamond Bluff and is zoned Agriculture Residential. The Diamond Bluff Town Board recommended approval of this request on 4-12-2012 without conditions. The Town did not reference its Comprehensive Plan, so it is assumed that he plan is silent on this request. The applicant owns 9.5 acres with a mobile home, shed and 2-story garage. The applicant would like to convert the top floor of the garage to an apartment. The accessory residence will require the issuance of a Pierce County Sanitary Reconnect Permit for connection to the existing septic system. The Department has not yet received the required 3-year maintenance record certifying that the septic system has been inspected and/or pumped. Also an “Affidavit regarding Common Private Sewage System” will need to be recorded on the deed that notifies future property owners that the septic system is connected to two residential structures on the property. Pierce County Code (PCC) 240-40(A) allows accessory residences, which are accessory to single family homes in the Agriculture Residential District with the issuance of a conditional use permit. PCC 240-88 defines Accessory Residences; definitions are listed in the staff report also defines Accessory buildings. No renewal of this request will be necessary. PCC Chapter 115 states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system. PCC 240-76G discusses the expiration of Conditional Use Permits and states, “All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit.”

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions.

1. The applicant shall record an “Affidavit regarding Common Private Sewage System” on their deed prior to issuance of a sanitary permit.
2. The applicant shall submit a 3-year maintenance inspection and/or pumping report on the septic system and obtain a Pierce County Sanitary Permit in order to connect the existing septic system to the accessory residence.
3. A separate uniform address number and sign shall be obtained for the accessory residence.
4. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
5. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Holst asked about a condition regarding multiple dwellings on a property and having the applicant reside on the property. Pichotta stated that has been required in regards to specific concerns by a Town. Holst asked Mr. Buroker if he planned to live there. Mr. Buroker stated yes. **Holst moved to approve the conditional use permit for an accessory residence for Robert Buroker, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #5, adding #6 Property owner shall inhabit one of the dwellings/Ross seconded. All in favor. Passed.**

Public hearing to consider proposed amendments to Chapter 240 Zoning of Pierce County Code; relating to Rural Business/Agritourism, Commercial Uses and Outdoor Recreational Uses.

Staff Report – Brad Roy: The proposed amendments include several new conditionally permitted use classifications and also changes that will remove redundancies and address portions of the code that are confusing or unnecessary. The proposed changes will also help to ensure consistent interpretation and

administration. The proposed use new classifications are intended to allow for the establishment of a variety of agriculture compatible and site specific commercial uses that would be conditionally permitted and would thus be subject to guidance and use parameters established in a town's adopted comprehensive plan. In this way a town can have a significant ability to control the types of uses that are allowed within their town and also the manner in which those uses are conducted. The proposed new use classifications are Agritourism, Nursery, Orchard and Winery which will be added to §240-35 Agricultural Uses; and Resorts and Nature Based Operations to be included in §240-39 Outdoor Recreational Uses. Other proposed amendments include simplifying campground regulations; creating a definition of general retail and services; removing trade and contractors establishments art galleries, institutional recreation camps – all of which are more appropriately permitted through other mechanisms; allowing the establishment of a residential park; and reducing the necessary acreage for allowing a horse to 3 acres (would still be subject to one open acre per horse).

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions, and if determined to be appropriate, approve said revisions and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption. The following pages have all the amendments; strike-throughs for the eliminated parts and underlines for the additions. Chairperson Fetzer stated he has read through it and asked if anyone would like Brad to read through it. Aubart asked Brad, under Agritourism, if a classroom goes to tour a farm, would that require a permit. Roy stated not if it's a one-time thing. If it was an on-going thing, open to the public for a fee, it would require one. Pichotta stated for example if you had a winery where you had classes; it's more for commercial endeavors, not incidental uses. Sanden asked how this would have affected the wedding farm issue. Roy stated, not at all, it would still be a Retreat Center because the agriculture isn't a main component of the wedding. Sanden stated whereas Vino in the Valley would fall under this. Pichotta stated Vino in the Valley would probably be considered to be a combination; a vineyard and a nature-based operation. Sanden asked if that would require two separate applications. Roy stated that the proposed language specifies that multiple related uses can be operated as one. **Chairperson Fetzer opened the hearing to the public.** Tim Fischer, has a roofing company, asked if what you are proposing affects contractors. Roy stated no, it affects businesses completely dependent on that site; an agricultural operation or one that is based on the natural environment. Their business couldn't be located anywhere else. Ron Foley, Town of El Paso, he asked how this will affect Vino in the Valley and their current conditional use permit. Roy stated it won't at this point. If this were to go through, he can apply for a different classification that would remove the size limitations and employee limitations. Mr. Foley asked about 240-36E, minimum lot size of 5 acres and then on F there is a 2 acre minimum. He is wondering what the difference is and how this impacts his situation. Pichotta stated you are grandfathered in so it wouldn't impact you at all. The Farm & Home Based Business allows someone to start a business out of their house and once you get to eight employees, you can either move to an appropriate location or not expand and stay where you are. **Public hearing closed.** Holst complemented Brad on his work on this concept. **Aubart moved to approve the amendments to Chapter 240 Zoning of Pierce County Code; relating to Rural Businesses/Agritourism, Commercial Uses and Outdoor Recreational Uses and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors/Ross seconded. All in favor. Passed.**

Public hearing to consider proposed amendments to Chapter 191 Sewage Disposal of Pierce County Code; to update code references.

Staff Report – Emily Lund: The 2011-2013 Wisconsin Budget Repair Bill merged the Department of Regulation & Licensing and parts of the Department of Commerce to start the new Department of Safety & Professional Services (DSPS). Wisconsin Administrative Codes that were previously under the authority of the Department of Commerce have been retitled to reflect the authority of the new DSPS. "COMM" codes became "SPS" codes as of January 1, 2012. Also, the previous code chapters "COMM 81-87" became "SPS 381-387". Local units of government have been directed to update their ordinances to reflect these revisions. Proposed changes were forwarded to SPS for comments and review for

uniformity per SPS 383.03(5)(b). DSPS recommended numerous additional changes to the draft language. Their comments, as well as the draft language, are being reviewed by the Corporation Counsels office. Revisions have become more complex than originally anticipated and final language will not be completed prior to the holding of the public hearing.

Staff Recommendation: Staff recommends the LMC, despite not having final language available, hold a public hearing to solicit comments and concerns relating to the mandated revisions. Staff further recommends the public hearing be held open until the May 16, LMC meeting, to allow for additional public comments once code language is finalized. LMC action on this issue is anticipated to occur at the May 16, 2012 meeting.

Chairperson Fetzer opened the hearing to the public. No comment. **Chairperson Fetzer stated the public hearing will be left open until the May 16, 2012 Land Management Committee meeting and action would be taken at that time.**

Discuss take action on proposed amendments to Chapter 1 General Provisions of Pierce County Code.

Staff Report – Emily Lund: In the past several years there have been changes to titles and descriptions of staff positions within the Department of Land Management. These changes are not reflected in Chapter 1-31 of the Pierce County Code which grants citation authority for enforcement of ordinances relating to one's job duties. There are two methods through which citation authority can be conveyed to a particular position. The first method is to have the specific position listed in 1-31(B) which "laundry lists" persons authorized to issue citations. The second method is for a person listed in 1-31(B) to submit written nominations to the County Board of Supervisors of employees within his/her office who should be delegated authority to issue citations relating to his or her official responsibilities (1-31(C)). Either method could be utilized to reestablish citation authority. If it is determined that a code amendment is the appropriate way to address the citation authority issue, the following code changes are proposed. They are listed in the staff report, mainly changing Andy's title and Emily's position wasn't even listed in the person's authorized.

Staff Recommendation: Staff recommends the LMC consider whether a code amendment is appropriate to correct the citation authority issue or whether nominations for said authority should be submitted for County Board approval. It should be noted that a public hearing by the LMC is not required for an amendment to Chapter 1. Holst asked if there is an advantage to doing it one way or another. Pichotta stated both would accomplish the same thing; one he would see as more of an interim measure and the other would address it on a more permanent basis. It is almost the same process for each. Basically it would go to Finance and Personnel and then onto the County Board. If we were to do the code amendment it would just need to go to the County Board for two readings so it would take one additional month. His recommendation is to do it right and fix the code. **Holst moved to direct staff to work with Corporation Counsels Office to amend Pierce County Chapter 1, General Provisions to reflect changed position titles and forward to Finance and Personnel/Ross seconded. All in favor. Passed.**

Discuss take action on proposed conditionally permitted use classifications for the commercial district.

Staff Report – Brad Roy: The current Commercial Code, §240-36, lists the commercial use classifications such as Bed and Breakfast, Farm and Home Based Business, Offices, and General Retail and Services. Any use which is not specifically listed in §240-36 is generally classified as General Retail and Services. Within the Commercial District, General Retail and Services requires only a Land Use Permit and Site Plan Approval. This allows for a scenario where a potentially high impact use such as a Bar/Tavern or an Adult Entertainment operation could be established in the Commercial District by simply obtaining a Land Use Permit and presenting a site plan for approval to the Land Management Committee. There is not the potential for placing conditions regarding the operation to mitigate impacts or to ensure consistency with comprehensive plans. Staff has been contacted with concerns relating to

these types of commercial uses that are not conditionally permitted and thus not subject to consistency with a given town's comprehensive plan.

Staff has identified two potential options to address this concern, if the LMC determines a change is appropriate.

- Make all General Retail and Services a conditionally permitted use in the Commercial District.
Advantages: This would ensure consistency with town comprehensive plans as well as allow neighboring property owners an opportunity to voice their concerns.
Disadvantages: Most of these commercial uses have been acceptable for the Commercial District and the concerns that were raised were able to be addressed through Site Plan approval process. Any change in use or operation would likely require a new Conditional Use Permit which would require additional time and fees.
- Create one or more new commercial use classifications that would be conditionally permitted in the Commercial District for uses which are more likely to create impacts which are not typical of other uses in the Commercial District.

Advantages: This would ensure consistency with town comprehensive plans, allow each town to develop policies to address the uses determined to be appropriate, provide neighboring property owners the opportunity to voice their concerns, and maintain the process where traditional commercial operations remain permit-able with a Land Use Permit and Site Plan approval.

Disadvantages: Definitions associated with new use classifications will need to be well crafted.

Staff has identified the following as commercial uses which may warrant additional regulation: Bars/Taverns, Large-scale Retail, Liquor Sales, Lodging, and Adult Entertainment.

Staff is seeking guidance on how to proceed and if any other uses warrant a new classification. No formal action is necessary. Sanden stated that maybe in an urban setting the first option would be a good one, where everything would have to go through site review. But in a rural setting, he thought it might be overkill, if everything has been going fine with commercial districts except for a couple things. The first one might be heavy handed. The second option might be a better choice where we would only do plan review for a specific type of use. Adult Entertainment, in some areas they will only relegate it to Industrial Districts. By just having a review, and say yes or no, can they be in the commercial district. Pichotta stated all of these things are already subject to site plan review but through site plan review we are not able to establish conditions as to the way operations are conducted or what those operations are. We have been able in the past, to deal with off-site impacts by requiring such things as screening or berming. He noted that we have sought to empower the Towns to control the uses within their borders by adopting comprehensive plans but putting in place policies and parameters within those plans to govern those uses. So he likes option two also. The question is do you want us to move forward with this. This came to light from a concern of an existing bar in a commercial district that is for sale currently. When we were thinking about how to address that particular use, it came to us that there may be other uses that would be appropriate as stand-alone uses and not simply permitted over the counter, for example large scale retail, with a threshold of over 25,000 square feet or something to take the place of a big box ordinance. As we were talking we identified some other uses like bars, taverns, liquor sales, lodging, all of these things have the potential to be a bit more obnoxious than some things we typically permit. Sanden asked if we would identify a small number of these that would be open for additional review and required consistency with the Town's comp plan. Is there any precedence that this might open some problem by identifying a subset for special review? Pichotta stated if you look under the first part of the zoning code it lists the purpose of the code and clearly delves into impacts to neighbors, operations that have a variety of impacts on neighbors. Holst suggested that everything has an impact on the neighbors. Sanden stated the code sets up the parameters where we can hold certain uses to a higher standard. Pichotta stated yes. Sanden stated he supports the second one. Sanden stated he didn't know about including lodging or liquor sales. Holst stated liquor sales is a Town issue, you can address it through the liquor license. If you don't want to grant them one, you have a lot of latitude to do that as a Town Board. John Eager, Town of Rock Elm,

stated as long as they are following all the conditions of their license you have no reason to turn them down; and you will end up in court; Town of Trenton. Holst stated he is very familiar with the Town of Trenton and they had no case but they took it anyway. There are ways to enforce their on and off sale liquor license. Mr. Eager stated he is the one that brought up the adult entertainment thing. At the time of the Trenton deal, the Town's Association was trying to get all the Townships to adopt ordinances. The Town Association said it was a zoning issue and that's one of the deals with the Comp Plan; you can address your commercial stuff but you can't get that specific on adult entertainment and you have to leave leeway. We've got a bar right now that got foreclosed on and within 75 feet is a house and right across the street is another house. So we're asking how Zoning is going to handle that. A lot of times it's relegated to an Industrial site or they put parameters where it can't be within so many feet of a residence. He is here to see how Zoning is going to handle this. Pichotta noted that there was a recent State Supreme Court decision relating to a Town's ability to adopt an ordinance regulating Nonmetallic Mining. Pichotta suggested that the same mechanism could be used to regulate adult entertainment. Mr. Eager stated it came down that it was licensing. The Town didn't have the authority to do zoning and that is the same thing with us with adult entertainment. The Town doesn't have the ability to do zoning. Pichotta suggested that if this were a conditionally permitted use and it were subject to a determination by a Town regarding consistency with its comp plan, what you would do is put in your comprehensive plan that you would only support the establishment of adult entertainment that met specific parameters, one would be a certain distance from residential homes. Mr. Eager wasn't sure if that would take care of it, because you have to be specific. Mr. Eager stated with a comp plan, you can't do it. If you put something in there and make it that tight, there is always going to be somebody that finds a way around it. Pichotta stated the hard part is for us to get our ordinance definitions right. If it is conditionally permitted and if your comp plan gives guidance or establishes parameters regarding what the town will support - it takes care of it. Mr. Eager disagreed. Roy stated that if we are looking at putting setbacks in there you have to look at churches, schools, etc. Chairperson Fetzer stated he feels adult entertainment, lodging and large scale retail should be looked at but leave the bars and taverns for the Town's Comp Plans. Ross asked if there was anything they discussed that didn't make the list. Pichotta stated that there was not and suggested that proposed language can always be tweaked if new uses are identified as well move forward. Ross stated that he is OK with having staff take a look at it. Chairperson Fetzer stated that committee consensus is to go forward and look at new classifications.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a Farm & Home Based Business for Holster Excavating in the Town of Trimbelle

Public hearing to consider a Farm & Home Based Business for towing & crane service in the Town of Trimbelle

Continuation of public hearing to consider code amendments to Chapter 191: Sewage, update references

Motion to adjourn at 08:25pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, May 2, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: May 16 th , June 6 th & 20 th , all in 2012.	Chair
3	Set next meeting dates.	Chair
4	Approve minutes of the April 18, 2012 Land Management Committee meeting.	Chair
5	Public hearing to consider a request for a conditional use permit for a Retreat Center in the Primary Agriculture District for Lorraine Peterson, owner, by Melissa Deyo, agent, on property located in the SE ¼ of the SE ¼ of Section 33, Town of Martell, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for an Accessory Residence in the Agriculture Residential District for Robert Buroker, owner on property located in the SW ¼ of the SW ¼ of Section 12, T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Lund
7	Public hearing to consider proposed amendments to Chapter 240 Zoning of Pierce County Code; relating to Rural Business/Agritourism, Commercial Uses and Outdoor Recreational Uses.	Roy
8	Public hearing to consider proposed amendments to Chapter 191 Sewage Disposal of Pierce County Code; to update code references.	Lund
9	Discuss take action on proposed amendments to Chapter 1 General Provisions of Pierce County Code.	Lund
10	Discuss take action on proposed conditionally permitted use classifications for the commercial district.	Roy
11	Discuss take action on Travel/Training Requests	Pichotta
12	Future agenda items.	Pichotta
13	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(4/20/12)

PIERCE COUNTY WISCONSIN

MINUTES - Pierce County Land Management Committee Meeting, April 18, 2012

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Election of Officers: Ross nominated Joe Fetzer as Chairperson/Aubart seconded. Holst moved to close nominations and cast a unanimous ballot/Ross seconded. All in favor with Fetzer not voting. Passed. Ross nominated Jeff Holst for Vice Chairperson/Aubart seconded. All in favor with Holst not voting. Passed.

Next meeting dates: May 2nd & 16th, June 6th & 20th, all in 2012.

Approve Minutes: **Holst moved to approve the April 4, 2012 LMC minutes/Sanden seconded. All in favor. Passed with Aubart and Ross abstaining because of not being committee members at the last meeting.**

Public hearing to consider a request for a map amendment (rezone) from Rural Residential 12/PRD District to General Rural Flexible 8 District for NEWCO Finance, Inc, owner, by William F. Holst III, agent on property located in part of the SE ¼ of the NE ¼, part of the E ½ of the SE ¼ and part of the W ½ of the SE ¼, all in Section 33 (approx. 97 acres), and part of the SW ¼ of the NW ¼, part of the W ½ of the SW ¼ and the SE ¼ of the SW ¼, all in Section 34 (approx. 118 acres), T26N, R19W, Town of Oak Grove, Pierce County, WI. Jeff Holst recused himself from discussion and voting because of possible conflict of interest. Chairperson Fetzer invited Nancy Beeler forward: Ms Beeler explained the request for a rezone is for agricultural use. Sanden asked what the intention of use for the future is. Ms Beeler stated it's farmed all around it and they plan to farm that land and in time to pasture it off for cattle. Sanden asked what the rationale was for rezoning. Ms Beeler stated for agricultural use.

Staff Report – Emily Lund: This request is to rezone land from Rural Residential 12/PRD to General Rural Flexible 8 District. The property is located in Section 33 and 34 in the Town of Oak Grove. The applicants currently keep part of the property wooded and other parts are farm cropland. Current Rural Residential 12/PRD density allows for 64 lots the requested rezone would reduce the density down to 43 lots. Nearby land uses include agriculture, residential and forest land. Adjacent zoning districts are Rural Residential 12/PRD and Agriculture Residential/PRD (in the Town of Diamond Bluff). The Purpose and Intent of Rural Residential 12 is listed in the staff report and is predominantly for residential subdivision development. General Rural and General Rural Flexible are for agricultural uses. Pierce County's recently adopted comprehensive plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." The Oak Grove Town Board recommended approval of this request at their 3-19-2012 meeting. The Town indicated that the request is consistent with their 2009-2029 Comprehensive Plan and specifically referenced Chapter 7: Economic Development,

Page 10, "Goal #1: Support economic activity and development that does not detract from the rural way of life in the Town of Oak Grove; Objective #1: Promote agricultural based businesses; Objective #3: Support Town of Oak Grove remaining as an agricultural community; & Policies Programs and Actions #1: Support existing farms and their continued operation." The Land Conservation Department indicated this land is not in the Farmland Preservation Program. The Value of Land for Agriculture using the "Land Evaluation Formula" is attached in the staff report. Lund noted that there are 15 different types of soil present on the property.

Staff Recommendation: Given that the Oak Grove Town Board has determined this request to be consistent with their comprehensive plan, staff recommends the Land Management Committee approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Roman Peterson, Town of Oak Grove, asked if this affects the road going in. Three of them have an easement to use the road. Pichotta stated the rezone will not affect any existing easements. It has to do with the zoning classification of the land which controls with allowable uses. Sanden asked what the significance of the PRD status is. Is there a development plan for this? Pichotta stated there was a plan for a PRD that was approved. There was a final plat completed for the northerly part of it which was phase one of the Diamond Bluff Estates Development. The PRD District is essentially an overlay. It enables the development of residential parcels at three times the underlying density and gives them some flexibility as far as road frontage requirements, lot size requirements, etc. Sanden asked if the original plan for the northern part included the southern part. Pichotta stated that it had long expired. Sanden asked if the current zoning allows for agricultural use. Lund stated you can do crop land but no cattle or agricultural buildings. **Public hearing closed.**

Ross moved to approve the rezone request from Rural Residential 12/PRD to General Rural Flexible 8 District for NEWCO Finance, Inc, owner, William F. Holst III, agent and forward a recommendation to the County Board of Supervisors/Aubart seconded. Motion passed with Holst not voting.

Public hearing to consider a request for a conditional use permit for Airports, Non-precision Approach Lighting in the General Rural District for City of Red Wing, owner, by Tammie Dougherty, agent on property located in S ½ of the SW ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Fetzer invited Rick Moskwa and Dave Bunch forward: Mr. Moskwa, Public Works Director for the City of Red Wing, introduced Dave Bunch, an employee at the airport, and stated that Mr. Bunch will explain the specifics of the project before you. As you noted, we are looking at putting some approach lights off the east end of runway 27 and the towers would extend from the end of the runway to Hwy 35. Mr. Bunch stated there are six phases of a flight; the takeoff, the climb, the cruise, the descent, the approach and the landing. That approach usually starts 20-30 miles out where the pilot will set up a course and an altitude dictated by the FAA, to make a successful approach. Most airports have some sort of approach lighting. What the lighting does is help guide the pilot to the end of the runway especially in bad weather. We have approach lighting on runway #9, off the west end of the field and nothing on the east end. There are two flashing strobes at the corner of the runway on the east end but they are not considered true approach lighting. What we propose to do is put two other types of lights where those flashing strobes are and five additional lights stretching out near the highway. They will flash once per second and flash in sequence going from the furthest light out to the end of the runway. This will give the pilot an idea where the end of the runway is giving safety to the pilot and the residents. Mr. Moskwa stated it will be a safety improvement funded by the State of Minnesota. It is an expensive project to do. They do have lights at the other end of the runway. Mr. Bunch stated the runway lights are on low all the time at night. If the pilot wants to trigger the light he clicks his microphone a different number of times for different brightness of the lights. They will stay on for approximately 15 minutes and then they will time out giving the pilot plenty of time to make the approach, the landing and taxi off the runway. Ross asked about the five towers up to 20 feet tall, are they going to descend on the towers. Mr. Bunch stated the towers are approximately the same level as the two lights on the corners of

the runway. They will stay at about that same level all the way out even though the ground drops away. The furthest light out will have a tower approximately 15 ft or 18 ft high because of the drop off of the ground. Holst asked if it will do away with the strobe lights that are an annoyance to traffic on Hwy 35. Mr. Bunch stated yes. Those lights as well as the flashing lights on the west field operate at about 15000 candelas, the new lights will operate at about 7500 candelas. Holst stated the new ones will be half as bright as the old ones. Aubart asked if there is an advantage or a reason that the last two lights are not being shielded from the highway. Mr. Bunch stated they don't think it's going to be an issue. That was one of the recommendations of the Town of Isabelle when they approved this report. They asked to be notified and take a look at the lights. In their opinion, if they are a problem then we shield those lights too. The shields are in a half moon and come up to near the top of the light so a driver down below will not see any of the flashes, they may see a glow.

Staff Report – Jim Kleinhans: The City of Red Wing operates an airport in Pierce County under a conditional use permit. They wanted to add these Omni-directional approach lights. We discussed that it would take a conditional use permit as an expansion or noticeable change. The parcel is zoned General Rural in which Airports are conditionally permitted. A series of towers up to 20 feet high would extend approximately 1400 feet from the end of the runway centerline. The trees and stumps were cleared from this area last year under an agreement with the Dept of Transportation in preparation for pursuing this permit. Dept of Transportation issued a land use authorization for construction of a strobe tower and cutting trees in the scenic easement on July 21, 2011. The proposed system is intended to guide instrument rated pilots in bad weather. Dave got into the intensity of the lights and from what staff understands the intensity of these lights will not be as great as the precision approach that was put in back in 1999 with a conditional use permit. Town of Isabelle recommended approval of this request with the following conditions:

1. The two far east light shields are adjusted such that no direct light shines in the windows of houses east and north of Highway 35.
2. That similar shields be added to the three lights west of the above lights in a similar fashion if necessary as determined by the Town of Isabelle.
3. Trees on the north side of Hwy 35 not be clear cut but selectively cut when and if a tree penetrates the approach slope.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest, or detrimental or injurious to the public health, public safety or the character of the surrounding area. If not found to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions.

1. Applicant shall comply with conditions recommended by the Town of Isabelle.
2. Applicant shall review the installation with Town officials and department staff after three months of operation.
3. The installation must be completed within 12 months unless an extension is granted by the Land Management Committee.
4. Compliance issues shall be referred to Land Management Department staff.
5. Applicant shall provide yearly status reports on Airport issues and activities to the Land Management Committee.

Chairperson Fetzer opened the hearing to the public. Tom Eichman, lives on 140th Ave, this is funding via the State of Minnesota or is there federal funding? What will this do to enhance the future plans for expansion of the airport runway? Mr. Moskwa stated yes, the State of Minnesota and the proposed master plan identifies the runway expansion of up to 7000 feet. This is on the other end of the airport. Mr. Eichman asked if these lights would enhance larger aircraft to use this airport. Mr. Bunch stated it doesn't invite more planes to use the airport it just enhances safety for the pilots. Mr. Eichman asked how this is going to affect them in the future. Mr. Bunch stated to his knowledge it won't affect you in the least. Lisa Anderson asked why these were not put in when the expansion was done on the other end of the airport. Mr. Bunch explained the aircraft will always land toward the wind. It slows the ground speed. Mr.

Moskwa stated this project wasn't included in the runway extension and they didn't have the funding. The trees had to be removed at that end and at that time we didn't have to remove them. Now they were getting into the approach zone. Everything they have done at that end is for the safety of the pilots. Ms Anderson asked how many pilots do you have flying out of there daily? It was stated they have over 300 corporate flights out of there a year. Ms Anderson feels the one set of lights is sufficient. Scott Nelson stated he is glad to hear the strobe lights are a little less intensive. He handed out information regarding emergency lights on traffic and potential hazards. He asked if a risk assessment has been completed. He would like to see them follow the FAA guidance for identifying and mitigating approach lighting system hazards. Having the fire departments and emergency responders understand that if a plane overshoots and ends up in those lights, how they have to handle that. You could make that a condition of giving them a permit. A lot of people are concerned about the airport expanding to 7000 feet. He also asked if this has anything to do with the zoning, do you have to have the lights before you can do the zoning or go to the 7000 feet? Mr. Moskwa stated no. Mr. Bunch stated the concern about over shooting; the lights are on frangible towers, they are designed to collapse if hit by the airplanes. Mr. Nelson stated but it may do big damage to the responders out there in the rain that might get electrocuted. **Public hearing closed.** Sanden asked if the risk assessment, are these pretty standard lights for most airports. Mr. Bunch explained yes, it depends on whether it is precision lights versus non-precision lights, this will be non-precision lighting. Aubart asked why you wouldn't shield all the lights because the strobes can be a safety issue. He stated he is aware there is a review or suggested review in three months but he doesn't want to see a traffic accident caused by the lights not being shielded. He guessed it's a cost issue. Mr. Bunch explained it's a minimal cost, the only reason they haven't designed them to the rest of the lights is we didn't feel they were going to be a problem for people on the ground or cars or residents. If they are an issue and the Town determines them to be, they are ready to be installed. The pilots can see them easier. Mr. Moskwa stated as we move closer to the runway, there are trees to help shield them. Ross stated once when he was flying into Cleveland in a cockpit, they were having maintenance issues, it was snowing terrible and if it wasn't for the lights they would have had to divert or risked potential injury for everyone on the ground and in the air. If you can avoid the shields, you get a better perspective from the pilot's point of view. Mr. Bunch stated they are fairly certain the last light would be a problem, we were somewhat sure the second to the last light would be a problem. This is the first time the City of Red Wing has installed that type of lighting and if it is we're ready to install them. Chairperson Fetzer asked if that is an issue how long will it take to get them up. Mr. Bunch stated about a day for installation. Mr. Moskwa stated they would have to order them and then have them installed. Ross asked if you order them from the government because that will take a while. Mr. Bunch stated they are getting them from a specialty company in Minneapolis. Holst stated the strobes on the end of the runway do affect the traffic on Hwy 35. Do you guarantee the new ones are going to be half as powerful and you can get the new ones on in a day? We have to start trusting that the City of Red Wing is going to treat the people of Isabelle, Trenton and Hartland Townships with fairness. In order to open up the line of communication and line of trust, he would be willing to allow you to put them up without the shields today, maybe in three days after the lights come on you will be putting them on.

Ross moved to find that the proposed use to be not contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area and to approve the conditional use permit for Non-precision approach lighting for the City of Red Wing with conditions #1 - #5, due to the fact /Holst seconded. Motion passed with Fetzer, Holst, Ross and Sanden in favor, Aubart opposed.

Discuss take action on a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District for Kipling and Julie Gore, owners on property located in the NE ¼ of the SW ¼ in Section 4, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Kipling Gore forward: Mr. Kipling explained he and his wife own property located at W8657 385th Ave in Ellsworth.

Staff Report – Emily Lund: This request is for an accessory residence. The LMC held a public hearing on April 4, 2012 but deferred action on this request in order for the applicant to be present at the meeting. The applicants built a 72ft by 56ft barn that has a 2-story, 24ft by 32ft, 1-bedroom loft apartment in December 2010. This request is to have the loft apartment become the accessory residence to a new principal residence that is proposed to be built this year. The principal residence would be connected to the same septic system associated with the accessory residence. The property is located in Section 4, Town of Trenton and zoned General Rural Flexible. The Trenton Town Board recommended approval of this request on 3-13-2012 with the stipulation that a separate fire number be acquired for the accessory residence. The Town indicated that the request is consistent with their Comprehensive Plan, but did not cite a specific reference. The applicant owns 39.92 acres and has an existing barn with a loft apartment. This request is to have the loft apartment become accessory to a principal residence that is proposed to be built this year. The proposed residence will be a 40ft by 46ft 3-bedroom house with a basement, main level and loft with 3-car attached garage with 2 decks, one being 10ft by 10ft and the other being 12ft by 18ft. Roger Nelson obtained a reconnect sanitary permit on 4-16-2012. Mrs. Gore recorded the “Affidavit regarding Common Private Sewage System” on 4-16-2012. PCC’s 240-88 Accessory Residences are defined in the staff report. B. A dwelling unit located in an accessory building located on a residential parcel. It also defines Accessory Building as: A. Subordinate to and serves a principal structure or a principal use. No renewal of this request will be necessary. The applicants indicated they do not plan to rent out the accessory residence immediately and will obtain a universal address number when they rent to a non-family member. PCC Ch 115 states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions: Conditions #1 and #3 can be struck. So the new conditions are:

1. The applicants shall obtain a Land Use Permit for the new principle residence.
2. A separate address and sign shall be acquired for the accessory residence.

Sanden asked what the approximate square footage of floor space in the apartment is. Mr. Gore stated the apartment in the loft level is 24 ft x 32 ft. It’s an open studio apartment with a kitchen area, laundry and bedroom. The first floor is just off of the tack room.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.** Sanden asked what the precedence is for an anticipated primary residence if it isn’t built. Lund stated if it doesn’t get built within 12 months the conditional use permit is void.

Sanden moved to approve the request for a conditional use permit for an accessory residence for Kipling & Julie Gore with conditions #1 - #2, finding that the request is not contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Holst seconded. All in favor. Motion passed.

Discuss take action on a request for site plan approval for an addition to existing structure for commercial uses for Stanley & Beverly Boles, owners on property located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimble, Pierce County, WI. Chairperson Fetzer invited Jay Boles and Jay Munson forward: Jay Munson stated he is representing Value Implement, they have a three year lease on the current facility and have grown and need more shop area to do service work for customers. Jay Boles stated the plans are drawn up to add onto the shop area.

Staff Report – Emily Lund: This request is for site plan review for a proposed addition to an existing structure for commercial uses. Mr. & Mrs. Boles own two adjoining parcels in the Town of Trimble that have been leased to Value Implement for the past 2 to 3 years. Robert Johnson from Eau Claire, WI designed the proposed 60 ft by 60 ft addition that is to be used for another shop area for farm machinery repair. They received Department of Safety & Professional Services conditional approval on 3-22-2012.

The property is located in Section 15, Town of Trimbelle. The 5.08 acres property is zoned commercial. Pierce County Code (PCC) §240-15 Purpose and Intent is listed in the staff report. General retail and services are permitted uses in the commercial district. PCC §240-75 discusses Site Plan Review: A. Review and approval. In short the code states:

1. Permits for new construction or additions to existing structures and buildings for commercial, industrial, institutional or multifamily uses shall require site plan approval as set forth in this section.
2. The Land Management Committee or its designee shall review the site, existing and proposed structures, architectural plans, neighboring uses, use of landscaping and open space, parking area, driveway location, loading and unloading area, highway access, traffic generation and circulation, lighting, drainage, water and sewer systems and proposed operations.

The CSM was recorded in 1983. There is an existing 66 ft wide private driveway easement that is along the west and north of this lot serving four adjacent residences. PCC §240-57(D) discusses nonresidential driveways and requires that they be at least 20 feet width but not greater than 35 feet in width. However, the driveway for this business was installed some time ago and connected to 530th Ave, which follows the entire southern portion of this lot. This existing driveway pre-dates current zoning code requirements. PCC §240-54 discusses off-street parking, where one space per employee during the peak shift shall be provided in addition to 1 space per 200 feet of primary floor area. The primary floor area in the display area is 392 square feet. They currently have 10 employees working 8AM to 5PM at Value Implement of Ellsworth. Handicapped parking spaces should include two percent of the total spaces created, with the minimum of one space. Staff identified the need for a minimum of 12 parking spaces. Currently eight parking spaces are designated, so four additional parking spaces are required, with one being designated for handicapped parking. Semi-tractor trailer unloading equipment utilizes 530th Ave and temporarily blocks the west private road easement and 530th Ave. An equipment unloading ramp is located southwest of the septic system drain field. Roof drainage plans and driveway paving plans were not submitted. Applicant plans to pave the driveway in the future and should ensure that surface runoff does not negatively affect 530th Ave or the adjoining neighbors. A private onsite wastewater treatment system (POWTS) was issued and a mound installed in 1984. The following issues were found:

1. The POWTS was designed based on commercial sizing criteria, with 6 employees, and one catch basin or 220 gallons per day. The current Wisconsin Administrative Code would have the system sized for 292 gallons per day with the 10 employees and a catch basin. If more employees work at this business, the septic system needs to be evaluated and increased in size or a POWTS restriction needs to be recorded on the deed.
2. The original sanitary permit plans indicate the floor drain from the shop goes into the septic tank. This design is not allowed now. The business should disconnect the catch basin from the existing shop floor drain and install a WI DNR non-domestic wastewater holding tank. If the new shop area installs a floor drain, they should also have a WI DNR non-domestic wastewater holding tank installed to collect any excess oil or wash water from repairing the equipment.
3. Marko Septic Inc. pumped the septic and pumped tanks on 8/11/2007 and 7/10/2010. In 2011, they had to replace the pump and make a repair to the effluent pipe leaving the pump tank as it was broken. If repairs are needed in the future, the applicant should contact the department to determine whether a sanitary permit is needed.
4. At the site inspection, the septic tank and pump tank above grade manholes were not properly secured, chained, and locked. The above grade manholes were not above finish grade, where the ground is 4 inches below the lip of the lid. Also, the observation pipe needs a cover and the electrical needs to be properly located in a weather proof conduit with an airtight seal from the gases in the pump tank.

Plans for security lighting were not provided. No freestanding light poles are proposed. Exterior wall mounted fixtures with shields will remain and continue around the new addition. Department of Safety & Professional Services (DSPS) conditionally approved the addition-alteration plan on 03-22-2012 with transaction # 2019255. The following conditions are to be met during construction or installation and prior to occupancy or use:

1. The applicant needs to submit 4 sets of lighting plans and calculations to review “Means of Egress Emergency Illumination” per IBC1006.
2. The applicant needs to submit 4 sets of lighting plans for “General Lighting for Energy Conservation” per IECC 505 and SPS 363.0505.
3. The applicant needs to submit HVAC plans and calculations for review.
4. The applicant needs to submit 1 set of truss plans, completed SB-118 application form, and submittal fees shall be submitted and approved prior to installation.

No additional advertising signs are proposed to be added to the site. PCC §115-3D discusses the uniform address number posting location. Currently the uniform address number sign is posted within the business window and is blocked from road view by customer parking. PCC states that the official numbers for each principal building shall be posted in a manner as to be visible from the road within 10 feet of the intersection of the driveway and the right-of-way line on which the property is located and on a post a minimum of four feet and a maximum of six feet from ground level. The proposed building addition location meets the set back to the road (184 feet to centerline) and side yard (220 feet to west yard). Three separate dumpsters for garbage, cardboard, and metal are located on the property. Oil is contained in oil containers and pumped out by Rock Oil Refining, Inc. A burn pile was found (photos attached) that contained burnt metal, plastic, cans, aerosol cans, treated lumber, lumber, and pallets. Recycling facilities should be established per Section 201-10 of the Solid Waste Code. Surrounding uses are residential and agricultural. Landscaping or screening (plant or fence) plans were not provided with this plan. This use has expanded over the last 2-3 years and there are adjacent residential homes located in fairly close proximity (two hundred feet +/-) away, the LMC should consider the whether there is a need for screening. The 2010 aerial photo shows the business shortly after establishment and the attached photos show the increased density of the outdoor machinery for sale. There is machinery located near 530th Avenue and the private driveway easement. The equipment and machinery must be kept out of the right-of-way from those two roads and also from within 33 feet of the centerline of the roads. The machinery must also remain out of the right-of-way of US Hwy 10, or 65 feet from the centerline.

Staff Recommendation:

Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the LMC consider including the following conditions in any plan approval:

1. Applicant shall move the address sign to a suitable location so it is more visible for emergency vehicles as required by PCC §115-3D.
2. Applicant shall adhere to the 4 conditions required by DSPS which shall be met either during construction or installation or prior to occupancy or use.
3. If the new shop is to have a floor drain, it shall have a WI DNR approved non-domestic holding tank installed and permits shall be obtained from the WI DNR wastewater specialists prior to occupancy or use of the new building. The catch basin in the existing shop shall be replaced with a WI DNR non-domestic holding tank.
4. Future paving and increased impervious area shall be directed to ditches, infiltration basins, and not negatively affect the Town road or downstream neighbors.
5. All parked vehicles, stored equipment, and sales machinery shall be no closer than 33 feet from the centerline of 530th Ave and the private driveway easement, and no closer than 65 feet from the centerline of US Hwy 10.
6. A total of 12 parking spaces, with one handicapped parking space, shall be delineated on-site.
7. The septic tank and pump tank above grade manholes shall to be brought to above finish grade, where the ground is 4 inches below the lip of the lid, and the lids chained and locked. The observation pipe must be covered and the electrical service must be properly located in a weather proof conduit with an airtight seal from the gases in the pump tank.

8. Recycling facilities should be established per Section 201-10 of the Solid Waste Code and burning on-site shall cease.
9. The applicants shall obtain a Commercial Building Permit from Todd Dolan, Building Inspector.
10. The need for a screening plan should be discussed by the LMC and required if deemed to be appropriate.

Holst asked if Solid Waste had been notified of the infractions. Kleinhans stated yes and they agreed that burning should no longer take place. Holst asked if they cited these people. Kleinhans stated they did not cite them. Phil Blodgett presented pictures of the view from his front yard and stated he would like to see some screening; pine trees 8 – 10 feet tall. He doesn't think a fence will do it. He stated he is glad to see them doing so well. Stan has done a good job of bringing the buildings up to look good. They do have some problems with people driving in their driveway to look at equipment. He wants to work together. Sanden asked Mr. Blodgett if he was to the north and stated that it looks like you are located up grade, will trees be big enough? Mr. Blodgett stated he remembers his dad planting the existing trees. A fence isn't going to hide it. It will make it look a little better. He wants to see trees because they will be there all the time. Mr. Munson asked if a private driveway sign had been put up. Mr. Blodgett stated he put up a private driveway sign and it has slowed down. Chairperson Fetzer asked about the other lots and driveways. Mr. Munson stated it's a growing store. We have four locations and are all very well kept. Holst stated we have a group of people who can meet and have an amicable solution. We'll just add another condition to site plan approval for tree planting. Mr. Boles stated they have talked to someone in River Falls Electric about the lighting and building. Mark Blodgett is going to do the concrete. Holst asked if they are going to have a floor drain in the new building. Mr. Boles stated that they are not. They are going to take care of the existing one and bring it up to code. The equipment has been moved back and out of the right-of-way. He stated the sign and parking stalls are pretty simple. They will take care of the dumpsters. Mr. Munson stated they knew this was going to be the issue but they wanted to get the business up and running and go from there. Holst added that they are an asset to the agricultural community and it's nice to be able to go six or eight miles to get parts. It's a very nice hospitable crew. **Holst moved to approve the site plan for Stanley & Beverly Boles with conditions #1 - #9, adding #10 A screening plan that is acceptable to neighbors shall be submitted for Land Management Committee review/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel requests at this time.

Departmental Update and Future Agenda Items

Public hearing to consider a Retreat Center in the Town of Martell

Public hearing to consider an accessory residence in the Town of Diamond Bluff

Public hearing to consider code amendments to Chapter 240: Agribusiness, Commercial

Public hearing to consider code amendments to Chapter 191: Sewage, update references

Discuss take action on Chapter 1: general provision of the code

Discuss take action on proposed conditionally permitted use classifications for the commercial districts - we're going to be asking the committee whether or not we should separate out things like adult entertainment from general retail and services and make them conditionally permitted to allow for a towns comprehensive plan to be applied.

Sanden asked if we need to discuss Fred Harding's e-mail. Pichotta noted that he had talked to Chairman Fetzer about the issue and it was determined that the issue would be brought before the LMC only if WISC wanted to discuss the issue prior to CUP renewal. At this point they do not.

Motion to adjourn at 08:17pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 18, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Election of Officers	Members
3	Next meeting dates: May 2 nd & 16 th , June 6 th & 20 th , all in 2012.	Chair
4	Approve minutes of the April 4, 2012 Land Management Committee meeting.	Chair
5	Public hearing to consider a request for a map amendment (rezone) from Rural Residential 12/PRD District to General Rural Flexible 8 District for NEWCO Finance, Inc, owner, by William F. Holst III, agent, on property located in part of the SE ¼ of the NE ¼, part of the E ½ of the SE ¼, and part of the W ½ of the SE ¼, all in Section 33 (approx. 97 acres), and part of the SW ¼ of the NW ¼, part of the W ½ of the SW ¼ and the SE ¼ of the SW ¼, all in Section 34 (approx. 118 acres), T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for Airports, Non-precision Approach Lighting in the General Rural District for City of Red Wing, owner, by Tammie Dougherty, agent, on property located in the S ½ of the SW ¼ of Section 5, T24N, R17W, Town of Isabelle, Pierce County, WI.	Kleinhans
7	Discuss take action on a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District for Kipling and Julie Gore, owners on property located in the NE ¼ of the SW ¼ in Section 4, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
8	Discuss take action on a request for site plan approval for an addition to existing structure for commercial uses for Stanley & Beverly Boles, owners on property located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼ of Section 15, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Lund
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(4/6/12)

MINUTES - Pierce County Land Management Committee Meeting, April 4, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 18th, May 2nd & 16th, all in 2012.

Approve Minutes: **Holst moved to approve the March 21, 2012 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for Mining, Accessory Uses for a rail load out facility in the Agriculture Residential District for Wisconsin Industrial Sand Co, agent for Dean & Mary Holden, owners on property located in Government Lot 1, the NW ¼ of the NE ¼ of Section 22, T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited Rich Budinger and Alan Nelson forward: Mr. Budinger, Regional Operations Manager, introduced Al Nelsen, Plant Manager of the Maiden Rock Facility, David Eckhardt, Assistant Plant Manager and Eric McLeod, legal counsel. Mr. Budinger explained that they are requesting to put in a rail load out structure. It is the same operation they have in the Village now. They will be bringing the load out closer to the plant operation and further from the Village. The relocation of the load out will effectively reduce noise by eliminating approximately 1500 feet of conveyor, 3000 feet of conveyor belt more than 375 trucking roller systems and 1125 individual rollers. Also moving the entire rail load out operation will move it approximately 1600 feet from the Village, businesses and residences. It will also address resident's ability to view the existing load out structure, which is currently directly beneath one of our neighbors within the Village. It will also reduce the potential for dust emissions. The rail load out structure plans were submitted which show cross sections, side view and aerial view. The structure is essentially the same structure they are currently using. The location will be directly in front of the plant operations, decreasing the footprint. Sanden asked if the timing has been coordinated with Burlington Northern to minimize the inconvenience on their tracks. Are you going to be interrupting their schedule? Mr. Budinger stated the structure itself is independent of the main line.

Staff Report – Brad Roy: This request is to construct a rail load out facility. The load out facility will include a conveyor and a structure which will support the rail car loading spout. The structure will also include the control room and master control center for electrical power distribution. Along with the new load out facility, siding along the railway was installed to the south as well as approximately 2200 feet of new track. There is an existing load out facility which extends north, approximately 1,500 feet, into the Village of Maiden Rock. Prior to this, all the sand produced from the mine was transported by truck to the rail line. The existing load out facility was constructed to reduce truck volume through the Village. The proposed facility will extend to the south away from the Village. The property is directly across Hwy 35 from the processing plant. This property lies within the BNSF right of way and its use is subject to a lease between BNSF and WISC. The property is narrow and will also require a Variance from the setback requirements from Hwy 35 and Lake Pepin by the Board of Adjustment. The total height of the structure

is 39 feet 11 inches. Structure heights are limited to 35 feet per §240-29A. §240-29B.(3) provides an exemption to the height requirement for “Special structures, such as elevator penthouses, grain elevators, observation towers in parks, communication towers, electrical poles and towers and smoke stacks, provided such structures shall not exceed in height their distance from the nearest lot line.

- The structure is approximately 106 feet from the centerline of Hwy 35 and approximately 55 feet from the Lake Pepin OHWM.

The new facility will:

- Reduce noise impacts by significantly reducing the equipment used in the load out process as well as moving personnel further from higher density residences.
- Move the entire rail load out operation approximately 1,600 feet further from the Village.
- Reduce the potential for dust emissions from the load out operations by shortening the overall structure by 1,500 feet.

A Fugitive Dust Control Plan was developed for the proposed facility. The existing structure and conveyors will be removed from the site. The Town of Maiden Rock recommended approval of this request on March 14, 2012, without reference to the Town Comprehensive Plan, but with the following comment, “Town will allow if Industrial Sand will develop a cleanup policy on load out – keeping tracks as clean as possible and surrounding area – Plan must be submitted to Town in written form.” The Town did not give any recommendation regarding hours of operation. Staff has received complaints from Village residents about noise late at night from WISC rail operations. The LMC may want to consider if limitations are warranted.

Staff Recommendation: Staff recommends the Land Management Committee consider the above and if the proposed use at the proposed location will not be contrary to the public interest and will not be detrimental or injurious to public health, public safety or the character of the surrounding area, grant this conditional use permit with the following conditions, as well as any additional conditions deemed appropriate or as suggested by the Town of Maiden Rock or area residents:

1. This proposal shall receive a Variance from the Board of Adjustment prior to construction.
2. The Fugitive Dust Plan shall be amended to include a cleanup policy as requested by the Town of Maiden Rock.

Chairperson Fetzer opened the hearing to the public. Fred Harding, resident of the Village lives within 100 feet of the rail line. He feels this load out facility is not in the best interest of the Village. He constantly hears the conveyor sounds. Current capacity is 23 rail cars. Mr. Budinger stated depending on the length of the cars; it could be up to 26 cars. Mr. Harding asked how many rail cars the expansion will handle. Mr. Budinger stated it’s about 2200 feet of track space so 50 feet a car, approximately 45 rail cars. Mr. Harding stated they will be doubling the amount of cars that will be pulled out. Moving the conveyor will minimize noise to the Village but will increase load out noise at the time the cars are switched out. They still have to take them through the Village. The process takes a great deal of time with 23 cars it takes approximately 30 minutes. Mr. Harding asked Mr. Budinger when they started to load out at 2:00 am. Mr. Budinger stated that Burlington Northern began making cars available at different times in mid-February. Mr. Harding is asking the committee to limit the mine to one switch out per day and to only daylight hours. He would also like to see the mine only process and load sand from the Maiden Rock facility thus minimizing the amount of truck traffic on a scenic highway. He would also add a condition that the mine clean all horizontal surfaces on loaded trains before moving them and that the mine deal with the waste products they produce from emptying cars before they fill them; when they bring an empty train in they have to make sure the cars are clean before they load them. He would also like the mine to practice best mine practices for sound mitigation against the conveyor they are putting in. Cynde Randall, Village Trustee and on the Plan Commission, on behalf of the residents in contact with her, she would support the conditions Fred just recommended. They had a lengthy discussion at their meeting and the four things they specified and wanted carried to this group are the one load per day during daylight hours, to re-engineer the structure for better capture of silica dust and to do a thorough cleaning of the train before it moves so it doesn’t throw clouds of dust into the Village and no sand from other operators. She believes some really clear conditions need to be put in place for this CUP. BJ Christofferson, resident and

business owner, right on Hwy 35. She would just like to reiterate what the two previous people have asked for. This is a very small village and this is a very large operation. One thing that has been an issue is the night time train operating. There are two B & B's in the Village; it's incredibly loud and long. If they are at least doubling their production then that will create another set of problems. We would request that you honor just these few conditions when and if you issue this conditional use permit. Gary Peterson, President of Village Board of Maiden Rock, suggested that it may be too quick a decision that the sand mine have only one train switch per day. We don't have the ability to restrict their capacity and it's possible that could turn to increase truck traffic in the Village and that could be worse than the train traffic. Linda Harding, resident of Maiden Rock Village, stressed the load out spout, what is in existence now is not very effective. She watches the silica dust blow all over the place. When she asked at a meeting if they are going to fix or change it for the new load out, she was told no, only if there was a problem. She would like there to be a condition that a different type of spout be used. She understands Menomonie has a spout that meets up with the opening on the train car and has another sleeve that goes over that, that captures more of the silica dust. Mike Michaud, lives in Maiden Rock Township and a member of an ad hoc citizens group that live near the mine, called the Maiden Rock Concerned Citizens Group, have been here before to talk to you when the mine was expanding into additional territory in the township. This request is much more than the simple moving of a piece of equipment from the Village into the Township. The rail load out facility relocation is one piece of a major upgrade to operations that WI Industrial Sand has been planning for over a year. Shortly after the last conditional use permit request in January, WI Industrial Sand unveiled plans to build a huge wash plant, new screening building and expand the length of its rail siding to accommodate twice as many rail cars as previously possible. Evidence from a recent WI Industrial Sand air pollution permit amendment process at the WI DNR indicates that this new upgrade expansion process will increase through put capability from previously permitted 150 tons per hour to a new production capacity of 300 tons per hour. Construction activities in the Township without first getting a permit from the County have been going on at the mine site. 2200 feet of additional rail has been built on new land not previously permitted. The new screening tower has been built without first getting a permit from the County. The track extension on unpermitted land seems to be in violation of a recent enacted Maiden Rock Town moratorium. This rail load out relocation is a major effort to double the production levels at the facility and has coincident, significant impacts to the community associated with the change in operations. The production increase is in direct violation of condition #6 of the January 2011 CUP any intensification of use or change in approved plans will require the issuance of an amended conditional use permit. This is an intensification of use. All the issues raised by the Citizens of Maiden Rock, the 19 pages submitted a year ago, still have not been addressed or incorporated. We want to incorporate those comments into this proceeding. The WI Industrial Sand increase of production, on the face of it, will also entail an increase of blasting activities, cancerous silica dust exposure to nearby residents, more trucks and noise impacts from the rail activities, changes to the aquifer, water consumption, groundwater contamination risks from the wastewater tailings and additional negative impacts to the natural scenic byway and reduce property values to nearby residences. The Land Management Committee should also look at condition #15, the whole debate on silica dust causing cancer has evolved significantly since the last conditional use permit; you want to be on top of ongoing studies. The LMC should look at our issues and recommendations from a year ago and get updated information from WI Industrial Sand on the scope of their expansion activities and then decide what additional conditions should be placed on it. David Meixner, on the Plan Commission for the Village of Maiden Rock, read a letter he presented to Jim Kleinhans regarding the approach this company has taken on the permitting process. He stated they are having issues with the permitting process in the Village and asks the committee to deny this application until WI Industrial Sand Co has been brought into compliance on outstanding issues. He encourages the County and Village to work together. **Public hearing closed.** Eric McLeod, counsel for WI Industrial Sand Co, one of the main items today is the limitation on the number of train car switching and times. The switching falls under the scope of the Federal Interstate Commerce determination. That regulation falls to the railroad directly. I don't know if this committee is aware that we feel this entire project should be subject to Federal preemption. Corporation Counsel disagreed. We

felt it was better to go through the process than engage in a further debate as it relates to our structure. Ultimately, if what is being proposed here is a limitation on the rail, I think Mr. Lawrence's views on that would clearly require this committee to abstain. We don't have the ability to control the railroad. The company is investing a significant amount of money to move this load out facility further away from the Village. We aren't going to satisfy all the concerns of the citizens with this conditional use permit process. What we intend to do will be a significant benefit to the Village. We disagree that we are in violation of condition #6; that is a separate matter under a separate CUP. The Town did make a recommendation of conditions to be attached to the CUP and we agree with the Town that we would do that, we're not opposing that. We operate with DNR permits, air permits, water permits and to his knowledge they're not in violation of any of those permits. They would be happy to answer any other questions the committee has. Mr. Budinger added to the comments that he heard about them disregarding the permit process and they disagree, they have gone through the permitting process at the County and Village. Holst asked about the ambient dust catcher that they are using in Menomonie. Mr. Nelsen stated it's called a bag. Mr. Budinger stated the spout that they are using has an inner transfer tube where the sand travels down and the outer tube is a flexible nylon hose and that's how the dust collection works. The sand travels down the inner core of the spout and then there is suction, negative pressure on outside sleeve which brings back up any dust at the emission source. The spout itself and the one we are offering is an upgrade, newer piece of equipment. Holst asked if the one that they will be installing will be different than the one they are running today. Mr. Nelsen stated it has the two sleeves and the newer style cars are lower so it slides down farther. Sanden asked Mr. McLeod about the number of load outs and timing, if the Feds control the railroad do they have jurisdiction over the structure? Mr. McLeod stated it's his position that this structure falls within the scope of Federal preemption and that we shouldn't be required to get zoning approval within the railroad right-of-way. Mr. Lawrence believes that it is a privately owned structure that doesn't fall under that scope of Federal preemption. We chose not to get into a legal debate. Based on his response to us, he clearly indicates that the timing and number of load outs aren't regulated by the County. Sanden asked if they have to get any approval or permitting through the Feds. Mr. McLeod stated certainly not, the railroad operates on its own. If there are any objections as to how the railroad operates those can be brought to a Federal authority. Chairperson Fetzer asked how many turns they are making a day currently? Mr. Nelsen stated two, five days a week when cars are available. Mr. Budinger stated the rail activity is seven days a week. We could potentially see double switching for five out of the seven. But if it continues throughout the seven with the service that we get on a regular basis, one of the problems working with the rails is that they will bring us a switch early in the morning and then not one in the afternoon or vice versa. The service is fairly sporadic. Sanden stated you are basically doubling the number of cars, are you then only doing one half the number of load outs per day? Or are you increasing the capacity of the sand mine and have the same number of load outs per day? Mr. Budinger stated the business model has us maximizing the logistics of transportation on the rail so the goal is to minimize the truck traffic. It's more economical and decreases our environmental footprint to keep the sand on site. The service right now is 40 plus rail cars on the spur. There absolutely is the potential that the frequency of the switching could be reduced. Sanden stated on the other hand it could stay the same. Mr. Budinger stated right. Chairperson Fetzer asked how many truck loads are in a rail car. Mr. Budinger stated four. Chairperson Fetzer stated you are looking to transfer your truck traffic into rail car. Mr. Budinger stated as much as they possibly can. Mr. Harding asked if there could be a clarification, he understands that the reason they transport by truck to other areas or markets not served by BNSR or to other areas where other train service provide more direct service. Mr. Budinger stated the rail terminals that they operate cover local rail spurs of Burlington Northern. There are different customer destinations other than the other terminals that they operate on the Canadian Pacific, the Canadian National railroads. We will make the appropriate decisions at that time if it makes more sense to truck or use rail cars or if there is a lack of rail cars to truck sand to an available rail. The main driver on them trucking sand to other locations would be the lack of rail cars or lack of availability. Sanden asked Brad when the original CUP is up for renewal. Roy stated January of 2013. Sanden asked if there has ever been any precedence for doing landscaping around rails. Roy stated we have screening requirements which apply to the

neighboring residential uses but to actually do within the railroad right-of-way, we haven't done that. Mr. Budinger stated there is a stretch of property back from the Village toward our rail load out that is fairly barren. Dept of Transportation has activity replacing a retaining wall. Any projects of beautification of landscape we take advantage of so we will work with the Village. Holst stated that's a Village issue, we can strongly recommend it but we can't enforce it. Mr. Nelsen stated any landscaping has to be approved by the railroad. We don't want things falling on the tracks. Kleinhans stated he checked with the Dept of Transportation and there is no scenic easement along that stretch of Dean Holden's property. Sanden stated one of the big issues is the noise and disturbance and the timing of the load outs per day, staff do you agree that this is an area that we shouldn't venture into? Pichotta stated Mr. Lawrence, the County's legal counsel, is currently out of the country but he spoke with legal counsel this morning and was strongly cautioned against placing conditions on those very things for those reasons.

Sanden moved to approve the conditional use permit for Mining, Accessory Uses for a rail load out facility for Wisconsin Industrial Sand Co with conditions #1 - #2, adding #3 Best management practices for load out dust control including better spouts be implemented for transfer to railroad cars. #4 Sand from facilities other than Maiden Rock cannot utilize this load out facility, Due to the fact this is not contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area./Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a rezone from Primary Agriculture District to General Rural Flexible District for Steven & Susan Boyer, owners on property located in part of the NE ¼ and the SE ¼ of the NE ¼ of Section 13, T27N, R17W, Town of Martell, Pierce County, WI.

Chairperson Fetzer invited Mr. Boyer forward: Mr. Boyer explained that the 29.31 acres is currently zoned Primary Agriculture and that his daughter would like to build on the property. She raises horses and works together with his wife with the horses. The current zoning doesn't allow for the construction of an additional residence. They are asking to change that to create another lot and put another home there.

Staff Report – Emily Lund: Applicants obtained a Conditional Use Permit for an accessory residence from the Land Management Committee on 2-16-2011. They intended to have a family member build an accessory residence on their property; however, they were unable to secure funding. They are now pursuing another option; that being to rezone the property from PA to GRF, subdivide the land, and then proceed to construct a home. The property is located in Section 13, Town of Martell. The Primary Agriculture zoning does not allow the land to be divided. The proposed rezone would allow for up to three lots. The district is "flexible" which means that, with Town approval, the density could be increased from 4 lots/40 acres to up to 8 lots/40 acres.) Nearby land uses include agriculture, commercial, residential, and forest land. Adjacent zoning districts are Primary Agriculture and General rural (in Town of Gilman).

Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts are listed in the staff report for Primary Agriculture, General Rural and General Rural-Flexible. Town of Martell Plan Commission recommended approval of this rezone request at their 3-8-2012 meeting. The Martell Town Board approved the request at their 3-15-2012 meeting. The Town indicated that the request is consistent with their Comprehensive Plan. Specifically in Chapter 3: Housing Element, Page 2, one of their goals is to "allow residential development while preserving the integrity of the environment and the character of the community." On page 3, one of the objectives is to "support subdivision practices that maintain the Town's agricultural and natural resources."

The property is not in the Farmland Preservation Program and information on soils has been submitted.

Staff Recommendation: Given that the Town Board of Martell has determined this request to be consistent with their adopted comprehensive plan, staff recommends the Land Management Committee approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. Lund stated she had received a phone call and an email regarding this request; one from the owners of the Red Barn indicating that they did not object to the request and an email, Jeffry Abboud, WI DOT. He stated that he has no comment on this request. No public comment. **Public hearing closed.** Holst stated this looks like a piece of property that should be

rezoned. Sanden commented that it is in the right location and along two highways and the density is only being increased by two lots. Holst stated that the primary requirement is that it is consistent with the Town's Comprehensive Plan. **Holst moved to approve the rezone from Primary Agriculture District to General Rural Flexible District for Steven & Susan Boyer, and forward a recommendation to the County Board of Supervisors/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit to Expansion of a Nonconforming Structure in the Rural Residential 20 District for Joseph & Betty Linder, owners on property located in the NE ¼ of the NE ¼ in Section 1, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Linder forward: Mr. Linder stated they are asking to expand a nonconforming structure on County Road C to replace the building and expand to make it longer basically in the same footprint that it sits in now. The biggest issue is that it is only 75 feet from County Road C. **Staff Report – Emily Lund:** The applicants own a 0.588-acre lot-of-record that was created prior to zoning regulation. Their home is 75 feet from the centerline of County Rd C and is a non-conforming structure. The applicants are requesting a CUP to replace/expand their existing home with a newer home (60 ft by 28 ft), attached garage (20 ft by 28 ft), and basement (60 ft by 28 ft). The expanded structure would not be located any closer to Co Rd C than the existing residence. The property is located in Section 1, Town of Trenton and is zoned Rural Residential-20. Pierce County Code § 240-27B states, "County highways. Except as provided in Subsection E, the required setback for all structures fronting on county highways shall be 100 feet from the center line of the road or 67 feet from the edge of the right-of-way, whichever is greater." Pierce County Code § 240-27E discusses setback reduction; however, there are no principal structures within 200 ft that are closer to the road, so this option does not help their situation. Pierce County Code § 240-67A(2) states, "Additions to or extensions of nonconforming structures are permitted, provided that such additions or extensions comply with all the provisions of this chapter or a conditional use permit is granted as provided in § 240-76." Pierce County Code Attachment 2: Table of Dimensional Requirement states the maximum impervious area is 40% in the Rural Residential-20 zoning district. The current impervious area is approximately 10.2% and with the new home the impervious area is approximately 13.8%. Trenton Town Board approved this request on 3-13-2012 without specific conditions. The Town referenced its Comprehensive Plan, but did not cite a specific provision. The well is located south of the garage. The septic tank and drainfield are located northwest of the house. The proposed home location will not encroach on the well. The setbacks from the new/expanded home to the drainfield (10 ft), septic tank (5 ft), and side/rear lot line (10 ft) will be maintained. The home will require a Pierce County Sanitary Reconnect Permit for connection to the existing septic system. The applicants plan to hire a Wisconsin Licensed Plumber to obtain a Pierce County Sanitary Permit and to complete this task. No renewal would be necessary for this request. Pierce County Code §240-76 (G) states that "all conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use."

Staff Recommendation: Staff recommends the Land Management Committee determine whether the expansion of a nonconforming structure at the proposed location would be contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP with the following conditions:

1. The applicants shall obtain a Pierce County Sanitary Permit in order to connect the existing septic system to the principal home.
2. The applicants shall follow Pierce County Solid Waste Code Ch 201 and Wisconsin Administrative Code NR 447 for disposal of used and unusable building materials.
3. The home shall maintain a 10 ft setback from rear and side lot lines, 10 ft setback from the drainfield, 5 ft setback from the septic tank, 75 ft setback to the centerline of Cty Rd C and not exceed 35 ft in height above the grade elevation.

4. The applicant shall work with the local building inspector, Galen Seipel, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
5. The use shall be established within 12 months of CUP approval.

Chairperson Fetzer opened the hearing to the public. No public comment. **Chairperson Fetzer closed the public hearing.**

Holst moved to approve the request for a conditional use permit for expansion of a nonconforming structure for Joseph & Betty Linder with conditions #1 - #5, due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Motion passed.

Public hearing to consider a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District for Kipling & Julie Gore, owners on property located in the NE ¼ of the SW ¼ of Section 4, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. & Mrs. Gore forward: Pichotta stated Gores are not in attendance this evening, what they asked that we do is go ahead and hold the public hearing and then defer action until the next meeting where they will be present.

Staff Report – Emily Lund: The applicants built a 72 ft by 56 ft barn that has a 2-story, 24 ft by 32 ft, 1-bedroom loft apartment in December 2010. This request is to have the loft apartment become the accessory residence to a new principal residence that is proposed to be built this year. The principal residence would be connected to the same septic system associated with the accessory residence. The property is located in Section 4, Town of Trenton and is zoned General Rural Flexible District. The Trenton Town Board recommended approval of this request on 3-13-2012 with the stipulation that a separate fire number be acquired for the accessory residence. The Town indicated that the request is consistent with their Comprehensive Plan, but did not cite a specific reference. The applicant owns 39.92 acres and has an existing barn with a loft apartment. This request is to have the loft apartment become accessory to a principal residence that is proposed to be built this year. The proposed principal residence will be a 40 ft by 46 ft 3-bedroom house with a basement, main level, and loft with 3-car attached garage with 2 decks, one being 10 ft by 10 ft and the other being 12 ft by 18 ft. The principal residence will require the issuance of a Land Use Permit as well as a Pierce County Sanitary Reconnect Permit for connection to the existing septic system. The applicants plan to hire a Master Plumber, to obtain a Pierce County Sanitary Permit and to complete this task. Also an “Affidavit regarding Common Private Sewage System” will need to be recorded on their deed that notifies future property owners that the septic system is connected to two residential structures on the property. Pierce County Code allows accessory residence with a conditional use permit. Accessory Residence is defined here. No renewal of this request will be necessary. The applicants indicated they do not plan to rent out the accessory residence immediately and will obtain a universal address number when they rent to a non-family member. PCC ch. 115 states that all properties or parcels and principal buildings shall be assigned an address based on the uniform numbering system.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for an accessory residence with the following conditions:

1. The applicants shall record an ‘Affidavit regarding Common Private Sewage System’ on their deed prior to issuance of a sanitary permit.
2. The applicant shall obtain a Land Use Permit for the new principle residence.
3. The applicants shall obtain a Pierce County Sanitary Permit in order to connect the existing septic system to the new principal residence.
4. A separate address and sign shall be acquired for the accessory residence.

Chairperson Fetzer opened the public hearing. No public comment. **Public hearing closed.**

Rohl moved to defer action on a conditional use permit request for an accessory residence for Kipling and Julie Gore until the next LMC meeting/Sanden seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for Expansion of a Nonconforming Structure in the General Rural Flexible 8 District for Alex & Jill Wells, owners on property located in the SW ¼ of the SE ¼ of Section 6, T27N, R19W, Town of Clifton, Pierce County, WI.

Chairperson Fetzer invited Mr. & Mrs. Wells forward: Ms Wells explained they just want to add general living space. Their house is small and they are not going to change the foundation at all. They just want to go up, change their garage into living space with a game room on top with some storage.

Staff Report – Jim Kleinhans: Mr. and Mrs. Wells came to our office to get a permit to expand their nonconforming structure. It's nonconforming because it's 67 feet from the centerline of County Road F. The garage location is 90 feet from the county road centerline. The applicants are requesting a CUP to convert the attached garage plus add a second story of living space to provide additional room for their family. Because we are adding living space, Pierce County Sanitary Code requires that we evaluate the septic system. That was evaluated by Darrell's Septic Service on March 14, 2012 and determined to be in good operation condition. All utilities meet required setbacks. The Clifton Town Board approved this request on 3-6-2012 without specific conditions or reference to their comprehensive land use plan.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the expansion of a nonconforming structure at the proposed location would be contrary to the public interest or detrimental or injurious to public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this CUP with the following conditions:

1. The applicant shall work with the local building inspector, Todd Dolan, to determine whether a permit from the town is needed and to ensure compliance with the Uniform Dwelling Code (UDC) requirements.
2. The use shall be established within 12 months of CUP approval.
3. Disposal of old and unusable building materials shall comply with Chapter 201-16 Pierce County Solid Waste Code and WI Administrative NR447.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Rohl moved to approve the expansion of the nonconforming structure for Alex and Jill Wells with conditions #1 - #3 due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Sanden seconded. All in favor. Passed.

Discuss take action on deferred request for a conditional use permit to expand/intensify "Vino in the Valley," a Farm & Home Based Business by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Pichotta stated a question came up as part of discussion, it was noted that Mr. Brenner has 40 part-time employees filling 16 positions, when he is entitled to 8 per conditional use permit. Pichotta noted that he had discussed staff's interpretation of code with corporation counsel who gave an opinion that the only reasonable way to look at the code is to consider employees on site at a time versus in total "on the books" He suggested that if you had a Farm & Home Based Business with eight employees and one took an extended leave of absence does that mean that you don't get to have another person come in and fill that person's position while that person was gone? He felt that was an unreasonable interpretation and the only way not to get absurd results was to consider it to be the number of employees on site at a given time. Sanden asked if it was ever brought up about multiplying the number of employees by 40 hours a week and see the collective number of hours worked by the part-time. Pichotta stated that they didn't get into that scenario.

Staff Report – Brad Roy: Larry is requesting 88 days of operation up from the 75 which would also modify the hours of operation. The requested change is to increase the number of days of operation to 88 days per year. Condition #11 states that the applicant shall not exceed 75 days of operation per year. The applicant is also requesting to change the hours of operation. Condition 12 states: Hours of operation from

April through September shall be Thursdays 4pm to 10pm with lights out at 11pm; Saturdays 4pm to 10pm for the public with lights out at 11pm and allow for any charity or special private event from 12pm to 4pm; Sundays 12pm to 8pm. From October through December the hours shall be Saturday and Sunday 12pm to 6pm. Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved. The proposed changes are:

May through September, Thursdays and Fridays 5pm - 10pm, Saturday Noon -10pm and Sundays Noon - 6pm.

October, Saturdays Noon – 7pm, Sundays Noon – 6pm.

The existing conditions are listed in the staff report. The Town of El Paso recommended approval of this request on February 20, 2012. The Town did not cite any specific language from their comprehensive plan, but suggested conditions about installing a directional sign and attempting to slow traffic.

Staff Recommendation: Staff recommends the LMC consider this request and its impact on the public interest, health and safety or character of the area and whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area.

Sanden asked Brad for the new hours. **Chairperson Fetzer recused himself from voting on the current issue. Sanden moved to approve the conditional use permit expansion/intensification for Vino in the Valley with conditions #1 - #13, modifying #11 to read “Applicant shall not exceed 88 days of operation per year, and #12 Hours of operation from May to September, Thursdays and Fridays 5pm – 10pm, Saturday Noon – 10pm and Sundays Noon – 6pm. October, Saturdays Noon – 7pm, Sundays Noon – 6pm/Rohl seconded.** Pichotta questioned whether deviation of days of operation subject to the discretion of the Town of El Paso, currently part of condition #12 would continue. Does that LMC want that included? **Sanden amended his motion to include “Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved/Rohl seconded. All in favor. Passed.**

Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE 1.4 of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.

Staff Report – Brad Roy: County Materials received a Conditional Use Permit for Nonmetallic Mining in April, 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. The original application presented a plan in which the entire operation would be conducted below grade within the extraction area. The operation plan states that excavation would create a floor elevation of 1050 feet above sea level, where all activity would be conducted. The average current floor elevation is 1100’ and the processing area has an approximate elevation of 1160’. Staff believes that if the operation is conducted in accordance with the operation plan, issues related to noise, dust and appearance would be mitigated. When crushing equipment is placed onsite it is located within the quarry, below grade. The wash plant and other operational structures are located above the quarry. This makes the operation more noticeable visually and audibly. County Materials intentions are to place the structures within the quarry, as space allows, limiting the impacts to the surrounding areas. The average floor elevation of the quarry is 1100’. Last year County Materials expressed a plan to expand the quarry to the south and lower the floor to 1075’. There are 30 unreclaimed acres on the site. This is the maximum allowed by the CUP. Hydraulic conveyors were installed last year to mitigate dust on neighboring properties. Dust complaints continued after the conveyors were installed. The Town of Spring Lake was contacted for comments or concerns regarding the renewal of this conditional use permit. Gary Peterson, Town of Spring Lake Chairperson, responded that the Town did receive complaints since the fall status report.

Staff is proposing new conditions to mitigate the impacts to neighboring landowners created by operation activity above the extraction area:

- Hours of operation shall be 7am to 5pm Monday through Friday. Operation shall be closed on holidays. (*Condition 2 currently states: Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.*)
- Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.
- 12 foot spruce trees shall be planted and maintained in a manner to create a continuous barrier atop the berms.
- A Fugitive Dust Plan shall be developed. The plan shall be presented to the Town of Spring Lake for comment and presented to the LMC for review and approval within 6 months.

The existing conditions of the permit are:

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. Hours of operation shall be 6am to 6pm Monday through Friday, 8am to noon on Saturday. Operation shall be closed on Sundays and holidays.
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in 6 months.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a nonmetallic mining operation with the following conditions (proposed new conditions are in ***bold italics***):

1. Applicant shall follow all recommendations and receive all necessary permits from all relevant departments and agencies.
2. ***Hours of operation shall be 7am to 5pm Monday through Friday. Operation shall be closed on holidays.***
3. Blasting shall be completed by a State licensed blaster. Blasting shall take place no more than 4 times per week and blasting times shall be between 11am and 2pm unless extenuating circumstances occur at which time a Town official shall be notified prior to any blasting.
4. Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department.
5. Erosion control shall be installed prior to any mining. All erosion control measures shall be submitted to the Zoning Office for review and approval prior to any mining.
6. Road access shall be permitted by WI DOT and a Uniform Address Number shall be obtained from the Zoning Office.
7. Reclamation shall be completed consistent with submitted plans.
8. Mine operation and design shall be consistent with the approved plans. Zoning Office shall be notified of any deviation from the plans.
9. Zoning Office shall be notified if ground water is encountered.
10. All structures and signage shall be permitted by the Zoning Office.
11. An elevation benchmark shall be established.
12. The reclamation financial assurance information shall be reviewed and approved by Corporation Counsel before mining commences.
13. Applicant shall comply with NR 135 Annual Reclamation Permits.
14. Property owners located within 1000 feet shall be given reasonable notice of all planned blasting. This request shall be waived for landowners who request not to be given notice.
15. Well tests for nitrates, suspended solids, and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline, and for all other properties as agreed upon by County Materials (Jones, etc.). This shall be completed prior to blasting. Wells shall be tested annually thereafter. All results shall be provided to the Zoning Office.
16. A copy of the Storm Water Pollution Prevention Plan and Spill Prevention Control and Countermeasures shall be submitted to the Zoning Office.
17. The recycling of concrete products shall be allowed.
18. This CUP shall be reviewed for renewal in one year.
19. County Materials Corporation shall conduct operations on the site consistent with the standards specified in the letter from CMC to Pierce County dated 3/13/07.
20. All loaded trucks shall be covered (tarped) prior to leaving the site.
21. The quarry shall have no more than 30 unreclaimed acres at any given time. The storm water pond and processing area are to be included in the unreclaimed acres.
22. Applicant shall conduct decibel readings during mining operations at; the property line, 1320 ft from the property line, and at 1½ miles from property boundary, and shall submit results to the Land Management Department. Such readings shall be taken three times annually, and at locations agreeable to Land Management Department staff and County Materials. An initial reading shall be made prior to operations to establish a baseline.
23. A four-strand barb-wire fence shall be placed around the active mining operation along with appropriate signage.
24. A lockbox with access key shall be made accessible to emergency personnel.
25. Applicant shall provide a status report to the LMC in 6 months.
26. ***Stockpiles shall be a minimum of 10 feet below the height of the berm at all times.***
27. ***12 foot spruce trees shall be planted and maintained in a manner to create a continuous barrier atop the berms.***

A Fugitive Dust Plan shall be developed. The plan shall be presented to the Town of Spring Lake for comment and presented to the LMC for review and approval within 6 months.

Mr. Small introduced Pete Krautkramer, new aggregate supervisor that has been with the company for over 25 years, he will be taking over the operations at the pit. Mr. Small wanted to comment on the new conditions. The last one, he feels is an excellent idea and if they had had that earlier, maybe they wouldn't be here. Last fall when there were some wind gusts, they should have shut it down. They did shut it down when Evelyn called but it isn't her duty to call them. He would like to move up the Fugitive Dust Plan to the Township by their May meeting. He would like to get a weather station or anemometer on site that will record it and will come up with a wind speed so they can say when it's over this speed or gusts they shut it down but stay on site to water. Our production guy's idea of what is too windy was far dustier than Evelyn's idea of too dusty. We also paved the driveway for 400 feet going in. We have started the reclamation along the north slope. It's been sloped 4:1 approximately. We're up against the 30 acre footprint now and to try and get the equipment into the quarry, the whole idea of having enough room to be able to flip flop everything and get it down there. The stockpiles, the contour fluctuates a lot and there are areas of the processing plant that are within 10 feet of the berm. Pete will talk about raising the berm. We will raise the berm on the inside because the seedlings and grass have taken off. The manufactured sand isn't selling and is piling up. We're trying to find a market for that product but it is a fairly large pile. The hours of operation, not sure how that mitigates the dust, we would like to be open the hours we have now so we can water. Pete Krautkramer, been with County Materials for about 30 years on the eastern part of the state while Jack was over here. The biggest problem is watering so he hired a third guy that will be out watering. The screening and lime end are the big problem. He expects to see that down in the hole in the spring of 2014. He will have a water truck run at all times. He is hoping that when they are predicting high winds that he can come in Saturday or Sunday and water. The weather station will give the people at the pit something to go by and not rely on their judgment. He really needs the hours, it's a short season. He was going to ask for hours from 6:00am to 9:00pm for repairs. You are requesting 12 foot trees out there. He would like to bring the berm up another 10 feet this summer and seed and put trees on top of that. The piles that are above 10 feet below the berm, it's tough to do. He believes they have a nice, clean, very respectable looking place. They have a brush for the skid steer to clean the blacktop as it gets dirty. We're not getting dust off the sand pile. It's the traffic and the loaders around the pit and the lime. So he'll keep someone with a watering truck, all day. Mr. Small offered an invitation to the Town of Spring Lake and Pierce County for a tour to see what they are doing with the piles. Holst stated that Mr. Small has been coming here since 2007. We have been very patient. Mr. Sonntag didn't do all that he said he was going to do. The fact is that we were told that this was going to happen and that was going to happen. You impact Evelyn at a tremendous amount, in your opinion it's only a day or two a summer. In her opinion, it's every day. She is a willing seller, buy her house and let her get on with her life. Then maybe we can address the hours and take a look at getting your production back up, just something to take back to corporate. Bill Kanderman stated that Evelyn is not the only house that is impacted by this. Are you suggesting that County Materials buy everyone out? Holst stated that he is not suggesting that, but Evelyn is the one that has complained the most. Mr. Krautkramer stated we have talked about buying Evelyn's property and then there will be six more lined up. Holst stated in Evelyn's opinion there is a serious problem. He understands that Mr. Krautkramer got this dumped on him but the reputation of this company isn't as good as it was when they walked in here. Mr. Krautkramer is asking for six months to prove himself. He hired a guy just for watering and he feels if they go to this weather system it will really help. Michael Jacobson, Spring Lake Supervisor, initially we recommended to the County that they not to approve this CUP. We were told that it wouldn't be visible unless you were in an airplane, that you would mitigate dust and that you would not know that a quarry was in our township. This quarry is an intensive use quarry. Evelyn is ground zero and gets the brunt of it day in and day out. It is negative to the aesthetics of the Town of Spring Lake. We're here twice a year because there is extenuating circumstances that make us have to come back. There are some things that aren't working that need to be addressed. Evelyn Jensen doesn't feel the trees are going to help. She had pictures of trucks coming out, six at a time, and going in, in a half hour period on Saturday. She doesn't feel they deserve anymore time. She feels they have other places that the stockpiles could be placed. The berm higher should help but the piles shouldn't be there. Sanden asked when this is up for renewal. Pichotta according to code, every two years, but we have had these folks on a shorter leash, back in every six months for status reports. Roy stated six month review and one year renewal. Sanden asked Mr. Krautkramer about the hours of operation, concerned about not have time for watering and repairs. Mr. Krautkramer stated he would be happy with the 6:00am to 6:00pm. Mr. Krautkramer stated the way it reads now; he wouldn't be able to be out there Saturday afternoon or Sunday to water. Holst stated we'll give you that; you can water 24/7. Sanden stated to the committee he doesn't know if they should give them the benefit of the doubt beforehand or afterwards. He agrees with all the comments, there has been plenty of time for them to prove themselves. On one hand he feels they should prove it with the conditions as modified and they can revisit in six months, then maybe expand the hours. Or they can work with the new operator, give them the benefit

of the doubt and modify these to give them a little more time and bring them back in six months. Chairperson Fetzer asked if there is any precedence on shortening up the window, six months takes them through the summer. Holst stated we can have them back every week if you want and he thought they should get a comment from the Town. Mr. Jacobson stated hearing the spring of 2014 is disheartening. Mr. Krautkramer stated he wishes he could do it sooner. Mr. Jacobson stated he wants to hear the truth. The biggest issues are dust and visibility. If they have something that they want to propose and raise the berm that would help take care of the problems. Ms Jensen stated she has no trust in them anymore. Mr. Klanderma stated Mr. Small has listened to us but never had the authority to do something. Holst stated he has only been by the site once and asked if the stockpiles are limestone. Mr. Krautkramer stated they are off the wash plant. The largest piles along the road are the manufactured sand. The last two years there was no market for it. **Sanden moved to approve the conditional use permit renewal for Nonmetallic Mining for CMC-Spring Valley LLC with conditions #1 - #28, amending condition #2 to read, Hours of operation shall be 7am to 5pm Monday through Friday, watering/repair operations shall be 6am to 6pm Monday through Friday, 8am to Noon on Saturday. Operation shall be closed on holidays, also to add that this will be up for review and renewal in 6 months. Chairperson Fetzer asked if we want to add anything as far as watering. Holst stated he believes watering should be allowed anytime at the discretion of the operator and he would like to see them brought back in three months. It gives him the incentive to get this going and get it straightened out. Sanden stated that is acceptable. Chairperson Fetzer stated so amended. Holst seconded. Chairperson Fetzer stated the motion is to approve the renewal of the conditional use permit for Nonmetallic Mining for CMC-Spring Valley with amended conditions #1 - #29. All in favor. Passed.**

Discuss take action on site plan review for proposed Oak Grove Town Hall Fire Station by Auth-Consulting/Associates, agent for Town of Oak Grove, on property located in Section 21, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Kip Johnson forward: Mr. Johnson, civil engineer with Auth-Consulting/Associates, stated they have been hired by the Town of Oak Grove to help them through the process of site design, get permits and get approval. The staff report covers most of the issues. The Town/Fire Hall building is a total of 6400 feet with surrounding parking. They have 48 parking stalls, proposing to be a gravel parking lot first, eventually to pave. We do have it submitted to the DNR for approval for land disturbing permit. He talked to Jim Devlin today and he didn't see a problem with that permit and expected it to be granted next week.

Staff Report – Jim Kleinhans: Five years ago the Town of Oak Grove purchased this parcel and had a soil test completed and driveway approved and installed. They have been planning ever since to develop this into a new town hall to replace their existing facility on County Road QQ. This building will require approval from the State Department of Safety and Professional Services based upon the volume and use of the structure. Road access was approved by the Town and the driveway was stubbed in several years ago. The driveway will be installed a little wider than initially designed; 30 foot width to accommodate vehicles and fire equipment. Kip mentioned the number of parking places and Jim evaluated that based on the code. The site plan identifies a location for an on-premise advertising sign but lacks detail on sign message or size. Staff will have to work with them to make sure the sign will be in compliance with the zoning code. The building location meets setbacks from the roads and side yards. Plans for security lighting were not provided. No freestanding light poles are proposed. Wall mounted fixtures with shields were discussed with Mr. Johnson. The tallest portion of the building (40ft by 80ft) includes the proposed fire hall equipped with four drive-thru doors. The traffic circulation will allow them to drive completely around the building. A high capacity well is proposed for the fire hall for filling trucks. The size of the created parcel allows for other land use including some recreational facilities. Plans for those are not provided at this time. Landscaping plans were not provided with this concept site plan. Mr. Johnson indicated a 4 to 6 foot strip in front of the building will be landscaped with various plantings plus decorative rock and mulch. The fire station is being developed in conjunction with the Prescott Fire Dept. An emergency siren is not proposed at this remote location as pagers are more typical means of notification of firefighters. They discussed the potential for establishing a roll-off drop site for recycling containers. Jim believes Solid Waste Department should still be involved for development of this site, not only for roll-off containers but possibly internal recycling measures.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if this development is not found harmful to the health, safety, prosperity, aesthetics and general welfare of the county. Staff recommends the LMC also consider the following:

1. Land Conservation Department review surface water and storm water runoff plans.
2. Solid Waste Department approve solid waste recycling methods.
3. Land Management staff review and approve signage and security lighting for this facility.

Holst moved to approve the site plan for Town of Oak Grove Town/Fire Hall with conditions #1 - #3/Sanden seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time.

Departmental Update and Future Agenda Items

Rezone from RR12/PRD to GRF8 in the Town of Oak Grove

CUP request for Airports, Non-precision approach lighting for City of Red Wing

Discuss take action on the Gore Accessory Residence

Motion to adjourn at 09:29pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, April 4, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: April 18 th , May 2 nd & 16 th , all in 2012.	Chair
3	Approve minutes of the March 21, 2012 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a conditional use permit for Mining, Accessory Uses for a rail load out facility in the Agriculture Residential District for Wisconsin Industrial Sand Co, agent for Dean and Mary Holden, owners on property located in Government Lot 1, the NW ¼ of the NE ¼ of Section 22, T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
5	Public hearing to consider a request to rezone from Primary Agriculture District to the General Rural Flexible District for Steven and Susan Boyer, owners on property located in part of the NE ¼ and the SE ¼ of the NE ¼ of Section 13, T27N, R17W, Town of Martell, Pierce County, WI.	Lund
6	Public hearing to consider a request for a conditional use permit for Expansion of a Nonconforming Structure in the Rural Residential 20 District for Joseph and Betty Linder, owners on property located in the NE ¼ of the NE ¼ of Section 1, T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
7	Public hearing to consider a request for a conditional use permit for an Accessory Residence in the General Rural Flexible District for Kipling and Julie Gore, owners on property located in the NE ¼ of the SW ¼ in Section 4, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
8	Public hearing to consider a request for a conditional use permit for Expansion of a Nonconforming Structure in the General Rural Flexible 8 District for Alex and Jill Wells, owners on property located in the SW ¼ of the SE ¼ of Section 6, T27N, R19W, Town of Clifton, Pierce County, WI.	Kleinhaus
9	Discuss take action on deferred request for a conditional use permit to expand/intensify “Vino in the Valley,” a Farm & Home Based Business, by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ of Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Pierce County, WI.	Roy
10	Discuss take action on a request for renewal of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N,	Roy

	R15W, Town of Spring Lake,	
11	Discuss take action on site plan review for proposed Oak Grove Town Hall Fire Station by Auth·Consulting/associates, agent, for Town of Oak Grove on property located in Section 21, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Kleinhans
12	Discuss take action on Travel/Training Requests	Pichotta
13	Future agenda items.	Pichotta
14	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, March 21, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: April 4th & 18th, May 2nd & 16th, all in 2012.

Approve Minutes: **Sanden moved to approve the March 7, 2012 LMC minutes/Holst seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit for a Utility Facility >1000 square feet for an electrical substation in the General Rural District for Dairyland Power Coop, owner, by Steven Andrews, agent on property located in the SW ¼ of the SE ¼ of Section 3, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Mr. Andrews forward: Mr.

Andrews explained they are requesting to put in an electrical substation. Right now they're on Xcel's site and renting space from them. Xcel is going to be expanding their substation so they're getting booted out of there. So they'll have a facility on about a 2 acre site.

Staff Report – Jim Kleinhans: Dairyland Power created a new parcel behind the existing substation about a year ago with the intent to do this. They have come in with plans and want to establish another substation and give themselves a little more room. They have 25 of these electrical distribution cooperatives in the area, several in Pierce County. This is in the Town of Gilman in Section 3. Section 240-41F in our Code talks about Utility Facilities and lists about four applicable things; the Exclusive Agriculture District does not apply since this is zoned General Rural. The site is along a town road and they will be moving behind the existing substation so it will be farther from the road than where they are currently. This spot would be advisable to use since they can tie into the existing grid. There is a new site plan in committee folders that show how they are going to tie into the existing grid. The lines will run directly west and to the north/south lines. Dimensions of the secured area are 100 feet by 90 feet with a security fence that will contain all the equipment. The zoning code specifies a 10 foot high security fence for electrical substations and Steve said that would work. There is a drawing that shows topographic features with one foot contour intervals and the proposed facility would be at an elevation of 1175. Sheet three in the staff report shows cross sections and the amount of filling along the south side and the amount of cutting on the north side to maintain a level facility. Steve indicated that soil erosion control best management practices will be incorporated to stabilize the site. There was no landscape plan with this but Steve also indicated that another firm follows up to tidy up the site after they have installed their equipment. Height of proposed development is 34 feet to lightning rods that project 11 feet above the equipment. The 35 foot height limitation for structures can be exceeded by electrical equipment based on Section 240-29 of the Zoning Code. This section reads special structures such as elevator penthouses, grain elevators, observation towers in parks, communication towers, electrical poles and towers and smoke stacks, provided such structures shall not exceed in height their distance from the nearest lot line. Jim verified on the scale drawing that this isn't an issue. The facility also has a communication pole

projected 80 feet above grade that has a yagi on it for monitoring load management in the facility. Originally the pole was going to be located outside the fence. They would prefer it be located directly next to the small shed on the south side of the substation. Jim looked at the dimensions of the 80 foot pole and if they located it just to the west side of the proposed shed it would meet the 80 foot setbacks to all property lines. The other equipment includes an 8 foot by 12 foot control building, one transformer, a set of regulators and steel equipment supports. Jim had a call about stray voltage, Steve indicated that stray voltage is usually not a concern for these types of facilities provided electrical connections are made correct and the facility is designed with a closed circuit ground loop. A uniform address number was designated for the property and a sign will need to be placed at the site. The Town of Gilman recommended approval of this request on Feb 8, 2012 without any comments or suggested conditions.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the LMC approve this request with the following conditions:

1. The security fence be installed to a height of 10 feet above the grade elevation.
2. The land use shall be established within 12 months from approval.
3. Any electrical interference to adjoining property owners shall be corrected within a reasonable timeframe.
4. The uniform address sign be placed near the entrance to the facility or along their driveway.
5. Best management practices to be implemented to prevent off site impact from ground disturbance activities.
6. The communication pole and antennae shall be located a minimum of the height of the pole and antenna plus 80 feet from any property lines. It is more desirable to be located in the fenced compound instead of what the original plan shows.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked if putting the pole in the fenced compound is going to be a problem. Mr. Andrews stated not at all, we prefer to have it next to the control shed but we can run our underground cables to it. The reason we were thinking of putting it outside of the fence was to meet the setbacks. It's a wooden pole with a three foot aluminum antenna. There's no load on the pole. Sanden asked Jim if there have been any issues or complaints on the substation on the site. Kleinhans stated no, he did have a call from the adjoining property owner because of the location his house lines up with it. Jim went out and looked at the site. There are some trees between his house and the existing substation. He wouldn't have quite as much buffer with this new facility. He is a couple hundred feet from it and he does have the transmission lines running between his house and the substations. Sanden asked if there has been any issues with the stray voltage. Kleinhans stated no, not that he is aware of.

Holst moved to approve the conditional use permit for a Utility Facility >1000 square feet for an electrical substation for Dairyland Power Coop with conditions #1 - #6, amending #6 to read 80 feet from any property lines, due to the fact this is not contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area./Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for an Antique Shop and Collectibles in the Primary Agriculture District for Sheryelann Salewski Hanuman, owner, by Scott Reeverts, agent, on property located in the NW ¼ of the SW ¼ of Section 7, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Ms Hanuman and Mr. Reeverts forward: Ms Hanuman explained they would like a conditional use permit for an antique and collectibles shop that is currently on their property. All the descriptors are in the staff report. Rohl asked if the shop is existing? Ms Hanuman stated the building is existing, correct.

Staff Report – Jim Kleinhans: Jim was made aware of this business by the off-premise advertising signs that were around the Town of El Paso. He stopped and talked to them and indicated a retail type business such as this would require a conditional use permit. The parcel is zoned Primary Ag and is 3.4 acres and

looking at the code an antique shop would not require the five acre minimum lot size for a Farm & Home Based Business. The request is for an antique shop and other items for sale and they do internet sales. The property has two driveways; one for the residence and one for the building. The building sets off of 490th Street about 190 feet. It has a bathroom connected to a 2000 gallon holding tank. Parking requirements for the antique shop, figured by square feet of primary floor area, roughly about 15 parking spaces would be adequate. They have one handicapped parking space and about a dozen spaces now. There are shipping containers in the back and side of the building for additional storage. Two resident owners operate the business now and they would consider two additional non-resident employees in the future. Proposed hours of operation are 9:00am to 6:00pm six days per week. When Jim initially talked to them they had not been open to that extent. Two advertising signs were installed on the gates with dimensions of 18 inches by 24 inches. Those have been taken down but they have requested additional off-premise signs along Hwy 72, 490th St, Hwy 63 and County Rd N & County Rd G to direct traffic to the business. Department of Transportation can authorize TODD signs along State Highways and the County Code also has a section about business and directional signs. The Town of El Paso recommended approval to this request.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest or detrimental or injurious to public health, public safety or the character of the surrounding area. If determined not to be contrary to the above, staff recommends the LMC approve this request for an antique shop with the following conditions:

1. The business shall be conducted as presented in the CUP application.
2. All proposed advertising signs shall comply with the zoning code standards.
3. All sales activities shall be indoors except incidental, outdoor display is allowed.
4. The conditional use permit shall be subject to renewal in 2 years. Renewal may be completed administratively if no compliance issues exist.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked how long this has been in operation. Ms Hanuman stated October of last year. Sanden asked what they would estimate the weekly traffic load of people coming in and is there truck deliveries or trucks taking away materials. Ms Hanuman stated three people a day and there were trucks during construction but no semi deliveries. **Sanden moved to approve the conditional use permit for Sheryelann Salewski Hanuman, owner and Scott Reeverts, agent, for an antique and collectibles shop with conditions #1 - #4, due to the fact it is not found to be contrary to public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.**

Public hearing to consider a request for a conditional use permit to expand/intensify “Vino in the Valley,” a Farm & Home Based Business, by Larry Brenner, owner on property located in the SW ¼ of the NE ¼ in Section 33, T26N, R16W, Town of El Paso, Pierce County, WI. Chairperson Fetzer invited Mr. Brenner forward: Mr. Brenner stated they put together a business plan in 2006 and thought they knew what they needed. It’s been quite successful. People that have come down have really enjoyed the valley and the experience. Two years ago, they asked for 83 days and were granted 75. They are asking to expand to 88 days and the reason for that is they’ve outgrown their business. Thursdays and Sundays it gets to be a one to two hour wait and Saturdays have become almost a negative situation that can get to be a three hour wait. Some of these people have traveled quite a long distance and then find out it’s going to be a long wait and they leave or become upset and it’s becoming a negative effect. They would have Friday nights to take the pressure off. They have decided to book no more weddings or private parties and just honor the ones on the books. They would like to open just the bar from noon to 3:00pm. Then at 3:00pm instead of 4:00pm open to the public. When they had weddings it was a chaotic situation to try to turn from a wedding situation to being open to the public. They are also going to close a little earlier on Sunday nights, they’ve found by 6:00pm it’s winding down. Brenner stated that his detractors would say “I told you so, and he’s going to come back and ask for more” and they would be right. He is back asking for more. There is a lot of agribusiness starting up across the country - starting in

rural areas. In terms of the last five years, they pump their sewers and aren't polluting the groundwater. He hasn't heard of any reports of accidents out there and he watches for bottles, he sees a lot of cans but they don't serve cans. Last summer a Corvette Club came by at a pretty good clip. One thing they talked about at the El Paso meeting is that he is going to talk to the leaders of the clubs to respect the neighbors and the speeds. They can tell when people come across the bridge whether they are customers or the locals. They've tried to be a good neighbor. They put up a couple walls to the northwest of the building and have put up a wall of spruce to help block the music. Larry asked if he would have a chance to speak again after the public hearing. Chairperson Fetzer stated yes.

Staff Report – Brad Roy: This request is to the number of days and hours of “Vino in the Valley”, which is an event where patrons are served wine, bread, cheese and pasta. Other events include pumpkin sales along with a petting zoo in the month of October. A farmer's market and gift shop is also located on the property and operates under a separate Conditional Use Permit. The LMC granted approval for the original request on March 21, 2007 and later modified the hours of operation on September 5, 2007 to better accommodate the fall and winter “events”. In 2008 the LMC allowed for an expansion/intensification with increased seating, increased days of operation, modified hours of operation, and the use of an audio enhancement system. In 2010 the LMC allowed for the applicant to deviate from the scheduled hours with approval from the Town of El Paso. The farmer's market and gift shop are permitted for 83 days of operation per year and will not be impacted by any changes to this CUP. The requested change is to increase the number of days of operation to 88 days per year. Condition #11 states that the applicant shall not exceed 75 days of operation per year. The applicant is also requesting to change the hours of operation. Condition 12 states: Hours of operation from April through September shall be Thursdays 4pm to 10pm with lights out at 11pm; Saturdays 4pm to 10pm for the public with lights out at 11pm and allow for any charity or special private event from 12pm to 4pm; Sundays 12pm to 8pm. From October through December the hours shall be Saturday and Sunday 12pm to 6pm. Any deviation from the approved schedule shall be at the discretion of the Town of El Paso. The Town shall notify the Department of Land Management when any such deviation is approved. The proposed changes are:

May through September, Thursdays and Fridays 5-10, Saturday Noon-10pm and Sundays Noon-6pm.

October, Saturdays Noon-7pm, Sundays Noon-6pm.

The existing conditions are listed in the staff report #1 - #13. The Town of El Paso recommended approval of this request on February 20, 2012. The Town did not cite any specific language from their comprehensive plan, but suggested conditions about installing a directional sign and attempting to slow traffic.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this request to modify conditions #11 and #12. Staff further recommends the LMC consider whether any changes, modifications or additions to other existing conditions are necessary to address Town concerns.

Chairperson Fetzer opened the hearing to the public. Dawn Hendershot, lives on 400th St, expressed her concerns as to when this one night a week will stop, the next request was Saturdays and Sundays. They have had to deal with motorcycles and coach buses. She asked who pays for all the road repairs. They have had to put blinds in their home because of increased traffic. She stated winter is great, no traffic and no singing. She doesn't agree with this decision. Chris Chard, property just north of VINO in the Valley, can hear it every night at his house. Their intention was to raise a family in a wholesome place. He, too, has seen car clubs that drive through the valley at 50mph and he would never let his kids ride their bikes on those roads now. He is not in favor of the expansion. Pichotta read a letter from Sharon Hills and Becky Bersch, who have a home at N4119 400th St and are unable to attend the meeting. They are not in favor of the expansion which has gone from a one evening event to a restaurant. They feel with its increased intensity and expansion over the years, it is even more so a violation of the Town and County zoning. It is constant traffic, noise and disturbance. The CUP is conditioned on an 8 employee

limit and this has gone unenforced. They ask that the committee say “no” to his request. Kim Beebe, lives four miles from Veno stated traffic has increased in the last ten years, not due to Veno in the Valley. There is more building and traffic; things are expanding. News headlines talk about the economy and unemployment, she feels it’s a clean business that can provide employment and supports other businesses. It’s also a venue for performers that aren’t the typical rock band or don’t play in bars. Mr. Brenner stated he is here asking to grow the business. He pays his share of taxes also. The people coming down there are not coming just to get drunk but to enjoy the valley and create a unique experience. A lot of the businesses, like his and vineyards exist all over the country. Mr. Brenner asked Andy how many complaints he has heard in the last few years. Pichotta stated there had been very few and had related to traffic and signage. Mr. Brenner believes most of his customers are respectable and drive safely; again he is going to address the car clubs. He doesn’t know of anyone that has gotten in trouble with the law or DWI or any accidents down there. They have served a lot of people down there. If you get a hundred guys with a business plan, how many of them won’t change that plan within the first couple years. Ron Hendershot stated that this business didn’t do anything good for the valley. **Chairperson Fetzer closed the public hearing.** Holst asked El Paso Town Chair, Ron Kannel, if there have been any complaints received by the Town Board? Mr. Kannel stated none, the only complaints were at the Planning Commission, not at the Town Board meeting where they are on the record. Holst stated the Townships have the authority to change the speed on the roads. They can slow down the traffic. Mr. Brenner, there are things you can do in the community as a leader, now is the time to step up, alleviate some of your neighbors problems and concerns and in return your neighbors will be supportive of what you are doing. Show them that you are a good neighbor. Sanden asked the Town Chairperson in the letter that was just read, it mentioned that the commercial operation is not consistent with the Town’s Comprehensive Plan, that was just approved within the last two years, can you speak about that. Mr. Kannel stated he couldn’t without having the comp plan to check definitely what it is. Pichotta stated basically comp plans establish goals, objectives and policies relating to a variety of issues including land use, economic development, etc. In any comp plan, you could find various goals, objective and policies that could be interpreted to either support or not support a given situation or proposal. That’s why you can never take the elected officials out of the equation. It’s the elected officials that have to look at that plan and determine which goals, objective and policies apply to a given situation. A comprehensive plan is as it is interpreted by the folks who have it as a guidance document. The assertion that there are things in there that don’t support it, is probably true but the Town of El Paso elected officials have reviewed it as part of the application and believe it to be non-applicable. They did not quote it so we assume they viewed it to be silent on this particular request. Sanden asked Pichotta, to your knowledge, in that comp plan there is no explicit language to designate that this is an area where no development, or limited growth or on the other hand that this valley is designated for growth. Pichotta stated he is aware of no designation, also noting that Pierce County is considering language that deals with agribusiness/agritourism, nature-based operations that are a more appropriate mechanism to deal with this sort of thing instead of the Farm & Home Based Business. The Farm & Home Business ideally would be used more for a business incubator where once a startup grows to a certain point, then it would relocate to an appropriate area, whether it be an Industrial or Commercial district. These sorts of operations are location dependent, no matter how successful they are would never move. That is why we talked about creating additional use classifications that were allowable in the agricultural districts. He has encouraged Mr. Brenner to convert to one of those more appropriate classifications once they are available. Sanden asked Mr. Brenner if there have been coach buses. Mr. Brenner stated they have about seven or eight a year. Sanden asked about the hot air balloons. Mr. Brenner stated he doesn’t invite them but Lynn Huppert has asked to come down and take off from there. It’s approximately two or three times a year. Sanden asked how many employees he currently has or what’s the maximum number of employees he has. Mr. Brenner stated he has 40 different part-time employees overall. Sanden stated this is a difficult situation and he has been on the committee since it evolved. He is definitely supportive of entrepreneurs, such as Mr. Brenner, trying to make it a welcoming environment. On the other hand, it’s our job to protect the neighbors as well. He isn’t comfortable with this many changes in such a short amount of time. He stated yes, business plans do always change but

that's why we have commercial districts. Chairperson Fetzter noted that he would recuse himself from voting due to a possible perceived conflict of interest. Holst stated he would like some clarification on County Code as it refers to the number of employees; is that eight at one time or all together? Pichotta stated that the code states that no more than eight persons not residing on the site may be employed in the business. Mr. Brenner has two conditional use permits so he is entitled to 16 employees between the two. Mr. Brenner stated there are 40 different employees but at any given time he has 12 to 16 employees on site. If he only had 16 employees, they wouldn't all be able to work all the time, some are college kids; some are high school kids. Holst stated he understands why he has the number he has but he isn't sure that our code gives us the latitude to say eight at a time or eight all together or 16 since you have two conditional use permits. Mr. Brenner stated his understanding is that at any given time he can't have more than 16 working at the building. Holst stated then you have lived by your understanding but stated that his understanding isn't quite as clear cut as Mr. Brenner's. **Holst moved to defer action on the expansion of the conditional use permit for Vino in the Valley until the allowable number of employees is clarified/Sanden seconded. All in favor with Fetzter not voting. Motion passed.** Pichotta asked when the committee would like to have this on the agenda. Holst asked if it has to be a public hearing. Pichotta stated no. Chairperson Fetzter stated it could be on the next meeting as long as everything has already been presented and we're just looking for clarification.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time.

Departmental Update and Future Agenda Items

CUP request for an accessory residence in the Town of Trenton

CUP request for expansion of a nonconforming structure in the Town of Trenton

CUP request for expansion of a nonconforming structure in the Town of Clifton

CUP for a load out facility for WI Industrial Sand in the Town of Maiden Rock

Rezone from PA to GRF in the Town of Martell

CUP Renewal for County Materials

Site Plan Review for Oak Grove Fire Station and this issue again.

Motion to adjourn at 08:04pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, March 21, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

MINUTES - Pierce County Land Management Committee Meeting, March 7, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: March 21st, April 4th & 18th, May 2nd & 16th, all in 2012.

Approve Minutes: **Sanden moved to approve the February 1, 2012 LMC minutes/Rohl seconded. All in favor. Passed.**

Public hearing to consider proposed amendments to Chapter 240-37 and Chapter 240-88 of Pierce County Code; relating to Industrial Uses. Staff Report – Brad Roy: Proposed changes are intended to address redundancies created by other chapters, clarify unclear or ambiguous language, and address problems associated with the current language that have become apparent in the course of administering the existing County Zoning Code. These changes are the result of a recent review, the need for which was established in the County's recently adopted Comprehensive Plan. The proposed changes will help the general public and ensure more consistent interpretation and administration. Staff is proposing to present the code in a more clear and consistent manner where each use is listed in the code, on the Table of Uses, and has a definition. Currently some uses may only be listed in the code or on the Table of Uses, and not all uses have a definition. Specific amendments proposed relate to nonmetallic mining, sawmills/planing mills, warehousing and storage, recycling facilities and collection points, and heavy and light industrial uses in general. Hydraulic Dredge Material Placement and Storage is also proposed to be created as a stand-alone conditionally permitted use. The placement of these materials is currently not specifically addressed in the code. Also, all Industrial Uses will now be Conditionally Permitted, currently some Industrial Uses are not allowed in the Industrial District. It should be noted that proposed industrial uses continue to remain subject to the issuance of a Conditional Use Permit which is intended to ensure that activities occurring within a given town are consistent with that Town's comprehensive plan, if applicable.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions, and if determined to be appropriate, approve said revisions and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption. Roy stated the first thing we're looking at is 240-37 Non-metallic mining; they are looking to add some additional things to the mining application; a list of chemicals, estimated water use and they may also require a transportation impact analysis, dust plan or blasting plan if we feel it is needed. We are also looking to remove anything related to reclamation plan since Chapter 241 requires that already. Moving down to Asphalt Plants and Mining, Accessory Uses; we're not changing anything here or on Salvage Yards. Sawmills are staying the same. Letter E we are listing Heavy Industrial Uses, going back to the fact that everything will be listed here in the code, on the Table of Uses and have a definition. Getting in to the Dredge Material, this is to address the concerns we received about the impacts on surrounding

areas. There is a long list of requirements for an application and another part of it is that they provide that analysis for a minimum of two sites and a narrative discussing the feasibility of each site. § 240-37.1. Light Industrial, under B. "Warehouse and storage," for some reason the definition was listed here but it is not defined in Chapter 240-88 with the rest of the definitions, so we are just removing that and putting it in Chapter 240-88. Letter C has indoor maintenance which is already listed in the Commercial Uses so we are removing it from this section so it will only be listed once. The definition will remain the same. We will also look to have it permitted in the Commercial District which it currently isn't but that would be in a separate agenda item. Recycling Facilities, we're changing the name just to make it a little more clear what we're talking about. It's currently not defined or on the table of uses. Looking at the definition of a Recycling Facility we realized there is a need for a Recycling Collection Point so we have that as another use which would strictly be limited to sorting and transferring. § 240-66. Nonconforming uses; A (2)Expansion of a nonconforming nonmetallic mining operation shall be permitted up to the lot lines existing on the effective date of this chapter ~~or 20 acres in area, whichever is less, except that greater expansion may be authorized by a conditional use permit. This is unenforceable.~~ Chapter 240-88 Definitions; There is a slight change to the Abandonment of Nonmetallic Mining Operations, we added activities as well. The new definition of Hydraulic Dredged Material Storage to The placement of dredged material which had large amounts of water added for transfer. We're looking to change the definition of Heavy Industry. We're taking the emphasis off the activity on the site and putting it on the impacts that the use creates. This would be the district for the uses that just aren't compatible with the other districts. There is a slight change to the Light Industrial definition which makes it clear that all activities need to be indoors. Mining Accessory Use definition needed some tweaking to remove some redundancies. Our Nonmetallic Mining definition is also a definition for an entire nonmetallic mining operation. Some activities which are typical with a mining operation are said to be an accessory use. In theory you could be requiring two CUP's for one mining operation, this just clarifies that. A slight change to the Nonmetallic Mining definition just adding that stockpiling, sorting and screening is allowed on site. Recycling Facility, we added the definition; A facility in which recyclable materials are recycled, reprocessed and treated to return such products to a condition in which they may again be used for production. Recycling Collection Point, A site in which recyclable materials such as paper, cardboard, glass, metal and plastic are collected and temporarily held until transferred. Sawmills; A facility where wood is sawed, split, shaved, stripped, chipped or otherwise processed to produce wood products to be sold. The Warehouse and Storage definition was moved from the code into this section. Listed in the staff report is the new table of uses, you will see everything is conditionally permitted in the Industrial District and then we added Hydraulic Dredge Material Storage, Warehouse and Storage, Recycling Facility and Recycling Collection Point. Holst stated he needs this clarified; all these roll offs that are around the County to collect the solid waste, will this affect them in any way, shape or form? Roy stated the existing ones, no, going forward they would need a permit. We talked about this; the collection areas do have increased traffic so depending on where they are located could cause an impact on the neighboring uses. By requiring a permit, we can look at how it is set up and try to minimize the impacts. Sanden asked about clarification on Chapter 240-37 Light Industrial Uses; requirements for the indoor maintenance that is under the Commercial District also and can be permitted in the Commercial District? Roy stated it is listed in the Commercial code but he doesn't have the definition. Typically it's your gas station, service shops, that fit better in the Commercial District instead of the Industrial District. Oddly enough it's listed in the Commercial District but not permitted in that district. We will be changing that. Sanden asked if someone wants to establish an electronic maintenance facility in the Light Industrial zone, is that covered by the general definition of Light Industry. It's listed here; automobile repair, service and electronic maintenance and repair. Is that still allowed? Roy stated it would also be conditionally permitted in the Light Industrial, not sure about the Industrial District. Sanden stated you are taking it out of here to clean things up. Good job and it does clean things up really well, there should be less questions when it comes to interpreting it.

Chairperson Fetzer opened the hearing to the public. Kleinhans asked if we are getting rid of reclamation in the zoning code that doesn't have a minimum area and Chapter 241 has one acre mining sites, how will we get reclamation on sites under an acre? Roy stated it still requires a reclamation plan as

far as the application we just took out #2 what the reclamation plan shall include. Bill Bechel, Town of Union, asked if this would mean you couldn't zone any additional land into Industrial Use. Pichotta stated this has nothing to do with a rezone for Industrial Use. If your town wanted to create more industrial zoning within your town, given that you don't have a comprehensive plan at this point, the determination of whether a given spot was appropriate to rezone to Industrial would be based on the County's plan. Our plan says that intersections of state and county highways, adjacent to other existing districts, if you supported that and it was supported by our plan then a new district could be created. This just regulates uses within those districts. **Public hearing closed. Sanden moved to approve the proposed amendments to Chapter 240-37 and Chapter 240-88 of Pierce County Code; relating to Industrial Uses and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption/Rohl seconded. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Bill Green forward: Mr. Green explained he wasn't sure after the last meeting what had transpired. They offered the neighbors an opportunity to come to their meeting and discuss foul balls and overflow lighting. He feels it was a very productive meeting. They found out what they were looking for and they made suggestions and came up with a proposal. Their concerns lie more with the amateur baseball rather than the youth. They were the three infractions they had down there and they have to have a contract through the baseball association in order to play there. The baseball association is planning to extend the back stop from 20 feet, it was 16 feet and they increased it to 20 feet, they are going up to 24 feet behind home plate on all three sections of the 20 foot backstop. In 2013 they plan to place netting from the first section of the backstop on the base side and continue out 24 feet high all the way to the dugouts on third base side. In 2014 they will replace on the right field side. This should keep the majority of foul balls in the park. He believes the neighbors that were there were pretty receptive to that. Chairperson Fetzer asked if this is retractable netting. Mr. Green stated they will leave the poles in and remove the netting in the winter. It will be a black nylon mesh for the netting. Mr. Green stated the neighbors main concern is the overflow lighting. The baseball association's long-term goal is to get the shields for the lights, in the meantime, limiting the use of the field to 8th grade, high school and legion ball which only play seven innings as opposed to nine innings. They start at 6:00pm so a three hour game, they would be out of their before the time limits. In order for the amateur team to play there, they have changed their schedule. They only have 11 home games and five are on Friday or Saturday nights. The rest are day games. The Skeeters weren't aware of the impact they were causing. They are well aware of the LMC's ability to pull this conditional use permit for continued violations. They have moved their start time from 7:30 pm to 6:30 pm. The use of the lights would be extremely limited. They have been scolded and he feels they will comply with the time constraints. He thinks they were looking at it as 10:15pm during the week and 10:45pm on weekends were lights off, his interpretation is that the hours are park hours and everyone has to be out by then. The high school starts March 21st and goes through the end of May. Their games start at 5:30pm. The Legion games start at 6:00pm and are seven inning games. There isn't the impact with the volume of people for those games. Kleinhans stated he has been talking to Bill about the narrative given and he has also talked to the neighbors. Another aspect of this request is to alter some soccer fields to baseball diamonds so the committee needs to think about that. The conditional use permit isn't really clear on whether the park is closed at 10:15pm and 10:45pm or if it's just lights out. They've made some modifications to the amateur team hours. The neighbors were concerned with the safety aspects with foul balls coming into their yard. Mr. Green said that the pipes and netting have been ordered. He was wondering if they could get them installed before the games start on March 21st. Mr. Green stated practice starts on March 24th and he doesn't know if they will be outside at that time. They should have them in place by the first home game by April 15th. We should have them in place. Kleinhans stated one of the things the neighbors have requested is to have it up by the first home game. The committee could react to the proposed schedule of changes. The netting will be a better option. Holst asked Jim if the neighbors

were happy with the changes or if these were proposed after the meeting. Kleinhans stated they came after the meeting but they meet the first Wednesday of the month and have been working on this. Holst stated you have to get the point across that you will lose your CUP if the park isn't closed by 10:15pm during the week and 10:45pm on the weekends. Kleinhans stated one of the original conditions was to have a sign with the hours on the site. Mr. Green stated as soon as we put them up they take them down. We put them on the main gate. Kleinhans stated that if we had a sign on the gate, fence or dugout with the hours, they wouldn't have an excuse to not abide by it. The other issue is the conversion of soccer fields into additional diamonds to be used for softball. We have a concept plan for four diamonds. The plan lacks a lot of detail. They are interested in putting in two this spring. One of the issues is diamond #3 & #4 are moving toward the highway, #1 is going toward the mini storage facility. The field dimensions are outlined on the concept plan with the length of the infields and outfields. Field 4 had a high fence proposed in the right field and outfield which should help any overflow of balls on Highway 63. Mr. Green stated these fields are 210 feet to right and left field and 265 feet to center field. High school fields are 190 feet right and left field and 210 feet to center field with 60 foot base pass versus 90 foot base pass. Fields #1 and #2 are what the baseball association would like to put in this year. The boundary fence is a four or six foot fence. The gentleman with the storage unit would not allow any balls in there. It's placed back as far as they possibly can because the soccer field #1 is elevated about four feet to the lower field that would have #2 & #3 on it. Hoping to get Field #2 in for girls softball and up to boys 6th grade youth ball. Holst stated it looks like from the end of the fence to the property line or end of the building there is 60 feet. Kleinhans stated one issue is not much detail on what they submitted. The committee could advise what they need to do regarding parking, add satellites, etc. Holst stated this is more like de-intensification, they could put a couple satellites in. There is a gravel road going back there and they can park on both sides. Kleinhans asked if the committee wants to see this come back with a more specified plan or are you satisfied. Mr. Green stated they will make sure there is an additional satellite on that end of the field. Holst stated he is satisfied with what is presented. Chairperson Fetzer stated it's not an intensification and he is alright with it as long as the new fields are away from the buildings. Mr. Green stated the biggest problem back there is grazing cattle and the 4-wheelers coming in off the railroad tracks. Kleinhans stated he spoke with Joel Anderson, owner of the storage units and he agreed it was set back as far as they could go. He is OK with it as long as there is a fence to keep the balls and the people from coming into his facility. Chairperson Fetzer asked if we need a motion on everything or is this a good clarification on the approval we had before. Holst stated it needs to be referenced on the timeframe and we need to clarify that 10:15pm and 10:45pm mean everybody out not just lights out. Kleinhans stated possibly require that the backstop be up by the beginning of the season. Sanden mentioned a sign as well as hours. Mr. Green stated he wants to clarify the backstop addition. They will be having practices before it is up but they will have it up by the first home game. Holst asked if the backstop goes straight up or if it is angled. Mr. Green stated they moved it back and it will go straight up. He talked to the fencer and he said it will be going straight up because it would catch more balls that way.

Sanden moved to modify the conditional use permit for Ellsworth Baseball Association 12 with conditions #1 - #12, adding "Signs noting hours of operation, Hours of operation are 8:00am to 10:15pm Sunday through Thursday and 8:00am to 10:45pm Friday and Saturday with the park closing at those times, Backstop extensions shall be up and operational by the first home game of 2012 and an additional satellite for the new softball fields"/Holst seconded. All in favor. Passed.

Discuss take action on site plan review for proposed Oak Grove Town Hall Fire Station by Auth-Consulting/Associates, agent, for Town of Oak Grove on property located in Section 21, T26N, R19W, Town of Oak Grove, Pierce County, WI. Pichotta stated that this item is not yet ready for action by the LMC. Kleinhans noted that the Town of Oak Grove is holding a special meeting tonight.

Discuss take action on Travel/Training Requests. Pichotta stated Jim has requested to attend the Wisconsin County Code Administrators Spring Conference in Mosinee on March 29th. It's a day trip.

Holst moved to approve the travel/training request to the Wisconsin County Code Administrative conference for Jim Kleinhans/Sanden seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

There are three public hearings; one for a Utility Facility >1000 Square Feet by Dairyland Power Inc in the Town of Gilman

Antique Shop in the Town of El Paso

Larry Brenner is proposing an increase in the number of days for Vino in the Valley.

Motion to adjourn at 07:47pm by Rohl/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, February 1, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 15th, March 7th & 21st, all in 2012.

Approve Minutes: **Rohl moved to approve the January 18, 2012 LMC minutes/Sanden seconded. All in favor. Passed.**

Public hearing to consider a request to rezone a 20 acre parcel from Rural Residential 12 District to General Rural Flexible 8 District by Kerry & Mary Stees, owners on property located in the NE ¼ of the SE ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Mr. Stees forward:

Mr. Stees explained that he lives on 20 acres and would like to raise some livestock and build a loafing shed. When he came in for a permit for the shed he found out his property's zoning and learned that he couldn't have cattle there. He is bordered on two sides by General Rural Flexible District and the other sides are residential. Holst noted that several years ago at the Pierce County Fair he was looking at the photography and saw a beautiful picture of a contoured farm, oats are golden, corn is beautiful green and an ear on every stock, the hay is freshly mowed. He realized it was land he farmed. He looked and it was taken by Autumn Stees and she got a blue ribbon for that picture. It was taken from Mr. Stees deck. It's farm country around him.

Staff Report – Andy Pichotta: This is a request to rezone a parcel from RR12 to GRF8. The property is located in Section 23, Town of Oak Grove. The applicants have indicated that they wish to raise crops and livestock and the current zoning district does not allow that. The applicants obtained a land use permit on 10/21/2011 for a loafing shed and storage shed. The permit was conditioned on the stipulation that the sheds couldn't be used for agricultural purposes unless the rezone is approved. Current RR12 density allows for 6 lots; the zoning density for GRF8 is 4 lots so there would be a decrease in density points or what is called a "down zone". The purpose and intents of the zoning districts are listed in the staff report. The Town of Oak Grove Board of Supervisors recommended approval of this rezone request at their November 21, 2011 meeting. This request is consistent with their comprehensive plan on page 6-25, Goal 4, Objective 2 stating "Encourage the appropriate use of agriculture land for hobby farming, farmettes and other similar activities." Pierce County's recently adopted comprehensive plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. In cases where a town has not adopted a comprehensive plan, rezoning will be approved only when consistent with the Pierce County Plan (encouraged vs. discouraged). In such cases, Pierce County will solicit a non-binding town recommendation regarding the proposed rezone." Soils data is also shown in the staff report.

Staff Recommendation: Given that the Town of Oak Grove Board of Supervisors has determined this request to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked if the 20 acres is fine and not considered spot zoning. Pichotta stated it wouldn't be a spot zone given that it is consistent with the comp plan and 20 acres is arguably getting to the point of size where it could be its own zone, but the fact that it borders on two sides with General Rural Flexible, it's not an issue. Holst stated it's almost like the Rural Residential 12 is the spot zone.

Sanden moved to approve the rezone from Rural Residential 12 District to General Rural Flexible 8 District for Kerry & Mary Stees, and to forward a recommendation to the County Board of Supervisors/Rohl seconded. All in favor. Passed.

Public hearing to consider a request for a conditional use permit for tree removal on the Kinnickinnic River Blufflands by Patrick & Michael Branigan and Edgar Family Trust, Judith Edgar, owners on property located in the SW ¼ of the SW ¼, in Section 8 and the NW ¼ of the NW ¼ of Section 17 and the NE ¼ of the NE ¼ of Section 18, all in T27N, R19W, Town of Clifton, Pierce County, WI. Chairperson Fetzer invited Michael Branigan forward: Mr. Branigan explained that land that Edgars have, as well as theirs, is all in the managed forest crop. It's overdue for cutting. It's such a small piece that they put it out for bid a few years ago but no one would bid on it because of the terrain. Now that Judy's land needs to be done also, it became enough for a commercial harvester to come in. It's not our choice. They are just cleaning things up to improve the forest. Schmitt Timber has been contracted to do the job. They have marked the timber and the DNR has been out and approved of it. They put a lot of conditions on it such as it must be done when the ground is frozen so there aren't any erosion issues.

Staff Report – Jim Kleinhans: Both properties are on the south side of the Kinnickinnic River and they are adjacent. Mr. Branigan's property is land locked. Both properties are enrolled in the Managed Forest Land program but they have to be harvested according to their plan and guidelines. There are some trees that are overgrown that require harvesting. They are going to do some things with noxious and invasive plants as well. When they enrolled in the 25 year program, this wasn't part of the zoning code. The Kinnickinnic River Bluffland protection area was approved in 1998. Occasionally we get some folks in here that are making an application to this committee that they wouldn't have considered when they signed up for the program. It's for the benefit of the bluff land and it won't affect the near shore area. It's mostly working along the tops and opening up the canopy so the understory can take hold and encourage certain species that are more desirable. The Town of Clifton approved these requests on January 3, 2012 without additional concerns.

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request would be contrary to the public interest or detrimental or injurious to the public health, public safety or character of the surrounding area. If not found contrary to the above, staff recommends the committee approve this conditional use permit request with the following conditions:

1. All tree harvesting will be completed within 12 months of this permit approval.
2. Best management practices will be applied to control excessive ground disturbance.
3. Any potential merchantable timber removed will be reported to the WI DNR forester when affected acreage is enrolled in the Managed Forest Land Program and a cutting notice filed 30 days prior to cutting. Yield tax is due the state on saw timber harvest.
4. Chemical herbicide application of stumps will be applied topically.
5. Staff shall be notified after tree removal and planting has been completed to verify permit compliance.
6. Notification of the Pierce County Sheriff and Solid Waste Departments before any burning activity.
7. Future management consistent with this conditional use permit will be allowed beyond the 12 month period.

We have done condition #7 on some of the properties in the past. That is why it was included and it was at the request of the land owners as well. Chairperson Fetzer stated they won't have to come back before us as well. Kleinhans stated as long as they are operating under their manage forest land and working with a professional tree cutter. Chairperson Fetzer asked if in the future they have to work under the same conditions and report. Kleinhans stated he thinks it would be great if they report to us they are cutting. Rohl asked what the purpose of the chemical on the tree stumps is for. Holst stated to get rid of the species.

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed. Holst moved to approve the request for a conditional use permit for tree removal on the Kinnickinnic River Blufflands for Patrick & Michael Branigan and Judith Edgar, owners with conditions #1 - #7, due to the fact it is not found to be contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Rohl seconded. All in favor. Passed.

Committee to convene into closed session pursuant to WI §19.85(1)(c) considering employment, promotion, compensation or performance evaluation data of any public employee over which the governmental body has jurisdiction or exercises responsibility; to-wit; performance evaluation of Land Management Director. Holst moved to convene into closed session/Rohl seconded. Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes and Sanden-yes. Passed. Convene into closed session at 7:15pm.

Motion by Holst/seconded by Rohl to return to open session at 7:50pm. Roll call vote; Holst-yes, Rohl-yes, Fetzer-yes and Sanden-yes. Passed.

Motion by Holst/seconded by Rohl to approve a step increase for the Land Management Director based upon a satisfactory annual review. Motion passed.

Discuss take action on Travel/Training Requests. Pichotta requested that staff be authorized to attend a frac sand mining workshop at the Chippewa County Courthouse on February 9th. **Sanden moved to approve the travel/training request of the frac sand mining workshop at the Chippewa County Courthouse/Rohl seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Pichotta stated there is nothing on the agenda for February 15th, therefore the next LMC meeting would be held on March 7.

Motion to adjourn at 07:55pm by Sanden/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, January 18, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: February 1st & 15th, March 7th & 21st, all in 2012.

Approve Minutes: **Holst moved to approve the January 4, 2012 LMC minutes/Rohl seconded. All in favor. Passed.**

Discuss/take action on request for modification of a conditional use permit for private outdoor recreation (motorcycle hill climbs) in the General Rural Flexible and Commercial Districts for Larry Gerdes, owner, by Dean Gerdes, agent on property located in the E ½ of the SW ¼ and the W ½ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI. Chairperson Fetzer invited Dean and Sue Gerdes forward: Ms. Gerdes explained they would like to modify condition #5; the dates. The original activity was approved for Sept 4, 2011 with a rain date of Sept 5, 2011 and identified the need to request additional days with a maximum of two events per year. They have been given the opportunity to host the National Competition which is one event but it runs over three days. They would like clarification from the committee if an event is one day. They are asking the committee to grant events without specifying the dates. Their second request is to change the hours. So many people showed up they weren't able to finish within the established hours. They don't have lighting at this time so they would have to be done at dusk. There is talk of strings of lights like they use in construction. They would like to open up the times; hours of operation beginning at dawn and ending at 10:00pm during week days and midnight on weekends, provided they have lights - otherwise they would end at dusk.

Staff Report – Emily Lund: Larry Gerdes applied for a CUP for motorcycle hill climbing events and was first approved 1-13-1977. The CUP was renewed 2-12-1979, 2-9-1981, 3-7-1983, 9-9-1985, 9-8-1987 and 9-20-1989. Larry Gerdes re-applied and the LMC approved a new CUP on May 4, 2011. The Gerdes' and Valley Springs Motorcycle Club, an AMA District 16 Chartered Club, held their hill climb on September 4, 2011. It was a successful event and there were no injuries or complaints to the County. Enclosed is a narrative and pictures that re-capped the 2011 event. The narrative discusses future events for 2012-2015, including being chosen to hold the National Motorcycle Hill Climb Competition in 2012. Applicants would like to modify conditions #5 & #6 from the May 4, 2011 LMC CUP approval. The property is located in Section 28, in the Town of Hartland and is zoned General Rural Flexible and Commercial. The locations for the motorcycle hill climbers, spectators, concessions and parking areas will remain the same. The applicant obtained a Land Use Permit on 8/11/2011 to build a new 12ft x 12ft announcer stand. Emergency vehicles will be on-site and others will be notified to be on stand-by. Applicants will not hire any employees. Everyone working at the event will be volunteers. The existing building on-site will not be used for the events. Participants and spectators will bring their own pop-up

tents and trailers. Equipment to be used will be generators, skid steer and miscellaneous small equipment. Concession stand(s), 5 portable restrooms and trash cans will be provided and maintained for patrons. Applicants should contact the Department of Public Health to comply with their regulations, licenses and/or permits. In addition to the portable restrooms, they will utilize an existing vaulted privy that is located on-site. The roof will be fixed in 2012 for the upcoming events. This is something new we are suggesting be added to the permit. The applicants shall sign a holding tank pumping agreement with a Wisconsin Licensed Septic Pumper and submit that to the Land Management Department prior to the next event. Applicants will be allowed to camp on the property in 2012. When camping is allowed by the owner, camping is limited to day prior and day after the event. The same insurance coverage through Northfield Insurance Company will be continued into 2012. Each individual entering the event will sign a "Release and waiver of liability, assumption of risk and indemnity agreement". If there are any changes to the plan, the new plan shall be re-submitted to the Department. An admission fee will be charged and they will be changing it but not sure what the fee will be at this time. Alcohol will not be sold on-site. The applicants want to have seasonal signs for advertising banner signs. They also want to put up directional sandwich signs the day before the event that will be taken down the day after the event.

Staff Recommendation: Staff recommends the Land Management Committee determine whether established conditions continue to be adequate to protect the public interest, public health and safety and the character of the area or whether modifications are necessary. Staff further recommends that the LMC modify condition #5 to enable planning of future events and consider modification to #6 to enable earlier hours of operation on event days.

1. If any structures are built on-site, a land use permit shall be obtained for all future structures prior to construction.
2. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Commerce, Department of Public Health).
3. Adequate portable satellite waste stations (1 per 50 people) shall be provided.
4. Solid waste dumpsters or waste containers shall be located on-site and maintained.
5. Approved dates for 2012 are _____. Request for additional dates to be approved by Land Management Committee (maximum of 2 events per year).
6. Hours of operation shall be 9AM to dusk, or as otherwise established by the LMC.
7. Any advertising signs shall comply with the zoning code standards and any necessary permits shall be secured prior to sign installation on property.
8. A copy of the insurance and any changes to the insurance shall be submitted to the Land Management Department.
9. If an emergency evacuation of injured riders will go through an adjoining property owner's property, applicants shall obtain written permission from the adjoining property owner prior to the event.
10. If camping is allowed for participants and spectators in the future, camping shall be limited to day prior and day after the event.
11. The CUP shall be renewed every 2 years. Renewal may be completed administratively if no complaints or compliance issues arise.
12. Applicant understands that expansion or intensification of this use may require modification to this conditional use permit, or potentially the issuance of a new conditional use permit.
13. The applicants shall sign a holding tank pumping agreement with a Wisconsin Licensed Septic Pumper and submit that to the Land Management Department prior to the next event.

Ms Gerdes stated that Emily and she had talked about having a maximum of three events written in even though they don't plan on having three events but will allow in the future for the club if it continues to grow at the rate they are. Mr. Gerdes stated the event is actually two days the third day, Friday, would be tech inspection of the bikes, nothing happening on the hill. Dave Esterby, Chairperson, Town of Hartland, at the board meeting they unanimously approved the events. There was no problem what so ever last year. It was the biggest event in Hartland Township and it was families and their kids are climbing. They are fully in support of it. Chairperson Fetzer asked if they only did one event. Ms Gerdes stated yes, a one-

day event. Sanden asked Mr. Esterby if the hours of operation until midnight would be a problem. Mr. Esterby stated he didn't think so. It might be a little crowded for vehicles is all. Chairperson Fetzer asked about the number of campers. He asked if they thought spectators would camp out. Ms Gerdes stated maybe some family members of competitors. The National event; they come a long way and they come in these toy haulers. Most of them want to be in the hotel with a pool.

Sanden moved to approve the modification to the conditional use permit for a private outdoor recreation (motorcycle hill climbs) for Larry Gerdes, owner by Dean Gerdes, agent, with conditions #1 - #13, modifying condition #5 to state Three events per year from one to three days each are approved. Request for additional days to be approved by Land Management Committee and condition #6 to state Hours of operation shall be dawn to 10:00pm on week days and dawn to midnight on weekends or as otherwise established by the LMC/Holst seconded. All in favor. Passed.

Discuss take action on a request for modification of a conditional use permit for a Utility Facility >1000 square feet for a natural gas meter station in the Primary Agriculture District by Northern Natural Gas Company, agent for Gail Collett, owner on property located in the NE ¼ of the SE ¼, in Section 1, T25N, R16W, Town of Salem, Pierce County, WI. Chairperson Fetzer invited Tom Dixon forward: Mr. Dixon asked to modify the condition regarding the security fence to allow it to be left as it is, not the 10 foot height specified in the CUP. The subcontractor made a mistake and built it to our current standard which is six feet with three strands of barbwire.

Staff Report – Jim Kleinhans: Last August, Tom was here representing Northern Natural Gas, to include a local gas metering facility in the Town of Salem. At that time it was still zoned Exclusive Agriculture and we put several conditions on it. Because it was a new utility, we looked at Section 240-41F of the zoning code. Part of that includes electrical substations as well as gas facilities. Condition #1 included a 10 foot high security fence consistent with this section on utilities. There was some modification to the facility after they started construction; normally it was going to be a 100ft x 100ft fenced in area around the structure and the valves. The fence was extended out the back where they tied in to the high pressure line. A copy of the design is included in the staff report. The contractors didn't follow the design. They built what is typically done for these facilities. Tom indicated they are requesting to modify the first condition of the conditional use permit to avoid having to replace that fence. Tom stated their fencing meets current federal standards as well.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the requested modification would be contrary to the public interest or detrimental or injurious to the public health, public safety or character of the surrounding area. If determined to be not contrary to the purpose of the zoning code, staff recommends the LMC modify condition #1 to authorize the 7 foot security fence. Holst asked why you gave us plans for a 10 foot fence and then you put up a 7 foot fence and don't blame it on the contractor. Mr. Dixon stated that was their "approved for construction plan". We have that in our construction plans to give to the contractor because that was what was in the conditional use permit. Holst stated it went through there and your subcontractor came in and put in a fence three feet shallower. Mr. Dixon stated we actually contract out all of our work. We hired a contractor and they hired a subcontractor to do the fence. There was a misunderstanding on the fence guidelines. If I were to guess the inspector probably gave them our current up to date fence guidelines. Holst stated as far as safety concerns are there any? Are you worried about anyone crawling in and getting into your pump house? Mr. Dixon stated no. Holst asked how they meter the product, in cubic feet? Mr. Dixon stated he thinks it can be metered in certain other aspects, not sure if it's just cubic feet. In one of the buildings they have an ultrasonic meter that measures it by sound and he's not sure if that is in cubic feet. Holst asked if he knows how much product flows through this facility in a year. Mr. Dixon stated no, he doesn't. Chairperson Fetzer asked if it is up and running. Mr. Dixon stated yes. Sanden asked if it is a high pressure gas line. Mr. Dixon stated they have a high pressure gas line they run into the station and from that point Xcel Energy is our customer that takes it out and reduces the pressure and drives it to Maiden Rock for the sand plant there. Residents along the way will be able to pick up natural gas service. Sanden asked if there is a liability issue for the County if the fence isn't to code. Kleinhans stated our code states

a 10 foot high security fence is required for an electrical substation. We had a little bit of an issue with one off of 490th St. They didn't build that fence 10 feet high. We demanded that they put in a 10 foot high fence and they modified it. In this case we looked back at the code and it states that 10 foot high fences are required for electrical substations. Since this isn't an electrical substation we thought we could bring it back to the committee and consider modifying that one condition. The lease was modified in January to reflect the changes that happened with the fenced area. Chairperson Fetzer stated he drives by this everyday and he doesn't see anything wrong with it. Kleinhans stated he spoke with neighboring landowner Jay Richardson and he didn't have any problem with it. **Rohl moved to approve the modification of a conditional use permit for a Utility Facility >1000 square feet for a natural gas meter station for Northern Natural Gas Company, agent, for Gail Collett, owner, amending condition #1 to read "height of 7 feet" /Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated Louie Filkins has a request to attend the annual surveyor conference in Wisconsin Dells. **Holst moved to approve the travel/training request of the annual surveyor conference in Wisconsin Dells for Louie Filkins/Sanden seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Rezone request in the Town of Oak Grove

Public hearing for tree removal along the Kinnickinnic River Blufflands

Andy's annual evaluation

Pichotta noted that there was a retirement in the Department effective last week, that being Faye Owen, was the part-time zoning secretary. At some point we will be having a discussion about our staffing plan in regard to refilling positions. I actually anticipate four retirements in the Department this year. Given that in a number of departments they have not been refilling vacant positions; we need to think about whether or not we can do with a little bit less and which ones are important that we refill. Also the Red Wing Airport, the issue with the attempt to initiate a zoning overlay; there has been a joint airport zoning board created. Mr. Holst and Mr. Kleinhans are representing Pierce County on that group. There has been some legislation at the State level that would impact a municipality from different state's ability to unilaterally impose zoning although it appears that this may well jeopardize the whole concept of interstate reciprocity. I spoke with Senator Harsdorf, she is trying to set up a meeting of local officials as well as the DOT and Bureau of Aeronautics.

Kleinhans stated he met with the Ellsworth Baseball Association in December and they talked about coming in with some better plans for mitigating the impacts from that facility. He recently spoke with Bill Green and he stated they have some plans, narrative and a design for affective measures and a time-line for incorporating those. They should be ready so we can discuss that again in February.

Motion to adjourn at 07:28pm by Holst/Rohl seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, January 18, 2012 – 7:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: February 1 st & 15 th , March 7 th & 21 st , all in 2012.	Chair
3	Approve minutes of the January 4, 2012 Land Management Committee meeting.	Chair
4	Discuss take action on a request for modification of a conditional use permit for private outdoor recreation (motorcycle hill climbs) in the General Rural Flexible and Commercial Districts for Larry Gerdes, owner, by Dean Gerdes, agent on property located in the E ½ of the SW ¼ and the W ½ of the SE ¼ of Section 28, T25N, R17W, Town of Hartland, Pierce County, WI.	Lund
5	Discuss take action on a request for modification of a conditional use permit for a Utility Facility >1000 square feet for a natural gas meter station in the Primary Agriculture District by Northern Natural Gas Company, agent for Gail Collett, owner on property located in the NE ¼ of the SE ¼, in Section 1, T25N, R16W, Town of Salem, Pierce County, WI.	Kleinhans
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items and departmental update.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, January 4, 2012

Present: Joe Fetzer, Jeff Holst, Don Rohl and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Excused: Paul Barkla

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 7:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 18th, February 1st & 15th, March 7th & 21st, all in 2012.

Approve Minutes: **Rohl moved to approve the December 7, 2011 LMC minutes/Sanden seconded. All in favor with Fetzer not voting because of absence from the last meeting. Passed.**

Discuss/take action on request for renewal of a conditional use permit for a heliport in the General Rural Flexible 8 District for Christopher Brekken, owner on property located in the SW ¼ of the NE ¼ of Section 27, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Mr. Brekken forward: Mr. Brekken asked to have the CUP reapproved the way it is written.

Staff Report – Brad Roy: The conditional use permit for the heliport was renewed on January 5, 2011. The site has been approved by the Department of Transportation. The FAA approved the site for “personal use” so this facility could not be used for public or commercial flights. Flights are typically on Saturday or Sunday, usually early afternoons. Flights enter and exit the north end of the property. The applicant is allowed up to 10 night flights per year. Staff has not received any complaints since the last renewal. The Town of Oak Grove Chairperson was contacted about this renewal request and expressed no issues or concerns. The conditions associated with this CUP are listed #1 - #9 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit with the following conditions: The only change to the conditions is #1 which would change it from a 1 year renewal to the new condition which states:

1. The CUP shall expire in 2 years or if compliance issues arise. Renewal may be completed administratively if no compliance issues occur.
2. Any potential or future changes or intensification in the use of the heliport shall be approved by the Land Management Committee.
3. The heliport is approved for daylight operations and up to 10 night flights per calendar year.
4. Approach and departure shall follow 180/360 flight path unless the committee finds modifications are necessary to mitigate impacts to surrounding neighbors.
5. Maintain the clear zone around the heliport following the 8:1 ratio.
6. The total number of take-offs and landings may not exceed 30 per month.
7. Proof of adequate liability insurance shall be provided.
8. This conditional use permit shall terminate if the Department of Transportation revokes their certificate of approval or Mr. Brekken’s pilot license.

9. Onsite fuel storage shall be in approved containment vessels.

Holst moved to approve the renewal of the conditional use permit for a heliport for Christopher Brekken with conditions #1 - #9/Rohl seconded. All in favor. Passed.

Update on Farmland Preservation Planning process. Pichotta reports: As you are aware, Pierce County must adopt an updated Farmland Preservation Plan (FPP) prior to December 31, 2012. The effort to update the existing plan, which was adopted in 1982, will be a joint effort of the Land Management and Land Conservation Departments. The Land Management Department has been awarded a \$30,000 grant to help offset the cost of completing this mandated plan. The plan will be structured in a manner very similar to that of our recently adopted comprehensive plan and will be adopted as an addendum to that plan. It is also anticipated that the FPP will also be implemented in much the same manner as the Comprehensive Plan. That is that we will have over arching goals objectives and policies relating to the County as a whole and we're not going to get into the specifics and tell the Towns what they need to do. One of the key pieces of this is the identification of the "Farmland Preservation Areas" basically areas within each Town that are suitable for preservation. We will utilize a variety of criteria (soils, land cover, slopes, etc) to help identify land within a given town that is potentially suitable for preservation. Staff will be going to each Town, all 17 of them, present that data to them and leave it for their consideration. Saying here is what we think may make sense however, recognizing that it is a political decision, they can include everything or they can include nothing. The final determination will be up to the Town Board versus Pierce County. County-wide goals objectives and policies will be developed. A number of the existing goals objectives and policies relating to agriculture in the Comprehensive Plan are pertinent and will be included. In the next couple months, we will be bringing to you as well as the Land Conservation Committee draft goals, objectives and policies. Towns will be encouraged to develop town specific goals objectives and policies relating to farmland preservation and to incorporate them into their existing comprehensive plans. We do have one Town that hasn't adopted a Comprehensive Plan. If they want to have some goals objectives and policies specific to their Town, we could include them in our plan. The County wide goals will probably be more along the lines of strategies to encourage the sorts of things we want to see and discourage things we don't want to see. Also as part of this, we are going to present draft ordinance language relating to agri-business, agri-tourism and natural resource based activities. The reason we haven't held a public hearing on that is that all it takes is one more than half of the Towns under County zoning to object and we can't adopt it. The reality is it will create a lot more options for the Towns. The goal is to make a presentation regarding that language and hypothetical comprehensive plan language a Town might have in their comp plan and apply it to a hypothetical request to show a town how comprehensive plans can steer conditionally permitted uses within their Towns so they understand the relationship. Sanden asked about the variety of criteria, do you go as far as using a LESA approach of a weighted average or formula to rank land higher, so if someone asks why your land is in and theirs isn't. Roy stated the criteria is looking at soils, existing use and historical use of the property, when you look into what qualifies as an acceptable use it can be as simple as an open area. The question going to the Towns will be do you want to get restrictive. Pichotta stated we would discourage folks from using Land Evaluation Site Assessment (LESA). Although we don't have such a program. One other point in Ag Enterprise Areas, according to State Statutes, they are landowner driven as far as the designation. What the statutes allow for is there have to be five different land owners but they have the ability to include land that is not owned by them. I think this committee and Land Conservation Committee will need to consider whether we support that inclusion of land that isn't actually owned and controlled by those who are proposing these things. Once you create one of these areas, it could be fairly easy for the State to impose new restrictions on them even though they say it's merely a benefit to those folks. We need to think what our default position on that will be. Most Towns will likely take a position on whether or not to include that type of land. If a Town feels strongly about allowing folks to do that, it may should be the County's position to support the Town's wishes.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Motorcycle hill climb review of event schedule for the Gerdes's in the Town of Hartland
Northern Natural Gas request for conditional use permit modification in Town of Salem

Motion to adjourn at 07:20pm by Rohl/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, December 18, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: January 15th, February 5th & 19th, March 5th & 19th, all in 2014.

Approve Minutes: **Sanden moved to amend the minutes of the December 4, 2013 Land Management Committee meeting to read Acting Chairperson Ross called the meeting to order at 6:00pm in the County Board Room/Ross seconded. All in favor. Passed with Holst not voting due to absence at the last meeting. Sanden moved to approve the amended December 4, 2013 LMC minutes/Ross seconded. All in favor. Passed with Holst not voting due to absence at the last meeting.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for a welding business, pursuant to Pierce County Code, Chapter 240-36D in the General Rural District for Terry Roatch and Tony Roatch, owners on property located in the SW ¼ of the SE ¼ of Section 2, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Terry Roatch forward: Mr. Roatch explained he would like to run a small business out of his building. He will probably just work the last ten years until retirement age. He may get one or two guys to help him out and hopefully be able to make a living at it.

Staff Report – Jim Kleinhans: Terry operates his business out of his home which was permitted in 2005. It's located in Section 2 in the Town of Gilman. He is requesting a Farm & Home Based Business. He owns 6.12 acres which exceeds the minimum for a Farm & Home Based Business and he is located in General Rural zoning district. The narrative explains the nature of the business is offering mild steel welding services as well as specialty welding services for aluminum and stainless steel. The building is located in a 80 ft x 60 ft pole shed which also includes his residence. Staff took a look at the residential space and the welding space. With putting some personal storage and his personal vehicles inside the business, it is roughly half of the 4800 square feet. The equipment that he uses for the business includes: 3 welders using nonflammable Argon, or carbon dioxide/Argon/oxygen, cutting torches using flammable acetylene, drill presses, table saws, grinders, air compressor, electric hand tools, gas powered pressure washer and a forklift. There are fire extinguishers located at each welding station. What brought staff's attention to the business is the unauthorized sign that was placed within the road right-of-way setback on 850th Street. That is an issue that we need to address under the conditions. Typical hours of operation are 7:00am to 7:00pm Monday through Friday and 7:00am to 4:00pm on Saturday. The applicant has no regular outside employees but occasionally hires temporary (contracted) help needed to complete special projects within a specified timeline. Most raw and finished materials are stored indoors. A metal shelving unit sits in the front of the building. Raw materials are picked up and hauled by Mr. Roatch. Recycling and scrap metals are hauled to Kadingers salvage in his personal vehicle. There is not a lot of big trucks coming in hauling material to the site. Surrounding land uses include Schmitt Timber (zoned industrial)

and several residences along 850th Avenue, (zoned General Rural). The general nature of the area is wooded. The Town of Gilman Board of Supervisors recommended approval of this request on 11/13/2013. The Town indicated this request falls within the Town's land use plan and the plan commission will review the use in three years. Pierce County Code talks about off-street parking places and there are several parking spots on the side of his driveway in front of the building. This use is established.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area within the building shall not exceed 2400 square feet.
5. There shall at least 2 designated parking spaces, with a minimum of one space for handicapped parking.
6. The on-premise advertising sign shall be moved to a compliant location (at least 33 ft from centerline) by May 1, 2014.
7. A land use permit shall be obtained for all future structures prior to construction.
8. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
9. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. Land Management staff should be contacted if applicant has questions as to what constitutes expansion or intensification.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Sanden asked Mr. Roatch if the business is up and running? Mr. Roatch stated yes. Sanden asked how long it's been operational. Mr. Roatch stated 4 or 5 months. Chairperson Fetzer asked how business has been so far. Mr. Roatch stated slow, he needs to get some advertising done. Ross asked if it will be a problem getting that sign moved by May 1st. Mr. Roatch stated no. **Holst moved to approve the conditional use permit for a Farm & Home Based Business for a welding business for Terry Roatch with conditions #1 - #9 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Discuss take action on proposed amendments to Chapter 238-20 of the Floodplain Ordinance relating to camping and camping units and to Chapter 240-29D, of the Zoning Ordinance relating to the height of Industrial buildings.

Staff Report – Jim Kleinhans: In the course of administrating the floodplain ordinance we found some things that should be included in our code; definitions to help support the administration of that ordinance. In some places, yurts have been permitted as cabins. We have some in the County and they function pretty well as a habitable structure. They don't have running water as a rule. They usually associate or support that with a privy. In the floodplain we had a recent case where a person had a yurt but called it a tent-like structure. They are somewhat of a tent-like structure with a lattice but more permanent than a tent. We thought if we included a definition for yurt, calling it a tent-like structure instead of a tent, the attorneys wouldn't pick that apart. It really is defined as a tent in Webster's Dictionary. So we included a definition for yurt and hopefully we can add that to the floodplain code just for clarification. Then regarding camping in the floodplain outside of campgrounds for a private facility, we have proposed Section M, that would state camping in a camping unit in floodplain outside of an approved campground under this section is allowed without a permit if the camping unit consists of nothing more than an easily removable tent or if the following criteria is met:

- a. The camping unit is a mobile recreational vehicle.
- b. The camping unit is on a parcel of land that has less than 4 camping sites and the parcel is not advertised, represented or used as a campground and
- c. The camping unit may not occupy the site for a period of more than 180 consecutive days.
- d. Support services are consistent with items J and L listed above.

That talks about restriction to floodplain, the flood flows and utilities; natural gas lines, propane tanks, etc. We have had issues with people setting up camping in the floodplain and floodways. When they set a couple big cylinders there for propane and don't attach them to trees, it's important to include some of these things so we don't have issues where we get a flood and people aren't able to deal with things that they have developed but haven't thought through the whole process. It's more consistent with WI Administrative Code for floodplain management as well. Another definition regarding habitable structures, we define human habitation but we didn't have habitable structure defined which was in WI Administrative Code NR 45. That would be any structure, a portion thereof used or designed for human habitation. There is also a definition about habitable structure in the riverway but the riverway definition is a lot more involved or restrictive. We decided to go with NR 116, the regular floodplain program and we would request to add that to our floodplain code as well. We have a couple housekeeping items under Chapter 238-24D where the Department of Commerce has been changed to the Department of Safety and Professional Services. We would just amend those sections where the reference to Administrative Code is from Comm to SPS. We're just trying to keep our code current. Under the Zoning Code, Chapter 240, we've dealt quite a bit with the frac sand industry lately. Knowing that the processing facilities are rather tall because of the way they process their sand with the gravity and sieves to make the product that they need to meet specifications for their buyers, we have had a number of variances come through recently. One out in Grange Hall and the other was in Trenton. The Board of Adjustment(BOA) struggled with supporting the variance standards for hardship for these buildings. We thought possibly amending the section on Industrial buildings where this committee was authorized to take them up to 60 feet. The Land Management Committee could grant exceptions to Industrial and possibly Commercial buildings that require structures to be taller than 35 feet or taller than 60 feet, just take out that reference to 60 feet. Instead of tall commercial buildings or tall industrial buildings coming before the BOA, they would just be dealt with by this committee either through site plan review or a conditional use permit. If you understand how the BOA deals with their standard and trying to write up their Findings, Facts and Conclusions, they struggle with that to make it sound right. Maybe this committee can do that looking at the purpose and intent of the zoning code and how we praise(?) our conditional use permit just like we did with the last applicant. If it's not contrary to public interest, things like that might be easier to justify, protecting the public interest is typically one of the things we look at. Pichotta stated after we had finished the staff report, he was doing some work on ACT 20 which changes the standards for cellphone towers in the State. It establishes a ceiling law as to what a municipality can require. You can't say someone can't put up a cellphone tower, you can't specify heights, make them paint them and you can't make them use a monopole. If someone wants to do it, they basically can. It also takes away the ability to require setbacks. If we were to have language in our code that said Industrial and Commercial structure heights may be granted exceptions by the Land Management Committee we could use the same mechanism to continue to require that at least communication towers be set back their height from adjacent property lines. We are going to be bringing forth, at some point in the not too distance future, some language regarding cellphone towers and probably going to be recommending they become a permitted use versus a conditional use because it doesn't seem right to have them be a conditional use when the reality is we can't say no and we can't place conditions. Rather than what is in the staff report, he suggests the committee consider language that says Industrial and Commercial and then instead of buildings, say structure heights may be granted exemption by the Land Management Committee provided that all setbacks and yards are increased by not less than one foot for each foot the structure exceeds 35 feet. If you are comfortable with that, it would be helpful when we tweak the code relating to cellphone towers. We haven't seen much for commercial structures that are higher than 35 feet but it doesn't mean we won't. Sanden asked about being limited to what we can do with cellphone towers because of the

jurisdiction not being in our court but we do have the authority to determine setbacks? Pichotta stated we do if those same setbacks apply to all commercial structures. Holst stated that is why it would be advantageous to us to have these setbacks in place for this and then update your ordinance again to apply to cellphone towers when they get that in place. Sanden asked if we approve this, does it stop here or does it have to go to the full board. Pichotta stated it does go to the full board, it's an ordinance amendment. If you are comfortable with the changes that have been presented here, we would publish a public hearing notice and bring these changes back to you on January 15th. Sanden asked about part N, the first one that we talked about, if he understood, there was problems with people camping in floodplain areas and having some issue with tanks and such. How does this address this, it looks like it says there they are allowed to do that. It says they can be there without a permit. Kleinhans stated that under L it talks about the propane tanks, they would be properly anchored or placed at flood proof elevations. Some of those things, when the floods come up they are not prepared or people are not there and all of a sudden stuff starts heading downstream. Sanden asked if a yurt is considered a tent or habitable structure. Kleinhans said it's a habitable structure, that is what we have permitted elsewhere in the County but in the floodplain they call them a tent. Under this code it says you can have a tent in the floodplain where you don't permit it. Sanden stated but not a yurt. Kleinhans, a yurt is not as easy to remove as a tent. If we can do something with the code so we have something to fall back on so we're not calling it a tent, we're calling it a yurt which is a tent-like structure. Sanden said that is where he was confused because it says a tent is allowed and then we define a yurt as a tent-like structure. Does that mean it's a tent? Kleinhans stated tent-like, he thinks there is a difference. In 2007 or 2005 we talked to the committee about amending our shoreland code and that has been in the works for over a decade and we found out the Natural Resources Board just approved some final changes to NR 115 but they are still leaving it open that the legislator can change it some more. Some Counties are waiting to make those changes and some are moving forward without putting all of the changes in the code, for instance the part about impervious surface regulations which will be a nightmare to regulate. St. Croix County is going forward probably this week with a hearing. It doesn't make sense to dig into this until the legislator is done playing with this. It shouldn't take that long to do. One of the things he wanted to mention is we applied for a grant to change the code. They keep extending the grants and now they are extended until May 2016 and the legislator should be finished with this by May 1, 2014. After May 1st of next year, we can get to work on it. This is one we have been working on and off trying to get it going but it doesn't make sense to do it yet. Holst stated he thinks the changes make sense even though the yurt isn't going to affect him. He sat on the BOA for a couple years and they deal with a completely different animal than we do and if we can make their job easier it would be very beneficial. Sanden stated it helps us too and he supports the 240-29D amendments. Chairperson Fetzer stated it would stream-line things more. Pichotta asked if that is consensus or does the committee want to make a motion? It doesn't matter if your directive is to have us schedule a public hearing to consider these amendments. Chairperson Fetzer directed staff to move forward with a public hearing to amend Chapter 238-20 and Chapter 240-29D.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time.

Departmental Update and Future Agenda Items

Public hearing for expansion of a nonconforming structure in the Town of Salem for Wieser Concrete.
Public hearing to consider and take action on amendments to the Floodplain ordinance and the Zoning ordinance that was brought before you tonight.

Site Plan review for a winery for Shannon & Angel Zimmerman in the Town of Clifton.

Discuss take action on a status report and potential modification of the CUP for Muskie Proppant relating to disposal of their waste product.

Discuss take action on location of a new air shaft for WISC in the Town of Maiden Rock.

Motion to adjourn at 6:30pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, December 18, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: January 15 th , February 5 th & 19 th , March 5 th & 19 th , 2014.	Chair
3	Approve minutes of the December 4, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Farm & Home Based Business for a welding business, pursuant to Pierce County Code, Chapter 240-36D in the General Rural District for Terry Roatch & Tony Roatch, owners on property located in the SW ¼ of the SE ¼ of Section 2, T27N, R16W, Town of Gilman, Pierce County, WI.	Kleinhans
5	Discuss take action on a request for site plan approval for Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ and part of the SE ¼ of the SW ¼, all in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
6	Discuss take action on proposed amendments to Chapter 238-20 of the Floodplain Ordinance relating to camping and camping units and to Chapter 240-29D, of the Zoning Ordinance relating to the height of Industrial buildings.	Kleinhans
7	Discuss take action on Travel/Training Requests	Pichotta

Fax: 715-273-6864

MINUTES - Pierce County Land Management Committee Meeting, December 4, 2013

Present: Jon Aubart, Joe Fetzer, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Jeff Holst

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Chairperson Fetzer continued the meeting. Next meeting dates: Dec 18th (if necessary), 2013. Pichotta stated it will be necessary. We have a number of agenda items. If the committee is comfortable with the first and third Wednesday of each month except we should talk about the first meeting in January because the first Wednesday in January is the 1st. Do we want to do a week later? Aubart asked if there is a need to. Pichotta stated we have one pending conditional use permit application and that is for expansion of a nonconforming structure at Wieser Concrete. Chairperson Fetzer asked if there is a rush? Pichotta stated there is no rush for them because they need a letter of map amendment in order to construct. Chairperson Fetzer stated we can push them back. Pichotta, So we are looking at possibly the one meeting in January at the 3rd Wednesday? There was a consensus among the committee.

Approve Minutes: **Ross moved to approve the November 20, 2013 LMC minutes/Aubart seconded. All in favor with Fetzer not voting because of absence at the last meeting. Passed.**

Discuss take action on a request for approval of a 4-Lot Major Certified Survey Map for MIDIOWA Construction Inc, owner, Pete Gartmann, agent, on property located in part of Gov Lot 3, Section 14, T26N, R20W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Kim Christiansen forward: Staff Report – Emily Lund: Kim Christiansen is the owner of MIDIOWA Construction Inc and is proposing to create 4 lots within a five-year period, which is considered a Major CSM per Pierce County Code (PCC) §237-9B. The certified dedication of easement is described on page 3 of 3 of the CSM. Staff walked the site on 10-28-2013 and verified that no erosion issues were present on the proposed lots. On 11-6-2013, LMC discussed a rule exception to the requirement that an erosion control plan be submitted, but no action was taken. The applicant subsequently submitted road plans, stormwater and erosion control plans to the Land Conservation Department for review. The CSM is located in Section 14, Town of Oak Grove. Surrounding land use is agricultural, residential and woodland. The parcel is zoned General Rural Flexible 8. The current density units are 27. After the CSM is approved, then 23 density units remain. Oak Grove Town Plan Commission and Town Board reviewed the CSM. On 10-21-2013, the Town Board of Oak Grove approved the CSM and the 3-acre minimum lot size. The road is to be designed and constructed to Town specifications, but it will remain a private road. The Town will sign off on the CSM when they have confirmed that the road was constructed to their specifications. One shared driveway access point on State Hwy 35 between Lots 2 & 3 was issued by the Wisconsin Dept of Transportation (WI DOT). Per PCC §237-17(B)3, staff reviewed the site to see if the property was subject to any hazards to life, health or property; no such hazards were found. The CSM meets slope and road frontage requirements. Will Heidt completed a soil test on all 4 lots and

conventional septic systems are recommended. Pierce County Surveyor, Louie Filkins, reviewed and approved the CSM. Survey review fees in the amount of \$500 were paid on 10-7-2013. Property is not in the Farmland Preservation Program, per Land Conservation Department. The Land Conservation Committee approved the storm water and erosion control plan on 11-21-2013. The plan was approved with the following recommended conditions:

1. The County must approve any modifications to the plan.
2. Permanent seeding species detailed in the plan must be used due to the coarse-textured soils existing on the site.
3. All disturbed areas must be completely covered with straw mulch.
4. Any erosion concerns that may arise during construction will be addressed to the satisfaction of the County.
5. Letter of completion and as-built plans or redline/record drawings which include highlighted changes or deviations from the approved plan must be submitted to the Land Conservation Department.

No restrictive covenants are proposed. A private road maintenance agreement was submitted. The agreement is being reviewed by the Pierce County Corporation Counsel, was signed today and will need to be recorded along with an approved CSM. Applicant should be aware that archeological features were reviewed and the site was cleared by the Historical Society and the State Archeologists. There aren't any hits on these four lots. The proposed road shall be named 1259th St and a traffic control sign (stop sign) and road number sign shall be required at the intersection of 1259th Street and State Highway 35.

Staff Recommendations: Staff recommends the Land Management Committee approve this 4 Lot CSM with the following conditions:

1. All conditions of preliminary Major CSM approval shall be completed before Final Approval is granted.
2. The private road shall be built to Town specifications prior to final approval.
3. All conditions recommended by the Pierce County Land Conservation Committee shall be met (1-5).
4. A financial surety in form of a bond, irrevocable letter of credit, or other method, in the amount of 200% of the estimated cost of installing erosion control measures shall be submitted to the Department along with a copy of said estimate. Said surety shall be in place prior to site disturbance. We can strike #4 because we received a surety bond in a check and we got the bid.
5. Erosion control measures shall be installed according to approved plans and associated conditions and site stabilized to the satisfaction of the Land Conservation Department, prior to final plat approval. Applicant understands that final approval will not be granted until the Department of Land Management is notified by the Land Conservation Department, in writing, that the project is eligible for final plat approval.
6. A statement of completion that is signed and stamped by a certified professional engineer that the erosion control and storm water measures have been installed according to approved plans shall be submitted. Any deviation from approved plans shall be noted on as-built plans that shall be submitted with the statement of completion. Any issues requiring follow-up (punch list) should be listed along with a proposed schedule for completion.
7. Applicant agrees that any unforeseen erosion issues that arise during construction will be addressed to the satisfaction of Pierce County.
8. The private road serving the proposed lot shall be labeled as 1259th St, as according to our uniform road numbering system.
9. The applicant shall purchase a road number sign and stop sign from the County Highway Department and they shall be placed at the intersection of 1259th Street and State Highway 35.
10. The private road maintenance agreement shall be reviewed by the Pierce County Corporation Counsels Office and any changes deemed necessary shall be made. We can strike #10, this has been completed.

11. The private road easement dedication, maintenance agreement and approved Major CSM shall be recorded simultaneously.
12. Applicant shall obtain all necessary sign permits (i.e. temporary new development signs; on-site construction signs; on-premises residential neighborhood signs).

Sanden asked Emily if the area falls under the bluff buffers or any tree removal. Is it Single Family Residences and is there plenty of room before the 12% slope? Mr. Christiansen stated yes.

Sanden moved to approve the 4-Lot Major Certified Survey Map (CSM) for MIDIOWA Construction Inc, Kim Christiansen, owner with conditions #1 - #12 striking #4 and #10/Ross seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a Farm & Home Based Business for a welding business in the Town of Gilman
Flood Plain Ordinance amendments relating to camping and camping units and Zoning Ordinance amendments relating to the height of Industrial buildings.

Site Plan review for Shannon & Angel Zimmerman for the winery. Unsure if the discussion will include the subordinate issue with the restaurant and the winery component.

Motion to adjourn at 6:15pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 20, 2013

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund and Shari Hartung

Absent: Joe Fetzer

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: Dec 4th & 18th (if necessary), 2013.

Approve Minutes: **Ross moved to approve the November 6, 2013 LMC minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for site plan review for an accessory structure in the Industrial District for Schmitt Timber Corporation, owner on property located in part of the SE ¼ of the SE ¼ of Section 2, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Holst invited Jeff and Greg Schmitt forward: Jeff Schmitt explained they are tearing down an existing building and constructing a new one. Greg Schmitt stated it will be used to store more lumber and covering up machines. They are trying to make it better.

Staff Report – Emily Lund: We have site plan review for an accessory structure for industrial uses. The property is located in Section 2, Town of Gilman and in the industrial zoning district. This request involves tearing down an existing 48' x 45' accessory building. Then the construction in the same location of a new 60' wide x 88' long x 28' tall building with a 10' wide x 72' long roof extension. The building is proposed to be a total of 6,000 square foot. The use is for lumber storage equipment storage, belt conveyor/saw storage and open space. Cleary Building Corporation drafted plans and sent them to the Department of Safety and Professional Services (DSPS). It is designed to meet 50 PSF snow load and 90 mph wind speed. The industrial use is not being expanded with this new request. They currently have 20 employees and no additional employees are proposed at this time. The proposed new construction will allow the company to process lumber more efficiently, quietly and will allow equipment to be stored inside. Pierce County Code 240-15K Purpose and Intent for Industrial Zoning is stated in the staff report and also 240-75 Site Plan Review. The property has trees along the north side of the driveway and trees around the existing buildings screening adjoining neighbors. There are piles of harvested trees to the south and processed plaited wood (within the property). Adjacent uses include residential and agricultural uses. Applicants have 20 existing parking spaces. There will be no increase in traffic. No additional advertisement signs are planned at this time. DSPS requires handicapped accessible parking to be 96 inches wide van and 96 inches wide automobile parking stalls with a 96 inch wide shared access aisle near the new building. The property is served by an existing private well. A holding tank was installed in 2013 to accommodate 1 floor drain and 20 employees. The proposed building is to be 100 ft north of the adjacent neighbors. Per Pierce County Code 240-30B(5), buildings in industrial districts located adjacent to railroad access are exempted from front, rear and side yards provided they do not violate any other provision of Chapter 240 Zoning Code. For security lightning, an existing light pole is near the plate

storage area. Additional lights may be constructed around the perimeter and inside the building. Applicants will need approval from DSPS, which staff received a copy of their plans and approval, today. The applicants should also contact the Town Building Inspector to obtain any necessary town building permits, if required.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the LMC consider including the following conditions in any plan approval.

1. Applicants shall submit DSPS approved building plans and obtain a Pierce County Land Use Permit for the industrial accessory structures for a \$300 fee.
2. Applicant shall comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Todd Dolan, Gilman Building Inspector, Department of Safety & Professional Services (DSPS), etc.).

Sanden moved to approve the site plan review for an accessory structure for Schmitt Timber Corporation with conditions #1 - #2, striking the reference to DSPS in condition #1/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there is one request and that is for Jim Kleinhans to attend the WOWRA Conference on January 31st and February 1st in Stevens Point. The only costs would be attendance and mileage because he is would be staying with a friend. Ross moved to approve attendance at the WOWRA Conference for Jim Kleinhans /Aubart seconded. All in favor. Passed.

Departmental Update and Future Agenda Items

MIDIOWA Construction Certified Survey Map (CSM) approval. They are on the Land Conservation Committee's agenda for tomorrow.

Motion to adjourn at 6:09pm by Aubart/Sanden seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, November 6, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 20th, Dec 4th & 18th (if necessary) all in 2013.

Approve Minutes: **Sanden moved to approve the October 16, 2013 LMC minutes/Ross seconded. All in favor. Passed.**

Discuss take action on a request for renewal and potential modification of a suspended conditional use permit for Rudy & Cathy Jungwirth (Valley Vineyard), located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Mr. Jungwirth forward:

Staff Report – Brad Roy: On October 16, 2013, the LMC suspended the applicants CUP until November 6, or until such time as a DNR and /or DSPS approved (as applicable) Waste Stream Management Plan was developed and implemented. At the October 16 meeting, the applicant suggested that by-product waste and liquid waste from the winery would be placed into a sealed container and hauled offsite by P.I.G. waste haulers or that the liquid waste would be land-applied. However, a formal plan containing sufficient detail was not submitted and numerous questions regarding implementation were unanswered. The applicant has been working with a local plumber regarding the development of a Waste Stream Management Plan and has made modifications to the waste management strategies that were described on October 16. A plan was submitted that describes:

- The production process
- Estimated volumes of liquid and by-product waste
- Waste containment measures
- Waste storage and removal measures
- Timeline for implementation

After the grapes are picked and crushed the by-product waste will be stored in containers onsite. P.I.G. will remove the waste from the site. This is compliant with DNR regulations. The wastewater generated from the wine-making process will run to a sump pump which will discharge to a 500 gallon polypropylene tank with an alarm. The liquid from the tank will be pumped out and disposed of by Darrell's Septic. This is compliant with DNR regulations. A Non-Domestic Wastewater Holding Tank Plan Approval Application has been filed with the DNR. We received DNR approval last week. Final installation is expected to be completed by no later than December 15, 2013. Roy stated that he spoke with the DNR today to confirm that this plan is compliant with all their regulations and doesn't need DSPS review or approval. Chairperson Fetzer asked if it is compliant and doesn't need DSPS approval. Roy stated that is correct. Prior to the October 16, 2013 meeting, staff contacted the Town of Oak Grove regarding this request. Chairperson stated that the town has concerns about the number of licensed

bartenders and when the applicant is hosting town approved events during the harvesting. At the October 16 meeting the LMC discussed these concerns and concluded that these issues could best be resolved by the Town of Oak Grove. The Town recently requested that a condition requiring that the applicant provide neighbors with notice of days where larger than typical attendance is anticipated to be added to the CUP. Through the Waste Stream Management Plan process it was determined that the sanitary system for winery guests needed additional review. The applicant has hired a plumber to make all necessary changes. The existing conditions are listed #1 - #15 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether Waste Stream Management Plan is acceptable and also consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and the character of the area, and if appropriate, renew the CUP with the following conditions (proposed new conditions are shown in *bold italics*):

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking with one space delineated for handicap parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The hours of operation shall be Wednesday through Sunday, 10am to 6pm.
7. Food served shall be incidental to wine tasting and must not require a food license, no "carry in" foods shall be allowed.
8. Activities outside the scope of this CUP (including catered food service) may be authorized by the Oak Grove Town Board consistent with the Town's Special Event Ordinance.
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. Applicant shall discontinue the use of the audio bird repellent.
11. ***This permit shall expire in one year, renewal may be granted by the LMC.***
12. ***Winery waste water and by-products shall be disposed of in a manner consistent with the DNR/DSPS approved Waste Stream Management Plan. Full implementation of Waste Stream Management Plan (including installation of winery holding tank) shall be completed prior to December 16, 2013.***
13. If a new owner wishes to continue the business with the established conditions prior to the permit expiration, a proposed business/operations plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.
14. Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).

Sanden asked about the Town's request for applicant to provide neighbors with information, are they referring to the days open or the harvesting or what specifically? Sarah Palodichuk, Oak Grove Chairperson, stated they spoke with Rudy about this and are talking about specific events: the Great River Road Wine Trail and harvesting. We just wanted communication from Rudy to his neighbors. I don't know that it needs to be a condition if he is happy to provide that information. Ross asked how the neighbors are going to get notified because he could see a problem there. Mr. Jungwirth stated he can supply a calendar if they want or he can email them or he can go through Oak Grove. Ross stated however you want to solve it, he can see it becoming a problem later if you don't decide now how you are going to communicate with the neighbors. Ms Palodichuk stated the neighborhood has an email list with a point person they can email it to and they can distribute it. Mr. Jungwirth stated the dates are the first week in June every year and the second week in November every year. Aubart asked where the holding tank is located. Mr. Jungwirth stated it had to be located inside because they didn't want it freezing. It's inside the winery. It's already in, the sump pump is installed the alarm is in, everything is complete. It needed a

15 inch opening for Darrell's Septic to pump it out and the alarm got installed yesterday. Aubart asked about the change from what we had talked about at last meeting. Mr. Jungwirth stated P.I.G. is still taking all the solid waste. Aubart stated that we talked about the liquid waste, they were going to take that too? Mr. Jungwirth stated at first they said they would be able to take that also because it was minimal. If we had 2,000 pounds of skins, there is maybe 40 gallons of water. They said that's not a problem but then I saw that their tanks aren't watertight. Aubart stated as we're sitting here tonight that holding tank is in place and functional? Mr. Jungwirth stated yes, for the liquids. After the last meeting, he decided since he isn't working, he would harvest 2,000 pounds of their additional grapes in the field. They did that and called PIG to pick that material up just to make sure it was OK with them to have grape skins and they had no issue. Holst asked if we can modify condition #12. Pichotta stated you could leave it and we'll go out and verify. Holst stated he thought all the grapes had to be harvested before freezing. Mr. Jungwirth stated they have one product out there that is meant for Ice Wine. They harvested it a little early. It's supposed to be left on until early December. He still has two rows out there that he might decide to make Ice Wine out of but you have to pick it at night, at exactly 23 degrees. And it's hard to get people to work in the dark at that temperature. Your red grapes all get harvested prior to frost. Chairperson Fetzer asked about the bartender issue. Ms Palodichuk stated that's been taken care of already. **Holst moved to renew the suspended CUP for Rudy Jungwirth, Valley Vineyard with conditions #1 - #14 and remind applicant that it is a conditional use permit and he has to abide by the conditions/Ross seconded.** Aubart asked how soon it could be verified. Roy stated he could inspect on Friday. Aubart stated based on past statements, he would like to see approval contingent on verification by staff. Holst stated with the second's permission he could modify his motion. Ross agreed. **Holst moved to renew the suspended CUP for Rudy Jungwirth, Valley Vineyard with conditions #1 - #14 after verification with staff that condition #12 has been satisfied/Ross agreed to the amendment. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI. Chairperson Fetzer invited Pete Krautkramer forward: Mr. Krautkramer stated he and Jim Small went to the Spring Lake Town meeting and they are in good standing there. This year they did very well on the dust and problems from before. Jim will go over the stormwater ponds.

Staff Report – Brad Roy: County Materials received a conditional use permit for Nonmetallic Mining in April 2007. Mining operations began in 2008. The Conditional Use Permit covers approximately 200 acres; County Materials intends to mine approximately 130 of those acres. Last year the hours of operations were expanded to 6AM to 6PM Monday through Friday, Saturday 8AM to noon. The number of allowable unreclaimed acres was also increased to 40. The permit was renewed in April of this year. Staff did not receive any complaints about the operation since the last renewal. Backup alarms have been changed to lessen noise impacts on neighboring properties. Condition #4 states, Storm water pond design shall be completed by a State certified engineer. The pond design shall be reviewed and approved by the Pierce County Land Conservation Department within 6 months. (The 6 month timeframe was added at the April 2013 renewal.) No plans have yet been submitted for review. The plan for stormwater management has changed from when the mine was first proposed and the original condition established. Due to this change, the applicant would prefer to not have engineered certified plans drawn up and would prefer to submit their own drawings for Land Conservation review and approval. Given that the mine appears to be internally drained staff agrees that engineered plans are likely not necessary. A condition requiring Land Conservation Department review and verification would appear to be sufficient to ensure proper function. The Town of Spring Lake was contacted regarding this status report. They did not identify any concerns about this renewal. The existing conditions #1 - #28 are listed in staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the

public health, safety, the public interest and character of the area. Staff further recommends that condition #4 be modified to read:

Storm water measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department within 1 month. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days.

Jim Small presented a drawing of the mine and stormwater ponds. He stated at their first meeting they had proposed to build silt ponds in the valley and that's where that condition came from. By the second meeting they decided to add a fines recovery system in so they didn't have to do that. In July 2007, he designed a pond that would hold a 50-year rain event. Holst stated we've had twelve of them since then and two 100-year storms since then. Small stated that it held up well. That pond is gone. They have a new pond and it's changing all the time. They are done blasting now. He plans to topo the map. He gives an updated map to Brad every year and they do have a new pond that replaced the original one so he should renew it with Brad and Jim Devlin at DNR. Right now that pond is only holding the water from the cornfield adjacent to the pit. All the water from the pit stays in the pit. Pete built a nice pond with an overflow channel. He hasn't surveyed it yet but will do that before it's covered with snow. Sanden asked how high above the water table they are. Mr. Small stated the Eau Galle is at 900 feet and the bottom of the Prairie Du Chen is 1045 feet. At the lowest point they would mine is still 60 feet above the water table. Mike Jacobson, Supervisor for Town of Spring Lake, stated it has been a quiet year. Pete delivered on what he promised. The Town didn't give them extended work hours but allowed them to prepare and do maintenance at the end of each day. They have mitigated the dust, their trucks are abiding and they are on the other truck drivers also. They worked with the Township this year on some activities that they needed. This is the best outcome they could have hoped for. Chairperson Fetzer commended Pete and Jim on the good job they have done mitigating impacts. The committee appreciates it. Mr. Krautkramer stated he is asking for the nonproduction hours for repairs to be from 6:00pm to 8:00pm. Holst asked if they wanted anytime on Saturdays. Mr. Krautkramer stated no.

Holst moved to approve modification of the conditional use permit for the CMC-Spring Valley, LLC (County Materials) for Nonmetallic Mining with conditions #1 - #28, amending condition #2 to read "Hours of operation shall be 6am to 6pm with nonproduction hours from 6pm to 8pm, Monday through Friday and 8am to noon on Saturday. Operation shall be closed on holidays." And amend condition #4 to state "Storm water measures shall be reviewed and internal drainage verified by the Pierce County Land Conservation Department within 1 month. If determined to not be internally drained, engineered plans shall be submitted for Land Conservation review within 90 days."/Ross seconded. All in favor. Passed.

Discuss take action on a request for renewal of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Dean and Cheryl DeGross forward: Mr. DeGross stated the nets were on backorder but they have received them now and they will be done by spring. They limited all the games to day games so it was very few night games. So the light issue is taken care of.

Staff Report – Brad Roy: The facility was deeded to the Ellsworth Baseball Association in 2007. The site contains a baseball field, volleyball courts, playground equipment and recently added two softball fields. Two soccer fields were removed to make room for the softball fields. The CUP was renewed in November 2011. It was modified in 2012 to address ongoing issues with neighboring properties. The property is zoned Rural Residential 20 and Commercial. Private Outdoor Recreational Uses are conditionally permitted in the Commercial District. Prior to 2012 Private Outdoor Recreational Uses were also conditionally permitted in the Rural Residential 20 District. In 2012 the Zoning Code was modified to make Private Outdoor Recreational Uses no longer a permitted use in the Rural Residential 20 District. Given that, this use is now considered to be a preexisting nonconforming use which can continue indefinitely as long as the use is not expanded. Any expansion of the use would need to be authorized by a new Conditional Use Permit. Last year the applicant submitted a plan to address impacts to neighboring

properties. That plan stated that netting would be installed above the fence on the third-base side this year to help contain foul balls. Netting would be installed along the first-base side in 2014. The applicant notified us that the netting has now been received. The plan also addressed lighting issues. It states that the number of night games will be limited and that shrouds are to be placed on some of the fixtures to better contain the light on the site. This will apparently be done as funds become available. It should be noted that the Ellsworth Baseball Association is under new management. It is unclear as to whether current management is aware of the plan. Conditions 12 and 13 were added at the modification in 2012. At this time, staff has not received notice of liability insurance and the hours of operation are not posted on the site. Staff has not received any complaints since the modification in 2012. Staff contacted the Town of Trenton regarding this renewal. Chairperson stated that he had not received any complaints and had no concerns about renewing the permit. The existing conditions are listed #1 - #14 in the staff report. **Staff Recommendation:** Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit for a Private Outdoor Recreational Use with the following conditions:

1. Land use must be established within 12 months of approval and notify the Land Management Department when the use is formally established to document compliance with current conditions.
2. A two-year permit renewal to verify compliance with permit conditions.
3. A land use permit shall be issued for any buildings located or constructed on the site.
4. On-premise signs located along the public roads shall be permitted by Pierce County.
5. Adequate portable satellite waste stations shall be provided, one additional satellite for the proposed softball fields.
6. Solid waste dumpsters or waste containers be located on site and maintained.
7. Operation and maintenance plan be submitted with a contact number for a local responsible party, to the Land Management Department.
8. Road access and driveway permits must be secured from the County Highway Dept. Property fence issues along the north and west property lines to be addressed.
9. Hours of operation shall be 8:00am to 10:15pm, Sunday through Thursday, 8:00am to 10:45pm, Friday and Saturday.
10. Alleviate lighting overflow problems for adjacent property owners.
11. A plan must be drawn up in conjunction with the neighboring property owners to address overflow lighting and foul ball issues by the conditional use permit renewal in September 2011.
12. Proof of adequate liability insurance shall be submitted.
13. Post a sign with hours of operation. Facility to be vacated by closing time.
14. *Netting shall be installed and operations conducted consistent with the January 3, 2012 letter to the Zoning Administrator.*
15. *Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).*

Sanden asked when you are anticipating the netting to be put into place, the liability insurance to be submitted and signs of operation to be posted? Mr. DeGross stated they have the insurance, he will talk to Tom about providing documentation. The netting is in storage until spring, it was backordered and they just got both of them. Sanden asked when the season starts. Mr. DeGross stated they started earlier last spring because it was the only field they could get open. The Skeeters start practicing in June. They won't have the boy's baseball next summer. The varsity girls will start when school ends. It will either be the end of May or in June. **Sanden moved to approve the renewal of the conditional use permit for a Private Outdoor Recreational Use for the Ellsworth Baseball Association modifying conditions #12, #13 & #14 to state "on or before June 1, 2014"/Ross seconded. All in favor. Passed.**

Discuss take action on a request for a rule exception to the requirement that an erosion control plan be submitted for a 4-Lot Major Certified Survey Map for MIDIOWA Construction Inc, owner, Pete Gartmann, agent, on property located in part of Gov Lot 3, Section 14, T26N, R20W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Kim Christiansen and Pete Gartmann forward: Staff Report – Andy Pichotta: MIDIOWA Construction Inc is asking for a rule exception to the requirement that an erosion control plan be completed for a 4-Lot Major Certified Survey Map (CSM). Mr. Christiansen is proposing to create 4 lots within a five-year period, which is considered a Major CSM. Pierce County Code (PCC) requires erosion control plans for the creation of Major CSM sites and states that accompanying information shall include erosion control plans. Staff walked the site on 10-28-2013 and verified that no erosion issues were identified on the proposed lots. Rule exceptions per PCC Subdivision of Land §237-30 states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

The proposed CSM is located in Section 14, Town of Oak Grove. Surrounding land use is agricultural, residential and woodland. The parcel is zoned General Rural Flexible 8. The following conditions must be present for a proposed land division to qualify for this type of rule exception (LMC policy).

- No roads are being constructed as part of the land division.
- No erosion problems are present on the property.
- There are no problems with stormwater or surface water flow on the subject property or that originate on the subject property.

The staff report states that no roads are being constructed as part of this proposed land division. There is a bit of confusion between the County and the Town regarding what the Town required. If you look at the proposed CSM, attachment to agenda #8, you will see that there is a detail for a private access point onto State Highway 35. It states drive detail not to scale, shared driveway dimensions 24 ft by 70 ft asphalt surface with 40 ft 18 in CMP and pipe endwalls. The reality is that it's not going to be a shared driveway but a private road built to Town road standards. We have learned that was a requirement that the Town placed on the approval of this CSM before they moved it along to us. Based on that, it appears a road is going to be created in conjunction with this and so it wouldn't appear to qualify for a rule exception. His understanding is that road is not a shared driveway but a private road being built to Town road standards. That would trigger a stormwater sediment erosion control plan. Sarah Palodichuk stated what Andy just stated sounds right to her. Gary Huppert stated the road as far as he understands is coming off of Highway 35 for the approach into the lots. Ms Palodichuk stated there is a 70 foot stub of road and then two driveways with two houses each. Pichotta asked if the 70 foot is entirely in the right-of-way. Is there to be a cul-de-sac? Mr. Christiansen stated no. Holst stated 70 feet would put it past right-of-way. Mr. Christiansen stated it will be 10 feet into the property, far enough for them to get in and turn. It's a shared driveway is what it is. Ms Palodichuk stated if it's a shared driveway, then it wasn't approved. The Town doesn't allow a driveway to have more than two houses on it. Mr. Christiansen stated it's confusing, the State would only allow them one access. There is no room for a road. If you want an erosion control plan, he can draw a silt fence on each side and we can call it an erosion control plan. Pichotta stated it's not clear to him if the Town is asking for a road design plans to be submitted. Mr. Christiansen stated no, because it's not a road. Pichotta stated what their code says that three or more houses served by a single access point be brought up to Town specified public or private road standards. Mr. Gartmann asked isn't that what it is to be brought up to their standard? That will be built to that standard that they have agreed to meet. Mr. Christiansen stated the width and length is all they asked for and that's why they have 24 ft

of pavement and showed the length. Pichotta stated you are building a road in conjunction with your land division. Mr. Christiansen stated if that's what you call it. Mr. Gartmann stated we are building an access to their standard. Mr. Christiansen stated they asked us not to call it a town road. Mr. Gartmann stated it cannot be a town road. Ms Palodichuk stated the Town asked that it be a private road with the designation with their assurance that they not ask for it to be taken over by the Town. Mr. Christiansen asked what Land Conservation would require for an erosion control plan besides to look at it and say there won't be any erosion because there is only 2,000 square feet at the most be disturbed on this thing. Pichotta stated you are asking us to substitute our judgment for Land Conservation Committee at this point. Mr. Gartmann asked if they can provide an erosion control plan before it's installed and make it subject to getting an erosion control plan. Mr. Christiansen stated they will drop this part of the variance and provide an erosion control plan with the conditions of the approval of the Certified Survey Map. Pichotta stated you are asking for us to approve the CSM contingent on your supplying of an erosion control plan in the future. He stated that it's a required submittal. Mr. Christiansen stated the unfortunate thing about this is that it has been on the table for quite some time. It's very confusing. Pichotta stated if this was a shared driveway it would qualify for a rule exception to the requirement of an erosion control plan. But based on what he is learning here, it's not a shared driveway, it's a private road to be built to public road standards. Chairperson Fetzer suggested that if we can't do one, we can't do the other. Mr. Gartmann asked what they do now. Pichotta stated the issue is, it was his understanding that what you submitted was what the Town signed off on. That is not what the Town signed off on - a shared driveway, they signed off on the inclusion of a private road built to public road standards and that is different than what this says and he did not learn that until just before the meeting. Mr. Christiansen stated that is not what they were told at the meeting either. Ms Palodichuk stated that is not true. They would have had to grant an exception. Holst asked if we have to re-advertise this. Pichotta stated no, it's not a public hearing, simply an agenda item. Holst stated you will need to meet with Land Conservation and do an erosion control plan and come back before this committee. Mr. Christiansen asked when our next meeting is. Pichotta and Holst stated in two weeks. Mr. Gartmann asked if they just get the plan together and present it at the next meeting. Pichotta stated it needs to be approved by the Land Conservation Committee. Holst stated it's just a miscommunication here, he is sorry it's an inconvenience but they will all be able to work through. Ruth Wood stated the next Land Conservation meeting is November 21, 2013 at 10:00am. Mr. Gartmann stated your meeting is the day before. Pichotta stated we will also meet the first week in December. Ms Palodichuk asked if they could approve it based on the submittal of it, if that is possible. The same way you said Rudy's needs to be verified to make sure that is present. Pichotta stated this issue a little more complicated and he is not comfortable making a snap decision to recommend approval with conditions. If it's possible to do that we can put it on for the next agenda. There is a good bit of process to sort through with a couple committees. Holst suggested we follow protocol, dot all the I's and cross all the t's and come back. That is what he is comfortable with. Ross stated to Sarah's point, we are dealing with another committee's opinion; Rudy's was not, just with the LMC. Pichotta stated either take no action or deny the request for a rule exception at this point or if the applicant just wants to withdraw it. We will help you jump through the hoops. This is unforeseen confusion relating to what the Town required. Mr. Gartmann stated that basically what they need to do is provide the plan and get it to Land Conservation on the 21st and back to this committee. They don't need to go back to the Town. Pichotta stated if the town is comfortable with that. Typically what you would submit is cross-sections associated with what your road plan is going to be and then as part of those road plans you would identify BMP's that you are going to use to ensure stormwater doesn't created erosion issues. Holst stated your silt fence either side of it. Chair Fetzer asked what action should be taken. Pichotta stated that it appears that no action on either agenda item is able to be made at this point. No action was taken. Applicant will submit a stormwater and sediment control plan for LCC review and then the issue will be back for LMC review.

Discuss take action on Travel/Training Requests. Pichotta stated there are none at this time.

Departmental Update and Future Agenda Items

Working today for a better tomorrow

Site plan review for Schmitt Timber in the Town of Gilman

Motion to adjourn at 6:53pm by Ross/Sanden seconded. All in favor. Motion carried.
Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, November 6, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 20 th , December 4 th & 18 th (if necessary), all in 2013.	Chair
3	Approve minutes of the October 16, 2013 Land Management Committee meeting.	Chair
4	Discuss take action on request for renewal and potential modification of a suspended conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
5	Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining in the General Rural District by CMC-Spring Valley, LLC (County Materials), owner on property located in the SE ¼ of the SE ¼ of Section 9 and the NE ¼ and the NW ¼ of the SE ¼ of Section 16, all in T27N, R15W, Town of Spring Lake, Pierce County, WI.	Roy
6	Discuss take action on a request for renewal of a conditional use permit for Ellsworth Baseball Association Inc, owners on property located in the NW ¼ of the NW ¼ of Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
7	Discuss take action on a request for a rule exception to the requirement that an erosion control plan be submitted for a 4-Lot Major Certified Survey Map for MIDIOWA Construction Inc, owner, Pete Gartmann, agent, on property located in part of Gov Lot 3, Section 14, T26N, R20W, Town of Oak Grove, Pierce County, Wisconsin.	Lund
8	Discuss take action on a request for approval of a 4-Lot Major Certified Survey Map for MIDIOWA Construction Inc, owner, Pete Gartmann, agent, on property located in part of Gov Lot 3, Section 14, T26N, R20W, Town of Oak Grove, Pierce County, Wisconsin.	Lund
9	Discuss take action on Travel/Training Requests	Pichotta
10	Future agenda items.	Pichotta
11	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(10/25/13)

MINUTES - Pierce County Land Management Committee Meeting, October 16, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: November 6th & 20th, Dec 4th & 18th (if necessary) all in 2013.

Approve Minutes: **Ross moved to approve the October 2, 2013 LMC minutes/Sanden seconded. All in favor. Passed.**

Discuss take action on a request for renewal and potential modification of a conditional use permit for Rudy & Cathy Jungwirth (Valley Vineyard), located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Fetzer invited Mr. Jungwirth forward: Mr. Jungwirth stated he doesn't have anything to add at this point.

Staff Report – Brad Roy: The applicants operate Valley Vineyard LTD, which first received a conditional use permit for a Farm and Home Based Business in 2008. Grapes are grown and wine is produced onsite. Guests can sample the wine and purchase bottles in a tasting room. On July 17, 2013, the LMC modified the CUP requiring the replacement of two dead screening trees and the development and implementation of a DNR and DSPS approved Waste Stream Management Plan. Deadlines to complete the conditions were also established. The applicant did replace the trees but failed to meet the established deadline and is still in the process of developing a Waste Stream Management Plan. The two dead screening trees along the driveway were replaced mid-September. Given the lack of precipitation in the month of August staff felt it reasonable to allow some flexibility on the timing of the planting of the trees. However, the applicant's failure to comply with the deadline does appear to reflect an emerging pattern of disregard for LMC required conditions. A certified plumber inspected the septic system and determined it to be in proper operating condition. A Waste Stream Management Plan compliant with DNR and DSPS regulations has been developed, however, not implemented at this time. Staff has spoken with the DNR staff about the status of this issue. At the time of this report they had indicated the initial applications have been submitted but additional information is needed. The by-product (stems and skins) can be land applied in appropriate locations or used for animal feed. The waste-water can be land applied on a vegetated area or distributed to the septic system. On October 15th we received information from the DNR and Mr. Jungwirth that all by-product and the water will be removed by a hauler. As required by LMC policy, Land Management Staff notified the applicant on October 9 that he was not in compliance with his conditional use permit and that unless outstanding compliance issues are rectified immediately, that daily citations would be issued. Staff issued a citation on October 11. A Waste Stream Management Plan has been developed but implementation has not yet occurred. At this point staff recommends the LMC suspend the applicants CUP until such time as a compliant plan is submitted and implemented. The Town of Oak Grove authorized the applicant to host an event onsite, consistent with their Special Events Ordinance, where the patrons prepared their own food. This event occurred at the same time as harvesting

activities where the applicant hosts a large number of volunteers to pick grapes. A lunch is provided for the volunteers. Staff contacted the Town of Oak Grove Chairperson regarding this request. The chair stated that the town has two concerns: The first concern is the number of “licensed bartenders” for the business and whether a licensed bartender should always be present on the site during operation. Currently only Mr. Jungwirth has a bartender license. Staff has reviewed the State of Wisconsin regulations regarding bartender’s licenses. It appears to require that each establishment have a licensed bartender, but does not appear to require that a licensed bartender always be present. Ms. Palodichuk noted that it is in the Town’s Liquor License Ordinance that requires a licensed bartender to always be present. The other concern is when the applicant hosts events on the same day as the harvest. With the volunteer grape pickers being provided a lunch, there is the potential to have patrons of the business served food in violation of the CUP. Ms. Palodichuk believes that a condition restricting events on the day of the harvest or separating the business patrons and the volunteers may be appropriate. The existing conditions are listed #1 through #15.

Staff Recommendation: Due to the fact that a Waste Stream Management Plan has yet to be fully implemented, staff recommends the Land Management Committee suspend the applicants conditional use permit. If this action is necessary, staff further recommends that this issue be placed on a November LMC agenda and if compliance has not been achieved at that point, that revocation of the applicants CUP be considered. If the LMC choses to renew the CUP we are recommending the following conditions #1 - #14 (proposed new conditions are in ***bold italics***), the only changes were the removal of the condition regarding the replacement of trees and modifying #11 to state this permit shall expire in one year, renewal may be granted by the LMC and #12 Winery waste water and by-products shall be disposed of in a matter consistent with the DNR/DSPS approved Waste Stream Management Plan:

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking with one space delineated for handicap parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The hours of operation shall be Wednesday through Sunday, 10am to 6pm.
7. Food served shall be incidental to wine tasting and must not require a food license, no “carry in” foods shall be allowed.
8. Activities outside the scope of this CUP (including catered food service may be authorized by the Oak Grove Town Board consistent with the Town’s Special Event Ordinance).
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. Applicant shall discontinue the use of the audio bird repellent.
11. ***This permit shall expire in one year, renewal may be granted by the LMC.***
12. ***Winery waste water and by-products shall be disposed of in a manner consistent with the DNR/DSPS approved Waste Stream Management Plan.***
13. If a new owner wishes to continue the business with the established conditions prior to the permit expiration, a proposed business/operations plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.
14. Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I).

Ross asked Mr. Jungwirth where he is with compliance. Mr. Jungwirth stated the compliance issue would have been solved on the 3rd, 4th or the 7th but because Brad Roy did not get back to his phone calls, it didn’t happen until yesterday. That was when Peter Skorseth from the DNR notified Brad and Land Management that no permits were required because we are getting rid of our product through PIG, the garbage company. They have a sealed container that they can haul it away so the last report he got, and

Brad has a copy of that, came in at 9:27am that says no additional requirements are required from the DNR. No permits are required because PIG is going to be taking that product. As far as the comment that he is not living up to Land Management's plan, after the last meeting he went to the DNR on the 21st of July. Mr. Skorseth told him that because of the size of his operation and what they do because of the amount of the water they use, no permits would be required. He let Brad know that and he did not get an answer back. All he did find out was that he was supposed to have an inspection of his plumbing system which they did have and he has it with him. He got a letter from Brad requesting that he have it inspected and he sent him a list of all the people in the County that can do the inspections. One of them was Marko and another was Wang. He deals with both those people because Marko does his pumping every three years. When he submitted the Marko one; that was submitted in early August, Brad got back to him on September 13th and told him it can't be Marko, it has to be a certified plumber. So then he had Wang do it. Actually, both were on the report. From that point, Brad said he did have to have some kind of permit in talking with Peter from DNR. Rudy stated that when he talked to Mr. Skorseth the last time, he said that if Land Management still insists that he have a permit, he would come out and inspect and verify. So he did come out and inspect. It was 3rd of October when Mr. Skorseth did the inspection. They went through everything and some of the options for the water were to either put it in his grass or put it in the septic system. So he left a message for Brad to find out if that is OK. He did not get an answer back and finally Brad stopped out on the 8th and said that he was in violation. Mr. Jungwirth stated all you had to do was get back to me regarding the water and we could have been in compliance. Mr. Jungwirth stated that Brad's comment was that it isn't up to us to decide what you want to do. You have to submit it and we will tell you if it's OK. If you read the DNR's report, he said I needed to talk to Land Management to verify what they wanted so he could write up a report. He stated that the report made it sound like he is not trying to comply with Land Management but he has been working on it all summer. He doesn't know where the big issue is coming from; it was all very simple; unfortunately Land Management does not give suggestions as to what you can do with your waste product. Now that they know, because he is the first winery here, now they can at least suggest that to the next person. PIG was more than happy to bring out a sealed container to put the product in. We could even put in the water we use if we wish too. We are putting in a containment system in the back of the winery so that no water can run away and it will be pumped into a tank and either put in the waste management or in the yard. We can put the water in either place. DNR did not have an issue with putting it in the yard because it's just water, no big deal. Kleinhans asked Mr. Jungwirth if anything is getting run into the septic system. Mr. Jungwirth stated no, it's all going either into the containment system or it's going to go into the yard. They had no problem with putting it in the grass. He asked if there was any problem with putting it in the woods and they said it's too steep a slope so they didn't want him to let it run in the woods. So he said fine, they can solve that issue so they are just going to put it in the yard. They are going to pump it into a tank every time they use it. The amount of equipment they use; they have a crusher, de-stemmer and a press. The total water volume in a five week period could be for each use, 15 gallons. You just spray off the juice that's on the tank. As far as what type of system, the DNR is still leaving that up to him. They can either use a vacuum system to suck up the water in the contained area or they can use a sump pump and haul it out to the yard. Both issues would be hauled out to the yard or put in the tank from PIG. Either one, the DNR is agreeable with; he just needs to let them know. They didn't do any processing this year because they sold their grapes to Dancing Dragonfly up in St. Croix Falls. All they have been doing is moving their grapes around and hauling them up. The DNR said if they aren't doing any processing, he doesn't need permits period. But he would need for next year because they will be processing next year. As far as the trees, at the last meeting when they were discussing the trees and he said they were 21 - 22 foot trees, Jeff Holst did mention that he didn't know anything about 21 - 22 foot trees as to whether that is a good time to plant or not. So he appreciates the committee waiting because he didn't want to put them in too early. Holst stated that he has since found out any time is a good time; you just have to take care of them. Mr. Jungwirth stated it takes a lot of water when it's dry. Holst stated you can plant trees anytime the ground isn't frozen; you just have to take care of them. Holst stated he doesn't appreciate Mr. Jungwirth chastising staff in public; if you have a problem with staff, let people know on this committee. Mr.

Jungwirth stated if he had known that was the case, he would have done that. He didn't think they wanted to talk to him until the meeting. Now that he knows that, he appreciates it. Holst stated he is not going to get into a public debate whether or not Brad received your messages or didn't. Ross concurred. Mr. Jungwirth brought the issue up because you are stating that he is not complying and appears to be fighting the system and he was not. I have been in contact with people all summer. If it's going to be put in print he just wanted to answer it, that's all. Sanden asked staff if anyone has heard from the DNR. Pichotta stated we were copied in on an email chain and it does appear that the DNR is satisfied. It says that they have a Valley Vineyard file and no additional information is necessary. They did request some additional information. Pichotta stated one of the things the applicant said is that no permit is required. It clearly says in this email that no sanitary permit is required. Are you suggesting that you don't actually need a waste management strategy? Mr. Jungwirth stated not as long as it's put in the dumpster. According to Peter Skorseth, PIG has a permit so he doesn't have to worry about having a permit. Pichotta stated that actually is referring to a sanitary permit; which is not the same as a Waste Stream Management Plan. You are still required to do a Waste Stream Management Plan. Correct? Mr. Jungwirth stated correct, yes and that's going to be in the letter that he is going to be using the containment system so the water can't go anywhere. Sanden asked if that gets signed off by the DNR? Pichotta stated it certainly does, the DNR didn't submit to us any kind of formal approval, however based on the emails were copied on, they appear to be satisfied. Pichotta asked Mr. Jungwirth about his Facebook page; it says that you are going to be making lambrusco and chardonnay, is that accurate? Mr. Jungwirth stated that is coming from Dancing Dragonfly. They process it for us and we are going to be having that in stock. They have purchased all the grapes and they wanted to make chardonnay out of it and he said he wants 100 gallons back. Pichotta stated that the facebook page said you retained a couple of rows and the way it was phrased led him to believe that you were making the wine. Mr. Jungwirth stated those rows are still there; they have not harvested them. Pichotta asked and the lambrusco also? Mr. Jungwirth stated they already have that to Dancing Dragonfly. That was taken up. Pichotta noted that if that was the case it was phrased interestingly; it was phrased in the first person so he assumed that Mr. Jungwirth was making it. Mr. Jungwirth stated no. Aubart asked if there is an additional email besides the one that they got with the staff report? Pichotta stated yes. Aubart stated this one talks about the waste water being pumped out on the land or on an approved site. Apparently there is an approved site now? Pichotta stated yes, PIG apparently. Holst stated its Mr. Jungwirth's yard. Aubart asked if that has been approved. Mr. Jungwirth stated yes that was. That was the choices. He could either go through PIG or put the water in the yard. Aubart asked if we have a Waste Stream Management Plan. Pichotta stated we don't have a copy of the plan, he had been expecting that we would be provided a narrative that fully explains how it's going to be done. Aubart stated then we don't have a copy of a plan. What we asked for in the condition was "shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations. Verification of compliance shall be submitted to the Land Management Department by no later than October 7, 2013. So we haven't had any verification submitted. Pichotta, We do have an email that suggests that the DNR is OK with the plan that has been submitted. However, we haven't seen the actual plan itself. Mr. Jungwirth said it does state that on October 15th by the DNR, would you like to see a copy of that? Aubart stated yes he would. Ross asked how he attempted to get ahold of Mr. Roy. Was this always by phone or email? Mr. Jungwirth stated unfortunately it was by phone and he will use emails from now on. Chairperson Fetzer stated what that is saying is that the plan is acceptable but we don't have a copy of it? Mr. Jungwirth stated Peter Skorseth has a plan. Pichotta asked if Mr. Jungwirth submitted a plan to him. Mr. Jungwirth stated he just told me to send him what we were doing and he would fill it out. There is no permit required because you just need to contain the water and then haul it out to the front yard or put it in a dumpster and PIG didn't have a problem either way because their container they would supply us with would be sealed. Holst stated that we're basically a week late with getting a plan. Mr. Jungwirth stated he would have had it last week. Mr. Jungwirth stated he would not have been late if he had gotten a call back from Mr. Roy. Pichotta asked Mr. Jungwirth what the question was that he was going to ask Mr. Roy, exactly. Mr. Jungwirth stated the question was regarding whether or not they could use their septic system for the average of 365 gallons of water per year. He did not get an answer on it

until the 9th when he was told by Mr. Roy that we don't set the plan, you do and we will approve it or disapprove it. If you read the DNR report which is in the staff report, it says that you need to be working with Land Management to find out what is agreeable with Land Management before the DNR could set up a plan. Mr. Roy told me that if I use the septic system, I have to have a septic system inspection again. I need to go through all kinds of reports; I said it's easier to put it in the grass, because that's compliant with DNR. So that's what he decided to do. Pichotta stated #3 in the email that is contained in the staff report states: "The processing equipment can be washed in an area tributary to a trench drain that will catch the wash water and distribute it to a tank/sump/wet well where it can be pumped out and into the current on-site sewerage system. Valley Vineyard will have to work with the DNR, Pierce County Land Management and Zoning Department and the Department of Safety and Professional Services for approval to do this." That does not mean we have to approve your use of the septic system. It means that if you are going to put in place a catch system; that we have to potentially issue a permit for it. It doesn't mean we have to sign off on the concept of it. Did you also call DSPS about the same thing? Mr. Jungwirth stated he didn't know who DSPS is. Pichotta stated Department of Safety and Professional Services. Mr. Jungwirth stated he thought the DNR is all he needed. Pichotta stated that the email refers to the fact that if you were to pursue a particular strategy it would potentially require that Land Management Department to be involved and issue a permit for it. Mr. Jungwirth stated that's if I was going to put it in the septic system probably. Pichotta stated that's if you were going to put in a trench drain to catch the lost water and distribute it to a tank/sump/wet well. That's if you put in a separate septic system. It's a reference to the fact that the County issues permits for on-site septic systems. Mr. Jungwirth stated once they found out the cost factor of that, they decided they would just put it in the grass. Pichotta noted that is not exactly how you presented what that says. Roy stated he is confused about the applicant talking about putting it in the grass when the email talks about all waste water being hauled off-site by PIG. Mr. Jungwirth stated right, they gave him two options; either put it in the grass or have PIG haul it. PIG said they would take it. The only reason he mentioned the grass is because today, Peter said he thought about it last night and about 9:30pm it came to him that it would probably be a lot easier just putting it in your grass. Roy stated through his discussions with Pete Skorseth; if you are going to land apply it, there is a land application permit from the DNR. Mr. Jungwirth stated no, there is not. Ross stated we are going to want to know that for sure. The other thing is, that he was hoping the committee would see some good communication going on between you and Land Management and he isn't going to take your word that you tried to call. He knows that our staff does a very good job here. So he isn't comfortable with this idea that we wait up until the last minute mentality and expect the committee to accept that. Mr. Jungwirth stated he tried all the way through September and you would have to talk to Pete Skorseth that he was out of town and when he did return he notified Mr. Skorseth that they are still wanting a type of report and that is when he said he was in meetings all week and that is how it ended up last week, Thursday, the 3rd. It took time and he tried to communicate but unfortunately the communication fell through. Brad did admit that he got the information that Rudy sent to him on the 7th. But he did not get a call back and Peter was waiting for a call back so he could finish the report. Had he gotten a call back he would have been in compliance. Holst stated that generally when he wants to get ahold of someone, he makes numerous calls or gets in his car and drives to wherever he has to go. If it's important to the life-blood of my operation, I would go and get it done. He strongly suggests to Mr. Jungwirth that if he has something like this to get done that he get it done and not try to blame other people. Mr. Jungwirth stated he agrees with Jeff. He has no problem. Aubart stated he has issues with this plan, what you gave them is that PIG is going to haul this off in a sealed container and now, maybe his hearing is bad but five minutes ago you said you are going to dump it on the lawn. Mr. Jungwirth stated he has the option of putting the water on the grass or hauling it away. Aubart stated that is not what it says right here. Clearly under condition #14 of the recommendations from the last meeting, we talked about "develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations". Clearly if you don't know what DSPS is then I think I would figure that out to see if you're in compliance with that. It says "Verification of compliance shall be submitted to Land Management Department no later than October 7, 2013. This letter is obviously from yesterday. Mr. Jungwirth stated correct. Aubart noted that you're not even going

to do what he is talking about in this letter. Mr. Jungwirth stated that he asked Brad who he was supposed to call after the last meeting because he did not know and Brad said you need to talk to the DNR in Baldwin and he gave him Peter's name. Ross stated to Mr. Jungwirth that the onus is also on you, to have taken a look at what was submitted here. As Jon stated, a plan that is compliant with DNR and DSPS. Mr. Jungwirth stated DSPS was never brought up. Ross, Aubart and Sanden all stated it was brought up right here in the conditions from the last meeting. Mr. Jungwirth stated he thought they were all the same. Holst stated it was brought up in this email dated October 7th under #3. Holst stated he can understand why a person wouldn't know but he can also understand why a person in Mr. Jungwirth's situation would get to know who they are. Sanden asked staff regarding the request by the Town of Oak Grove, as far as prohibiting any events during the day of harvest, would that be best applied here as a condition or is that something the Town of Oak Grove would deal with. Pichotta stated it seems that would appear to be simpler to address on their end. They would just simply ask the question, is anything else planned that day that involves food and if there is, perhaps don't issue approval for that day. So they do have the ability to address that on their end. Sanden asked on the other hand, given the history and things falling through the cracks or not totally understood, it wouldn't hurt us to put it here as well. Holst stated then we begin to be in the position of enforcing their ordinances and he doesn't know if we want to get into that position. Chairperson Fetzer stated it's the same with the bartender issue. Holst stated the Towns have the ability to regulate that better than we do. Pichotta stated that it is his understanding that this issue is on an upcoming Oak Grove agenda. Aubart asked how many volunteers do you have help harvest the grapes? Mr. Jungwirth stated it will depend; they try to keep it to 24 in the morning and 24 in the afternoon because it doesn't work if they have more than 24. They had two days that they harvested and they had only a morning on the one day and a morning and afternoon on the other. Holst stated he can see where it would be interesting for people to come and watch you harvest grapes and beneficial to your operation. He can also see why you would have to feed them a little lunch to get them to come out. He has no problem with any of those things. Chairperson Fetzer stated he doesn't see it as being any different than the old threshing bee. They do that when they are harvesting crops, they feed people. Holst stated they do also. Pichotta asked Mr. Jungwirth if it is his intention to implement this plan and is there anything that is required to be put on the ground or in the ground to catch your wash water? Mr. Jungwirth stated they have a big twelve foot apron on the back of the winery. So when they are working back there, his plan is to put down these long retaining blocks with a curve on one end and concave on the other so you can form them. It will cover a 12 ft by 16 ft area where their two pieces of equipment will set. So after they clean the equipment they can rinse it and dispose of the water. Pichotta asked if the details are contained in the formal Waste Stream Management Plan? Mr. Jungwirth stated that Peter looked at it and saw where they should put it and he gave him the option to either do aluminum or concrete to hold the water and so there is nothing actually drawn. Pichotta asked if Mr. Jungwirth was stating that all Mr. Skorseth from the DNR has given you is some verbal instruction as to what you need to do to comply? Mr. Jungwirth stated correct. And he said as long as he does those things he won't have to doing anything until next year now. They only harvest between the last week in August through the second or third week in September. This year was later. They shipped everything up to Dancing Dragonfly. Holst asked if they were completely harvested. Mr. Jungwirth stated he has the two rows of chardonnay that he has to get up yet. Holst asked if all you have to do is pick them and haul them up there. Mr. Jungwirth stated yes that is all he does. They even put 27,000 pounds in cold storage because they didn't have capacity to take care of their 63,000 pounds. So it's in a freezer in Hammond. Pichotta asked if Mr. Jungwirth could get a copy of the Waste Stream Management Plan from the DNR and provide us with a copy of it. Mr. Jungwirth stated he said there was nothing required. So Mr. Jungwirth said Pichotta should call him. Pichotta suggested that what Mr. Skorseth said was that there was no additional information required and said that there is no septic permits required. A Waste Stream Management Plan is required. Mr. Jungwirth stated there are no permits required as long as he does it the way he mentioned. Pichotta stated if this is according to the plan, we want a copy of the plan. Mr. Jungwirth stated he can see if he can draw something up. Pichotta stated our expectation was that on or before October 7th, we were going to get a copy of a plan that detailed how you were going to handle solid waste disposal and liquid waste disposal, as well as a

description of what you had done to prepare your property in order to implement the plan. That was our expectation of what we were going to receive. Holst stated and compliance by October 7th, that means it had to be implemented. Mr. Jungwirth stated that is why he went to Peter on the 21st of July. He went and started way early and Mr. Skorseth told him with the size of their operation and what they do, there wouldn't be any permits required. Pichotta asked permits or plans? Mr. Jungwirth stated permits, if Land Management insists they want a permit, he can come out and inspect it. Pichotta stated we didn't want a permit, we wanted a Waste Stream Management Plan. Those aren't interchangeable terms. Mr. Jungwirth stated that is what he writes up. Ross stated that is what we wanted. We want to be clear on that, we wanted a plan. Aubart stated he doesn't think it's up to the DNR to write it. It's your plan, they are just going to approve it. Mr. Jungwirth stated he is just going by what Peter told him. Saying if no permits are required, why would you want a plan? Aubart stated because we are asking for it. It's right here. Mr. Jungwirth stated if you want something, I can certainly send it to you but he is just going by what the DNR told him. Holst stated they have to go by what #15 was in our previous condition. Sanden stated and to be clear what are we expecting from the DSPS so we can get it on the record. Pichotta stated that there is the potential for a number of different management strategies for the waste. Depending on which direction Rudy chose, it would either be approved by the Department of Safety and Professional Services (DSPS) or it would be approved by the DNR. Depending on how he approached it. When Brad said that it's not up to us to choose how you deal with your Waste Stream, that's what he was referring too. It's not up to us to say here is how we want you to do it. We don't care how you do it, as long as it's compliant with either the DNR or Department of Safety and Professional Services. Ross said, and we need to see a plan that speaks to that. Pichotta stated yes. Mr. Jungwirth stated the plan was it's going to PIG. Holst stated the key word here is "and" not or. The DNR and DSPS, you got signed off by one but not by the other. Mr. Jungwirth asked where they are located. Kleinhans stated LaCrosse. Mr. Jungwirth stated he agrees with Mr. Holst and there will be communication next time, trust him. Ross stated he is not of the mindset that he is willing to terminate the CUP entirely. **Ross moved to suspend the CUP for Valley Vineyard until the November 6 LMC meeting or until we are provided with a DNR and DSPS compliant Waste Stream Management Plan that has been implemented/Sanden seconded.** To be clear please have the Waste Stream Management Plan completed and provided to our staff prior to the meeting date. Mr. Jungwirth stated he could do that. **All in favor. Passed.** Kleinhans handed Mr. Jungwirth contact information for Department of Safety and Professional Services (DSPS).

Discuss take action on a request for a renewal of a conditional use permit for Filling and Grading to improve an existing boat ramp in the Shoreland/Floodplain District, pursuant to Pierce County Code, Chapter 240-41E, by Pierce County Parks, owner on property located in part of Government Lot 5 in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI. Staff Report – Jim Kleinhans:

Last year, Scott Schoepp from the County Parks Department applied for a conditional use permit to rebuild the boat launch down on Trenton Island. Cedar Corporation was acting as the agent for the procedure. There were a couple issues that needed to be resolved, one was a grant to do the work and another was a Chapter 30 permit to place the boat ramp, loading docks and the riprap of the bed of the Mississippi River. Jim provided a copy of the Chapter 30 permit that was obtained this year, April 4th. There were some other issues, near shore parking would include lighting and we had some issues with wattage and replacement tree planting. The Corp of Engineers permit was approved about the same time as the DNR approved their permit on April 4th. Things have been moving along but they didn't get to the project in this year waiting for the other approvals so Scott called and asked that the committee consider extending the conditional use permit for another year and that you extend the renewal until December 1, 2014 so that they can completely get the bids out and get it constructed.

Staff Recommendation: Staff recommends the Land Management Committee determine whether any additions or modifications to established conditions are necessary to mitigate any impact on the public health, safety, the public interest and character of the area and renew this conditional use permit with the original conditions modifying condition #7 to state that the project shall be completed by December 1, 2014. **Holst moved to approve renewal of the conditional use permit for the Pierce County Parks**

Department for Filling and Grading in the Shoreland/Floodplain District until December 1, 2014/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are none at this time.

Departmental Update and Future Agenda Items

County Materials status report in the town of Spring Lake

Conditional use permit renewal for Ellsworth Baseball Association

Valley Vineyard will be back before the committee

Motion to adjourn at 6:53pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 16, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: November 6 th & 20 th , December 4 th & 18 th (if necessary), all in 2013.	Chair
3	Approve minutes of the October 2, 2013 Land Management Committee meeting.	Chair
4	Discuss take action on a request for renewal and potential modification of a conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
5	Discuss take action on a request for renewal of a conditional use permit for Filling and Grading to improve an existing boat ramp, in the Shoreland/Floodplain District, pursuant to Pierce County Code, Chapter 240-41E, by Pierce County Parks, owner on property located in part of Government Lot 5 in Section 3, T24N, R18W, Town of Trenton, Pierce County, WI	Kleinhans
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(10/04/13)

MINUTES - Pierce County Land Management Committee Meeting, October 2, 2013

Present: Jim Ross, Eric Sanden and Dale Auckland

Absent: Jon Aubart, Joe Fetzer and Jeff Holst

Others: Andy Pichotta, Jim Kleinhans and Shari Hartung

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: October 16th, November 6th & 20th, Dec 4th & 18th (if necessary) all in 2013.

Approve Minutes: **Sanden moved to approve the September 4, 2013 LMC minutes/Auckland seconded. All in favor. Passed. Sanden moved to approve the October 25, 2012 Joint Land Management Committee and Land Conservation minutes amending the bolded wording to strike the redundant phrase “adoption of the”/Auckland seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a map amendment (rezone) from General Rural District to Commercial District for City of Red Wing, owner, on approximately 4.5 acres in part of the NE ¼ of the SW ¼ and the NW ¼ of the SE ¼ of Section 6, T24N, R17W, Town of Isabelle, Pierce County, WI. Chairperson Ross invited Rick Moskwa forward: Mr. Moskwa, Public Works Director for the City of Red Wing, stated they are asking to rezone a portion of the airport, if you look at the map, near the new airport pad was built about seven years ago. The pad was federally funded. It has stipulations that say anything that goes around it has to meet the definition of the funding and one of the definitions is that it cannot be a privately held operation. If anyone operates off pad it has to be for the public. So it has to serve the better-meant of the public and it has to be public/aircraft related. It has to be an aviation business open to the public. When it was built, no zoning was attached. It was just what the airport was zoned at that time because we didn't know what was going to be developed there. When we got to the process and the owner that we are doing the rezone for, Wes Converse is here in attendance. We found out after talking to staff, replacing a hangar of about 100 feet by 120 feet and asking for an office with well and septic. When talking with staff, talking about it in principal and design, after some concerns, the office part of this structure is separate from the hangar and doesn't fit that zoning requirement the way it should. They sat down with Mr. Converse and then staff told them what the process is. So they went before the Town of Isabelle Planning and they approved it then they went before the Isabelle Town Board and they approved this. This is their next step. Ross asked if part of the pad wasn't redone recently. Mr. Moskwa stated they had a drainage problem. Last year they brought in three and a half feet of fill to bring it up to buildable level. Ross stated he thought there was concrete work done recently. Mr. Moskwa stated that was for the taxi ways and runways, resurfacing. Ross asked on the map, the U shape, why they aren't using that area. Mr. Moskwa stated that is scheduled for another piece of concrete, the L shape area is for additional hangars for future expansion. Ross asked if Mr. Converse's hangar will go in an area indicated on the map. Mr. Moskwa stated there is room for two hangars there; he will be on the inside. It is their plans to have future development, but it's been there seven years and this is the first expansion. It's kind of a slow go. Ross stated his only other concern is on 151st Ave, you are saying no additional businesses could operate off of that road, you couldn't build anything other than

aircraft use. Mr. Moskwa stated the businesses surrounding the area should be aviation related. We wouldn't be able to build a hangar there but towards Meyer's that's all private hangars.

Staff Report – Jim Kleinhans: The City of Red Wing has applied for this rezone to move part of their facility into commercial to accommodate, primarily, Mr. Converse's business. The 4.5 acre parcel is downsized quite a bit from what was originally requested. At this point, like Rick said, it's a little slow so maybe this would accommodate their needs going into the immediate future. What we discussed with Rick and Mr. Converse is that we could permit hangars there but no offices based on the allowable uses in the Zoning Code so that is why the request is for the Commercial district. In the staff report, the Purpose and Intent of Zoning Code of what the parcel is zoned right now and the Commercial District which does allow for some retail and services. Nearby land uses include commercial, agriculture and residential. Construction in Commercial Districts requires site plan review by the Land Management Committee so as these proposals come forward, you will be dealing with things under site plan review like surface water drainage, signage, lighting, parking, things like that. The MN Department of Transportation is currently reviewing the zoning ordinance that the Joint Airport Zoning Board put together. In the future, if this request goes through, we will notify the Department of Transportation in Minnesota that there is a change. He noted that he had sent out the staff report to all of the Joint Airport Zoning Board members for their information. The Town of Isabelle reviewed this request before it came to this committee and the Town Board recommended approval of this request for a map amendment based on consistency with their Comprehensive Land Use Plan. One item we always list for rezones is the value of the land for agriculture. Soil information is provided in the staff report. This request does not convert farm land which is consistent with provisions of the Town of Isabelle Comprehensive Land Use Plan.

Staff Recommendation: Given that the Isabelle Town Board has determined this request to rezone 4.7 acres from General Rural to Commercial to be consistent with their comprehensive plan, staff recommends the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Ross opened the hearing to the public. Ron Bartels, Town of Isabelle supervisor, stated that the town supports the rezone and Wes Converse's business. He feels we need to get business in the County and do everything we can to keep Wes's business in the County. Mr. Converse has 50 employees. It's a nice operation, no controversy. **Public hearing closed.** Ross asked what the problem is with the office part. Kleinhans stated that in the Table of Uses there are certain land uses that are allowed in different districts, some with permitted uses, some with conditional uses. Offices are listed as permitted under Commercial or Light Industrial Zoning Districts. When the office proposal came in, he stated he couldn't accommodate their needs and would need to talk about adjusting the zoning or doing something different and that's how they came to this map amendment. If these are going to be hangars and facilities that are supporting the public or the public has use of them, the commercial district seem to fit because they would provide service to the general populous of the County and the surrounding area. Auckland stated the key word for him is "it fits". He believes it will work.

Sanden moved to approve the rezone request from General Rural to Commercial for the City of Red Wing and forward a recommendation to the County Board of Supervisors/Auckland seconded/All in favor. Passed.

Discuss take action on a request for a rule exception to allow for an extension of Preliminary Plat approval on Whispering Pines for Jeffrey & Diana Oskey and Patina Properties LLC, owners on property located in the SE ¼ of the NE ¼, the fractional NE ¼ of the NE ¼ and the fractional NW ¼ of the NE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Ross invited Joyce Anderson forward: Ms Anderson stated she and her sister have this land development they decided to pursue. If you look at the last page of the staff report, you will see that they spent a lot of time with Trenton Township to get this development to this stage. We partnered with Jeff & Diana Oskey to do this because Trenton wanted the road going through their property to match up with 163rd already in Hager Heights. Then the economy tanked and the road would be quite an investment. They decided when the lots in the Hager Heights development start selling then they would build the road. That hasn't

happened. There are still five lots available across the street. They are asking for another extension to put the road in. They have done all the things through the State and Township. They even had the State come out and look for Indian artifacts. If they don't get this extension, they probably won't pursue the project.

Staff Report – Andy Pichotta: This is a request for a rule exception to allow for an extension of Preliminary Plat approval for Whispering Pines. Attached to the back of the report are the previous staff reports; this would be the third extension. In 2007, the applicants received concept plan approval. Conditional preliminary plat approval was granted in January of 2008. In September of 2009 the applicants sought and received a rule exception to allow a 24 month extension to the project. In October 2011 the applicants received a second rule exception to extend preliminary plat approval. All parcels meet the Town of Trenton 1-acre minimum lot size. The Town conditionally approved preliminary plat in 2007 with the condition that the owners sign and deliver a Developer's Agreement to the Town of Trenton. Staff has been provided a draft copy of the agreement and understands that the applicants and Town have been working together to complete this task. The applicants shall complete the Town's conditions prior to site disturbance. While this subdivision completion dates were extended, the Town of Trenton adopted a new subdivision code on 9-10-2008 and their Comprehensive Plan was adopted by Ordinance No. 19 on 3-10-2009. If the LMC does not approve the rule exception, the stormwater sediment and erosion control review fee the applicants paid on 9-17-2007 totaling \$6,300 will be forfeited to the County; the subdivision review fees the applicants paid on 9-17-2007 totaling \$3,500 will be forfeited to the County; the applicants would have to re-apply for preliminary plat approval; and the applicants would have to work through the newly adopted Town of Trenton Subdivision Code. Pierce County Code §237-17C(3) allowed applicants 24 months to finish preliminary plat. However, after 11-2-2010 the County Board adopted Ordinance No. 10-05 allowing final plat to be submitted within 36 months from the date of preliminary plat approval. The parameters associated with rule exceptions per Pierce County Code Subdivision of Land §237-30 are stated in the staff report. Since this staff report was put together, Pichotta noted that he has looked in the Subdivision code and an amendment made in late 2010 gives the committee the discretion to extend the timeframe for final plat without utilizing the rule exception mechanism. Sanden stated the deadline is put in place to keep the process moving. He doesn't ever remember a time when they have issued a third extension. He doesn't want to see the applicants lose \$10,000. He asked Andy for his professional opinion on whether they would be setting a precedence, what problems do you see? Pichotta stated that since the Town of Trenton first saw this, the Town has put into place a subdivision code as well as a new comprehensive plan. Pichotta stated that the concern as he sees it is potentially allowing someone to circumvent regulation at the town level. He noted that a condition of approval is that a Developer's Agreement be in place prior to breaking ground. So the town does have an ability to ensure any concerns it may have are addressed through that mechanism. Ms Anderson stated she sat on the Town Planning Commission and their development was the model for how they wanted to make the ordinance work. As they worked through it, they were in compliance at that point. Sanden asked if realistically they are looking to break ground in the next 12 or 24 months? Ms Anderson stated it would be at least a couple years. She can't see that they can come up with money that they are going to be financing to put a road in when there is no demand for lots. When she sees the other lots sell across the street that is when there will be the need. Sanden stated it's not the process to leave a development in limbo until such time as it's decided it's a go. At some point he would think you would decide to pull the plug and come back when it is ready to go whether that be five years or ten years from now otherwise we will be right back here in 24 months. Again he has to weigh that with the loss of \$10,000. Ms Anderson stated she can't put another \$200,000 in when there is no demand. Ross asked if we have heard from the Town of Trenton specifically on this. Pichotta stated we have been in contact with the Town. When Emily was working on the staff report she spoke to the clerk to get the ordinance adoption dates from them. Ross asked about any movement on the lots across the street. Ms Anderson stated no, there are two lots on 161st Street and three lots on 163rd. Her and her sister own a little less than half of the land in the project and Oskey's own the rest. Originally they wanted a cul-de-sac and it ended up with all the work done at the Trenton level to incorporate Oskey's property and get the road going to 161st. Pichotta stated that he understands their concerns but he doesn't want to see this used as a

mechanism that folks use to stave off time until economic conditions are ideal for something. The LMC could grant a shorter timeframe and ask the applicant to secure a Town Recommendation regarding a longer extension. In that way, we could solicit the Town's opinion as to whether they are comfortable with it continuing in a holding pattern or what they would like to see. Ross asked if the committee could extend up to a period of 48 months. Pichotta said the way he reads it; you could extend it whatever timeframe you wanted. However once you get your last preliminary plat approval, you have 36 months from that last approval to get all your improvements in and apply for final plat approval. Kleinhans noted that in the office we're starting to see new development, Emily has been doing a fair amount of CSM reviews and approvals and we're seeing new development. Not just additions like we were seeing three to four years ago, new homes going up, new construction. He thinks the trend has turned in Pierce County. That might weigh on your decision too. Pichotta noted our revenues went up \$100,000 between 2011 and 2012. Ross stated the main concern is the applicant losing \$10,000. If things turn around, we could make the process as easy as we can. If we have the opportunity to see growth, we're ready for it. Sanden asked if a formal part of the motion would be to ask for Town of Trenton's recommendation. Pichotta stated if that is the direction you want to go, he would say extend it temporarily for six months with the understanding that he applicant would come back within that timeframe with a Town recommendation regarding a longer extension. Ross asked if Ms Anderson has spoken with the Town of Trenton. Ms Anderson stated no but she is comfortable with doing that; she won't be here in six months though. **Sanden moved to grant a 12 month extension to preliminary plat approval, if another extension is needed, input from the Town of Trenton will be solicited regarding a full 36 month extension, finding that undue difficulties will result from strict compliance and also that this action will not have the effect of nullifying the intent and purpose of the chapter and given that we are in extraordinary economic times/Auckland seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has one request for Emily Lund. She would like to attend a workshop being held in Eau Claire on November 4th through the 8th for local Floodplain Officials, focusing on management map studies, ordinances and administration. There are no fees associated just travel costs. **Sanden moved to approve the travel/training requests for Emily Lund/Auckland seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Conditional use permit renewal for Rudy Jungwirth, Valley Vineyard.

Request for extension of a conditional use permit renewal for filling and grading to improve the existing Boat Ramp on Trenton Island.

Possible Status report for County Materials on Hwy 128, haven't heard from the Town of Spring Lake yet to see if they want to talk about it at the Town level first or if they are comfortable with us putting it on for the 16th.

Motion to adjourn at 7:45pm by Sanden/Auckland seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**AMENDED
LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, October 2, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: October 16 th , November 6 th & 20 th , December 4 th & 18 th (if necessary), all in 2013.	Chair
3	Approve minutes of the September 4, 2013 Land Management Committee meeting and the October 25, 2012 joint LMC/LCC meeting.*	Chair
4	Public hearing to consider and take action on a request for a map amendment (rezone) from General Rural District to Commercial District for City of Red Wing, owner on approximately 4.5 acres in part of the NE ¼ of the SW ¼ and the NW ¼ of the SE ¼ of Section 6, T24N, R17W, Town of Isabelle, Pierce County, WI.	Kleinhans
5	Discuss take action on a request for a rule exception to allow for an extension of Preliminary Plat approval on Whispering Pines for Jeffrey & Diana Oskey and Patina Properties LLC, owners on property located in the SE ¼ of the NE ¼, the fractional NE ¼ of the NE ¼ and the fractional NW ¼ of the NE ¼, all in Section 2, T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
6	Discuss take action on Travel/Training Requests	Pichotta
7	Future agenda items.	Pichotta
8	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(9/20/13)

***Amended 10:15 a.m. 9/26/13**

PIERCE COUNTY WISCONSIN

DEPARTMENT OF LAND MANAGEMENT & RECORDS

Pierce County Courthouse
414 W. Main Street P.O. BOX 647
Ellsworth, Wisconsin 54011

MINUTES - Pierce County Land Management Committee Meeting, September 4, 2013

Present: Joe Fetzter, Jeff Holst, Jim Ross and Eric Sanden

Absent: Jon Aubart

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Chairperson Fetzter called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 18th, October 2nd & 16th, all in 2013.

Approve Minutes: **Ross moved to approve the August 21, 2013 LMC minutes/Sanden seconded. All in favor. Passed with Holst not voting because of absence at the last meeting.**

Discuss take action on conditional use permit renewal and potential modification for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1, CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI.

Staff Report – Brad Roy: This facility was permitted in 2011 and began full operation late last year processing sand from a mining operation located in Pepin County. Sand is trucked to the site, off-loaded, conveyed to a raw sand stockpile, then dried and processed for sale. The facility also has byproduct storage stockpiles, storm water ponds, a high capacity well, process water treatment facilities and elevators for the storage silos. Applicant notified us the final product is primarily trucked to Chippewa Falls or Minneapolis. The applicants originally planned to return the waste sand (byproduct) to the mine to be used in reclamation. This was apparently not clearly stated in the Reclamation Plan approved by Pepin County. Pepin County will not allow for the applicant to modify the Reclamation Plan. Until a modification can be made or another disposal site can be identified the waste sand is being stored onsite. There have been multiple compliance issues on the site. On June 5, 2013, these issues were discussed with the LMC. Additional conditions and deadlines for compliance were established. The legal description for the property is in Section 15 in the Town of Union and is zoned Industrial. The applicant notified us of a couple other changes recently. The hours of operation are 24 hours per day generally hauling is from 6:00am to 6:00pm. Semi-trucks hauling final product are spread out over 20 hours per day. The applicants have prepared an updated site plan for the facility which recognizes the modifications from the previously reviewed site plan. The updated site plan is enclosed. The applicant has discussed a potential structure to enclose the waste sand that is stored onsite. This may potentially reduce fugitive dust concerns. Prior to any construction, plans must be presented to the LMC for Site Plan Review and approval. The DOT approved the construction of the Hwy 10 intersection. The applicant has indicated that they have received all necessary DNR permits. The Zoning Office issued a permit for a sanitary system located onsite. Numerous concerns have been raised about the dust suppression methods utilized onsite. A Fugitive Dust Plan has been submitted. The plan details potential sources, control measures and daily record keeping. There have been no changes to the storage of byproduct since June. The applicants are apparently still unable to modify the Reclamation Plan for the extraction site in Pepin County to allow for the byproduct to be placed back in the mine. The access driveway slope issue has been corrected and is compliant with Pierce County Code 240-57(I). Within the past year staff has received complaints

regarding the use of jake brakes. There have been no further complaints since Condition 12 was added in June. The applicant has indicated that they are continuing to pursue additional product sources which may result in new travel routes. Municipalities (Pierce County, Towns) have expressed a desire to have road agreements if sand processing facilities were to utilize local roads. Staff has contacted the Town of Union Chairman regarding this renewal request. Staff received a call today from the Town Chair and he said the only concern he has and has heard about is regarding dust, but it hasn't been real recent. The existing conditions are listed #1 - #16 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health, public safety and the character of the surrounding area and determine if any modifications are necessary. (Staff suggested modifications are shown in *italics*.)

1. *Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.*
2. *Activities shall be conducted as submitted in the application and as presented to the LMC, unless modified by another condition of this CUP.*
3. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
4. *Applicant shall obtain all necessary permits and approvals for any construction and signage for the site.*
5. Raw product and load out stockpiles shall be limited to 35 feet in height above grade.
6. No jake brakes shall be used in sensitive areas when approaching the facility along the designated haul route.
7. *The Fugitive Dust Plan shall be adhered to.*
8. Byproduct shall be utilized in the reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code.
9. *Any potential new or modified haul route shall be reported to the Land Management Department and road agreements shall be secured from applicable municipalities prior to route use.*
10. *The facility shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists.*
11. *All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.*
12. *Any unforeseen dust and/or erosion issues that arise shall be addressed to the satisfaction of the County.*
13. *The conditional use permit shall expire in 1 year.*

Ross asked about clarification of where the product is trucked to; Chippewa Falls and Minneapolis. Roy stated that is correct. When the applicants got a copy of this report they notified us that it's going to Chippewa Falls and Minneapolis. What was originally submitted was Eau Claire or Nelson. Sanden asked about the time frame for Pepin County and their process? Roy stated the he believes the moratorium they had has expired. Kenny King stated Pepin County's moratorium is off and they have worked with the Township. The paperwork has been turned into the Township with the issues that they had with it. Kevin Accola stated Pepin County will have probably a 90 day review period to look at the application and hopefully approve it in that time frame. We will also have our agreement in place with the Town to be able to haul material. Holst suggested adding a condition #14 and have a review with these guys in 120 days. That should give them enough time to come back with what happened with Pepin County, just a status update. Mr. Accola stated there are a couple of these conditions they would like to address. They have looked through all of them and for the most part most of them are acceptable. Some are vague and ambiguous. Some of the terms that are used are not really defined, particularly #10 and #12. When you talk about silica emissions, there are currently no technologies to monitor for silica emissions. What we monitor for is PM10, PM2.5 and fugitive dust. If that changes then the DNR would require them to make a change at that point. With the current and future studies, is a staff person going to be looking at studies that are coming up and review those types of studies to see if there is a significant public health threat? In #12, unforeseen dust and erosion issues, is not really defined as far as what that means. Holst stated we

can write it down if you want; no offsite dust and no offsite erosion. Mr. Accola stated he feels condition #1 covers things that they need to do at the plant to address their fugitive dust. The DNR has a permit that they have to follow for dust, stormwater and erosion. All those issues are wrapped up in those permits and they are regulated under those permits. They have plans in place for their Stormwater Pollution Prevention Plan and their Fugitive Dust Plan. In consultation with their attorney, she reviewed these and went to the County Code to see what that said and pointed out that Chapter 240 Zoning under 240-76 says that the Land Management Committee may in approving an application for a conditional use permit impose such restrictions and conditions that determines are required to prevent or minimize adverse effects on a proposed use or development on the properties in the neighborhood and the general health, safety and welfare of the County. The key word there, they believe is required. Nothing in #10 or #12 gives us any indication that we are required to do something, it's more of this may happen in the future. Those are the issues they have with conditions #10 and #12 and would like the committee to consider whether or not those conditions are applicable to the conditional use permit. Chairperson Fetzer stated condition #10 is probably word for word with WISC's conditions. You are in the same business as WISC so we're just trying to be consistent. Roy stated it is. A couple years ago the DNR started a study on silica emissions and basically concluded that more information is needed and the study needs to continue. They didn't say whether it's harmful or not. Basically, condition #10 is to see what the result is. If they find out it is harmful and there needs to be new control methods, we're going to bring you in. Holst stated this is a warning to the applicant that this possibly could happen; it might not happen. That's a good faith effort on our part to warn you that it could possibly happen. Holst stated that this also gives you warning that, if unforeseen problems arise, the County is going to be looking at that also. As a County, we have to be in a position to protect our people if MSHA and everybody else doesn't. This gives you a little warning that the County is going to be watching too. It's just another level of the bureaucracy that you have to play by. Ross concurred with Mr. Holst, even though there hasn't been recent complaints that the Chairman of Union has heard. It still lingered out there, in case it does come up. Holst stated if you build a building; that will likely take care of a lot of the issues. You have made a lot of improvements, you've stepped up to the plate, you've done what you said you were going to do and we appreciate that. That carries a lot of weight with this committee. Chairperson Fetzer stated he lives in the area and sees that you have made significant strides. Mr. King asked about condition #9, road agreement, what triggers the need for a road agreement, any sand hauled? If he has to bring in 20 or 30 loads of sand and try it through the plant, does that trigger a need for an agreement? Roy stated he would say not. That is not what we are intending. When it becomes part of the process where these roads are getting used very frequently and it can damage the Town Roads, we would want agreements. Pichotta stated if bringing in materials in through Town or County Roads; at least speak to those municipalities and let them know what you are up to. Let them know that you are willing to enter into an agreement should you end up using those roads. We don't want you running roads with heavy equipment that can't handle it and damaging them. If you work it out beforehand, it may be that one isn't necessary but it would be necessary if you use that with some regularity. Holst stated you will know if the product will work before you bring it in. Mr. King stated they have talked with Chad Johnson about volumes of 150,000 to 200,000 ton a year and he saw no issue with that on County Road CC. **Holst moved to approve the conditional use permit renewal and modification for Muskie Proppant LLC, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #13, adding condition #14 Applicant shall provide a status report before the Land Management Committee within 120 days/Ross seconded. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining for County Materials, agent for BS Construction Inc and Steve Schoeder Properties on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI. Chairperson Fetzer invited Pete Krautkramer and Jim Small forward: Pete Krautkramer stated County Materials is asking to put the Z-

curve in place. They need to do a blast at full-face; benching isn't working for them. They did the signature blast. They aren't talking about safety or destroying anyone's property; they are talking about human perception on feeling that blast, like a thunderstorm. Everybody in here will have a different perception.

Staff Report – Brad Roy: In 2006 the Syllas agreed to allow County Materials to mine within 50 feet from the property line as long as the mining did not encroach within 400 feet of the house and peak particle velocity would not exceed .35 inches per second. Last year the LMC modified the conditions and raised the peak particle velocity from .35 to .50. A signature hole blast was completed on August 5, 2013. An analysis was done of the wave form to determine the optimum blast time utilizing electronic detonators. Since then, there have been two production blasts. Each blast was designed to remove the top half of the mine wall. The blast on August 22 had a peak particle velocity of .41 and the August 26 blast peak particle velocity was .25. County Materials would like to go back to the Z-curve. The Sylla's appear to acknowledge that the Z-curve is designed to protect structures. However, they want the peak particle velocity limit to go back to .35. They are concerned about the effects of the blasts to them as well as their structures. As the blasting gets closer to their residence they believe that higher peak particle velocity will make the blasting less tolerable to them. The LMC required that the operator come back before the LMC after a production blast to determine if any modifications to the permit are necessary. The Town of Rock Elm is in the process of developing a Blasting Ordinance which would supersede this permit. The existing conditions are listed #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary.

1. Hours of operation remain consistent daylight hours Monday through Friday, 6:00am – 6:00pm during the construction season with an occasional Saturday, 6:00am – 6:00pm, property owners within 300 feet and Mr. Huebel shall be notified in advance of Saturday operation hours.
2. Applicant shall receive all necessary permits from other agencies.
3. The reclamation financial assurance information shall be kept current and approved by Corporation Counsel.
4. Applicant shall comply with DNR NR 135 Annual Reclamation Permits (Ch 241 PCC).
5. Applicant shall identify blasting frequency and all blasting shall be done by a certified state licensed blaster.
6. Property owners located within 1000 feet shall be given adequate notice (48 hours) of any planned blasting. Peak particle velocity shall not exceed 0.50 inches per second. A signature hole process will be conducted to minimize vibrations.
7. Well tests for nitrates, suspended solids and dissolved solids shall be conducted for all existing wells within 1000 feet of the proposed mining operation to establish a baseline. This shall be completed prior to blasting and every two years thereafter.
8. Dust control measures shall be implemented when necessary. The operator will water when necessary.
9. This CUP shall be renewed every two years.
10. 50 foot setback shall be maintained from all property lines and a 400 feet setback shall be maintained from all existing dwellings.
11. A vegetative buffer shall be established to screen adjacent residences.
12. Operator shall ensure that fly-rock does not negatively impact adjacent properties.
13. County Materials shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions.

Sanden asked Mr. Krautkramer, you mentioned benching isn't feasible, can you explain more of why that doesn't work. Mr. Krautkramer stated it is very costly for County Materials to bench the blasts. They need to get equipment in to clean off the bench. It is right around 60 feet total face and they have been blasting at 35 feet. The upper half is a poorer quality and they need to mix it. Sanden asked if they did a full-face blast would it be fewer times. Mr. Krautkramer stated no, it would be the same amount of blasts.

They wouldn't take the entire face length wise. They would take a portion at a time and drop it down. Holst asked how many ton per blast. Mr. Krautkramer stated 12,000 ton. Holst asked if you went to full-face what would you be looking at for amount? Mr. Krautkramer stated about the same. Holst stated 12,000 or 24,000, which would it be? Mr. Krautkramer stated per blast, 12,000 ton and then two days later they do another 12,000 before they crush. Sanden asked about the August 22nd and 26th blasts, those were the benching type blasts? Mr. Krautkramer stated that was the top part of the bench, yes. Pichotta asked Mr. Krautkramer if you are able to do a full-face blast and stay under the .5 inches? Mr. Krautkramer stated all the records of blasts back to 2009, because he just came in and started taking over, he looked at all the files and they were all at .5 something; one went into .6. Chairperson Fetzer asked if that was full-face. Mr. Krautkramer stated that was full-face. Mr. Sylla stated one went into .71 in 2004. At a .71, it would go on the wrong side of the Z-curve. Pichotta asked if they can design a full-face blast and stay under the .5? He noted that he was expecting that you might attempt with one of the two production blasts to actually do a full-face blast. Mr. Krautkramer stated he wanted to try the benching and hopefully he could keep it down to a .35 doing this and do it economically. After they started doing it, he could not blend. He needs the layers to blend. It's very distinct. Pichotta stated it seems like this puts us back to square one where we did the signature blast and we did these two benches and now we're back to wondering what the peak particle velocity of a full face blast would be – which is what you actually wanted to do going in. Mr. Krautkramer stated he didn't understand the signature blast at all because what did we get out of that. Pichotta stated maybe an understanding of the substrate so you could use timers to try and knock down the vibration levels? Mr. Krautkramer stated yes, but we are back to the same place we were before. We're still trying to hold a .35. Mr. Sylla stated we have talked a lot about disturbing nature with the high peak particle and high frequency but blasting up close isn't just a matter of being annoyed by disturbances, as they are getting near our home, there is a safety concern. He was warned that the full-face blast is not to be used in a close proximity. They would like to see them go back to .35, if they go over, fine. But they want to see them designing for the .35. John Eager stated he thought this was going to be a bench blast and now you want to do a full-face blast. He has concerns about how you are going to use your data from a bench blast and now do a full-face blast. Mr. Krautkramer stated the reason they did the bench blast is we told them we would work with them. We tried it. Mr. Eager stated now you are coming in with that information and wanting to do a full-face blast. Part of the reason we came out there was to experience what you are doing and now you are going down a new road and you don't have the data to back it up. Mr. Krautkramer stated if we go back in the blast there is a lot of data. Mr. Sylla stated with the Z-curve they are allowed to load the holes with heavier blast and because it's getting closer to the home, that is a huge safety concern for us. Ross asked Mr. Eager where the Town is on their Licensing Ordinance. Mr. Eager stated they are waiting to see what the County requires. They have been postponing to see what happens here. Mr. Sylla stated they could all live with the signature blasts that they did. All but one was under a .35. When they exceeded it, .41, if they were designing for a .35 and it went to a .4, they would be happy with that. Chairperson Fetzer asked Mr. Krautkramer about constantly monitoring your data on blasts, don't you do that? Mr. Krautkramer stated yes, the blasting company takes care of that. He has been emailing it to John and Dan Flory. As far as safety, every blast since he has been over here, they have stood out in Bill's yard. Nobody ever was concerned about safety. Chairperson Fetzer stated safety was on his mind. He didn't know what to expect. Mr. Eager stated it was a concern for him also. Mr. Krautkramer stated they aren't there to hurt somebody and if the County says you can go now our blasters are not going to load this thing up. Mr. Eager stated what you did, he didn't think it was bad but his concern is if you do a full-face - is it going to be the same? Mr. Krautkramer stated according to what he looked on old records, it's going to be a .5 something. Mr. Sylla stated that if you change it to the Z-curve it allows you to go way beyond .5. Sanden asked if we use the Z-curve for standards in any other mines, is this the only one we don't? Pichotta stated the Z-curve is a State standard. We have no other mines that we have singled out for this sort of treatment but the reality is we don't have any situations that are similar to this either. Mr. Krautkramer stated they are 400 feet from the house. Holst stated you agreed to that and got 50 feet from the property line. Ross asked about the two benches, it doesn't give you enough of a mix, you have to do full-face to get the mix? Mr. Krautkramer stated the

upper 25 feet of the upper level is a lot poorer grade material than the lower 35 feet. When you do a full-face blast it blends the material more. So when you go into crush it, it blends some more. So we pretty well have a good blend and we're done. Also when he does the upper bench, 50% stays on the bench up there so he has to go through with an excavator and clear that all off. Holst stated what we're concerned about is peak particle velocity. Sanden asked if in any of the data they had, do any of the full-face blast go past a .5. Mr. Krautkramer stated there was one that was a .6 since 2009. Holst asked how many times do you shoot per year? Mr. Krautkramer stated four times a year. Holst asked how long do the blasts last. Mr. Krautkramer stated about one second. Mr. Sylla stated he has a log and in 2011 they shot eight blasts. Holst stated then we are looking at 10 seconds. He asked what is the life expectancy of that quarry? Mr. Small stated they have about 130 feet. Mr. Krautkramer stated they have the 130 feet to go to the buildings. They are contracted with Schoeder's but there are so many variables. He stated for a couple years he doesn't believe they were in there. Mrs. Sylla stated if they contract with someone else then they have to come back before the committee pleading their case again. Holst stated no, whatever conditions are put on this go with the land. Chairperson Fetzer stated they stay with the quarry. Holst stated the State adopted the Z-curve. Holst stated when they started, they were picking numbers out of the sky which was basically what they did with the .35 and the .5. We are trying to find something that is a compromise. It allows them to use their property. Mr. Sylla stated their concern is if a fly rock comes out of there and hits someone. Sanden moved to alter condition #6 to not exceed 0.60 inches per second. Chairperson Fetzer asked why we would go up. Sanden stated Mr. Krautkramer said they could do full-face blast a little over .5 or go back to the Z-curve and that could give them all the way up to a 2. Holst stated he can understand both of those conditions. If the Town feels the County didn't do something adequate, then they can do something. If they don't choose to, then they live with what we propose here. The Z-curve would give us a standard but does it give us what we want to use? Chairperson Fetzer asked Pichotta about his perception of the blast that was a .40. Pichotta stated it felt fairly reasonable, he was inside the structure. It was much like a clap of thunder; although that may not be what we are talking about. We are talking about a full-face which is probably a bit different. He suggested the inclusion of another condition: "Applicant shall conduct a pre-blast survey of structure and well integrity and shall be responsible for any damage from said blast. Ross, on condition #13, he would like to see a specific time line versus as soon as possible, like within 30 days after the blast. Holst, does that give the applicant sufficient time to gather the data and bring it back to the Land Management Committee. Mr. Krautkramer, we can do that, you understand his next two blasts will be the lower portion of the bench. It will be next year sometime for the full-face blast. Chairperson Fetzer stated he would have an issue with going to a .60 inches per second because everything will go over. Holst stated if we pick a finite number and they go over then they are in trouble, if it stays under those people are happy. We also have to have the understanding that sometimes these things might become a .525 but if it was engineered for a .5. Pichotta suggested leave it at a .5, they design the blast, try and do a full-face under .50 and come back to the committee. They do one production blast not counting the two benches and come back after one. Mr. Krautkramer stated he needs to do two blasts at a time to bring in a crusher. Ross stated as soon as possible is too open-ended for him. If it's 30 days after the 25,000 or drop, fine. Mr. Krautkramer stated every report that he looked at were a .50 something after a full-face blast. Holst stated you will have the opportunity to do two blasts before you come back. Mr. Eager asked Mr. Krautkramer if he can be notified when they are going to do the full-face blast. Pichotta stated notify us as well. **Sanden moved to approve the modification of the conditional use permit for Nonmetallic Mining for CMC-Spring Valley, LLC (County Materials) with conditions #1 - #13, modifying condition #13 to read "County Materials shall come back before the Land Management Committee within 30 days after the next two production blasts for a status report and to review conditions." And adding condition #14 "Applicant shall conduct a pre-blast survey for structure and well integrity and shall be responsible for any damage resulting from blasting."** Mr. Sylla asked about the pre-blast survey for the structure. Holst stated if you allow them onto your property to do a pre-blast survey of any structures to see if any structural damage is caused by their blasting. Ms Sylla stated they have already had one done. Holst stated very good so would you rather them not come back. Mr. Sylla asked about the well. Pichotta stated we are talking about both.

Chairperson Fetzner stated we did not know there was a base line for the structures done. We were just trying to protect you. Mr. Sylla stated the well they would definitely like to have done. Holst stated we can leave the house off if you are comfortable with it. **Sanden amended condition #14 to remove the structure and include the well only and revise condition #13 to read County Materials shall come back before the Land Management Committee within 30 days after the next two full-face production blasts for a status report and review of conditions./Ross seconded. All in favor. Passed.**

Discuss take action on status report for a conditional use permit for a Retreat Center in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners, on property located in the SE ¼ of the SE ¼ of Section 33, T27N, R17W, Town of Martell, Pierce County, WI.

Staff Report – Emily Lund: The owners purchased the property on 4-17-2012 and received CUP approval on 5-2-2012 to change the use of the agriculture barn to a retreat center for country-style weddings and receptions. Many neighbors were in opposition of the change in use, so a status review was a conditioned part of the approval. The preparation for the use has taken longer to complete because a few expensive projects were not anticipated to be completed. The first wedding is planned for September 2013. After checking with the Town Chair, Town Building Inspector and the property file, no complaints have been received from the public. Also, no weddings have taken place at this property at this time. The Town Building Inspector, Todd Dolan, reported that on 7-31-2012 (Trans. ID 2114754), the applicants received commercial plan approval from DSPS for a dance hall that was seasonal, unheated and without water sprinklers. As originally proposed, they added a new deck with stairs to the east of the barn and a handicapped accessible ramp to the west. New wiring was added and an air test was completed by the inspector. A mop closet, water fountain and two bathrooms were added within the upper level of the barn, as required by the Uniform Commercial Code (UCC). The bathroom stall dividers need to be added before final inspection. On 6-4-2012, the Department issued a state sanitary permit to replace the septic system to the residence. On 8-28-2012, the Department issued a state sanitary permit for the retreat center's septic system. The Department inspected both mound system installations on 10-4-2012. Another condition of the approval was to submit a landscaping plan to screen the parking area from County Road N (attached to staff report). The owners propose to plant 7 aspen trees parallel to County Road N to screen the parking area. Currently they landscaped the property as planned by adding flower gardens and an orchard with 5 different kinds of fruit trees. The existing conditions are listed in the staff report #1 - #8.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any additions or modifications are necessary. (Staff suggested modifications are shown in *italics*.)

1. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.
2. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), Department of Health & Family Services, etc.).
3. Maximum occupancy shall be limited to 150 people, 3 events per week and 1 event per day on Friday, Saturday and Sunday.
4. The maximum capacity of 150 persons will require 50 available parking spaces, with a minimum of one space for handicapped parking.
5. Advertising signs shall comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
6. *Applicants shall work with Todd Dolan, Martell Building Inspector, to secure final approval from DSPS prior to holding any events.*
7. *Applicant shall establish a vegetative screen, consisting of _____, between the parking lot and County Road N within _____ months.*

8. *A status report shall be made to the LMC in one year.*
9. *This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.*

Ms Deyo explained they are almost done with all the work, a little bathroom work left. They had all the dirt brought in for the landscaping. The handicap ramp is complete. A little more clean up and they will be ready to go. Ms Deyo and Mr. Dufek will be the first wedding at the Retreat Center on September 21, 2013. Chairperson Fetzer asked about condition #7 Applicant shall establish a vegetative screen, consisting of blank. Sanden stated they were proposing seven Aspen trees, we could just go with seven Aspen trees. Pichotta stated from experience they know that Aspen trees don't do a very good job screening. Sanden asked if there was a reason they picked Aspen trees as opposed to conifer trees? Ms Deyo said there is a field that they rent to a farmer so they were a little concerned about too much shade for his crops. Ms. Deyo said they are open to suggestions. We just were worried about shade. Aspen are really pretty trees. Holst stated we have been having applicants plant some kind of Spruce. They give you a better visual screening and their noise abatement seems better than an Aspen and they can still be a really pretty tree. You can plant them this fall or in the spring. Mr. Dufek asked if they recommend a certain size. Holst stated 9 to 12 foot trees, you can still move them but they add to that instant change. Sanden stated 15 feet apart, Spruce might need more space in which case there would be fewer than seven. Ms Deyo stated they are going to plant them from the parking lot all the way over to the driveway no matter how many trees that takes. Holst suggested to stagger them if they are too close together to give it an offset and cover it. Lund asked committee when they want the status report one year from today and then when should the conditional use permit be renewed would that be two years from next year. Holst stated two years from the original date. Roy stated they would be in in May and back in September. Lund stated they would be back twice next year. Holst stated it is advantageous to all parties if you are in more frequently, you can address any issues and if there is no problem, there is no problem. Chairperson Fetzer asked if typically these are renewed administratively if there are no complaints in May, then we could go with a year renewal and a status report after the summer to find out what's going on. If there are complaints we will be coming in. Ross asked what we did for spacing on the others. Holst stated we never gave it a number for spacing, just a number of trees.

Sanden moved to approve the modification of the conditional use permit for Melissa Deyo and Donald Dufek for a Retreat Center with conditions #1 - #9, adding "no less than five Spruce trees, 9 to 12 foot tall between the parking lot and County Road N within 12 months to condition #7/Holst seconded/All in favor. Passed.

Discuss take action on proposed 2014 Land Management Budget: Andy Pichotta reported: Just a quick synopsis of the sheets you see that there is generally four budgets; planning, zoning, surveyor and GIS. Surveyor is proposed to go up by 8.1% which will be explained later in the budget. Under the County Planner budget, administration prepares the personnel numbers for us; the other numbers for operating are largely what we present to you. We are proposing a slight increase in Sundry Repair and Maintenance which deals with the contract associated with our copier. That goes up almost 12%; otherwise we are proposing the same operating expenses as 2013. For Zoning, the numbers from administration are what they are for personnel. On the operating side we are proposing no increase. Sanden asked about the life insurance. Pichotta stated the 20% increase went up \$3, it just looks like a lot. County Surveyor, we reduced new equipment. We had \$10,000 budgeted to assist in the purchase of new GPS equipment. We're proposing to reduce that back down to \$2,500. At the last meeting you authorized us to move forward with an unbudgeted expense in the regard to the purchase of that equipment, in order to keep it eligible for contingency funds, we utilized the \$9,000 that is available in that line item currently for new equipment as well as \$3,000 associated with road repair services in order to keep it under \$17,000.00. It's got to be 10% of the whole surveyor budget in order to be eligible for contingency otherwise it would need to go to the full board. By using those dollars we kept it under so it could be authorized by Finance and Personnel. There is a 75% reduction in new equipment budget. County Planner/GIS is the only budget that has the distinction of going down. Under Other Professional Services

we had \$2,400 budgeted which we typically utilized to pay for Arcview Arc Info Licenses. As you may recall from the last meeting changes in ACT 20 which deals with the biannual budget for the State increases Wisconsin Land Information Program base budget by \$50,000 so we now have in 2014 a \$53,000 or \$54,000 Grant from the State to purchase services or goods related to land information. So there is a reduction in operating costs of \$2,400 which makes it a 1.8% reduction in that overall budget. The Land Information Grant, still an expenditure budget, currently our budget was \$6,000. When someone records something in the Register of Deeds Office, a portion goes to general fund, a portion goes to the State and a portion goes into the Land Records Fund. What we retain is subtracted from \$50,000 and we are eligible for a grant from the State for the difference between what we retained and \$50,000. What changes for 2014 is that \$50,000 threshold is now \$100,000. We are now eligible for substantially more in grants. Holst asked if there is any match. Pichotta stated no. If you look at the bottom, we have a list of items we are proposing to take out of the Land Records Modernization Fund. Basically this is a combined fund that has about \$75,000 in it. What he is proposing to do is identify enough expenditures to ensure that we can at least secure all of the grant dollars that are available for us between what we retain and \$100,000. Some of these are 2013 expenditures that didn't happen because we didn't have the equipment failures in the Register of Deeds Office; the flatbed scanner and receipt printers. Should those things fail between now and the end of the year, those things will come out of the budget and he wants to ensure that we still have enough to secure that full grant up to \$52,000 or \$53,000. We can retain within the Land Records Fund itself that we house here in the County. We are on a five to six year plan to acquire aerial photos as well as Lidar in 2016. That Land Records Modernization list at the bottom was reviewed and approved by Land Information Council a week or two back. He is budgeting out of the Land Records Fund \$26,486, assuming we are going to get at least \$40,000 in a grant. 2014 is going to be prorated for the County's based on what's available. We hope to know more within a few months on that. Park Development he is proposing no expenditures this year out of Park Development, as you are aware a couple years ago we utilized \$60,000 out of it to purchase some land adjacent to the Trimbelle Recreation Area. Currently \$325,000 is budgeted for the Trenton Island Boat Ramp. It looks like we're not going to get as much grant funding as we had hoped for that project. We will likely have to utilize a substantial amount of monies left in the Park Development Fund. Wisconsin Fund Grant is a program we vacillate between \$20,000 and \$10,000. So for years he budgeted around \$15,000 each year and it's either slightly higher or slightly lower. The next sheet is a revenue budget. Monumentation Fees have stayed close to the same; basically we are seeing similar amounts of surveying activity. Under State Aid Planning/GIS is that Land Records that he referenced so we are anticipating a substantial increase in that. Under Zoning/Farmland Preservation we received a grant to offset the costs of us developing the County Farmland Preservation Plan which is currently being reviewed by the State. We have received the first funds of \$15,000 and once it's approved by the County Board we should be eligible for the second half which will be another \$15,000. Zoning permits 2011 actual was \$38,204, 2012 actual was \$136,304. He tried to be somewhat conservative; he is hoping we will see \$100,000 in 2014. Staffing levels, Operating Budget and Capital Improvement; the Survey Technician is vacant, we want to hold that position open indefinitely. We have to have our monumentation and our parcel data to a certain standard by 2017. If it looks like we can't get the production out of Louie working by himself; it may be advantageous to us to fill that position. He is reserving judgment on that until we see how the new equipment is working out. He doesn't plan to fill that position but feels it's prudent to keep it open. The operating budget is similar for the next three years. Capital Improvements; we have identified \$25,000 in both 2015 and 2016 for new vehicles. The reality is that he has been projecting \$25,000 for new vehicles for the last ten years. Holst stated the County might go to a fleet of vehicles where the County has vehicles and the Department doesn't. That might be beneficial to small departments like ours. Pichotta stated that would be as long as there are four-wheel vehicles. He stated the department has probably spent a \$1,000 per month for the last several months on vehicle repairs. He isn't certain it warrants purchasing new vehicles so we will continue to limp along. Holst asked how many miles are on each vehicle. Pichotta stated that he believed there are 118,000 on the Jeep, 142,000 on the Ford and 161,000 on the Chevy. The increase in the surveyor position is because Barry was under his wife's insurance and they are assuming someone would

want family health insurance coverage so that made it go up by \$15,000 or \$17,000. **Ross moved to approve the proposed 2014 Land Management Department Budget/Holst seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated he has two requests at this time, both for Emily. She would like to attend the Wisconsin Wetlands Association meeting on September 12th & 13th in Chippewa County. It would not involve any overnight and there are no fees associated. The second request is the Wisconsin County Code Administrators annual conference in the Fox Hills Resort, October 2nd through the 4th, \$125 registration and two nights in a hotel at \$60/night. **Holst moved to approve the travel/training requests for Emily Lund/Ross seconded. All in favor. Passed.**

Departmental Update and Future Agenda Items

Andy stated we have no agenda items at this time and he proposed that the committee doesn't meet on September 18, 2013. Committee agreed.

Motion to adjourn at 7:35pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, September 4, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 18 th and October 2 nd & 16 th , all in 2013.	Chair
3	Approve minutes of the August 21, 2013 Land Management Committee meeting.	Chair
4	Discuss take action on conditional use permit renewal and potential modification for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1 CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI.	Roy
5	Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining for County Materials, agent for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI	Roy
6	Discuss take action on a status report for a conditional use permit for a Retreat Center in the Primary Agriculture District for Melissa Deyo and Donald Dufek, owners, on property located in the SE ¼ of the SE ¼ of Section 33, Town of Martell, Pierce County, WI.	Lund
7	Discuss take action on proposed 2014 Land Management Budget	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(8/23/13)

MINUTES - Pierce County Land Management Committee Meeting, August 21, 2013

Present: Jon Aubart, Joe Fetzer, Jim Ross and Eric Sanden

Absent: Jeff Holst

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: September 4th & 18th, October 2nd & 16th, all in 2013.

Approve Minutes: **Aubart moved to approve the August 7, 2013 LMC minutes/Ross seconded. All in favor. Passed.**

Chairperson Fetzer stated the applicants engineer is not yet here for Agenda item #4, he will entertain a motion to table that item until later in the meeting. Ross moved to table the public hearing for William F. Holst III and Nancy Beeler and move to the last public hearing on the agenda /Sanden seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Shoreland Area within the Industrial Zoning District, pursuant to Pierce County Code Chapter 240-41E, for William & Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sands, Inc, owners, by Wisconsin Industrial Sand Company, agent on property located in the W ½ of the SW ¼ and the S ½ of the SW ¼ of Section 1; NE ¼ of the SE ¼ of Section 2 and part of Gov Lot 1 in Section 12, all north of the railroad and all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand forward: Jeff Himes, along with Rich Budinger, Mark Krumenacher and Eric McLeod are here to request a conditional use permit for filling and grading to add a track at the Hager City site to allow them to build unit trains. The unit trains are blocks of cars from 100 to 110 cars that are shipped and delivered to the customer, returned as a unit without splitting them up. In order to make this project work, they are acquiring 40 acres from Shelley Endres and Bill & Patricia Schroeder. They will build five tracks totaling about 19,000 feet of track. A unit train is about 5,000 feet long. They will also be building a service road along the track so the railroad can inspect the unit train before they pull it. Basic operating process for this will be the BN delivering the unit train empty. The train will be made up of cars that are filled at Maiden Rock and Hager City. The Hager City employees will assemble the unit train. Once the block is put together the BN will pull that and deliver another set of empties and the process will start over again. They will continue to have daily service going in and out of Hager City going down to LaCrosse for their business that isn't served by the unit train. The benefits for WISC are more efficient method of transportation of product to customer and back to the plant, energy savings and reduction in freight costs. Benefits to the community include jobs created by the construction project; they will be adding operators at the Hager City plant to build and maneuver the cars and build the unit trains. The BN will hire crews to operate the trains. This project is not going to change the existing plants impacts. The dust; they load at that facility and dust collection equipment is already on that facility. Noise; the plant process stays the same; there will be some added car

movement in the rail yard that's consistent with traffic along the main line. Although, we may see a reduction in brake noise. Right now they have to set brakes and use a tugger to pull the cars through the loadout system and the brakes squeal. They will be using track mobiles to move the cars and they have their own brake system. They will continue to operate to meet or exceed expectations from the community and the regulators and the Township. They have demonstrated a quick response to issues or concerns raised by their neighbor's and community. The change in operation is consistent with the current use and what properties adjacent are being used for. They are looking for a favorable recommendation for the filling and grading. The lower end of the project is within 300 feet of the Mississippi River and that requires the Filling and Grading permit. All the work on their project will be on the north side of the BN, there are no wetlands in that area and all runoff will be controlled by the drainage Stormwater Pollution Prevention Plan that they will have in place.

Staff Report – Brad Roy: WISC is seeking approval for a rail expansion at its Mineral Processing Facility in the Town of Trenton that will require filling and grading. A small portion of the project area is located within the Shoreland Area, that being an area located within 300 feet horizontal distance of navigable water where the existing or resultant slope is toward the water, triggering the need for this CUP. This permit is required to ensure that the applicant is taking the necessary measures to protect the waterway. The proposed expansion includes the construction of five rail sidings to the BNSF Railroad. The sidings will be used for storage and in the loading process. The proposed new track, access road and asphalt pad areas will require some fill and some areas will require excavation to obtain the required grades. The grades will be consistent with the BNSF mainline elevations. The southern portion of the project that is located within the Shoreland area will require a cut into an existing bluff which is comprised primarily of sand and gravel. The cut material will be utilized as engineered fill where needed. The majority of cut material will be permanently placed on the property and graded and seeded. GZA Geotechnical Engineers have designed and implemented a geotechnical exploration program, tested soil samples and completed soil slope stability modeling and calculations necessary to design the slope re-grading and provide recommendations for earth retention systems. The final retention system designs have not been selected at this time. The applicant is working with the WDNR to obtain a General Stormwater Permit for Construction Activities. Erosion control Best Management Practices (BMPS) will be utilized on site. BMPS for the project include:

- Disturbed soils will be seeded as soon as practicable.
- Access to construction site will be limited to a controlled entrance at the processing plant.
- A tracking mat will be utilized and wash water, if required, will be treated prior to discharge.
- A silt fence will be placed along the southern extent of the construction area, as stormwater run-off discharges to the south.

Some of the filling and grading within the Shoreland Area takes place in the BNSF rail right-of-way and, as such, is exempt from municipal regulations. The Town of Trenton recommended approval of this request on May 14, 2013 without any specific recommendations or reference to the Town Comprehensive Plan.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Activities shall be conducted consistent with the approved plans.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies, if required.
3. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Ross asked about the new way to move the cars, is it a smaller unit moving them and typically quieter to move them that way. Mr. Himes stated the current machine is a big winch at the end of the track. The

units in this project are self-contained, self-propelled that couple to the cars and move them. They are rail mounted and also have rubber tires so they can drive off the track, then move to the next location, drive back on the track and shuttle the cars. There will be two of those units in the project. Sanden asked about the impact on the cut into the shoreland, will there be any filling in that small piece? Mr. Himes stated that on the small piece they will cut the excess material out and bring everything up to the grade necessary to tie into the existing track and grade a road. Sanden noted that we are seeing the siding issue in a couple of pieces, and this request is just the grading issue. Roy stated yes. **Sanden moved to approve the conditional use permit for Filling and Grading in the Shoreland Area within the Industrial Zoning District for William and Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sands Inc by Wisconsin Industrial Sand Company, due to the fact the proposed use at the proposed location would not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #3/Ross seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Expansion of Mining Accessory Uses in the Industrial Zoning District, pursuant to Pierce County Code Chapter 240-37B, for William & Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sands Inc, owners, by Wisconsin Industrial Sand Company, agent on property located in the W ½ of the SW ¼ and the S ½ of the SW ¼ of Section 1; part of the E ½ of Section 2 and part of Gov Lot 1 in Section 12, all north of the railroad and all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer asked Jeff Himes to explain this request: Mr. Himes noted that he had covered most of the information regarding this request in his prior comments, one additional piece of information is that there was a parcel that they have owned, part of the plant property before they acquired it, that was excluded from the initial conditional use permit request. They are also asking to include that parcel in the permit.

Staff Report – Brad Roy: WISC is seeking an expansion of its Mineral Processing Facility in the Town of Trenton. The facility was originally permitted in 2006. Sand is trucked in from the Bay City mine and is washed, dried, screened and shipped by rail. The proposed expansion area is approximately 54 acres. The future uses will remain consistent with the current use. Activities to be conducted will consist of the construction of an expanded railroad siding for the plant and one of the existing tracks present at the plant will be replaced and a new access road constructed. There will be no additional buildings or structures constructed on site. There is an existing residence on a parcel that is to be acquired for the rail expansion project. The project will not utilize that area of the property and staff is not aware of the plans WISC has for the existing residence. A parcel, owned by WISC, adjacent to the existing facility is also being added to the CUP. There is an old unused residence on the property. WISC currently has no plans for the structure or parcel. Any construction will require Site Plan Approval and any use of the parcel which expands/intensifies the current use will require modification or issuance of a new CUP. All this property is in the Industrial District. Pierce County Code §240-15K states “the Industrial District is established for the purpose of allowing those industrial uses that are more intensive than those uses allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic, the potential need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses.” The proposed expansion includes the construction of five rail sidings to the BNSF Railroad. Track A will be constructed in the BNSF right-of-way at Highway 63 and extend approximately 9,500 feet south. Four additional sidings (Track B through E) comprising approximately 8,000 feet will be constructed adjacent to the BNSF right-of-way. Each track will be separated by approximately 15 feet. An approximate 13-foot wide, unpaved access road will be constructed along the entire length of Track A. The southern portion of the project will require a cut into an existing bluff, most of that material will stay on site. To comply with BNSF requirements, an approximate 500 x 40 foot asphalt-paved switch pad will be added to the north and south ends of the project where Track A connects to the northbound main line. A switch house, two propane tanks and switch heaters are presently

understood to be required by BNSF on the asphalt pads. The facility has a Storm Water Pollution Prevention Plan and a Spill Pollution Control and Countermeasures Plan. These plans identify potential sources of stormwater pollution and spills of oil-related materials and other chemical, and established controls to minimize any potential impacts to surface waters. WISC is planning to have these plans updated. The applicant is working with the WDNR to obtain a General Stormwater Permit for Construction Activities. Erosion control Best Management Practices will be utilized on this project. A Fugitive Dust Plan has been developed for the operation. The plan details the measures to be taken to reduce roadway dust from truck traffic on paved roads and railway dust from rail traffic, during periods of dry or windy conditions. A water truck will be available during construction activities. Several concerns have been raised about the health effects of silica dust. The WDNR Bureau of Air Management permits and monitors emissions of nonmetallic mining and processing operations. Their jurisdiction ranges from extraction to shipment. The applicant has performed archeological, wetland and endangered resources reviews for the proposed project. The review concluded that there are no archeological sites or wetlands in the project area. The endangered resources review determined that there are State and Federally listed mussels and fish in the Mississippi River and that the Bald Eagle could be potentially impacted by the project. The WDNR made the following recommendations:

- The rail spur construction project must use erosion control measures to mitigate impacts to state or federally listed mussels and fish associated with the Mississippi River.
- Avoid human activity between March 15 and August 1. If abiding by this timing restriction is not feasible, perform a survey of the site and within 660 feet of the site for nest Bald Eagles. If they are present in the area, contact WDNR for guidance in mitigating impacts.

High density residential, Rural Residential 20 District, is located adjacent to the proposed rail expansion to the east and south across the rail line. In past similar situations the LMC has required buffering. In this case, buffering may be difficult. The residential district to the east is approximately 60 feet above the facility on a bluff. The hillside leading to the residences has existing trees. The applicant does not own the land to the south of the rail line to screen those residences. The LMC should consider the effectiveness that any buffering may have on surrounding land owners. The Town of Trenton recommended approval of the rail expansion project on May 14, 2013 and the adjacent parcel on July 9, 2013 without any recommendations or reference to the Town Comprehensive Plan. The existing conditions are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed use at the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or character of the surrounding area. If found to be not contrary to the above, staff recommends the LMC grant this conditional use permit with the following conditions:

1. Activities shall be conducted consistent with the submitted plan.
2. Applicant shall follow all recommendations and receive all necessary permits from WI DNR, Department of Safety and Professional Services, MSHA and other agencies if required.
3. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
4. Applicant shall obtain all necessary permits and approvals for construction and signage for the site.
5. WISC shall be subject to control methods deemed adequate by the LMC for silica emissions if current or future studies suggest a significant public health threat exists from such studies.
6. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
7. This permit shall expire in two years and may be renewed administratively if no compliance issues arise.

Chairperson Fetzer opened the hearing to the public. Tom Breen, Oak Grove, asked about definitions, giving the advancing of this industry and the threat, as he sees it, to the railway and highway 35. With filling and grading, will this result in altering swamp land and woods, otherwise unusable into serviceable area or will it erase the scenic areas and desirable habitat to accomplish what will be massive construction and mechanized equipment around. Secondly, expansion of mining accessory uses; is that just the

occupation of more visible land by even more machinery and hardware. Bill Sharp, within 300 feet, asked about the noise levels of a train hitting a box car at 20 mph to hook it up. Do we have any noise regulations or restrictions? **Public hearing closed.** Mr. Himes stated the filling and grading will be down below the bluff, well out of the site of Highway 35. There is a tree plantation on the Mr. Schroeder's property that won't be affected. It's a brushy area. No wetlands will be disturbed. Mining, accessory uses will be handling of the trains, the vehicles that they use to ship the sand, the expansion of that is adding the track facility. We're not going to hit the trains at 20 mph; that would cause potential damage to the cars and our equipment. There will be some additional activity with the track wheels grabbing the cars, coupling and pulling them forward and building the trains. There is going to be some noise with that but in relationship to the noise of the trains on the main line and the plant itself and the shuttling of cars and moving cars. The noise level associated with this project will be well within the noise that is already generated. The plant runs relatively quiet. There haven't been any issues with excessive noise in the plant. He doesn't know of any regulations on trains. Sanden asked if there is a potential for noise reduction. Mr. Himes, we may see a potential reduction in noise because of the issue he described earlier with the brakes dragging when using the tugger. We may see a net reduction in noise on the track because they will be using the track mobile as opposed to the tugger. Sanden 54 acres is in the extreme northwest part, from what is being described there will be track on that part too? Roy stated no, that area won't have any. That was the adjacent piece that was acquired after the original permit was issued. There hasn't been any activity there but since they were coming in for an expansion, the thought was to add it now. **Ross moved to approve the conditional use permit for Expansion of Mining Accessory Uses in the Industrial Zoning District for William and Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sand Inc, by Wisconsin Industrial Sand Company, due to the fact the proposed use at the proposed location would not be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7, Sanden asked to add a condition #8, Bald Eagle nest survey will be conducted for areas within 660 feet of the site and if any nests are found the DNR will be contacted for guidance and to mitigate impacts/Sanden seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Floodplain District and Shoreland Area for William F. Holst III and Nancy Beeler, owners on property located in the NE ¼ of the NW ¼ and part of the SE ¼ of the NW ¼, all in Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI. Chairperson Fetzer invited Mr. Holst and Mr. Humphrey forward: Roger Humphrey, Humphrey Engineering, explained they are here for a conditional use permit on the Diamond Ridge subdivision. This project was previously approved. The permit expired and they are coming back to re-initiate the project. Sanden asked Mr. Humphrey what their intentions are. Mr. Humphrey stated the project is a subdivision that has been through various stages of approval, DNR permits, with the market slow down and some other requirements, the timing of those requirements stalled it out. Economic conditions, the archeological study, floodplain studies, a lot of variables but the overall intention is to move forward with the original planned subdivision with all of those applications that were previously submitted.

Staff Report – Emily Lund: Before we go on, Roger had said he was going to mention some information about the engineering. Mr. Humphrey explained the engineering has been reviewed by him, it was done by Bohlen Land Surveying and Engineering and the spinoff of the engineering and the surveying side. They have reviewed the information and what came across on the subdivision was, in order to comply with the Shoreland Ordinances and stormwater requirements there are several ponds constructed on the site that were reviewed and analyzed through a floodplain study and various stormwater calculations. All those seem very much in line with what is being proposed. On the applicant's property that he owns, there is a slight rise in the 100 year stormwater event but it happens to exist on his property, part of it is on the subdivision and part of it is off the subdivision. By ordinance requirement, you will be requiring an easement of some nature from the applicant on the part within the subdivision. Before he is able to convey it to another party, that easement should be in place. **Lund:** The applicant and agent are here today to get

a conditional use permit for filling and grading in the floodplain district and the shoreland area. The LMC approved a CUP authorizing this activity on April 19, 2006, but the permit expired before the project started. The applicants are re-applying for the CUP at this time. The applicant's intentions are to create two storm water retention ponds within 300 feet of navigable waters as part of a proposed subdivision called Diamond Ridge Addition. The proposed subdivision is located in Section 19, Town of Diamond Bluff. The plat area is 39 acres, more or less. Shoreland provisions contained in the zoning code regulate filling and grading within 300 feet horizontal distance of navigable water and require the issuance of a conditional use permit. The proposed Diamond Ridge Addition plat is located directly adjacent to Hope Coulee, where a conditional use permit is required for filling and grading within 300 feet of navigable waters. A copy of the proposed plan is provided. A profile of the land is provided in the staff report. Soil pit information is before you. There was a floodplain study done and there was a net increase of .08 feet when there is a 100 year event and it stays wholly on their property. This project was first reviewed by Ayres & Associates in 2006; they recommended storm water control devices to be incorporated into the project area in order to control erosion as per Pierce County Code Subdivision of Land Ch. 237-17(3)(a) & (b). Applicant's agent then designed two retention ponds and drainage easements around the ponds within the development. The North Basin is proposed to be 120 feet long, 20 feet wide, and 6 feet deep. The East Basin is proposed to be 170 feet long, 15 to 35 feet wide, and 6 feet deep. Adjacent areas to the facility will be re-graded to direct surface waters from the stream bank and water exiting the basins will be to the east or downstream. Surface runoff waters will be piped downhill to these proposed ponds. Those steep hillsides will have to be stabilized soon after the drainage pipes are installed per May 2006 plans. The second submittal was then reviewed by the Land Conservation Department and approved by the Land Conservation Committee in July 2012. Pierce County Code Floodplain Zoning §238-17 Hydraulic and hydrologic analyses is in the staff report. There are some requirements of easements when you increase the region flood depth by .01 feet but according to the DNR program guidance that only applies when it increases on adjoin properties. The Town of Diamond Bluff recommended approval of this project at their March 7, 2006 Town Board meeting and stated that the Town views the proposal acceptable for runoff control. This project was again reviewed and approved at the July 14, 2011 Diamond Bluff Town Board meeting.

Staff Recommendation: Staff recommends the Land Management Committee determine whether the proposed location would be contrary to the public interest or would be detrimental or injurious to public health, public safety or the character of the surrounding area and if found to be not contrary to the above, grant this conditional use permit with the following conditions:

1. Filling and grading activities shall not commence until such time as preliminary plat approval has been secured.
2. The project shall be conducted consistent with approved plans and shall be completed within one year of the approval date.
3. The applicant shall inform the Land Conservation Department at project commencement and shall provide opportunity for their inspection and monitoring of construction activities.
4. The applicant shall note any deviations from the proposed plan or other potential pollutant sources present on site and not addressed in the erosion control plan and/or storm water management plan and shall notify the County of the condition and propose changes to the plan to address the issue.
5. The applicant shall ensure that any changes to the construction plans are reviewed and approved by Land Management or Land Conservation Department staff.
6. Best management practices shall be implemented and maintained per the erosion control and storm water management plans until the site is completely stabilized.
7. The applicant shall comply with state and federal agencies, and secure all necessary approvals, permits and licenses (i.e. WI DNR, WI DSFS, ACOE, etc).

Chairperson Fetzer opened the hearing to the public. Dave Dodge owns adjacent property, asked if this is for the drainage ponds and that's all. Mr. Humphrey stated yes, correct. Mr. Dodge stated if it's to continue on with the drainage ponds, he is fine with it. Sanden stated there will be a preliminary plat hearing later on. **Public hearing closed.**

Sanden moved to approve the request for a conditional use permit for Filling and Grading in the Floodplain District and Shoreland Area for William F. Holst III and Nancy Beeler, due to the fact this request is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7/Ross seconded. All in favor. Passed.

Discuss take action on County Surveyor purchase of GPS and equipment.

Staff Report – Andy Pichotta: As a part of the 2013 Land Management Department Budget discussion the LMC authorized the inclusion of \$7500 in the Surveyor Budget to be utilized toward the purchase or lease of more current GPS equipment. At that time it was anticipated that \$7500 would be adequate to secure (possibly lease) appropriate equipment. After conducting additional research, Louie Filkins, County Surveyor, has suggested that ideally a base station would also be purchased in order to maximize staff productivity. Mr. Filkins was asked to research options to address Surveyor equipment needs and to attend tonight's meeting to discuss options with the LMC. An email detailing equipment needs and discussing several options is attached for your information.

Staff Recommendation: Staff recommends the LMC consider the attached information, as well as information presented by the County Surveyor, to determine the scope of equipment to be acquired and also whether it should be purchased outright or leased (or payment plan) and the timing of said purchase. Mr. Filkins stated the GPS is old, purchased in 2000 and is failing. Its old technology, they use it three out of five days most weeks. It's their main tool other than the truck. Without it, they can't survey or they would be set back in time 30 years. The radio frequencies that the current system uses were outlawed by the FCC as of January 1, 2013. When he looked into trying to repair the system, it's so old, they don't support it anymore, you can't upgrade it, even service is becoming difficult. It's getting to be a problem with the unit. The other bullets mention increased technology; the updates you would expect with memory, more cables, more satellites, operates on a network system, currently they have a base and a rover with the two communicating via a radio link. This system can operate in that fashion and it can also operate standalone using a cellphone modem to connect with Madison. It's another plateau of technology where you don't have to set up the base. Originally he thought that would be the ideal way to go but as he investigated, he found out from other surveyors that you have increased accuracy if you have the base set up, especially elevations. There is a spreadsheet on pricing. The Leica quote has been updated, that is the one he is recommending. The representative for Leica lives in Rosemount, MN and is the current equipment rep. They have a Leica system right now and the rep has been very good to work with. If they need anything for parts or a loaner, he comes through Ellsworth often. The purchase price now is \$26,201.20. He could only hold that for 30 days so it went up \$335. It's still far below the other quotes. There is a finance option and when he and Andy originally talked about it the idea of a lease was something they wanted to investigate. They included that information for a three year option because each company offered that, making the comparison the same. The quotes received are in the staff report. It's important to note that this is a system, not just one piece of equipment. It's everything they need to do their surveying including tripods and radio links. There is a cellphone needed with this system but they already have that and are in the process of upgrading their cellphones also. Sanden asked if the Leica is limited on expandability? He knows Trimble probably has more variety of options, is Leica going to give you enough so that five years down the road you can upgrade as needed? Filkins stated he is not familiar with the upgrade ability. He knows that for what they do and need, it will do everything and more. Most of these systems are built for what we use them for which is a high precision survey but are also used for road stake out. They can be used for massive data collection, topographic and property surveys. He thinks they will be using 10 or 20% of its capability. It has a lot more memory. He sees no reason why the system can't last 15 years. Sanden asked with a base station what kind of accuracy are you talking about? Filkins stated it's arguable but half inch to an inch with a base, horizontal and probably one inch vertical. Sanden asked Andy if there are any options for the County to get a better finance plan. Can the County borrow money from the bank and get a better interest rate? Pichotta stated it may make sense to move forward with this as an unbudgeted expense and just buy something outright. He will be bringing the

budget to the committee for 2014 at the next meeting. But it makes sense to purchase this more quickly than that so that we can get a jump on the surveying this summer. One other thing that has changed is ACT 20 which deals with the next two year budget for the state, that included some changes to the Wisconsin Land Information Program makes it so we will have a good bit more money for Land Records activities as it increases our base budget from \$50,000 a year to \$100,000 a year so we will have adequate resources to update our data but the reality is that in order to do that we need Louie to progress through the remaining monumentation that needs to be done. Basically, we have until 2017 in order to get our data to a certain standard under this ACT 20. If we don't they will penalize us. That adds a little more urgency to us getting the equipment we need so Louie can move forward quickly. Sanden stated you direct the budget in this area and it sounds like you are comfortable and this is within our ability to just handle it. Pichotta stated he can't accommodate it within our existing budget; it would have to be forwarded as a request to finance and personnel committee for an unbudgeted expense yet this year. Ross stated we would use contingency funds likely. That is something they have done on various occasions when needed. Sanden stated it would save us \$4,000 in interest. Ross stated in situations where they are buying something for \$400,000 it helps them to spread it out. He is not suggesting that \$20,000 is not a lot of money but it is more advantageous and economical to go ahead and buy it. Chairperson Fetzer stated that Louie had talked about a potential lease option. Pichotta stated it's not really a lease, it more of a payment plan. Chairperson Fetzer stated he just wanted to clarify this, when you are purchasing some of this equipment, it may be smarter to lease for five years and then you get new stuff again just to keep updated on equipment. Pichotta stated really it's more of a rent to buy situation. He is asking if the committee is comfortable with purchasing the Leica system, to authorize staff to pursue a non-budgeted expenditure to purchase the Leica system consistent with the County's purchasing policy. Aubart asked if we need a dollar amount. Pichotta stated you could pick an amount not to exceed. Louie stated the new quote is \$26,201.20. Pichotta suggested to maybe bump it up to \$27,000 given the potential for a price change. Sanden asked how long they think the process will take. Pichotta stated a month or two. Chairperson Fetzer asked when the quote was obtained. Filkins stated last week and they only hold it for 30 days but hopefully we can pull some strings.

Sanden moved to authorize staff to move forward with a non-budgeted expenditure to purchase the Leica system for not more than \$27,000 consistent with the County's purchasing policy/Aubart seconded/All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Status report on the Melissa Deyo, Wedding Barn in the Town of Martell.

Conditional use permit renewal for Muskie Proppant in the Town of Union.

Proposed 2014 Budget

Chairperson Fetzer asked if there have been any complaints on the wedding barn, Pichotta stated no, there was a requirement that there be a status report and they haven't yet established the use. We'll be hearing how things are going.

Motion to adjourn at 7:05pm by Ross/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 21, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: September 4 th & 18 th and October 2 nd & 16 th , all in 2013.	Chair
3	Approve minutes of the August 7, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Floodplain District and Shoreland Area for William F. Holst III and Nancy Beeler, owners on property located in the NE ¼ of the NW ¼ and part of the SE ¼ of the NW ¼, all in Section 19, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a conditional use permit for Filling and Grading in the Shoreland Area within the Industrial Zoning District, pursuant to Pierce County Code Chapter 240-41E, for William & Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sands Inc, owners, by Wisconsin Industrial Sand Company, agent on property located in the W ½ of the SW ¼ and the S ½ of the SW ¼ of Section 1; NE ¼ of the SE ¼ of Section 2; and part of Gov Lot 1 in Section 12, all north of the railroad and all in T24N, R18W, Town of Trenton, Pierce County, WI.	Roy
6	Public hearing to consider and take action on a request for a conditional use permit for Expansion of Mining Accessory Uses in the Industrial Zoning District, pursuant to Pierce County Code Chapter 240-37B, for William & Patricia Schroeder, Shelley Endres and Wisconsin Specialty Sands Inc, owners, by Wisconsin Industrial Sand Company, agent on property located in the W ½ of the SW ¼ and the S ½ of the SW ¼ of Section 1; part of the E ½ of Section 2; and part of Gov Lot 1 in Section 12, all north of the railroad and all in T24N, R18W, Town of Trenton, Pierce County, WI	Roy
7	Discuss take action on County Surveyor purchase of GPS and equipment.	Filkens
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(8/9/13)

MINUTES - Pierce County Land Management Committee Meeting, August 7, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 21st, September 4th & 18th, all in 2013.

Approve Minutes: **Ross moved to approve the July 17, 2013 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for John & Marjorie Kralewski Family Partnership, Jerry & Karen O'Brien and Jill Greenhalgh, owners, on property located in the South one half of the SE ¼ of Section 3 and the NW ¼ of the SE ¼ and the SW ¼ of the NE ¼ of Section 10 and the NW ¼ and part of the South one half of the SE ¼ of Section 11 and the SW ¼ of the SE ¼ and part of the SE ¼ of the NW ¼ of Section 14, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI. Chairperson Fetzer invited David Eckhardt forward: Jeff Holst recused himself from discussion and voting on this matter due to possible conflict of interest. Mr. Eckhardt explained they are operating under their current conditional use permit which was renewed January 2nd. There was a moratorium in the Town of Maiden Rock which prevented them from adding additional properties. So the purpose of this conditional use permit amendment is to add 377 acres of reserves to the property. There will be no change in business or how they operate, this is additional reserves. It's adjoining property. They have been operating within the conditions of their existing conditional use permit. Their application was reviewed by the Town of Maiden Rock. The board unanimously voted in favor of granting them the amended conditional use permit with no additional conditions. They are asking for some clarification on condition #12. It states three vent shafts, they interpret that as three additional vent shafts but would like some clarification. He pointed out there is a new condition by the Land Management Committee that was added, condition #18; that new shafts locations will be reviewed by the Town of Maiden Rock. So that should take care of any concerns on additional vent shafts. With him here tonight are Al Nelson, Plant Manager of Maiden Rock, Mark Krumenacher, Consulting Engineer from GZA Environmental, Jeff Himes, Plant Manager at Hager City and Eric McLeod, their Attorney.

Staff Report – Brad Roy: As was stated, WISC is requesting to add approximately 377 adjoining acres to its current mining operation. This request is not to change the mining process or activities, but rather to allow the existing mine to continue onto new property. The mine operates 24 hours a day, seven days a week and employs 45 people. Most of the activity associated with the operation takes place within the Village of Maiden Rock, which houses the processing plant. In April, 2012 a new loadout facility was constructed which included a conveyor and a rail car loading spout. The new loadout facility is intended to increase efficiency while reducing noise and dust. A fugitive dust plan has been developed for the

loadout facility. WISC has begun using a new wash plant with a water recycling system which has reduced the amount of water used. The mine received its first Conditional Use Permit from the Land Management Committee in 2004; it was last renewed on January 2, 2013. Tunnels are created by blasting; WISC uses a room and pillar method. The entire mining process will take place underground; mining activities will include underground blasting and washing. Surface activity is largely limited to the processing plant in the Village of Maiden Rock. There are two ventilation shafts in the current mining area that extend up to the surface. New shafts will most likely be required in the future to provide clean air to the underground mine. The exact location of any potential new air shafts has not been determined at this time. The land currently has agricultural, residential and undeveloped uses. The proposed expansion will not prevent these uses from continuing. The only above ground disturbance may be a potential air shaft. No new wells are needed for the expansion. There are currently 4 wells on-site. Three of the wells are high capacity. WISC is currently using one of the three high capacity wells for processing activities. The current mining activity takes place at approximately 50-80 ft above the Water-Table. No new exits are planned on the expansion properties. Blasting typically takes place three or four days a week; the blasts usually occur around 5:30 pm. The WDNR (and other agencies) regulate many of the activities of a mining operator. This regulatory authority originates not only in the mining laws, but in different environmental statutes. For example, primary authority for the regulation of storm water runoff, impacts to navigable waterways, and high capacity wells rests with the WDNR and other State agencies, but are not included in the mining laws. WISC has agreed to provide staff with updated copies of the operation's Storm Water Pollution Prevention Plan, Spill Prevention, Control and Countermeasures Plan and the Wisconsin Pollutant Discharge Elimination System Permit to keep on file. WISC submitted a Groundwater Response Plan for the facility. The plan addresses the source and use of groundwater within the facility as well as measures to protect the quality of the water. As part of this plan, WISC has installed two transducers and dataloggers to continuously measure and record groundwater elevations in two residential water supply wells located within the permitted mining area. WISC developed a Damage Response Plan as previously requested by the LMC. Said plan was to be developed jointly with an ad hoc citizens committee. An agreement was unable to be reached regarding draft parameters. The LMC directed WISC to present the proposed Damage Response Plan to the Town of Maiden Rock for review and comment (condition #11). The Town of Maiden Rock, at their April 10, 2013 meeting, reviewed and approved the Damage Response Plan as drafted.

Staff has not received concerns/complaints about this request, but in the past citizens have raised concerns about this operation which include:

- Health effects of silica in the air.
- Depletion of the aquifer.
- Contamination of the aquifer and surface water.
- Blasting effects on wells and structures.
- Potential decrease in property values.

Since the renewal staff has received two complaints about the noise associated with the rail load out facility. The Town of Maiden Rock recommended approval of this request on May 30, 2013 with the existing 17 conditions. The Town did not reference its Comprehensive Plan. The existing conditions are listed in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit request with the following conditions (proposed changes in **bold**)

1. Blasting shall occur up to seven days a week with no time limit constraint unless complaints are received. If complaints are received, previous time restrictions shall be reinstated. (Blasting shall occur no earlier than 5am up to four times per week, including Saturday.)
2. Comprehensive water testing will be conducted annually for residential wells located within the boundaries of the mined area. Testing of the wells on properties on which mineral rights are not

leased and fall within 1000' of mining activity shall be comprehensively tested, including for suspended solids, nitrates and dissolved solids and chlorides, two times each year. Test results and the base line data tests shall be provided to the Department of Land Management.

3. A 100-foot buffer shall be maintained from the active mining to the boundaries of non-leased properties, and where already closer than 100-feet, there shall be no further encroachment. Mining under a leased property shall be a minimum of 100' from any well.
4. Evidence of compliance with applicable state and/or federal regulatory agencies shall be submitted to the Land Management Department.
5. Any intensification of use or change in approved plans will require the issuance of an amended conditional use permit.
6. A map of mining activity and areas of future expansion shall be provided to the Town of Maiden Rock.
7. Applicant agrees that any erosion issues that arise shall be addressed to the satisfaction of the county.
8. A map of the facility and underground tunnels shall be updated annually and submitted to the Land Management Department.
9. This permit shall expire in two years.
10. An annual report demonstrating adherence to approved conditions submitted to the Land Management Department on or before December 31st of each year.
11. **The Damage Claim Response Plan, as approved by the Town of Maiden Rock, shall be adhered to.**
12. The Town of Maiden Rock's recommendations/comments, **from the January 19, 2011 public hearing**, shall be adhered to.
 - a) **Wisconsin Industrial Sand should be required to establish a historical average for each private water well they are mandated to test. This information should be shared with the owner of the well along with an explanation of what data means.**
 - b) **The Commission had concerns about the air from the mines and wanted reassurances that noxious fumes and bad odors would not affect near-by neighbors. Therefore, the Commission recommends that Wisconsin Industrial Sand set up a monitoring system that would test the air from the air shafts before and after blasts are set off in the mine.**
 - c) **The Planning Commission recommended that no new portals can be built for this site in the Town and that Wisconsin Industrial Sand would not be allowed to build more than 3 air shafts for this permit. If the Sand Company wants to build any additions to this permit they must seek another approval from the Town of Maiden Rock.**
13. WISC will be subject to control methods deemed adequate by the LMC for silica emissions if current **or future** studies suggest a significant public health threat exists from such emissions.
14. A fugitive dust plan shall be developed for the processing facility and submitted to the Zoning Office.
15. The operator shall provide notice to the County of any orders to cease and desist from MSHA.
16. All polyacrylamide flocculants must be used consistent with WI DNR permit requirements.
17. Emissions from the ventilation shafts shall be monitored twice annually and the results shall be submitted to the Town of Maiden Rock and the Land Management Department.
18. **No ventilation shafts or secondary access portals shall be developed until after such time as the proposed location is reviewed by the Town and approved by the LMC.**

Chairperson Fetzer opened the hearing to the public. No public comment. Public hearing closed.

Sanden asked about condition #12c, he realizes these are verbatim from the Town of Maiden Rock's comments, could we add "additional" after 3 air shafts. Roy stated we could do that, with condition #18 that any new location is going to bring it back to the Town anyway. It could get addressed that way. He didn't know if we want to change the wording of the Town's recommendation. Aubart asked if we could take c. out of there. It seems redundant. Sanden stated except it mentions portals. Chairperson Fetzer asked what David's concern with it is. Mr. Eckhardt stated they just want clarification, it's stating three

and we have two currently. They are interpreting it as three additional. Chairperson Fetzer asked if we know how Maiden Rock is interpreting it. He then asked if anyone from Maiden Rock Board is here. Fetzer noted that there wasn't anyone from Maiden Rock Town Board present. Eric McLeod stated it was their understanding based on the comments made at the 2011 Town meeting where they established these conditions, that they were approving up to three additional. Obviously they have two existing, so they aren't going to build the two existing. Condition #18 would be a way in which the Town and the LMC could ensure the location of those additional three were appropriate relative to concerns in the community. They just want insurance that they can add the three; the location of the three will be the subject of further proceedings. Aubart stated the language that Dr. Sanden suggested, three additional, would clarify that. Pichotta stated he believes that such clarification would be appropriate. **Sanden moved to approve the request for a conditional use permit for a Nonmetallic Mining Operation for Wisconsin Industrial Sand, owner and agent for John & Marjorie Kralewski Family Partnership, Jerry & Karen O'Brien and Jill Greenhalgh, due to the fact this request is not found to be contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #18, amending 12c to add "3 additional air shafts"/Aubart seconded. All in favor. Passed with Holst not voting.**

Discuss take action on a status report for a Nonmetallic Mining Operation in the Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for Diamond Bluff Investments LLC, Holst Farms Inc, William McCusker, MOAP LLC, WTW Properties, Steven Burmood, Helen Holst, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff, Pierce County, WI. Jeff Holst again recused himself from discussion and voting on this matter due to possible conflict of interest. Chairperson Fetzer invited Jeff Himes forward: Mr. Himes, Plant Manager for the Hager City/Bay City operations filling in for Mr. Budinger this evening to present this. WISC continues to move forward with the Diamond Bluff project. They have acquired a number of permits and completed surveys and others are in process. It is their intention to continue activity on this project.

Staff Report – Brad Roy: Last year, WISC is obtained a Conditional Use Permit for a new underground mining operation in the Town of Diamond Bluff. The mining permit encompasses 59 parcels totaling 1,867 acres. Allowable activities on the site include blasting and screening underground as well as stockpiling and loading on the surface. The mining process will be consistent to those at Maiden Rock and Bay City. The material from the proposed mine would be processed at a processing facility in the Town of Trenton which was permitted in 2012. Mining has not begun at this time, but the applicant has taken multiple measures to commence action and establish the use. The permitted mine was intended to be part of a larger project that would also extend into the Town of Oak Grove. That Town may have a moratorium on Nonmetallic Mining in place and has not provided a town recommendation at this time. Pierce County requires a town recommendation as part of the CUP application. Condition 24 required a status report in one year to provide an update on the status of the project. Access to the mine entrance site is off of 1005th St. The road will need significant upgrades if the proposed facility is approved. The applicant submitted a conceptual request to the WisDOT regarding the Hwy. 35/1005th St. intersection. WisDOT recommends that the intersection be upgraded to the B1 class. This will widen the intersection to allow trucks to enter and exit simultaneously and create a 200' right turn lane on northbound Hwy. 35. The Wind River runs through the mine entrance site and the eastern edge of the site is in the Floodplain. The proposal is for the existing 1005th St. to be moved into the Floodplain. Two stormwater ponds are also proposed within the Floodplain and the Shoreland area. These activities require additional information and permitting.

Activities to date are:

- Mine ID, obtained
- Reclamation and Fugitive Dust Plan, completed
- Initial Wetland Survey, completed

- Wetland-Shoreland survey, in progress
- Archeology survey, evaluated need
- Threatened and Endangered Species review, in progress
- Highway 35 and 1005th St. Improvements design, in progress

The existing conditions are listed #1 - #24 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate potential impacts on public health, safety, the public interest and character of the area. It may be that no committee action is necessary.

Chairperson Fetzer asked if the committee needs to do anything at this time. Pichotta stated that the LMC could make a motion to accept their report, if it so desired. Roy stated they will be back next year, as the permit will expire.

Ross moved to accept Wisconsin Industrial Sand Company's status report as presented/Sanden seconded. All in favor. Passed with Holst not voting.

Public hearing to consider and take action on a request for a conditional use permit for a Winery and Nature-Based Operation, pursuant to Pierce County Codes 240-35B(6) and 240-39C, in the General Rural Flexible 8 District by Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.

Chairperson Fetzer invited Mr. and Mrs. Zimmerman forward: Mr. Zimmerman stated he and his family are here to request a conditional use permit for Bellevinez Vineyard and Winery. They have reviewed the staff report and feel it is a complete and appropriate description of what they are asking for. Mr. Zimmerman stated he believes the face of agriculture is changing and both Wisconsin and Minnesota have seen increases in new winery creations since 2007. This is influenced by the development of wine grape varieties which can endure harsh winters and the quality of the fruit has improved. This has led his family to pursue a business in this industry. They are asking for a conditional use permit under the land use classifications of Winery and Nature-based Operations. The vineyard has nearly two thousand vines presently planted, with 500 of those vines now in year two of development. Additional vines will be staggered and added as they progress. Soil testing was conducted prior to the first plant in 2012 to ensure that these grapes would thrive in this area. Initial wine production will begin this fall. The business plan has two elements. The initial phase is to offer consumers a complete "wine experience", not only purchasing wine locally but enjoying it onsite at the winery, in the vineyard. The second phase is tied to the brand and identity from the first phase. As production increases, the volume of wine produced increases and can be sold in a variety of regional distribution channels. They are also requesting the ability to offer guests food. Market research suggests that guests prefer to have some food while drinking wine. Food is ancillary and complementary to the wine. They intend to construct a facility that is designed to mimic a Tuscan style farmhouse. The building size is comparable to the square footage of homes in the area. The placement of the building is to be centered and north on their property so as to maximize the distance from any neighboring property. The house to the south is over 500 feet from the structure and the house to the east is over 1,000 feet. Trees to the north and over 2,000 vines to the south and east will shield the facility. Their home is directly to the west. The facility is architecturally designed in a way to minimize sound, the shape, materials and use of berms and other landscaping techniques will serve to address sound and sight concerns. They will provide ample parking on the property. They will use a reservation system. Parking on 875th is to be strictly prohibited and will be controlled. This is a private road which they own. An easement for ingress and egress traffic does exist. They are asking to operate from May 15 – Dec 31. They ask for operating days to be any part of the seven-day week and operating hours to span from 11am to 10pm. They would request the full wine experience which would include brick oven pizza, appetizers and wine set in the socialization area of the facility be limited to Thursday-Sunday. They will also promote wine related products, very small wine crafts and Bellevinez gifts. There will be wine for sampling and purchase onsite, as well as the ability to join the Bellevinez wine club where wine can be shipped directly. Mr. Zimmerman cited pages and information from the

Comprehensive Plan that he feels pertain to this issue. He stated they have already taken steps to ensure traffic is addressed, noise levels managed and an array of measures to help visually conceal their business. He indicated they will continue to take steps to be a good neighbor to those directly around them. Regarding traffic, they will promote a route from County Road M onto 1090th St and then onto 875th Ave. They will be using a reservation system to aid in reducing excessive traffic. Steps have already been taken concerning the noise/sound issue. The facility will be located center and north on the 20-acre parcel. An existing tree line serves to shield visually and audibly the facility and the building design will have nearly all brick/block on exterior walls to aid as a barrier. If additional barriers are needed, more trees will be brought in on both sides of the road. The property to the south can be addressed in a similar way, they have offered to place trees and put a completely non-see through fence on the property line. The property to the east will be further from the structure. In 2013, 34 rows of grapes are growing between these structures. They are also contemplating the addition of trees and berms on this border, if necessary. They have agreed to stipulations such as no live music or amplified sound from the facility with the Department of Land Management. Safety is another concern. The road today sees both business and farm related heavy equipment and is designed to accommodate that type of traffic. This endeavor would be no different than if more housing is added over the coming years. This winery will operate using the same standards for alcohol service as any other establishment. If it is apparent that someone has consumed too much, they will refuse service and help facilitate transportation. He stated the food is merely a complement to the wine. It is not to disguise a commercial restaurant. They view food as an important element of safety; it can slow or minimize the effects of alcohol. Their modified request is for brick oven pizza and appetizers only. They are established in the River Falls area and wish to be good neighbors. Sanden asked about the Social Space, Rec/Storage, Kitchen, those are all indoor activities? Mr. Zimmerman stated yes, that is correct. The south side is open, everything else is enclosed. Sanden asked what they anticipate the activity in the gazebos will be. Mr. Zimmerman stated those are optional and could be used for socialization and are optional. Sanden asked if they would be having music inside these areas. Mr. Zimmerman no, the only area that there would be any form of music would be inside the physical structures and it would be the equivalent of a sound system playing some form of faint background music. Holst stated with no amplification. Mr. Zimmerman stated just the speakers on the inside walls. They have agreed that there will be no outside amplification or live music at all. Sanden asked if the trees along the northern border are conifer trees. Mr. Zimmerman stated there is an array of different trees. Sanden asked if he could estimate percentage wise how many of them are conifers versus broadleaf, is it half and half? Mr. Zimmerman stated maybe, he could only speculate about the ratio.

Staff Report – Brad Roy: The applicant is proposing to establish “Bellevinez”, a vineyard with a winery which would include a tasting room and limited food service. The operation is intended to build interest and demand for “Bellevinez” brand wine, which is to be produced onsite. Off-sale wine along with various craft and wine related products are also proposed to be sold. Food service would be conducted in an open sided pavilion. The applicant stated the number of vines and that the first harvest will be this year. The applicants reside on the 20 acre site where the winery/nature based operation is proposed to be constructed. Production of wine is to take place onsite in a 54’ x 80’ shed which was permitted in 2012. The applicant originally proposed a winery with an associated restaurant with food options similar to “Vino in the Valley”. There has been significant resistance to this type of activity by neighbors. The applicant has since modified his request for a full restaurant, but still wants to be able to provide a smaller food menu consisting of brick-oven pizzas and appetizers. The property is zoned General Rural Flexible 8. Pierce County Code 240-15 Purpose and Intent of Zoning Districts states:

General Rural (GR). This district is established to maintain and enhance agricultural operations in the county. The district also provides for low-density residential development which is consistent with a generally rural environment and allows for nonresidential uses which require relatively large land areas and /or are compatible with surrounding rural land.

General Rural Flexible (GRF/8). Allows for greater residential density but has the same purpose and intent.

“Winery” is defined as: An establishment located on land with a producing vineyard or similar growing area for the production of wine, as defined by the State of Wisconsin, that includes a room for the tasting of wine, nonalcoholic fruit juices or incidental food items or the retail sales of winery products, products by the bottle for off-premise consumption or other retail items identified in the conditional use permit. A winery is conditionally permitted in all agricultural districts.

“Nature-based Operation” is defined as: A site-specific operation reliant on the property’s natural environment and characteristics and may include multiple related uses managed as one operation. A nature based operation is conditionally permitted in all agricultural districts.

A Winery is listed in the Pierce County Code as an Agricultural Business Operation along with other uses such as Orchard and Nursery.

“Agricultural Business Operation” is defined as: A site-specific business reliant on the property’s active agriculture which may include multiple related uses managed as one operation.

The use categories of “Agricultural Business Operation”, “Nature Based Operation”, and “Resorts” were created in response to a need that was identified in Pierce County’s Comprehensive Plan.

The new classifications were intended to allow for the establishment of a variety of agriculture compatible and site specific commercial uses that would be conditionally permitted and would thus be subject to guidance and use parameters established in a town’s adopted comprehensive plan. The minutes associated with LMC’s approval of the “Nature Based Operation” classification reveal that the classification was intended to serve as a “catch-all” for proposals, but would require the LMC to make a determination of whether the proposed use is reliant on the natural environment and characteristics as well as impose conditions to limit the scale and intensity of the use to an appropriate level. It was also noted in the minutes that an operation like “Vino in the Valley” would need to be brought forward as a combination “winery” and “nature based operation”. Pierce County Code §240-76 states that any expansion or intensification of a conditional use will require an additional conditional use permit. Staff would consider an increase in seating capacity or parking spaces to be an intensification of the use. The area is characterized by mixed uses including large-scale agriculture, residential and some commercial (north side of County Rd M in St. Croix County) uses. Numerous horse boarding facilities, both private and commercial are also located in the general vicinity. The applicants are proposing to construct a 2,000 square foot enclosed structure to be used as the winery. It would house the tasting room and office and would contain limited seating. The other main feature is the “social area”. The social area is to be a 2,800 square foot pavilion opening to the south. Another structure will house the restrooms and mechanical equipment. A large open air plaza area would connect the structures. Three gazebos are also proposed on the site. The original plans called for a kitchen. However, the applicant has indicated that since the full restaurant proposal has been modified, changes to the layout will be necessary. Therefore structure designs are not final at this time. The applicant has indicated that sizes and layout may be modified, however sizes will not exceed what has been proposed. Land Use Permits would not be required for structures approved as part of any conditional use permit, however all structures would require approval by the Wisconsin Department of Safety and Professional Services (DSPS). The tasting room is proposed to be open from mid-May to December 31st, seven days a week. The hours of operation are proposed to be from 11am to 10pm. This change was a result of the meetings with the Town of Clifton. Customers of the tasting room would be welcome to use the plaza and social area, but it is anticipated that the area will be closed in mid-October due to weather. Off-sale wine and other various crafts would be sold in the winery gift shop. Only appetizers would be served in the tasting room. The applicant is proposing to serve the brick-oven pizzas from mid-May to December 31 when weather allows, but expects to need to cease sales in mid-October due to weather. The pizza service is proposed to be open Thursday through Sunday with hours of operation being 11am to 10pm with lights out by 11pm. The social area pavilion is proposed to contain a 120 person seating capacity for food service. Seating would primarily be in the pavilion; however some seating might be moved to the plaza depending on the weather. Food items will only be available to those at the dining tables. Patrons of the winery who are on the plaza would not be served food, unless seated at a table. The applicant has indicated that consideration of noise was taken into account when developing the site layout. Mr. Zimmerman also went over the reservation requirement; this

being a means to eliminate the potential for large crowds waiting on site for available seating. The applicants anticipate hosting weddings or small private events. They propose to limit activities to the wedding and a small reception, and not include a typical dance or other late evening activities. There events would be done within business' regular hours of operation. Tours of the vineyard will run only when scheduled. Customers would not be allowed to walk the site unattended. Pierce County Code §240-54 requires parking for a restaurant or tavern to be: 1 space per 100 square feet of primary floor area or 1 space per 3 seats, whichever is greater. Using per seat, 40 parking spaces will be required for the pavilion. The winery will require another 20 parking spaces based on the square footage. Pierce County Code does not have parking space requirement classification for the plaza area. §240-54 has a requirement of 1 space per 500 square feet of display area for "Outside Retail Sales" uses. Staff has estimated the plaza area at 5500 square feet. This would require an additional 11 parking spaces. The parking lot will be constructed from crushed asphalt or paved. The applicant is proposing to provide 90 parking spaces. Applicant explained the parking space limits. This is done to limit traffic and noise. They also discussed the music. The number of employees would vary with the seasons and need. Pierce County Code does not restrict the number of employees for Wineries or Nature-based Operations. Applicants would apply to the Town of Clifton for all necessary liquor licenses. They would request the ability to sell beer, wine and potentially mixed drinks in the pavilion. The tasting room would sell wine exclusively. Any place that serves food to the public must be licensed as a restaurant under Wisconsin Department of Health and Family Services chapter 196. The Department Lighting Policy states: Power and orientation of light fixture: No exterior light fixture may be placed or orientated so that the lighting element or associated convex lens is visible from an adjacent lot line, ordinary high water mark line or public road right-of-way easement line. Applicant discussed trees that have been planted. The residence located onsite has a septic system for the residential use. Arrangements would need to be made for the sanitary waste generated by the proposed winery and food service. Staff has discussed winery waste and wastewater with the DNR and the Department of Safety and Professional Services (DSPS). Winery operators have many options to dispose of waste and wastewater. Permits from those agencies may be required depending on the volumes and method of disposal of the wastewater and byproducts (skins and stems). Review by the DNR or DSPS is needed depending upon the manner of disposal proposed. Staff has received numerous concerns from area residents regarding this proposal. Concerns include:

Inadequate Regulations and Inappropriate Use Classifications, which has been discussed earlier in the report.

Whether a restaurant could be located outside of the commercial zoning district.

Whether approval would be result in spot zoning, we have provided Wisconsin Supreme Court definition of spot zoning. Staff is confident that an approval of this request would not result in spot zoning.

Proposal will be detrimental to the character of the area, noise, traffic, road safety and compatibility with other uses. The site is approximately one half mile from County Road M. There are approximately 12 residences near the travel route.

1090th Street is identified as a potential bike route in Pierce County and is also used for walking and horse riding. Traffic counts for the roads are not available. The make-up of the area (large-scale agriculture, horse boarding and residential) requires multiple uses to coexist on 1090th St.

Wastewater, any plan will need to be approved by the DNR and DSPS.

Another concern is parking and we've gone over the Pierce County Code.

Effects on Property Values, Staff was unable to find any conclusive data that states whether a winery will have any impact on the surrounding property values, negative or positive.

Hours of Operation

Water Usage, Wells are regulated by the Department of Natural Resources (DNR).

Serving of Alcohol

Light Pollution, The Land Management Department has a lighting policy which was discussed above. The applicant has stated that the only lighting will be on the facility and not over the vineyard. All lighting would need to comply with the policy.

Impacts on the Kinnickinnic River, The proposed site is located approximately 1.4 miles from the river. Staff believes that implementation of a State approved Waste Stream Management Plan would be adequate to protect the river.

Use of Audio Bird Repellants, The applicant has not expressed any desire to use an audio bird repellent. Chemicals used on Grapes

Distance to Sheriff's Department and response time for emergency calls and the costs for emergency response if provided by the City of River Falls.

Possible future expansions

Environmental Issues

Impact of Weddings and other Celebrations

The Town of Clifton recommended approval of a "winery" on July 2, 2013. The Town Recommendation states: "Upon recommendation from Clifton's Planning Commission, the Clifton Town Board recommends to Pierce County Land Management a Conditional Use Permit for a Winery for Shannon Zimmerman be approved with no restaurant or any food served that requires a license. The "tasting room" in a Winery, is an operation that is permitted by zoning and supported by Clifton's Comprehensive Plan." The Town's recommendation also included the following comment, "There has been strong opposition to the winery from the surrounding neighbors who have attended Town meetings for the last 4 months. The Town Board feels this action is supported by Clifton's Comprehensive Plan and can be reviewed in two years for evaluation. A town recommendation is required as part of the application for a rezone or a conditional use permit. This recommendation is necessary whether a town has adopted a comprehensive plan or has not. Pierce County will seek to further each Town's planning goals when considering the establishment of conditionally permitted uses and when considering approval of a request for a rezone or map amendment. Pierce County will consider adherence to the goals, objectives and policies of an adopted or amended town comprehensive plan to be consistent with the "public interest" for decisions relating to that Town. In cases where an adopted plan gives guidance regarding the establishment of a proposed conditional use, the specific portion of the plan relating to the request should be referenced. If a town plan is silent regarding the establishment of a proposed use, or a town has not adopted a comprehensive plan, the recommendation will be advisory in nature. (Above language is contained in Pierce County's Comprehensive Plan and also on the LMC approved Town Recommendation Form). The Town of Clifton's recommendation does not specifically cite any portion of their Comprehensive Plan and it is referenced only generally in that it states that the "tasting room" is supported by the plan. No mention of the Town Comprehensive Plan is made in regards to the food service portion of the request; therefore their recommendation is to be considered advisory in nature.

Staff Recommendation: Staff recommends the Land Management Committee first determine if the proposed "nature based operation" portion of the request (restaurant/food service) is, in fact, dependent upon being located in the proposed location. If the request is determined to NOT be locationally dependent the LMC should only consider the approval of activities consistent with the definition of a "Winery".

Staff further recommends that, subject to the above determination, the LMC determine whether the proposed use(s) in the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a Nature-based Operation and/or a Winery with the following conditions:

1. Activities shall be conducted consistent with the application unless modified by another condition of approval.
2. Applicant shall obtain all necessary permits for any future structures or signs not presented in this plan from the Zoning Office.
3. The winery shall produce "wine" as defined by the State of Wisconsin.
4. Applicant shall develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations.
5. The applicant shall obtain necessary licenses from the Town of Clifton.

6. Applicant shall obtain all other necessary permits from state and municipal agencies.
7. The parking lot shall have at least 71 parking spaces. There shall be no on-street parking. (LMC may want to consider establishing a limit on the maximum number of spaces that can be provided.)
8. Seating capacity for full food service shall not exceed 120.
9. Applicant shall install signs detailing the need for reservations and no parking on the street.
10. Finalized plans of the structures shall be presented to the LMC for review and approval.
11. Winery may be open from mid-May to December 31st. Hours of operation shall be 11am to 10pm.
12. Pizza service may be provided from mid-May to December 31st, Thursday through Sunday. Hours of operation shall be 11am to 10pm with lights out at 11pm.
13. No beer or liquor shall be served in the tasting room.
14. Lighting shall comply with the Land Management Department policy.
15. Sound system shall only be within the structures.
16. No audio bird repellent shall be used onsite.
17. Weddings and special events may not exceed established business hours and must be conducted consistent with the other conditions of this permit.
18. This Conditional Use Permit shall expire in 2 years and a status report shall be presented to the LMC in one year.
19. Applicant understands that any intensification or expansion of the use will require the issuance of a new Conditional Use Permit.

Chairperson Fetzer opened the hearing to public comment. He stated he would appreciate if everyone would use the podium, state your name and township and also keep your comments to three to four minutes please. Gary Borgstadt and his wife, Marcia, the eastern neighbor, presented photos of the neighborhood and also photos of the LMC members homes. They feel the commercial operations planned by the Zimmerman's far exceed any existing business uses in their neighborhood and the surrounding town. They feel the CUP application, including a winery with restaurant food, does not reasonably meet the definition of a Nature-based Operation. It is their concern that it is unlikely the Zimmerman's can have effective mitigation of the noise and are concerned about vehicle and pedestrian traffic, waste disposal, and erosion from paved and plaza areas. The proposed plans are a significant variation from the current pleasant harmony of the existing neighborhood, both visually and audibly. What they propose is not in character with the area: a parking lot, large buildings, gazebos and the noise. They believe the hours of operation proposed are unreasonable for a vineyard and wine tasting room, 11am to 10pm, is extremely long hours of operation in a quiet residential neighborhood. The property concerns they have are the parking lot area will be about 200 feet along the wetland area right next to their home. Their property value and ability to ever sell will suffer due to noise, traffic, commercial appearance brought on by the small parcel. Currently the trees planted on their property line as a barrier are no higher than the alfalfa so it creates a distrust that there will be a way to mitigate it. They have come to the Clifton Town to oppose the application, a petition with 98 signatures was presented on May 7th and property owners have sought legal counsel for considering any legal action and advice. The Town of Clifton has recommended no restaurant and if the County discards their input, it would be directly ignoring the property owners who have spoken clearly against this CUP. John Holck, with his wife Connie, live on the corner of Cty Rd M and 1090th St since July 1981. They first became aware of this project last fall in the River Falls Journal, which reported that the Town of Clifton had approved a vineyard/winery for Shannon Zimmerman and in that same article Mr. Zimmerman stated that he intended to build a project similar to "Vino in the Valley". It stated he had discussed this with his neighbors who had no objections. The article also quoted Chairperson LeRoy Peterson as saying it would require a change in zoning to commercial before that could happen. They believe Mr. Peterson is correct. From talking to people in Oak Grove, they know that a vineyard and winery and tasting room in an established rural residential neighborhood is not compatible. There are certainly locations in Pierce County where the facilities can be established without impacting the homeowners. It is not speculative that the increase in traffic from a commercial facility such as envisioned by this will greatly diminish the enjoyment of their property. Their driveway fronts on

Cty Rd M but their property is exposed to 1090th St. The increase of traffic and noise will greatly impact them. There are no stacking lanes on Cty Rd M. Anyone can plant and attempt to grow grapes in an agriculture area and a winery is a conditional use, therefore there is no reason to throw in the Nature-based classification. He questions whether a vineyard/winery is natural. Well maintained vineyards are the antithesis of nature. They require intensive management, incorporating hundreds of treated fence posts, trellis systems, manual or chemical pest and fungus control, bird and animal control systems, irrigation, fertilization and a lot of heart and labor. It is very intensive agriculture not nature. The production of wine requires specialized equipment and produces very high biological strength solid waste and waste water that requires special handling. It is an industrial food production activity. They request that the committee reject the proposal in total or deal only with the vineyard/winery aspect and set conditions similar to what were recently set for Oak Grove. Carmel White, lives on that street, stated that Mr. Zimmerman has obviously scaled back his intentions to make sure that he pleases the neighborhood. She stated that what the neighbors have not mentioned is the heavy traffic that does travel down the road because they have a large horse area in the neighborhood and they constantly have heavy traffic, heavy equipment and also the neighbors constantly have parties and they do park out on the street. She has a hard time getting home due to cars on the road because she has to go around a curve. She would find it a joy to look out at a vineyard every day. She thinks it's very natural. Joe Bechtel, lives in River Falls Township, does not live in the neighborhood, but he is here to speak to the integrity of Mr. Zimmerman. He has known him his whole life. There is a lot of fear around what it could be versus what the intentions of the Zimmerman's are. He looks to the committee to set those parameters to help take some of that fear out. He thinks that this type of offering would be very welcome, not only by people in the River Falls area, but across the valley in St. Croix and the state border. Janna Kusilek, she and pat have lived on the southern property line for years. They did know that they were going to plant and have the vineyard. They did mention a small gazebo with some wine tasting. They also find out, after reading in the Journal, about the plan to have a restaurant and a commercial business. They do not want the commercial business, but they also own a business and drive on that road. She had questions for Mr. Zimmerman; she didn't realize the one building would be open to them and then indicated that their property is actually 40 feet from their diving board to the first grape vines, which will have tours. Joe Rohl, resident and member of Clifton Town Board, asked when the definition of a Nature-based operation was added in our zoning code. Pichotta stated that discussions began in 2010 and language was formally adopted in 2011-2012. Mr. Rohl asked when our County Comprehensive Plan was last ratified and when most town plans were adopted. Pichotta stated there was legislation passed years ago that required all land use decisions made by a municipality effective January 1, 2010 be consistent with a comprehensive plan. Most town plans were developed within six months either side of that date. Mr. Rohl stated that he has been hearing from a lot of people concerned about this issue. He hasn't heard any negative comments about the Zimmerman's, they have been spoken about with a high regard. He doesn't feel the staff report fully reflects the discussion that the Clifton Town Board and Planning Commission had regarding the Nature-based Operation portion of this proposal. They did discuss it at both meetings before it came back to this body with their recommendation. It was their opinion that it isn't a Nature-based Operation. It isn't unique to any other part of Clifton or Pierce County for that matter. They weren't thinking of it at the time when they made the recommendation and thus they didn't speak to the Nature-based portion. When they decided to make a recommendation, it was based on the fact that their comprehensive land use map showed that it is GRF8 zone and a winery is definitely a conditional use in that zone. Ultimately what they are trying to do is have compatible land uses existing as the best they can. They have a comprehensive land use plan that is to be their tool to help guide their decisions. None of them had a full understanding of Nature-based Operation classification that has been added to the ordinance since the last revision of their comp plan. Their conclusion was, it was going to take a rezone. If you were to rezone this property, he believes you wouldn't, because it would result in a spot zone. The other thing that he heard was, if the viability of this is tied more to the restaurant than to the property, that would be a test as to whether it truly is nature-based or not. They want to see the Zimmerman family exercise their rights under the current comp plan and zoning code and that is why they sent the recommendation for a winery with a

tasting room. Debbie Branigan, has lived on 840th Ave for the past 30 years. They have seen lots of changes and lots of added traffic to their road. It is a very scenic road with a lot of curves. With that concern, she called the Pierce County Sheriff's Department and spoke with Jason Matthys and was asking some concerns on the added traffic volume. It's not just the traffic you have to consider but the consumption of alcohol with children on the road, bicycles on the road. They have antique cars they like to drive and she would be very nervous to be out on the roads when we have this added volume of traffic. Roald Evensen, lives 1600 feet from the site in question and addressed the question of sound. Mr. Zimmerman is proposing an open amphitheater type building constructed of brick and block which will do nothing but amplify whatever inside speakers he is asking to have. They don't know the definition of light music in the staff report but they have heard a lot of not light music over the years from this property. Trees and seven foot vines as a barrier are inadequate. He is proposing a destination business that will draw hundreds and hundreds of people every weekend right through their residential community and it is an incompatible land use. Joe Gednalske, lives in Clifton Township about a third of a mile from the location. As he looks at the code for a winery, he thinks the understanding of the state of Wisconsin, a winery is someone that has a vineyard, someone that produces wine and may allow tasting on location of wine. He recently has been to wineries and doesn't see any 90 space parking lots even in California at some of the very big wineries around the world. Most of the large wineries that have a tasting room don't have food, the common practice is to not have food, they may have a breadstick but the food, the alcohol, totally puts it out of the scope of a winery by the definition of the State of Wisconsin. Catherine Munkittrick, attorney in River Falls in practice for 26 years, practices primarily municipal law and represents municipalities so she is very familiar with land use regulation and the issues that are involved in this application. She represents some of the residents in the area. The neighbors are opposed to the proposed use and what they, neighbors in surrounding area and the Town is asking this committee to do is to analyze the proposal under its own and the town comprehensive plan and under the zoning ordinance. She stated this is not a use permitted as a right, only permitted as issuance of a conditional use permit which this committee can grant or deny in its discretion. This committee, in order to approve a conditional use permit, has to find that the proposed use at the proposed location will not be contrary to the public interest and will not be detrimental or injurious to the public health, public safety or the character of the surrounding area. The surrounding area is used as quiet, rural, residential area. This is not a proposal far from development but one proposed right in the middle of an existing neighborhood with significant property values. The applicant is asking to put in a high intensive, high traffic, high people use. It's a 90 car parking lot at a minimum of probably two people in each car on the property from 11am to 11pm in a quiet residential neighborhood. That is incompatible. This committee has had a history and experience with these types of operations in a residential neighborhood. As it becomes successful, it generates more traffic and more noise. The applicants are not modifying their proposal in any way that will minimize noise or traffic through the neighborhood. The only modification relating to the restaurant is that they will serve pizza and appetizers. There will still need to be a kitchen. The significant change from the application to what is now presented is a parking lot that is gone from 62 cars to 90 cars. The hours, 11am to 11pm are not compatible with a residential neighborhood. The committee's job in considering this application is to determine if it is a Nature-based Operation. The proposed hours of the winery are not clear, the application says that the winery is to be open year round, the staff report says it's to be open mid-May to December 31st. Neither the application nor the staff report state the seating capacity of the wine tasting room. They are still proposing a 120 seat, fully licensed restaurant. It may have a larger seating capacity because the applicant tonight referred to possibly setting up tables on the plaza area, which is outside the proposed restaurant area. The proposed restaurant area is the Socialization Area. That is going to be open-air on one side leading out to this plaza area. If you have people sitting in the restaurant area and the plaza area, which is larger than the restaurant, you could more than double the seating capacity of the proposed operation. It has been said that customers of the wine tasting room will be allowed to congregate or sit and can be served food on the plaza area if there are tables. The square footage of the proposed structures is quite large for a residential neighborhood. The capacity to accommodate significant numbers of people; 200 plus people 11am to 11pm is a concern and

inappropriate. That doesn't begin to contemplate the weddings and special events. The applicant hasn't provided you that information and under your zoning code, it's the burden of the applicant to show that he meets the criteria of the conditional use provisions. Noise is an important issue. Ms Munkittrick cited information regarding vegetative buffers, stating that they visually screen but do not stop noise. Even berms aren't that effective unless they are very high and very wide. The applicant has not proposed any reasonable or effective measure to abate noise. The application talks about reservations being required, they don't say what they are going to do if a person doesn't have a reservation. We know there is a large amount of seating capacity proposed in this application, her guess is that if someone doesn't have a reservation and there is room on the plaza or restaurant or even on the reception area; that they will be able to congregate and wait until a seat is available. There is nothing in the natural environment or natural characteristics of the property that require this restaurant to be placed on this location. The wine tasting experience can be done in another location. She feels they have spot zoning, a commercial operation and to allow it as a Nature-based operation would in effect be allowing a high impact, commercial use in a residential neighborhood. The application acknowledges that the business cannot be viable without the restaurant. The staff report indicates staff was not able to find information on the effect of a winery on residential property values. What is proposed is not just a winery; it's a winery/restaurant/special event/gift shop. She did find information recognizing that residential uses are noise sensitive uses recognizing that studies have shown exposure to traffic noise can lower residential property values and have negative health effects. This proposal is not consistent with the Pierce County Comprehensive Plan; pages were cited. A huge goal of the Town Comprehensive Plan is promoting high quality, rural residential neighborhoods. That was part of the Town Board's opposition to the commercial aspect of it. Greg Eggers, Planning Commission member, Town of Clifton, their recommendation to the County was to approve the conditional use permit for a winery/tasting room and not the Nature-based Operation. They also added a clarification or opinion on what they considered incidental food which was anything that did not require a food service license. He has also been to wineries all around the country and at none of those wineries has he seen beer and mixed drinks. This has been discussed at both the planning commission and town board but no motions were made and he doesn't believe that is consistent with a Nature-based Operation. Rich Schoenthaler, neighbor to the southwest, kitty corner, he has two concerns when he looks at this. The road or traffic, he has had engineers take a visual inspection of the road, not an official study, the road would not be a mid or high capacity road. The curve is not WI DOT certified which would require a complete engineering job to reduce and eliminate that. That hill starts just below where 840th is and goes up and around. Chairperson Fetzer asked him what road we are talking about. Mr. Schoenthaler stated 1090th. Any type of modification would have to bring it up to WI DOT certification to what he is told. He had his traffic designers estimate the increase in road traffic for a 1,000 square foot type facility. He doesn't know if it's a Town or County issue but the road may have to be brought up eventually to certification standards. The Township, at one time, when they widened the road had looked at this but had decided to not go through the whole engineering because it would require massive elimination of the hill and curve. His other concern is water usage, currently wells in the area, three, just south of there, have had to drop their wells because the water table has dropped. They have natural occurring arsenic. When that is exposed to air, that becomes a form that can be put into the water. They are monitoring this in St. Croix County. As the wells drop, that is exposed to air; it becomes arsenic and can be put into the water supply. He consulted other offices that deal with wineries, about the use of water for wineries. He stated they use a lot of water and in cases of drought they can use extensive amounts if they water the vines. So he hopes the DNR or whoever will be conducting the studies will reflect high capacity wells and the usage in the area. The residences in the valley may have to drill down to the next aquifer which is a traumatic expense. Greg Johnson with wife Kristin, live on the northern border of the Zimmerman's parcel, just moved in May 17th. He wants to make sure there is better communication in the future. Chairperson Fetzer stated whatever comes of this tonight, good or bad, any conditional use permit will come back in within a year typically or we can set up any timeframe that is necessary. Pichotta stated if we approve a conditional use permit for a use that is controversial or contentious, generally the committee brings the applicant back in on fairly short timeframes to find out what's going on and also find out how it's going in the community.

The beauty of a conditional use permit is if there are unexpected or unanticipated impacts to the neighborhood, we can literally get in front of the Land Management Committee in 24 hours and conditions can be changed. If an applicant does not adhere to imposed conditions, the committee can ultimately pull the permit. A conditional use permit is a mechanism through which, if the committee doesn't get it perfect right away, they can get it right, over the course of time and in the right set of circumstances that wouldn't take too long. Joe's point is that we do have the ability to react to things as they come up. Catherine Munkittrick, asked if the committee members received her letter that did have proposed conditions if the committee was going that way. Joe Rohl stated the committee has the opportunity to use the comprehensive land use plan in a conditional use process to allow Mr. Zimmerman to utilize his property in ways that he would like to and yet protect the other economic interests in the area. LeRoy Peterson, Chairperson, Town of Clifton, everyone keeps mentioning this restaurant that they have agreed they are not going to have and a lot of the traffic is based on this restaurant that is not going to happen. Don Dusek, stated that the applicant had only agreed he would serve only pizza and appetizers and that's still a restaurant. **Public hearing closed.** Holst asked Mr. Zimmerman if he has plans for a high capacity well. Mr. Zimmerman stated no. Holst noted that arsenic is a naturally occurring phenomenon in the State of Wisconsin. It sounds scary but we've all got it. William Thiel, attorney for the applicant, the definition of a conditional use permit directly from the State Supreme Court is for a particular use of land that a community recognizes as desirable or necessary but which the community will sanction only in a controlled manner. A conditional use permit allows a property owner to put his property to a use which the ordinance expressly permits when certain conditions or standards have been met. The Zimmerman property is zoned GRF8 as are his neighbor's properties. We have heard numerous comments about this being a residential neighborhood, a residential district. It is not. It is agricultural. The residential component in this neighborhood is subordinate to the agricultural use which is predominant. If you look at your code, the purpose of the GR district is to maintain and enhance agricultural operations in the County. This County has been used foresight in developing its comprehensive plan and zoning code to recognize that agriculture is not static. Agriculture is an evolving type of use of land and Pierce County's code and comprehensive plan recognize that, considering the fact that you have incorporated a definition of a winery. Contrary to a lot of the comments here tonight, winery is an establishment located on land with a producing vineyard, this is, as Mr. Zimmerman has indicated, or a similar growing area for the production of wine that includes a room for the tasting of wine, nonalcoholic fruit juices or incidental food items. As has been indicated, as staff has submitted; the potential for producing some stone baked pizzas and appetizers fits within their definition of being incidental and we would hope that it would in yours as well. The operation of a winery is wholly compatible with the emphasized agricultural uses of land emphasized in the GRF8 district. Not only is the Zimmerman's proposed land use that of a winery but it qualifies as an agricultural business operation as well. The area in which the Zimmerman property is situated is a mixture of uses, predominant among which is agriculture. Both the Town and County plans are planning instruments prepared to deal with expected or anticipated land uses and land use changes. It can clearly be stated, that the development and devotion of agricultural lands to wineries is specifically recognized by and promoted in the zoning code. The real implementing element at this level is the zoning code which has been adopted in a consistent manner, as Mr. Pichotta indicates, with your comprehensive plan. This recognizes both the Town and County levels; the need to preserve agricultural uses of land and in the process has broadened the approach of the County as to the nature of agriculture and what face of agricultural land uses the County is looking for in the future. As a supervising committee you are being asked, with due respect, to grant a conditional use permit. You look at the standards under 240-76E(2) in deciding what if any standards to apply. Not to be disrespectful but what you have heard tonight, to a great extent, has been essentially speculation and guesses as to what will or will not occur. As was indicated, this operation will be under a microscope if you grant a conditional use permit. I submit to you that the Zimmerman's both as residents on the land in question, as agricultural producers, and as people that are going to invest a lot of money in this, are fool-hearty at best if they are going to invest time and money in this and engage in operations that anger the neighborhood so they have a situation in which you sit down a year from now and take away their conditional use permit. They would have lost a lot of

money, time and effort and based upon his knowledge of the Zimmerman's that is not going to be the case. It's a quiet rural residential area infused into an agricultural district. Pierce County now recognizes that wineries are an appropriate agricultural use. There is no evidence of insufficiency of the highways. Indeed if there are issues that come up in the future, they will have to be dealt with, but at this time there is no evidence of insufficiency of highways. We keep hearing restaurant but as Mr. Zimmerman indicated to you in his statement at the onset, he has a vineyard, growing grapes, he is producing wine. Contrary to what may have happened at some other vineyard operation in Pierce County, he is going to produce grapes that will be used to produce wine on-site, serve it and potentially sell it off-site. It is his preference and his families that ancillary food items be allowed to enhance the wine tasting experience but this is not a restaurant. Again the definition of winery is broad, the County Board could have narrowly defined winery to be a place where grapes are grown, crushed and put into bottles but it chose not to. It is not the mission of the committee to second guess what the County Board, as a whole, has determined but rather to apply that law. If these folks fail to abide by terms and conditions or if problems arise that they don't deal with, you will be looking at this again. Mr. Thiel indicated that he has been practicing law for 38 years; he has dealt with both municipalities and with private persons. He has dealt with spot zoning a lot. They are not talking about rezoning here. They are talking about applying a conditional use standard under our ordinance. The conditional use standards do allow, subject to your wisdom, for a winery as an agricultural use to be made of land in the GRF8 district. Mr. Zimmerman stated that this is in demand and it will likely be an opportunity that is extremely consistent with the comprehensive plan that he previously read. It is likely to bring people into ag and promote ag tourism. They see it as a wonderful opportunity to enhance the area. In terms of barriers to the east, his approach is that they have some extremely small trees there but have left it alone with the anticipation of the excavation of the berms they will put up there. This is a substantial difference. The people to the south, Pat and Janna Kusilek, her point about her pool being 40 feet from his first vine, which is 300 feet long, which is almost 200 feet to the next structure. He just wanted to put that into context. They will do everything they can to make sure these things are addressed. When they contemplated this endeavor, they did so because they have a passion and a love for this. They did so also knowing that if they are successful doing it, they are going to live there forever. They are going to take care of these things. Brad Roy was pretty clear with him that if we are talking about 120 guests, we talk about parking lots and the lot is being proposed as larger so they keep every single car off of 875th Ave. It doesn't mean it's a free for all in the building. If we say 120, it's 120. If the parking lot is full, they leave, it's that simple. To not follow that would be a violation of this committee if that is going to set forth for us. Our request is to be given the chance and be controlled by way of conditions, to take advantage of an opportunity to bring people in to Pierce County. He speculates the traffic will come from the north. They will abide by the decision and do whatever down the road if adjustments are necessary. Aubart asked about condition #8, seating capacity for full food service not to exceed 120. He would like to see food service be taken out of there and seating capacity not to exceed the 120 as Mr. Zimmerman just explained it. Roy asked if that goes for the tasting room as well. The way he wrote it, the 120 would be for the pavilion and the plaza area. If they were going to move some seats out of the pavilion and onto the plaza, you have 120 seats outside of the tasting room, where you want to put them is up to you. Aubart asked what the capacity of the tasting room is. Roy stated its 2000 square feet. Mr. Zimmerman stated there is no seating directly in there. That is more the wine sampling area where people will enter. Holst asked Aubart if he is thinking of limiting the overall capacity. Aubart stated yes, the overall capacity because when they talk about the parking. Holst asked if he means the food service and the wine tasting, limiting the overall capacity for everything to 120. Aubart stated he doesn't know if 120 is the number but when we talk about parking issues and those things, so that we limit. It doesn't make any difference if you have 120 people in the pavilion and the parking lot is full, that number isn't necessary. Chairperson Fetzter stated what he thinks Brad is doing is talking about the seating capacity in the eating area. Holst stated he believes Mr. Zimmerman has implied that he will berm for his eastern neighbor, is that correct? Mr. Zimmerman stated that is correct. Holst stated he thinks that needs to be listed here along with size and height of said berm, along with vegetative cover that will go on said berm, probably in all directions. It would go a long way to appease your neighbors and I think that is your intent

sir, but we have been caught before by not having detail in these permits. Sanden echoed that. The diagram shows far less vegetative buffering north of the parking lot than anywhere else. It would be nice if that was a permanent visual screen. Holst would concur with Mr. Zimmerman's legal representation that this is not a residential district. It is an ag district. Under those terms, your town had the ability to zone it as a residential district, at the time they chose not to zone it as residential, correct Joe? Mr. Rohl stated absolutely. Sanden stated that he would like some clarification from Mr. Zimmerman, this was brought up by the Town Board as well, on the idea of it being a Nature-based Operation. His understanding was it was meant to identify areas that were unique in the aesthetic sense. Can you say what makes this area aesthetically unique in Pierce County to warrant that designation of Nature-based? Mr. Zimmerman stated there are multiple elements to this answer. It may not be as unique as we will have it when it is done. In the idea they have contemplated of a more complete wine experience where people can come and enjoy wine and have something there that they can eat. When they spoke with the Department of Land Management, if we are going to have any form of food to have both distinctions and classifications; so in consultation with the Department of Land Management, we sought both. What he has since learned that by technical right, with a winery, you can have food as well, the vague term incidental that is really up to the committee. Their goal is have someone from Hudson, River Falls and where ever be able to experience a beautiful vineyard and winery. The design that has been created is intended to model itself after a Tuscan Farmhouse. They have 34 and another row of 16 trellises and grapes put in. This is year two for one section. Sanden stated he would like to drop the Nature-based element of this, it doesn't mean the food is nullified. What it would mean is that you would have to show us that the food is subordinate or incidental, you can come back with a plan of the food operation. In terms of the economic input, as far as square footage, you can come back and show us that the food service portion of your application is subordinate and incidental then it could fit into the winery definition. Mr. Zimmerman asked to clarify, an example of that would be, a condition that wine sales exceed food sales. Sanden answered yes, but that is possibly one facet. He would also like to see square footage because if you are successful in this and bring in a tremendous amount of money with wine sales, then the economic input alone would not be sufficient. You could still have a huge restaurant and it could still be considered incidental so not only the economic element but the square footage; that kind of approach. He feels the concern that has been expressed is that the winery could go away at some point and they would be left with a restaurant. Holst asked when you compare what the winery is and include the tasting room in the winery, he believes that is allowed, by State definition, when you figure the square footage of those areas it far exceeds the proposed food area. That is another way to look at this. Holst stated that he concurs with Dr. Sanden that a nature based operation is not the correct usage for this application. We ship most of our industry or commercial projects out of the County. He would like to see this stay. That's why they put the definition in the plan. There are a lot of things with this proposal that differ from Vino in the Valley, that differ from the one in Oak Grove. There are some similarities but there are a lot of differences also. Ross stated he lives on one of the main roads that goes into Vino in the Valley. He has lived there 11 or 12 years. They really didn't see a lot of increase of a negative nature. When he comes home from work every night about 10pm, rarely is there any trouble. He sees this on a regular basis. Conditional use permits are not set in stone and if there are issues, they will be brought back here. An area resident asked what do you consider a fair amount of production on the own location? Do you anticipate that all the wine produced will need to come from grapes that are produced on that site? Mr. Zimmerman stated not unlike those that buy hay, buy other supplemental goods for any other farm, they will produce as much as they possibly can. If production and demand rises, even in the distribution area, they will buy grapes. We will produce the maximum amount that the land can sustain and if there is a deficiency of any kind then they would be helping some other farmers out by buying some of their crop. The same area resident asked what the Land Management Committee's interpretation of the wine percentage produced on their own farm is. Holst stated he doesn't believe there is one. We didn't limit ourselves or draw such tight constraints when this was drawn up to say 51% has to come from your own land. He, as a farmer, owns a vast amount of land and rents very little. Other farmers own very little and rent a lot. Agriculture has to have the ability to grow as it can and needs to shrink/constrict as it can. He

doesn't feel we need to limit, not only this applicant, but applicants for a winery as a whole or other ag-tourism based operations as a whole. Chairperson Fetzer stated he runs a 1500 cow dairy operation. Last year they had to buy a lot of corn, this year they picked up a little land and lost most of their alfalfa. It fluctuates with each year. Sanden asked what the decibel limit was that was put on Vino in the Valley. Roy stated 80 decibels. Ms Kusilek asked how that is measured. Pichotta stated we have a decibel meter. Roy stated he believes it was 80 decibels at any point on the property, 80 decibels was right next to the speakers. Holst stated that is not the way he recalls it but it could be. He thought it was at the property line. Holst stated for the gentleman that took pictures of LMC member homes, he has Burlington Northern Railroad for one neighbor, he has a sand mine for another one and he has steep slopes in excess of 15% and he would welcome a restaurant if someone could shoehorn one in there. Chairperson Fetzer stated he also lives on one of the main arteries for Vino in the Valley and the other main artery this spring was closed down because a bridge was out. He really expected to see a huge difference in traffic but he can honestly say he didn't notice a difference. He does know when Vino is open because there are Minnesota cars that drive by. He also knows that his road is used for motorcycle rides, not necessarily for Vino, it's just a nice scenic route. He doesn't notice traffic coming by his place. Judy Clement-Lee, Clerk/Treasurer for Clifton Township, stated there is some confusion about a restaurant. One of the requests from the Town of Clifton was that there would be no restaurant, anything that required a license. Is the brick-oven pizza going to qualify as a restaurant? Fetzer stated yes if that was granted, it would. Pichotta stated if you are going to serve food, you need a food service license. Holst stated the way that this is proposed, he will need a liquor license from the Township. He has taken quite a gamble by planting grapes; you are taking a gamble by building a building. You are going to have a tremendous amount of expense in this and the Town of Clifton may say we don't have a license for you. Sanden asked if the committee needs to do this in a two-step motion as to what is recommended. Pichotta stated you certainly could do that, if he understands what you have suggested, that the applicant bring additional information, you could defer action until such time or you could grant some sort of approval with the understanding that there will be further clarification when more information is brought in. Sanden asked if it would be appropriate to approve the winery part and delay action on the food service until such time as they are presented information. Pichotta stated if you are going to consider incidental food under the winery it might make sense to hold off on a decision relating to the winery. If you are going to approve a conditional use permit for a winery and in the future allow for what might be considered an intensification of that use, it might make sense to do it all at once. Holst stated he believes they have the information before them to come to a conclusion whether or not it would be incidental/subordinate to the winery, just in terms of square footage and we could put a condition in that would address the financial implications. He is sure we will revisit this probably on the six month basis to begin with and then onto a yearly basis. It's quite a gamble of the applicant to move forward with the type of investment that he is talking about with a conditional use permit, as it is with all conditional use permits. They need to be good neighbors. They have to keep their word with us and also with their neighbors. Sanden stated the only problem he has with the word incidental is that does define it as not requiring a food service license. He prefers subordinate use. Pichotta stated incidental is part of the definition of winery. When we sought guidance as to what incidental meant, the zoning code refers to a certain dictionary for reference. That dictionary indicated that incidental would be considered to subordinate to the principal use. He noted that incidental in one case may mean no food that requires a license, that was applicable to the Valley Vineyard application but one must remember that the applicant applied as a Farm and Home Based Business, he also said in the application that he was only going to serve cheese and crackers. In that particular case, the committee has made the decision that incidental, in the case of Valley Vineyard, means cheese and crackers, those sorts of things. Conditional use permits are based on the proposed use in the proposed location and are not precedential. Each one is dealt with on the merits of that request at that particular location. Just because you made a determination in regard to Valley Vineyard; doesn't mean that you don't have the ability to take into consideration something different for this particular request. Aubart questioned condition #8, could we change that seating capacity of 120 for both the pavilion and plaza. Holst asked if Dr. Sanden has his suggestions about screening and a suggested route on Cty Rd M just as

the applicant has said he presumes that people will use. Sanden stated the committee has had some experience with these kinds of operations, speaking just for himself, it is critical that this doesn't get expanded that this is really what you're planning on doing, not some incremental growth over time and that these conditions be followed carefully. As was mentioned you are going to be under the microscope, you have a lot of neighbors who will be watching this very carefully and he wouldn't be very receptive if we had to come back and revisit some of this. This is a conditional use permit and it isn't the end of the story, this is the beginning, we can keep coming back on this, revising and get it right. We have a very unenviable position to have to try and strike compromise; trying to allow them to use their land in a proper way and trying to maintain your full enjoyment of your property. The conditional use permit does give us the mechanism by which to do this. We have our ways of checking up and we also rely on you, the neighbors, to report to us if there are any violations or problems that we didn't get. **Sanden moved to approve the conditional use permit for a winery for Shannon and Angel Zimmerman, due to the fact this is not found to be contrary to the public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 – 19, modifying condition #8 to eliminate full food service and add Seating capacity for the pavilion and plaza shall not exceed 120. Add condition #20 Berm shall be established on the east perimeter of the property with adequate vegetative cover. #21 Adequate vegetative cover shall be established to visually screen the parking lot from the road. #22 Applicant shall provide a plan for food service operation which demonstrates that food operations are incidental/subordinate to winery operations. #23 Sound shall be limited to no more than 80 decibels at the property line. #24 Food service shall remain incidental/subordinate to the primary use as a winery. #25 Promoted access route shall be along County Road M. #26 Arrangements shall be made to establish a visual screen along the southern property boundary.**

Mr. Zimmerman stated they have planted a small amount of trees, they can do a berm and a fence, they will do both. Chairperson Fetzer stated you can work with your neighbor. Sanden stated to Kusilek's that you can come back and say it's not adequate if so. Ms Kusilek stated they have been working together. An area resident asked if the hours of operation can be addressed, he feels that is late. **Sanden stated also revising condition #11 Hours of operation shall be 11am to 9pm. And #12 Hours of operation shall be 11am to 9pm with lights out by 10pm/Ross seconded.** Roy stated condition #15 going on what happened at Vino, they limited all speakers to the structures as well, maybe we just want to clarify that so they couldn't put a speaker right on the property line. All the speakers and the sound system will be within the structure. **Sanden amended condition #15 Sound system, including speakers, shall only be within the structures/Ross accepted that change. All in favor. Passed.**

Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining for County Materials, agent for B.S. Construction Inc and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI.

Staff Report – Andy Pichotta: BS Construction/Steve Schoeder Properties owns a mine in the Town of Rock Elm which was expanded in 2006. County Materials is the current operator of the site. In 2006, the applicant and the adjoining property owner, Bill Sylla, agreed to allow mining within 50 feet of the Sylla's property line as long as mining did not encroach within 400 feet of the Sylla's house and peak particle velocity would not exceed .35 inches per second. On September 5, 2012 the LMC modified the condition regarding peak particle velocity for blasting. The maximum peak particle velocity was raised from .35 to .50. This was at the request of the mine operator. It was stated that the low peak particle velocity makes it more difficult to blast the rock as activity gets closer to the Sylla's property. The applicant indicated that the ability to utilize a higher peak particle velocity will allow blasters to obtain a higher frequency in the blast and also utilize electronic detonators that will, with proper timing, result in less potential for impacts to the Syllas. The blasters will drill the hole and set up two seismographs between the hole and the Sylla's house. Form the signature blast, an analysis can be done of the wave form to determine an optimum blast time to utilize with the electronic detonators. It would appear that a

determination as to whether impacts to the Sylla's are, in fact, lessened will not be known until such time as the information gathered in conjunction with the signature blast can be utilized in a production blast. The LMC asked to be presented with the results of the signature blast and indicated that if the higher peak particle velocity creates a problem that it would be reduced back to .35. The signature hole blast is scheduled to be conducted on August 5th at noon and did take place. The results will be presented at the August 7 LMC meeting. It should be noted that the Town of Rock Elm is in the process of developing a Nonmetallic Mining Licensing Ordinance and a Blasting Ordinance which may limit the peak particle velocity to .35 inches per second for all blasting that is to occur within the town. The proposed Town ordinance would supersede the Conditional Use Permit. The property is located in Section 15, Town of Rock Elm and is zoned Agriculture Residential. The existing conditions are listed in the staff report #1 - #13.

Staff Recommendation: Staff recommends the Land Management Committee consider whether established conditions are adequate to protect the public interest, public health and safety and the character of the area and determine if any modifications are necessary. Given that we just had the signature blast done and the next production blast would utilize the results from that it can't be known if modifications of the conditions is necessary until such time as that occurs. The committee will need to make that determination.

Chairperson Fetzer invited Brian LaRue forward: Mr. LaRue, stated Curt Oakes, the General Manager had recently resigned and took a position, his dream job, in North Carolina. They put the signature hole analysis that they did on Monday, shot on the 5th at 12:12pm with good results, on Instantel. It gave them the information that they needed to move forward. The whole purpose of the last meeting on September 12, 2012 was to allow them to do the signature hole blast, get the analysis, take the timing through the software through Instantel and to get the optimum timing for row to row and hole to hole to keep under that .35. They did, he has the results and presented them to the committee and Sylla's, along with the z-curve that County Materials would like the committee to consider versus the .35. Mr. LaRue went over the results and the timing that they propose. The z-curve, which they were promoting the use of, the hertz, y axis, x axis and amplitude show on a particular signature hole that they had 9 to 13. With simulation with the signature hole analysis timing, they can slide that frequency up. This is the time that they are using from the one hole shot off the corner. They had a seismograph at 374 feet. Bill's house is 581 feet. Chairperson Fetzer asked about the second page. Mr. LaRue stated the next page shows a simulation with a new timing taken off of the signature hole. Moving forward with the signature hole analysis and the new timing they propose to use that timing the next time they shoot probably in the next couple weeks. They can slide those hertz up to 30 hertz with the new timing and the projected peak particle velocity ranges from .127 to .247. Chairperson Fetzer stated so you are staying under the .35. Bill Sylla Jr stated that if the plan is to stay under the .35; that is reasonable with them. He explained how they got to the .35, which was asked at the previous meeting. He presented information on research done on the effects on humans. Bill Sylla Sr took the information which is plotted on the same curve as the z-curve, and put it on a transparency and they overlaid it for all the blasts for the quarry. You can see it starts out as perceptible and the next one is disturbing and then above that is intolerable. That is the average person. The first blast was a little on disturbing but most is perceptible, the next page shows 10 to 20% in the intolerable range. That's with people driving with a .35 target, not shooting for a .50. Because of the geology and whatever else, some of the examples go above. Most has been pretty good at staying below the .35 limit for the blasts. If you look at the higher frequencies, that is when it becomes more disturbing for the people that live in the residence. The z-curve, the State standard, protects property. It protects the blasters from liability if they happen to damage property. It's easily visible if that happens. It doesn't do much to protect the souls that live in the houses. That is why they asked for the .35 inches. His parents have lived with a .35, keep mining at that and close it out. Mr. LaRue stated that they had this discussion last September with Curt Oakes and you are comparing apples to oranges from displacement to amplitude. Mr. LaRue asked Mr. Sylla to look at their graph, discussion followed regarding peak particle velocity and the z-curve. John Eager went to the signature blast and asked before anything is finalized he would like to see the production blast and see the information from that. Chairperson Fetzer stated the

computer model of the signature blast keeps everything under the .35 and that looks good. Pichotta suggested modifying condition #13 to say, County Materials shall come back before the Land Management Committee as soon as possible after the next production blast for a status report and to review conditions. **Aubart moved to modify condition #13 as stated/Holst seconded. All in favor. Passed.** John Eager asked if they can be notified prior to the production blast so they can coordinate their planning committee. Pichotta asked County Materials if they could notify him when that is going to take place as far in advance as you can and he will notify Mr. Eager.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for Filling and Grading in the Floodplain/Shoreland Area for William Holst & Nancy Beeler in the Town of Diamond Bluff

Public hearing for Filling and Grading in the Shoreland Area for William Schroeder, Shelley Endres and Wisconsin Specialty Sand by Wisconsin Industrial Sand, agent on property in the Town of Trenton

Public hearing on Expansion of Mining Accessory Uses for Wisconsin Industrial Sand, agent on property in the Town of Trenton

Discuss take action on the County Surveyor GPS Equipment

Pichotta noted that there was a letter in your folders from the Town of Oak Grove Chair, Sarah Palodichuk, relating to WISC's CUP application regarding the fact that they are working on an developing an application for their licensing ordinance and also explaining how that will work into our conditional use permitting procedures.

Motion to adjourn at 9:47pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, August 7, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 21 st , September 4 th & 18 th , all in 2013.	Chair
3	Approve minutes of the July 17, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Nonmetallic Mining Operation in the Agricultural Residential District pursuant to Pierce County Code 240-37 for Wisconsin Industrial Sand Company, owner and agent for John & Marjorie Kralewski Family Partnership, Jerry & Karen O'Brien and Jill Greenhalgh, owners, on property located in the South one half of the SE ¼ of Section 3 and the NW ¼ of the SE ¼ and the SW ¼ of the NE ¼ of Section 10 and the NW ¼ and part of the South one half of the SE ¼ of Section 11 and the SW ¼ of the SE ¼ and part of the SE ¼ of the NW ¼ of Section 14, all in T24N, R16W, Town of Maiden Rock, Pierce County, WI.	Roy
5	Discuss take action on a status report for a Nonmetallic Mining Operation in the Agriculture Residential and Industrial Districts, pursuant to Pierce County Code Chapter 240-37A for Wisconsin Industrial Sand Company, agent for Diamond Bluff Investments LLC, Holst Farms Inc, William McCusker, MOAP LLC, WTW Properties, Steven Burmood, Helen Holst, William F. Holst III and William Holst IV, owners on property located in Sections 1, 2, 3, 4, 10, 11 and 12, all in T25N, R19W, Town of Diamond Bluff, Pierce County, WI.	Roy
6	Public hearing to consider and take action on a request for a conditional use permit for a Winery and Nature-Based Operation, pursuant to Pierce County Codes 240-35B(6) and 240-39C, in the General Rural Flexible 8 District by Shannon and Angel Zimmerman, owners on property located in part of the SW ¼ of the NW ¼ in Section 3, T27N, R19W, Town of Clifton, Pierce County, WI.	Roy
7	Discuss take action on a status report and potential modification of a conditional use permit for Nonmetallic Mining for County Materials, agent for B.S. Construction Inc. and Steve Schoeder Properties, on parcels located in the SE ¼ of the SE ¼, Section 15 and the N ½ of the NE ¼, Section 22, T26N, R15W, Town of Rock Elm, Pierce County, WI	Roy
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

(7/25/13)

MINUTES - Pierce County Land Management Committee Meeting, July 17, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Emily Lund, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: August 7th & 21st, September 4th & 18th, all in 2013.

Approve Minutes: **Ross moved to approve the June 19, 2013 LMC minutes/Sanden seconded with Chairperson Fetzer not voting because of absence at the last meeting. All in favor. Passed.**

Chairperson Fetzer stated we will be striking Agenda item #7 because Louie Filkens is unavailable this evening.

Public hearing to consider and take action on a request for a conditional use permit for a Utility Facility >1000 square feet and a single wood pole communication antenna >70 feet in the General Rural District for Dairyland Power Cooperative, owner, by Steven Andrews, agent, on property located in the SW ¼ of the SE ¼ of Section 3, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Fetzer invited Mr. Andrews forward: Mr. Andrews explained they are requesting to put in a new substation for a communication pole. One year ago they had approval but didn't get it built. The Town of Gilman has approved it.

Staff Report – Emily Lund: Dairyland Power Coop is the wholesale electrical energy generation and transmission cooperative providing services to 25 electric distribution cooperatives, including Pierce Pepin Cooperative Services. Dairyland Power currently operates out of the adjacent Northern States Power (NSP) facility. NSP may need more space in the future, which prompted Dairyland Power to create a new parcel in 2010 that is northeast of the NSP facility. Dairyland Power proposes to develop a substation, move the communication antennae to this new lot, and tie into the common power grid. The applicants received CUP approval at the 3-21-2012 LMC meeting; however, the permit expired before any construction began. The design plans and location have changed since the first approval. The property is located in Lot 3 CSM V12, P143, in Section 3, Town of Gilman. The property is zoned General Rural and is located at W3472 850th Avenue. The current use of the property is agriculture. Surrounding uses include residential and agricultural. Requirements for Utility Facilities are listed in the staff report. The dimensions of the secured area are 102 ft by 92 ft. The security fence is located 46 feet from the west lot line, 54 feet from the north lot line and 167 feet from the east lot line. Proposed equipment includes one transformer on a concrete pad, one set of regulators, one 8 ft x 12 ft metal control building, and steel equipment supports. The equipment meets the 75 ft setback to a dwelling unit and 50 feet from any residential lot line. The previous plans (submitted in 2012) indicate the height of the proposed equipment is 34 feet and the lightning rods project 11 feet above the equipment. The 35 ft height limitation can be exceeded by electrical equipment provided the structures do not exceed in height their distance from the nearest lot line. The submitted narrative specified a 10 ft chain link fence topped with a 1 ft barbed wire and this meets Pierce County Zoning Code requirements. Sheet 2 shows topographic features with 1 ft contour intervals. The proposed facility elevation is 1180 ft. Access to this property is a shared driveway

north of 850th Ave through the lot south of this property. There will be an easement agreement recorded on the deeds allowing Dairyland Power Company ingress and egress through NSP's property. Sheet 3 shows cross-sections of the proposed substation development. Some filling is proposed to connect to the shared driveway on NSP's property and building the base for the facility. Soil erosion control best management practices must be incorporated to stabilize the site. Landscape design was not provided with the plans. The facility will be unmanned, but will operate 24 hours a day, 7 days a week. There are no facilities to accommodate the public. Wireless communication towers greater than 70 feet are conditionally permitted uses in all zoning districts. A wooden communication pole, with antennae, to monitor switching gear, will be moved from NSP's property and placed on this lot. The new plans do not indicate the location, but the 2012 plans show it being located 94 feet from the south lot line and 175 feet from the west lot line. The pole is proposed to be 80 feet tall and located east of the fenced compound. In 2010, a uniform address number (UAN) was issued and shall be placed on the property in case of an emergency. The Town of Gilman approved this request on 2-8-2012. The applicant returned to the Town again on 6-20-2013 with the new CUP plans. The Town Board found it consistent with their Comprehensive Plan and it was approved again. Pierce County Code §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether this request is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit request with the following conditions:

1. Activities shall be conducted according to submitted plans and specifications.
2. The security fence shall be installed to a height of 10 feet above the grade elevation.
3. The land use shall be established within 12 months from approval.
4. Any electrical interference to adjoining property owners shall be corrected within a reasonable timeframe.
5. The uniform address sign be placed near the entrance to the facility.
6. Best management practices shall be implemented to prevent off site impact from ground disturbance activities.
7. An access easement shall be secured and recorded.

Chairperson Fetzer opened the hearing to the public. No public comment. **Public hearing closed.** Holst questioned if the applicant has any intention of vegetative screening. Mr. Andrews stated if required, they can do that. There is a substation on that site now that is NSP's. Holst stated it has been brought to his attention that it will be more visible to the adjoining neighbor to the west. Mr. Andrews stated if it's a problem they can plant some trees over there. The reason they changed the plans a little bit is because there are some waterways and some wetlands. They shifted the position a little bit. The original plans called for a new driveway on the east side of the existing substation. It's a little wet there. Sanden asked apart from the new location of the driveway, are there any other changes? Mr. Andrews stated the location of where the substation is. They stuck it up a little more into the northeast corner to avoid the waterways. Holst asked Mr. Andrews if the committee needed to add a condition regarding the screening. Mr. Andrews stated yes, they can do that.

Holst moved to approve the request for a conditional use permit for a Utility Facility >1000 square feet and a single wood pole communication antennae >70 feet for Dairyland Power Coop, owner, due to the fact this request is not contrary to the public interest nor detrimental or injurious to public health, public safety or the character of the surrounding area, with conditions #1 - #7/Sanden seconded. All in favor. Passed.

Discuss take action on status report and potential modification of conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.

Staff Report – Brad Roy: On June 5, 2013 the LMC modified the CUP, which required action within 30 days. Conditions 10 and 13 required the applicant to replace two dead screening trees and to provide staff with a description of the winery waste process. This meeting is to provide the LMC with an update on the permit. The two dead screening trees along the driveway have not yet been replaced. Mr. Jungwirth has contacted a nursery about replacing the trees. The nursery would not plant 9’ tall trees at this time of year. Mr. Jungwirth was told that the fall would be a better time to plant. Mr. Jungwirth provided staff with a description of the disposal of winery waste and the associated wastewater. The grapes are crushed and the stems and skins are removed to and stored in the garden and is spread in the vineyard each spring. The amount of water used is low and is generally limited to washing equipment. The water that is used goes to the septic system that serves the home and business. The septic system was permitted in 2010. Staff has discussed winery waste and wastewater with the DNR and the Department of Safety and Professional Services (DSPS). Winery operators have many options to disposing of waste and wastewater. Permits may be required depending on the volumes and method of disposal of the wastewater and by products (skins and stems). It may be determined that a holding tank is needed for the winery. It is also possible that no additional permits are needed. Review of the process by DNR or DSPS is needed depending on the manner of disposal. The applicant has raised concerns about the “no carry in” food limitation established in condition #7. The existing conditions are listed #1 - #13 in the staff report.

Staff Recommendation: Staff recommends the Land Management Committee determine the appropriate course of action regarding the screening trees and consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area: We are suggesting modification to condition #13 to state: Applicant shall have the existing septic system inspected by a certified plumber to ensure proper function and develop and implement a Waste Stream Management Plan which is compliant with DNR and DSPS regulations. Verification of compliance shall be submitted to the Land Management Department by no later than October 7, 2013.

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking with one space delineated for handicap parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sales of wine need to cease.
6. The hours of operation shall be Wednesday through Sunday, 10am to 6pm.
7. Food served shall be incidental to wine tasting and must not require a food license, no “carry in” foods shall be allowed.
8. Activities outside the scope of this CUP (including catered food service) may be authorized by the Oak Grove Town Board consistent with the Town’s Special Event Ordinance.
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. Applicant shall discontinue the use of the audio bird repellent until such time as three nine foot tall spruce trees are planted along the Huppert southern property line and replace the two dead trees located along the driveway. Completion shall be in 30 days from this modification.
11. This permit shall expire on October 31, 2013, renewal may be granted by the LMC.
12. If a new owner wishes to continue the business with the established conditions prior to the permit expiration, a proposed business/operations plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.
13. ***Applicant shall have the existing septic system inspected by a certified plumber to ensure proper function and develop and implement a Waste Stream Management Plan which is compliant***

with DNR and DSPS regulations. Verification of compliance shall be submitted to the Land Management Department by no later than October 7, 2013.

Pichotta stated he is recommending an additional condition #14 Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and /or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I). Holst stated he spoke to a tree person who said the only time they can't transplant a tree is when the ground is frozen. It will cost more for this size of tree, at this time of the year, but it can be done. Sanden asked about the size of the trees for Valley Implement? Holst stated they were 9 ft to 12 ft trees and they were planted. Sanden stated they were the same and they were transplanted within the last couple weeks. Sanden asked about condition #13, the October 7th date? Where was that date obtained from? Roy stated the permit expires on October 31st. So the meeting would have to be the third Wednesday of that month so if we got it by October 7th, that would give staff time to look over everything before we have the meeting before the permit expires. Holst asked about condition #10 if that was satisfied. Roy stated #10 deals with the screening of the two screening trees and also the audio bird repellent. Holst stated three 9 ft tall spruce trees to be planted along Huppert's southern property, was that satisfied. Roy stated that has not. Holst stated we're talking about five trees as opposed to two? Roy stated the three trees along that southern property line was part of a negotiation with Mr. Huppert that he would say he didn't need those trees planted as long as the audio bird repellent wasn't played. Holst asked if it was played. Ben Huppert stated yes. Roy stated it was last year and asked if it has been this year. Mr. Huppert stated he has not heard it yet but that time of the year isn't here yet. Holst stated we should ask the applicant what his intentions are. Chairperson Fetzer asked Mr. Jungwirth what his intentions are. Mr. Jungwirth stated whatever is necessary he will do. Chairperson Fetzer stated that is what you told us last time. Mr. Jungwirth stated yes, that is correct and asked if he violated something. He stated he didn't believe so because Ben Huppert said he did not have too. Chairperson Fetzer stated if you were shooting off the bird repellent without putting trees back in, because that was the negotiation that he clearly remembers. There was some violation there. Mr. Jungwirth stated his question last year; because you insinuated that he needed to put trees blocking his vineyard, he never got to see the reason why that occurred. He would like to see that because just blocking an ag field, he will not do. Chairperson Fetzer stated we are trying to mitigate the neighbors getting along. Just like we had the previous applicant was going to put some trees in just to screen his area. It's a pretty simple deal. Mr. Jungwirth asked why you would want to block the view of a vineyard. It's not blocked from the road and it's certainly not ugly. Chairperson Fetzer stated he is not familiar with the area, he is just going on what the neighbors have requested and that is some screening so they don't have to see what's going on in their yard. He does remember that. Mr. Jungwirth stated there is nothing going on in there so why would he want to screen it. He has a pumpkin patch next to mine and he doesn't hear anyone complaining about that and it's right next to his fence. Chairperson Fetzer asked if there are people coming into his pumpkin patch? Mr. Jungwirth stated he has no clue. As far as people coming into his vineyard, yes, when they harvest, he has UW River Falls come in with their horticulture division three years ago. That is probably when the problem came up. There were about 18 people, maybe 20 that went out to see, because they were the ones that gave him the advice on how to plant. They wanted to see how it was doing. That was the only time anybody has been out in that vineyard. That was a question of his. The other two trees along the driveway, he had actually contacted a gentleman from Hastings almost three and a half weeks ago and at that time the candling was huge. He said he can't do it right now. They aren't going to make it. They are 21 ft trees. He really prefers to wait until the end of August after they have hardened off and that way he has better success. I know they are moving trees now but it depends on what size they are. Sanden stated that is why he asked the question and they were 9 ft tall. Mr. Jungwirth stated they are 20 and 21 ft tall. We put in big trees. Sanden asked about splitting the trees to a separate condition to make it cleaner. Then with condition #14, if they don't get in, we terminate the CUP. Holst asked Mr. Jungwirth if it is his intent to play the bird repellent again. Mr. Jungwirth stated no, he has ordered fencing this year. That will be in next week and they will be installing that in three weeks. It's netting that goes over the sides. He didn't want to do it a year ago because it does kill birds. They get caught in the netting and they die. He would

prefer to not have done that, that is why he turned off his bird call every day, no later than 4:30pm and it didn't get turned on until 7:30am. It wasn't like it was when people were home unless they were working nights then they were home. Chairperson Fetzer asked if we are looking at two trees; the two dead screening trees. Roy stated the two dead screening trees and the other three trees are tied into the bird repellent. Holst stated that if the bird repellent comes on then the trees have to be planted, otherwise he isn't compliant and he will lose his CUP and be shut down. So you have some incentive to do something. Mr. Jungwirth stated he has already sold the bird calls. Holst stated he can go buy other ones. Ross stated he would like some clarification. When you said there was only people out there during some harvest time, saying people haven't come and gone at any other time. Mr. Jungwirth, most of it, the scouting, if people do come out, they want to know if they can walk in the vineyard. They walk in the ones on Lots 7 & 8. It's down by the parking lot. It's closer. So they walk right from the parking lot, 110 feet over. We do a lot of that. There is a big interest in seeing how they grow. Holst stated we need to satisfy the applicants question about "carry in" food. Mr. Jungwirth stated it is difficult for him to watch his parking lot to see if people are coming in with "carry in" food. We have two trash cans down there; we have for three years and there is trash in them every week. So people are eating on the road and he doesn't want to have to police it plus in the entire state of Wisconsin people can stop along waysides and have a picnic if they want. I don't want to try and restrict them. Holst stated he didn't believe that is was the intent of the Town nor of this committee to outlaw a Randy's hamburger on your property to be consumed by a private individual. Sarah Palodichuk stated the last time this was before you, she mentioned they were having a hard time with drawing a line because someone could go sit and have a sandwich. The problem is when somebody brings four pizzas or Rudy has said in the past, there is a group from River Falls that makes their own food, brats & cheese and they grill at the vineyard. For her, that is past the line. They, as a board, weren't able to define a line. One of the residents asked if she was going to police it every day. They used no "carry on" just because they don't know how to draw the line. They would appreciate a line being drawn, if you can draw it and enforce it. Holst stated we will enforce it when we draw it. Mr. Jungwirth stated that is the only organization that comes in, is the one from UW River Falls. They come in with their meat processing group and their cheese making group and they like to make their own product. Ross stated then it would be a problem to have the condition in there. Ms Palodichuk stated it's not that no one is doing it. People bring food, every group is different. You can't really say you can't bring pizza here but you can bring subway or you can't bring subway but you can bring a sandwich from home. Holst stated he thinks the intent was catered food and institutional, unannounced to you, someone brings in food with a group and bought a bottle of wine and sits down to eat their food. Gary Huppert asked about the advertising of the Valentine's Dinner, on facebook, that was bringing people in and he was actually cooking food. They just weren't bringing their own. Mr. Jungwirth stated it wasn't him doing the cooking, it was Café 214. He didn't know at the time he wasn't allowed to set up the function. Café 214 got paid for it, they came out and cooked. We helped cook it. They had three chefs with them. We had 46 people. He talked to Brad about that and Brad said we aren't going to let you have a food license. He thought according to the state law he read on-line, he had to use caterers, only to find out later that he can't set the price if he uses a caterer. The caterer would have to collect the money, he was told by Ms Williams. He can't collect the money. He wasn't aware of that either. Whatever it takes to make it legal is all they ever want to do. Right now they have set everything up so if they do anything like that the function would be held at Café 214 because he has the space and he isn't open in the evenings and he can use the business. We weren't trying to make money doing it; we were trying to break even. We actually lost \$400 or \$500 because rabbit is expensive. Whatever we need to do to make it work is all we're trying to accomplish. Chairperson Fetzer stated that is what we are looking at is not having the catering. What was said about the couple events? Pichotta stated one of the intents was that the facility not act as a banquet facility; where you host a family reunion and have it catered in. Ms Palodichuk stated just because you are talking about intent, at the Town meeting we really did go as far as to say you can't bring a sandwich in your car. That is what was expressed to these people at that meeting because we couldn't draw a line. We have asked you to draw a line for us, but saying you can't have catered food is not dealing with the huge area between a personal sandwich and a Valentine's Dinner. This is going back to

how we were before, this big grey area and that's what we were trying to address. Sanden stated as he understands, the language in the food permit is what we were going off. If it was going to require a food permit, then it wasn't allowed. Pichotta stated that was for foods that were to be utilized for tasting as a part of wine tasting. They needed to be incidental and not require a food license. This is more picnic type situations and also the banquet facility type scenario. Roy asked if you could limit the size of the group that is allowed to do it. Set a number of people in the group, groups of 4 or less can bring food in. Anything more, larger groups, that is where you would have the problem with the food service being brought in. Mr. Jungwirth stated in the seven years they have been open, they have only had the UW River Falls in a large group. Otherwise, the 25 people in a bus never bring food. That's just more clean-up for us. UW River Falls is really the only one that is an issue. Ms Palodichuk asked if we could address that through the Special Events Ordinance. Mr. Jungwirth stated if it fits. Ms Palodichuk stated to Rudy, they talked about this and it would fit because they require you to follow something consistent with ours. They require approval consistent with it. It doesn't have to be under our ordinance but it would have to be consistent with it. Mr. Jungwirth stated he is certainly willing to talk about it because that is coming up in just a couple months. Ms Palodichuk stated that you would have to come before our board. Mr. Jungwirth stated he can do that, it's not a problem. Pichotta stated he thinks the existing language for the food works if Mr. Jungwirth is willing to work with the Town with regard to consistency with their Special Events Ordinance. If the Town authorizes it, perhaps the language we have here will in fact work. Pichotta asked Ms Palodichuk if she agrees with that. Ms Palodichuk stated she doesn't have the language in front of her but she agrees with what she has heard. Roy gave her a copy of the staff report and indicated conditions #7 & #8 contain language regarding food. Ms Palodichuk asked about how this affects his advertising on his website. She asked if that meant limited to groups of four. Pichotta stated no, as it is now, he wouldn't be able to advertise carry-on is welcome unless it was a specific date that had been preauthorized by the Town. Ms Palodichuk stated that she is fine with that. Holst asked if we need to address that in our verbiage. Pichotta stated he thinks we do. Holst stated we imply it. Aubart stated it says authorized by the Town Special Event Ordinance, condition #8. Pichotta stated the minutes will also reflect it, should there be a question. Holst asked if the applicant is clear. Mr. Jungwirth stated yes. Pichotta suggested regarding the recommended conditions; #10 be split into two and the second half of the condition be a new #11 stating, The two dead trees located along the driveway shall be replaced within a certain amount of days established by the committee, #11 become #12, #12 become #13, #13 become #14 and #14 which he previously suggested become #15. Holst stated he is not ready to move yet. He would like more clarification on #11 on the direction that the committee chooses to go. He can understand Rudy wanting to put in his 21 ft trees. Ross asked if he is talking about a date as clarification. Holst stated yes. He didn't get enough information about when you can transplant trees. He assumed they were going to be 12 ft trees. Sanden asked if we could specify 9 ft or taller and then have the compliance within 30 days. Holst stated from what he was told the 30 days would work for the simple reason that they start becoming hard needled about the middle of August or right in there. All trees get hard needled about the same time. You could stretch it to 40 days. If it doesn't apply, #15 will cover that. Sanden stated he has one other issue with regards to the wastewater. How many cases of wine did you sell last year? Mr. Jungwirth stated he sold around 12,000 bottles. Sanden asked how many he is anticipating for this year? Mr. Jungwirth stated about the same. Sales are about the same. Sanden stated you gave details on the fate of the wastewater but can you give me some indication of the quantity of wastewater we are talking about? Mr. Jungwirth stated if you took the swimming pool that Mike has in his backyard, we don't use that much water in ten years. Holst stated we're not familiar with Mike's backyard. How many gallons? Mr. Jungwirth I don't know how big a pool it is 16 ft or 18 ft. Holst asked if it is 4 ft x 16 ft. Mr. Jungwirth stated he really doesn't know but he can see it when he drives up his driveway. On a typical day of bottling we may use five gallons. That's about it. We don't use it for anything. It's just to rinse off the equipment when we're done. We've got a bottle filler and you pull the filters on that, they go in the dumpster and then you rinse it off, it's just residue. Sanden asked if the grapes themselves get washed. Mr. Jungwirth stated no, they never wash them. They would split and you would have a real issue. Sanden asked if there was any pesticide residue. Mr. Jungwirth stated we have to watch that really close. We don't put on pesticide in the last six

weeks. That is State and Federal laws. You've got to follow those. Ms Palodichuk stated she doesn't feel Rudy's question about the food got addressed. Where we're at right now is, If he knows that people want to bring food, he needs to get permission from the Town but if somebody shows up with a peanut butter and jelly sandwich and wants to eat it in their car before going in, he doesn't have to go bust them for having a sandwich. Chairperson Fetzer stated he thinks that is tough to police. Ms Palodichuk stated she thinks it's tough to police too. Holst stated "no carry in food" shall be allowed, condition #7, it's clarified. Ms. Palodichuk just wanted to make sure. Mr. Jungwirth asked if he needs to police it. Holst stated you can police it or we can. Mr. Jungwirth stated if you want to do that. Just get me the signs that say it's prohibited by Pierce County and I'll be happy to put them up. Holst stated that's not our obligation to supply you will signage. Mr. Jungwirth stated just tell me what to write on it. Chairperson Fetzer stated "no carry in food allowed". That's pretty simple. Mr. Jungwirth, OK'd by Pierce County, I can do that. Holst stated you can include your Township if you want. Lund stated after every meeting we send an approval letter with the conditions. He could post that next to his signs. Pichotta stated typically you wouldn't post a CUP and to expect folks would actually read the conditions. I think a reasonable interpretation of that carry in food, if somebody is eating something in their car, I don't think we are going to take you to task over that. The intent is that you don't have a revolving picnic ground, you are not catering banquet events; that is the intent of it. Holst stated if it needs to be black and white Rudy, then #7 states "no carry in food". Mr. Jungwirth stated he thought that maybe you have a sign, he had no idea. Holst stated it's not our obligation to provide signage. Mr. Jungwirth stated it was your requirement, Jeff. Holst stated it's not our obligation; it's the obligation of the applicant to provide signage when it's required. This isn't required. Mr. Jungwirth stated you made it sound like it was required. Holst stated "No, I did not". I said you could post a sign but that is your obligation. If you want to carry this to the next level, we can and we can put more stipulations on it. **Holst moved to modify the conditional use permit for Rudy Jungwirth, Valley Vineyard, by splitting condition #10 to get rid of the Huppert part because the bird repellent will be no problem because he has gotten rid of it, #10 Applicant shall discontinue the use of the audio bird repellent. #11 Two dead trees along the driveway shall be replaced by the end of August with 21 foot trees, consistent with what he has there today. Condition #11 becomes condition #12, #12 becomes #13 and so on with a new condition #15 Failure to comply with one or more of the above conditions may result in the issuance of an order by Land Management staff to suspend this use, pursuant to 240-84, and/or termination of this conditional use permit by action of the Land Management Committee, pursuant to 240-76(I)/Sanden stated he has a minor grammatical amendment to condition #8, it needs an end parenthesis after food service, he will second. Holst stated he will take that as a friendly amendment. All in favor. Passed.**

Discuss take action on a rule exception to minimum lot size on a 2-Lot Certified Survey Map (CSM) for Jack Lindstrom, owner, pursuant to Chapter 237-26A and Chapter 240-25C(5), on property located in the SE ¼ of the SW ¼ of Section 18, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.

Staff Report – Emily Lund: We have the Lindstrom's here and they are requesting a rule exception to the one acre minimum lot size on the attached 2-Lot CSM pursuant to 237-26A. The Bonnie Lindstrom Trust currently owns the home on proposed Lot 1 (see attached CSM) with address N2933 Cty Rd OO. John & Kathleen Lindstrom own the home on proposed Lot 2 with address W9592 State Rd 35. These existing parcels were created prior to the enactment of subdivision requirements and are considered to be preexisting non-conforming lots. John & Kathleen Lindstrom's septic system is currently located on Bonnie Lindstrom Trust's property, with an approved septic system easement agreement. Bonnie Lindstrom Trust's septic system is on Lot 1 Lindstrom Heights Addition. The proposed CSM corrects the septic system locations so they are located on the same lot as the associated home. The vacant Lot 1 of Lindstrom Heights Addition is combined with proposed Lot 1. The sale or exchange of land between owners of adjoining property is typically exempt from the requirements of Chapter 237 as long as any new lot configurations meet applicable zoning and other regulations. However, the subdivision code established a minimum lot size of 1 acre. The proposed reconfiguration of these preexisting

nonconforming lots would, despite the inclusion of existing vacant Lot 1, result in reconfigured lots that continue to be less than 1 acre in size. Due to this, a rule exception to the minimum lot size requirement is necessary. The property is located in Section 18, Town of Diamond Bluff and includes Lot 1 Lindstrom Height Addition. Pierce County Code Subdivision of Land §237-26A states, “Area and dimensions of lots shall conform to the requirements of the Pierce County Zoning Ordinance, where applicable. For areas where zoning is not applicable, minimum lot size shall be one acre, exclusive of land in any rights-of-way or easements.” Given that the proposed CSM would reconfigure 3 preexisting nonconforming lots, zoning is not applicable and a minimum lot size of one acre is required unless a rule exception is granted by the LMC. PCC §237 regarding Rule Exceptions states:

- A. Where the Land Management Committee finds that undue difficulties will result from strict compliance with the regulations of this chapter or better design will result, it may vary the regulations so that substantial justice may be done and the public interest secured, provided that such rule exception will not have the effect of nullifying the intent and purpose of this chapter.
- B. A majority vote of the entire membership of the Land Management Committee shall be required to grant any rule exception to these regulations and any rule exception thus granted shall be entered into the minutes of the Committee setting forth the reasons which, in the judgment of the Committee, justified the rule exception.

Since Lot 1 Lindstrom Heights Addition was combined with proposed Lot 1, it is considered “combining parcels” under §237-8 and a CSM was required. The Department of Administration Plat Review recommended that the Town of Diamond Bluff sign off on the CSM since the plat was altered. Diamond Bluff Town Board approved the proposed CSM on July 2, 2013.

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not this situation warrants a rule exception.

Sanden asked if Emily could describe it so he could understand, he stated they started out with three nonconforming lots and they want to combine two of them. Holst stated as Town Chair, he can explain this. Thirty-five or forty years ago, Lindstrom Family developed a platted subdivision in the Town of Diamond Bluff. At that time, minimum lot size was less than they are today. Jack lived next door to his mother, Bonnie and dad, John. They had one lot that didn’t sell in the subdivision that was on the corner. The three lots in question are Jack’s (John Jr) & Kathy’s and Bonnie’s. Bonnie has deceased so the family wishes to sell off. Jack had a sewer easement to put his sewer on his mom’s property. Through the reconfiguration, they would combine them with the two lots, Jacks & Bonnie’s. That would straighten up the sewer easements and would get rid of one buildable lot. Even though that lot is undersized by today’s zoning, it is a lot of record so that made it buildable. This is a down zone and that is why it made sense to us as a Town Board. Lund stated that the map shows the existing lot lines and the CSM shows the new ones. **Holst moved to approve the rule exception to minimum lot size on a 2-Lot Certified Survey Map (CSM) for Jack Lindstrom, pursuant to Chapter 237-26A and Chapter 240-25C(5), finding this does not nullify the intent and purpose of the subdivision chapter/Ross seconded. All in favor. Passed.**

Agenda #7 has been stricken.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a winery and nature based operation for Shannon Zimmerman in the Town of Clifton.

Public hearing for a nonmetallic mine operation expansion in the Town of Maiden Rock for WISC.

Status report for WISC in the Town of Diamond Bluff.

Status report for County Materials in the Town of Rock Elm and County Materials intends to do their signature hole blast on August 5th or 6th when we have a firm date we will let you know. If more than two of you would like to be there, we will have to notice it as a meeting.

Motion to adjourn at 6:57pm by Sanden/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, July 17, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: August 7 th & 21 st , September 4 th & 18 th , all in 2013.	Chair
3	Approve minutes of the June 19, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a conditional use permit for a Utility Facility >1000 square feet and a single wood pole communication antenna >70 feet in the General Rural District for Dairyland Power Cooperative, owner, by Steven Andrews, agent, on property located in the SW ¼ of the SE ¼ of Section 3, T27N, R16W, Town of Gilman, Pierce County, WI.	Lund
5	Discuss take action on status report and potential modification of conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
6	Discuss take action on a rule exception to minimum lot size on a 2-Lot Certified Survey Map (CSM) for Jack Lindstrom, owner, pursuant to Chapter 237-26A and Chapter 240-25C(5), on property located in the SE ¼ of the SW ¼ of Section 18, T25N, R18W, Town of Diamond Bluff, Pierce County, WI.	Lund
7	Discuss take action on County Surveyor purchase of GPS and equipment.	Filkins
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members
Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.		
Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.		

A quorum of County Board supervisors may be present.

MINUTES - Pierce County Land Management Committee Meeting, June 19, 2013

Present: Jon Aubart, Jeff Holst, Jim Ross and Eric Sanden

Absent: Joe Fetzer

Others: Andy Pichotta, Jim Kleinhans, Emily Lund, Brad Roy and Shari Hartung

Acting Chairperson Holst called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: July 3rd & 17th, August 7th & 21st, September 4th & 18th, all in 2013.

Approve Minutes: **Ross moved to approve the June 5, 2013 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a map amendment (rezone) from Light Industrial District to Rural Residential 20 District for Randall & Bonita Trok, owners on pending Lot 4 located in the SE ¼ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Chairperson Holst invited Mr. Trok forward: Mr. Trok explained he is requesting the rezoning from Light Industrial to Rural Residential 20 District for a possible sale, two acres split off of the eight acres there.

Staff Report – Emily Lund: As Randy mentioned they are rezoning two acres from Light Industrial to Rural Residential 20. In 2005, 0.6 acres of this 8.015 acre property was rezoned from Rural Residential-20 to Light Industrial to achieve a consistent zoning throughout the entire parcel. The zoning district allowed these uses to be permitted on the property: 3 large storage buildings for boat storage, 40-unit mini-storage, a bathroom, an office/storage area for the owners, and an area rented out to a coffee roasting company. Pierce County Code §240-40A(1) allowed the residence to be permitted accessory to the principal use in the LI District. The owners are now planning to split the property into two parcels as shown on the attached Certified Survey Map. The home will be located on its own parcel and is proposed to be rezoned to RR-20 so it would not be a non-conforming use. Parcels on which this rezone is requested are located in pending Lot 4 of a Certified Survey Map located in the SE ¼ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI. Existing land uses on the parcel include residential and light industrial. Nearby land uses include industrial uses, agriculture and residential. Adjacent zoning districts include Industrial, Rural Residential-20 and General Rural Flexible. Pierce County's adopted Comprehensive Plan is stated in the staff report. The Trenton Town Board, upon review of the Town of Trenton Comprehensive Plan 2009-2029, recommended approval of this request at their May 14, 2013 meeting. The Town's Comprehensive Plan, on the "Future Land Use" map, identifies the area located riverward of State Highway 35 as being appropriate for "Mixed Uses" and they are listed in the staff report. Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts for Rural Residential 20 and Light Industrial are shown in the staff report. Information regarding soils on the property shows they are pretty sandy in that area.

Staff Recommendation: Given that the Trenton Town Board has determined this proposed rezone of 2.0 acres from Light Industrial to Rural Residential-20 to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County

Board of Supervisors.

Sanden asked if the lines on the map are off a little bit. Lund stated yes.

Chairperson Holst opened the hearing to the public. No public comment. **Public hearing closed.**

Sanden moved to approve the request for a rezone from Light Industrial District to Rural Residential 20 District for Randall & Bonita Trok, owners, and forward a recommendation to the County Board of Supervisors/Ross seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a map amendment (rezone) from Rural Residential 12 District to General Rural Flexible 8 District for Gerald Pechacek, owner on 80 acres in the SW ¼ and the NW ¼ of the NW ¼ of Section 10, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Holst invited Mr. Pechacek forward: Mr. Pechacek explained he is requesting what was stated.

Staff Report – Emily Lund: This is a rezone request on 80 acres from Rural Residential 12 to General Rural Flexible 8, going from a residential district to an agricultural district. The owners are proposing to rezone 80 acres of their land from a residential district to an agricultural district. The owners have two - 10 acre parcels parallel to the east of each 40-acre parcels that are already GRF-8, so the rezone makes for consistent zoning throughout. The rezone will allow the owners to secure a permit to build an agricultural machine shed for storage and to relocate two grain bins to the property. The GRF-8 district is consistent with the current use and will allow those structures to be permitted on the property. The property is located in Section 10, Town of Oak Grove. Existing land uses on these parcels is agricultural. Nearby land uses include agriculture and residential. Adjacent zoning districts are Rural Residential 12 and General Rural Flexible 8. Pierce County’s adopted Comprehensive Plan is stated in the staff report. The Oak Grove Town Board, upon review of the Town of Oak Grove Comprehensive Plan 2009-2029, recommended approval of this request at their May 20, 2013 meeting. Town Chairperson, Sarah Palodichuk, justified their decision by referencing the plan by stating, “Chapter 6 (p. 25), Goal 4 – Protect and preserve agricultural resources. The land is currently being farmed but is zoned RR 12. The rezone is for agricultural purposes.” Pierce County Zoning Code §240-15 Purpose and Intent of Zoning Districts of Rural Residential 12, General Rural and General Rural Flexible are listed in the staff report and the different soil types on the agricultural land are listed also.

Staff Recommendation: Given that the Oak Grove Town Board has determined this proposed rezone of 80 acres from Rural Residential 12 to General Rural Flexible 8 to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Chairperson Holst opened the hearing to the public. No public comment. **Public hearing closed.**

Aubart moved to approve the rezone from Rural Residential 12 to General Rural Flexible 8 for Gerald Pechacek and forward a recommendation to the County Board of Supervisors/Ross seconded. All in favor. Passed.

Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining, pursuant to Pierce County Code 240-37A, in the General Rural District for Fesenmaier Enterprises LLC, owner, by John O’Meara, agent on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R16W, Town of Gilman, Pierce County, WI. Chairperson Holst invited Mr. O’Meara forward: Mr. O’Meara, Mattison Contractors Project Manager, stated they were awarded a road project for the Town of Gilman, 290th Street reconstruction. The project requires approximately 6500 cubic yards of borrow material for safety improvement. The Fesenmaier property lies directly west of the project. It makes sense for us to try and acquire the material from there just to lessen the beating of the roads from our dump trucks and a safety concern with kids out of school for the summer. The site would be opened approximately a month, stripped off and then reclaimed at the end.

Staff Report – Brad Roy: As was stated, Mattison Contractors will be completing a road project on 290th St in the Town of Gilman. The project requires 6,500 cubic yards of borrow material. Mattison is proposing to extract the material from the field directly adjacent to the project owned by Fesenmaier

Enterprises LLC. The property is currently being used as crop land. The property is located in Section 35, Town of Gilman. Topsoil will be removed and stockpiles using a dozer. Silt fence will be placed as needed around the project boundary. Applicant intends to extract 6500 cubic yards of material, utilizing an excavator for loading 3 dump trucks. A water truck will be brought on site to control dust as necessary. Mr. Fesenmaier will also use some of the material for fill at his farm. After all the material is removed the site will be graded and contoured to match the surrounding area and to meet the landowner's needs for future agricultural uses. The topsoil will be redistributed on site at an approximate depth of 8 inches. Temporary seeding will be applied unless the landowner directs otherwise. Because the area affected will be less than one acre an NR 135 Reclamation Plan will not be required. Hours of operation are proposed to be 6:30am to 6:30pm. The project will take approximately one month. Mattison anticipates scheduling the project within June to August. The Town of Gilman recommended approval of this request on May 9, 2013, without reference to its Comprehensive Plan.

Staff Recommendation: Staff recommends the Land Management Committee consider whether the proposed use at the proposed location is contrary to the public interest or detrimental or injurious to the public health, public safety or the character of the surrounding area. If found not to be contrary to the above, staff recommends the Land Management Committee approve this conditional use permit with the following conditions:

1. The initial fee of \$1,000 for Nonmetallic Mineral Extraction shall be paid prior to any site disturbance.
2. Applicant agrees that any unforeseen erosion issues that arise shall be addressed to the satisfaction of the county.
3. Hours of operation shall be 6:30am to 6:30pm.
4. If the site disturbance exceeds 1 acre, an NR 135 compliant Reclamation Plan shall be submitted to the Land Management Department for approval.
5. This permit shall expire upon completion of the road project. If the mining project is not completed by October 1, 2013 the applicant shall request an extension and provide a status report to the LMC.

Sanden asked what borrow material is. Mr. O'Meara explained it is taking the fill from Fesenmaier's property and moving to the intersection to flatten it out. **Chairperson Holst opened the hearing to the public.** No public comment. **Public hearing closed. Sanden moved to approve the conditional use permit for Nonmetallic Mining for Fesenmaier Enterprises LLC, owners by John O'Meara, agent with conditions #1 - #5 due to the fact this is not found to be contrary to the public interest nor detrimental or injurious to the public health, public safety or the character of the surrounding area/Ross seconded. All in favor. Passed.**

Public hearing to consider and take action on proposed amendments to Chapter 240 Zoning of Pierce County Code; relating to language intended to regulate adult entertainment.

Staff Report – Brad Roy: This has been discussed a couple times. On March 6, 2013 staff presented draft code language regarding several commercial uses which have the potential for significant impacts but are not specifically classified and fall under the classification of "General Retail and Services". Uses classified as General Retail and Services could begin to operate in an existing structure within the Commercial District without the requirement of any permit or review. However, a Land Use Permit and Site Plan Review would be required for any new construction in the Commercial District. The LMC has determined that a new classification for Adult Entertainment uses is warranted. Appropriate zoning district and setbacks were discussed on May 1, 2013. Potential impacts and concerns regarding adult entertainment include traffic, noise, property devaluation, morality issues, increased potential for criminal activity and incompatibility with surrounding uses. The LMC determined that Adult Entertainment uses should be a Conditionally Permitted use in the Industrial District. There is approximately 1,424 acres within the County currently zoned Industrial. Definitions have been presented to and discussed with the LMC to clearly define Adult Oriented Entertainment Business uses, the proposed definitions are;

- Adult Oriented Entertainment Business – any business whose primary business activity is characterized by emphasis on matters depicting, describing or relating to nudity, sexual conduct, sexual excitement or sadomasochistic abuse, such as an adult bookstore, adult theater, adult massage parlor, adult sauna, adult entertainment center, adult cabaret, adult health/sports club, adult steam room/bathhouse facility.
- Nudity – the showing of the human male or female genitals or pubic area with less than a fully opaque covering or the depiction of covered male genitals in a discernably turgid state and/or the appearance of bare buttocks, anus or female breast.
- Sexual conduct – acts of masturbation, sexual intercourse, or physical contact with a person’s unclothed genitals, pubic area, buttocks or female breast.
- Sexual excitement – the condition of human male or female genitals when in a state of sexual stimulation or arousal.

Setbacks to mitigate potential negative offsite impacts have been discussed, the LMC determined that the following setbacks are sufficient to protect surrounding land uses.

- *1320’ from schools, churches, licensed daycares and parks
- *500’ from residential zoning districts
- *300’ from offsite residences

The proposed amendments have been reviewed by Corporation Counsel. There were no concerns about the legality of the proposed code amendments. All towns under county zoning were provided a copy of the public hearing notice regarding this proposed amendment via certified mail.

Staff Recommendation: Staff recommends the Land Management Committee review the proposed revisions, consider any public comment received and if determined to be appropriate approve said revisions and forward a recommendation to the Finance and Personnel Committee and the County Board of Supervisors for approval and adoption.

Chairperson Holst opened the hearing to the public. No public comment. **Public hearing closed.**

Aubart stated he is not too excited about this. He thinks that we’re trying to solve a problem that doesn’t exist. We’re creating regulation on a proposed business when we talk about the potential impacts and concerns. He looks at this and that is every bar in the County. He personally doesn’t care for it. Sanden stated when you say this affects every bar in the County, could you expand? Aubart stated when we talk about the potential impacts concerning this particular industry or business. It says it includes traffic, noise property devaluation, morality issues, increased potential for criminal activity and incompatibility with surrounding uses; that is nearly every bar. Currently, there is one of these facilities in the County. Compare that to the sheriff calls to the Woodshed or the Harbor Bar. It’s not even on the same level. These establishments are licensed and can be regulated by the Townships easily and he thinks that it’s just being put back on the County to regulate. Sanden stated there was an establishment in Hudson where they had an adult business show up on Main Street and there wasn’t anything in their code that would regulate it. They spent a lot of time battling that issue. There was another issue downtown St. Paul, where they ended up buying out the bar for around \$800,000 to clean up that neighborhood. He appreciates Jon’s comments and feels they are valid but is looking at the other side too and doesn’t want to be caught in a situation where it does happen and then we can’t do anything about it. You make a good point about the Townships taking the weight on this. **Chairperson Holst stated he would deviate from the proceedings and take public comment on this since Mr. Eager is the spearhead of this.** John Eager, Rock Elm Town Chair, stated the Town Association was contacted on this and they said there was nothing the Town could do about it because it is a zoning issue. For them to try to do anything would be for them to do zoning and they said they couldn’t do it. There was a deal probably happened about the time the Trenton Township thing happened. The Town’s Association had townships trying to adopt these ordinances and they ended up with it being a zoning thing and it became null and void. Aubart asked if the Townships issue the liquor licenses. Mr. Eager stated yes. Aubart stated that if they have a problem with any establishment, with these or another bar, they can control or put conditions on that liquor license or revoke that license or suspend it. Mr. Eager stated that the problem is if you revoke their liquor license,

that doesn't mean that you are going to actually get rid of the business. There were businesses that did that in the Twin Cities that served soda pop. Aubart stated that he would agree with the viability of that but with the population base he would suspect that they wouldn't be around very long. Chairperson Holst stated most of the entertainers, from what he has been told, you would have to be kind of full to go there anyway and appreciate the artist value of said enterprise. Mr. Eager stated he wanted to make the comment that the Township did address it and they were told flat out that it was a zoning issue. Whether it is liquor or soda pop; if they own the building and there is no criteria. Ross asked if there has been a request on properties that you are aware of to do this type of business. Mr. Eager stated not at this point. They have three bars in their township. Chairperson Holst asked how many are active. Mr. Eager stated three. So the potential is there. Ross stated he is with Dr. Sanden and can see both sides of the issue. Mr. Aubart are you concerned that the statement of morality issues is defined by a variety of different possibilities? Mr. Aubart stated legislating morality is a problem. Ross stated he would concur. Mr. Eager stated that you are not legislating morality; you are just saying where it can take place. Chairperson Holst stated with this code every township has to have a place where this kind of establishment could take place. Pichotta stated not every Town, if it were a Town that adopted their own zoning and limited it to Light Industrial, like the Town of River Falls, there has to be a place where it could actually go. Chairperson Holst asked if a Town has no Industrial District then we can strike them out. Pichotta stated we are looking at the County as a whole instead of the Towns so there just has to be places in the County that meet the criteria. Chairperson Holst stated so we have 1420 acres that meet the criteria? Pichotta stated yes we do. Chairperson Holst stated he feels this is a relatively distant opportunity; it may or may not happen, he doesn't believe that you are going to have a large on rush to Rock Elm or Diamond Bluff or any place else to do this. He also sees this as a relatively benign thing. **Sanden moved to approve the amendment to Chapter 240 regulating adult entertainment and forward a recommendation to the County Board of Supervisors/Ross seconded. All in favor with Aubart opposing. Passed.**

Discuss take action on site plan review of a new storage building in the Light Industrial District for TW Equities LLC, owner on property located in part of the NE ¼ and the SE ¼ of the SE ¼ of Section 35 and part of the NW ¼ and the SW ¼ of the SW ¼ of Section 36, all in T27N, R20W, Town of Clifton, Pierce County, WI.

Staff Report – Jim Kleinhans: George Jacques rezoned and developed some property to Light Industrial in the Town of Clifton, Section 35 and 36. This parcel is 15.1 acres so we haven't seen a lot of the details on it. TW Equities bought the property and would like to put a cold storage building on the property. Mr. Westby approached the Land Management Department for a permit and he was informed that he needed state plan approval for the building and site plan approval from the committee. They now have foundation approval from the State. They have driveway access that was approved. They propose to build 125 ft. by 160 ft metal building and proposing a small parking area on the west side of the building and a fire lane on the north side. There will be no well or sewer at this time because it's just cold storage. The remainder of the property will continue to be farmed. No plans for security lighting were proposed. Adjacent uses include agricultural and commercial. No advertising signs were proposed.

Staff Recommendation: Staff recommends the Land Management Committee consider the information provided in this report to determine if any aspect of this development, as proposed in the site plan, is potentially harmful to the health, safety, aesthetics and general welfare of the county and can be addressed through modifications to the proposed site plan. Staff also recommends the LMC consider including the following conditions in any plan approval:

1. Two regular parking spaces and a minimum of one handicapped parking space shall be delineated.
2. Advertising signs shall comply with the zoning code standards and signs shall be located outside of road right-of-way. WI DOT regulations shall also be adhered to for off-premise signage.

Applicant understands that he needs a land use permit. **Chairperson Holst invited Mr. Westby forward:** Todd Westby, TW Vending, the owner, stated that the size of the building is going to be 125 ft. by 100 ft. Sanden stated to be clear this is site plan review not a land use permit. Kleinhans stated yes and asked Mr. Westby if he had any security light plans. Mr. Westby stated this is just cold storage at this time

but next year they will be requesting an office be put on the front at which time the electricity and lighting will be done. Sanden asked about any fencing. Mr. Westby stated no. They currently rent from a farmer on the adjacent property in a steel building that is right there. They want to move all of their equipment into the proposed building. The plans are next year to put an 8,000 square foot two-story office on the front of it, 40 ft out by 20 ft high, the width of the building. Sanden asked if there would be any plantings or landscaping? Mr. Westby stated no, any earth moved will be seeded. **Sanden moved to approve the site plan review for TW Equities LLC with conditions #1 - #2/Aubart seconded. All in favor. Passed.**

Discuss take action on compliance with, and potential modification of, conditions of site plan approval for Value Implement by Stan & Beverly Boles on property located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼, Section 15, T26N, R18W, Town of Trimble, Pierce County, WI.

Staff Report – Jim Kleinhans: This committee looked at site plan approval when they expanded Value Implement Dealership last year. Part of the criteria was a vegetative screening plan to the adjacent residential structures. On October 17, 2012 the Land Management Committee approved an amendment to allow 10 trees to be planted in the spring of 2013 versus the current growing season due to drought. Mr. Boles selected trees from Mr. Hines stock just north of town. Mr. Hines indicated that the ground is too wet for his equipment to go in and dig out the trees so they have not transplanted the trees at this time. Our office received a call from one of the adjoining property owners very upset saying that the trees weren't in and that is why this is back on the agenda for the committee to review. Jim checked this afternoon and the trees aren't out there yet. Another item for discussion in October was the private drive sign and he verified there is a sign at the entrance of the private drive as you go around.

Staff Recommendation: Staff recommends the Land Management Committee consider whether requiring a financial surety or establishing a timeframe triggering enforcement action is warranted or allow them a little more time to get those trees in there. Another option would be for Mr. Boles to buy the trees from someone else that has higher ground. He has these trees selected from Mr. Hines. Jim talked to Mr. Hines recently and he indicated he will do that and Mr. Boles is first on his list, as soon as he can get in there without tearing up his fields. Sanden stated I don't suppose he can give you any estimated date being it's all based upon the weather. Kleinhans stated it's been wet and Mr. Hines' property is low. He's not concerned that the trees won't make it. Mr. Boles hired someone to water the trees last year and they all look like they are doing just fine. It's a bit of an investment buying trees that big so he wanted to make sure they grew. Sanden stated he feels better that it doesn't sound like he is just neglecting the responsibility, it's just the conditions. It sounds like he has every intention of following through with it. If we gave a timeframe, could it be contingent upon the weather, not sure how to word it? Chairperson Holst stated that area Mr. Hines is on out there isn't going to get dry for months. Nesbitt's have been hauling trees out by the semi load all spring. One of the neighbors was concerned that now that the pines have needled out, they wouldn't be able to transplant. Mr. Hines stated he doesn't have a problem with it as long as Mr. Boles takes care of them. Sanden asked if he mentioned how long of a timeframe he has until it is past the season for planting. Kleinhans stated the issue is that he just can't get in there to dig them. Sanden asked if he could do it up until the ground freezes? Kleinhans stated the fall is a good time. They could have gotten trees somewhere else but he started with Mr. Hines, but we've got neighbors that are aggrieved. There is some spacing between the trees also. You can see tires, pallets and equipment between them. They could use a little more screening and part of the problem is that they put the trees in before it was approved by this committee. That's part of the problem. They were supposed to work with the neighbors. We talked about an enforcement issue for site plan review. They can spend their money on tickets or they can spend their money on trees. Technically, after Friday they are in violation of this site plan review and the extension the committee gave them. Ross asked what 30 days would do, would the neighbors be bothered by 30 days if we give them more time to do it. Chairperson Holst stated he would entertain a motion stating that if the trees aren't in by the end of the month, Land Management Department will start enforcement actions to the tune of \$250/day for every day after the end of the month that the trees are not planted. That is a compromise that wouldn't satisfy the adjoining property owners

but maybe light a fire under the Boles' to get this deal done. Kleinhans stated this is the third time the committee has dealt with it. **Ross moved that Mr. Boles has until June 30, 2013 to plant said trees, any days beyond that would trigger a \$250.00 per day fine/Aubart seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a nonmetallic mine and mining, accessory uses in the Town of Maiden Rock for WISC. Louie Filkins will be bringing the GPS equipment information to the meeting.

Motion to adjourn at 6:47pm by Ross/Sanden seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 19, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: July 3 rd & 17 th , August 7 th & 21 st , September 4 th & 18 th , all in 2013.	Chair
3	Approve minutes of the June 5, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider and take action on a request for a map amendment (rezone) from Light Industrial District to Rural Residential 20 District for Randall and Bonita Trok, owners on pending Lot 4 located in the SE ¼ of the SE ¼ of Section 33, T25N, R18W, Town of Trenton, Pierce County, WI.	Lund
5	Public hearing to consider and take action on a request for a map amendment (rezone) from Rural Residential 12 District to General Rural Flexible 8 District for Gerald Pechacek, owner on 80 acres in the SW ¼ and the NW ¼ of the NW ¼ of Section 10, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Lund
6	Public hearing to consider and take action on a request for a conditional use permit for Nonmetallic Mining, pursuant to Pierce County Code 240-37A, in the General Rural District for Fesenmaier Enterprises LLC, owner, by John O'Mara, agent on property located in the SE ¼ of the SE ¼ of Section 35, T27N, R16W, Town of Gilman, Pierce County, WI.	Roy
7	Public hearing to consider and take action on proposed amendments to Chapter 240 Zoning of Pierce County Code; relating to language intended to regulate adult entertainment.	Roy
8	Discuss take action on site plan review of a new storage building in the Light Industrial District for TW Equities LLC, owner on property located in part of the NE ¼ and the SE ¼ of the SE ¼ of Section 35 and part of the NW ¼ and the SW ¼ of the SW ¼ of Section 36, all in T27N, R20W, Town of Clifton, Pierce County, WI.	Kleinhans
9	Discuss take action on compliance with, and potential modification of conditions of site plan approval for Value Implement by Stan & Beverly Boles on property located in Lot 1, Certified Survey Map (CSM) V1, P219, in the SW ¼ of the SW ¼, Section 15, T26N, R18W, Town of Trimbelle, Pierce County, WI.	Kleinhans
10	Discuss take action on Travel/Training Requests	Pichotta
11	Future agenda items.	Pichotta
12	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(6/7/13)

MINUTES - Pierce County Land Management Committee Meeting, June 5, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Jim Kleinhans, Brad Roy and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 19th, July 3rd & 17th, all in 2013.

Approve Minutes: **Sanden moved to approve the May 15, 2013 LMC minutes/Ross seconded. All in favor with Holst and Fetzer not voting due to their absence from the last meeting. Passed.**

Public hearing to consider and take action on a request for a map amendment (rezone) from Rural Residential 20 District to Industrial District for Wisconsin Industrial Sand Company, agent for Shelley Endres and William & Patricia Schroeder, owners on property located in Lot 1 CSM V1, P251, containing approximately 10 acres, being part of the W ½ of the SW ¼; and part of the NW ¼ of the SW ¼, approximately 8.26 acres; and part of Lot 1 CSM V4, P70, being part of the SE ¼ of the SW ¼, west of the utility easement, approximately 3.5 acres, all in Section 1 and part of Gov't Lot 1 in Section 12, all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Wisconsin Industrial Sand forward: Mr. Himes explained they are requesting the rezoning of the parcels to allow them to add to their rail system to allow for the assembly of unit trains. Unit trains are made up of 100 cars, 110 cars; common product going from one starting point to a final destination out in the market place rather than going through a rail yard. In order to make this work, they would be purchasing about 40 acres from Shelley Endres and Bill & Patricia Schroeder. They would add about five tracks to their existing rail, with total installation of about 19,000 feet of track in a ladder track configuration. The need for that much track is because the unit train is a mile long. So we need a lot of track to maneuver. We will be presenting applications for a conditional use permit modifications and a filling and grading conditional use permit later. The benefits to WISC on this project are for more efficient loading and building of trains and more efficient transportation costs. The cars won't have to go to a rail yard and be assembled. They will go straight to the market, so it will be a savings in transportation costs for them and an energy reduction. To the community, the advantage is additional jobs. There will be jobs created during the construction; the Hager Facility will add about four employees to operate addition equipment to move the cars and also BN will probably add three crews to run these unit trains between the market and our location. The project really won't change the impacts of the plant which they currently work very hard to minimize. In terms of dust, the plant facility and the loading facility won't change; all of the rail car loading are currently dust collected. The plant process is going to stay the same. There will be some added car movement in the yard but it is very consistent with the noise around the facility and on the tracks. They may also have the benefit of reduced brake noise. One of the changes that will occur is they will be using track mobiles to move the cars as opposed to our tugger system which requires that a brake be set on a car when they move it and that can be heard squealing. That noise will be reduced. They will use the minimal lighting necessary for safety, keeping the lighting aimed at the areas that need to be illuminated for safe operation. There won't be any change to the impact

that they have right now on town roads. 770th Ave that comes into the plant will see the same level of traffic and they rebuilt the road at their expense a couple years ago to make it suitable for their use. They have and will continue to be contributing members of the community through programs, donations, educational grants to local schools, volunteer hours, etc. The Hager City facility is zero waste, nothing goes to landfills. They have aggressively looked at water reduction programs to reduce the amount of fresh water that they use in their process. They have been recognized by the Wildlife Habitat Council for the activity with the bats in the mine. They have achieved Green Master Status through the Wisconsin Sustainable Business Council, Green Tier Status for the WDNR and recognized as Business of the Year by the Pierce County EDC. They take pride in meeting and exceeding compliances and requirements from this committee. They will continue to work to make sure that is the case in the future. They ask that the rezone be approved. They believe it is consistent with both the County and Town Comprehensive Plans. It's located within the rail corridor, the Wisconsin Hwy 35 corridor, located near other industrial operations, creates employment opportunities and is in an area designated for industrial development. Sanden asked if Mr. Himes would define ladder track. Mr. Himes stated that is several tracks parallel to each other. Sanden asked if it would be like sidings. What do you anticipate how deep that would be, how many tracks. Mr. Himes stated yes, its sidings and it will be five sets of tracks. Sanden asked him to expand on the noise impact, either positive or negative by having the sidings rather than changing cars on the main line. Mr. Himes stated the noise will be consistent with what they do now, moving cars as they are loading them. The cars will be brought in by the BN and staged in this area they are expanding into and they would use track mobiles, small locomotives that can go on and off the track. They would go in and grab a group of cars and pull them into the loading facility, load them and position them into a track with loaded cars on it. Sanden asked if he could compare that to the operation as it stands right now. Mr. Himes stated it would be very similar, a little more coupling noise, a little more noise down at that end of the track that they are proposing to expand into. But they are moving cars fairly continuously in the loading facility now. Chairperson Fetzer asked if there would be more coupling noise. Mr. Himes stated it would be a little more back and forth when they are building the unit train. Chairperson Fetzer asked when you are stacking them up, will one set of cars muffle the ones in between or are you always working on the outside. Mr. Himes explained they would be working on all the tracks. There will be two phases to the loading operation and car movement. The BN will deliver a unit train, 100 cars empty and that would be the body of cars that they would be loading to build a unit train. But also on a daily basis, like now, the BN will deliver cars into the plant and those will be shuttled onto tracks where the empty cars will be stored. Also the BN will be delivering cars for our Maiden Rock Facility that are loaded and those will be shuttled into where they are building the unit train. The unit train will be a combination of our cars and the Maiden Rock cars so they would be putting that together and on some frequency, maybe once a week, the BN would grab that set and take it to market and deliver another set of empties. They would still continue to have the daily business. It would be half the cars because now half the loading is going into the unit trains. Sanden stated in the past we have had complaints about the clanking noise as these cars are being loaded one by one and he was wondering if this allows multiple cars to be loaded at once so there isn't that much noise. But it sounds like this is just connecting the empty cars together and they are still loaded one by one. Mr. Himes stated they will pull a string with the track mobiles rather than the tugger. The track mobiles would push or pull maybe half a dozen cars through the loading facility at a time. Then they would be moved to the appropriate track and the next string of empties would be brought in. The difference will be with the tugger, you have to set a brake on the car and that generates a significant amount of the noise associated with rail loading is that high pitch squealing. The track mobile is what holds the cars steady and that noise will be greatly reduced.

Chairperson Fetzer opened the hearing to the public. Ruth Ray, lives just in front of the plant, you are going to be loading an additional 100 cars and working more hours, more sand and that is going to create more dust for our homes. Mr. Himes stated this project doesn't increase the capacity of the plant it changes how they deliver the cars, not how much material they are shipping to market. It's just going by unit train rather than going through LaCrosse. Sarah Schuck, lives right across the railroad tracks from the operation, currently they don't have a lot of train cars in front of their house but her understanding is that

they are going to have an abundance of train cars across from their living quarters which is about 50 to 70 feet from the railroad tracks. Her concerns are after living there for 36 years and building equity in their home, what will this do to the values of the homes in that area. What will their taxes look like with more industrial things going on? Are they going to get a break in their taxes? Mr. Himes stated you will have cars across from you. We're putting the projects in an Industrial area. He can't speak as far as taxes and on a general study that they have had done, they've haven't seen a significant change in property value. Joan Walker, lives on 140th Avenue, their property value has been reduced since all of the airport business has been going on. They would like to sell their house but can't get out of their house what they will have to pay for another house. Ivy Conrad, lives on 130th Avenue, her concern is when they start taking out part of the bluff, how is that going to affect the structure of their homes? She is also concerned about the increase in dust. She and her son have asthma and it affects their living. Ms Walker agrees with Ivy that their cars have a lot more dust on them and her asthma has been worse. She would like to see EPA come and do a study by their home. Sarah Palodichuk, Oak Grove Chairperson, people have asked her if this will increase train traffic. There is a sense that if a company is requesting something it will make them more efficient and put more cars on the tracks. Hearing they are going to ask for CUP modification, that would be her question also. Joe Bacon, Spring Lake Township, asked if there is air quality monitoring going on at the site? In the future is the number of cars going to increase? If the precedence is set on this expansion what is going to happen to all rail sites in Pierce County in the future? If there is air quality monitoring being done, to what standard and also noise standard. Bill Schroeder stated that he still will own about a 300 foot buffer between Heidi's house and beyond the power lines to the west of that. He stated he doesn't know where the dust is coming from because his shop is right there and he doesn't see it. Pre 1986 you couldn't have had your windows open because that was an open field and when the wind blew from the west there was dirt banks along the power lines. That's why there is a ridge there because it's a dirt bank. Originally this property was all industrial, then he zoned it Rural Residential because he was going to have a house back there at one time. He bought it for the industrial uses. Also the lady down over the hill, Mrs. Ray, most of the car staging will be done down the track from where the curve is. When you are looking out your window, you are going to see one row of cars because they are parallel with the track. As far as the noise, it's a railroad track. It shakes his house and in the winter his windows rattle. Lisa Flynn, lives right on the hill next to the sand mine. As far as the dust goes, she doesn't notice the difference pre sand mine to post sand mine. As far as the noise, they really don't hear the cars and some of that noise will be muffled. Richard Huppert, lives on 747th Street, how many cars are they presently loading a day and if they are using a track mobile, how many cars can a track mobile run? If they start bringing in unit trains they are going to have to have a locomotive or possibly two hooked together. **Chairperson Fetzer closed the public hearing.** Mr. Himes stated in terms of the bluff and stability of the bluff, any work they do will be engineered so it won't affect adjacent properties. They are not going to undercut the bluff or disturb anyone's home with this project. In the issue of dust, they are regulated by the EPA, MSHA, by the conditional use permit and they monitor the dust in their facility as an occupational hazard. They have to control that environment inside the plant so they don't have dust levels that are unacceptable or beyond acceptable limits and expose. Away from the plant the dust is going to be dramatically less. There are a lot of regulations at both the state and federal level and the local level in terms of dust. Chairperson Fetzer asked if the EPA ever comes in and to check. Rich Budinger stated it's through the WDNR. The EPA has delegated its authority to the WDNR to manage that within the state of Wisconsin. So the WDNR holds the regulations, they have to get the air permits through WDNR and they require stack testing, which is a probe test that ensures that they are in compliance. Anytime they want to modify the plan, add a piece of equipment or change something, they have to modify the air permit which resets the whole process again. The regulations for the air permit that are included also visible dust, fugitive dust, those sorts of things also. Mr. Himes stated MSHA also comes in annually and checks the dust levels. We monitor noise and so does MSHA in the plant to make sure we aren't exceeding acceptable limits. We're loading 24 cars a day now. When we're moving cars with the track mobiles, we would be moving a dozen cars at a time. The locomotives will come in only when they are going to pull or deliver the cars. We won't be running locomotives in our facility. The future will be

based on the market as any business would look for ways to grow their business and with any intensification we would have to come back before this committee. Holst stated that a lot of the questions asked are all valid and weigh heavily on a person but the majority of the questions asked will be answered when these people come in for a conditional use permit. They will be addressed at that time. Today's hearing is on a rezone. We, the LMC as a group, do this with some regularity. So we are more familiar with this process. You will have another chance to skin this cat after this.

Staff Report – Andy Pichotta: This request for a rezone doesn't enable any kind of an expansion. A rezone simply enables them to apply for an expansion. Expansion would require two different conditional use permits; one for the expansion itself and one for filling and grading associated with it. As a conditional use permit - it requires a town recommendation so both of those issue will need to go through the town again and they would generate a recommendation regarding conditions they believe necessary to be associated with any approval. So folks that have concern, are encouraged to attend the meetings when these are on the Towns agenda should this rezone move forward. This is a rezone request for 21.76 acres from Rural Residential 20 to Industrial District. The parcel is located in Sections 1 and 12 in the Town of Trenton. Existing land uses on the parcels include productive forest lands, residential and agriculture. Nearby land uses include industrial uses, agriculture, residential and forest land. Adjacent zoning districts include Industrial, Rural Residential 20, Commercial and General Rural Flexible. Pierce County's adopted Comprehensive Plan states: "The County will approve re-zonings or map amendments only when the proposed change is consistent with an adopted or amended town comprehensive plan. Trenton Town Board upon review of their town comprehensive plan recommended approval of this request at their May 14, 2013 meeting stating that "This request is consistent with the land use map in the town comprehensive plan." The Town's Comprehensive Plan on the "Future Land Use" map, identifies the area located riverward of State Highway 35 as being appropriate for "Mixed Uses". Their plan (page 109) further states:

Mixed Uses

Purpose: Development continues to be a key focus for Trenton's economy. By providing basic employment, industry serves as the foundation for further expansion in the retail and service sectors. Located near STH 63 and STH 35, there is a need for additional planned acreage to serve the industrial potential of Trenton. There are a number of business uses in the Town that are reliant on a highway arterial or collector road location. The Town wishes to reduce the potential for conflicting traffic movement, congestion and hazardous conditions along these highways. This plan attempts to balance the benefits to the Town's tax base that this type of development will bring with the impacts associated with highway business development. Design standards should be established for all development along the highway. Such standards may include both site design criteria such as landscaping and building design criteria such as construction materials. The design standards are intended to ensure high-quality development that is aesthetically pleasing and that reinforces the desired character of Trenton.

Mixed Use Area Standards are also discussed. Criteria the Town is to consider include:

- Adequacy of access
- Assessment of need for public utilities
- Site plan review by the town
- Traffic volume assessment
- Need for landscape or visual buffer in certain circumstances
- Need for solid waste/hazardous material plan if warranted
- Lighting standards
- Days and hours of operation
- Access to main arterials to reduce commercial traffic on local streets
- Segregated/buffered from residential uses

It should be noted that the establishment, expansion or intensification of an industrial use in an Industrial District requires the issuance of a conditional use permit by the Land Management Committee. As such, a Town Recommendation is required at time of application and will provide the Town the opportunity to

apply the above criteria to any proposed industrial uses. Purpose and Intent of Zoning Districts are listed; Rural Residential 20 and Industrial. Rural Residential 20 is intended to provide for densest residential development; 20 houses per 40 with an average lot size of 2 acres. Industrial is established to provide for industrial uses that are more intensive than those allowed in the Light Industrial District. The purpose of the district is to accommodate a heavy volume of traffic. The need for rail access to parcels and the presence of noise and other factors which could pose a nuisance in other districts. The intensity and use of land as permitted in this district is intended to facilitate the total range of industrial uses. The Value of the Land information is also listed.

Staff Recommendation: Given that the Trenton Town Board has determined this proposed rezone of 21.76 acres from Rural Residential 20 to Industrial to be consistent with their comprehensive plan, staff recommends that the LMC approve this rezone request and forward a recommendation to the County Board of Supervisors.

Aubart moved to approve the request for a rezone from Rural Residential 20 to Industrial for Wisconsin Industrial Sand Company, agent for Shelley Endres and William & Patricia Schroeder, owners, and forward a recommendation to the County Board of Supervisors/Sanden seconded. All in favor. Passed.

Discuss take action on status report and potential modification of conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI. Roy noted that Mr. Jungwirth was not able to be present tonight. He has seen the staff report and understands the situation here tonight. Pichotta stated, given the concerns, we felt it appropriate to leave it on the agenda simply to ensure that the conditions in place are adequate to address the concerns that have been raised by the community up to this point. We could, if you believe it is warranted, have him come in to give a status report in the near future.

Staff Report – Brad Roy: The applicants operate Valley Vineyard LTD, which first received a conditional use permit for a Farm and Home Based Business in 2008. Grapes are grown and the wine is produced onsite. Guests can sample the wine and purchase bottles of wine in a tasting room. It was indicated in the application that food would be limited to incidentals like cheese and crackers. The hours of operation have been 10am to 6pm Wednesday to Sunday. Staff has received information about operations extending beyond 6pm as well as full meal service being provided to guests. A three ring binder documenting many of the neighbors' concerns was provided to staff as well as LMC members. There is also an unresolved issue regarding screening trees and the use of audio bird repellants. Neighboring land owners have also expressed concerns regarding the sanitary system for the business. Hours of operation and limitations on food service were not formally established as conditions. However the expectation has been that operations would be conducted as presented in the application. Lack of formal conditions has impacted staffs ability to enforce that expectation. This agenda item is intended to clarify and establish conditions for future operations and enable the issuance of citations if compliance issues arise. The owner/applicant has indicated that he has made an offer to purchase a property located in a Commercial District in another Town and that he intends to move the business to that site before the fall. The Town of Oak Grove has discussed this issue and took action on May 20, 2013. The Town recommends the hours of operation be 10am to 6pm Wednesday thru Sunday, the food served will be incidental to wine tasting and should not require a food license, no "carry in" foods allowed and any catered food that will be served must be approved by the Town Board and consistent with Oak Grove's Special Event Ordinance. The commercial activities take place in the accessory structure adjacent to the residence. Staff has received information that indicates that Mr. Jungwirth has scheduled business events that extended past the hours of operation and has provided food service. In 2011, vegetative screening between the applicants and Mr. Huppert's property was discussed before the LMC. The Land Management Committee directed the applicant to plant trees along the driveway between the properties as well as trees along Mr. Huppert's South property line. At a later LMC meeting, Mr. Jungwirth and Mr. Huppert agreed that the trees along Mr. Huppert's south property line would not be necessary as long as

Mr. Jungwirth no longer utilized an audio bird repellent. Last year, Mr. Jungwirth resumed use of the audio bird repellent. The trees to be located along Mr. Huppert's south property line have not been planted. Staff was also informed two trees along the drive way have died and will need to be replaced. A sanitary permit was issued in 2010 to connect the business to the home sanitary system. The applicant stated that the waste water from the wine production is disposed of offsite. Neighbors have raised concerns about the wine production waste and the existing sanitary system. Mr. Jungwirth also hosted a wedding last summer at the site which had music and went late into the night. He has indicated that the event was for a friend and not part of the business. A Conditional Use Permit typically runs with the land and not with the property owner. If the property is sold a future property owner could begin to operate a vineyard/winery on the site under the existing permit. The Town of Oak Grove has requested that any future owner be required to present a business/operations plan to the Town and the LMC prior to the establishment of any business. If a future property owner proposes to operate a different type of business, a new permit would be required to establish that use. When the existing permit expires, any new business operation on the site would have to apply for the use and follow all necessary permitting processes. The existing conditions are listed in the staff report #1 - #10.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area (proposed new conditions are in *bold italics*):

1. No more than 8 persons not residing on the site shall be employed in the business.
2. The entire business area shall not exceed 5,000 square feet in an accessory structure.
3. The applicant shall delineate 12 parking spaces that will be available for customer parking and there shall be no on-street parking.
4. Any proposed advertising signs shall comply with the zoning code standards and any necessary permits secured.
5. If the liquor license is not renewed annually, sale of wine needs to cease.
6. *The hours of operations shall be Wednesday through Sunday, 10am to 6pm.*
7. *Food served shall be incidental to wine tasting and must not require a food license, no "carry in" foods shall be allowed.* We talked about this with public health staff and basically, a license is required from them for anything other than sampling so this condition would eliminate food service on the site.
8. *Activities outside the scope of this CUP (including catered food service) may be authorized by the Oak Grove Town Board consistent with the Town's Special Event Ordinance.*
9. Applicant understands that expansion or intensification of this use will require modification to this conditional use permit.
10. *Applicant shall discontinue the use of the audio bird repellent until such time as three nine foot tall spruce trees are planted along the Huppert southern property line.*
11. *This permit shall expire on October 31, 2013, renewal may be granted by the LMC.*
12. *If a new owner wishes to continue the business with the established conditions prior to permit expiration, a proposed business/operation plan shall be presented to the Town of Oak Grove and the LMC for review prior to business commencement. Conditions of the permit may be modified.*
13. *Applicant shall provide documentation within 30 days demonstrating how and where winery waste and wash water is being disposed of. If the applicant fails to demonstrate appropriate disposal methods within this timeframe the issue will be brought before the LMC to consider permit modification to include a condition requiring the timely installation of an appropriately sized holding tank.*

Ross asked if there were no set hours of operation on this CUP previously. Pichotta stated typically what we have done is say that the applicant shall conduct activities as presented in the application. This was done early on the front end when we started doing this and that particular condition didn't make it into this. Then there was some confusion regarding what the hours actually were. Our understanding was that

they were to be consistent with the Town of Oak Grove's Special Events Ordinance which was 10am to 6pm and then Wednesday through Sunday. So we are playing catch up. Ross asked about the twelve parking places and stated it seems we usually mandate one for handicap parking. Pichotta stated that is true. Ross recommended adding that. Sanden asked if the applicant has indicated he may be vacating this use on this site and moving it to a commercial area which wouldn't be subject to a CUP, and it doesn't expire until October, what if he doesn't abide by these conditions. Can we issue a cease and desist if he isn't abiding by the new conditions? Pichotta stated yes, actually we could convene the committee in 24 hours if we had too. Aubart asked Brad about condition #7, any food on the property they would need a license, he asked how that differs from condition #8, the catered food service, they would still need the license correct? Mr. Roy stated they would not. To be a server of food, you need a license - unless someone is providing a cheese curd on a napkin between tasting - they don't need a license for that. If they are going to sell anything, process or prepare any food; that would need a license. There was no fine line, they look at every situation. When he read this condition to the public health officer she said yes, that pretty much eliminates all food service done by them. If they were to cater, Mr. Jungwirth wouldn't need a license to have that. Ross stated anyone that caters would have had to go through the Wisconsin mandated classes. Holst stated condition #8 is important in that Mr. Jungwirth should receive all the rights and freedoms as any other citizen of the Township. Anybody can have up to four Special Events a year with the blessing of their Town Board. It's important that be included, so we're not discriminating against him and then it switches it back to the Town. If they don't feel it's a good fit; they can say come back with a different idea. Sanden stated we are in a very challenging position trying to accommodate different wishes of land owners. They have people that want to make a living so they need to provide for that. They have people that want the full enjoyment of their property; peace and quiet, they have to accommodate that. So it is a very tough job that they volunteer to do so when they put the conditions on Mr. Jungwirth that was required and would be a good faith effort on his part to do so. When he sees someone not doing it, and treating these conditions as if they are suggestions, it is very disheartening and makes their job that much more difficult. They know that if they don't follow them; that is it. He hopes that Mr. Jungwirth reads these minutes and understands that these conditions that are set forth are there to provide for the neighbors and we take them very seriously even if the applicant doesn't. Aubart asked if we need to add that into condition #10. Chairperson Fetzer stated we need to put a timeframe on the trees. Aubart suggested 30 days. Ross asked whether there would be an issue with planting now. Holst stated that this guy he has pretty much done whatever he felt like. Tell him to get them in, in 30 days or he can find himself without. Chairperson Fetzer stated you are looking at three trees. Holst stated no, we're looking at three trees plus the two that died. Holst asked Chairperson Fetzer if he would want to ask the neighbors for input. Chairperson Fetzer asked if anyone has any comments. Sarah Palodichuk asked about the condition #7. She had talked to Mr. Pichotta and is trying to clarify this. They had made some recommendations at their Town meeting. Her concern is food incidental to wine tasting and to be able to define what that is. She wasn't aware he needed a license; that it was a licensed thing and they were saying that he shouldn't acquire an additional food license but her concern is that if he is talking about serving salmon that was prepared by someone else; where does that fit in? What the Town was trying to do is trying to create a line where this is OK for wine tasting but if staff is saying that any catered food can be used for wine tasting then that falls under the Special Event. That's what the Town was trying to address. The concern that his neighbors were trying to express is that this is OK, this is OK and that isn't. Joy Ptacek, lives out by Rudy, she feels Sarah hit it on the head with getting a better definition. As far as she knows with catered food, the caterer has to be present, they are using their license. Catering doesn't mean they drop off the food, leave and then Rudy serves it. She doesn't know if catering has to be listed as an approved use on his permit. With catering, whether he moves or not and someone else is in there, is this going to become a catering hall. Can he host weddings every weekend during the day up until 6:00pm? That will change the dynamics of the neighborhood. Does the Special Events Ordinance allow him to do that or if that is something that has to be stated on the conditional use permit? Holst stated catering, as he understands it, goes through your Town Special Event Ordinances. He can have four events per year if your Town so chooses to grant him that permit. Frances Jeche, lives in the development

on Lot 23 out at Crossroads, she has been to several of these meetings. When he started this, his intent, as he verbalized it, because they even helped him plant his grapes, he was moving into retirement years from his years as a successful insurance man, and this was going to be his hobby in retirement and now it has just turned into this mega business that he has people growing grapes for him here, there and everywhere and he is making wine in Menards buckets under his deck. Bringing in a pizza oven trying to make it into a restaurant and asked for a permit to have beer; when everyone spoke up against that he stated at the Planning Commission meeting that he would just continue to give it away then, basically, he was flouting the attitude that he would not follow any restrictions on the unbridled growth that he was seeking to engage in. As people move into the country on a dead end street they don't want to have people coming out in buses tasting wine other people driving through our neighborhood possibly inebriated or possibly not. It's very insulting to us to think that we were so deceived and that he has been so cavalier about treating the CUP as a suggestion, and now feeling victimized because we aren't going to stand for this. This is not what we signed up for and not what we pay taxes for. If you want a winery that is going to be a growing concern, put it on the main drag like the one in Pepin where you are a commercial entity. This is not a suitable scale of business for a residential development and that has really galvanized our whole development. We are not happy about the deception and the on-going postings on facebook about the pizza oven; we came out and enjoyed the free pizza (wink, wink). This is basically an ersatz restaurant. This is what we want stopped. Maybe he made an offer, maybe he is moving, it doesn't matter; while he is here he shouldn't be conducting his business this way. And if he leaves, someone else shouldn't come in and think it worked for him, it will work for me. We want our neighborhood back. Sanden explained these Farm Based Businesses were meant to be small scale and be incubators and when they did grow to the size that would be something outside of the intent, they would then move it to a commercial area. Which sounds like it's what he intends to do but that doesn't mean in the meantime he can violate these conditions. We put ourselves out on the line when we make these conditions and basically it's a good faith effort to make sure he behaves. Ross stated it's important that we understand and hear from you folks so we get more of a full version. Ms. Jeche stated we didn't object in the beginning because it was presented to us as a hobby. Sanden stated as far as the food issue, if you look at conditions #7 & #8, staff did an artful job of crafting those so it meets what you are expecting. Anything beyond the incidental food and if he does cater something, it has to be approved by the Town Board and he can only have four a year if the Town Board wants him to. Ben Huppert, the immediate neighbor, stated that he has been put through the ringer for years. He was almost ready to give up but thank god his neighbors came to him and asked how he can tolerate it. He feels Rudy Jungwirth has made a mockery of them and this committee. At what point is there enforcement; he has been fighting this tree issue and tried to barter with him with the bird system. He called Brad Roy about the fact that it wasn't put in the conditional use permit; it was just in the minutes. He was hoping Brad was right, unfortunately here we are again today. Sanden stated the vast majority of people that do come through to get a CUP do honor their CUP. Holst stated that there have been a series of unfortunate events associated with this use, we didn't catch it in the minutes; we didn't catch it in the CUP. It all fell on this guy's lap and he did take advantage of it. He believes that the CUP is now well spelled out now and the minutes will be read thoroughly and amended if they need to be. He believes we will be in a better position to deal with enforcement than we were before. Pichotta stated that staff has the ability to issue citations if someone violates the conditions of the CUP - but noted that we only have that ability if staff actually witnesses the violation. However, if we are informed of violations and don't witness them, we will bring those back before the committee and have the committee address them. Krystal Johnson, also lives in the Crossroads Development, just to go off that rule, if there is probable cause to lead the committee to believe there was a violation, i.e. photographs, documentation, website posting, etc. would that be sufficient grounds for a citation. Pichotta stated not for a citation but sufficient to bring the applicant back in front of the committee. Ms Johnson asked if that would result in the possible modification of the CUP if there are violations. Pichotta stated yes or it could potentially be pulled. Ms Johnson stated she was reading here if Rudy does move and a new owner moves in, it sounds like he could take over the current CUP and at that time it could be modified. What happens if this expires and he moves on November 5th and a new person moves in with the intent to have a business, do they

have to come before the committee? Pichotta stated yes and also the Town. Mike LaCasse, he has been coming to meetings both here and at the Town level since 2009, he applauds the committee's efforts today, he just wants them to understand that they are dealing with a very slippery person. The thing with the wedding, he got around the alcohol thing by selling the wine to the individual the week before and then they brought it back with them for the wedding. He said it was for a friend and also said that was to gauge how the neighborhood would support an event like that. The staff reports from 2009 state one to two tour buses a week by appointment only. He can go through these things in order as to his business expanding. Like Ben has said, he has just steamrolled and walked all over everybody and laughed as he did it. He too is glad that the neighborhood has bonded together. Like Brad said he is aware of what is at risk here and what is in play and where is he? Again he is just thumbing his nose at everybody. Chairperson Fetzer stated he thought of both Ben and Mike when he saw this issue on the agenda because they have been coming to every meeting. It frustrates him also and he doesn't have to deal with it on a daily/weekly basis as you do. He felt Dr. Sanden stated it very well and know it frustrates us also. Michael MacGregor, Oak Grove, just wanted to summarize his own feels on this, it's like real estate; location, location, location. This is a residential community on a dead end street and this was originally supposed to be a hobby, now it is a business. Whether it is Rudy or someone else living there, it should stay mostly in the hobby level. If he wants to operate a business he should move into a business area. Chairperson Fetzer stated the committee appreciates all the input. Ross stated he wants to stress that they have the ability to pull the CUP and these conditions will either be taken seriously or we will take action. **Holst moved to approve modification of the conditional use permit for Rudy Jungwirth with conditions #1 - #13/Ross seconded. Sanden asked for a friendly amendment to #3 to add the need for a handicap accessible parking space and #10 to specify replace the two trees along the driveway and have them done within 30 days. Holst agrees and Ross seconded the modifications to the conditional use permit for Rudy Jungwirth. All in favor. Passed.**

Discuss take action on status report and potential modification of conditional use permit/site plan approval to address compliance issues for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1 CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI. Chairperson Fetzer invited Greg Bechel forward: Greg Bechel, Jeff Bechel, Cy Ingram, Kevin Accola and Kenny King were all present. Kleinhans stated there are some items in the committee's folders including an updated site plan that shows existing buildings and the way the facility is situated and some photographs of items around the facility that shows the sand transfer point, how they load the trucks, the water truck that tries to protect the driveways and keep dust down of Highway 10 and some water wands on the conveyor. Kevin Accola submitted these to him so you can see what they are talking about.

Staff Report – Jim Kleinhans: He put this on the agenda because the office has received complaints regarding the facility that started in operation late last year. Greg Bechel originally started this process, the rezoning, getting the permits and the property was transferred to Muskie Proppant LLC late last year about the time the facility became operational. During the winter months we found some fugitive dust problems. We talked to Kevin about those items and Klienmans indicated that he keeps an eye on the facility since it's on his commute every day, twice a day. He noticed some things were out of compliance. He would like to go through some of those issues. In the staff report he has listed the existing conditions that were approved as part of the conditional use permit, plus we had a site plan review and those conditions are listed on the second page of the staff report. Compliance issues related to the CUP are as follows:

- The height of the raw sand stockpiles has exceeded 35 feet. Staff determined that by looking at the light station around the facility. The peaks of the piles were subject to high winds. He was monitoring offsite impacts of the sand on the snow cover. After every storm he would go by and see fresh cover of sand on the fresh snow cover so he thought there was an issue. He talked to Kevin about that. At one point they met on site and they had a dozer push down the sand piles and level them out. At that time they talked about the water cannons around the

sand pile, and it was indicated that the manager would implement the water spray when the sustaining winds exceeded 15 mph.

- Staff has not observed the drop sock equipment implemented at the finished product loading facility. He was out there this week and Kevin took photographs of the drop sock installation, which you don't see as you are driving by.

Under conditions of site plan approval:

1. The location of solid waste storage facilities shall be delineated. They were not delineated until he was onsite with Kevin, Greg and Jeff. Again the waste product is stored on the east side of the facility where there had been a proposed building at one point.
2. There were two stormwater and high capacity well permits secured from the WI DNR.
3. Conditional approval for the new building was secured from the Department of Safety and Professional Services.

Kleinhans identified the following compliance issues:

- Processed waste sand material is stored on the east side of the building within the truck driveway access. (*Condition 1*) This has been a point of issue because the sand cannot be returned to the sand source in Pepin because of a moratorium and because it was not considered during the reclamation review of Greg's permit. So as the sand pile grew and waste material grew, Kevin and Jim discussed some options along with Greg about disbursement of that sand product. At one point it went to a pit down in Trenton to be used for reclamation but the way the waste material is considered with the WI DNR and Pierce County Solid Waste Code is that it's considered to be a waste product from mining and industrial processing. So we haven't advised these guys to just disburse it freely because it is a regulated product. Chapters of the WI DNR Code restrict it to not being used in wetland, shoreland or floodplains and there is a chemical process going on inside the plant. So we talked to our Corporation Counsel about this material and again we try to be consistent where that material is always disposed of as a reclamation product within an approved nonmetallic mining facility or we obtain a license to dispose of that material under our Solid Waste Code.
- The parking area for staff and visitors has not been developed consistent with the approved plans. No handicapped parking area is delineated. The existing parking area is an unsurfaced area in the southwest corner of the building. Processed sand piles are found where the parking area is designated on the site plan. (*Condition 5*) Again in your folder you will see a revised site plan.
- Sand stockpiles exceed 35 feet. (*Condition 6*) That has since been taken care of.
- The access driveway was not constructed consistent with Chapter 240-57(I). (*Condition 8*) Jim showed a profile of the driveway from the road edge up into the facility. That section in the zoning code calls for the driveway to drop down 6 inches from the road edge before it starts sloping up into a development. So we don't have that condition and that part of the driveway has to be reconstructed.

In addition, staff has received numerous complaints about truck drivers using jake brakes. While doing the profile observed the jake brakes being engaged while the trucks were leaving the facility and approaching Highway 10. Typically you want to use those jake brakes in an area where you have to reduce the speed. Greg can address that more since it's his trucks using the facility. The source material is obtained from a mine located in Pepin County. Pepin County adopted a moratorium on nonmetallic mining that is expected to expire on June 30, 2013. At that point, Greg will have to revise his reclamation plan so at some point this year the waste material will probably go back into that mine but they have been looking for a place to dispose of the material. Kevin requested a place to temporarily store or stockpile material at some location in Pierce County but Jim could not find a mechanism to allow them to do that. He talked to our Corporation Counsel about it and maybe that's a discussion we will have tonight with the committee. The discussion he had with these individuals this week about the breakdown of the chemical compounds that are added to the sand as a flocculant indicated that they believe that the material

dissipates by the time it leaves the facility. But he hasn't seen data to show that it is a reality so we haven't loosened up our consideration for where this material will go. WI Adm Code NR538 where they do restrict the material from floodplain, shoreland, wetlands and emission of hazardous contaminants. We do consider processed waste material from industrial and mining operations as a solid waste. The conditional use permit is due for renewal September 7, 2013. Another reason this is on the agenda is because we didn't want to go into the renewal with a handful of issues related to the conditional use permit.

Staff Recommendation: Staff recommends the Land Management Committee consider whether any other additions or modifications to the established conditions are necessary to help mitigate impacts on public health, safety, the public interest and character of the area (proposed new conditions are in **bold italics**):

1. A site development plan shall be approved by the LMC to verify compliance with zoning regulations.
2. The high capacity well, grading/stormwater permit and air discharge permits shall be secured by Department of Natural Resources prior to construction.
3. Approval of a commercial driveway access shall be obtained from Department of Transportation and installed prior to the use being established.
4. Buildings shall be approved by the Department of Safety and Professional Services prior to construction.
5. Any proposed onsite sanitary facilities shall comply with state and county sanitary regulations.
6. The use shall be established within 12 months of approval.
7. The conditional use permit shall be renewed in 2 years and may be completed administratively if no complaints are reported.
8. Activities shall be conducted consistent with the submitted application.
9. Applicant understands that expansion or intensification for this use will require modification to the conditional use permit.
10. Raw product and loadout stockpiles shall be limited to 35 feet in height above grade.
11. Drop sock or equivalent equipment to reduce potential of blowing dust will be included on conveyor system.
12. *No jake brakes shall be used when approaching the facility.*
13. *A Fugitive Dust Plan detailing measures to be taken to reduce dust from roadways, truck traffic, stockpiles, sand transfer points, as well as actions to be taken in instances of exceptional events such as high winds shall be developed and presented to the LMC at the renewal hearing.*
14. *The access driveway shall be corrected to comply with Chapter 240-57(I) prior to September 7, 2013.*

Greg Bechel stated they have talked to the drivers recently about the brakes after talking to Jim. We didn't know we had any complaints and in the future we would like to be notified right away. We aren't going to jake brake in the plant. It's kind of like cruise control and you can leave it on. It's easy to forget and if you come back down the road and hit a certain speed, it will just come back on. We're going to address that. As we approach the plant there are some residences in a cluster. When we get past that there are no residences. We're just going to wait until we get past the intersection and away from the residences. He feels without the engine brakes, they will be slowing down much further back just so they won't burn up the brakes. If they get traffic behind them, regular semi's, they will be using their brakes and it will be near the residences anyway. They have no control over that. His solution is to wait until they get closer to the plant to use the jake brake. Chairperson Fetzer asked about the fugitive dust plan. Kevin Accola stated the fugitive dust is one of their primary environmental concerns; they deal with it every day and take very seriously. He explained how they are regulated. They have an air permit and fugitive dust control plan issued by the WDNR. So they regulate and require certain things. They require that they can't exceed fugitive dust at opacity of 20%. They have three visible emissions testers that are certified who can look at dust coming off a pile or dust off of a conveyor and know that it is 5%, 10%, 15% or 20%. They measure visually what the opacity is. WDNR doesn't hold them to 0 visible emissions. There will be

visible emissions at times and when they see that they take action on a daily basis. Chairperson Fetzer explained his observation coming by the facility. He has heard it from other people as well. He was coming by one day when they were loading a semi with good product. He could not see the front of the semi because of the dust flowing through there. He knows the issues because the committee deals with this and has for years. He lives in the area. He is sure that the sock has gone in since then. Greg Bechel stated they had some maintenance issues on one of them. They are getting all the bugs out of the system. Holst asked how long the loadout facility is. Jeff Bechel stated its 150 feet. Holst asked if it would be possible to put a door on both ends to mitigate some of the loss. He hauls grain all over and a lot of time when you shut a door, you don't have all that wind blasting through there. Cy Ingram stated they definitely control the dust as best they can. Holst stated they could control it a little better if they had a door. Mr. Accola stated part of the problem with that would be when the semis have to be extended out. Holst said if you have 150 feet. Mr. Ingram stated that's the length of the scale below all four silos. Greg Bechel stated that sometimes to reach the back hopper, the truck has to be off the scales in the back. Mr. Accola explained about the socks, they extend down, sand comes out and there is a vacuum that draws dust back into the system, circulates it back to try to get it back into that truck. The last two photos shows the truck entering and shows the spout as it is coming down into the truck. Currently they have two water cannons, a halo mister on the stacker/conveyor, they have a water truck that they can drive around the site and they can also extend water hoses out of the building if they need to water piles or anything close to the building. They have a skid steer and a wet sweeper to clean up sand. They had noticed dust coming off one of the conveyors, so they extended some skirting down the side of the conveyor. They do daily record keeping for their visible emissions activities and document that on the form. There are going to be times when they are inside working, they can't be outside all day long. If they see dust outside and he is not filling out the form at the time, they will address it. They have immediate corrective actions if that certified person sees something that isn't right. They also monitor the weather forecast and watching on the National Weather Service to see what the winds are doing and it hasn't proven real helpful so they purchased an onsite weather station. That just came in and it will be installed this week or next week. That system will log all the weather data from that day so they will be able to monitor wind speeds and based on what the testers are seeing, they will be able to tie in what the wind speeds are that are causing the fugitive dust. They will be installing four additional water cannons to have better coverage. There are times when the wind doesn't allow the cannons to work. They are also going to install a sprinkler system along the paved driveway to wet that down on a more consistent basis rather than try to keep it watered down with the truck. They are not only concerned about dust flying around but about losing their product. Sanden asked if they could address the stockpile height. Mr. Accola stated they were aware that the stockpile was approaching 35 feet in March when they were building it up in anticipation of road bans. It was never measured; they didn't feel it was over 35 feet. They do acknowledge that it was starting to get peaked up and they did see some fugitive dust so they did knock it down, flatten it out. That did it. Greg Bechel stated they are having a learning curve here and they have corrected a lot of things along the way. Mr. Accola stated a lot of this was going on during start up. Jeff Bechel stated part of the process was educating new employees that didn't even know there were conditions. Aubart stated he can appreciate the growing pains and some of the issues but you can't afford the mistakes. Aubart indicated that one of the complaints came from him and he talked to Mr. Pichotta about it, probably February or March. This is a touchy subject with all the communities. You cannot afford to make these kinds of mistakes, the stockpiles, getting rid of the extra material, etc. You have to have a plan and it's not going to work if it continues down this road. It's going to be a problem. Greg Bechel stated that the stockpile, no one actually measured it. Aubart stated that if your stockpile looks high and there is sand out in the road and snow covered in sand and it's brown. That is a problem. Everybody that drives by is going to see that and if you don't like the industry to start with, you are just fueling that fire so we need compliance with the conditions. Greg Bechel stated they are taking this very seriously and that's why they are here. Sanden asked about the waste product; do you use polyacrylamides in your operation? Greg Bechel stated yes. Everyone calls it waste material but they don't see it as waste material. It's a very usable product here; dairy operations want it for fill for bunkers but because it has a label on it, it can't be used. We need to

find a use for it. We need to change the way it's looked at, it's not a waste. We need to find a solution here. We talked to Jim and he explained it to us how we can do it. We can take our very best product we have and if we don't sell it that day, that can be called waste and we can sell it as a load of bedding sand. Mr. Accola stated they use polyacrylamides in their process to make the sand conglomerate and flock out of the water so they can reuse the water. So that generates a sand material that is conveyed out of the building. They have sampled the material. The original samples that they provided to Jim were based on 50 parts per billion and it was non-detectable of acrylamides not polyacrylamides. Acrylamide is what has drawn concern. It is used to manufacture polyacrylamides. So in that polyacrylamide flocculant there is residual amount. The residual amount in what they use is 0.15%. Now the polyacrylamide gets dosed into their water at one to four parts per million. It's pretty low concentrations. They have been told by their buyers that it's the same concentration that a water treatment plant would dose if they were treating surface water for drinking. So they have sampled the sand that comes off the conveyor after it has been de-watered. The original samples were non-detectable. The laboratory was just recently able to lower their detection limits so now they are down to two parts per billion. They sample again and again they are not detecting it. He provided Jim with an exemption concurrence that they got from the WDNR. It identifies how the WDNR views the material and provides an exemption from the solid waste codes. Mr. Ingram stated they very much prefer this material to go back to the mine of source and be used for reclamation. Polyacrylamides are used for road control on the sides of roads for the DOT, they are used in drinking water for drop out sand, this material works excellent for reclaiming a mine site, layering it below the topsoil, it retains moisture. It's a beautiful material, a great fill, it's got good compressive strength when it's compacted and chemically there is nothing detectable in it. They are definitely working with the County of Pepin to obtain approval to take it back to the mine. Ross asked where that process is at now. Mr. Ingram stated their moratorium is in place until the end of June and then Greg would need to amend his reclamation plan because they have a condition to not allow that material to come back to the mine on his permit. Which is not what the State would prefer, they would prefer it come back to the site. Greg Bechel would like the committee to consider letting them have a temporary stockpile at some location and once everything is in place in Pepin County, they would be able to take it back to that site. These guys will need it for reclamation. Sanden stated you have the designated raw sand stockpile to the north, what were you thinking as far as a temporary stockpile. Greg Bechel stated it would have to be something offsite or used for construction projects. Mr. Accola acknowledged that in the WDNR letter, they point out that it has to meet locational criteria, no wetlands, those kinds of things. Chairperson Fetzer asked about the access driveway. Mr. Accola acknowledged that it is not correct. It was designed correctly but not built correctly. The contractor has been notified and it will be corrected. Ross asked if there is a timeline. Mr. Ingram stated he had hoped to have it done before this meeting; it's a local contractor coordinating with Monarch Paving to get the paving scheduled. They are holding money and it's a warranty issue. They want it fixed. Sanden asked about the handicap spot. Greg Bechel stated part of their final site development will include establishing the parking area. They have a gravel area right now but they need those contractors to get in there and finish it up. Sanden asked about condition #7, renewal in two years, do we need to reword #7 so it doesn't imply that it is two years from this date that it is renewed. Pichotta stated this isn't renewal. It is a modification of existing conditions. Chairperson Fetzer stated the committee appreciates you coming in but understand this business is under a huge microscope. **Sanden moved to approve the amended conditions for Muskie Proppant LLC, adding conditions #12 through #14. Ross asked if they wanted to add anything regarding the Jake Brake issue. Sanden added to #12, no Jake Brakes shall be used when approaching the facility and sensitive approach areas along the haul route.** Pichotta suggested two additional conditions #15 Byproducts shall be utilized in reclamation of an existing licensed nonmetallic mine or disposed of or stockpiled consistent with Pierce County Solid Waste Code. #16 Updated site plan shall be presented to the Land Management Committee for review. **Sanden agreed to the additional two conditions as stated.** Greg Bechel asked what that meant regarding the solid waste code. Pichotta stated you can do a temporary stockpile somewhere consistent with the solid waste code or you could do a clean fill site. You could have had it done six months ago if you had started on it when it was first an issue. Holst stated with that condition, it

still gives you some flexibility yet it still allows us to live within our codes otherwise if you just put a pile of sand at point x, then point x moves to point y and we've got guys digging all over; we don't want that. You will be coming back in September and we want things straight and we want them good. **Ross seconded. All in favor. Passed.**

Discuss take action on a proposed policy to establish a timeframe within which a town must take formal action to generate a town recommendation for a proposed conditional use permit or rezone, once requested. Staff Report – Andy Pichotta: As you are aware, a Town Recommendation is required as part of an application for either a conditionally permitted use or for a rezone. There have been several occasions in the past where a town has either been unwilling or unable to generate a recommendation regarding an applicant's request in a timely manner. Non-action on the part of a town essentially creates a roadblock for an applicant pursuing a rezone or conditional use permit. This potential has created the need for a mechanism to allow Land Management Department staff to accept an application in those infrequent cases where a town is unable or unwilling to generate a recommendation. In cases where a Town is unwilling or unable to generate a Town Recommendation regarding a proposed rezone or conditionally permitted use within 90 days of a request to be placed on a town agenda, the Land Management Department may accept an application that does not contain a completed Town Recommendation Form. A town may submit a written request to the Land Management Committee (LMC) requesting that an extended timeframe beyond 90 days be authorized. Said request must explain why an extension is warranted and establish a timeframe within which formal action would be taken. Such extension must be requested within 60 days of an applicant's initial request to be placed on a town agenda. If an application for a rezone or conditionally permitted use is accepted without a Town Recommendation the LMC will utilize guidance given by that town's comprehensive plan, if applicable, when considering the request. This is not necessarily in response to anything going on right now, we have had an issue in the past where someone requested a CUP recommendation for a campground and was strung out for seven or eight months before they ultimately received got a recommendation. We have a situation now that is stuck at the Town level and sooner or later something has to give and we need to be able to accept it or have some mechanism to resolve the issue. Sanden asked if the LMC would be the one who would authorize the requested extension. Mr. Pichotta stated yes, we would actually bring it to the committee. Sanden asked about the timeframe, how does this compare to other, similar situations in the State. Mr. Pichotta suggested that most Counties in the State don't require a Town Recommendation for a conditional use permit. The suggestion that the extension be required within the first 60 days is to ensure we don't get somebody who gets to 85 days and says time to get an extension. If it looks like they have some concerns they want to sort through, it gives them an opportunity as long as they have a valid reason to do so. We just don't want a request to be dead end because a planning commission simply sits on it. Kleinhans stated or an example of a moratorium, this group is trying to get a permit from Maiden Rock for February and May they approached them and we just saw it this week. And maybe that is the reason because of the moratorium that they asked for that exception this week. Holst stated that a moratorium would be an exception and Town's will have the right with this policy to come forward within a 60 day time period to ask for more time if they feel that they need it. Some places seem to need more time. He feels this is put together real well; it protects the applicant and the Town. Sarah Palodichuk, how are you going to determine the validity of a Town justification? Are you going to specify that moratorium's are appropriate or will it be a case by case? Pichotta stated case by case basis and a moratorium would clearly be a valid reason. We can't possibly write up the parameters that would cover everything, once you do that, you are immediately presented with something that falls outside of that. Sanden asked if there are multiple extensions needed and this is saying that it has to be determined within 60 days of the initial application. What if there is a 90 day extension and another 90 day extension. Pichotta stated that if a Town were to say that as part of their request for an extension, if they were to say it may be that another extension will be necessary to be granted. I think they could note that in the initial request that the potential for further extensions. The desire isn't to inhibit the Town's ability to make a recommendation; it's simply to not have Town's sit on things. Ms Palodichuk stated they have a request that is pending; the prior board put a

moratorium in place. Our Town Board has a recently passed ordinance that does not have an application developed with it. We are new to the situation. We don't even know if the process is for the application to go first and be seen by the Town and go through the Town process before going to the County. This is something that wasn't foreseen a year ago. If the Town did, there would be an application right now. How should it have been handled initially? Holst stated he believes this committee would be understanding to both the applicant and the Town. He doesn't think the committee is heavy handed and likes to think that they are open-minded but he would also like to think that at some point in time, Towns have to accept their responsibility. If they choose to go into great detail as some Towns do or if choose to have a relatively simple approach as other Towns do, we have to be able to accept both avenues here. Ms. Palodichuk stated there needs to be some expediency. Pichotta suggested at the end of the first paragraph, Such extension must be requested within 60 days of an applicant's initial request to be placed on a town agenda. Adding the phrase - Additional extensions may be granted. Sanden added to that sentence, Such extension must be requested within 60 days of an applicant's initial request or extension to be placed on a town agenda. Pichotta stated what if they ask for a six month extension, if we make them ask for an additional extension beyond the six months, in the first 60 days, they wouldn't know that. Holst stated also to be fair to applicants, there needs to be some sort of timeframe. He understands that Oak Grove has a unique situation with the changing of the Board. **Holst moved to approve the policy to establish a timeframe within which a town must take formal action to generate a town recommendation for a proposed conditional use permit or rezone, once requested/Sanden seconded. All in favor. Passed.**

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

Public hearing for a rezone from Light Industrial to Rural Residential 20 in the Town of Trenton

Public hearing for a rezone from Rural Residential 12 to General Rural Flexible 8 in the Town of Oak Grove

Public hearing for a conditional use permit for nonmetallic mining in the Town of Gilman

Public hearing for amendments to Pierce County Code regarding adult entertainment language

Discuss take action on Site Plan review for a storage building in the Town of Clifton

Pichotta noted that we have a tree issue with Value Implement, there was a requirement that some trees be planted and it still has not been done. LMC consensus to place on next agenda if not resolved.

Motion to adjourn at 8:16pm by Holst/Ross seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

**LAND MANAGEMENT COMMITTEE
MEETING AGENDA
Wednesday, June 5, 2013 – 6:00 p.m.
County Board Room, Pierce County Courthouse,
414 W. Main St. Ellsworth, WI 54011**

#	Action	Presenter
1	Call to order	Chair
2	Next meeting dates: June 19 th , July 3 rd & 17 th , all in 2013.	Chair
3	Approve minutes of the May 15, 2013 Land Management Committee meeting.	Chair
4	Public hearing to consider a request for a map amendment (rezone) from Rural Residential 20 District to Industrial District for Wisconsin Industrial Sand Company, agent for Shelley Endres and William & Patricia Schroeder, owners on property located in Lot 1 CSM V1, P251, containing approximately 10 acres, being part of the W ½ of the SW ¼; and part of the NW ¼ of the SW ¼, approximately 8.26 acres; and part of Lot 1 CSM V4, P70, being part of the SE ¼ of the SW ¼, west of the utility easement, approximately 3.5 acres, all in Section 1 and part of Gov't Lot 1 in Section 12, all in T24N, R18W, Town of Trenton, Pierce County, WI.	Lund
5	Discuss take action on status report and potential modification of conditional use permit for Rudy Jungwirth (Valley Vineyard) located in Lots 6, 7 & 8, of the Crossroads Land Division, in the SW ¼ of the NW ¼ of Section 23, T26N, R19W, Town of Oak Grove, Pierce County, WI.	Roy
6	Discuss take action on status report and potential modification of conditional use permit/site plan approval to address compliance issues for Muskie Proppant LLC Sand Processing Plant located in part of the SE ¼ of the SW ¼ of Section 7, including Lot 1 CSM V4, P165, all in T25N, R15W, Town of Union, Pierce County, WI.	Kleinhans
7	Discuss take action on a proposed policy to establish a timeframe within which a town must take formal action to generate a town recommendation for a proposed conditional use permit or rezone, once requested.	Pichotta
8	Discuss take action on Travel/Training Requests	Pichotta
9	Future agenda items.	Pichotta
10	Adjourn	Members

Questions regarding this agenda may be made to the Department of Land Management at 715-273-6746.

Upon reasonable notice, efforts will be made to accommodate the needs of individuals with disabilities requiring special accommodations for attendance at the meeting. For additional information or to make a request, contact the Administrative Coordinator at 715-273-6851.

A quorum of County Board supervisors may be present.

(5/24/13)

MINUTES - Pierce County Land Management Committee Meeting, May 15, 2013

Present: Jon Aubart, Jim Ross and Eric Sanden

Others: Andy Pichotta and Shari Hartung

Acting Chairperson Ross called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: June 5 & 19th, July 3rd & 17th, all in 2013.

Approve Minutes: **Sanden moved to approve the May 1, 2013 LMC minutes/Aubart seconded. All in favor. Passed.**

Public hearing to consider and take action on a request for a conditional use permit for a Farm and Home Based Business (Electrical Contractor), pursuant to Pierce County Code 240-36D, in the General Rural Flexible 8 District for Rickey and Sara Diesing, owners, by Pat and Diane Wood, agents, on property located in the NE ¼ of the NW ¼ of Section 29, T26N, R19W, Town of Oak Grove, Pierce County, WI. Chairperson Ross invited Mr. and Mrs. Wood forward: Mr. Wood explained they would like to move their business from its current location to this property and have a small shop and office in one building and storage in another. They almost exclusively do road construction, street lighting and traffic signals, usually from April to November, weather dependent. There is very little work at the physical location, mostly used for storage and office work. They have two full-time employees. Sometimes the employees come to the shop in the morning and other times they drive right to the job site. Sanden asked about cutting things to size, fabrication or welding on site. Mr. Wood stated they only do fabrication in the shop if they get rained out. They will build up some 6 x 6 detector lubes or rebar cages. They can assemble light fixtures in the shop but that is rare because once they start putting them together they need to be stood up. Sanden asked if the fabrication is welding, cutting or mill work. Mr. Wood stated not as part of the fabrication for the electrical projects. He does some repair to equipment and they may do a little welding. Sanden asked if the repairs are done in the building. Mr. Wood plans to have access doors to pull trucks inside. He generally does the maintenance to the trucks in the winter.

Staff Report – Andy Pichotta: This request is for a conditional use permit for a Farm and Home Based Business. The 9.9 acre parcel is located in Whitetail Ridge land division in Section 29 in the Town of Oak Grove. The property is zoned General Rural Flexible with an address of N4899 1150th St. The Diesings intend to sell the property to the Woods contingent on obtaining this CUP for the proposed business. The agents are owners of LPD Electric. The company was established in 1978 in Lake Elmo, MN and was operated by a previous owner until 1999. The Wood's purchased the business in 1999, operated there until 2004, moved the business to a small commercial lot in St. Croix Beach, MN and it has operated there ever since. Now they propose to move their business to this property and live there as well. LPD Electric's principal business is street lighting and traffic signal construction for cities, counties, MN DOT and WisDOT. Their work location is in the twin city metro area and northwestern Wisconsin. They do not work on any residential, commercial or industrial wiring. Their focus is road construction projects only. The current land use of this property is residential and agricultural. Accessory structures are mainly for

storage. Adjacent land use is residential, agricultural and there is an auto/truck repair business located about a half-mile north of this property. Agents propose to operate LPD Electric out of the accessory buildings and live in the home. No additional buildings will be built at this time. There are no plans for future business expansion. The applicants are seeking this CUP to allow them to utilize a 40 ft x 40 ft portion of an existing 40 ft x 100 ft building (Structure "B" on the attached map) to house LPD Electric. This structure will have a heated shop, an office, a storage area and a 60 ft x 40 ft personal use area. The applicants also propose to utilize a 40 ft x 80 ft portion of an existing 60 ft x 80 ft building (Building "D") for business vehicle storage. A 20 ft x 80 ft area of this structure (Building "D") will be for personal use. The business will occupy an area no greater than 5,000 square feet. All materials and vehicles will be stored inside. Department staff will conduct a site inspection to verify that the business occupied area criteria is met and maintained. Building "B" will require some modifications: trusses will need to be modified to allow for a 14 foot door on the east end, interior walls will need to be insulated and heat added. A commercial building designer will prepare the designs and applicants plan to obtain proper permits. Building "B" is proposed to have a shop for maintenance and light repair of trucks, equipment, filters, hoses, tires, etc. Used oil and coolant are to be stored on-site in suitable containers and a qualified disposal company will remove them. In the past they contracted with Safety Clean and Kath Oil. The applicants currently have 2 full-time and 1 part-time employees. This is seasonal work so the field crew is laid off and the office employee only works 1-2 days a week December to April. From May to November, they are working Monday through Friday and sometimes Saturday, where the office hours at the shop are 9AM to 5PM. Most work is conducted off-site and the employees are usually gone from 6AM to 5:30PM and then return to the shop. From May to November, they propose to have a chemical toilet (satellite) located outside under an overhang with sidewalls and south of Building B. There is a bathroom at the house nearby. The residence is sized for a 3 bedroom mound that will be available from December to April. Pierce County Code §240-60N(1)(d) allows on-premise signs issued with a CUP, and the sign face area shall not exceed 32 square feet. They propose one on-site advertising sign that is 2.5 ft by 2.5 ft being 6.25 square feet. The building will be used to store equipment in the winter. The equipment will usually remain off-site and will move from one construction site to the next during the work season. Sometimes equipment will be moved back to shop in-between jobs. Equipment utilized for this business includes: 2001 International 4900 Bucket Truck, 2008 Hino Box Truck, 1995 GMC TOPKICK digger Derrick Truck, 1999 Sterling Box Truck, 1997 Ford F700 with contractors bump, 2 Vermeer 5750 cable plow with backhoe, Kubota L35 mini-tractor loader backhoe, Vermeer 24x40 directional drill, 2 hydro-vac excavators on trailers, Ingersol Rand tow behind air compressor, Ingersol Rand skid mount air compressor, 2 pole trailers, 2 single-reel, reel trailers, 2 tag-along equipment trailers and a custom designed cage trailer. Material delivery occurring from December to April will be ~2-3 times a month and is mostly by UPS. During the construction season material delivery will be ~2 times a week and will be from local delivery trucks, UPS, Speedy, electrical wholesalers, etc. They expect 5-8 semi-truck deliveries during the summer, which is mostly light poles and will be delivered during normal business hours. Agents plan to hire a local company for recycling and trash pick-up for weekly dumpster service. The Town of Oak Grove Board of Supervisors recommended approval of this request on 4/15/2013. The Town did not reference its comprehensive plan; therefore it is assumed that their plan is silent regarding this request. Pierce County Code (PCC) §240-54A requires 2 off-street parking spaces for contractor establishments and the property has more than 2 parking spots available. PCC §240-54I requires handicapped parking spaces should include 2 percent of the total spaces created, with the minimum of one space. PCC §240-76G discusses expiration of Conditional Use Permits and states, "All conditional use permits shall expire 12 months from the date of issuance where no action has commenced to establish the authorized use. If a time limit has been imposed as a condition for the permit, the permit shall expire at the end of the time limit."

Staff Recommendation: Staff recommends the Land Management Committee determine whether or not the proposed use at the proposed location is contrary to the public interest and whether it would be detrimental or injurious to public health, public safety or the character of the surrounding area. If found to

be not contrary to the above, staff recommends the Land Management Committee approve this conditional use permit for a farm and home based business with the following conditions:

1. Activities shall be conducted as presented in the application, including hours of operation.
2. The business shall be conducted by the owner of the dwelling unit.
3. No more than 8 persons not residing on-site shall be employed at the site at any given time.
4. The entire business area shall not exceed 5,000 square feet.
5. There shall be at least 2 parking spaces, with a minimum of one space for handicapped parking.
6. The advertising sign shall not exceed 32 square feet, comply with the zoning code standards and signs shall be located outside of road right-of-way and out of the vision clearance triangle.
7. Applicants shall work with Todd Dolan, Oak Grove Building Inspector, to determine whether or not commercial plan review and approval is required from Department of Safety & Professional Services.
8. A land use permit shall be obtained for all future structures prior to construction. Applicant shall also comply with all relevant local and state ordinances and regulations and secure all necessary permits and licenses (e.g. Department of Safety & Professional Services (DSPS), etc.).
9. The use shall be established within 12 months of CUP approval. This conditional use permit shall be renewed every 2 years. Permit may be renewed administratively if no compliance issues arise.
10. Applicant understands that expansion or intensification of this use will require issuance of a new conditional use permit. If applicant has questions as to what constitutes expansion or intensification, Land Management staff should be contacted.

Chairperson Ross opened the hearing to the public. Mr. Wood explained since he submitted the application, he has thought about a little better use of the buildings. He is well aware of the 5,000 square foot limit of building space but he is asking for a little flexibility on where in the building he uses the space. Pichotta stated that wouldn't be an issue from our perspective as long as you stay below the 5,000 square foot threshold. Sarah Palodichuk, Oak Grove Chairperson, stated they feel this is a good use of this property. Their concerns would be to keep things out of sight and an increase in the number of employees causing an increase in traffic, that's intensification, lighting that would bother the neighbors and being courteous to drivers at the driveway intersection. **Chairperson Ross closed the public hearing.** Sanden asked if the vehicles would be stored inside. Mr. Wood stated yes, inside. Sanden asked about the oil and coolant, if a condition needed to be added to address that item. Pichotta stated that would be included in condition #1 but if you felt so inclined you could add another condition. Sanden also asked if the limit of 5,000 square feet covers the vehicles parked outside. Pichotta stated the expectation is that all activities will be conducted in buildings so any vehicles parked outside would be employee vehicles.

Sanden moved to approve the request for a Farm and Home Based Business (Electrical Contractor) for Pat and Diane Wood, agents for Rickey and Sara Diesing, owners, with conditions #1 - #10, due to the fact this is not found to be contrary to public interest, nor detrimental or injurious to public health, public safety or the character of the surrounding area/Aubart seconded. All in favor. Passed.

Discuss take action on Travel/Training Requests. Pichotta stated there are no travel/training requests at this time.

Departmental Update and Future Agenda Items

CUP and site plan review again for Muskie Proppant for the Industrial site on Hwy 10 that was originally permitted for Greg Bechel. There are some issues that didn't comply with site plan requirements; the driveway and some fugitive dust issues.

Potential rezone for WISC in the Town of Trenton, they are purchasing some adjacent land to their processing plant from Shelley Endres and William Schroeder to rezone to Industrial to use for additional load out capabilities.

There is a 3-ring binder about Valley Vineyard with information that the neighbors have put together regarding what they view as violations. We have had some issues with Valley Vineyard out in Oak Grove.

They are scheduled to be in front of the Town Board on May 20th. If that gets kicked back to us the Town is going to make some recommendations regarding days and hours of operation to try and deal with some impacts to the neighborhood that weren't anticipated. It's been more successful and the impacts have been quite great, in some cases on one weekend a thousand people came through.

Motion to adjourn at 6:23pm by Sanden/Aubart seconded. All in favor. Motion carried.

Respectfully submitted by S. Hartung

MINUTES - Pierce County Land Management Committee Meeting, May 1, 2013

Present: Jon Aubart, Joe Fetzer, Jeff Holst, Jim Ross and Eric Sanden

Others: Andy Pichotta, Brad Roy, Emily Lund and Shari Hartung

Chairperson Fetzer called the Pierce County Land Management Committee meeting to order at 6:00 pm in the County Board Room, Ellsworth, Wisconsin.

Next meeting dates: May 15th, June 5th & 19th, July 3rd & 17th, all in 2013.

Approve Minutes: **Ross moved to approve the April 3, 2013 LMC minutes/Sanden seconded. All in favor with Aubart not voting due to his absence from the last meeting. Passed.**

Chairperson Fetzer stated agenda item #4 is struck from the agenda.

Public hearing to consider a request for a map amendment (rezone) from Rural Residential 20 District to General Rural Flexible District for Jeffery Kessler, owner, by Chris Willgrubs, agent, on property located in part of the NW ¼ of the NE ¼ and part of the North Half of the NW ¼ of Section 11 and part of the SE ¼ of the SE ¼ of Section 3, all in T24N, R18W, Town of Trenton, Pierce County, WI. Chairperson Fetzer invited Mr. Willgrubs forward: Mr. Willgrubs explained he is asking to rezone approximately 50 acres from Rural Residential 20 District to General Rural Flexible District. It seems to fit with the Town's Comprehensive Plan. Sanden asked what his intent for the land is. Mr. Willgrubs stated his intention is to apply for a conditional use permit for a campground.
